Objective

The usage of information technology is increasing at a rapid rate. It has made it easier for everyone to easily access the internet, increasing the number of internet users. Also, technology is not constant, and it is continuously evolving. It makes it very difficult for end-users to be aware of measures to protect their data privacy.

Description

Individuals, as well as companies, rely on IT systems. But they are not aware of the cyber risks, ways to handle them, and how to protect themselves from such risks. The primary purpose of a cyber awareness program is to educate people about possible cyber threats and avoid a data breach. However, no method can guarantee complete security from the attacks but can help reduce their occurrence and equip end-users and professionals with practical knowledge to mitigate such risks.

Proceedings of the Event:

Team KLEF_CEA reached Cyber security awareness means knowing about various cyber threats, the ability to detect potential threats, and taking measures to mitigate their effect to protect your digital assets.

Team CEA went to Chirravuru Village at 01:45PM and then we divided into teams and conducted door to door surveys. Then we told what the crimes were going on online.

Outcome

The survey has been successful and everyone there has responded well. The interaction session was good and our students told them how to use the online in the correct manner.
