STAY HOME - STAY SAFE

Stated the Objective as Industry 4.0 as career plan ALUMNUS discussed various phases towards it. In simple terms, skilled individuals are required to create the technologies, business processes, implementation strategies, and support solutions that will make Industry 4.0 a tangible reality. Right now, manufacturers in various sectors are exploring and implementing solutions that come under the Industry 4.0 umbrella. This includes solutions to automate a manufacturing process, for example. It also includes solutions that provide real-time data in a usable format to help with decision-making and critical business planning.

I/C Mrs. K.Krishnaveni ECM

Head of the Department - ECM
