#### **Details of the Event:**

Date of the Event	:	31-07-2023
Name of the Event	:	Rain Water Harvesting
No. of Hours	:	01:30 AM To 04: 30 PM
Venue of the Event	:	Pedapalem Village
No. of Participants	:	Students: 69, Faculty: 02
No. of Beneficiaries	:	250

## **Objective**

The process of collecting and reusing rainwater is known as rainwater harvesting. Rainwater is typically gathered at the location where it falls, although many homes have constructed dedicated areas to catch rainwater. Harvesting rainwater is a common practice that is vital to daily life. The water is becoming polluted as a result of human activity and population growth. As a result, everyone needs to save water, which is why the KLEF\_CEA is conducting an event called "RAIN WATER HARVESTING" at Padepalem Village on July 31, 2023.

## **Description:**

One of the most popular methods to conserve water is water harvesting. It makes reference to reserving water for various uses. Water collection is done with the intention of avoiding wasting it and preventing runoff. Overall, the process of using simple components to gather water is complete. In light of India's current water shortage, this method is incredibly beneficial. Additionally, obtaining water is not particularly difficult and can be accomplished by almost anyone. We should encourage this training to help people access clean water more effectively and realistically for free.

To increase awareness about the rainwater harvesting methods and techniques to save water, the KLEF\_CEA team organized an event titled "Rain Water Harvesting". The KLEF\_CEA team thoroughly explained the methods, techniques, and strategies to the residents of Padepalem village and how they will be helpful in the future.

## **The procedure of the event:**

- ❖ The KLEF\_CEA team arrived at the location
- ❖ After dividing into groups, they explained to the residents of Padepalem village about the rainwater harvesting methods and techniques.
- ❖ They also explained the necessity of water.
- ❖ Finally, they resolved all of the queries related to rainwater harvesting.

## **Benefits:**

- Ability to build or farm in areas with no other water supply
- Lower water supply cost
- High Quality pure and free of chemicals water
- Can supplement other sources of water supply like groundwater or municipal water connections.

## Outcome:

- It also increased awareness of rain water harvesting among residents of Pedapalem village, and all the participating residents or individuals thanked the KLEF\_CEA team for organizing such an amazing event that raised awareness among Pedapalem village residents about the rain water harvesting.
- The students said the event's overall purpose was achieved since the KLEF\_CEA team did an excellent job arranging it to raise awareness. Throughout the entire event, the volunteers behaved themselves and were quite friendly.
