

Why integrated IAS course?

To-day we have copious career options like Engineering, Medicine, Law, Software, pharmacy, Entrepreneurship etc. However, IAS enjoys a distinct respect and the prestige, job satisfaction, involvement in societal development that are connected to Civil Services are unparalleled. Meritorious and positively charged graduates from a variety of academic backgrounds compete in the Civil Services examinations and although a million people put their best efforts in this Nationally tough competitive exam, it is finally some hundreds who would ultimately make it into the echelons of power. Thus, out of lakhs of people who take preliminary test, finally it is very few diligent, deserving aspirants who would get into jobs like IAS, IPS, IFS, IRS. Why then so many equally talented, hardworking students are failing?

Usually students form an idea on career either during or after their graduation. For an exam like Civil Services, years of systematic preparation becomes a key factor in success given the level of competition and increasing complexity year-by-year. Every single mark counts towards your success. UPSC calls for a specific skill set and skill level and maturity of thought is the premium. You need to write with analysis, preciseness, clarity, originality, variety and progression of thought, culminating theory and above all with linguistic competency. Some students don't realize the fact that mere academic success won't give success in competitive exams and right strategy plays a crucial role. Mentoring and constant guidance will be very helpful and it is proven that without scientific preparation it would be practically difficult to crack the exam.

When you have an ambition of making it into Civil Services, instead of preparing for the exam after graduation, it is wiser to start their preparation right in degree. There lies a crucial difference between a graduate completely immersed in Civil service oriented training for three years and the one who would start afresh after getting degree. In the formative years, students are exposed to various concepts in UPSC syllabi and accordingly gain required knowledge and skills. On the other hand, people who start their preparation after their graduation might fall behind since they have just begun the race. Moreover, UPSC aspirants in integrated course will sustain their interest, keep the flame of ambition glowing and know the strength and weakness in subjects with clarity. As we notice, many students who begin working to realize their IAS dream spend a year or two in understanding the basics in subjects, knowing their individual strength and weakness and struggle to adapt a right strategy for success. We have designed our integrated course with the sole concept of helping students get foundational knowledge for UPSC and keep the ambition high. During these three formative years, at the institutional level we focus on subject knowledge, communication, writing skills, Higher academic skills, soft skills, personality development.

Course Structure:

Our course is very accurately designed that it is a Degree with IAS foundation course. As a matter of fact, History, Geography, Economy, Public Administration including Constitution and Polity are the core areas in UPSC and our Degree is offered in this combination. Knowledge of History is very helpful in answering many questions in prelims and mains and similarly Geography is a core testing area in the exam. Exhaustive information of Constitution and polity, information on Economy are so crucial for success in UPSC. We have taken care that ample coverage is given to all the subject areas of study and regular news paper analysis is also provided for the coverage of current affairs. Writing practice is given priority and through a number of assignments, tests, paper presentations we imbibe in the student the essential writing skill.

Quality training is provided for success in Preliminary, Mains and also in personality Test. In the very first year itself, complete training will be given for CSAT. As the students progress, in the second year sufficient inputs for the general studies are provided and we identify the critical gaps in the study. Remedial course of action will be followed too. Finally, as they enter the third year of study, good training is provided in Mains optional subjects. As of now, we are providing training in the most popular subject areas like Public Administration, Political Science, Anthropology, Sociology, Geography and Telugu Literature. Depending on the number of aspirants and other pertinent factors, we may extend the training to other subjects in coming years.

However, students are cautioned to check their preparedness for UPSC challenge after graduation, decide whether to take the exam immediately or after another year of rigorous, intensive training. In the best interest of students, it is advised that they seek admission in Masters in their chosen subject (Sociology, Political Science, History etc) and simultaneously prepare for UPSC. It is very important that students wisely plan for another complete year's preparation and then take the exam with confidence.

Please remember that success comes to the aspirants who planned well, trained well and started well in advance. Better not late and better start earlier.
