National Service Scheme (NSS)

Awareness on diseases caused due to stagnant water

Event : Awareness on diseases caused due to stagnant water

Date : 10-08-2026

Place : Ravendrapadu.

Objective:

The objective of the **Awareness on Diseases Caused Due to Stagnant Water** program conducted on **10-08-2026 at Ravendrapadu** was to create awareness among villagers about the health risks associated with stagnant water and poor sanitation. The program aimed to educate residents about how stagnant water can become a breeding ground for mosquitoes and other disease-causing organisms. It also focused on encouraging villagers to remove stagnant water, maintain cleanliness around their homes, and follow simple preventive measures to protect themselves and their families from diseases.

Description:

As part of the community outreach initiative, the **Awareness on Diseases Caused Due to Stagnant Water** program was organized on **10-08-2026** at **Ravendrapadu**. The activity was conducted through a **door-to-door awareness campaign**, allowing volunteers to interact directly with villagers and explain the health problems associated with stagnant water.

The volunteers explained how stagnant water collected in open containers, discarded tyres, pots, drains, and other areas can provide suitable breeding conditions for mosquitoes. Residents were educated about the importance of regularly checking their surroundings and removing accumulated water. They were also encouraged to keep water storage containers covered, maintain clean surroundings, clean drainage areas, and dispose of waste properly. The door-to-door approach made the interaction more effective and gave villagers an opportunity to ask questions and understand practical preventive measures.

Outcome:

The program successfully improved the villagers' understanding of the health risks associated with stagnant water and poor sanitation. Through direct interaction with households, residents gained better knowledge about how stagnant water can support mosquito breeding and contribute to the spread of diseases. They were made aware of the importance of regularly checking their surroundings and removing accumulated water from containers, drains, tyres, pots, and other places. The awareness activity also encouraged villagers to keep drinking and stored water properly covered, maintain clean surroundings, dispose of waste appropriately, and ensure proper drainage. The interaction motivated residents to adopt simple preventive practices at the household level and share the information with their family members and neighbors.

Impact on Society:

The program contributed positively to the community by promoting awareness about hygiene, sanitation, and prevention of diseases associated with stagnant water. By encouraging households to eliminate stagnant water and maintain clean surroundings, the initiative can help reduce mosquito breeding and lower the risk of disease transmission. The door-to-door approach strengthened communication between volunteers and villagers and encouraged individuals to take greater responsibility for the cleanliness of their surroundings. The awareness created among families can further spread within the community as residents share the information with others. Overall, the initiative promoted healthier habits, greater community participation, and a cleaner and safer living environment.

Details of the Event:

Name of the Event : Awareness on Diseases Caused Due to Stagnant Water
Place of the Event : Ravendrapadu.
Date of the event : 10-08-2026
No. of Hours : 1:30 pm to 4:30 pm
No. of Participants : Students:21, Faculty: 01
Faculty Name : P. Suresh (Id no- 4099)
