VISION

To be a globally renowned university.

MISSION

To impart quality higher education and to undertake research and extension with emphasis on application and innovation that cater to the emerging societal needs through all-round development of students of all sections enabling them to be globally competitive and socially responsible citizens with intrinsic values.

AWARDS

Koneru Satyanarayana,
Chancellor

Sri Koneru Satyanarayana, BE, FIE, FIETE, MIEEE graduated in Electronics and Communication Engineering in the year 1977. Along with Sri Koneru Lakshmaiah, he is the co-founder of the Institute which was established in the year 1980. He is an educationist of eminence and also an industrialist of great repute. He runs a number of industries in and around Vijayawada.

Dr. K S Jagannatha Rao
Pro Chancellor

Prof. K. S. Jagannatha Rao was one of the leading scientists in neuroscience research in globe. He was the Director on Institute for Scientific Research and Technological Advances (INDICASAT AIP), Republic Panama and contributed lot in building innovation in higher education and research in Panama since 2010. He played a key role in building PRISM (Panamanian Research Institutes of Science and Medicine) in Latin America. Dr. Rao has his research area on Brain Research and established Alzheimer's Centre and published 165 papers in leading Biochemistry and Neuroscience Journals, supervised 19 Ph.D students. He is also adjunct faculty of Biomedical Informatics of UTHS, Houston, and Advisory Board Member of UT- El Paso Minority Health NIH program, USA and Adjunct Faculty, Methodist Research Institute, Houston, USA. He was elected Member of Panamanian Association for the Advancement of Science (APANAC) - Considered as National Science Academy of Panama. He received his undergraduate and Ph.D degrees from Sri Venkateswara University, Tirupati. Later, joined in Central Food Technological Research Institute, Mysore. He received Sir C. V. Raman Award by Karnataka State Council of Science and Technology, 2003.

Prof. G P S Varma
Vice Chancellor

Prof. G P S Varma, Vice-Chancellor, KLEF, is one of the most widely experienced leaders in Indian higher education, known for his commitment to expanding student opportunity, catalyzing academic innovation, and encouraging university's civic engagement and service to society. He adorned the position of Chairman, ISTE (Indian Society for Technical Education)- AP State, TSEM CET Test Committee Member-2021 nominated By Telangana State Govt, APEAMCET Admission Committee Member in 2016 by Andhra Pradesh State Council of Higher Education, Govt. of Andhra Pradesh. He has been a very farsighted Peer Team Visit Member for National Assessment and Accreditation Council (NAAC), Expert Committee Member for University Grants Commission (UGC) Autonomous Visits. He has been an Advisory Council Member for (CEGR) Centre for Education Growth, and Research India International Centre, New Delhi, and Board Member for Big-Data Analytics Forum.

Dr. N Venkatram
Pro-Vice Chancellor

Dr. Venkatram Nidumolu, Pro-Vice Chancellor is High performing, strategic thinking professional with more than 15 years of administration experience and 20 years of teaching experience in KLEF and 30 years overall experience in the higher education sector. He graduated in B.Tech (ECE) from Acharya Nagarjuna University, pursued M.S degree from BITS, PILANI in software Systems. He received Ph.D award from Acharya Nagarjuna University. He held the positions like HOD, Joint Register, Principal, and Dean-Academics before becoming Pro-Vice Chancellor. He was core member of all NBA, NAAC, & other accreditations since 2004 and he has good experience in handling of quality issues and assessment related practices.

Dr. A V S Prasad
Pro-Vice Chancellor

Dr. A.V.S.Prasad, M.E and Ph.D from JNTU, Hyderabad is a professor in Civil Engineering. He has a rich experience of 33 years in academics which includes 26 years in administration at various cadres ranging from Head of Department, Dean, Principal, Director and Pro-Vice Chancellor. Dr. Prasad has served as Director of Audisankara group of institutions and Narayana Group of Institutions for 18 years and was instrumental in getting these institutions accredited by NAAC, NBA, Autonomous and gained many laurels from the State Government, JNTU etc. He has served as Pro-Vice Chancellor of K.L. University for 3 years.

Dr. Prasad has extensive knowledge of administrative system, maintaining statutory norms of bodies like AICTE, UGC etc and has a good understanding of NBA, NAAC procedures and norms. He has to his credit many papers published in indexed journals. He has experience in organizing various National Level Events, Workshops and Conferences. He served as Member, Chairman of Board of Studies at JNTU(A), KLCE(Autonomous) and K.L. University. Above all he is soft spoken, congenial and an effective team worker and team leader.

OFFICE OF DEAN ACADEMICS

Hari Kiran Vege
Dean (Addl) Academics

Dr. V N Sailaja
Associate Dean Academics
(Curricular Aspects)

Dr. P Kasi Visweswara Rao
Associate Dean Academics
(Curricular Aspects)

Dr. M Kameswara Rao
Associate Dean Academics
(Academic Registrations)

Dr. K Uday Kiran
Associate Dean Academics
(Academic Registrations)

Dr. M Venkata Naresh
Associate Dean Academics
(Strategic Planning & Policy Making)

Dr. N V K Ramesh
Associate Dean Academics
(Teaching & Learning Process)

Dr. Aravindhan Alagarsamy
Associate Dean Academics
(Teaching & Learning Process)

Dr. Padmanabhan K
Associate Professor, CSE

Dr. B Chaitanya Krishna
Associate Dean Academics
(OBE & Evaluation)

Dr. E Vamsidhar
Associate Dean Academics
(OBE & Evaluation)

Dr. S Balaji
Associate Dean Academics
(Off-campus Operations)

Dr. P Vidya Sagar
Associate Dean Academics
(Projects, Academic Research & Internships)

Mr. A Gopi
Assistant Dean Academics
(Projects, Academic Research & Internships)

Dr. Fazal Noor Basha
Associate Dean Academics
(Academic Counselling)

Dr. M Latha
Associate Dean Academics
(Academic Counselling)

Dr. A S Chandra Sekhara Sastry
Controller of Examinations

Dr. Ch V Ramana Murthy
Addl. Controller of Examinations

Dr. Chakka Raghava Prasad
Addl. Controller of Examinations

Dr. Chetty Manna Sheela Rani
Addl. Controller of Examinations

Dr. Sreevardhan Cheerla
Addl. Controller of Examinations

Dr. Kallakunta Ravi Kumar
Addl. Controller of Examinations

Dr. M V V K Srinivas Prasad
Asst. Controller of Examinations

Dr. Kallipalli Venkata Raju
Addl. Controller of Examinations

VISION

To evolve into a globally recognized department in the frontier areas of Electronics & Communication Engineering.

MISSION

To produce graduates having professional excellence.

To carry out quality research having social & industrial relevance.

To provide technical support in transforming the learners into entrepreneurs.

(DEEMED TO BE U N I V E R S I T Y)

Y23: B.Tech. - Internet of Things

Program Handbook

Program Educational Objectives (PEOs)**PEOs**

PEO	PEO Description
1	Practice engineering in a broad range of industrial, societal and real-world applications.
2	Pursue advanced education, research and development, and other creative and innovative efforts in science, engineering, and technology, as well as other professional careers.
3	Conduct themselves in a responsible, professional, and ethical manner.
4	Participate as leaders in their fields of expertise and in activities that support service and economic development throughout the world.

Program Outcomes & Program Specific Outcomes (PO & PSO)

PO & PSO

PO/PSO	PO/PSO Description
P01	Engineering Knowledge: An ability to apply knowledge of mathematics, science, engineering fundamentals and an engineering specialization for the solution of complex engineering problems in engineering
P02	Problem Analysis: An ability to identify, formulate, research literature, analyze complex engineering problems in engineering using the first principles of mathematics, natural sciences and engineering sciences
P03	Design/ development of solutions: An ability to design solutions for complex engineering problems and system component or processes that meet the specified needs considering public health & safety and cultural, societal & environment
P04	Conduct investigations of complex problems: An ability to use research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to obtain solutions to engineering problems.
P05	Modern tool usage: Ability to create, select and apply appropriate techniques, resources and modern engineering activities, with an understanding of the limitations.
P06	The engineer and society: Ability to apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
P07	Environment and sustainability Ability to demonstrate the knowledge of engineering solutions, contemporary issues understanding their impacts on societal and environmental contexts, leading towards sustainable development.
P08	Ethics: An ability to apply ethical principles and commit to professional ethics and responsibilities and norms of engineering practice.
P09	Individual and team work: An ability to function effectively as an individual, and as a member or leader in diverse teams and in multi- disciplinary settings.
P010	Communication: Ability to communicate effectively oral, written reports and graphical forms on complex engineering activities.
P011	Project management and finance: Ability to demonstrate knowledge and understanding of engineering and management principles and apply those ones own work, as a member and leader in team, to manage projects and in multi-disciplinary environments
P012	Lifelong learning An ability to recognize the need for and having the preparation and ability to engage independent and life-long learning in broadest context of technological change
PSO1	An ability to Understand the theoretical and mathematical concepts to analyze real time problems and develop the systems to resolve.
PSO2	An Ability to Design and Analyse systems based on theoretical foundation, Professional Knowledge and Practical Skills.

Program Rules & Regulations

Admission Eligibility Criteria

A Pass in 10+2 or equivalent examination with 60% in aggregate and 60% and above (or) equivalent CGPA in Group subjects - Physics, Chemistry and Mathematics.

Program Structure and Curriculum

For each academic program, the curriculum serves as a framework that specifies the credits, course category, codes, titles, and delivery methods (Lectures, Tutorials, Practice, Skills, Projects, Self-Study, Capstone Design, etc.) under the **Choice-Based Credit System (CBCS)**. The curriculum is designed, implemented, and assessed following the **Outcome-Based Education (OBE)** framework. In designing the curriculum, we ensure the integration of key contemporary and traditional values by embedding Indian Knowledge Systems (IKS), Sustainable Development Goals (SDGs), and Design Thinking principles into courses at their inception.

- Each **Academic Year** consists of two regular semesters, each approximately 20 weeks including classwork and exams:
 - **Odd Semester:** July to December
 - **Even Semester:** December to May
- A **Summer Term** may be offered from May to June but is not considered a regular semester for calculating program duration.
- Students have the flexibility to choose courses as prescribed by KLEF.
- Each course has a **Lecture-Tutorial-Practice-Skill (L-T-P-S)** component.

Course Credit Structure:

Credits are allocated to courses based on the **L-T-P-S** structure:

- Every **Lecture** or **Tutorial** hour equals **1 credit**.
- Every **Practical** hour equals **0.5 credits**.
- Every **Skill-based practice** hour equals **0.25 credits**.

Course Precedence:

The following are the guidelines for registering into courses with pre-requisites.

- A course may have one or more of its preceding course(s) as pre-requisite(s).
- To register for a course, the student must successfully be promoted in these course(s) earmarked as pre-requisite(s) for that course.

Academic Flexibilities

Major Flexibilities:

- **Honors:** Honors can be awarded if students complete additional courses from their core program and earn 20 extra credits through specified category of courses.
- **Honors through Research:** Honors through Research offers students the chance to explore their chosen field of study in greater depth, cultivate valuable research skills, and make meaningful contributions to their specific area of interest. Students can be awarded this Degree upon fulfilling the requirement of earning an additional 20 credits through specified category of courses.

- **Honors through Innovation:** Honors through Innovation emphasize the exploration of innovative ideas, problem-solving, and creative thinking within a particular field of study. It may provide opportunities for students to engage in innovative projects, research, or entrepreneurial activities. Students can be awarded their degree upon successful completion of additional courses from their core program and earning an extra 20 credits through specified category of courses.
- **Honors through Experiential Learning:** Honors through Experiential Learning focuses on hands-on, practical experiences that complement and enhance traditional classroom learning. Students will be eligible for the degree upon the successful completion of additional courses from their core program and the attainment of 20 extra credits through specified category of courses.

For the above said categories, if a student fails to meet the CGPA and SGPA requirements, at any point after registration, she/he will be dropped from the list of students eligible for the specified Degree, then student will receive B.Tech. Degree only. However, such students will receive a separate grade sheet mentioning the additional courses completed by them.

Program Add-ons:

- **Specialization:** Specialization degree can be awarded if student completes five professional electives and one skill development course in the same track of his/her interest.
- **Minor:** Minor degree can be awarded if student fulfills all the program requirements of their discipline and are successful in completing a specified set of courses from another discipline through which they earn an additional 20 credits are eligible to get minor degree in that discipline.
- **Double Major:** Double Major degree can be awarded if student earns 40 additional credits from the selected second major stream in addition to fulfilling the requirements of their first major.

	No Major Flexibility	Major Flexibility Honors	Major Flexibility Honors through Research	Major Flexibility Honors through Innovation	Major Flexibility Honors through Experiential Learning
No Program Add-On	B.Tech.	B.Tech. (Honors)	B.Tech. (Honors through Research)	B.Tech. (Honors through Innovation)	B.Tech. (Honors through Experiential Learning)
Program Add-On Specialization	B.Tech. with Specialization	B.Tech. (Honors) with Specialization	B.Tech. (Honors through Research) with Specialization	B.Tech. (Honors through innovation) with Specialization	B.Tech. (Honors through Experiential Learning) with Specialization
Program Add-On Minor	B.Tech. with Minor	B.Tech. (Honors) with Minor	B.Tech. (Honors through Research) with Minor	B.Tech. (Honors through Innovation) with Minor	B.Tech. (Honors through Experiential Learning) with Minor
Program Add-on Double Major	B.Tech. with Second Major	B.Tech. (Honors) with Second Major	B.Tech. (Honors through Research) with Second Major	B.Tech. (Honors through innovation) with Second Major	B.Tech. (Honors through Experiential Learning) with Second Major

Registration Process

Key Guidelines:

- **Course Availability:** Students are permitted to register only for courses offered in the specific semester of enrollment.
- **Prerequisites:** Any prerequisite courses must be successfully completed before registering for subsequent courses.
- **Timely Registration:** Students must register on the designated registration day. KLEF reserves the right to deny late registrations.
- **Add/Drop/Change Period:** Students have a one-week window from the start of classes to add a course and two-weeks to drop or change courses.
- **Credit Limits:**
 - The recommended credit load is 22-24.
 - The maximum credit load per semester is 30.
 - If a student finds the standard load overwhelming, they can opt for deceleration, taking fewer courses now and making up the credits in a future summer semester.
 - Students in honors programs or pursuing a minor may be allowed to take on a heavier load through overloading, subject to eligibility criteria.
- **Elective Course Availability:** KLEF may cancel elective courses with low enrollment within the first week. Students will be able to switch to another elective if they meet its prerequisites.
- **Re-registration:** If a student wants to improve their grade in a course, they can re-register for it with approval from the Dean of Academics.
- **Registration Cancellation:** KLEF can cancel a student's registration for disciplinary reasons or plagiarism.
- **Timetable Clashes:** Students are responsible for resolving any timetable conflicts. They should contact their Department Year Coordinator immediately if any clashes arise.
- **Irregularities:** If any irregularities are found in a student's registration later on, KLEF may cancel their registration for a course or even the entire semester.

Registration Flexibilities:

- **Choice of electives:** Students have the flexibility to choose from a diverse set of elective courses that align with their personal interests or career objectives.
- **Choice of faculty:** Students have the flexibility to choose their preferred faculty members for certain courses, depending on departmental policies and course availability.
- **Acceleration & Overloading:** Students can accelerate their progress by taking courses from the next semester in advance, or overload by taking more credits than the standard limit. Prior permission from the Dean of Academics is required for either of these.
- **Deceleration & Underloading:** If students need to lighten their course load, they can decelerate by postponing some courses to the next semester, or underload by taking fewer credits than usual. Students who do not register on time, may also be forced to decelerate to compensate the classwork that they missed due to late registration. In both the cases of deceleration, permission must be sought from Office of Dean Academics through proper channel.

- **Special Purpose Semesters:**

- **Innovation Semester:** An Innovation Semester is a dedicated academic term focused on cultivating a culture of creativity, problem-solving, and entrepreneurial thinking. It provides students with the opportunity to develop innovative solutions to real-world challenges.
- **Product Development Semester:** A Product Development Semester is an academic term dedicated to the process of creating new products or improving existing ones. It provides students with hands-on experience in the entire product lifecycle, from ideation to market launch.
- **Rapid Prototyping Semester:** A Rapid Prototyping Semester is an academic term dedicated to the practical application of rapid prototyping techniques to create physical models or prototypes of products or designs. It provides students with hands-on experience in transforming digital designs into tangible objects.
- **Research Semester:** A research semester is a dedicated period within an academic program focused on independent research or scholarly inquiry. It provides students with the opportunity to delve deep into a specific research topic or project under the guidance of a faculty mentor.

Summer Term Registration:

The Summer Term is designed to help students catch up or get ahead. Here are the guidelines:

- **Eligibility:** Students can register for summer courses if they have backlogs to clear, need to fulfill pre-requisites, or have been approved for acceleration.
- **Credit Limit:** The maximum credit load for the summer term is 12.
- **Timetable Clashes:** Students should ensure there are no conflicts in their summer course schedule.
- **Attendance & Promotion:** The same policies apply as in regular semesters, except that attendance condonation is not available in the summer.

Course Categories

- **Humanities, Arts and Social Sciences (HAS):** The Humanities, Arts, and Social Sciences (HAS) category encompasses a diverse range of academic disciplines designed to broaden students' perspectives beyond their core areas of study. As part of the undergraduate curriculum, students can choose from a variety of courses within this category, including Foreign Language Electives and Management Electives. These courses offer valuable opportunities for students to develop skills in communication, cultural understanding, and management, complementing their technical education and fostering a well-rounded academic experience.
- **Basic Science Courses (BSC):** The Basic Science category covers key courses in subjects like Mathematics, Physics, and Chemistry, providing a strong scientific foundation for undergraduate students. This category includes Mathematics Electives and Science Electives, offering students the flexibility to choose courses that align with their interests. These courses help develop essential problem-solving and analytical skills, which are critical for understanding advanced concepts in their field. Basic Science courses also play a vital role in applying scientific principles to real-world engineering and research challenge.
- **Engineering Science Courses (ESC):** The Engineering Science category comprises foundational engineering courses that introduce students to essential principles and methods used in various engineering fields. These courses provide the necessary technical background and practical knowledge required for more advanced study and specialization in engineering disciplines.
- **Professional Core Courses (PCC):** Professional Core Courses (PCC) are essential courses within each engineering discipline that provide foundational knowledge and skills critical to the field. These courses are integral to the curriculum and ensure that students acquire the core competencies necessary for their professional practice.

- **Flexi Core Courses (FCC):** Flexi Core Courses offer students a degree of flexibility within their core curriculum. These courses are designed to complement the professional core courses while allowing students to select topics that align with their career goals and personal interests. Flexi Core Courses are integral to ensuring that students receive a comprehensive education while exploring specialized areas that may not be covered in the traditional core courses.
- **Skill Development Courses (SDC):** Skill Development Courses are designed to equip students with practical, hands-on skills that enhance their employability and professional capabilities. These courses often focus on soft skills, technical proficiency, and industry-relevant competencies, such as communication, teamwork, leadership, digital literacy, and industry-specific software tools. By offering both theoretical knowledge and practical training, these courses help bridge the gap between academia and the professional world.
- **Professional Elective Courses (PEC):** Professional Elective Courses (PEC) are required for students who wish to pursue a specific specialization within their field of study. These courses allow students to focus on advanced topics and gain in-depth knowledge in their area of interest, tailoring their education to align with their career goals. By completing the designated PECs, students can achieve a degree of specialization that enhances their expertise and prepares them for specific roles or industries in their professional journey.
- **Project Research and Internship (PRI):** Project Research and Internship courses provide students with real-world experience by engaging them in research projects and internships in industry or academia. These courses are essential for developing practical problem-solving skills, fostering innovation, and giving students the opportunity to apply the theoretical knowledge gained in the classroom to real-life scenarios. Through internships and research projects, students can gain industry exposure, improve their technical skills, and prepare themselves for professional careers or advanced studies.
- **Open Elective Courses (OEC):** Open Elective Courses offer students the flexibility to explore subjects outside their core discipline, fostering interdisciplinary learning and intellectual diversity. Available across all university programs, these courses encourage students to integrate knowledge from various fields, promoting innovation and a holistic understanding of global issues. Open Electives play a key role in broadening student academic perspectives and preparing them for multifaceted professional challenges.
- **Value-Added Courses (VAC):** Value-Added Courses are designed to enhance employability by providing students with training that leads to globally recognized certifications or specialized skills. These courses focus on industry-relevant knowledge and practical applications, ensuring students are well-prepared for current job market demands. By offering advanced skills and certifications, Value-Added Courses give students a competitive edge in their careers.
- **Social Immersive Learning (SIL):** Social Immersive Learning (SIL) is an informal learning approach facilitated through the Student Activity Centre, where students earn credits by actively participating in a wide range of events. These include Extension, Social & Outreach Events, Technology Club Events, Literary, Hobby & Cultural Events, Innovation, Incubation & Entrepreneurship Events, and Health & Well-Being Events. SIL emphasizes experiential and activity-based learning, fostering personal growth and social engagement. The course is evaluated based on the points students accumulate through their involvement, offering a flexible, real-world learning experience that complements their formal education.
- **Bridge Courses:** Bridge Courses are designed to address academic gaps and ensure continuity between Basic Sciences, Engineering Sciences, and Professional Courses. These courses, identified through gap analysis and stakeholder feedback, serve as a foundation for students, helping them transition smoothly between academic levels or disciplines. Bridge Courses reinforce fundamental concepts and skills, preparing students for more advanced coursework in their academic programs.
- **Audit Courses (AUC):** Audit courses are courses that students can attend without receiving a formal grade or credit towards their degree. These courses are often chosen by students who want to learn a subject for personal enrichment or to gain knowledge in areas outside of their major.

- **Honors Flexi Core Courses (HFC):** Honors Flexi Core Courses (HFC) provide students pursuing honors programs with the flexibility to choose from a range of core courses tailored to their specific academic interests and career goals. These courses are designed to offer advanced content and greater depth in core subjects, allowing students to personalize their academic journey while fulfilling the requirements of their honors program.
- **Honors Through Research Courses (HRC):** Honors Through Research Courses (HRC) enable students to engage in in-depth research projects as part of their honors curriculum. These courses focus on developing student research skills, critical thinking, and analytical abilities, allowing them to contribute original knowledge to their field of study. Through hands-on research experiences, students gain valuable insights and prepare for advanced academic or professional pursuits.
- **Honors Through Innovation Courses (HIC):** Honors Through Innovation Courses (HIC) emphasize creativity and innovation within the honors program framework. These courses encourage students to explore cutting-edge technologies, develop novel solutions to real-world problems, and engage in entrepreneurial activities. By focusing on innovation, students can apply their learning to create impactful projects and drive advancements in their areas of interest.
- **Honors Through Experiential Learning Courses (HEC):** Honors Through Experiential Learning Courses (HEC) integrate practical, hands-on experiences with academic study. These courses offer students opportunities to apply theoretical knowledge in real-world settings through internships, fieldwork, or community projects. HEC courses aim to enhance student learning by providing experiential opportunities that complement their honors education and contribute to their personal and professional development.
- **Minor Degree Courses (MIN):** Students pursuing a Minor Degree must complete a designated set of Minor Degree Courses. These courses are carefully selected to provide a structured and cohesive understanding of the minor subject, complementing the student's major field of study. By fulfilling these requirements, students gain specialized knowledge and skills in an additional discipline, which enhances their overall academic profile and broadens their career opportunities.
- **Minor Skill Development Courses (MSDC):** Minor Skill Development Courses (MSDC) must be completed as part of the selected minor degree. These courses are designed to provide targeted skill-building opportunities relevant to the minor field, focusing on practical and industry-specific competencies. By engaging in MSDC, students develop specialized skills that complement their major and enhance their overall expertise, making them more versatile and competitive in their chosen career paths.
- **Second Major Flexi Core Courses (SMFC):** Second Major Flexi Core Courses (SMFC) are designed for students pursuing a second major, offering flexibility in selecting core courses that meet the requirements of both their primary and secondary majors. These courses allow students to integrate and balance the demands of two distinct fields of study, providing a comprehensive educational experience across discipline.

Requirements for the award of Degree

To be eligible for the award of a B.Tech. degree, a student must successfully fulfill the following criteria:

- **Credit Requirements:** Earn the minimum number of credits specified in the program structure.
- **Focused Training:** Successfully undertake specific training in focused areas that enable students to be successful in their chosen career tracks. The focused areas are: (a) Employment in MNCs, (b) Civil Services (c) Higher Studies (d) Research and (e) Entrepreneurship.
- **Certifications:** Successfully complete at least three global certifications or value-added courses in the chosen discipline, along with one in yoga, sports & games, or fine arts.
- **Internships:** Complete both a Social Internship and a Technical Internship.

- **Audit Courses:** Successfully complete all audit courses outlined in the program structure.
- **Minimum CGPA:** Achieve a minimum Cumulative Grade Point Average (CGPA) of 5.25 by the end of the program.
- **Extra Courses:** Students with extra courses having 'DT' or 'F' grades can still graduate if they meet all other requirements. However, these courses will be factored into the CGPA calculation.
- **Time Limit:** Complete all requirements within:
 - A minimum of 8 regular semesters (excluding summer terms)
 - A maximum of 8 years

Note: The student is awarded a B.Tech. (Honors / Specialization / Minor / Double Major) degree based on the chosen academic flexibility, provided they fulfill all the credit and outcome requirements specified for each degree (refer to degree-wise requirements under Design your own Degree) in addition to meeting the regular B.Tech. degree requirements mentioned above.

Multiple Entry and Exit System

Multiple Entry and Exit System (MEES) empowers students to make their own academic decisions, allowing them to rejoin their studies at a later point and achieve their career goals. As per NEP guidelines, undergraduate degrees can be three or four years long, with multiple entry and exit points. Students can earn certificates, diplomas, or degrees based on their progress.

Entry and Exit Options:

- 1st Year (Level 5 - Undergraduate Certificate):
 - Entry: Secondary School Leaving Certificate (Grade 12/Intermediate)
 - Exit: Certificate in Computational Thinking & Engineering Science (40 credits + 4 skill development credits)
- 2nd Year (Level 6 - Undergraduate Diploma):
 - Entry: Completion of the first year with a certificate.
 - Exit: Diploma in the respective discipline (80 credits + 4 skill development credits, with at least 40 credits at Level 6)
- 3rd Year (Level 7 - Bachelor's Degree):
 - Entry: Completion of two years with a diploma
 - Exit: Bachelor of Science in the respective discipline (120 credits + 4 skill development credits across Levels 5, 6, and 7)
- 4th Year (Level 8 - Bachelor's Engineering Degree):
 - Entry: Completion of a three-year B.Sc. degree with a minimum CGPA of 7.5.
 - Exit: B.Tech. degree (minimum 160 credits from Levels 5 to 8).

Note: These degree levels align with the NHEQF. While the student is provided with MEES, the maximum time limit for completion of degree must still be adhered for the award of degree.

Branch Transfer

A student admitted to a particular Branch of the B.Tech. Program will normally continue studying in that branch until the completion of the program. However, in special cases the KLEF may permit a student to change from one branch to another after the second semester, provided s/he has fulfilled admission requirement for the branch into which the change is requested.

The rules governing change of branch are as listed below:

- (a) Top 1% (based on CGPA until 2nd semester) students will be permitted to change to any branch of their choice within the program discipline.
- (b) Apart from students mentioned in above clause, those who have successfully completed all the first and second semester courses and with CGPA greater than or equal to 8 are also eligible to apply, but the change of Branch in such case is purely at the discretion of the KLEF.
- (c) All changes of Branch will be effective from third semester. Change of branch shall not be permitted thereafter.
- (d) Change of branch once made will be final and binding on the student. No student will be permitted, under any circumstances, to refuse the change of branch offered.
- (e) Students in clause (a) and (b) may be permitted subject to the availability of seats in the desired branch.

Academic Bank of Credits

- ABC helps the students to digitally store their academic credits from any higher education institute registered under ABC in order to award Certificate/Diploma/Degree/Honors based on the credits earned by the student.
- All the credits acquired by the students are stored digitally by registering into Academic Bank of Credits (ABC) portal. It also supports retaining the credits for a shelf period and continue their program study with multiple breakovers.
- Students may exit from their current program of study due to any unforeseen reasons or to focus on their chosen career path. In such cases, the student may break for a period of time (preferably not in the middle of an academic year) and may continue with the program of study at a later stage.
- Students must be able to complete their program by not exceeding the maximum duration of the program. If not, they may be issued with a Certificate, diploma, degree or honors based on the credits acquired over the period of time for all the programs approved by UGC.

Award of Class

A student having cleared all the courses and met all the requirements for the award of degree with:

- **Pass class:** CGPA greater than or equal to 5.25 and lesser than 5.75.
- **Second class:** CGPA greater than or equal to 5.75 and lesser than 6.75.
- **First class:** CGPA greater than or equal to 6.75 and lesser than 7.75
- **First class with Distinction:** CGPA greater than or equal to 7.75, provided the student has cleared all the courses in first attempt and must have fulfilled all the program requirements in program specified minimum years duration.

Award of Medals

KLEF awards Gold and Silver medals to the top two candidates in each program after successful completion of their study. The medals are awarded based on their CGPA during the Annual Convocation with the following constraints:

- The grade obtained through betterment/ supplementary will not be considered for this award.
- He/She must have obtained first class with distinction for the award of Gold or Silver-medal.

Course Flexibilities

In line with the institution's commitment to personalized learning, courses are offered in multiple modes, allowing students to tailor their academic journey based on personal preferences, career goals, and learning styles. The available modes include:

- **Regular Mode:** It is the traditional method of learning, involving in-person classroom instruction, a structured curriculum, and traditional assessments. This mode provides students with a structured and predictable learning environment, facilitating direct interaction with professors and classmates. It is suitable for students who prefer a traditional learning approach and value face-to-face interaction.
- **Advanced Mode:** This mode is designed for students seeking a more rigorous academic experience, this mode offers additional credits, in-depth theoretical studies, research projects, and complex problem-solving evaluations. It is particularly suitable for students participating in honors programs.

- **Experiential Mode:** This mode emphasizes practical learning through real-world projects, lab work, or industry interactions. It offers variable credits based on the extent of practical involvement and assessments centered around project outcomes and presentations. Honors students pursuing experiential learning often choose this option.
- **MOOCs Mode:** Massive Open Online Courses (MOOCs) are utilized to support independent learners, such as students engaged in internships or practice school. Students can earn credits by completing accredited online courses at their own pace. Assessments in this mode may include online quizzes, certifications, and institutional evaluations.
- **Work-in-lieu Mode:** It allows students to substitute certain coursework with relevant work experience, internships, or on-the-job training. Credits are awarded based on the work performed, and evaluations are typically centered around performance reports, supervisor evaluations, and reflective essays. This mode is ideal for students who want to gain practical experience while fulfilling academic requirements.

Attendance calculation in a course

- **Attendance calculation for LTPS:** Attendance of a student on a course is calculated based on the credit-weighted average of the student's attendance in each of the LTPS components of the course.
- **Attendance start date:** Attendance is counted from the class commencement date. However, for transferred or newly admitted students, attendance in their admitted semester is counted from the date of admission.

Attendance requirements leading to promotion

- **Minimum Attendance:** 85% attendance is required for course promotion and appearing for the semester-end exam.
- **Condonation:** Up to 10% condonation by Principal, College of Engineering, is possible for medical emergencies with proper documentation submitted within a week. Students will be levied a condonation fee to appear for the semester-end exam.
- **Marginal Cases:** Attendance slightly below 75% due to severe medical or valid reasons may be considered for further relaxation by the condonation board appointed and headed by the Vice-Chancellor.

Attendance-based marks

- **Optional Marks:** Course coordinators can allocate up to 5% of the total marks for attendance, clearly stated in the course handout and approved by the Dean of Academics through proper channel.
- **Mark Distribution:** Marks are awarded based on attendance ranges: 85-88% = 1 mark, 89-91% = 2 marks, and so on. Below 85% results in zero marks, even with condonation.
- **Applicability:** Attendance marks, if given, apply to all L-T-P-S components cumulatively, not just the theory part.

Attendance waiver

- **Eligibility:** Students with a CGPA and SGPA of 9.00 or higher in the previous semester can get an attendance waiver for up to three courses in the next semester, with prior approval from the Dean of Academics through proper channel.
- **Conditions:** Students using the attendance waiver can participate in all assessments and evaluation components without being marked ineligible due to attendance-based regulations.

Compensatory (Extra) attendance policy

- **Eligibility:** Students representing KLEF in events or participating in co-curricular / extracurricular activities can get compensatory attendance with prior written approval.
- **Limit:** Compensation is limited to 10% of total classes per course per semester and doesn't apply to the summer term.

Course-based promotion and detention policy

- **Minimum Attendance:** Students must meet the minimum attendance requirement to be promoted in a course. If a student fails to meet this requirement, their grade in the course will be marked as "DT", indicating that the student is detained in the course.
- **Next Steps after detention:** Student must re-register in a detained course and study it completely by attending the classwork, submitting all assessments, taking all evaluation components

Eligibility for appearing Sem-End Examination

A Student registered for a course and got promoted is eligible to write the Semester End Examination for that course unless found ineligible due to one or more of the following reasons:

- Shortfall of attendance.
- Acts of indiscipline.
- Withdrawal from a course.
- Non-payment of examination fees.
- Without a hall ticket.

Assessment & Evaluation

The assessment in each theory subject consists of Sem In Exams, in class quizzes/tutorials/home-assignments/Active Learning Methods (continuous assessment) and the Semester End Examination (SEE). Students are advised to refer to the course handout to get more detailed information on assessment.

- Sem In Examinations and the Semester End Examinations will be conducted as per the Academic Calendar.
- As per the necessity, the Supplementary examinations will be conducted at the discretion of Dean Academics with the approval of the Vice Chancellor.
- Students may have to take more than one examination in a day during Sem In exams, Semester End Examinations /Supplementary examinations.

College / School Name	Semester-In Evaluation (Weightage in percent) (A)	Sem End Examination (Weightage in percent) (B)	Minimum requirement for pass percent	
			(A+B)	B
College of Engineering	60	40	40	40

Semester-In Evaluation

The following guidelines are followed for the Semester In evaluation.

- The process of evaluation is continuous throughout the semester
- The distribution of marks for Semester In evaluation is 60 percent of aggregate marks of the course.
- The distribution of weightage for various evaluation components are decided and notified by the course coordinator through the course handout after approval by the Dean Academics, prior to the beginning of the semester.
- In order to maintain transparency in evaluation, answer scripts are shown to the students for verification, within one week of conduct of exam. If there is any discrepancy in evaluation, the student can request the course coordinator to re-evaluate.
- The solution key and scheme of evaluation for all examinations are displayed by the Course Coordinator in the appropriate web portal of the course, on the day of the conduct of examination.
- In case the student is unable to appear for any evaluation component owing to hospitalization, participation in extra/ co-curricular activities representing KLEF/ state/ country; the Dean Academics can permit to conduct of re-examination for such students.
- In case a student has missed any of the two in semester evaluations, S/he is eligible for and will be provided with an opportunity of appearing for re-examination.
- The pattern and duration of such examination are decided and notified by the Course Coordinator through the Course handout, after approval from the Dean Academic.
- To maintain transparency in evaluation, answer scripts are shown to the students for verification. If there is any discrepancy in evaluation, the student can request the Controller of Examinations to re-evaluate.
- If a student earns F grade in any of the courses of a semester, an instant supplementary exam (for only Semester End Exam component) will be provided within a fortnight of the declaration of the results.

Semester-End Evaluation

The following guidelines are followed for the End Semester evaluation.

- The end-semester evaluation typically includes a variety of components such as Sem End Exams, projects, presentations, or practical assessments, skill assessments as detailed in the course handout.
- Each component is evaluated based on the criteria outlined in the course handout.
- The distribution of weightage for various evaluation components are decided and notified by the course coordinator through the course handout after approval by the Dean Academics, prior to the beginning of the semester.
- To pass in a course, student must meet or exceed the minimum passing marks specified for each end semester summative assessment component mentioned in the course handout.
- The key and scheme of evaluation for all examinations are displayed by the Course Coordinator in the appropriate web portal of the course, on the day of the conduct of examination.
- In case the student is unable to appear for any Sem end summative evaluation component owing to hospitalization, participation in extra/ co-curricular activities representing KLEF/ state/ country; student can request for re-examination by taking prior permission from Dean Academics.
- If a student earns F grade in any of the courses of a semester, an instant supplementary exam (for only Semester End Exam component) will be provided within a fortnight of the declaration of the results.

Absence in Assessment and Examination

If a student misses a formative assessment component (quizzes, assignments, etc.) due to illness or other valid reasons, no retakes will be permitted, and a score of zero will be recorded. However, in cases of an excused absence, the instructor may allow the student to retake the assessment, subject to written approval from both the Principal and the relevant Head of Department.

Make-up Exams:

A student's absence from Semester In or Semester End Exams will only be considered for a make-up exam under the following circumstances.

- Pre-approved participation in university/state/national/international co-curricular or extracurricular activities.
- Illness or medical emergencies resulting in hospitalization, with a doctor's certification explicitly stating the student's inability to attend the exam within the designated period.
- Death of an immediate family member.

Remedial Exams:

- Remedial exams are conducted for students who score less than 60% on Semester In Exam I and have attended at least 85% of the remedial classes.
- For courses without remedial classes, no remedial exam will be scheduled.
- If a student does not take or scores less than 60% on Semester In Exam I, they must attend remedial classes and maintain a minimum 85% attendance to be eligible for the remedial exam. The remedial exam score will then be considered.
- The number of remedial classes will be 33% of the regular classes held prior to Semester In Exam I. However, there are no remedial exams for Semester In Exam II or laboratory exams.

Remedial Classes Policy

The following categories of students are recommended to attend Remedial classes:

- Students who did not attend or obtain a minimum of 60 percent marks in the Sem In exam1.
- Students for whom CO1/CO2 is (are) not attained in Sem In Exam 1
- Any other student may also be permitted to attend remedial classes as per the discretion of the principal.

The following are the guidelines to conduct remedial classes:

- Remedial classes which are scheduled to be conducted usually one or two weeks post conclusion of Sem In exam1.
- The number of remedial classes to be conducted shall be 33 percent of regular classes held till the Sem In exam I.
- Remedial classes MUST NOT be scheduled during regular class work hours.

Assessment of Project/Research based Courses

- All project or research-based subjects must have a defined time limit for completion.
- The specific time limits for completion and schedule for monitoring and evaluation of performance of students will be announced each term.
- The final project report, after getting the plagiarism certificate, only will be considered and evaluated by the panel of examiners.
- Student project reports must follow the guidelines prescribed by the office of Dean Academics.

Grading Process

At the end of all evaluation components based on the performance of the student, each student is awarded based on absolute/relative grading system. Relative grading is only applicable to a section of a course in which the number of registered students is greater than or equal to 25. Choice of grading system is decided by the Course Coordinator with due approval of Dean Academics and is specified in the course handout.

(i) Absolute Grading:

The list of absolute grades and its connotation are given below:

Performance	Letter Grade	Grade Point	Percentage of marks
Outstanding	O	10	90 - 100
Excellent	A+	9	80 - 89
Very Good	A	8	70 - 79
Good	B+	7	60 - 69
Above Average	B	6	50 - 59
Average	C	5	46 - 49
Pass	P	4	40 - 45
Fail	F	0	0 - 39
Absent	AB	0	Absent

(ii) Relative Grading:

The following table lists the grades and its connotation for relative grading:

Letter Grade	Grade Point	Grade Calculation
O	10	total marks $\geq 90\%$ and total marks $\geq \mu + 1.50\sigma$
A+	9	$\mu + 0.50\sigma \leq \text{total marks} < \mu + 1.50\sigma$
A	8	$\mu \leq \text{total marks} < \mu + 0.50\sigma$
B+	7	$\mu - 0.50\sigma \leq \text{total marks} < \mu$
B	6	$\mu - 1.00\sigma \leq \text{total marks} < \mu - 0.50\sigma$
C	5	$\mu - 1.25\sigma \leq \text{total marks} < \mu - 1.00\sigma$
P	4	$\mu - 1.50\sigma \leq \text{total marks} < \mu - 1.25\sigma$ or ≥ 40
F	0	total marks $< \mu - 1.50\sigma$ or total marks ≤ 39
AB	0	Absent

μ is the mean mark of the class excluding the marks of those students who scored greater than or equal 90 percent and less than or equal 40 percent after rounding the percentages to the next highest integer. σ is the standard deviation of the marks.

Course handout

A course handout is a document that provides essential information about a specific course. It's like a roadmap that guides you through the course, helping you understand the expectations, assignments, and grading criteria.

Significance of Course Handout:

- **Clarity and Organization:** Course handouts help you stay organized and focused by outlining the course structure, topics, and deadlines.
- **Expectations:** They communicate the instructor's expectations for your participation, assignments, and overall performance.
- **Grading:** Course handouts outline the grading criteria, so you know exactly how your work will be evaluated.
- **Resources:** They often list valuable resources, such as textbooks, articles, or online tools, that can aid your learning.

Expectations from the course handout:

- **Course Description:** A brief overview of the course, its goals, and its relevance to your studies.
- **Learning Outcomes:** Clear goals for what you should be able to do by the end of the course. These outcomes will help you understand the skills and knowledge that are expected to gain.
- **Instructor Information:** Contact details, office hours, and specific communication preferences.
- **Course Schedule:** A tentative timeline of topics, assignments, and exams.
- **Required Materials:** A list of textbooks, articles, or other materials essential for the course.
- **Assessment Methods:** A breakdown of how your final grade will be determined, including the weight of assignments, exams, and participation.
- **Assignment Guidelines:** Detailed instructions for each assignment, including due dates, submission requirements, and expectations.

Effective use of the course handout:

- **Refer to it regularly:** Check back to keep track of important dates and assignments.
- **Highlight key points:** Make notes or highlight sections that are particularly important to you.
- **Ask questions:** If something isn't clear, bring it up in class or during office hours.

Betterment

- A student may reappear for the semester-end examination for betterment, only in the theory part of a course to improve their grade, provided that the student has passed the course, his/her CGPA is less than or equal to 6.75 and the grade in the respective course is equal to or lower than a 'C'. In case of reappearing for a course, the best of the two grades will be considered.
- A student may re-register for any course in any semester during the program to improve their grade if the current grade in the course is lower than 'B+', with the approval of the Dean Academics and in accordance with academic regulations.
- A student cannot reappear for the semester-end examination in courses with an L-T-P-S structure such as 0-0-X-X, 0-0-X-0, 0-0-0-X, Social Internship, Technical Internship, Seminar, Term Paper, Project, Capstone Project, Practice School, Industrial Internship.
- A student is not eligible for the award of a Degree with Honors if they opt for the betterment option.

Supplementary

- A student is eligible for a supplementary exam if they don't meet the minimum passing marks for a course or if they fail any component of the end-of-semester assessments listed in the course handout.
- If a student has failed courses from a previous odd semester that are not offered in the current semester, the supplementary exams for those courses will be scheduled for the summer supply.

- As per the end semester assessment components listed in the course handout (i.e. end semester summative) if student fail any component, they are eligible for a supplementary exam. Only the component(s) student failed will be considered for this supplementary attempt, though in some cases, you might be allowed to retake all components to improve your marks.
- If a student fails any of the end-of-semester examinations in an odd semester, supplementary exams for the current semester's courses will be conducted within one month after the release of the results. These supplementary exams will only cover the courses offered in that specific odd semester.
- In cases where there is a clash between odd semester supplementary exams and other scheduled exams, students may take the supplementary exams during the summer supply.
- If a student fails any of the end-of-semester examinations in an even semester, supplementary exams will be scheduled either within one month after the release of the results (i.e. summer supply) or during the summer term.
- Student must register for supplementary exams within a specified period after the results are declared.
- Student may be required to pay a supplementary exam fee. Details on the fee structure and payment process will be provided along with the supplementary exam notification.
- A student is not eligible for the award of a degree with first class with Distinction, if they opt for the Supplementary option.

Revaluation

Students desirous of seeing their Semester End Examination answer scripts have to apply online to the COE for the same within the timeframe as declared by the COE by paying the prescribed fee through ERP. Student applications must be forwarded by the Head of the Department and the Principal of the School and then re evaluation fees are to be paid. The application along with the attached fee receipt must be submitted to the office of the COE.

- There is no provision for re evaluation in case of Lab/Practical/skilling exams, project, viva voce exam or seminar / design / mini project courses.
- The final grades awarded to each course shall be announced by the COE and the same will be made available to students through the website/notice boards.

Credit Transfer

Credit transfer between KLEF and other Institution:

Credit transfer from other institutions to KLEF or vice versa is permitted only for undergraduate program.

Credit transfer from KLEF to other institutions: Student studying in KLEF can take transfer to another institution under the following conditions:

- KLEF has signed MOU with the institution
- However, a student, after seeking transfer from KLEF can return to KLEF after a semester or year. Based on courses done in the other institution, equivalent credits shall be awarded to such students.

Credit transfer from another institution to KLEF:

A student studying in another institution can take transfer to KLEF under the following conditions:

- When a student seeks transfer, equivalent credits will be assigned to the student based on the courses studied by the student.

- To determine the equivalent credits for a course from a previous institution on a 10-point scale at KLEF, the number of credits of the course is multiplied by the equivalent grade point of the previous institution and then divided by the number of credits of the corresponding course at KLEF.
- If a course from the previous institution has zero credits and no grade assigned, the student must sit for the final examination for the equivalent course at KLEF.
- A transfer student seeking improvement in any course can take the final examination at KLEF, where the grade received at KLEF becomes the final grade recorded on their grade sheets.
- The student, when transferred from other institutions, must stick to the rules and regulations of KLEF.
- To graduate from KLEF, a student must study at least half of the minimum duration prescribed for a program at KLEF.

Credit Transfer Through MOOCs:

- Undergraduate students can get credits for MOOCs courses recommended by KLEF up to a maximum of 20% of their minimum credits required for graduation. The discretion of allocation of MOOCs courses equivalent to the courses in the curriculum lies with the office of the Dean Academics.
- A student may also be permitted to obtain 20 credits through MOOCs in addition to the minimum credits required for graduation. These 20 credits can also be utilized to acquire a Minor degree or an Honors degree if the courses are pronounced equivalent to those specified for the respective degrees by the office of the Dean Academics. These additional credits through MOOCs if to be considered for CGPA/Minor/Honors degree must be approved by Dean Academics prior to enrollment in the respective MOOCs.
- Students acquiring additional credits for Honors/Minor degree must adhere to the rules governing the award of the respective degree, otherwise, a student applying for registering into additional credits through MOOCs must possess a minimum CGPA of 7.5 till that semester.

Semester Promotion policy

Promotion is only course-based. Semester-based promotion is not applicable for B.Tech. students.

Counselling procedure

KLEF is committed to fostering a supportive and nurturing environment for our students, addressing not only their academic needs but also their psychological well-being. To achieve this, KLEF is implementing a comprehensive Mentor-Mentee Scheme aimed at providing holistic support through academic, career, and psychological counselling. To achieve this, KLEF implement a comprehensive Mentor-Mentee Scheme and establish the Central Academic Counselling Board (CACB) in addressing academic, career and student-psychological issues.

The Mentor-Mentee Scheme aims to provide personalized guidance and support to students throughout their academic journey. Each student shall be assigned a mentor from the faculty, who will act as a guide, counselor, and advocate for the student's academic and personal growth. The mentor-mentee relationship is intended to facilitate communication, goal-setting, and problem-solving.

The primary objectives of the Mentor-Mentee Scheme are:

- To facilitate a strong and positive mentor-mentee relationship that supports students' academic growth, personal development, and psychological well-being.
- To offer career counselling, guiding mentees in exploring career options, developing professional skills, and making informed career-related decisions.

- To provide psychological counselling, offering a safe space for mentees to discuss psychological concerns and providing appropriate support or referrals when needed.
- To provide tailored academic counselling, helping mentees set academic goals, plan their course of study, and navigate academic challenges effectively.

Academic Counselling:

The mentors oversee the following academic counselling activities which are not limited to:

- Providing guidance during academic registration sessions
- Monitoring attendance and addressing attendance-related concerns
- Communicating attendance and marks information to parents/guardians
- Addressing concerns related to backlogs and providing advice
- Advising on domain specializations and academic flexibilities
- Assisting students in exploring study abroad opportunities
- Conducting student and parent meetings to address academic concerns

Career Counselling:

The mentors oversee the following career counselling activities which are not limited to:

- Recommending technical skilling courses and certificate programs
- Facilitating internship opportunities and competitive exam preparations
- Guiding students through term papers, projects, hackathons, and coding challenges
- Providing information on higher education options and entrance exams
- Encouraging entrepreneurship awareness and guiding start-ups initiatives
- Assisting students in preparing for placements and future career goals
- Conducting student and parent meetings to discuss career aspirations

Psychological Counselling:

The Mentors oversee the following psychological counselling activities which are not limited to:

- Providing guidance on time management and classroom activities
- Addressing anti-ragging issues and promoting a positive attitude
- Providing support for managing mental stress and promoting well-being
- Addressing hostel, room, home, and food-related concerns
- Conducting student and parent meetings to address personal well-being

Mentor-Mentee allocation

- The Department Academic Counselling Board (DACB) is responsible for assigning approximately 20 students to each faculty member, who will act as their mentor. The mentors will guide and support their assigned students throughout their academic journey.
- For engineering students, the procedure includes a specific approach: during their first year, faculty members from the Fresh Engineering Department (FED) will be designated as counsellors/mentors. From the second year onwards, counsellors/mentors will be appointed from the students' respective parent departments, and these faculty members will continue as mentors until the students complete their course.
- The counselling program aims to help students develop their character, academic abilities, professional skills, and social responsibilities. Mentors play a vital role in this process by:
 - Maintaining detailed records of mentor-mentee interactions in the ERP system. Mentors are required to update the ERP with counselling remarks for both students and their parents every fortnight.
 - Providing regular updates to parents about students' academic progress, career developments, and physiological status through various communication channels, including phone calls, SMS, WhatsApp, and Telegram.
 - Ensuring that counselling remarks are accurately recorded in the ERP system, and reflecting these updates in DACB monthly reports and CACB semester reports.

Academic Counselling Board

- Academic Counselling Board is constituted by the Dean Academics. This board shall comprise of the Chairman, Convener, Principal/Director, HOD and Professor/Associate Professor. A student will be put under Academic Counselling Board in the following circumstances:
 - Has CGPA of less than 6.00.
 - Has F grade or Detained in multiple courses.
- The first level of Counselling such students will be done by the Mentor of the student and the HoD followed by the ACB and the list of students who have to undergo the ACB counselling be forwarded by the HoD to the Office of Dean Academics.
- The students undergoing the Academic Counselling Board process may be allowed to register only for a few courses based on the recommendation of Academic Counselling Board.

Rustication policy

A student may be rusticated from the KLEF on disciplinary grounds, based on the recommendations of any empowered committee, by the Vice Chancellor.

Malpractice penalty policy

The following actions constitute malpractice during examinations and are subject to disciplinary actions as outlined below:

Clause 1: Possession of unauthorized material in the examination hall (e.g., paper, notebooks, programmable calculators, cell phones, or any material related to the exam subject). This includes any marks on the candidate's body that could be used as an aid.

Penalty: Immediate expulsion from the examination hall, without cancelling the paper.

Clause 2: a) Providing or receiving assistance, or communicating with others via oral means, body language, or electronic devices (such as cell phones), either inside or outside the examination hall. b) Smuggling in or out answer sheets, additional sheets, or arranging to send out the question paper or answer sheets during or after the exam. c) Using objectionable or offensive language in the answer paper or in communication with examiners, or attempting to influence examiners to award passing marks. d) Exchanging answer scripts or additional sheets in the examination hall

Penalty: Expulsion from the examination hall and cancellation of the comprehensive examination performance in that subject only of all the candidates involved. In case of an outsider, he will be handed over to the police and a case is registered against him

Clause 3: Copying from any unauthorized material (e.g., paper, books, programmable calculators, palm computers) during the exam.

Penalty: Expulsion from the examination hall, cancellation of the exam performance in that subject, and a fine of Rs. 1000.

Clause 4: a) Taking the answer script outside the exam hall, tearing the script or any part of it inside or outside the hall. b) Appearing for the exam in a drunken condition.

Penalty: Expulsion from the examination hall and cancellation of comprehensive examination performance in that subject and all the other subjects the candidate has already appeared including practical examinations and project work and shall not be permitted for the remaining comprehensive examinations of the subjects of that semester/year.

Clause 5: a) Disobeying examination authorities, creating disturbances, organizing or instigating a walk-out, threatening or assaulting officials, or damaging property inside or outside the exam hall. b) Possession of any lethal weapon or firearm in the examination hall.

Penalty: Expulsion from the exam hall and cancellation of exam performance in all subjects. The student will be debarred from future exams and may forfeit their seat. Outsiders will be handed over to the police.

Clause 6: Impersonation during the examination.

Penalty: Both the impersonator and the original candidate will be expelled from the exam hall. The original candidate's performance will be cancelled in all subjects, including practical and project work, and they will be barred from exams for two consecutive semesters. Continuation in the course is subject to academic regulations. The impersonator (if an outsider) will be handed over to the police.

Clause 7: Repeated offenses.

Penalty: For a second offense, the candidate will face expulsion from the exam hall and cancellation of all exam performances for that term, with a fine of Rs. 1000. Repeated academic dishonesty may result in the issuance of a transfer certificate (TC).

Clause 8: Any other form of malpractice not specified.

Penalty: Punishment will be determined by the Examination Malpractice Committee and approved by the Vice-Chancellor.

Plagiarism Penalty Policy

Plagiarism is considered a serious breach of academic integrity, compromising both the ethical standards of the university and the intellectual development of students. The university enforces a strict zero-tolerance policy regarding plagiarism, and all students are expected to uphold the highest standards of academic honesty.

Penalties for plagiarism will be applied as follows:

First Offense:

- Minor Plagiarism (e.g., improper citation, small portions of copied work): The student will receive a warning and be required to resubmit the work with proper citations. Marks may be reduced up to 50%.
- Major Plagiarism (e.g., copying significant portions, submitting another person's work): The assignment will receive a grade of zero. The student may be required to attend a mandatory workshop on academic integrity.

Second Offense:

- Any second offense, regardless of severity, will result in a zero for the assignment and an official letter of reprimand placed in the student's record. The student will be placed on academic probation.

Third Offense:

- The student will face suspension from the university for one academic term. A record of academic misconduct will be permanently placed in the student's academic file.

Repeated Violations:

- Further violations after the third offense may lead to expulsion from the university.

In cases of group work, if plagiarism is identified, all group members will be held equally accountable unless it can be demonstrated that the act of plagiarism was isolated to specific individuals.

Terminology

Absolute Grading: Absolute grading is a method of assigning grades based on predetermined criteria or standards rather than comparing student performance to other students in the class (See: Relative Grading where the performances are compared).

Academic Bank of Credits (ABC): Academic Bank of Credits, an initiative of Government of India, is a digital platform that stores the academic credits earned by a student throughout their educational journey. It's essentially a virtual repository of a student's academic achievements.

Academic Council: The Academic Council is the highest academic body of the University and is responsible for the maintenance of standards of instruction, education and examination within the University. The Academic Council is an authority as per UGC regulations and has the right to decide all academic matters including academic research.

Academic Year: It is the period necessary to complete an actual course of study within a year. It comprises of two consecutive regular semesters i.e., Odd and Even semesters.

Acceleration: Acceleration of courses refers to a student's ability to progress through their academic program at a faster pace than traditional timelines.

Attendance: Attendance refers to the record of a student's presence or absence in educational institutions. It is a critical factor influencing academic performance, overall development, and future success.

Audited Course: It is a course of study which has zero credits and has a "Satisfactory" or an "Unsatisfactory" grade.

Backlog Course: A course is considered to be a backlog if the student has obtained 'F' grade or detained in the course.

Basic Sciences: The courses of foundational nature in the areas of Mathematics, Physics, Chemistry, Biology etc., are offered in this category.

Betterment: Betterment is a way that contributes towards improving the students' grade in any course(s). It can be done by either (a) re-appearing or (b) re-registering for the course.

Board of Studies: Board of Studies (BOS) is an authority as defined in UGC regulations, constituted by Vice Chancellor for each of the department separately. They are responsible for curriculum design and update in respect of all the programs offered by a department.

Branch of Study: It is a branch of knowledge, an area of study or a specific program (like Civil Engineering, Mechanical Engineering, Electrical and Electronics Engineering etc.)

Bridge Courses: Courses which are required to bridge the continuity among the Basic sciences/Engineering Sciences/professional courses (both core and electives) and are identified through gap analysis carried out using feedback obtained from various academic stakeholders are termed as Bridge Courses. These courses also do not yield any credits but require a "Satisfactory" result to register into the attached professional courses.

Capstone Project: A capstone project is the culminating academic experience for many students, typically undertaken in the final year of a degree program. It's designed to integrate and apply the knowledge and skills acquired throughout the course of study.

Certificate course: It is a course that makes a student gain hands-on expertise and skills required for holistic development. It is a mandatory, non-credited course for the award of degree.

Change of Branch: Change of branch means transfer from one's branch of study to another.

Compulsory course: Course required to be undertaken for the award of the degree as per the program.

Course: A course is a subject offered by the University for learning in a particular semester.

Course Handout: Course Handout is a document which gives a complete plan of the course. It contains the details of the course viz. Course title, Course code, Pre-requisite, Credit structure, team of instructors, Course objectives, Course rationale, Course Outcomes and the relevant syllabus, textbook(s) and reference books, Course delivery plan and session plan, evaluation method, chamber consultation hour, course notices and other course related aspects. In essence, course handout is an agreement between students (learners) and the instructor.

Course Outcomes: The essential skills that need to be acquired by every student through a course.

Course Withdrawal: Withdrawing from a Course means that a student can drop from a course within the first two weeks of the odd or even Semester (deadlines are different for summer sessions). However, s/he can choose a substitute course in place of it by exercising the option within 5 working days from the date of withdrawal.

Credit: A credit is a unit that gives weight to the value, level or time requirements of an academic course. The number of 'Contact Hours' in a week of a particular course determines its credit value. One credit is equivalent to one lecture hour per week or two hours per week of tutorials/ self-learning/ practical/ field work during a semester.

Credit point: It is the product of grade point and number of credits for a course.

Credit Transfer: The procedure of granting credit (s) to a student for course(s) undertaken at another institution.

Cumulative Grade Point Average (CGPA): It is a measure of cumulative performance of a student over all the completed semesters. The CGPA is the ratio of total credit points secured by a student in various courses in all semesters and the sum of the total credits of all courses in all the semesters. It is expressed up to two decimal places.

Curriculum: Curriculum is a standards-based sequence of planned experiences where students practice and achieve proficiency in content and applied learning skills. Curriculum is the central guide for all educators as to what is essential for teaching and learning, so that every student has access to rigorous academic experiences.

Deceleration: Deceleration of courses typically refers to a student's decision to reduce their course load or extend the time taken to complete a degree program.

Degree: A student who fulfils all the Program requirements is eligible to receive a degree.

Degree Requirements: Degree requirements are the specific courses, credits, and academic standards that a student must fulfill to earn a particular degree.

Degree with Specialization: A student who fulfils all the Program requirements of her/his discipline and successfully completes a specified set of Professional elective courses in a specialized area is eligible to receive a degree with specialization.

Department: An academic entity that conducts relevant curricular and co-curricular activities, involving both teaching and non-teaching staff and other resources.

Designing Your Own Degree: Designing your own degree is a revolutionary concept that empowers students to create a customized educational path aligned with their passions, career goals, and unique learning styles.

Dissertation: Dissertation is a substantial piece of original research written and defended by a candidate for a degree.

Detention in a course: Student who does not obtain minimum prescribed marks in continuous in-semester evaluation and /or minimum prescribed attendance in a course shall be detained in that course.

Double Major Degree: A double major degree allows students to specialize in two academic fields while earning a single bachelor's degree.

Dropping from the Semester: A student who doesn't want to register for the semester should do so in writing in a prescribed format before commencement of the semester.

End-semester Evaluation: End-semester evaluation is a summative assessment conducted at the conclusion of an academic term to measure students' overall performance.

Elective Course: A course that can be chosen from a set of courses. An elective can be Professional Elective, Open Elective, Management Elective and Humanities Elective.

Engineering Sciences: The courses belonging to basic evolutionary aspects of engineering from Mechanical Sciences, Electrical Sciences and Computing like Engineering Mechanics, Data structures, Network Theory, Signal Analysis.

EPICS: EPICS stands for Engineering Projects in Community Service. It's a unique program that combines engineering education with community service.

Evaluation: Evaluation is the process of judging the academic work done by the student in her/his courses. It is done through a combination of continuous in-semester assessment and semester end examinations.

Experiential Learning: Experiential learning is a process through which students develop knowledge, skills, and values from direct experiences outside a traditional academic setting. It involves learning by doing, where students engage in hands-on activities, real-world problem-solving, and reflective practices to gain deeper understanding and practical application of the concepts they are studying.

Flexi-Core course: A Flexi-Core course typically refers to an elective or optional course within a degree program that offers students flexibility in choosing subjects based on their interests and career goals.

Formative Assessment: Formative assessment is ongoing evaluation of student understanding to inform instruction and facilitate learning.

Flipped Learning: Flipped learning is an instructional strategy that reverses the traditional teaching model. In flipped learning, students are introduced to new content outside of class, usually through video lectures, readings, or other materials. The in-class time is then used for more interactive activities, such as discussions, problem-solving, group work, and applying the concepts learned at home.

Grade: It is an index of the performance of the students in a said course. Grades are denoted by alphabets.

Grade Point: It is a numerical weight allotted to each letter grade on a 10 - point scale.

Grade Point Average (GPA): Grade Point Average is a numerical representation of a student's academic performance. It is calculated by averaging the numerical equivalents of letter grades earned in courses, considering the number of credit hours for each course.

Honors Degree: A student who fulfills all the Program requirements of her/his discipline and successfully completes a specified set of additional courses within the same program is eligible to receive an Honors degree.

Humanities, Arts and Social Sciences (HAS): It is a broad term that groups together the academic disciplines of humanities, arts and social sciences.

Industrial Training: Training program undergone by the student as per the academic requirement in any company/firm.

Industrial Visit: Visit to a company/firm as per the academic requirement.

Internship: Internship is a temporary work experience offered by an organization for a limited period. It provides students, graduates, or career changers with an opportunity to gain practical skills and experience in a specific field.

In-Semester Evaluation: Summative assessments used to evaluate student learning, acquired skills, and academic attainment during a course.

Induction Courses: Student who gets admitted into B.Tech. program must complete a set of Induction courses for a minimum period of 3 weeks and obtain a "Satisfactory" result prior to registering into 1st Semester of the Program.

Innovation Semester: An Innovation Semester is a dedicated academic term focused on cultivating a culture of creativity, problem-solving, and entrepreneurial thinking.

Lecture: A lecture is a formal instructional session where an instructor presents information to a large group of students.

Make-up Test: An additional test scheduled on a date other than the originally scheduled date.

Malpractice: Malpractice typically refers to academic dishonesty or misconduct during examinations or coursework. This can include a wide range of behaviors that compromise the integrity of the evaluation process.

Management elective: A course that develops managerial skills and inculcates entrepreneurial skills.

Minor Degree: A student who fulfills all the Program requirements of her/his discipline and successfully completes a specified set of courses from another discipline is eligible to receive a minor degree in that discipline.

Multiple Entry and Multiple Exit (MEME): It is an educational framework designed to provide flexibility in learning pathways, allowing students to enter and exit educational programs at various stages based on their individual needs, prior knowledge, and career goals.

National Education Policy (NEP): NEP 2020 is a comprehensive framework for transforming India's Education System. It aims to create an equitable and vibrant knowledge society by providing high-quality education to all.

NHEQF: NHEQF stands for National Higher Education Qualifications Framework. It's a comprehensive framework designed to standardize and classify higher education qualifications in India. The primary goal of NHEQF is to ensure that qualifications from different institutions are comparable and recognized nationally and internationally.

Open Elective: This is a course of interdisciplinary nature. It is offered across the University for all Programs.

Overloading: Registering for more number of credits than normally prescribed by the Program in a semester.

Peer Learning: Peer learning is a collaborative learning process where students learn from each other. It involves sharing knowledge, skills, and experiences among peers.

Practical: A practical is a hands-on session where students apply theoretical knowledge in a real-world or laboratory setting. Practical sessions are designed to develop students' technical skills, problem-solving abilities, and understanding of experimental procedures.

Practice School: It is a part of the total program and takes one full semester in a professional location, where the students and the faculty get involved in finding solutions to real-world problems. A student can choose Project/Practice School during his/her final year to meet the final requirements for the award of degree.

Pre-requisite: A course, the knowledge required for registration into higher level course.

Product Development Semester: A Product Development Semester is an academic term dedicated to the process of creating new products or improving existing ones.

Professional Core: The courses that are essential constituents of each engineering discipline are categorized as Professional Core courses for that discipline.

Professional Elective: A course that is discipline centric. An appropriate choice of minimum number of such electives as specified in the program will lead to a degree with specialization.

Program: A set of courses offered by the Department. A student can opt and complete the stipulated minimum credits to qualify for the award of a degree in that Program.

Program Educational Objectives: The broad career, professional, personal goals that every student will achieve through a strategic and sequential action plan.

Program Outcome (PO): Program outcomes are statements that describe what students are expected to know, understand, and be able to do upon completing a specific academic program.

Project: Course that a student must undergo during his/her final year which involves the student to undertake a research or design, which is carefully planned to achieve a particular aim. It is a credit-based course.

Project-Based Learning (PBL): Project-Based Learning is an instructional approach where students actively engage in real-world and personally meaningful projects.

Rapid Prototyping Semester: A Rapid Prototyping Semester is an academic term dedicated to the practical application of rapid prototyping techniques to create physical models or prototypes of products or designs.

Registration: Process of enrolling into a set of courses in a semester/ term of the Program.

Re-Registration: Student who are detained in courses due to attendance or marks criteria as per their regulation are given a chance to re-register for the same and complete it during the summer term.

Relative Grading: Relative grading is a method of assigning grades based on a student's performance compared to the rest of the class.

Remedial Exam: A remedial Exam is an assessment designed to identify specific areas of weakness or gaps in a student's knowledge or skills. It is typically administered after a student has performed poorly on a regular assessment.

Research Project: A research project is a systematic investigation undertaken to answer a specific question or address a particular problem.

Research Semester: A research semester is a dedicated period within an academic program focused on independent research or scholarly inquiry.

Research Seminar: A research seminar is a formal academic gathering where researchers present their ongoing work to a group of peers, faculty, and other interested individuals.

Self-learning: Self-learning is the process of acquiring knowledge and skills independently without formal instruction.

Semester: It is a period of study consisting of 15+1 weeks of academic work equivalent to normally 90 working days including examination and preparation holidays. The odd Semester starts normally in July and even semester in December.

Semester End Examinations: It is an examination conducted at the end of a course of study.

Skilling: It is a process of developing and enhancing specific skills that are essential for performing particular tasks or activities effectively. It involves structured training and practice aimed at equipping individuals with the practical abilities, knowledge, and competencies required for professional success and personal development.

Social Immersive Learning (SIL): Social Immersive Learning is a pedagogical approach that combines the power of social interaction with immersive technologies to create engaging and impactful learning experiences.

Social Service: An activity designed to promote social awareness and generate well-being; to improve the life and living conditions of society.

Student Outcomes: The essential skill sets that need to be acquired by every student during her/his program of study. These skill sets are in the areas of employability, entrepreneurial, social and behavioral.

Substitution of Elective course: Replacing an elective course with another elective course as opted by the student.

Summative Assessment: Summative Assessment is a type of evaluation that occurs at the end of a learning period.

Summer term: The term during which courses are offered from May to July. Summer term is not a student's right and will be offered at the discretion of the University.

Supplementary: A student can reappear only in the semester end examination for the Theory component of a course, subject to the regulations contained herein.

Term paper: A 'term paper' is a research report written by students that evolves their course-based knowledge, accounting for a grade. Term paper is a written original research work discussing a topic in detail. It is a credit-based course.

Tutorial: A tutorial is a small group session designed to provide personalized guidance and support to students. Tutorials often involve discussions, problem-solving activities, and hands-on practice to reinforce concepts learned in lectures.

Under-loading: Registering for lesser number of credits than normally prescribed for a semester in that Program.

Value-Added Courses: Courses leading to global certification and those which are conducted exclusively for employability are referred to as value added courses.

FAQs

Q: What is the Choice-Based Credit System (CBCS) and how does it work?

A: CBCS allows student to choose courses from various categories based on your interests and career goals. Each course has a credit value assigned to it, and you need to earn a minimum number of credits in each category and in total to complete your program.

Q: Can I choose electives based on my interests?

A: Yes, student has the flexibility to choose electives that align with your personal interests and career objectives.

Q: Can I choose my preferred faculty members for certain courses?

A: During registrations prior to commencement of each semester, if a course is offered for multiple sections and if multiple faculty are teaching the same course, you will then have a choice of selecting the section being taught by that faculty under whom you wish to study.

Q: When and how do I register for courses?

A: Student must register for courses on the designated registration day. There is a one-week window for adding courses and a two-week window for dropping or changing them.

Q: Can I get an attendance waiver?

A: Students with a CGPA and SGPA of 9.00 or higher in the previous semester can get an attendance waiver for up to three courses with prior approval.

Q: What is the minimum attendance requirement for promotion?

A: 85% attendance is required for course promotion and appearing for the semester-end exam.

Q: Can I transfer to a different branch?

A: Under special circumstances, you may be permitted to transfer branches after the second semester based on your CGPA and seat availability.

Q: Can I pursue a minor degree?

A: Yes, any student can pursue a minor degree by completing a specified set of courses from another discipline.

Q: Can I study some semesters in abroad?

A: KLEF University may have exchange programs or partnerships with foreign universities, allowing you to study abroad for a semester or year.

Q: Are there any extracurricular activities or clubs available?

A: Yes, KLEF offers various extracurricular activities and clubs, such as sports, cultural events, and student organizations.

Q: What happens if I have less than 85% attendance?

A: Upto 75% attendance, student may be eligible for condonation or marginal case consideration, but need to provide proper documentation and may be subject to fees. But falling below 75% will make you detain in the course.

Q: What happens if I detain a course?

A: Student who detained in a course must re-register for the course and study it again in summer term. If the detained course is not offered by the department, then the student can study other equivalent course from the same category upon taking approval from office of Dean Academics.

Q: What is ABC?

A: ABC enables you to digitally store your earned credits and potentially use them towards future studies at other institutions.

Q: Can I accelerate or decelerate my studies?

A: Students are generally recommended to register for 20 to 24 credits in each semester. Students who cannot cope up with such load, may consult their counsellor and Head of the Department to register in lower number of credits. This process is called "Deceleration". Students who do not register on time, may also be forced to decelerate to compensate the classwork that they missed due to late registration. In both the cases of deceleration, permission must be sought from Office of Dean Academics through proper channel. On the contrary, Students who wish to accelerate can register for upto 30 credits by selecting courses that are usually offered in later semesters and complete them in advance. Students may also use the optional Summer Term for accelerating courses upto 12 credits. In Similarly, a student may also register for credits lower than. However, you'll need approval from the Dean of Academics.

Q: Will I get my degree upon acquiring all the required credits?

A: Apart from fulfilling the total credit requirement, it is required to fulfill category and sub-category wise credit requirements and outcome requirements (which are clearly mentioned in the degree-wise credit requirements section) to be eligible for award of specific degree.

Q: Can I register for a course without promoting in its pre-requisite course?

A: No, student must promote in the pre-requisite course in order to register for a course having pre-requisite.

Program Articulation Matrix

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
1	HAS	23FL3054 - FLG	CO1	Acquire a working knowledge of the basic elements of the French language viz. letters, vowels, accents, articles, useful expressions, etc.					2			2						
2	HAS	23FL3054 - FLG	CO2	Classify questions and respond in the affirmative or negative with ?tre and avoir and form plurals						2				3				
3	HAS	23FL3054 - FLG	CO3	Utilize and apply the adjectives and essential verbs.								2		2				
4	HAS	23FL3054 - FLG	CO4	Construct and use in speech, vocabulary, reading, questions and answers								2				3		
5	HAS	23FL3055 - GLG	CO1	classify their understanding of greeting wishes, alphabets and numbers learning. to understand the greetings in formal and informal way					2			2						
6	HAS	23FL3055 - GLG	CO2	Apply their knowledge of essential daily expressions, present, past and future tense. Conjugating the verbs in the Singular and Plural groups, Past participle tense and the futertense and relations with the verbs										3				
7	HAS	23FL3055 - GLG	CO3	Utilize their understanding with suitable prepositions, questions, and possessive pronouns, and the importance of four German cases. Prepositions in Akkusativ and Dativ										2				
8	HAS	23FL3055 - GLG	CO4	Develop their knowledge about how to move in public places, such as shopping centres, restaurants, tourist places, etc, and preparation of them for German A1 level examination.								2				3		

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
9	HAS	23FL3058 - JLG	CO1	Classify Hiragana, Katakana, and basic Kanji characters used in greetings and simple scripts					2			2						
10	HAS	23FL3058 - JLG	CO2	Apply their knowledge of essential daily expressions, numbers, months, dates, time, body parts, colors, and common vocabulary to effectively communicate in basic everyday situations										3				
11	HAS	23FL3058 - JLG	CO3	Utilize their understanding of present, past, and future tenses, along with the ability to construct interrogative sentences, to express themselves in various timeframes and ask questions effectively in different conversational contexts. pen_spark								2		2				
12	HAS	23FL3058 - JLG	CO4	Develop their knowledge of verbs, including negative conjugations, and prepositions to discuss hobbies, deliver self-introductions, and navigate basic interview scenarios in Japanese								2				3		
13	HAS	23MB0001 - BME	CO1	Understand the basic concepts of marketing management		2												
14	HAS	23MB0001 - BME	CO2	Understand the concepts of Marketing environment, consumer behaviour and Segmentation, Targeting and Positioning (STP)		2												
15	HAS	23MB0001 - BME	CO3	Apply the marketing mix strategies with special focus on technology products				2										
16	HAS	23MB0001 - BME	CO4	Apply promotion and distribution strategies for marketing of high tech products and services						2								
17	HAS	23MB0002 - PIMT	CO1	Understand the basic management concepts along with an insight into levels of management									2					
18	HAS	23MB0002 - PIMT	CO2	Understand the key contributions of classical approach to Management												2		

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
19	HAS	23MB0002 - PIMT	CO3	Understand and apply Quantitative methods to improve Management performance.									2					
20	HAS	23MB0002 - PIMT	CO4	Understand the key contributions of Behavioural and contemporary approaches to Management.									2					
21	HAS	23MB0003 - FMFE	CO1	Understanding the comprehension of finance functions and diverse business models to facilitate informed decision-making processes within financial management.		2												
22	HAS	23MB0003 - FMFE	CO2	Analyzing the investment decisions through an understanding of capital budgeting techniques, both traditional and modern, emphasizing long-term implications.				2										
23	HAS	23MB0003 - FMFE	CO3	Analyze and make informed decisions regarding working capital management, considering the short-term financial health of organizations through practical case studies.				2										
24	HAS	23MB0003 - FMFE	CO4	Developing proficiency in comprehending and utilizing various sources of finance while discerning the implications of different dividend policies in practical financial scenarios.				2										
25	HAS	23MB0004 - OMG	CO1	Remember and understand the various management theories and management approaches.									2					
26	HAS	23MB0004 - OMG	CO2	Remember and understand organization theories, structures and organization principles												2		

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
27	HAS	23MB0004 - OMG	CO3	Have basic knowledge and understanding of motivation, motivational theories, leadership theories, moral and behavioral sciences and also understand the management concept, administration and management objectives.									2					
28	HAS	23MB0004 - OMG	CO4	Remember and understand the various issues in industrial relations, trade unions and college bargaining and industrial safety									2					
29	HAS	23MB0005 - MPF	CO1	Understanding Personal Finance	2													
30	HAS	23MB0005 - MPF	CO2	Applying and Building a Budget and Tracking Your Money		3												
31	HAS	23MB0005 - MPF	CO3	Applying and Managing Debt and Credit in present context			3											
32	HAS	23MB0005 - MPF	CO4	Applying Saving and Investment to present scenario			3											
33	HAS	23MB4062 - CPM	CO1	Understand construction principles and techniques to effectively plan and execute construction projects.	1										2		1	
34	HAS	23MB4062 - CPM	CO2	Understand about construction project scheduling, cost estimation, and resource allocation for a particular project	1										2		1	
35	HAS	23MB4062 - CPM	CO3	Understand about the Construction Methods and Techniques	1										2		1	
36	HAS	23MB4062 - CPM	CO4	Understand about the Construction Project Cost Estimation and Control.	1										2		1	
37	HAS	23MB4062 - CPM	CO5	Understand about project cost control and monitoring, earned value management in construction.	1										2		1	

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
38	HAS	23MB4063 - RSQM	CO1	Demonstrate an understanding of resource management principles and the importance of resource optimization in construction projects by applying best practices to enhance efficiency.	2			3				2						2
39	HAS	23MB4063 - RSQM	CO2	Interpret and ensure compliance with construction safety regulations and standards set by regulatory bodies, ensuring legal and regulatory adherence in project execution.	2			3				2						2
40	HAS	23MB4063 - RSQM	CO3	Apply hazard identification techniques and conduct comprehensive risk assessments to prioritize and mitigate risks in construction environments, enhancing safety management.	2			3				2						2
41	HAS	23MB4063 - RSQM	CO4	Develop and implement safety management systems and quality assurance strategies, including safety policies, training, and communication, to ensure high safety standards and quality control in construction projects.	2			3				2						2
42	HAS	23MB4064 - SDM	CO1	Understand the concepts of digital marketing and search engine optimization											2			
43	HAS	23MB4064 - SDM	CO2	Apply the search engine optimization technique to website											2			
44	HAS	23MB4064 - SDM	CO3	Apply the key PPC concepts to draw visitors to a business websites											2			
45	HAS	23MB4064 - SDM	CO4	Analyse the search engine optimization technique for marketing strategy											2			
46	HAS	23MB4065 - DET	CO1	Introduction to Digital Economics	2													
47	HAS	23MB4065 - DET	CO2	Digital Business Models		2												
48	HAS	23MB4065 - DET	CO3	Tokenomics Fundamentals			3											

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
49	HAS	23MB4065 - DET	CO4	Economic Implications of Cryptocurrencies			3											
50	HAS	23MB4066 - DFDFS	CO1	Define and explain the key concepts of DeFi, including decentralization, blockchain technology, smart contracts, and decentralized applications (DApps). Differentiate between traditional financial systems and DeFi ecosystems, identifying the advantages and challenges of each.	2												2	
51	HAS	23MB4066 - DFDFS	CO2	Describe the fundamentals of blockchain technology, including consensus mechanisms, cryptographic principles, and transaction processing. Evaluate different blockchain platforms and their suitability for supporting DeFi applications.			2										2	
52	HAS	23MB4066 - DFDFS	CO3	Analyze and evaluate various decentralized financial protocols, such as decentralized exchanges (DEXs), lending platforms, liquidity provision mechanisms, and asset management protocols. Demonstrate the ability to interact with DeFi protocols through hands-on exercises and practical applications.						3								3
53	HAS	23MB4066 - DFDFS	CO4	Explain the concept of stablecoins and synthetic assets, including their design principles, use cases, and implications for the broader financial ecosystem. Assess the role of stablecoins and synthetic assets in mitigating volatility and enabling new financial services in DeFi.						3								3
54	HAS	23MB4067 - IMPP	CO1	Understand the basic management concepts along with an insight into production and control											2			2

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
55	HAS	23MB4067 - IMPP	CO2	Select best forecasting models to predict future demand	2													2
56	HAS	23MB4067 - IMPP	CO3	Solve various production scheduling problems to optimize productivity				2										2
57	HAS	23MB4067 - IMPP	CO4	Understand concept of Inventory control, Method study and time study											2			2
58	HAS	23MB4068 - IMG	CO1	Identify and analyze market needs and gaps, using tools such as SWOT and PESTLE analysis, to pinpoint real-world problems suitable for entrepreneurial solutions.		1									2		2	
59	HAS	23MB4068 - IMG	CO2	Develop innovative solutions through creative thinking and apply lean startup principles to build and iterate a minimum viable product (MVP).		1									1		1	
60	HAS	23MB4068 - IMG	CO3	Create a comprehensive lean business model canvas that outlines customer segments, value propositions, channels, revenue streams, and key metrics.		1									2		1	
61	HAS	23MB4068 - IMG	CO4	Create a compelling business plan and investor pitch, including financial projections and funding strategies, demonstrating effective communication and persuasion skills.		1									2		2	
62	HAS	23UC0026 - HGP	CO1	Understanding the basic concepts of value education								2	1					
63	HAS	23UC0026 - HGP	CO2	Gain basic understanding of the principles in harmony among the human beings								2	1					
64	HAS	23UC0026 - HGP	CO3	Gain knowledge in the concept of Harmony in the family and society								1	3					
65	HAS	23UC0026 - HGP	CO4	Acquire knowledge in the concepts of harmony in the nature								1	3					

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
66	HAS	23UC0027 - LAMS	CO1	Understand basic leadership, skills and perspectives and leadership styles									3					
67	HAS	23UC0027 - LAMS	CO2	Understand different managerial skills and apply them to develop high performance teams											3			
68	HAS	23UC0027 - LAMS	CO3	Analyse effective communicative strategies and apply them in team tasks										3				
69	HAS	23UC0027 - LAMS	CO4	Apply strategic planning fundamentals and decision-making techniques, through exercises and case studies											3			
70	HAS	23UC1101 - IPE	CO1	Language Mechanics and Basic Grammar										2				
71	HAS	23UC1101 - IPE	CO2	Integrated Reading and Techniques of Writing										2				
72	HAS	23UC1202 - EP	CO1	Express the ability in interactive skills of listening, speaking, reading, and writing that are better suited for the corporate environment.									3	3				
73	HAS	23UC1202 - EP	CO2	Apply various strategies for LSRW skills and apply them in interpreting the text									3	3				
74	HAS	23UC1203 - DTI	CO1	Understand the importance of Design thinking mindset for identifying contextualized problems		1												
75	HAS	23UC1203 - DTI	CO2	Analyze the problem statement by empathizing with user							2							
76	HAS	23UC1203 - DTI	CO3	Develop ideation and test the prototypes made			2											
77	HAS	23UC1203 - DTI	CO4	Explore the fundamentals of entrepreneurship skills for transforming the challenge into an opportunity											1			
78	BSC	22PH1008 - PEE	CO1	Applying the concepts of basics of crystal structure to find out for the structure property relation through crystal imperfections.	3													

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
79	BSC	22PH1008 - PEE	CO2	Understand the conducting and semiconducting properties of solids at the microscopic level	2													
80	BSC	22PH1008 - PEE	CO3	Understand the dielectric properties of materials at the microscopic level and their applications.	2													
81	BSC	22PH1008 - PEE	CO4	Apply the spin and orbital motion of electrons in determining magnetic properties of materials and identifies their role in classification soft & hard magnetic materials having specific engineering applications	3													
82	BSC	22PH1008 - PEE	CO5	Apply the knowledge on the structure and properties of materials while executing related experiments				3										
83	BSC	23CS3201 - DSS	CO1	Understand the fundamental principles of data science and statistics	2	2												2
84	BSC	23CS3201 - DSS	CO2	Gain basic understanding the role of data science in various scenarios in the real-world problems.		2		3										2
85	BSC	23CS3201 - DSS	CO3	Apply probabilistic predictions and decisions based on data analysis.		2		3										2
86	BSC	23CS3201 - DSS	CO4	Implement and apply proficiency in statistical inference techniques			2											2
87	BSC	23CY1001 - ECY	CO1	Apply the operation of electrochemical systems to produce electric energy and storage devices.	3	2												
88	BSC	23CY1001 - ECY	CO2	Use the fundamental aspects of electrochemistry and materials science relevant to corrosion phenomena.	3	2												
89	BSC	23CY1001 - ECY	CO3	Examine water quality and apply appropriate purification technique for intended problem.	3	2												

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
90	BSC	23CY1001 - ECY	CO4	Employ the fundamental principles and general properties of materials in various engineering applications.	3	2												
91	BSC	23CY1001 - ECY	CO5	Analyze the data, develop skills in chemical analysis and their application in engineering.	3						3							
92	BSC	23MT1001 - LACE	CO1	Apply matrix algebra to the real-world applications in engineering, physical and biological sciences, computer science, finance, economics and solving the system of equations.	3													
93	BSC	23MT1001 - LACE	CO2	Apply multivariate differential calculus to find maxima & minima of functions and understand the concepts of second order differential equations and its applications.	3													
94	BSC	23MT1001 - LACE	CO3	Apply beta and gamma functions to evaluate improper integrals. Evaluate double and triple integrals techniques over a region in two dimensional and three-dimensional geometry.	3													
95	BSC	23MT1001 - LACE	CO4	interpret the physical meaning of different operators such as gradient, curl and compute the line integrals of vector functions and learn their applications.	3													
96	BSC	23MT2003 - MMNM	CO1	Modeling and solution of algebraic and transcendental equations.	3	3											3	
97	BSC	23MT2003 - MMNM	CO2	Applying numerical methods to solve ordinary differential equations.	3	3											3	
98	BSC	23MT2003 - MMNM	CO3	Solving of Linear and non-linear Partial Differential Equations.	3	3											3	
99	BSC	23MT2003 - MMNM	CO4	Applications of Partial Differential Equations.	3	3											3	

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
100	BSC	23MT2004 - MPG	CO1	Apply various methods for finding the optimal solution of Linear Programming Problem.	2	2											2	
101	BSC	23MT2004 - MPG	CO2	Apply Integer and Fractional programming approaches for solving optimization problems.	2	3											2	
102	BSC	23MT2004 - MPG	CO3	Apply quadratic programming and geometric programming techniques for solving non linear programming problems	2		3										3	
103	BSC	23MT2004 - MPG	CO4	Apply evolutionary algorithms, nature-inspired metaheuristics, to solve complex optimization problems in infinite-dimensional spaces.		3	3										3	
104	BSC	23MT2007 - RVASP	CO1	Apply Mathematical models of random phenomena and solve probabilistic problems.	2												2	
105	BSC	23MT2007 - RVASP	CO2	Analyze different types of random variables and compute statistical parameters of the random variables.	3	3											3	
106	BSC	23MT2007 - RVASP	CO3	Apply random processes in the time domain and model time varying linear systems.		3												
107	BSC	23MT2007 - RVASP	CO4	Analyze random processes in frequency domains and model spectral characteristics of LTI systems.			3											
108	ESC	23AD20010 - AIML	CO1	Apply a variety of artificial intelligence algorithms and techniques to effectively solve complex problems in diverse real-world environments		3	3	3									3	
109	ESC	23AD20010 - AIML	CO2	Solve constraint satisfaction problems, employ knowledge engineering principles to perform inferencing, reasoning and probability theory.		3	3	3									3	
110	ESC	23AD20010 - AIML	CO3	Apply various machine learning techniques to analyze and solve real-world problems		3	3	3									3	

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
111	ESC	23AD2001O - AIML	CO4	solve complex real-world problems using advanced supervised and unsupervised learning techniques.		3	3	3									3	
112	ESC	23AD2001O - AIML	CO5	Evaluate solutions for various AI & ML related problems.			3	3	3								3	
113	ESC	23EC1101 - FITS	CO1	Apply the basic concepts of IoT and its implementation using the Development Hardware	2	1											3	
114	ESC	23EC1101 - FITS	CO2	Apply the different sensors interfacing with Development Hardware		1	3										3	
115	ESC	23EC1101 - FITS	CO3	Apply the different actuators interfacing with Development Hardware		1	3										3	
116	ESC	23EC1101 - FITS	CO4	Analyze the IoT concept to solve real time insights		1	3	2									3	
117	ESC	23EC1101 - FITS	CO5	Analyze the concept of IoT by interfacing with sensors and Development Hardware		1	3										3	
118	ESC	23EC1202 - DDCA	CO1	Build the combinational and programmable digital logic circuits using logic gates and optimization methods	2	2											3	
119	ESC	23EC1202 - DDCA	CO2	Construct the sequential and memory circuits using flip-flops	2	2											3	
120	ESC	23EC1202 - DDCA	CO3	Organize computer architecture and instructions sequence	2	2											3	
121	ESC	23EC1202 - DDCA	CO4	Model the Memory Architecture and I/O Organization modules	2	2											3	
122	ESC	23EC1202 - DDCA	CO5	Develop and analyze computer architecture modules using basic combinational, sequential and memory logics	2		2		2								3	

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
123	ESC	23EC1203 - BEEC	CO1	Understand the basic concepts of circuits and its fundamentals	2												3	
124	ESC	23EC1203 - BEEC	CO2	Grasp the principles of AC circuits, including sinusoidal waveforms, impedance, and power factor.	2												3	
125	ESC	23EC1203 - BEEC	CO3	Comprehend the behavior of basic electronic components, such as diodes, and transistors.	2												3	
126	ESC	23EC1203 - BEEC	CO4	Understand the basic functional Principles of analog and digital ICs.	2												3	
127	ESC	23ME1103 - DTW	CO1	Demonstrate proficiency in typing sentence , paragraph , report , presentations along spread sheets using office tools, LaTeX tools and PowerBI					2									2
128	ESC	23ME1103 - DTW	CO2	Build a static website and blog with using html along with Special features of HTML5, CSS and Javascript					3					3				
129	ESC	23ME1103 - DTW	CO3	Develop a virtual environment with cospace and construct a marker based Augmented Reality			3										3	
130	ESC	23ME1103 - DTW	CO4	Utilising the softwares of Autodesk Fusion 360 and the same can be printed in 3D printer as physical prototype			3										3	
131	ESC	23SC1101 - CTSD	CO1	Develop and apply logical building blocks to solve real world problems	3	3	3											
132	ESC	23SC1101 - CTSD	CO2	Apply computational thinking for designing solutions	3	3	3											
133	ESC	23SC1101 - CTSD	CO3	Develop and apply the CRUD operations on arrays	3			3										
134	ESC	23SC1101 - CTSD	CO4	Apply CRUD operations on Linear Data Structures	3	3	3											

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
135	ESC	23SC1101 - CTSD	CO5	Apply the structured programming paradigm with logic building skills on Basic and Linear Data Structures for solving real world problems	3													
136	ESC	23SC1101 - CTSD	CO6	Skill the students in such a way that students will be able to develop logic that help them to create programs as well as applications in C														
137	ESC	23SC1202 - DS	CO1	Understand various sorting algorithms and analyse the efficiency of the algorithms.	3	3												
138	ESC	23SC1202 - DS	CO2	Implement and evaluate Linear Data Structures and Demonstrate their applications.	3	3	3											
139	ESC	23SC1202 - DS	CO3	Implement and evaluate tree data structures and understand hashing techniques	3	3	3						3					
140	ESC	23SC1202 - DS	CO4	Understand graph data structures and apply graphs to solve problems	3	3							3					
141	ESC	23SC1202 - DS	CO5	"Design, Develop and evaluate common practical applications for linear and nonlinear data structures."			3						3					
142	ESC	23SC1202 - DS	CO6	"Skill the students in such a way that students will be able to develop logic that help them to create programs on both linear and non-linear data structures and its applications."			3						3					
143	ESC	23SC1203R - CTOD	CO1	Apply Object oriented paradigm for code reusability			3		3									3
144	ESC	23SC1203R - CTOD	CO2	Design object-oriented solutions to the real-world problems through SOLID design principles			3		3									3
145	ESC	23SC1203R - CTOD	CO3	Build Abstract Data Types by applying generic classes and java API			3		3									3
146	ESC	23SC1203R - CTOD	CO4	Demonstrate Exception handling and String manipulation techniques			3		3									3

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
147	ESC	23SC1203R - CTOD	CO5	Develop solutions for real time problems by using object-oriented programming concepts.	3	3		3										3
148	ESC	23SC1203R - CTOD	CO6	Develop a real time project by using object-oriented programming concepts.	3	3		3										3
149	PCC	23AD2102R - DBMS	CO1	Apply fundamental database design principles, including normalization, to model complex data relationships.			3											
150	PCC	23AD2102R - DBMS	CO2	Develop efficient and secure database applications using Structured Query Language (SQL) and PL/SQL for data manipulation and retrieval.			3											1
151	PCC	23AD2102R - DBMS	CO3	Implement and manage database systems with appropriate indexing techniques, query optimization strategies, and concurrency control mechanisms for efficient and reliable data access.					2				2					2
152	PCC	23AD2102R - DBMS	CO4	Analyze and evaluate the suitability of emerging database technologies like NoSQL and Big Data for modern applications, considering security implications.					2				3					2
153	PCC	23AD2102R - DBMS	CO5	Design and implement practical database solutions to solve real-world problems using appropriate database management system technologies and best practices.			2		2				2					3
154	PCC	23EC2106R - PRC	CO1	Apply the foundational concepts of the 8086 microprocessor, including its architecture, pinout, addressing modes, instruction set, timing diagrams for different modes, ALU programming, and practical examples."		2			3		3						2	

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
155	PCC	23EC2106R - PRC	CO2	Apply the core aspects of the 8051 microcontroller, focusing on its architecture, pin diagram, addressing modes, instruction sets, and programs involving arithmetic and logical operations, as well as the use of timers and counters."		2			3		3						2	
156	PCC	23EC2106R - PRC	CO3	Analyse the 8051 microcontroller applications through assembly-level programming, exploring interrupts, serial port operations, and peripherals like timers, seven-segment displays, LCDs, ADCs, DACs, and stepper motor control, with case studies in keypad interfacing, traffic signals, home automation, and industrial use cases."		2			3		3						2	
157	PCC	23EC2106R - PRC	CO4	Apply the architectures and features of PIC and ARM microcontrollers, examining the ARM series\' evolution, core features, pipeline processing, processor modes and registers, exception handling, and ARM\'s Thumb mode of execution."		2			3		3						2	
158	PCC	23EC2106R - PRC	CO5	Analyse the 8051 microcontroller applications through assembly-level programming, exploring interrupts, serial port operations, and peripherals like timers, seven-segment displays, LCDs."		2			3		3						2	
159	PCC	23EC2210R - NPS	CO1	Apply the knowledge of communication to understand the concepts of physical layer and datalink layer.	2	2	2											2
160	PCC	23EC2210R - NPS	CO2	Analyze various MAC protocols and apply IP addressing concepts to subnet a network.		2	3											2

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
161	PCC	23EC2210R - NPS	CO3	Analyze static and dynamic routing algorithms and transport layer protocols.		2	3											2
162	PCC	23EC2210R - NPS	CO4	Analyze application layer protocols and various cryptographic algorithms.		2	3											2
163	PCC	23EC2210R - NPS	CO5	Analyze the functionality of the network using different protocols and working of various cryptographic algorithms.		2			3									2
164	PCC	23IN2101R - IOTPA	CO1	Apply the concepts of IoT Architecture and technologies	3						3						3	
165	PCC	23IN2101R - IOTPA	CO2	Apply the logical design of IoT system	3						3						3	
166	PCC	23IN2101R - IOTPA	CO3	Apply IoT networking protocols and Authentication Protocols for IoT Application layer.	3	3			3								3	
167	PCC	23IN2101R - IOTPA	CO4	Apply IoT protocols and programming concepts for real-world problems.	3	3			3								3	
168	PCC	23IN2101R - IOTPA	CO5	Develop IoT based applications using IoT Protocols			3		3									3
169	PCC	23IN2102 - EDAIC	CO1	Apply the knowledge of Semiconductor physics and discuss BJT configurations and its applications	2												2	
170	PCC	23IN2102 - EDAIC	CO2	Apply the limitations of BJT and discuss the characteristics and applications of Field Effect Transistors	2												2	
171	PCC	23IN2102 - EDAIC	CO3	Analyze the linear and nonlinear circuits approaches and realize the characteristics of operational Amplifiers	2	2											3	
172	PCC	23IN2102 - EDAIC	CO4	Apply the knowledge of internal structure, operation and applications of different ICs	2												2	

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
173	PCC	23IN2102 - EDAIC	CO5	Design and analyze analog circuits for real-time applications using Passive and Active Components		2	3		3								2	
174	PCC	23IN2203R - WTIOT	CO1	Apply RF spectrum analysis techniques to assess and optimize wireless communication systems	2												2	
175	PCC	23IN2203R - WTIOT	CO2	Apply knowledge of various wireless personal area network technologies, including Bluetooth, UWB, and ZigBee, to implement efficient sensor networks.	2	2											2	
176	PCC	23IN2203R - WTIOT	CO3	Apply the IEEE 802.11 standards to enhance WLAN connectivity and quality of service, including power-saving mechanisms.	2												2	
177	PCC	23IN2203R -	CO4	Illustrate the various cellular standards	2												2	
178	PCC	23IN2203R - WTIOT	CO5	Design and Analyse various analog and digital communication circuits			2										2	
179	PCC	23IN3104R - RTOS	CO1	Understand subsystem components of the Kernel and apply the CPU Scheduling algorithms.	2						3						2	
180	PCC	23IN3104R - RTOS	CO2	Understand memory and process virtualization and Paging, apply Page Replacement Algorithms	2						3						2	
181	PCC	23IN3104R - RTOS	CO3	Understand and Apply the threading issues for RTOS	2	2			2								3	
182	PCC	23IN3104R - RTOS	CO4	Understand and Apply the memory management concepts in RTOS	3	3			2								2	
183	PCC	23IN3104R - RTOS	CO5	Able to perform experimentation Real-Time Operating Systems Other Basic Operating System Functions														
184	PCC	23IN3105R - ESD	CO1	Understand Embedded C programming concepts and apply for embedded system design.			2		2									3

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
185	PCC	23IN3105R - ESD	CO2	Apply GPIO and HAL concepts to interface various input output devices.			2		2									3
186	PCC	23IN3105R - ESD	CO3	Apply UART, I2C communication protocols to interface real time devices.		3			3									3
187	PCC	23IN3105R - ESD	CO4	Analyze state flow models for embedded system applications			3		3									3
188	PCC	23IN3105R - ESD	CO5	Design and develop real world applications using embedded system design principles.		2			3									3
189	PRI	23IE2040 - SIP	CO1	Remember the fundamentals of the science of water cycle along with powerful tools that students can use to diagnose the health of the local water cycle as well as develop targeted action plans to restore the local natural water cycle and bring water prosperity			3										3	
190	PRI	23IE2040 - SIP	CO2	Remember the water sustainability and water resilience of village, city, residential facilities and households using multi-level water scorecards				3									3	
191	PRI	23IE2040 - SIP	CO3	Apply the design thinking positive action plan for a village, campus, residential facility and community neighbourhood.					3								3	
192	PRI	23IE2040 - SIP	CO4	Apply the water positive solutions within an urban watershed, a rural watershed, residential institutional and corporate community						3							3	
193	PRI	23IE3041 - TIP	CO1	Ability to demonstrate the impact of academic skills and logical thinking			3										3	
194	PRI	23IE3041 - TIP	CO2	Ability to integrate existing and new technical knowledge for industrial application				3									3	

S#	Cat	Course	CO	CO Description	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
195	PRI	23IE3041 - TIP	CO3	Ability to demonstrate the impact of the internship on their learning and professional development					3								3	
196	PRI	23IE3041 - TIP	CO4	Demonstrate the ability to harness resources by analyzing challenges						3							3	
197	PRI	23IE4048 - EPJ	CO1	Literature search equips students with the ability to efficiently locate, evaluate, and synthesize academic and scholarly sources relevant to their field of study. Students will develop skills to conduct comprehensive searches, critically assess the credibility of sources, and apply research findings to support their academic or professional work.	2													
198	PRI	23IE4048 - EPJ	CO2	Problem identification enables students to accurately recognize and define complex issues or challenges within a given context. Students will learn to analyze situations critically, identify underlying causes, and articulate clear problem statements that guide effective problem-solving strategies.		2												
199	PRI	23IE4048 - EPJ	CO3	Analysis of research work prepares students to critically evaluate and interpret research studies, assessing the methodology, data, and conclusions. Students will develop the ability to dissect research findings, identify strengths and weaknesses, and draw informed conclusions that contribute to their own academic or professional endeavors.						3							3

23FL3055 - GERMAN LANGUAGE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23FL3055	GERMAN LANGUAGE	GLG	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	classify their understanding of greeting wishes, alphabets and numbers learning. to understand the greetings in formal and informal way	2	PO5, PO8
CO2	Apply their knowledge of essential daily expressions, present, past and future tense. Conjugating the verbs in the Singular and Plural groups, Past participle tense and the futertense and relations with the verbs	3	PO10
CO3	Utilize their understanding with suitable prepositions, questions, and possessive pronouns, and the importance of four German cases. Prepositions in Akkusativ and Dativ	3	PO10
CO4	Develop their knowledge about how to move in public places, such as shopping centres, restaurants, tourist places, etc, and preparation of them for German A1 level examination.	3	PO8, PO12

Syllabus

Introduction to multiplication concepts (may be a bit advanced for beginners). Simple multiplication problems with pictures or manipulatives might be introduced. Learn the upper and lowercase letters of the German alphabet (A-Z, a-z). Practice pronunciation of each letter.

Sein Form: Used for statements about existence, location, and becoming (e.g., "Ich bin Student" - I am a student).
Haben Form: Used for statements about possession, action, and completion (e.g., "Ich habe ein Auto" - I have a car).

Building German sentences? Cases (Nominative, Accusative, Dative, Genitive) are key! They show the role of nouns and pronouns (like "ich," "mein Buch"). Prepositions (in, auf) and questions (Wo? Wer?) require specific cases too. Understanding cases unlocks clear and flexible sentence structures!

Understand about how to move in public places such as shopping centres restaurants tourist places etc and preparation of them for German A1 level examination. A1 German for navigating public places: Learn basic greetings ("Guten Tag") and phrases ("Entschuldigung, wo ist...?" - Excuse me, where is...?). Practice ordering ("Ein Kaffee, bitte" - One coffee, please) and asking permission ("Darf ich hier sitzen?" - May I sit here?). Remember key vocabulary for shops ("Gesch?ft"), restaurants ("Restaurant") and tourist spots ("Sehensw?rdigkeit").

Introduction to Digital Marketing & SEO: Concept, and Scope of Digital Marketing, Comparison of Marketing and Digital Marketing, Benefits of Digital Marketing, Digital Marketing Platforms and Strategies, Digital Marketing Trends. Introduction to SEO: Meaning, Difference between portal and search engines, SEO Techniques (On Page and Off Page), Need for SEO, choosing the best search engine.

Keyword Research: Introduction, how and why to choose the right keywords, types of keywords, keyword analysis, keyword density analysis, tools for keyword research, competition analysis, localized keywords research.

On Page Optimization: Introduction, title, description and keyword tags, difference between primary, secondary and tertiary titles, length of titles, meta description and snippets, H1 to H6 tags and their importance, meta descriptions and content, difference between internal and external links, anchor text, anchor links optimization, importance of Alt tags and Image tags, Image tag optimization, content optimization, Different types of Sitemaps and their importance, Google SEO guidelines, Google Analytics and Webmaster integration

Off Page Optimization: Introduction, Social media optimization techniques, Introduction of link building and its types, Directory submission, Blog and article submission, Forum posting, Forum signatures and commenting, Free classifieds, Classifieds Posting, Press release submission, video submission, Social book marking, photo and Video sharing, Infographics sharing, Document sharing, content marketing and its importance.

23MB4065 - DIGITAL ECONOMICS AND TOKENOMICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MB4065	DIGITAL ECONOMICS AND TOKENOMICS	DET	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Introduction to Digital Economics	2	PO1
CO2	Digital Business Models	3	PO2
CO3	Tokenomics Fundamentals	3	PO3
CO4	Economic Implications of Cryptocurrencies	3	PO3

Syllabus

Overview of Digital Economics Definition and scope Key concepts and trends Impact of Digital Technologies Internet and mobile communications Social media and its economic implications The sharing economy

Network Effects and Value Creation Understanding network effects Models of value creation in digital platforms Digital Market Modelling Market structures in the digital age Case studies on digital marketplaces

Introduction to Tokenomics Definition and importance Key components: token supply, market cap, and token distribution Token Supply Mechanisms Inflationary vs. deflationary tokens Staking and its impact on token supply

Cryptocurrencies in the Digital Economy Role and impact of cryptocurrencies Case studies of prominent cryptocurrencies like Bitcoin and Ethereum Token Utility and Use Cases Utility tokens vs. security tokens Real-world applications and case studies

Reference Books

- 1 Introduction to Digital Economics - Foundations, Business Models and Case Studies, Harald ?verby and Jan A. Audestad, 2004, Springer.
- 2 Tokenomics: The Crypto Shift of Blockchains, ICOs, and Tokens, Sean Au and Thomas Power, 2009, TMG.
- 3 The Token Economy: How the Web3 Reinvents the Internet, Shermin Voshmgir, 2012, O'Reilly Media.

23MB4066 - DECENTRALISED FINANCE AND DIGITAL FINANCIAL SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MB4066	DECENTRALISED FINANCE AND DIGITAL FINANCIAL SYSTEMS	DFDFS	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Define and explain the key concepts of DeFi, including decentralization, blockchain technology, smart contracts, and decentralized applications (DApps). Differentiate between traditional financial systems and DeFi ecosystems, identifying the advantages and challenges of each.	2	PO1, PSO1
CO2	Describe the fundamentals of blockchain technology, including consensus mechanisms, cryptographic principles, and transaction processing. Evaluate different blockchain platforms and their suitability for supporting DeFi applications.	2	PO3, PSO1
CO3	Analyze and evaluate various decentralized financial protocols, such as decentralized exchanges (DEXs), lending platforms, liquidity provision mechanisms, and asset management protocols. Demonstrate the ability to interact with DeFi protocols through hands-on exercises and practical applications.	2	PO6, PSO2
CO4	Explain the concept of stablecoins and synthetic assets, including their design principles, use cases, and implications for the broader financial ecosystem. Assess the role of stablecoins and synthetic assets in mitigating volatility and enabling new financial services in DeFi.	2	PO6, PSO2

Syllabus

Introduction to Decentralized Finance (DeFi): Overview of DeFi concepts and principles Comparison with traditional finance systems Understanding decentralized applications (DApps) and smart contracts Blockchain Technology: Fundamentals of blockchain technology Consensus mechanisms (Proof of Work, Proof of Stake, etc.) Smart contract platforms (Ethereum, Binance Smart Chain, etc.)

Decentralized Exchanges (DEXs): Role of DEXs in DeFi ecosystem Types of DEXs (Automated Market Makers, Order Book-based) Liquidity provision and decentralized liquidity pools Lending and Borrowing Protocols: Overview of decentralized lending platforms (e.g., Compound, Aave) Yield farming and liquidity mining Risk management in decentralized lending

Stablecoins and Synthetic Assets: Types of stablecoins (algorithmic, collateralized, etc.) Synthetic asset creation and trading Stablecoin protocols and their role in DeFi Decentralized Asset Management: Automated portfolio management strategies (e.g., yield optimization) Decentralized asset management platforms (e.g., Yearn Finance, Balancer)

Decentralized Identity and Governance: Identity verification in decentralized systems Decentralized governance mechanisms (e.g., DAOs) Voting and decision-making processes in decentralized communities Security and Risks in DeFi: Smart contract vulnerabilities and exploits Risks associated with liquidity provision, lending, and borrowing Regulatory challenges and compliance considerations

Reference Books

- 2 DeFi and the Future of Finance, R. Harvey and Ashwin Ramachandran, 2021, WILEY.
- 3 The Infinite Machine: How an Army of Crypto-Hackers Is Building the Next Internet with Ethereum, Camila Russo, 2nd 2020, Asia-Pacific Holdings .
- 4 The Basics of Bitcoins and Blockchains: An Introduction to Cryptocurrencies and the Technology that Powers Them (Cryptography, Crypto Trading, Digital Assets, NFT), Antony Lewis, 2019, mongo.

23MB4067 - INDUSTRIAL MANAGEMENT & PRODUCTION PLANNING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MB4067	INDUSTRIAL MANAGEMENT & PRODUCTION PLANNING	IMPP	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic management concepts along with an insight into production and control	2	PO11, PSO2
CO2	Select best forecasting models to predict future demand	3	PO1, PSO2
CO3	Solve various production scheduling problems to optimize productivity	3	PO4, PSO2
CO4	Understand concept of Inventory control, Method study and time study	2	PO11, PSO2

Syllabus

Management Concept, Scope and functions of Management, Levels of Management: Low level, Middle level, High level, Importance of management, Scientific Management, Frederick W Taylors contributions, Contribution by Henry L Gantt, Contribution by Frank Lillian Gilberth, Objectives and benefits of planning and control, Functions of production control, Types of production - Job Order, Batch and Mass Production Systems

Forecasting models, Approaches and Types, Qualitative Approach: Judgmental Methods, Quantitative Approach: Time Series techniques, Regression techniques, Forecasting Error Estimation Techniques, Aggregate production planning, Benefits of Aggregate Production Planning, computer integrated production planning systems, elements of Just In Time Systems, Fundamentals of MRP II and Enterprise Resource Planning

Scheduling of Batch Production, Scheduling of Job Order production, Loading, Concept of Assembly line balancing, Sequencing: Definition, Sequencing of n jobs through one machine, n jobs through two machines (Johnsons algorithm), n jobs through three machines, n jobs through m machines, Materials Requirement Planning (MRP): Structure, Inputs, Outputs of MRP, Lean manufacturing, Seven Forms of Waste in Manufacturing

Inventory control: Purpose of holding stock, Effect of demand on inventories. Determination of Economic order quantity and economic lot size, Problems on Economic order quantity, Method study, basic procedure, Recording of process, Critical analysis, work measurement and Techniques of work measurement, Time study, techniques for time study, Production study, Work sampling methods

Reference Books

- 1 Principles of Management, Stoner, Freeman, Gilbert , 1: 1995, Pearson.
- 2 Operations management: Design, Planning and Control for manufacturing and services, James. B. Dilworth, 3: 1993, Mcgraw Hill International .
- 3 Production and Operations Management, R. Pannerselvam, 3: 2012, PHI Learning Pvt. Ltd.
- 4 Operations Management, Roberta S. Russell and Bernard W. Taylor, 4: 2003, Prentice Hall.

23MB4068 - INNOVATION MANAGEMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MB4068	INNOVATION MANAGEMENT	IMG	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify and analyze market needs and gaps, using tools such as SWOT and PESTLE analysis, to pinpoint real-world problems suitable for entrepreneurial solutions.	4	PO2, PO11, PSO1
CO2	Develop innovative solutions through creative thinking and apply lean startup principles to build and iterate a minimum viable product (MVP).	3	PO2, PO11, PSO1
CO3	Create a comprehensive lean business model canvas that outlines customer segments, value propositions, channels, revenue streams, and key metrics.	6	PO2, PO11, PSO1
CO4	Create a compelling business plan and investor pitch, including financial projections and funding strategies, demonstrating effective communication and persuasion skills.	6	PO2, PO11, PSO1

Syllabus

Fundamentals of Entrepreneurship and Innovation Definition and importance of entrepreneurship; Types of entrepreneurs; Entrepreneurial mindset; Types of innovation (incremental, disruptive, architectural, radical); Innovation in entrepreneurship; Techniques for identifying problems; Market needs and gaps analysis; SWOT analysis; PESTLE analysis; Customer discovery; Market research

Ideation and Lean Startup Principles Creative thinking and brainstorming techniques; Evaluating and selecting ideas; Introduction to lean startup methodology; Building a minimum viable product (MVP); Validated learning; Turning ideas into solutions; Prototyping techniques; User testing and feedback collection; When and how to pivot; Improving the MVP; Continuous improvement

Developing the Lean Business Model Canvas Overview and components of the lean business model canvas; Customer segments and value propositions; Identifying and building channels; Developing customer relationships; Creating revenue streams; Understanding cost structure; Key metrics for startups; Analysis of successful business models; Lessons learned from failures

Business Planning and Investor Pitching Elements of a business plan; Market analysis; Competitive landscape; Creating financial projections; Funding strategies; Budgeting and financial planning; Creating a compelling pitch deck; Tips for effective presentation; Handling Q&A sessions; Preparing for the pitch; Presenting to a panel of judges; Feedback and improvement

Reference Books

- 2 Creative Confidence, Tom Kelley, David Kelley, 2nd (2016), Crown Business.
- 3 The Lean Startup, Eric Ries, 1st (2011), Crown Business.
- 4 Business Model Generation, Alexander Osterwalder, Yves Pigneur, 1st (2010), Wiley.

23UC0026 - HUMAN VALUES, GENDER EQUALITY & PROFESSIONAL ETHICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23UC0026	HUMAN VALUES, GENDER EQUALITY & PROFESSIONAL ETHICS	HGP	R	2	0	0	0	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the basic concepts of value education	2	PO8, PO9
CO2	Gain basic understanding of the principles in harmony among the human beings	2	PO8, PO9
CO3	Gain knowledge in the concept of Harmony in the family and society	3	PO8, PO9
CO4	Acquire knowledge in the concepts of harmony in the nature	4	PO8, PO9

Syllabus

Introduction to Human Values Understanding Value, Self-exploration as the Process for identifying Value, Continuous Happiness and Prosperity The Basic Human Aspirations, Right Understanding, Relationship and Physical Facilities, Happiness and Prosperity Current Scenario, Method to fulfil the Basic Human Aspirations Harmony in the Human Being Understanding the Human Being as Coexistence of Self I and Body, Discriminating between the Needs of the Self and the Body, The Body as an Instrument of I, Understand Harmony in the Self I, Harmony of the Self I with the Body.

Understanding Harmony in the Family and Society The Basic Unit of Human Interaction, Values in Human to Human Relationships, Vision for the Universal Human Order Harmony in the Nature Existence Understand Harmony in the Nature, Interconnectedness, Self regulation and Mutual Fulfillment among the Four Orders of Nature, Realizing Existence is Coexistence at All Levels, The Holistic Perception of Harmony in Existence.

What is Gender, and Why Should We Study It? Gender Equality Milestones, The Context Today Socialisation Making Women, Making Men Preparing for Womanhood, Preparing for Manhood, Different Masculinities, Unrecognised and Unaccounted For, Wage Differentials between Women and Men, Women in the Working Environment . Being Boy A Village Boyhood, School Days, College Styles, Ek Ladki Ko Dekha Toh Sexual Harassment SAY NO! Sexual Harassment, Not EveTeasing, Consent and Relationships, Coping with Everyday Harassment Becoming Man A Dangerous Model of Masculinity, Changing Masculinities, Imprints of Masculinity, Mothers, Fathers and Family.

Implications of the Right Understanding a Look at Professional Ethics Natural Acceptance of Human Values, Definitiveness of Ethical Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics, Holistic Technologies, Production Systems and Management Models Typical Case Studies, Strategies for Transition towards Valuebased Life and Profession

Reference Books

- 3 "The Brave Heart", Rosa Parks, 1, Indian.
- 4 How the Other Half Dies, Sussan George, First Edition, Penguin Press, Reprinted.

23UC0027 - LEADERSHIP AND MANAGEMENT SKILLS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23UC0027	LEADERSHIP AND MANAGEMENT SKILLS	LAMS	R	0	0	4	0	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand basic leadership, skills and perspectives and leadership styles	2	PO9
CO2	Understand different managerial skills and apply them to develop high performance teams	3	PO11
CO3	Analyse effective communicative strategies and apply them in team tasks	3	PO10
CO4	Apply strategic planning fundamentals and decision-making techniques, through exercises and case studies	3	PO11

Syllabus

Fundamentals of Leadership Skills Understanding Leadership and its Importance, Traits and Models/styles of Leadership, Perspectives on Leadership: Bipolarity-Unidimensionality - Bidimensionality-Hierarchical: Management within Leadership - Hierarchical: Leadership within Management, Basic Leadership Skills: Motivation, Teamwork, Negotiation & Networking, Emotional intelligence.

Managerial Skills - Basic Managerial Skills - Planning for effective management, Recruiting and Retaining Talent - Delegation of tasks - Learn to Coordinate, Organising, Building and Leading high-performance Teams

Effective Communication Strategies for Leaders and Managers - Self-Management Skills: Understanding Self-Concept - Developing Self-Awareness -Self-Examination - Self-Regulation, Active Listening and Feedback Techniques, Conflict Management & Conflict Resolution - Negotiation skills, Role-playing and Group activities

Strategic Planning and Decision-Making - Fundamentals of Strategic Planning and Decision-Making - Setting Goals & Objectives for the Organization, Strategic Tools: SWOT, PEST, FORCE FIELD, SCENARIO PLANNING and SIX THINKING HATS, etc., Simulation Exercises and Strategic Planning Case Studies

Reference Books

7. "Leadership: Theory and Practice", Peter G. Northouse, 8th Edition, 2021, SAGE Publications.
8. Case Studies in Strategic Management: A Practical Approach", Sanjay Mohapatra and R. Sridhar, 1st Edition (2012), Pearson Education.
9. Active Listening: Improve Your Ability to Listen and Lead, Center for Creative Leadership , 1st Edition (2012), Center for Creative Leadership.

23UC1101 - INTEGRATED PROFESSIONAL ENGLISH (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23UC1101	INTEGRATED PROFESSIONAL ENGLISH	IPE	R	0	0	4	0	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Language Mechanics and Basic Grammar	2	PO10
CO2	Integrated Reading and Techniques of Writing	3	PO10

Syllabus

Discuss people you admire, Discuss a challenge, Explain what to do and check understanding, Give advice on avoiding danger, Discuss dangerous situations, Give and respond to compliments, Discuss ability and achievement, Discuss sports activities and issues, Make careful suggestions, Discuss events that changed your life, Discuss and describe rules, Discuss possible future events

Discuss choices and changes, introduce requests, discuss living in cities, discuss changes to home, imagine how things could be, discuss personal finance, discuss moral dilemmas and crime, discuss new inventions, discuss people lives and achievements, express uncertainty, speculate about the past, discuss life achievements, describe how you felt

Reference Books

- 1 Empower, Andrian Doff, Craig Thaine, Herbert Puchta, Jeff Stranks, Peter Lewis, 2nd, CUP.
- 2 The Only Grammar Book You'll Ever Need , Susan Thurman, Larry Shea, 2nd, Adams Media .
- 3 Dynamic Presentations, Mark Powell, 1st, CUP.
- 4 Effective Business Writing: Strategies, Suggestions and Examples, Maryann V. Piotrowski, 2nd, Collins Reference.

23UC1202 - ENGLISH PROFICIENCY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23UC1202	ENGLISH PROFICIENCY	EP	R	0	0	4	0	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Express the ability in interactive skills of listening, speaking, reading, and writing that are better suited for the corporate environment.	2	PO9, PO10
CO2	Apply various strategies for LSRW skills and apply them in interpreting the text	3	PO9, PO10

Syllabus

Usage of Tenses at an advanced level, , Describing people, asking and answering questions. Trying and succeeding, listening to podcasts, reading interviews. Speaking and enhancing communication skills Giving compliments & responding, discussing the natural environment, and writing a leaflet.. Vocabulary on cause and result, talking about life changes, discussing experience and training and rules.

Participles & non-finite verbs, Passive voice, Speaking- comparing different tourist destinations, agreeing, and disagreeing. Reading travel blogs, speaking. Writing travel blogs using descriptive language. Speaking and enhancing communication skills

Reference Books

- 1 Practical English Usage, Michel Swan, 1, Oxford University Press.
- 2 Everyday Vocabulary, Kumkum Gupta, 1, arihant.
- 3 Empower Intermediate/B1+ Student's Book with eBook 2nd Edition, Cambridge, 2, Cambridge University Press.
- 4 Improve Your Communication Skills, Daniel Burke , 1, Maanu Graphics Publishers.

23UC1203 - DESIGN THINKING AND INNOVATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23UC1203	DESIGN THINKING AND INNOVATION	DTI	R	0	0	4	0	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the importance of Design thinking mindset for identifying contextualized problems	2	PO2
CO2	Analyze the problem statement by empathizing with user	4	PO7
CO3	Develop ideation and test the prototypes made	3	PO3
CO4	Explore the fundamentals of entrepreneurship skills for transforming the challenge into an opportunity	2	PO11

Syllabus

Introduction to Design Thinking and Innovation: Introduction to design thinking and its principles, Learning, listening, observation, dialogue, and reading in the context of design thinking; Design definitions and stories, desirability, feasibility, viability, mystery, heuristics, algorithm, requirements, patterns, connect, blind spots; Laws of Design Thinking: less is more, last 2% equals 200%, theory of prioritization; Design mind: definitions, 5 forces of growth (SEPIA), 5 frictional forces (DCAFE), 3 capacity levers (VAL).

Design Thinking Process: Overview of the design thinking process, Design thinking for contextualized problem-solving, Incorporating sustainable development goals into design thinking, Design framework (L0); Empathy research: understanding user needs and perspectives, Persona development: creating user profiles; Customer journey mapping: visualizing user experiences, Define phase: asking the right questions and problem statement formulation.

Ideation, Prototyping and Testing: Ideation techniques, brainstorming and generating creative ideas, Identifying patterns and anti-patterns in ideation, Evaluation of ideas using different criteria (10/100/1000 gm): Prototyping and testing: translating ideas into tangible prototypes.

Entrepreneurial Innovation: Introduction to innovation management, Basics of business models and their role in innovation, Financial estimation for innovation projects: Pitch decks: creating persuasive presentations for innovation, Considerations for intellectual property rights (IPR) in innovation.

Reference Books

- 1 Design Thinking in the Classroom, David Lee, Kindle, Ulysses Press.
- 2 The Art of Innovation: Lessons in Creativity from IDEO, America, Tom Kelley , Jonathan Littman , Tom Peters, 2001, Doubleday Broadway Publishing, USA.
- 3 Unmukt- Science and Art of Design Thinking, Arun Jain, 2019, School of Design Thinking.
- 4 The Design Thinking Play Book, Michael Lewrick, Patrick Link & Larry Leifer, 2018, Wiley Press.

(DEEMED TO BE UNIVERSITY)

Y23: B.Tech. - Internet of Things

Category: Basic Science Courses (BSC)

22PH1008 - PHYSICS FOR ELECTRONIC ENGINEERS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22PH1008	PHYSICS FOR ELECTRONIC ENGINEERS	PEE	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying the concepts of basics of crystal structure to find out for the structure property relation through crystal imperfections.	3	PO1
CO2	Understand the conducting and semiconducting properties of solids at the microscopic level	2	PO1
CO3	Understand the dielectric properties of materials at the microscopic level and their applications.	2	PO1
CO4	Apply the spin and orbital motion of electrons in determining magnetic properties of materials and identifies their role in classification soft & hard magnetic materials having specific engineering applications	3	PO1
CO5	Apply the knowledge on the structure and properties of materials while executing related experiments	3	PO4

Syllabus

Atomic structure, atomic mass, and atomic number, Bonding in solids, Types of bonds- Force vs interatomic distance curve, PE curve, Crystal Structures (Space lattice, basis, unit cell, Seven Crystal systems, Bravais lattices, coordination number, Atomic packing fraction of SC, BCC, FCC,), miller indices, Crystal planes and defects (Point Defects, Line Defects, Surface Defects, Volume Defects, and Effects of Defects on Crystalline Properties)

Classification of electronic materials: metals, semiconductors, and insulators. Electrical properties: Classical Free Electron Theory: Drude and Lorentz model for metals. Temperature dependence of resistivity, Matthiessens rule. Conductivity in metals and Concepts of Fermi level. Concept of phonons, Thermal conductivity, Intrinsic and extrinsic semiconductors, Fermi level variation by carrier concentration and temperature, pn junction, drift and diffusion currents, Direct (LED) and indirect band (Solar cell) gap semiconductors

Dielectrics and electrical polarization, Depolarization field, Polarization mechanisms, Electronic polarization and its mechanisms, Dielectric breakdown, the frequency dependence of polarization, Clausius-Mossotti relation; Piezoelectricity, Pyroelectricity, and Ferroelectricity. Optical properties (Optical reflectance, Optical Absorption, Snells law, Total Internal reflection in optical fibers)

Basic definitions, classification of magnetic materials, Origin of magnetic moment, Types of interactions, Magnetic susceptibility, Curie and Neel temperatures; Domain ferromagnetism, Hysteresis, Hard and Soft magnetic materials. Magnetic anisotropies, Spin-orbit interaction, Applications: magnetic recording

Reference Books

- 1 Principles of Electronic Materials and Devices, Kasap, S.O, 3rd, McGraw-Hill.
- 2 Electronic Properties of Materials, Hummel Rodolf, 2nd, Narosa Publishing House.
- 3 Solid State Physics: An Introduction, Philip Hofmann, 2nd, Wiley.
- 4 Solid State Physics, Kittel. C, 8th, Wiley.
- 5 Solid State Physics, S.O. Pillai, 13th, New Age International Publishers.

23CS3201 - DATA SCIENCE AND STATISTICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS3201	DATA SCIENCE AND STATISTICS	DSS	R	2	2	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental principles of data science and statistics	2	PO1, PO2, PSO2
CO2	Gain basic understanding the role of data science in various scenarios in the real-world problems.	3	PO2, PO4, PSO2
CO3	Apply probabilistic predictions and decisions based on data analysis.	3	PO2, PO4, PSO2
CO4	Implement and apply proficiency in statistical inference techniques	4	PO3, PSO2

Syllabus

Data science combines math, coding, and real-world knowledge to extract meaning from data. It's used in finance, healthcare, and more to solve problems. There are challenges like big data and privacy, but data science offers exciting opportunities. Data scientists, analysts, and engineers all play a role in this field, using methodologies like CRISP-DM to guide their work. Software engineering practices are important for data science projects, and DataOps and MLOps help automate tasks to make data science more efficient.

Data comes in structured formats like tables (financial data) or unstructured formats like text (social media). Data wrangling ensures this data is clean and usable. Data models define how data is organized, while data pipelines automate the flow of data from source to destination (cleaning, transforming, loading). Modern infrastructure like cloud platforms and big data tools enable efficient handling of large datasets. Data scientists use tools to build models that automate data cleaning tasks.

Probability helps understand how likely events are (coin flips, customer arrivals). It uses concepts like chance, distributions (how likely different outcomes are), and different distribution types for various situations (number of successes in trials, time until an event). Statistics helps summarize data. It uses measures of central tendency (mean, median, mode) to find the 'middle' of the data, and measures of dispersion (variance, standard deviation) to see how spread out the data is. The type of data you have determines which measures are most useful. These tools together let you analyze the randomness in data and make sense of it.

Statistical inference lets you make educated guesses about a whole population (like all customers) based on a smaller sample (data you collect). It uses hypothesis testing (is there a difference?) and confidence intervals (likely range for a population value) to analyze this. There are different tests for different situations: t-tests compare group means, chi-square tests analyze relationships between categories, and ANOVA compares means of more than two groups. Regression analysis explores how one variable affects another. These tools help you go beyond just describing data and use it to understand relationships and make predictions.

Reference Books

- 1 Introduction to Data Science: Practical Approach with R and Python Paperback , B. Uma Maheswari, R. Sujatha, 1st, Mar 10, 2024 , Wiley.
- 2 Probability & Statistics for Data Science, Dr. D.C. Agarwal, Dr. Pradeep K. Joshi, 1st, 1 January 2022, Wiley.
- 3 Applied Statistics and Probability for Engineers, 6ed, ISV Paperback , Douglas C. Montgomery, George C. Runger, 3rd, 2011, Wiley.

23CY1001 - ENGINEERING CHEMISTRY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CY1001	ENGINEERING CHEMISTRY	ECY	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the operation of electrochemical systems to produce electric energy and storagedevices.	3	PO1, PO2
CO2	Use the fundamental aspects of electrochemistry and materials science relevant tocorrosion phenomena.	3	PO1, PO2
CO3	Examine water quality and apply appropriate purification technique for intendedproblem.	3	PO1, PO2
CO4	Employ the fundamental principles and general properties of materials in variousengineering applications.	3	PO1, PO2
CO5	Analyze the data, develop skills in chemical analysis and their application inengineering.	3	PO1, PO7

Syllabus

Electrochemistry: Single electrode potential and its measurement, Electrochemical cells, EMF series, Nernst equation, Cell emf measurement, Reversible and irreversible cells, Concentration cells, Reference Electrodes-Determination of pH using glass electrode. Batteries: Chemistry, construction, and engineering, aspects of Primary (mercury battery) and secondary (lead-Acid cell, Ni-Metal hydride cell, Lithium cells), and fuel cells, Hydrogen Oxygen fuel cell, methanol fuel cell advantages of fuel cell.

CORROSION & ITS CONTROL: Causes and different types of corrosion and effects of corrosion. Theories of corrosion: Chemical, Electrochemical corrosion, Pitting corrosion, stress corrosion, Galvanic corrosion. Factors affecting corrosion, Nature of metal, galvanic series, over voltage, purity of metal, nature of oxide film, nature of corrosion product. Nature of environment, effect of temperature, effect of pH, Humidity, effect of oxidant. Cathodic protection, sacrificial anode, impressed current cathode, electroplating.

WATER TECHNOLOGY: Introduction, Hardness: Causes, expression of hardness, units, types of hardness, estimation of temporary and permanent hardness of water, numerical problems. Alkalinity and estimation of alkalinity of water, numerical problems. Boiler troubles, Scale & sludge formation, caustic embrittlement, Boiler corrosion, priming & foaming. Softening of water: Internal and external treatments, Lime soda, Ion exchange process. Desalination: reverse osmosis and electrodialysis.

MOLECULES AND MATERIALS: Polymers, Types of polymerization, Mechanisms, Plastics, Thermoplastic resins and thermosetting resins, Preparation, properties and engineering applications of polyethylene, PVC, Teflon, Bakelite, Urea Formaldehyde. Conducting Polymers: Polyacetylene, polyaniline, conduction, doping and applications. Carbon nano tubes and Applications.

Determination of the concentration of unknown solutions (HCl vs NaOH); Determination of total alkalinity of a water sample; Determination of Iron using colorimetry; Estimation of hardness of water by EDTA method (Complexometric); Determination of chloride content of water sample; Determination of the rate constant of a reaction; Determination of Dissolved oxygen in the given water sample; Estimation of amount of iron using potentiometric method; Conductometric titration of strong acid with strong base; Estimation of amount of an acid using pH metric method; Synthesis of a polymer/ drug; Estimation of KMnO₄ using standard oxalic acid; Estimation of ferrous and ferric ion using standard K₂Cr₂O₇ solution; Estimation of amount of Vitamin- C in the given sample.

23MT1001 - LINEAR ALGEBRA AND CALCULUS FOR ENGINEERS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MT1001	LINEAR ALGEBRA AND CALCULUS FOR ENGINEERS	LACE	R	2	2	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply matrix algebra to the real-world applications in engineering, physical and biological sciences, computer science, finance, economics and solving the system of equations.	3	PO1
CO2	Apply multivariate differential calculus to find maxima & minima of functions and understand the concepts of second order differential equations and its applications.	3	PO1
CO3	Apply beta and gamma functions to evaluate improper integrals. Evaluate double and triple integrals techniques over a region in two dimensional and three-dimensional geometry.	3	PO1
CO4	interpret the physical meaning of different operators such as gradient, curl and compute the line integrals of vector functions and learn their applications.	3	PO1

Syllabus

Introduction to Matrix theory: Row echelon form and rank of a matrix, Systems of linear equations, Solution by Gauss elimination, LU-Decomposition, Eigen values and eigen vectors. Diagonalization of matrices, quadratic forms and their canonical forms.

Multivariate differentiation calculus, partial differential calculus, Jacobian, total differentiation and their applications, chain rule, Taylor's series for fundation of two variables, maxima and minima functions of two variables, Lagranges method of undermined multipliers, differential equations : mathematical models used in differential equations. second and higher order differential equations, along with methods of solutions and their applications

Multivariate Integral Calculus: Improper integrals, Beta, Gamma functions and their relationship. Line integrals- length of the arc, double and triple integrals and applications to area, volume, mass & moment of inertia. Change of order of integration, change of variables in polar, cylindrical and spherical polar coordinates.

Vector calculus - scalar and vector point functions, gradient, directional derivatives, divergence and curl, evaluation of line integrals, introduction to Greens and Stokes theorem and their applications.

23MT2003 - MATHEMATICAL MODELLING & NUMERICAL METHODS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MT2003	MATHEMATICAL MODELLING & NUMERICAL METHODS	MMNM	R	2	2	0	0	4

Prerequisite

S#	Course Title	Acronym	Rule
1	LINEAR ALGEBRA AND CALCULUS FOR ENGINEERS	LACE	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Modeling and solution of algebraic and transcendental equations.	3	PO1, PO2, PSO1
CO2	Applying numerical methods to solve ordinary differential equations.	3	PO1, PO2, PSO1
CO3	Solving of Linear and non-linear Partial Differential Equations.	3	PO1, PO2, PSO1
CO4	Applications of Partial Differential Equations.	3	PO1, PO2, PSO1

Syllabus

Bisection method and Newton Raphson method Finite differences Forward, Backward, Shift operators, average operator and relations between the difference operators.

Lagranges and Newtons divided difference formulas and Numerical solution of ordinary differential equations

Models of system of linear equations Jacobi and Gauss Seidel methods Formation of partial differential equations

one dimensional wave and heat equations and Laplace equation in two dimensions

Reference Books

23MT2004 - MATHEMATICAL PROGRAMMING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MT2004	MATHEMATICAL PROGRAMMING	MPG	R	2	2	0	0	4

Prerequisite

S#	Course Title	Acronym	Rule
1	RANDOM VARIABLES AND STOCHASTIC PROCESS	RVASP	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply various methods for finding the optimal solution of Linear Programming Problem.	3	PO1, PO2, PSO1
CO2	Apply Integer and Fractional programming approaches for solving optimization problems.	3	PO1, PO2, PSO1
CO3	Apply quadratic programming and geometric programming techniques for solving non linear programming problems	3	PO1, PO3, PSO1
CO4	Apply evolutionary algorithms, nature-inspired metaheuristics, to solve complex optimization problems in infinite-dimensional spaces.	3	PO2, PO3, PSO1

Syllabus

Linear Programming: Formulation of LP problem (LPP), Graphical method, Simplex method, Transportation problem, Duality concept in LPP, Feasibility of solution using Farka's Lemma, Ellipsoid method, Karmarkar's Algorithm

Combinatorial Optimization, Integer Programming, Branch & bound algorithms, valid inequalities & cuts. Fractional Programming. Combinatorial Optimization: Approximation Algorithms, Submodular functions, Matroids, Continuous approximation algorithms Dynamic programming: Knapsack problem, Travelling salesman Problem

Non-Linear Programming: Quadratic programs, Constrained quadratic programming Problems, Beale's method, Wolfe method, Karush Kuhn Tucker (KKT) Conditions, Geometric Programming: Problems with one-degree of difficulty with positive coefficients, Geometric programming with constraints, Problems with positive and negative coefficients

Infinite Dimensional Optimization: Heuristic and Meta heuristics, Single solution vs. population-based, Parallel meta heuristics, Evolutionary algorithms, Nature-inspired metaheuristics, Genetic Algorithm, Ant-colony optimization, Particle swarm optimization, Simulated annealing.

23MT2007 - RANDOM VARIABLES AND STOCHASTIC PROCESS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MT2007	RANDOM VARIABLES AND STOCHASTIC PROCESS	RVASP	R	2	2	0	0	4

Prerequisite

S#	Course Title	Acronym	Rule
1	MATHEMATICAL MODELLING & NUMERICAL METHODS	MMNM	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Mathematical models of random phenomena and solve probabilistic problems.	3	PO1, PSO1
CO2	Analyze different types of random variables and compute statistical parameters of the random variables.	4	PO1, PO2, PSO1
CO3	Apply random processes in the time domain and model time varying linear systems.	3	PO2
CO4	Analyze random processes in frequency domains and model spectral characteristics of LTI systems.	4	PO3

Syllabus

THE RANDOM VARIABLE AND MULTIPLE RANDOM VARIABLES: Introduction, Review of Probability Theory, Definition of a Random Variable, Conditions for a Function to be a Random Variable, Discrete, Continuous and Mixed Random Variables, Distribution and Density functions, Properties, Binomial, Poisson, Uniform, Gaussian, Exponential, Rayleigh, Conditional Distribution, Conditional Density, Properties. Vector Random Variables, Joint Distribution Function, Properties of Joint Distribution, Marginal Distribution Functions, Conditional Distribution and Density, Statistical Independence, Sum of Two Random Variables, Sum of Several Random Variables, Central Limit Theorem: Unequal Distribution, Equal Distributions.

OPERATION ON ONE AND MULTIPLE RANDOM VARIABLE EXPECTATIONS: Introduction, Expected Value of a Random Variable, Function of a Random Variable, Moments about the Origin, Central Moments, Variance and Skew, Chebychev's Inequality, Characteristic Function, Moment Generating Function, Transformations of a Random Variable: Monotonic Transformations for a Continuous Random Variable, Nonmonotonic Transformations of Continuous Random Variable. OPERATIONS ON MULTIPLE RANDOM VARIABLES: Joint Moments about the Origin, Joint Central Moments, Joint Characteristic Functions, Jointly Gaussian Random Variables: Two Random Variables case, N Random Variables case, Properties, Transformations of Multiple Random Variables, Linear Transformations of Gaussian Random Variables.

RANDOM PROCESSES TEMPORAL CHARACTERISTICS The Random Process Concept, Classification of Processes, Deterministic and Non deterministic Processes, Distribution and Density Functions, Concept of Stationarity and Statistical Independence. First-Order Stationary Processes, Second-order and Wide-Sense Stationarity, Nth order and Strict Sense Stationarity, Time Averages and Ergodicity, Autocorrelation Function and its Properties, Cross Correlation Function and its Properties, Covariance Functions, Gaussian Random Processes, Poisson Random Process.

RANDOM PROCESSES SPECTRAL CHARACTERISTICS: The Power Density Spectrum: Properties, Relationship between Power Density Spectrum and Auto correlation Function, The Cross Power Density Spectrum, Properties. Random Signal Response of Linear Systems: System Response Convolution, Mean and Mean squared Value of System Response, Auto correlation Function of Response, Cross Correlation Functions of Input and Output.

23AD2001O - ARTIFICIAL INTELLIGENCE & MACHINE LEARNING (O)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD2001O	ARTIFICIAL INTELLIGENCE & MACHINE LEARNING	AIML	O	3	0	2	0	4

Prerequisite

S#	Course Title	Acronym	Rule
1	COMPUTATIONAL THINKING FOR STRUCTURED DESIGN	CTSD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply a variety of artificial intelligence algorithms and techniques to effectively solve complex problems in diverse real-world environments	3	PO2, PO3, PO4, PSO1
CO2	Solve constraint satisfaction problems, employ knowledge engineering principles to perform inferencing, reasoning and probability theory.	3	PO2, PO3, PO4, PSO1
CO3	Apply various machine learning techniques to analyze and solve real-world problems	3	PO2, PO3, PO4, PSO1
CO4	solve complex real-world problems using advanced supervised and unsupervised learning techniques.	3	PO2, PO3, PO4, PSO1
CO5	Evaluate solutions for various AI & ML related problems.	5	PO3, PO4, PO5, PSO1

Syllabus

Introduction to Artificial Intelligence: Overview of AI, history, and applications; Agents and Environments; Problem Solving through search: Uninformed Search Algorithms: Breadth-first search, Depth-first search, Iterative deepening search, Depth Limit Iterative deepening search Bi-Directional Search; Informed Search: Heuristic search, Best First Search, A* algorithm, Local Search algorithms: Hill Climbing Algorithm, Simulated Annealing, Adversarial Search: Minimax algorithm, Alpha-beta pruning;

Constraint Satisfaction: Problem formulation, Constraint propagation, Backtracking algorithms, Knowledge Engineering: propositional Logic, Predicate Logic, Inferencing through propositional and Predicate Logic: Introduction, Inferencing rules, Inferencing Mechanisms: Entailment, Resolution, Lifting, Reasoning, Implementing inferencing: Forward Checking and Backward Chaining; Introduction to probability theory, Introduction to uncertainty Bayes Theorem;

Machine Learning: Introduction to Machine Learning, Types of Machine Learning; Introduction to Data Preprocessing: Data Cleaning, Data Splitting, Data Normalization, Data Batching, Data Shuffling, Overfitting and Underfitting; Performance metrics: Confusion matrix, Accuracy, F-score, Precision and Recall, Cross Validations; Supervised learning: Linear regression, Logistic Regression, Naive Bayes Classification, Bayesian Belief Networks; Decision Trees, KNN; Support Vector Machines (SVM), Introduction to Ensemble methods.

Ensemble methods: Bagging: Random Forest, Boosting: XG Boosting, Ada-Boosting, Unsupervised learning algorithms: K-Means clustering, Hierarchical Clustering Artificial Neural Networks (ANN): Introduction to ANN: Weights and Biases, Bias Vs Variance, McCulloch Pits, Perceptron, Applications of ANN, Types of ANN: Single-Layer Perceptron, Multi-Layer Perceptron, Feedforward and Backwards ANNs, Recurring RNN, Basics of ANN: Structure of ANN, Functionality of ANN, Learning ANNs, ANN techniques: Activation functions, Error computation (Loss Functions), Error distribution (Optimization), and Prediction using ANN.

23EC1101 - FUNDAMENTALS OF IOT AND SENSORS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC1101	FUNDAMENTALS OF IOT AND SENSORS	FITS	R	3	0	4	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic concepts of IoT and its implementation using the Development Hardware	3	PO1, PO2, PSO1
CO2	Apply the different sensors interfacing with Development Hardware	3	PO2, PO3, PSO1
CO3	Apply the different actuators interfacing with Development Hardware	3	PO2, PO3, PSO1
CO4	Analyze the IoT concept to solve real time insights	4	PO2, PO3, PO4, PSO1
CO5	Analyze the concept of IoT by interfacing with sensors and Development Hardware	4	PO2, PO3, PSO1

Syllabus

Introduction Characteristics, Architecture , Applications, Development Hardware, multiplexer (74LS153), de-multiplexer (74155), encoder (SN74LS148), decoder (74LS138), microcontroller (ATMEGA328P), Arduino Introduction Types Features Pin Description IDE Applications, Arduino GPIO Programming

Sensors and its interfacing Definition Types Classification, Temperature Sensors Thermistor Thermistor types Interfacing LM35 interfacing, Light Dependent Resistor Interfacing, Interfacing and implementation for various applications Infra-Red Sensor, PIR, Ultrasonic Sensor and Gas Sensor.

Actuators and its interfacing Introduction Types DC Motor and its applications ServoMotor and its applications Stepper Motor and its applications Motor Driver circuit Relay optocouplers

Introduction Features Pin Description GPIO Programming, Displays and its interfacing 7 Segment and its types LCD pin description commands, IoT Case Studies Home Automation Smart Irrigation Smart Health care, (Self-Learning Topics Smart Lighting Intrusion Detection Smoke Detectors Smart Parking Air Pollution)

Introduction to IoT Application and Architecture, Arduino Programming and GPIO, Digital Output Configuration of Digital Output, Concept of Delay, Introduction to LED, different connection methods of LED.

23EC1202 - DIGITAL DESIGN & COMPUTER ARCHITECTURE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC1202	DIGITAL DESIGN & COMPUTER ARCHITECTURE	DDCA	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Build the combinational and programmable digital logic circuits using logic gates and optimization methods	3	PO1, PO2, PSO1
CO2	Construct the sequential and memory circuits using flip-flops	3	PO1, PO2, PSO1
CO3	Organize computer architecture and instructions sequence	3	PO1, PO2, PSO1
CO4	Model the Memory Architecture and I/O Organization modules	3	PO1, PO2, PSO1
CO5	Develop and analyze computer architecture modules using basic combinational, sequential and memory logics	4	PO1, PO3, PO5, PSO1

Syllabus

Combinational Digital Logic Circuits: Boolean algebra, Digital Logic SOP/POS representation and optimization techniques. Adders, Subtractors, Multiplexers, De-Multiplexers, Decoder, Encoder. Programmable Logic Devices: PROM, PAL, and PLA design. Implementation of CPLD (Macrocells) and FPGA (CLB/LUT) based digital logic modules and their applications.

Design of Sequential and Memory Circuits: Latches and Flip-Flops, Modeling of memory and registers, Timing and sequence control modules using Asynchronous/Synchronous counters, Ring and Johnson counter as timing and control units. Shift registers, Random Access Memory (RAM) and Memory decoding.

Basic Computer Architecture and Instructions: Features of Micro Computer, Operands, Addressing modes, Instruction formats, Machine cycle, Instruction sets, subroutine call and return mechanisms. Instruction set architectures - CISC and RISC architectures. Hardwired realization vs micro-programmed realization, multi-cycle implementation. Instruction level parallelism, instruction pipelining and pipeline hazards.

Memory Architecture and I/O Organization: Storage systems, introduction to memory hierarchy: importance of temporal and spatial locality; main memory organization, cache memory: address mapping, block size, replacement, and store policies; virtual memory system: page table and TLB. External storage; IO fundamentals: handshaking, buffering, programmed IO, interrupt driven IO.

23EC1203 - BASIC ELECTRICAL AND ELECTRONIC CIRCUITS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC1203	BASIC ELECTRICAL AND ELECTRONIC CIRCUITS	BEEC	R	2	0	0	0	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic concepts of circuits and its fundamentals	2	PO1, PSO1
CO2	Grasp the principles of AC circuits, including sinusoidal waveforms, impedance, and power factor.	2	PO1, PSO1
CO3	Comprehend the behavior of basic electronic components, such as diodes, and transistors.	2	PO1, PSO1
CO4	Understand the basic functional Principles of analog and digital ICs.	2	PO1, PSO1

Syllabus

Basic circuit elements, Circuit fundamental: Mesh analysis and Nodal analysis, Thevenin's theorem, Norton's theorem, Superposition theorem, Maximum power transfer theorem.

AC fundamentals: RMS value, Average Values, Form & Peak factor, Steady state analysis (R, L, C, etc), Reactance, Impedance, Phase & Phase difference, Real power, Reactive power, Power factor.

Operation of the diode, Diode as a switch, Rectifiers, Clipper, Clampers, Zener Diode as a regulator, Operation of Transistor, Transistor as a switch.

Analog & Digital ICs: Voltage regulators 7805, 7905, and LM723, Operational Amplifiers IC 741, Timer IC 555, Comparators LM 339.

Reference Books

- 1 Electrical Circuit Theory and Technology, John Bird, 2009, Routledge publishers.

23ME1103 - DESIGN TOOL WORKSHOP (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME1103	DESIGN TOOL WORKSHOP	DTW	R	0	0	4	0	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate proficiency in typing sentence , paragraph , report , presentations along spread sheets using office tools, LaTeX tools and PowerBI	2	PO5, PSO2
CO2	Build a static website and blog with using html along with Special features of HTML5, CSS and Javascript	3	PO5, PO10
CO3	Develop a virtual environment with cospace and construct a marker based Augmented Reality	3	PO3, PSO1
CO4	Utilising the softwares of Autodesk Fusion 360 and the same can be printed in 3D printer as physical prototype	3	PO3, PSO1

Syllabus

Office management and documentation: Demonstrate proficiency in typing sentence , paragraph , report , presentations along spread sheets using office tools, LaTeX tools and PowerBI

Basics of Web Development: Build a static website and blog with using html along with Special features of HTML5, CSS and Javascript

Virtual Reality and Augmented Reality: Develop a virtual environment with cospace and construct a marker based Augmented Reality and create a 3D terrain

Conceptual Design, Modelling and Prototyping: Utilising the softwares of Autodesk Fusion 360 and the same can be printed in 3D printer as physical prototype, Fundamentals of electrical circuit: Ohms law

Reference Books

- 1 LaTeX Cookbook, Kottwitz, Stefan, Packt Publishing, 2015.

23SC1101 - COMPUTATIONAL THINKING FOR STRUCTURED DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SC1101	COMPUTATIONAL THINKING FOR STRUCTURED DESIGN	CTSD	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop and apply logical building blocks to solve real world problems	3	PO1, PO2, PO3
CO2	Apply computational thinking for designing solutions	3	PO1, PO2, PO3
CO3	Develop and apply the CRUD operations on arrays	3	PO1, PO4
CO4	Apply CRUD operations on Linear Data Structures	3	PO1, PO2, PO3
CO5	Apply the structured programming paradigm with logic building skills on Basic and Linear Data Structures for solving real world problems	3	PO1
CO6	Skill the students in such a way that students will be able to develop logic that help them to create programs as well as applications in C	3	

Syllabus

Structured Programming Paradigm: Problem Solving Approach, Algorithms and flowcharts, Program Development Steps, Structure of C Program, Pre-Processor Directives, Design of Building Blocks for solving real world problems: Data Types: Primitive, Extended and Derived, user defined data types Including Pointers, Modularizing problems using Functions, Scope of Variables and Storage classes

Operators: Types of operators, Precedence, Associativity, User I/O: Formatted I/O, Command line arguments, Redirecting I/O: Files and File Operations. Logic Design for Computational Thinking: Control Flow Statements: Decision Making using conditional statements, Definite and indefinite Iterative statements. Logic building using complex building blocks

Recursion, Strings and string manipulations, Arrays, 2-D Array, CRUD operations on Arrays, Strings, Dynamic Memory Allocation Searching: Linear Search and Binary Search Sorting: Bubble Sort

Structures, Array of Structures, structure pointers, CRUD operations on Linear Data Structures: Stacks, Queues, Single Linked List, Introduction to nonlinear data structures.

Reference Books

- 1 The C Programming Language: ANSI C Version, Brian W. Kernighan, Dennis M. Ritchie, 2nd Edition-2005, Prentice-Hall/Pearson Education.
- 2 Fundamentals of Data structures in C, Horowitz, Sahni, Anderson Freed, 2nd Edition-1995, Pearson Education.
- 3 Programming in ANSI C, E. Balagurusamy, 8th Edition-2015, Tata McGraw-Hill Education.
- 4 Data structures and Program Design in C, Robert Kruse, C. L. Tondo, Bruce Leung, Shashi Mogalla, 2006- 4th Edition, Pearson Education.

23SC1202 - DATA STRUCTURES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SC1202	DATA STRUCTURES	DS	R	2	0	2	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	COMPUTATIONAL THINKING FOR STRUCTURED DESIGN	CTSD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand various sorting algorithms and analyse the efficiency of the algorithms.	3	PO1, PO2
CO2	Implement and evaluate Linear Data Structures and Demonstrate their applications.	3	PO1, PO2, PO3
CO3	Implement and evaluate tree data structures and understand hashing techniques	3	PO1, PO2, PO3, PO9
CO4	Understand graph data structures and apply graphs to solve problems	3	PO1, PO2, PO9
CO5	"Design, Develop and evaluate common practical applications for linear and nonlinear data structures."	3	PO3, PO9
CO6	"Skill the students in such a way that students will be able to develop logic that help them to create programs on both linear and non-linear datastructuresand its applications."	3	PO3, PO9

Syllabus

Algorithm Analysis: Mathematical BackgrounModel, Analyze, Running Time Calculations. Sorting: Introduction to Sorting Algorithm, Insertion Sort, Shell sort, Heap sort, Merge sort, Quick sort, Bucket Sort, External Sorting.

Dynamic Memory implementation of linear data structures: Singly Linked list, doubly linked list, circularly linked list, Applications of data structures: Polynomial Manipulation, Implementation of Stacks and Queues using Linked Lists, Circular Queue, Deque(Double ended queue), Applications of Stacks and Queues. Priority Queues (Heaps): Model, Simple Implementations, Binary Heap, Applications of Priority Queues.

IHashing: Introduction to Hashing, Hash Function, Separate Chaining, Hash Tables without Linked Lists, Rehashing, Hash Tables in the Standard Library, Extendible Hashing. Trees: Introduction to trees, Binary Trees, Tree Traversals, The Search Tree: Binary Search Trees, AVL Trees, Splay Trees, B-Trees, Red black trees.

Understand graph data structures and apply graphs to solve problems

23SC1203R - COMPUTATIONAL THINKING FOR OBJECT-ORIENTED DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SC1203R	COMPUTATIONAL THINKING FOR OBJECT-ORIENTED DESIGN	CTOD	R	2	0	2	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	COMPUTATIONAL THINKING FOR STRUCTURED DESIGN	CTSD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Object oriented paradigm for code reusability	3	PO3, PO5, PSO2
CO2	Design object-oriented solutions to the real-world problems through SOLID design principles	3	PO3, PO5, PSO2
CO3	Build Abstract Data Types by applying generic classes and java API	3	PO3, PO5, PSO2
CO4	Demonstrate Exception handling and String manipulation techniques	3	PO3, PO5, PSO2
CO5	Develop solutions for real time problems by using object-oriented programming concepts.	5	PO1, PO2, PO4, PSO2
CO6	Develop a real time project by using object-oriented programming concepts.	5	PO1, PO2, PO4, PSO2

Syllabus

Introduction: Understanding Object Oriented Paradigm VS Structured Paradigm, Advantages of Object Oriented Programming and its key features-abstraction, encapsulation, inheritance & polymorphism, Java Program hierarchy and compilation process. Building static methods. Primitive data types and Arrays as Reference data type. Access specifiers for methods. Logic Building using control statements and Iterative statements. Wrapper classes, Type casting (Implicit & Explicit), command line arguments.

Classes & Objects: object, class Vs object and object instantiation. Abstraction and Encapsulation using accessors and mutators. Constructors- default, user-defined and parameterized. Introduction to Java API, Scanner class, console based IO, constructor chaining, this keyword, array of objects, aggregation vs composition, ArrayList, SOLID design principles.. Inheritance, Method overriding, dynamic polymorphism, dynamic method dispatch, Singleton classes. Inner classes.

Exception Handling & File IO: Introduction to exceptions & errors, Java API for exceptions, try, catch, finally, throw and throws keywords, try with resources, user defined exceptions. File IO, byte streams, character streams, wrapper classes for Object IO using serializable. Strings: String based algorithms using StringBuffer and String Builder, String constant pool, regex, garbage collection.

Abstraction & Applications: Abstract classes, abstract methods, final keyword for methods and classes, template pattern, Introduction to interfaces, Interfaces vs implementation, Factory classes, factory method pattern, Generic classes, application of interfaces to build abstract data structures, Java API for Vector and Hash set and Hash Map, comparable, comparator and cloneable, iterator interfaces. Anonymous classes, Decorator pattern. Event driven programming with event listeners.

Reference Books

- 1 Introduction to Java Programming, Comprehensive Version , Y. Daniel Liang , 10, PHI.

- 2 The Complete Reference Java , Herbert Schildt , 7th, TMH.
- 3 An Introduction to Object-Oriented Programming , Timothy A. Budd , 3rd, Pearson.
- 4 The JAVA programming language, K. Arnold and J. Gosling, 3, Pearson.

(DEEMED TO BE UNIVERSITY)

Y23: B.Tech. - Internet of Things

Category: Professional Core Courses (PCC)

23AD2102A - DATABASE MANAGEMENT SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD2102A	DATABASE MANAGEMENT SYSTEMS	DBMS	A	4	0	4	0	6

Prerequisite

S#	Course Title	Acronym	Rule
1	COMPUTATIONAL THINKING FOR STRUCTURED DESIGN	CTSD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply fundamental database design principles, including normalization, to model complex data relationships.	3	PO2
CO2	Develop efficient and secure database applications using Structured Query Language (SQL) and PL/SQL for data manipulation and retrieval.	3	PO5, PSO1
CO3	Implement and manage database systems with appropriate indexing techniques, query optimization strategies, and concurrency control mechanisms for efficient and reliable data access.	3	, PSO1
CO4	Analyze and evaluate the suitability of emerging database technologies like NoSQL and Big Data for modern applications, considering security implications.	4	PO5, PO9, PSO1
CO5	Design and implement distributed database systems, considering replication techniques and principles of distributed data management.	6	PO2, PO9, PSO1
CO6	Design and implement practical database solutions to solve real-world problems using appropriate database management system technologies and best practices.	6	PO5, PO9, PSO1

Syllabus

Introduction to databases, data models (ER Model), database management systems (DBMS) architecture. Entity-Relationship (ER) Modelling concepts, relationship types, cardinality and ordinality constraints. Relational model concepts, normalization process (1NF, 2NF, 3NF, BCNF) for data integrity.

Introduction to SQL, Data Definition Language (DDL) for schema creation and manipulation. Data Manipulation Language (DML) for data retrieval, insertion, deletion, and modification. Advanced SQL concepts: Joins (inner, outer), subqueries, aggregation functions, views, and data security using access control. Introduction to PL/SQL for procedural programming within the database.

Introduction to transaction management concepts (ACID properties). Concurrency control mechanisms (locking protocols) and recovery techniques (rollback, redo) to ensure data consistency. Indexing techniques (hashing, B-trees) for efficient data access. Query optimization strategies for improving query performance.

Introduction to NoSQL databases and their characteristics (key-value, document, graph). Big Data concepts, distributed storage and processing frameworks (Hadoop). Security considerations in database management systems, including access control, encryption, and intrusion detection.

Principles of distributed database systems: architectures, advantages, and challenges. Replication techniques for data consistency and availability. Data fragmentation techniques (horizontal, vertical), distributed transactions, and distributed query processing

23AD2102E - DATABASE MANAGEMENT SYSTEMS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD2102E	DATABASE MANAGEMENT SYSTEMS	DBMS	E	4	0	4	0	6

Prerequisite

S#	Course Title	Acronym	Rule
1	COMPUTATIONAL THINKING FOR STRUCTURED DESIGN	CTSD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Design and implement robust database models using advanced normalization techniques, design patterns, and optimizations to address complex real-world challenges.	4	
CO2	Develop sophisticated database applications utilizing SQL, PL/SQL, and relevant programming frameworks for efficient data processing and integration with real-world systems.	4	PO3, PSO1
CO3	Architect and manage scalable database systems, optimizing performance through advanced indexing, query tuning, and distributed architectures.	5	PO5, PO9, PSO1
CO4	Critically evaluate traditional and emerging database technologies (NoSQL, graph databases, in-memory databases) to architect optimal solutions for modern application use cases.	5	PO5, PO9, PSO1
CO5	Design and implement comprehensive database solutions for real-world projects, demonstrating collaboration, project management, and effective communication of technical concepts.	6	PO3, PO5, PO9, PSO1

Syllabus

Advanced normalization (4NF, 5NF, DKNF) and database design patterns. Performance optimization for complex schemas and data volumes. Project: Design a real-world database, applying advanced techniques and justifying choices.

Complex SQL queries, stored procedures, triggers, and functions for advanced data manipulation. Integrating databases with applications using ORMs, JDBC/ODBC, and relevant frameworks. Project: Extend an existing application with database features or build a database-driven application.

Replication (master-slave, master-master), sharding, and distributed database concepts. Performance tuning, load balancing, and benchmarking for large-scale systems. Project: Design and simulate a scalable database architecture, evaluating performance trade-offs.

NoSQL databases (key-value, document, columnar, graph): use cases, modeling, and performance considerations. In-memory databases, database appliances, and cloud-based database services. Project: Prototype a solution using an alternative database technology, showcasing advantages.

Team-based project addressing a real-world problem using a comprehensive database solution. Proposal, design, implementation, testing, deployment, and documentation. Presentation and defence of the project to a panel of experts.

23AD2102R - DATABASE MANAGEMENT SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD2102R	DATABASE MANAGEMENT SYSTEMS	DBMS	R	3	0	2	0	4

Prerequisite

S#	Course Title	Acronym	Rule
1	COMPUTATIONAL THINKING FOR STRUCTURED DESIGN	CTSD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply fundamental database design principles, including normalization, to model complex data relationships.	3	PO3
CO2	Develop efficient and secure database applications using Structured Query Language (SQL) and PL/SQL for data manipulation and retrieval.	3	PO3, PSO2
CO3	Implement and manage database systems with appropriate indexing techniques, query optimization strategies, and concurrency control mechanisms for efficient and reliable data access.	3	PO5, PO9, PSO2
CO4	Analyze and evaluate the suitability of emerging database technologies like NoSQL and Big Data for modern applications, considering security implications.	4	PO5, PO9, PSO2
CO5	Design and implement practical database solutions to solve real-world problems using appropriate database management system technologies and best practices.	6	PO3, PO5, PO9, PSO2

Syllabus

Introduction to databases, data models (ER Model), database management systems (DBMS) architecture. Entity-Relationship (ER) Modelling concepts, relationship types, cardinality and ordinality constraints. Relational model concepts, normalization process (1NF, 2NF, 3NF, BCNF) for data integrity.

Introduction to SQL, Data Definition Language (DDL) for schema creation and manipulation. Data Manipulation Language (DML) for data retrieval, insertion, deletion, and modification. Advanced SQL concepts: Joins (inner, outer), subqueries, aggregation functions, views, and data security using access control. Introduction to PL/SQL for procedural programming within the database.

Introduction to transaction management concepts (ACID properties). Concurrency control mechanisms (locking protocols) and recovery techniques (rollback, redo) to ensure data consistency. Indexing techniques (hashing, B-trees) for efficient data access. Query optimization strategies for improving query performance.

Introduction to NoSQL databases and their characteristics (key-value, document, graph). Big Data concepts, distributed storage and processing frameworks (Hadoop). Security considerations in database management systems, including access control, encryption, and intrusion detection.

23EC2106A	PROCESSORS AND CONTROLLERS	PRC	A	4	0	4	0	6

Prerequisite

S#	Course Title	Acronym	Rule
1	DIGITAL DESIGN & COMPUTER ARCHITECTURE	DDCA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the foundational concepts of the 8086 microprocessor, including its architecture, pinout, addressing modes, instruction set, timing diagrams for different modes, ALU programming, and practical examples."	3	PO2, PO5, PO7, PSO1
CO2	Apply the core aspects of the 8051 microcontroller, focusing on its architecture, pin diagram, addressing modes, instruction sets, and programs involving arithmetic and logical operations, as well as the use of timers and counters."	3	PO2, PO5, PO7, PSO1
CO3	Analyse the 8051 microcontroller applications through assembly-level programming, exploring interrupts, serial port operations, and peripherals like timers, seven-segment displays, LCDs, ADCs, DACs, and stepper motor control, with case studies in keypad interfacing, traffic signals, home automation, and industrial use cases."	4	PO2, PO5, PO7, PSO1
CO4	Apply the architectures and features of PIC and ARM microcontrollers, examining the ARM series\' evolution, core features, pipeline processing, processor modes and registers, exception handling, and ARM\'s Thumb mode of execution."	3	PO2, PO5, PO7, PSO1
CO5	Apply the architectural features of RISC type of ARM and AVR microcontroller	3	PO2, PO5, PO7, PSO1
CO6	Analyse the 8051 microcontroller applications through assembly-level programming, exploring interrupts, serial port operations, and peripherals like timers, seven-segment displays, LCDs.	4	PO2, PO5, PO7, PSO1

Syllabus

8086-Microprocessor: The course covers the basics of processors, introduction and history of processors, detailed 8086 pinout, and architecture. It explores addressing modes, instruction set, timing diagrams for minimum and maximum modes, ALU programming, and practical examples.

8051-Microcontroller: The course covers the architecture and pin diagram of the 8051 microcontroller, addressing modes, instruction sets, stack operations, and programs involving arithmetic and logical instructions. It also includes a detailed study of timers and counters.

8051-Microcontroller Applications: Interrupts & Serial port Assembly level programming, Peripherals and Input Output with 8051 Microcontroller - Timers and Interfacing Seven Segment, LCD, ADC, DAC & Stepper Motor Control). Case studies: Keypad, Traffic signal, Home automation & Industrial applications.

PIC Microcontroller: Architecture & features of PIC, Instruction sets , **ARM Microcontroller:** Introduction, Architecture, ARM series of microcontrollers, Evolution of ARM microcontrollers, ARM features, Basic concepts of pipeline processing, ARM processor modes and registers, Special registers.

ARM & AVR controllers: ARM Instruction sets: Data processing, Data transfer Instructions, Branch, Swap and Thumb modes of execution, Stack, Interrupts-Software Interrupts, ARM exception handling and Cortex. AVR controllers: Introduction, Architecture, features, Instructions, Timers/Counters.

23EC2210A - NETWORK PROTOCOLS AND SECURITY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC2210A	NETWORK PROTOCOLS AND SECURITY	NPS	A	4	0	4	0	6

Prerequisite

S#	Course Title	Acronym	Rule
1	DIGITAL DESIGN & COMPUTER ARCHITECTURE	DDCA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of communication to understand the concepts of physical layer and datalink layer.	3	PO1, PO2, PSO2
CO2	Analyze various MAC protocols and IP addressing concepts to subnet a network.	4	PO2, PO3, PSO2
CO3	Analyze static and dynamic routing algorithms and transport layer protocols.	4	PO2, PO3, PSO2
CO4	Analyze application layer protocols and various cryptographic algorithms.	4	PO2, PO3, PSO2
CO5	Analyze various link layer protocols and advanced security concepts.	4	PO2, PO3, PSO2
CO6	Analyze the functionality of the network using different protocols and working of various cryptographic algorithms.	4	PO2, PO5, PSO2

Syllabus

Introduction to Computer networks and Data Link Layer: Use of Computer Networks, Network Hardware, Network software, Reference models: OSI and TCP/IP, Physical Layer: The theoretical basis for Data Communication, Guided and Unguided Transmission Media, Switching. Data Link Layer: DLL design issues. Error Detection and Correction, Elementary data link protocols, sliding window protocols.

Medium Access Control Sub layer: Channel allocation problem, multiple access protocols, Design issues of Network layer, Inter-networking Devices: Distinguishing of Networking Devices and Inter-networking Devices, Analysis of Router Processing: Access, core and distribution. VLANs, Addressing: IP addressing (IPv4 & IPv6), subnetting; IP Tunneling, NAT, PAT.

ARP, DHCP, Types of Routing: static, default and dynamic. Networking Protocols: RIP, OSPF, BGP; Access Control list for IPv4, IPv6, Transport Layer: Process to Process Delivery; UDP; TCP; Stream Control Transmission Protocol (SCTP); Congestion Control: Open Loop, Closed Loop Choke Packets; Quality of Service: Techniques to Improve QoS: Leaky bucket algorithm, Token bucket algorithm.

Application Layer: DNS, SMTP, SNMP Introduction to Security, Security goals, Security Attacks, Security Services and Mechanisms, A Security Model, Asymmetric & Symmetric key Ciphers, Substitution Techniques, Transposition Techniques, DES, RSA algorithm, Secure Socket Layer.

Ethernet, HDLC, CHAP, PAP, PPP, PPPoE, AAA, IPSec, ACL, OSPF V3, IPv6: EUI-64, DAD; MPLS, Firewalls, Hashing, Digital Signatures.

CO5	Apply IoT Privacy and Security	3	PO1, PO5, PSO1
CO6	Develop IoT based applications using IoT Protocols	5	PO1, PO2, PO5, PSO1

Syllabus

IoT Reference Architecture: Introduction to IoT, Characteristics of IoT, IoT Architecture, Physical Design of IoT, Logical design of IoT, IoT enabling Technologies, IoT Levels & Development Templates, Difference between IoT and M2M, SDN and NFV for IoT. RFIDs, and wireless sensor networks technology.

Embedded devices for IoT and Sensor Technology. IoT Systems-Logical using Python: Installing Python, Python Data Types & Data Structures, Control Flow, Functions, Modules, Packages, Date/ Time Operations, Classes, Python Packages. IoT Design Methodology, Case study using weather monitoring. IoT Physical Devices & Endpoints: What is an IoT Device, Exemplary Device, Board, Linux on Raspberry Pi, Programming of IoT.

IoT Communication Technologies: wired UART, USART, SPI, I2C, ModBUS, CAN, Ethernet, USB. Wireless, Bluetooth, BLE, IEEE 802.11, IEEE 802.15, Zig SIGFOX. IoT Networking Protocols: IPv4 and IPv6, lowPAN, TCP/IP, IP addressing of IoT devices MAC addresses of communication circuit. Web connectivity connected devices Application Protocols HTTP, Web sockets, Node, MQTT, UDP, CoAP, XMPP, AMQP and gateway protocols. Link Layer protocols: 802.3, IEEE 802.11 Wi-Fi 802.16, WiMax 802.15.4, LR, WPAN, 2G, 3G, 4G. Cloud storage Models and Communication APIs. Web application management protocol, Python application framework.

IoT design considerations, Prototyping IoT solutions, Design IoT development Frameworks: Case studies illustrating IoT design: Home Automation: Smart lighting, Smart Appliances, Cities: Smart Parking, Smart Lighting, Smart Roads, Emergency response, Environment: Weather monitoring, Air Pollution Monitoring, Noise pollution, Forest fire, River flood, Agriculture: Smart irrigation, Green House control.

Internet of Things and Privacy, Computational Privacy and IoT, System and Application Level Privacy in IoT, Internet of Things and Security, Security Mechanisms in IoT, IoT Communications Security

IoT Reference Architecture: Introduction to IoT, Characteristics of IoT, IoT Architecture, Physical Design of IoT, Logical design of IoT, IoT enabling Technologies, IoT Levels & Development Templates, Difference between IoT and M2M, SDN and NFV for IoT. RFIDs, and wireless sensor networks technology.

Embedded devices for IoT and Sensor Technology. IoT Systems-Logical using Python: Installing Python, Python Data Types & Data Structures, Control Flow, Functions, Modules, Packages, Date/ Time Operations, Classes, Python Packages. IoT Design Methodology, Case study using weather monitoring. IoT Physical Devices & Endpoints: What is an IoT Device, Exemplary Device, Board, Linux on Raspberry Pi, Programming of IoT.

IoT Communication Technologies: wired UART, USART, SPI, I2C, ModBUS, CAN, Ethernet, USB. Wireless, Bluetooth, BLE, IEEE 802.11, IEEE 802.15, Zig SIGFOX. IoT Networking Protocols: IPv4 and IPv6, lowPAN, TCP/IP, IP addressing of IoT devices MAC addresses of communication circuit. Web connectivity connected devices Application Protocols HTTP, Web sockets, Node, MQTT, UDP, CoAP, XMPP, AMQP and gateway protocols. Link Layer protocols: 802.3, IEEE 802.11 Wi-Fi 802.16, WiMax 802.15.4, LR, WPAN, 2G, 3G, 4G. Cloud storage Models and Communication APIs. Web application management protocol, Python application framework.

IoT design considerations, Prototyping IoT solutions, Design IoT development Frameworks: Case studies illustrating IoT design: Home Automation: Smart lighting, Smart Appliances, Cities: Smart Parking, Smart Lighting, Smart Roads, Emergency response, Environment: Weather monitoring, Air Pollution Monitoring, Noise pollution, Forest fire, River flood, Agriculture: Smart irrigation, Green House control.

Internet of Things and Privacy, Computational Privacy and IoT, System and Application Level Privacy in IoT, Internet of Things and Security, Security Mechanisms in IoT, IoT Communications Security

23IN2101R - IOT SYSTEM DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN2101R	IOT SYSTEM DESIGN	IOTPA	R	3	0	2	0	4

Prerequisite

S#	Course Title	Acronym	Rule
1	FUNDAMENTALS OF IOT AND SENSORS	FITS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concepts of IoT Architecture and technologies	3	PO1, PO7, PSO1
CO2	Apply the logical design of IoT system	3	PO1, PO7, PSO1
CO3	Apply IoT networking protocols and Authentication Protocols for IoT Application layer.	3	PO1, PO2, PO5, PSO1
CO4	Apply IoT protocols and programming concepts for real-world problems.	3	PO1, PO2, PO5, PSO1
CO5	Develop IoT based applications using IoT Protocols	5	PO3, PO5, PSO2

Syllabus

IoT Reference Architecture: Introduction to IoT, Characteristics of IoT, IoT Architecture, Physical Design of IOT, Logical design of IoT, IoT enabling Technologies, IoT Levels & Development Templates, Difference between IoT and M2M, SDN and NFV for IoT. RFIDs, and wireless sensor networks technology. IoT Programming language and Tools.

Module 2 IoT Communication Technologies: wired - ModBUS, Wireless - Bluetooth, BLE, IEEE 802.11, IEEE 802.15, Zigbee, SIGFOX. IoT Networking Protocols: IPv4 and IPv6.6lowPAN, TCP/IP, IP addressing of IoT devices MAC addresses of communication circuit.

IoT Communication Technologies: wired UART, USART, SPI, I2C, ModBUS, CAN, Ethernet, USB. Wireless, Bluetooth, BLE, IEEE 802.11, IEEE 802.15, Zigbee, SIGFOX. IoT Networking Protocols: IPv4 and IPv6.6lowPAN, TCPIP, IP addressing of IoT devices MAC addresses of communication circuit. Web connectivity for connected devices Application Protocols HTTP, Web sockets, Node, MQTT, UDP, CoAP, XMPP, AMQP and gateway protocols. Link Layer protocols: 802.3, Ethernet 802.11 WiFi 802.16, WiMax 802.15.4, LR, WPAN,2G,3G.4G. Cloud storage Models and Communication APIs. Web application management protocol, Python web application framework.

IoT design considerations, Prototyping IoT solutions, Design IoT development Frameworks: Case studies illustrating IoT design: Home Automation: Smart lighting, Smart Appliances, Cities: Smart Parking, Smart Lighting, Smart Roads, Emergency response, Environment: Weather monitoring, Air Pollution Monitoring, Noise pollution, Forest fire, River flood, Agriculture: Smart irrigation, Green House control.

23IN2102 - ELECTRONIC DEVICES AND INTEGRATED CIRCUITS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN2102	ELECTRONIC DEVICES AND INTEGRATED CIRCUITS	EDAIC	R	3	0	2	0	4

Prerequisite

S#	Course Title	Acronym	Rule
1	BASIC ELECTRICAL AND ELECTRONIC CIRCUITS	BEEC	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of Semiconductor physics and discuss BJT configurations and its applications	3	PO1, PSO1
CO2	Apply the limitations of BJT and discuss the characteristics and applications of Field Effect Transistors	3	PO1, PSO1
CO3	Analyze the linear and nonlinear circuits approaches and realize the characteristics of operational Amplifiers	4	PO1, PO2, PSO1
CO4	Apply the knowledge of internal structure, operation and applications of different ICs	3	PO1, PSO1
CO5	Design and analyze analog circuits for real-time applications using Passive and Active Components	4	PO2, PO3, PO5, PSO1

Syllabus

The construction working and characteristics of BJTs, including DC load line analysis with the help of biasing and stability of operating point, the design of BJT amplifiers along with the small signal models

The construction working and characteristics of JFET like pinch-off voltage, drain saturation current, including the JFET biasing and amplification. Types of Metal Oxide Semiconductor Field Effect Transistor (NMOS, PMOS, CMOS) with their application.

Integrated circuits basics along with Ic741 and IC555 with the different operating modes and their application in arithmetic circuits, filters, oscillators, and multivibrators.

78xx/79xx voltage regulators used for maintaining stable voltage levels. Sample & hold circuits for capturing and holding analog signals, DAC and ADC for converting between digital and analog signals, and more complex devices such as CPLDs and FPGAs.

Reference Books

- 2 Electronic Devices - Electron Flow Version, Thomas L. Floyd , 2017, Pearson.
- 3 Op-Amps and Linear IC Applications, Ramakanth A. Gaykwad , 2021, Wiley.
- 4 Digital Design: Principles and Practices, Wakerly J.F., 2016, Pearson.

23IN2203R - WIRELESS TECHNOLOGIES FOR IOT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN2203R	WIRELESS TECHNOLOGIES FOR IOT	WTIOT	R	3	0	2	0	4

Prerequisite

S#	Course Title	Acronym	Rule
1	NETWORK PROTOCOLS AND SECURITY	NPS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply RF spectrum analysis techniques to assess and optimize wireless communication systems	3	PO1, PSO1
CO2	Apply knowledge of various wireless personal area network technologies, including Bluetooth, UWB, and ZigBee, to implement efficient sensor networks.	3	PO1, PO2, PSO1
CO3	Apply the IEEE 802.11 standards to enhance WLAN connectivity and quality of service, including power-saving mechanisms.	3	PO1, PSO1
CO4	Illustrate the various cellular standards	2	PO1, PSO1
CO5	Design and Analyse various analog and digital communication circuits	4	PO3, PSO1

Syllabus

Introduction to Wireless Communications Systems: RF & Spectrum Analysis of RF Environment, communication -Analog and Digital communication. Factors affecting network : range and speed ,Environment ,Line-of- sight ,Interference ,Defining ,CDMA and OFDM.

WSN & WPN: Wireless Personal Area Networks, Bluetooth, Bluetooth Standards, Bluetooth Protocol Architecture, UWB, IEEE 802.15 standards, ZigBee, Sensor Networks, co-existence strategies in Sensor Networks, Routing protocols in Wireless Sensor Networks

Organizations and Standards: IEEE, Wi-Fi Alliance, WLAN Connectivity, WLAN QoS & Power-Save, IEEE 802.11 Standards, 802.11-2007, 802.11a/b/g, 802.11e/h/l, 802.11n. Introduction to wireless sensor Networks, Advantages of ad-hoc/sensor networks, Unique constraints and challenges. Applications Platforms for WSN.

Cellular Standards: Cellular carriers and Frequencies, Channel allocation, Cell coverage, Cell Splitting, Microcells, Picocells, Handoff; Evolution of Cellular system architecture from 2G to 5G, Frequency bands for new radio, RAN architectures, frame structure, 5G Core architecture.

Reference Books

- 2 Advanced Electronic Communication Systems, Wayne Tomasi , 5th Edition, Pearson.
- 3 Wireless Communications - Principles and Practice , Theodore S Rappaport ,, 2nd Edition, Pearson Education Pte. Ltd.
- 4 Mobile and cellular telecommunication, William C.Y. Lee,, 2nd Edition, , TATA McGRAW-HILL .

23IN3104A - REAL TIME OPERATING SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN3104A	REAL TIME OPERATING SYSTEMS	RTOS	A	4	0	4	0	6

Prerequisite

S#	Course Title	Acronym	Rule
1	DIGITAL DESIGN & COMPUTER ARCHITECTURE	DDCA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand subsystem components of the Kernel and apply the CPU Scheduling algorithms.	3	PO1, PO2, PO5, PSO2
CO2	Understand memory and process virtualization and Paging, apply Page Replacement Algorithms	3	PO1, PO2, PO5, PSO2
CO3	Understand and Apply the threading issues for RTOS	3	PO1, PO2, PO5, PSO2
CO4	Understand and Apply the memory management concepts in RTOS	3	PO1, PSO2
CO5	Understand and Apply the Kernel Design Issues	3	PO1, PO5, PSO2
CO6	Able to perform experimentation Real-Time Operating Systems Other Basic Operating System Functions	3	

Syllabus

Operating System Functionalities, Types of Operating Systems, Process Virtualization: Processes, Process API code, Direct Execution, CPU Scheduling, Multi-level Feedback, Lottery Scheduling code, Multiprocessor Scheduling.

Memory Virtualization: Address Spaces, Memory API, Address Translation, Segmentation, Free Space Management, CPU Virtualization Basics, Introduction to Paging, Translation Look Aside Buffer, Swapping, Demand Paging, Thrashing, Page replacement algorithms.

Concepts, scheduling, IPC, RPC, CPU Scheduling, scheduling criteria, scheduling algorithms Threads: Multi-threading models, threading issues, thread libraries, synchronization Mutex: creating, deleting, prioritizing mutex, mutex internals.

Messages, Buffers, mailboxes, queues, semaphores, deadlock, priority inversion, PIPES MEMORY MANAGEMENT: - Process stack management, run-time buffer size, swapping, overlays, block/page management, replacement algorithms, real-time garbage collection.

Kernel Design Issues: structure, process states, datastructures, inter-task communication mechanism, Linux Scheduling

Reference Books

- 1 Kernel Design Issues: structure, process states, datastructures, inter-task communication mechanism, Linux Scheduling, Abraham Silberschatz, Peter Baer Galvin, and Greg Gagne, 3rd, Wiley..
- 2 Real-time systems, Real-time systems, 2nd, Prentice Hall.
- 3 Linux Kernel Development, Robert Love, 3rd Edition (2010), Addison-Wesley Professional.
- 4 Operating Systems: Internals and Design Principles, William Stallings, 9th edition, Pearson.

23IN3105A - EMBEDDED SYSTEMS DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN3105A	EMBEDDED SYSTEMS DESIGN	ESD	A	3	0	4	0	5

Prerequisite

S#	Course Title	Acronym	Rule
1	PROCESSORS AND CONTROLLERS	PRC	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Embedded C programming concepts and apply for embedded system design.	2	PO3, PO5, PSO2
CO2	Apply GPIO and HAL concepts to interface various input output devices.	3	PO3, PO5, PSO2
CO3	Apply UART, I2C communication protocols to interface real time devices.	3	PO2, PO5, PSO2
CO4	Apply embedded applications to simulink based testing	3	PO3, PO5, PSO2
CO5	Analyze state flow models for embedded system applications	3	PO2, PO5, PSO2
CO6	Design and develop real world applications using embedded system design principles.	4	PO3, PO5, PSO2

Syllabus

Overview of embedded systems, importance of processors/microcontrollers, Embedded C programming, debugging tools, data types, arrays, pointers, and storage classes: comprehensive syllabus covering key aspects in embedded system design and programming.

Introduction to HAL library in embedded C, GPIO programming with external devices using HAL, configuring ADC registers: comprehensive syllabus covering hardware abstraction and peripheral interfacing in embedded systems.

Programming timers and related control registers, applications of timer in time-sharing system, Concept of compare/capture modes, and applications of timers in PWM control, Interrupt programming with Hal :Interrupt priorities. Communication Protocol: UART, SPI Programming

SPI, I2C, UART, and Bluetooth enable STM32 interfacing for data communication and peripheral connectivity: syllabus covering essential communication protocols for effective interfacing in embedded systems.

V-cycle and MBD workflow, programming with MATLAB (m-script), Simulink modeling of dynamic systems, Stateflow modeling, model architecture, and data management, covering model-based design and simulation techniques.

(DEEMED TO BE UNIVERSITY)

Y23: B.Tech. - Internet of Things

Category: Flexi Core Courses (FCC)

23AD2224F - CLOUD COMPUTING (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD2224F	CLOUD COMPUTING	CC	F	2	1	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Fundamental concepts and architecture of cloud computing.	2	PO5, PSO2
CO2	Analyze and Implement cloud-based solutions using various service models like IaaS, PaaS, and SaaS.	4	PO3, PO5, PSO2
CO3	Evaluate security measures and best practices in cloud environments.	5	PO3, PO5, PSO2
CO4	Develop scalable and resilient applications on popular cloud platforms.	3	PO4, PO5, PSO2

Syllabus

Overview of Cloud Computing: Introduction to Cloud Computing , History of Cloud computing, Cloud computing elements, Essential characteristics, cloud service models, cloud deployment models, NIST cloud computing reference architecture, ITU-T cloud computing reference architecture.

Virtualization: Introduction, Virtualization concepts Types of Virtualization Server Virtualization Overview and Importance Techniques: Full Virtualization, Paravirtualization, OS-Level Virtualization Examples and Use Cases Desktop Virtualization, Concept and Advantages Virtual Desktop Infrastructure (VDI) Application, Virtualization Network Virtualization Virtual LAN (VLAN), Virtual Private Network (VPN) Software-Defined Networking (SDN) Storage Virtualization Block-Level and File-Level Storage Virtualization Storage Area Networks (SAN), Network-Attached Storage (NAS) Application Virtualization Benefits and Use Cases, Application Streaming and Packaging Data Virtualization Data Integration and Management Benefits in Cloud Computing Environments- Introduction to Various Hypervisors, Characteristics of virtualized environments, Taxonomy of virtualization techniques,

Cloud Architecture Layers and Models: Layers in cloud architecture, Cloud Service Models: Software as a Service (SaaS) Introduction to Software as a Service (SaaS) Definition and characteristics of SaaS Advantages and disadvantages of SaaS Examples of popular SaaS applications Architecture of SaaS Solutions Multi-tenancy concept in SaaS Differences between single-tenant and in multi-tenant environments Customization and configuration options for tenants Strategies for tenant management and user provisioning Understanding the Multitenant Nature of SaaS Solutions multi-tenant architectures Scalability and performance considerations in multi-tenant environments Design Principles for SaaS Data isolation and security models

Cloud Platforms in Industry: Amazon Web Services, Compute Services, Storage Services, Communication Services and Additional Services. Google AppEngine Architecture and Core Concepts Overview of Cloud Service Models, Introduction to Google App Engine, App Engine , Architecture, Core Concepts of Google App Engine, Scaling and Load Balancing in App Engine, Data Storage Options in App Engine, App Engine Services and APIs, Security and Compliance in App Engine, Monitoring and Logging in App Engine

Reference Books

23AD2229F - AI FOR HEALTH CARE (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD2229F	AI FOR HEALTH CARE	RTOS	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand ethical and regulatory considerations in deploying AI solutions in healthcare and a collection of AI Technologies used in healthcare.	2	PO1, PO2, PSO2
CO2	Apply Deep learning models of intelligence to real-world healthcare problems to identify the disease.	3	PO2, PO3, PSO1
CO3	Analyze the performance of a model after applying the standard evaluation metrics in diagnosing diseases.	4	PO1, PO3, PSO2
CO4	Implement an appropriate loss function for image segmentation, and apply a pre-trained U-net model to segment any disease regions from any Medical Image.	4	PO2, PO3, PSO2
CO5	Apply Machine learning and Deep Learning techniques for solving problems related to healthcare in the python environment.	3	PO2, PO3, PSO1

Syllabus

Introduction to AI in Healthcare: Objectives of AI in Healthcare, Applying AI in Healthcare, Common Challenges of AI in Healthcare, The future considerations in healthcare AI. AI Technologies used in Healthcare and their application: Introduction to Artificial Intelligence: basic concept. Machine learning: basic learning), Applications of ML in Healthcare, ANN: basic, its application in healthcare and its limitations, Natural Language Processing (NLP) basic and its application interactions, Computer vision: basic and its application for medical imaging analysis.

Fundamentals of Neural Networks: Introduction to Neural Networks: mimic brain function. Feedforward Neural Networks: Structure and functioning of basic neural networks. Backpropagation: Understanding the algorithm for learning optimization algorithms. Deep learning architecture applied in Healthcare: CNN, RNN, LSTM, Densenet, Deep Belief Network, Restricted Boltzmann machine (RBM) opportunities and challenges.

Confusion Matrix, Model evaluation and performance metrics, cross validation, Sensitivity, Specificity and Evaluation Metric Sensitivity, Specificity and Prevalence, PPV, NPV, ROC Curve and Threshold, Varying the Threshold, Sampling from the Total Population Confidence Intervals, 95% entropy, optimizing cost functions.

Handling Class Imbalance and small training set: Building and Training a Model for Medical Diagnosis, Image Classification and Loss, Binary Cross Entropy Loss Function, Training and Validation Loss, Accuracy and Loss Curves. AI for Medical Image Processing and Imaging: Medical Image Registration, U-Net Model architecture, Data Augmentation for Segmentation, Loss Function for Image Segmentation.

Reference Books

23BT2224F - BIOREACTOR OPERATIONS (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT2224F	BIOREACTOR OPERATIONS	BO	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding various process parameters for designing of bioreactor.	2	PO1, PSO1
CO2	Apply various unit operations for purification of value added products.	3	PO1, PSO1
CO3	Apply various bioreactors for production of value added products from microorganisms and enzymes.	3	PO3, PO5, PSO1
CO4	Interpret various Transport Processes for designing of bioreactor and unit operations.	3	PO3, PO5, PSO1
CO5	Analyze the kinetics of biological system involved in fermentation processes to enhance productivity and biomass.	4	PO3, PSO1

Syllabus

Overview of Biological Reactions, Types of Biological Reactions, Reaction Kinetics, Stoichiometry of Biological Reactions, Elements in Bioreactor Design, Bioreactor Types, Design Considerations, Instrumentation and Control Systems, Rate Expression in Biological Systems, Monod Equation, Enzyme Kinetics, Inhibition Kinetics, Basic Concept of Mass Transfer, Mass Transfer Mechanisms, Oxygen Transfer, Scale-Up Considerations, Basic Concept of Heat Transfer, Heat Transfer Mechanisms, Temperature Control, Heat Transfer in Bioprocesses

Development of Bioreactors, Historical evolution of bioreactor design, Fundamental design principles, Types of bioreactors: stirred-tank, airlift, packed bed, fluidized bed, Materials and construction considerations Purpose and Importance of Bioreactors, Optimization of growth conditions (pH, temperature, dissolved oxygen, nutrient supply), Scalability and production efficiency Bioreactor Development for Solid State Fermentation (SSF), Principles and advantages of SSF, Design considerations: substrate handling, moisture control, aeration strategies, Bioreactors for Animal Cell Cultivations, Unique requirements for animal cell cultures, Types of bioreactors: stirred-tank, wave, hollow-fiber, Scalability and production strategies, Regulatory and quality considerations Bioreactors for Immobilized Systems, Immobilization techniques: adsorption, covalent binding, entrapment, Design and operation of immobilized systems: packed bed, fluidized bed reactors, Bioreactors Used in Different Areas of Environmental Control and Management, Wastewater treatment: aerobic and anaerobic digesters, Bioremediation processes for soil and water, Biofiltration and air treatment: biofilters, bioscrubbers,

Scale-Up Methodologies for Bioreactors: Introduction to scale-up challenges, Criteria of scale-up: geometric, kinematic, and dynamic similarity, Similarity criteria: Reynolds, Froude, Péclet numbers, Scale-up methods: constant power input per unit volume, constant impeller tip speed, constant oxygen transfer rate, Generalized approaches to scale-up: computational fluid dynamics (CFD) simulations, integrative approaches combining multiple methods, Case studies in scale-up: industrial examples, challenges, solutions. Scale-Down Methodologies for Bioreactors: Introduction to scale-down challenges, Scale-down techniques: miniaturization of bioreactors, microfluidic systems, high-throughput screening platforms, Simulating large-scale conditions in small-scale systems, Application of scale-down models: case studies, process optimization, troubleshooting. Gas-Liquid and Liquid-Liquid Mass Transfer in Bioreactors: Fundamentals of mass transfer: mass transfer coefficients, interfacial area, diffusion rates, Factors affecting mass transfer: agitation speed, aeration rate, temperature, reactor geometry, Enhancing mass transfer: spargers, baffles, impellers, Modeling mass transfer: mathematical models, CFD simulations, Measurement techniques: oxygen uptake rate (OUR), carbon dioxide evolution rate (CER), tracer studies, Case studies in mass transfer: strategies, real-world examples, process performance improvements.

Design-of-Experiments for Development and Optimization of Bioreactor Media, Fundamentals of Design-of-Experiments (DoE), Evaluation of Experimental Design, Optimization of Culture Media by Design-of-Experiments, Integration with Computational Modeling, Artificial Liver Bioreactor Design, Principles of Artificial Liver Support Systems, Bioreactor Design Considerations, Clinical Applications and Challenges, Bioreactors Enabling Cell Production for Transplantation, Cell Culture Bioreactors, Stem Cell Bioreactors, Tissue Engineering Bioreactors.

Reference Books

- 1 Bioreactors Design, Operation and Novel Applications, Carl Fredrick, 2016, Wiley.
- 2 Bioprocess Engineering Principles, Pauline M. Doran, 2012, Academic Press.
- 3 Bioreactor System Design, Juan A. Asenjo, Jose C. Merchuk, 1994, CRC Press.
- 4 Principles of Fermentation Technology, Peter F. Stanbury, Allan Whitaker, Stephen J. Hall, 2016, Butterworth-Heinemann.

23CS2229F - APPLICATION DEVELOPMENT ON CLOUD (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2229F	APPLICATION DEVELOPMENT ON CLOUD	ADC	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the server based computing for hosting the web application with appropriate storage.	3	PO2, PO3, PSO2
CO2	Analyze the load balancing and security in the cloud infrastructure	4	PO5, PO11, PSO2
CO3	Apply the CI/CD services for hosting the web application.	3	PO3, PO5, PSO2
CO4	Analyze and optimize applications in cloud environment	4	PO3, PO11, PSO2
CO5	Apply the knowledge and implement the cloud concepts in real time.	4	PO3, PO5, PSO2

Syllabus

Compute: Amazon EC2- Elastic Beanstalk- AWS Lambda- AWS SAM. Storage: Elastic Block Store (EBS)-Elastic File System (EFS)- S3 -S3 Glacier, CloudFront. Networking: API Gateway-Route 53- VPC.

Content Delivery: Elastic Load Balancing, Auto Scaling. Database: Aurora- DynamoDB- ElastiCache- MemoryDB for Redis- RDS. Analytics: Amazon Athena- Amazon Kinesis - Amazon OpenSearch Service. Security, Identity, and Compliance: AWS Certificate Manager (ACM)- Amazon Cognito- IAM- AWS KMS- Secrets Manager- AWS STS-AWS WAF.

Developer Tools: AWS Amplify-Cloud9- AWS CloudShell- CodeArtifact- CodeBuild-CodeCommit- CodeDeploy- CodeGuru- CodePipeline- CodeStar- X-Ray. Containers: Copilot- ECR- ECS-EKS.

Management and Governance: AWS AppConfig- AWS CDK- CloudFormation- AWS CloudTrail- CloudWatch- CloudWatch Logs- AWS CLI- AWS Systems Manager. Application Integration: AWS AppSync- Amazon EventBridge(Amazon CloudWatch Events)- Amazon SNS- Amazon SQS-AWS Step Functions.

Amazon Connect, AWS Database Migration Service (AWS DMS), Amazon Polly, Amazon QuickSight, Amazon Rekognition, Amazon Lex, AWS Service Catalog, AWS Shield, AWS Database Migration Service

Reference Books

- 1 DVA-C02: AWS Certified Developer Associate: Volume 1: Technological Concepts and Development of AWS Services, Nouman Ahmed Khan, 2, 2023, Kindle.
- 2 Learning Amazon Web Services (AWS): A Hands-On Guide to the Fundamentals of AWS Cloud, Mark Wilkins, 1, 2019, Pearson.
- 3 AWS Certified Cloud Practitioner Study Guide: CLF-C01 Exam, Ben Piper and David Clinton, 1, 2019, Kindle.
- 4 AWS Certified Developer Official Study Guide: Associate (DVA-C01) Exam, Nick Alteen, 1, 2019, Sybex.

23CS2230F - SOLUTIONS ARCHITECTING ON CLOUD (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2230F	SOLUTIONS ARCHITECTING ON CLOUD	SAC	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Design Resilient Architectures	3	PO3, PO4, PSO2
CO2	Design High-Performing Architectures	3	PO3, PO4, PSO2
CO3	Design Secure Applications and Architectures	3	PO3, PO4, PSO2
CO4	Design Cost-Optimized Architectures	3	PO3, PO4, PSO2
CO5	Implement, monitor, and manage important cloud services and components using Open Source Tools and commercial systems	4	PO3, PO4, PSO2

Syllabus

Design a multi-tier architecture solution: Design a multi-tier architecture solution, Design highly available and/or fault-tolerant architectures, Design decoupling mechanisms

Design High-Performing Architectures : Identify elastic and scalable compute solutions for a workload, Select high-performing and scalable storage solutions for a workload, Select highperforming networking solutions for a workload, Choose high-performing database solutions for a workload.

Design Secure Applications and Architectures: Design secure access to AWS resources, Design secure application tiers, Select appropriate data security options.

Design Cost-Optimized Architectures: Identify cost-effective storage solutions, Identify cost-effective compute and database services, Design costoptimized network architectures

Reference Books

- 1 AWS Certified Solutions Architect Study Guide, Ben Piper, David Clinton , 2018, Sybex publishers .
- 2 AWS Certified Solutions Architect Associate All-in-One Exam Guide , Joyjeet Banerjee , 2020, McGraw-Hill .
- 3 Architecting Cloud Computing Solutions, Kevin L. Jackson, Scott Goessling, 2018, packt.
- 4 Cloud Computing Solutions Architect: A Hands-On Approach, vijaymadisetty, 2019, oreilly.
- 5 AWS Certified Solutions Architect Official Study Guide Associate Exam, Joe Baron, Hisham Baz, Tim Bixler,, 2016, sybex.

23CS2231F - VISUAL PROGRAMMING (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2231F	VISUAL PROGRAMMING	VSP	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamentals of the .NET framework using core C# concepts.	3	PO2, PO3, PO8, PSO1
CO2	Apply analytical skills to assess the effectiveness of ADO.NET in establishing database connectivity, evaluate the utilization of data providers, datasets, and data adapters, and justify appropriate strategies	3	PO1, PO3, PO5, PSO1
CO3	Apply practical skills to create desktop apps with pretty screens using Windows Forms.	3	PO2, PO5, PSO1
CO4	Apply foundational skills to build web applications with ASP.NET Web Forms	3	PO2, PO3, PO5, PO8
CO5	Acquire proficiency and mastery in dynamic .NET application development, showcasing expertise in UI design, efficient database management	3	PO5, PO8

Syllabus

Net framework Overview, .Net Architecture, Core C#-Variables, Data Types, Flow control, Objects and Types, Classes, Constructors and its types, Inheritance, polymorphism, Operator Overloading, sealed class and methods, interface, abstract class, exception handling, Generics -Arrays, Operators and Casts, Properties.

ADO.NET introduction, Data providers, Dataset, typed dataset, Data Adapter, updating database using stored procedures, SQL Server with ADO.NET, handling exceptions, GUI application development using Key events, Mouse events, OnClick_events.

using Web Forms: ASP.NET introduction, ASP.NET standard controls- displaying information, accepting user-input, Displaying images, Page and State management techniques, Data Controls with Asp Dot Net, Asp Dot Net validation controls

Designing websites with master pages, MVC folder structure, controllers, action methods, View Result, Content Result, File Result, Redirect Result, Redirect To RouteResult.

.NET applications, demonstrating expertise in crafting intuitive user interfaces, efficiently managing databases, and expertly building web applications.

Reference Books

- 1 Parallel Programming with C# & .NET Core, Rishabh Verma, 1, BPB Publications.
- 2 Programming C# 5.0: Building Windows 8 Metro, Web, and Desktop Applications for the .Net 4.5, Ian Griffiths, 1, O Reilly.
- 3 C# in Depth, Jon Skeet, 4, Manning; 4th edition.
- 4 Pro C# 10 with .NET 6: Foundational Principles and Practices in Programming, Andrew Troelsen, Phil Japikse, 11, Apress.

23CS2240F - .NET PROGRAMMING (EPAM) (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2240F	.NET PROGRAMMING (EPAM)	.NET-EPAM	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the Fundamental concepts of .NET Framework and C#.NET by proficiently constructing software programs.	3	PO2, PO3, PO4
CO2	Build the console and desktop applications utilizing the C#.NET Framework.	3	PO2, PO3, PO4
CO3	Develop C#.NET desktop applications by integrating ADO.NET for database connectivity and manipulation.	3	PO2, PO3, PO4
CO4	Develop the ASP.NET Standard Server controls to develop robust applications, showcasing their mastery of web development concepts.	3	PO2, PO3, PO4
CO6	Develop programs for desktop, web, and enterprise applications by employing advanced .NET programming techniques, demonstrating their mastery of software development across various platforms.	3	, PSO1, PSO2

Syllabus

C# Essentials:.NET Ecosystem (.NET Framework and .NET Core),C# operator basics,OOP principles,Class & Object, Constructors. Methods. Access modifiers,Inheritance. Polymorphism,Upcasting and downcasting.new and override methods. Sealed methods and classes,Class relationships overview,Memory management.

Exception handling system,Collection types IEnumerable and IEnumerator Generics Inheritance in generics Variance in generics Generic collections,Creation and using delegates Anonymous methods and lambdas Event handling

LINQ overview Extension methods and query syntax Dynamic LINQ,Unit Testing,Multithreading,Data processing,T-SQL,ADO.NET

Design patterns and architecture patterns,MVC (MVP, MVVM),Multilayered and onion architectures,Data processing technologies:ADO.NET EF,EDM Entities and DbContext Entity relations Database First, Code First, Model First Configuration, Initializers,Querying data,Data Loading: lazy vs eager LINQ to Entities,Data Annotations,Fluent Configuration,Migrations,Repository and UoW patterns,Front end Overview:Web Fundamentals.

Reference Books

- 1 ".NET Core in Action", Dustin Metzgar, 1st(2018), Manning Publications.
- 2 "Pro C# 9 with .NET 5", Andrew Troelsen and Philip Japikse, 10th Edition 2010, A Press.
- 3 "Entity Framework Core in Action", Jon P Smith, 1st(2018), Manning Publications.
- 4 "Learning Web Design: A Beginner's Guide to HTML, CSS, JavaScript, and Web Graphics", Jennifer Robbins, 5th Edition(2018), O'Reilly Media.

23CS2241F - FRONT END WEB DEVELOPMENT (EPAM) (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2241F	FRONT END WEB DEVELOPMENT (EPAM)	FEWD-	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concepts of HTML5 and CSS3 for static web application.	3	PO1, PO3, PO5, PSO1
CO2	Apply the concepts of javascript to develop client-side web application	3	PO1, PO3, PO5, PSO1
CO3	Apply concepts of advanced UI Designing using extended Javascript	3	PO1, PO3, PO5, PSO1
CO4	Apply concepts of ngx, npm, typescript to build dynamic web application, Angular framework to build dynamic web application	3	PO1, PO3, PO5, PSO2
CO5	Develop the webapplication using various technologies like html, css, javascript, typescript using React/Angular frameworks	3	PO1, PO3, PO5, PSO1

Syllabus

Git Basics: Understand of distributed version control system and its features, Set-up Git in your system, create branches and track files, create a repository in Git and GitHub, describe merging, cloning, resolving conflicts and raising a PR flow with reviewers. Web fundamentals: HTML5 Basics-DOM Tree, Semantic HTML5, CSS Basics: CSS3 Features, CSS Layouts, Responsive Design- Responsive Web - Media Queries, CSS Frameworks- Flexbox, CSS grid

Data Types, Functions, Error and Storage, Date and Regular expression DOM Events, OOP Introduction: Understand Object prototype, Object. define property, Methods on objects, extending objects, Array prototype, understand prototype chain, Understand OOP in JS, Inheritance using ES5, Inheritance using ES6, Async JS

NodeJS: NodeJS fundamentals, Call-back, Events and event loop, event emitter, node modules and package. json, Nodejs Module system and patterns, CommonJS, ES6. React: ReactJS Fundamentals, Introducing JSX, Overview, Rendering Elements, Components and Props, State and Lifecycle Overview of React, elements and components, JSX Composition over inheritance, how browsers handle render, reflow/repaint VDOM concept + Fiber.js in v16 Dev infrastructure: webpack, babel, source-maps, react-hot-loader, react-dev-tools, (react-create app).

Introduction to Web Development, Introduction to Typescript , Typescript Basics: Directives Basics, Attribute Directives, Host Listener, Host Binding, Built in Directives, Structural Directives, Create Structural Directive, Angular Component Life Cycle Hooks , Introduction to Angular- Angular Architecture Angular Version History Angular CLI Basics, Setup Angular Project Angular Project Structure Components Modules Angular App Bootstrapping, Angular Decorators.

Reference Books

- 1 Murach's HTML5 and CSS3, Zak Ruvalcaba, Anne Boehm, 2001, Mike Murach & Associates.
- 2 JavaScript: The Definitive Guide: Master the World's Most-Used Programming Language, David Flanagan, 2006, O'Reilly Media.
- 3 Learning React: Functional Web Development with React and Redux, Alex Banks, 2005, O'Reilly Media.
- 4 Angular for Enterprise-Ready Web Applications, Doguhan Uluca, 2009, Packt Publishing.

23CS2242F - SOFTWARE TESTING (EPAM) (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2242F	SOFTWARE TESTING (EPAM)	ST-EPAM	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the test scenario that are appropriate for software development in many fields.	2	PO1
CO2	Choose the appropriate testcases that should be run and conduct a small-to-medium sized software project source code for inspection or review.	3	PO7
CO3	Apply automated testing tools for building test plan based on requirement and design documents.	3	PO11
CO4	Analyze a test plan dependent on document leveraging test automation tools.	4	PO10
CO5	Analyse test plan contingent on the document using automated testing tools	4	PO4, PO5, PS02

Syllabus

Software Testing Fundamentals Role of QA Software Development Methodologies GIT Working- PUSH ,PULL REQUESTS. Software Abstract Classes and Interfaces Methodologies Data Analytics Java Introduction Conditions and Loops Arrays Classes OOPS Abstract Classes and Interfaces Nested Classes Strings Collections Maps Exceptions, Annotations Generics Enum Wrapper Classes Optional Classes.

Optional Classes, Cloud Computing, Design patterns Maven, Working with different Maven Repositories, Maven lifecycle , setup WebDriver launch Chrome Browser Web Driver Interface Relative and Absolute Xpath Selenium.WebDriver Locators in Selenium Web Element Locator Strategies Xpath Axes in Selenium.

Handling multiple Windows, HTML DOM, Handling Dropdowns, Handling text links, Handling Auto suggestions, Handling Radio buttons, Actions class and its usages, mouse Events, Drag and Drop cases.

Waits in selenium,, Implicit Wait, Explicit wait, Assertions in TestNG, Annotations in testing, Listeners in TestNG,Rest Services, REST Architecture and discuss other architectures for POST methods.

step Definition File Test Parallel using RestAPI data provider,Generating test logs, Integrating test suite ,test scenarios.Study on Integration frameworks like JENKINS and its importance.

Reference Books

- 1 Introduction to Software Testing, Ammann & Offutt, 2012, Cambridge Press.
- 2 Software Testing and Quality Assurance, Naik, 2009, Wiley India Pub.
- 3 Java Concepts , Cay Horstmann, 2006, Wiley Publications .
- 4 Software Testing Strategies, Matthew Heusser, 2011, Packt Publishing.

23CS2243F - CLOUD DEVOPS (EPAM) (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2243F	CLOUD DEVOPS (EPAM)	CD-EPAM	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic concepts of Networks, Cloud and DevOps. Identify the Need of DevOps in SDLC and Cloud Infrastructure in DevOps, Apply Version Control System to track the latest version of Software	2	PO5, PO6, PSO2
CO2	Inspect Configuration Management using Infrastructure as Code	4	PO5, PO6, PSO2
CO3	Analyze need of Containerization in SDLC and Examine the Kubernetes Pod Configuration.	4	PO4, PO5, PO6, PSO2
CO4	Analyze Continuous Integration and Continuous Deployment using Infrastructure as Code, Build in Cloud native Applications using Pipeline and Examine the Software and Automation Testing Frameworks.	4	PO4, PO5, PSO2
CO5	Build and Inspect the Tools associated to DevOps Life Cycle.	4	PO4, PO5, PO6, PSO2

Syllabus

Networking Fundamentals: The OSI Model TCP vs UDP IP addressing & Subnetting, Protocols & Ports Network Topology Switching, Web servers.

Version Controlling: Git, GitHub fundamentals. Configuring gitbash, Pushing and pulling codes to and from repositories. Linux and Scripting: Linux Introduction, Basic Commands, Operations of running systems, User and Group management

AWS: Cloud Fundamentals, AWS Accounts, AWS Fundamentals IAM, ACCOUNTS AND AWS ORGANISATIONS, Simple Storage Service, VPC, Security. Terraform: Introduction, Understanding Infrastructure as a service, Deploying terraform Configurations, input and output variables, Modules. Ansible: Introduction Architecture Playbook Concepts, Ansible inventory and configurations,

Ansible: Introduction Architecture Playbook Concepts, Ansible inventory and configurations, Ansible Modules Docker & Kubernetes: Virtualization Fundamentals Docker Introduction Docker Image Management Docker Engine

Reference Books

- 1 Docker for Developers_ Develop and run your application with Docker containers using DevOps tools for continuous delivery, Richard Bullington-McGuire, Andrew K. Dennis, Michael Schwartz, 2020, Packt Publishing.
- 2 A Complete DevOps Cookbook_ Build and manage your applications, orchestrate containers, and deploy cloud-native services, Murat Karslioglu, 2020, Packt Publishing).
- 3 Computer Networking, Russell Scott (Author) ,Kindle Edition, 2019, Kindle Edition.
- 4 Beginning DevOps with Docker , Joseph Muli,, 2018, PACKT Publishing.

23CS2247F - CRYPTOGRAPHY AND SECURITY (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2247F	CRYPTOGRAPHY AND SECURITY	CS	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying security goals like Confidentiality, Integrity, Authentication algorithms.	3	PO3, PO5, PO6, PSO1
CO2	Analyzing Block Cipher, DES and AES	4	PO3, PO5, PO6, PSO1
CO3	Analyze Block Cipher mode of operation	4	PO3, PO5, PO6, PSO1
CO4	Analyze Public key Crypto Systems to ensure Secure communication of data.	4	PO3, PO5, PO6, PSO1
CO5	Analyze security goals like Confidentiality, Integrity, Authentication algorithms.	4	PO5, PO6, PO7, PSO1

Syllabus

Introduction to Security Security attacks and services ,Security Mechanisms & Models of Network Security,Introduction to cryptography, Substitution techniques, cryptanalysis,Transposition techniques, Cryptanalysis

Block cipher design principles DES algorithm,Simple DES (SDES) algorithm AES algorithm,Simplified AES (SAES) algorithm,Multiple encryption: TDES

Block Cipher Modes of Operation,Modes of Operation,Random Number Generators, Demonstrate types of Random Number Generators,Stream Ciphers & SRC4,RC4 Algorithm

Public Key Cryptography RSA Algorithm,Diffie-Hellman Key Exchange,Elgamal Algorithm,Elliptic Curve Arithmetic

Reference Books

- 1 Applied Cryptography: Protocols, Algorithms, and Source Code in C , Bruce Schneier , 2nd edition, John Wiley & Sons.
- 2 Cryptography and Network Security , Forouzon B, Indian Edition, TMH (2010)...
- 3 Cryptography and Network Security Principles and Practice , William Stallings , 5th Edition, Pearson .
- 4 Applied Cryptography for Cyber Security and Defense: Information Encryption and Cyphering , Hamid R. Nemati and Li Yang , 2011, IGI Global .

23CS3203F - QUANTUM COMPUTING (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS3203F	QUANTUM COMPUTING	QCP	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate the basics of quantum computing, including quantum states, qubits, single and multiple qubit gates, entanglement, quantum circuits, and various applications.	3	PO1, PO5, PSO2
CO2	Apply quantum computing algorithms like Deutsch-Jozsa, Bernstein-Vazirani, Simon's, Shor's, and Grover's algorithms, as well as the Quantum Fourier Transform and superdense coding.	3	PO4, PSO2
CO3	Implement quantum circuits and the intricacies of quantum measurement, providing hands-on experience in these areas.	3	PO2, PSO2
CO4	Demonstrate Quantum machine learning techniques like unsupervised and supervised learning, pattern recognition, neural networks, support vector machines, regression analysis, and boosting.	3	PO1, PSO2
CO5	Apply quantum computing algorithms using IBM QISKIT, Cirq, PennyLane, and AWS like implementing quantum circuits, and performing quantum measurements.	3	PO1, PSO2

Syllabus

Overview of classical mechanics, Drawbacks of classical mechanics, Quantum mechanics origin, Building blocks of quantum mechanics, Introduction to quantum computing, Quantum states and qubits, Single qubit gates, Multiple qubits and entanglement, Quantum circuits, Applications.

Deutsch Jozsa algorithm, Bernstein Vazirani algorithm, Simons algorithm, Quantum fourier transform, Shors algorithm, Grovers algorithm, Superdense coding

Setting up environment, Python and Jupiter notebooks configuring, Quantum circuits implementation, Quantum measurement

Unsupervised learning, Pattern recognition and neural networks, Supervised learning, Support vector machines, Regression analysis and boosting, Quantum clustering and classification, Adiabatic quantum computing, Quantum teleportation and game theory, Applications, Quantum Deep learning

Reference Books

- 1 Quantum Machine learning, Peter Wittek, 2019, Elsevier.
- 2 Quantum computing for everyone, Chris Bernhardt, 2016, MIT Press.
- 3 An Introduction to Quantum Computing, Kaye P., Laflamme R., Mosca M, 2017, Oxford.
- 4 Quantum Computation and Quantum Information, Nielsen M.A., Chuang I.L, 2020, Cambridge University Press.
- 5 Quantum Computing, Hirvensalo M, 2021, Springer.

23EC2223F - FUNDAMENTALS OF ROBOTICS (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC2223F	FUNDAMENTALS OF ROBOTICS	FOR	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the functional elements to build different types of basic robotic systems with minimal cost	3	PO1, PO2, PSO1
CO2	Apply Denavit -Hattenberg parameters to describe the kinematic chain of manipulators	3	PO1, PO2, PSO1
CO3	Apply the differential motion through Jacobian to control the manipulator for precise movement and manipulation tasks	3	PO1, PO2, PO3, PSO1
CO4	Analyze the force control techniques using Lagrange dynamic model by understanding how forces and torques affect the motion of robotic systems.	4	PO1, PO2, PSO1
CO5	Analyze the movement of manipulator with the required kinematics to understand how the manipulator's joints and links contribute to its motion in Cartesian space	4	PO5, PSO1

Syllabus

Types of robots, Classification, usage, and the diverse Applications of Robots. Different Types and Ranges of Sensors Internal and External sensors. Common Sensors encoders, tachometers, strain gauge based force torque sensors, proximity, and distance measuring sensors. Different kinds of Actuators: Stepper, DC servo and AC motors.

Mathematical representation of Robots Position and orientation Homogeneous transformation Various joints Representation using the Denavit Hattenberg parameters Degrees of freedom Direct kinematics Inverse kinematics SCARA robots Solvability Solution Methods-Closed form solution.

Linear and angular velocities Manipulator Jacobian Prismatic and rotary joints Inverse Wrist and arm singularity Static analysis Force and moment Balance., Verify Stability and Equilibrium, Apply Equilibrium Equations

Lagrangian mechanics-2DOF Manipulator Lagrange Euler Formulation Dynamic model Manipulator control problem Linear control schemes PID control scheme Force control of robotic manipulator

Reference Books

- 1 Robotics and Control, R.K.Mittal and I. J. Nagrath, 2017, 1st Edition, Tata McGraw Hill.
- 2 Introduction to Robotics Mechanics and Control, John J. Craig, 2008, 2nd Edition, Pearson Education.
- 3 Industrial Robotics, M. P. Groover, M. Weiss, R. N. Nageland N. G. Odrej, 2010, 2nd Edition, Tata McGraw Hill.
- 4 Robotics-Fundamental Concepts and Analysis, Ashitava Ghoshal, 2015, 1st Edition, Oxford University Press.
- 5 Robotics, K. K.Appukuttan, 2017, 2nd Edition, I K International.

23EC2224F - DEEP NETWORK ARCHITECTURES (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC2224F	DEEP NETWORK ARCHITECTURES	DNA	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To demonstrate the fundamentals of deep learning	3	PO1, PO3, PSO2
CO2	To demonstrate and apply the Recurrent Neural Network (RNN) algorithms for classification applications using sequential datasets	3	PO1, PO3, PSO2
CO3	To Apply and analyze the performance metrics for various CNN Architectures.	3	PO1, PO3, PSO2
CO4	To analyze and implement the deep learning models using MNIST, Cifar10, and ImageNet datasets.	3	PO1, PO3, PSO2
CO5	To analyze and execute the deep learning application by developing the Python code.	4	PO1, PO2, PO3, PO4, PSO2

Syllabus

Convolutional neural networks: Convolution neural networks (CNN), building blocks of CNN, fundamentals of CNN, the architecture of CNN, Convolution and Pooling Layers, Activations in CNN, and loss functions

SGD and Adam Optimizers: performance metrics of deep learning: accuracy, precision, and recall, F1 score, ROC plots, and confusion matrix.

Recurrent neural networks: Time series modeling of data. Recurrent Neural Network (RNN), Training and testing on time series data.

RNN Types: Long short-term memory (LSTM), gated recurrent unit (GRU), and Bi-directional RNNs, Advantages, and drawbacks. Training, testing, and inferencing.

CNN Architectures: Deep Multi-layer Perceptrons, DenseNets, AlexNet, ZFNet, VGG, Inception Nets, and ResNets

Layer composition, hyperparameter computation, filter kernels, pooling, and activations. Performance measures and comparison.

Building Models: Deep Learning Model building with Keras, TensorFlow, and Scikit-learn. Built-in datasets in Tensorflow.

Describe, Apply, and Analyze the MNIST, Fashion MNIST, Cifar10, and ImageNet datasets along with AlexNet, VGG, and ResNet. Evaluate and compare the performance of AlexNet, VGG, and Resnet on the considered datasets.

Reference Books

- 1 Deep learning with Python, Chollet, Francois., 1, Simon and Schuster.
- 2 Deep learning with Python: develop deep learning models on Theano and TensorFlow using Keras, Brownlee, Jason, 2, Machine Learning Mastery,.
- 3 Deep learning, Trask, Andrew W., 1, Manning Publications Co.
- 4 Deep Learning, Trask, Andrew W., 2, LW Christina Taylor, Aleksandar Dragosavljevic, ed.
- 5 Deep Learning, Ian Good fellow, Yoshua Bengio, Aaron Courville,, 1, Manning Publications Co..
- 6 Neural Networks and Deep Learning, Michael Nielsen, 3, LW Christina Taylor,.
- 7 Learning Deep Architectures for AI,, Yoshua Bengio, 2, Aleksandar Dragosavljevic, ed.

23EC2228F - BIOMEDICAL ELECTRONICS & IOT FOR HEALTHCARE (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC2228F	BIOMEDICAL ELECTRONICS & IOT FOR HEALTHCARE	BEIH	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply principles of biopotential recording and different non-electric parameter measurements in the medical field	3	PO1, PO2, PSO1
CO2	Applying the various medical instrumentation and role of electronics in the medical field	3	PO2, PO3, PSO1
CO3	Apply IoT for Healthcare as a next-generation boon for electronics with a study of different sensors	3	PO2, PO3, PSO1
CO4	Utilise application-oriented approach in medical fields through IoT for integrated IoT Sensors, Polytronics Systems, Sensors swarm technology, printed electronics	3	PO2, PO3, PSO1
CO5	Analyze various lead configurations in ECG, EEG and EMG along with simulation of pacemaker and to develop the practical IoT applications for health care industry	4	PO3, PSO1

Syllabus

Biopotential recordings and measurements, the origin of biopotentials, bio potential electrodes, biological amplifiers, ECG, EEG, EMG, lead systems and recording methods, typical wave forms and signal characteristics, non electrical parameters measurements, PH, PO2, PCO2, calorimeter, auto analyser, blood flow meter, cardiac output, respiratory measurement, Blood pressure, temperature, pulse, Blood cell counters

Medical Instrumentations: Cardiac pacemakers, DC Defibrillator, Dialyser, Heart-lung machine, Diathermies-shortwave, ultrasonic and microwave type and their applications, surgical diathermy and telemetry principles, frequency selection, biotelemetry, radio pill, electrical safety, recent trends in biomedical instrumentation, thermograph, endoscopy unit, laser in medicine, cryogenic application, introduction to telemedicine

Internet of Things Promises, Sensors for IoT Applications, Structure of IoT, IOT Map Device, Industrial, Healthcare sensors, Description & Characteristics, First Generation, Advanced Generation, Integrated IoT Sensors, Polytronics Systems, Sensors swarm technology, printed electronics, IOT generation Road map.

Application of IOT In Healthcare: smart-wearables, smart-clothing, elderly fall- detection, infant care system, Monitor an aging family member, "Scalable-continuous"-heart rate monitoring.

Analyze various lead configurations in ECG, EEG and EMG along with simulation of pacemaker and to develop the practical IoT applications for health care industry

23EC2229F - WIRELESS SENSOR NETWORKS (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC2229F	WIRELESS SENSOR NETWORKS	WSN	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the various theoretical concepts related to wireless sensors and networking of the sensors	2	PO1, PSO1
CO2	Apply WSNs Architectures, Energy consumption of Sensor nodes for the development of the IoT based Systems	3	PO1, PSO1
CO3	Apply different MAC protocols, Routing mechanism used for the development of WSNs Application	3	PO5, PO7, PSO1
CO4	Apply node and network management related concepts for real time application of WSNs	3	PO5, PSO1
CO5	Evaluate and analyse the programming & interfacing of WSNs using the hardware/software tool	5	PO2, PO5, PSO1

Syllabus

Sensor network technology involves a complex architecture comprising various hardware components such as controllers, memory, communication devices, sensors, actuators, and power supplies. Wireless Sensor Networks (WSNs) face several challenges and hurdles, but advancements in enabling technologies are driving their development. Applications of sensor networks are diverse and impactful, including traffic control, healthcare, pipeline monitoring, and precision agriculture.

Sensor node architectures vary widely, impacting energy consumption across different operation states. Key components like microcontrollers, memory, and radio transceivers influence network topologies such as Single Hop Star, Multi Hop Mesh, and Grid, along with Two Tier Hierarchical Clusters. Optimization goals focus on improving gateway concepts and achieving desired figures of merit.

Networking sensors involves considerations at multiple layers: the physical layer includes transceiver design considerations, while the Data Link layer incorporates MAC (Medium Access Control) protocols. These protocols, categorized into Schedule Based and Random Access Based, cater to various performance requirements. Sensor MAC strategies like Periodic Listen and Sleep Operations optimize energy with schedule selection and synchronization. Low duty cycle protocols and wakeup concepts enhance efficiency, complemented by Adaptive Listening Routing Protocols addressing routing challenges in Wireless Sensor Networks (WSNs). Strategies like Data-centric, Energy-efficient, and Geographic routing aim to optimize network performance and energy consumption.

Node and network management in Wireless Sensor Networks (WSNs) involves critical aspects such as power management, including local considerations for the processor and communication subsystems. Dynamic power management strategies, including dynamic operation modes and scaling, optimize energy usage. Task scheduling ensures efficient utilization of resources, while time synchronization addresses the synchronization problem across nodes. Time synchronization protocols like Lightweight Tree Based, Flooding Time, Reference Broadcast, and Time Diffusion enhance synchronization accuracy in WSNs.

Programming concepts and applications of WSN and real time applications .

23EE2225F - POWER QUALITY (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EE2225F	POWER QUALITY	PQ	F	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand various power quality issues.	2	PO1, PO2, PSO1
CO2	Analyze various power quality issues and its causes.	4	PO1, PO2, PO5, PSO1
CO3	Analyze voltage sag and swell using simulation tools.	4	PO1, PO2, PO4, PSO1
CO4	Apply different mitigating techniques for improving power quality	3	PO1, PO2, PSO2

Syllabus

Introduction to Power or voltage quality, terms and definitions: short duration voltage variations, Interruptions, Voltage sag, Swell, Surges, Harmonics, Voltage fluctuations. Long duration voltage variations: Over voltage, Under voltage, Sustained interruptions, Transients: Impulse transients, Oscillatory transient, Power quality terms. Long Interruptions, Definition, Interruptions, Causes of long interruptions, Origin of interruptions, Limits for the interruptions frequency, Limits for the interruption duration.

Short Interruptions: Definition, origin of short interruptions, basic principle, fuse saving, voltage magnitude events due to reclosing, voltage during the interruption, monitoring of short interruptions, difference between medium and low voltage systems. Multiple events, single phase tripping, voltage and current during fault period, voltage and current at post fault period, stochastic prediction of short interruptions.

Voltage sag analysis: Voltage sag magnitude, Monitoring, Theoretical calculations, Examples, Sag magnitude in non-radial systems, Voltage calculation in meshed systems, Voltage sag duration, Fault clearing time, Magnitude duration plots- Measurement of sag duration, Magnitude and Phase angle jumps for three phase unbalanced sags, Phase to phase fault, Single phase faults, Two phase to ground faults, High impedance fault, Meshed systems.

Mitigation of Interruptions and Voltage Sags: Overview of mitigation methods, From fault to trip, Reducing the number of faults, Reducing the fault clearing time changing the power system, Installing mitigation equipment, Improving equipment immunity, Different events and mitigation methods. System equipment interface, Voltage source converter, series voltage controller, Shunt voltage controller, combined shunt and series controller. Typical wiring and grounding problems.

23EE2230F - ESSENTIALS OF AUTONOMOUS SYSTEMS (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EE2230F	ESSENTIALS OF AUTONOMOUS SYSTEMS	EAS	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Feedback Control principles to determine stability of physical systems	3	PO1, PO5, PSO1
CO2	Model the characteristics of sensors and implement networking of sensors	3	PO1, PO5, PSO1
CO3	Model the characteristics of Actuators and energy sources for autonomous systems	3	PO1, PO5, PSO1
CO4	Apply the electronic control for fundamental units of autonomous systems	3	PO1, PO5, PSO1
CO5	Test the characteristics of sensors, actuators, and electronic control for autonomous systems	3	PO1, PO5, PSO1

Syllabus

Feedback Control Principles: Modelling of Physical systems, Transfer Function, Negative feedback systems-characteristics, Test Signals, Response to test signals, Stability of negative feedback systems, PID control, Frequency Response

Sensors and Sensor Networking: Characteristics of Sensors - Inertia, pressure, ultrasonic, infrared, microphone, gyroscope, speed encoder, Networking-fusion, calibration, data processing, communication and storage

Actuators and Energy Sources for Autonomous Systems: Operational principle and models for Motors, hydraulic actuation, electro-magnetic actuation, electro-mechanical actuation, piezoelectric actuation, Operation and Models of energy sources - Battery Bank, PV cell, ICE

Basic Electronics and Digital Control for Autonomous Systems: Power converters-DC/DC, DC/AC converters, vehicular networks, digital control applications: system safety- emergency braking, cruise control, advanced applications: parking assistance, drive assistance:

23IN2222F - CLOUD COMPUTING FOR IOT (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN2222F	CLOUD COMPUTING FOR IOT	CCIoT	F	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand different cloud deployment models and service models, including Platform as a Service (PaaS), Software as a Service (SaaS), and Infrastructure as a Service (IaaS).	2	PO1, PSO1
CO2	Apply IoT fundamentals, utilize various IoT cloud services, manage devices and identities, and design interactive dashboards for data visualization and management.	3	PO1, PSO1
CO3	Apply IoT services from Google Cloud Platform (GCP), Amazon Web Services (AWS), and Microsoft Azure, learning their core features and applications to design, implement, and manage IoT solutions.	3	PO1, PO2, PSO1
CO4	Students will examine how IoT technologies transform sectors, analyze challenges and solutions, and explore the latest advancements and innovations.	3	PO1, PO2, PSO1
CO5	In this hands-on lab course, students will analyze and develop IoT projects using the Raspberry Pi, connecting sensors and actuators, and integrating with cloud services for data collection and remote control. They will evaluate essential IoT concepts, Raspberry Pi basics, sensor interfacing, and cloud integration, gaining comprehensive IoT development skills.	4	PO1, PO3, PO4, PSO1

Syllabus

Introduction to Cloud Computing, Characteristics of Cloud Computing, Software Virtualization, Containerizing Applications, Virtual Machine Provisioning & Manageability, Cloud Deployment Models, Cloud Service Models: PaaS, SaaS, IaaS.

Introduction to IoT Platform, Cloud IoT Architecture, IoT Cloud Services, Identity & Device Management, Introduction to Dashboards & Web Portals.

Overview of IoT Core Services: Comparative Analysis: Google Cloud IoT Core, AWS IoT Core, and Azure IoT Central, Setting Up Cloud IoT Core, Data Ingestion and Processing.

Real-World Applications and Case Studies: Smart Cities, Industrial IoT (IIoT), Healthcare IoT, Consumer IoT.

Integrate IoT devices (raspberrypi/ESP32) with cloud services for data storage and analysis.

Reference Books

23ME1001F - ENGINEERING MECHANICS (F)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME1001F	ENGINEERING MECHANICS	EM	F	2	1	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of forces, governing static equations, and analyze the planar system of forces.	3	PO2
CO2	Use analytical techniques for analyzing forces in statically determinate structures.	3	PO3
CO3	Apply the concepts of planar and non-planar system of parallel forces and estimate the moment of inertia for lamina and material bodies.	3	PO4
CO4	Apply fundamental concepts of kinematics and kinetics of particles to solve simple practical problems.	3	PO4

Syllabus

TWO DIMENSIONAL FORCE SYSTEMS Introduction, Basic concepts, Laws of motion, Principle of Transmissibility of forces, Resultant of a force system, force laws, Resultant of two dimensional concurrent and Non Concurrent Force systems, Free body diagrams, Applications. **Equilibrium of Rigid bodies** Equilibrium and Equations of Equilibrium, Lamis theorem, Type of supports and their reactions, Moments and couples, Varignons theorem, Resultant moment and applications.

SPATIAL FORCE SYSTEM & TRUSSES Spatial force systems Forces in space, resultant and equilibrium of spatial force system. Truss Analysis Trusses Assumptions involved in the Method of joints and sections.

FRICTION AND PROPERTIES OF AREAS: Friction Introduction, Laws of Coulomb Friction, Equilibrium of Bodies involving Dry friction, Applications ladder friction, wedge friction. **CENTRIOD AND MOMENT OF INERTIA** Centroid, Centre of gravity, Moment of inertia Area and Mass polar moment of inertia, Parallel axis theorem.

KINEMATICS OF RIGID BODY Introduction, Plane Motion of Rigid Body, Velocity and Acceleration under Translation and Rotational motion. **Virtual Work** Introduction Principle of virtual work Equilibrium of ideal systems. **KINETICS OF RIGID BODY** Introduction, Force, Mass and Acceleration, Work and Energy, Impulse and Momentum, D'Alemberts Principles and Dynamic Equilibrium.

Category: Honors Flexi Core Courses (HFC)

23IN01HF - 5G TECHNOLOGIES FOR IOT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN01HF	5G TECHNOLOGIES FOR IOT	5TAI	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the evolution, architecture, and applications of 5G technology, including RF Front-End advancements, IoT integration and millimeter wave communications	3	PO1, PO2, PSO1
CO2	Apply the intricacies of 5G waveforms, channels, and networking, exploring design principles, access technologies, propagation models, and cutting-edge applications	3	PO1, PO2, PSO1
CO3	Apply the intricacies of Machine-Type Communications (MTC) including fundamental techniques, massive MTC, ultrareliable low-latency MTC, D2D communication, multihop scenarios	3	PO1, PO2, PSO1
CO4	Apply the world of IEEE802 standards, exploring WiFi, Bluetooth, Zigbee, WiMAX, BLE, and their frame structures, alongside applications in both 4G and 5G networks	3	PO1, PO2, PSO1
CO5	Analyse the programming of NodeMCU or ESP microcontrollers, and learn to interface a variety of peripheral devices with them for comprehensive hardware integration	4	PO5, PSO1

Syllabus

Introduction To 5G , RF Front-End: LTE Beyond 4G, Building Blocks of 5G, 5G Architecture, 5G for IoT Applications: Introduction, Historical Trend of Wireless Communication, Evolution of LTE Technology to Beyond 4G, 5G Road map, 10 Pillars of 5G, IoT relation to 5G, From ICT to the whole economy, Rationale of 5G: High data volume, Global initiatives, Standardization activities, 5G system concept. The 5G Architecture IoT: relation to 5G. Millimetre Wave Communications: Spectrum and regulations, Channel propagations, Hardware technologies for mmW systems, Development scenario, Architecture and mobility, Beamforming, Physical layer techniques

5G Waveforms Channels Networking 5G Radio Access Technologies Design principles Multicarrier with filtering Nonorthogonal Multiple Access Radio access for dense deployments Radio Access for V2X Communication 5G wireless propagation channel models Modelling requirements and scenarios The METIS channel models.5G Evaluation Applications MTC D2D Communication Multihop D2D Multicarrier D2D

Machinetype communications Fundamental techniques for MTC Massive MTC Ultrareliable lowlatency MTC Devicetodevice (D2D) communications Multihop D2D communications Multioperator D2D communication Simulation methodology Evaluation methodology

IEEE802Std 802.11 (WiFi) 802.15.1 (Bluetooth) 802.15.4 (Zigbee) 802.16 (WiMAX) BLE 4G/5G Frame Structures and applications

Analyse the programming of Node MCU or ESP microcontroller and also interface various peripheral devices to the MCU or ESP microcontroller

23IN02HF - DEEP LEARNING FOR COMPUTER VISION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN02HF	DEEP LEARNING FOR COMPUTER VISION	DPNV	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Feature Descriptor Algorithms in Visual Feature Detection and Representation of images	3	PO1, PO2, PO3, PSO2
CO2	Analyze CNNs for Recognition, Verification, Detection, Segmentation	4	PO1, PO3, PO5, PSO2
CO3	Apply RNN Models for Video Understanding tasks using python	3	PO1, PO2, PO5, PSO2
CO4	Analyze Deep Generative Models for computer vision	4	PO1, PO3, PO4, PSO2
CO5	Demonstrate programs with deep learning over various computer vision problems using TensorFlow	3	PO1, PO4, PO5, PSO2

Syllabus

Introduction and Overview: Introduction to Image Formation, Capture and Representation; Linear Filtering, Correlation, Convolution Visual Features and Representations: Edge, Blobs, Corner Detection; Scale Space and Scale Selection; SIFT, SURF; HoG, LBP, etc. Visual Matching: Bag-of-words, VLAD; RANSAC, Hough transform; Pyramid Matching; Optical Flow

Deep Learning Review: Review of Deep Learning, Multi-layer Perceptrons, Backpropagation Convolutional Neural Networks (CNNs): Introduction to CNNs; Evolution of CNN Architectures: AlexNet, ZFNet, VGG, InceptionNets, ResNets, DenseNets Visualization and Understanding CNNs: Visualization of Kernels; Backprop-to-image/Deconvolution Methods; Deep Dream, Hallucination, Neural Style Transfer; CAM, Grad-CAM, Grad-CAM++; Recent Methods (IG, Segment-IG, SmoothGrad) CNNs for Recognition, Verification, Detection, Segmentation: CNNs for Recognition and Verification (Siamese Networks, Triplet Loss, Contrastive Loss, Ranking Loss); CNNs for Detection: Background of Object Detection, R-CNN, Fast R-CNN, Faster R-CNN, YOLO, SSD, RetinaNet; CNNs for Segmentation: FCN, SegNet, U-Net, Mask-RCNN

Recurrent Neural Networks (RNNs): Review of RNNs; CNN + RNN Models for Video Understanding: Spatio-temporal Models, Action/Activity Recognition Attention Models: Introduction to Attention Models in Vision; Vision and Language: Image Captioning, Visual QA, Visual Dialog; Spatial Transformers; Transformer Networks

Deep Generative Models: Review of (Popular) Deep Generative Models: GANs, VAEs; Other Generative Models: PixelRNNs, NADE, Normalizing Flows, etc Variants and Applications of Generative Models in Vision: Applications: Image Editing, Inpainting, Superresolution, 3D Object Generation, Security; Variants: CycleGANs, Progressive GANs, StackGANs, Pix2Pix, etc Recent Trends: Zero-shot, One-shot, Few-shot Learning; Self-supervised Learning; Reinforcement Learning in Vision; Other Recent Topics and Applications

23IN03HF - AR & VR APPLICATION DEVELOPMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN03HF	AR & VR APPLICATION DEVELOPMENT	ARVRAD	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Basics of Augmented Reality and Interactions and Fundamentals of Augmented, Mixed Reality and its features	2	PO1, PO2, PO5, PSO2
CO2	Building a simple AR application for mobile devices	3	PO1, PO3, PO5, PSO2
CO3	Develop basic scripting skills in C# programming language for implementing functionality and interactions within the VR environment using Unity3D	3	PO1, PO3, PO5, PSO2
CO4	Analyze how to Design and prototype user interfaces for AR and VR applications	4	PO1, PO3, PO5, PSO2
CO5	Developing AR and VR applications using Unity3D for VR, ARCore/ARKit for AR	3	PO1, PO3, PO5, PSO2

Syllabus

Introduction to AR & VR Overview of augmented reality (AR) and virtual reality (VR) concepts-Brief history and evolution of AR and VR technologies-Applications and use cases of AR and VR in different industries-Introduction to development platforms and tools for AR and VR Basics of 3D Graphics and Rendering Introduction to 3D graphics concepts (e.g., vertices, polygons, textures)-Overview of rendering techniques (e.g., rasterization, ray tracing)-Introduction to 3D modeling tools (e.g., Blender, Maya) Hands-on lab: Creating and rendering simple 3D objects

AR Development Fundamentals Introduction to AR development frameworks (e.g., ARCore, ARKit)-Understanding motion tracking and environmental understanding in AR-Implementing basic AR features such as plane detection and object placement-Hands-on lab: Building a simple AR application for mobile devices

VR Development Fundamentals- Introduction to VR development platforms (e.g., Unity3D, Unreal Engine)-Understanding VR hardware (e.g., headsets, controllers)-Implementing basic VR interactions and locomotion techniques-Hands-on lab: Creating a simple VR environment using Unity3D

User Interface Design for AR & VR Principles of user interface design in AR and VR-Designing intuitive user interactions and navigation in immersive environments-Best practices for minimizing motion sickness and discomfort in VR-Hands-on lab: Designing and prototyping user interfaces for AR and VR applications

23IN04HF - DEVOPS FOR IOT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN04HF	DEVOPS FOR IOT	DFIOT	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand DevOps for IoT and the Challenges and complexities of IoT development and deployment	2	PO1, PO2, PO5, PSO2
CO2	Apply continuous deployment pipelines in IoT projects, such as Jenkins, GitLab CI/CD, or Azure DevOps.	3	PO1, PO2, PO5, PSO1
CO3	Analyze Infrastructure as Code (IaC) for IoT and Security and Compliance in IoT DevOps	4	PO1, PO2, PSO1
CO4	Analyze the process of setting up monitoring and logging solutions for IoT deployments	4	PO1, PO2, PO5, PSO1
CO5	Examining and implementing DevOps concepts learned using open source tools	4	PO1, PO2, PO5, PSO2

Syllabus

Introduction to DevOps for IoT Overview of DevOps principles and practices-Challenges and complexities of IoT development and deployment-Role of DevOps in streamlining IoT development lifecycle-Introduction to DevOps tools and technologies Continuous Integration for IoT Understanding continuous integration (CI) concepts and benefits-Setting up CI pipelines for IoT projects-Automated testing strategies for IoT applications-Hands-on lab: Implementing CI pipelines for IoT development using Jenkins or GitLab CI

Module-2 Continuous Deployment for IoT Overview of continuous deployment (CD) practices-Deployment strategies for IoT devices and gateways-Blue-green deployment and canary releases in IoT environments lab: Implementing CD pipelines for IoT deployments

Module-3 Infrastructure as Code (IaC) for IoT Introduction to Infrastructure as Code (IaC) concepts-Managing IoT infrastructure using configuration management tools (e.g., Ansible, Chef)-Provisioning IoT resources in cloud environments (e.g., AWS, Azure)-Hands-on lab: Implementing IaC for provisioning IoT infrastructureSecurity and Compliance in IoT DevOps Understanding security challenges in IoT deployments-Implementing security best practices in IoT DevOps pipelines-Compliance considerations and regulations for IoT projects-Hands-on lab: Integrating security checks into CI/CD pipelines for IoT

Monitoring and Logging for IoT Importance of monitoring and logging in IoT Deployments-Monitoring IoT devices, sensors, and gateways-Analyzing IoT data logs for troubleshooting and optimization-Hands-on lab: Setting up monitoring and logging solutions for IoT deployments Project Refinement and Optimization Optimizing performance and efficiency of IoT DevOps pipelines-Fine-tuning automation scripts and deployment processes IoT deployments and managing resources efficiently project presentations and demonstrations

23IN05HF - IOT BASED HEALTH MONITORING SYSTEM USING FPGA (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN05HF	IOT BASED HEALTH MONITORING SYSTEM USING FPGA	IOTHM	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles of FPGA programming and its applications in IoT	2	PO2, PO3, PO5, PSO2
CO2	Learn how to interface sensors with FPGA for data acquisition	3	PO2, PO3, PO5, PSO2
CO3	Gain practical skills in real-time data processing and analysis on FPGA	4	PO2, PO3, PO5, PSO2
CO4	Develop an IoT-based health monitoring system for remote patient monitoring	5	PO2, PO3, PO5, PSO2
CO5	Build a prototype of the health monitoring system using FPGA and IoT components	5	PO2, PO3, PO5, PSO2

Syllabus

Introduction to FPGA and IoT: Overview of Field-Programmable Gate Arrays (FPGA)- Introduction to Internet of Things (IoT) and its applications in healthcare-Role of FPGA in IoT-based embedded systems-Selection of FPGA development boards and IoT platforms for the project

FPGA Programming Basics: Introduction to Verilog or VHDL programming languages-Basic FPGA architecture and design flow-Writing and simulating simple FPGA designs-Hands-on lab: Implementing basic logic gates and combinational circuits on FPGA

Sensor Interfacing with FPGA: Overview of sensors used in health monitoring systems (e.g., heart rate sensor, temperature sensor)-Interfacing sensors with FPGA using analog-to-digital converters (ADC)-Data acquisition and signal processing techniques on FPGA-Hands-on lab: Interfacing sensors with FPGA and acquiring real-time data

Real-time Data Processing on FPGA: Implementing real-time signal processing algorithms on FPGA-Digital filtering, noise reduction, and feature extraction techniques-Optimizing FPGA designs for performance and resource utilization-Hands-on lab: Implementing real-time data processing algorithms on FPGA

Communication Interfaces for IoT: Introduction to communication protocols for IoT (e.g., MQTT, HTTP)-Implementing UART, SPI, or I2C communication interfaces on FPGA-Designing custom communication protocols for IoT applications-Hands-on lab: Implementing communication interfaces for IoT on FPGA

IoT Platform Integration: Overview of IoT platforms (e.g., Arduino IoT Cloud, AWS IoT, Google Cloud IoT)-Integration of FPGA-based health monitoring system with IoT platform-Data transmission, storage, and visualization in the cloud-Hands-on lab: Integrating the health monitoring system with an IoT platform

23IN06HF - ADVANCED IOT AND SENSOR BIG DATA ANALYTICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN06HF	ADVANCED IOT AND SENSOR BIG DATA ANALYTICS	AATA	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the distributed computing, preprocess data effectively, and implement insights to optimize business operations.	3	PO1, PO3, PO5, PSO1
CO2	implement robust pipelines using Apache Kafka and Apache Flink, managing high-velocity, high-volume data streams to optimize operational insights.	3	PO1, PO3, PO5, PSO1
CO3	Apply architectures such as Apache Hadoop and Spark to ensure scalable, fault-tolerant storage and processing of big data, demonstrated through hands-on setup and execution of distributed computing jobs for IoT analytics.	3	PO1, PO3, PO5, PSO1
CO4	Apply the machine learning in IoT data analytics engineer and select algorithms	3	PO1, PO3, PO5, PSO1
CO5	develop application using the machine learning and deeplearning	5	PO1, PO3, PO5, PSO1

Syllabus

Introduction to IoT Big Data Analytics Overview of big data analytics and its applications in IoT-Characteristics and challenges of IoT big data-Introduction to distributed computing frameworks for IoT Analytics-Selection of tools and platforms for IoT big data analytics Data Acquisition and Preprocessing Techniques for data acquisition from IoT devices and sensors-Preprocessing steps for cleaning, filtering, and aggregating IoT data-Handling missing data and outlier detection in IoT datasets Hands-on lab: Preprocessing IoT data using Python libraries (e.g., Pandas, NumPy)

Real-time Stream Processing for IoT Introduction to stream processing and stream processing frameworks (e.g., Apache Kafka, Apache Flink)-Implementing real-time stream processing pipelines for IoT data-Handling data streams with high velocity and volume-Hands-on lab: Building a real-time stream processing pipeline for IoT data analytics

Distributed Computing for IoT Big Data Overview of distributed computing architectures (e.g., Apache Hadoop, Spark)-Distributed storage and processing of IoT big data-Scalability and fault tolerance considerations for distributed systems Hands-on lab: Setting up and running distributed computing jobs for IoT data analytics

Machine Learning for IoT Data Analytics Introduction to machine learning algorithms for IoT data analysis-Supervised, unsupervised, and semi-supervised learning techniques engineering and selection for IoT data-Hands-on lab: Implementing machine learning models for predictive analytics with IoT data Deep Learning for IoT Big Data Overview of deep learning architectures (e.g., convolutional neural networks, recurrent neural networks)-Applications of deep learning in IoT big data analytics-Training deep learning models for time-series analysis and anomaly detection-Hands-on lab: Building and training deep learning models for IoT big data analytics

23IN07HF - DIGITAL FORENSICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN07HF	DIGITAL FORENSICS	DFS	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic fundamentals of digital forensics and techniques	2	PO4, PO5, PO6, PSO1
CO2	Understand the Different types Investigation Procedures	2	PO4, PO5, PO6, PSO1
CO3	Apply data Acquisition methods and tools to a given scenario	3	PO4, PO5, PO6, PSO2
CO4	Analyze various Processing crimes and incident scenes	4	PO4, PO5, PO6, PSO2
CO5	Apply forensics tools and techniques to various scenarios	3	PO4, PO5, PO6, PSO2

Syllabus

Computer forensics fundamentals, Benefits of forensics, computer crimes, computer forensics evidence and courts, legal concerns and private issues.

Understanding Computing Investigations , Procedure for corporate High Tech investigations, understanding data recovery work station and software, conducting and investigations.

understanding storage formats and digital evidence ,determining the best acquisition method and acquisition tools in order to validating data acquisitions,

Processing crimes and incident scenes with seizing digital evidence at scene and storing digital evidence. EMail servers with specialized EMail forensics tool.

Reference Books

- 2 Guide to Computer Forensics and Investigations, 2. Nelson, B, Phillips, A, Enfinger, F, Stuart, C, 2, Thomson Course Technology.
- 3 Computer Forensics, Computer Crime Scene Investigation, 1. Vacca, J, , 2, Charles River Media.
- 4 Computer Forensics and Cyber Crime , MarjieT.Britz, 3, Prentice Hall.

Y23: B.Tech. - Internet of Things

Category: Honors Through Research Courses (HRC)

23IE01RF - INDEPENDENT STUDY & RESEARCH (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IE01RF	INDEPENDENT STUDY & RESEARCH	ISR	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Critically analyze research literature to identify existing gaps and formulate precise research questions.	4	PO2, PO4, PSO2
CO2	Apply advanced research methodologies to design and conduct experiments or studies and manage projects independently to achieve research objectives within specified timelines	3	PO1, PO2, PSO2
CO3	Utilize appropriate statistical and analytical tools to evaluate experimental data.	4	PO1, PO4, PSO2
CO4	Integrate research findings into comprehensive technical reports and presentations, and conduct peer reviews to provide in-depth, constructive feedback	4	PO2, PO10, PSO1
CO5	Demonstrate the ability to implement research methodologies in practical settings by conducting experiments, analyzing data, and interpreting results using advanced technical tools and software, culminating in the presentation of findings.	4	PO10, PSO2

Syllabus

Introduction to Research: Overview of research methodologies, Importance of independent study in engineering innovation, Identifying research problems and formulating research questions, Techniques for conducting a thorough literature review.

Research Design and Methodology: Qualitative and quantitative research methods, Designing experiments and studies, Advanced data collection techniques, Ethical considerations in research.

Data Analysis and Interpretation: Statistical and analytical tools for data analysis, Interpreting experimental results and drawing conclusions, Ensuring validity and reliability in research, Case studies and practical applications.

Technical Writing and Presenting Research: Structuring technical research papers and reports, Standards for academic and technical writing, Preparing technical presentations and posters, Effective communication of research findings.

Advanced Research Topics: Current trends and challenges in research, Emerging technologies and their impact on research, Interdisciplinary research, Case studies of groundbreaking research.

Developing a Comprehensive Research Proposal: Components of a research proposal, Crafting a clear and concise research hypothesis, Planning and outlining the research methodology, Budgeting and resource allocation for research projects.

Independent Study Project: Planning and execution of an independent research project, Data collection and analysis techniques specific to the project, Regular progress reporting and documentation, Overcoming challenges in independent research.

Peer Review and Feedback Process: Understanding the peer review process in academic publishing, Conducting peer reviews of engineering research papers, Providing constructive feedback to peers, Incorporating feedback into your research work.

Reference Books

23IE02RF - RESEARCH METHODOLOGY, ETHICS & SCIENTIFIC WRITING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IE02RF	RESEARCH METHODOLOGY, ETHICS & SCIENTIFIC WRITING	RMES	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To understand the fundamental concepts and methods in research and collect the data relevant to research problem.	3	PO1, PO2, PO3, PO8, PSO1
CO2	To analyze the data and gather the insights of the data and testing of hypothesis	4	PO1, PO2, PO3, PO8, PSO2
CO3	To be able to format a research paper, compile and interpret the results at the end, further scope of research	4	PO2, PO3
CO4	To be able to use the modern software tools for writing the research paper, test for plagiarism, identify suitable journal for possible publication	4	PO2, PO3
CO5	To be able to analyze the data using SPSS and interpret, test for plagiarism, prepare article/thesis using Latex	5	PO2, PO3

Syllabus

Objectives of research, Development of a research proposal. Research Design, Research Question, Investigation Question, Measurement Issues, Hypothesis Formulation, Levels of measurement, Nominal, Ordinal, Interval, Ratio. Sampling, Characteristics of a good sample. Probability Sample, Simple Random Sample, Systematic Sample, Stratified Random Sample, Multistage sampling. Determining size of the sample, Practical considerations in sampling and sample size.

Data Analysis, Hypothesis testing, Compilation and Interpretation of Data together with Paper Writing, Layout of a Research Paper, Impact factor of Journals, When and where to publish, Ethical issues related to publishing, Plagiarism and Self-Plagiarism.

Elements of Preparing a Paper and a Thesis: Title, Abstract, Keywords, Acknowledgements, Symbols and Abbreviations, Introduction, Literature Review, Materials and Methods, SI Units, Mathematical Materials, Graphical and Tabular Presentation, Results and Discussion, Conclusion, Interpretation, Generalization, Scope for Future Work, Citations and List of References, and Appendixes.

Usage of tools and techniques for Research: methods to search required information effectively, Reference Management Software like Zotero, Mendeley, Software for paper formatting like LaTeX/MS Office, Software for detection of Plagiarism.

23IE03RF - RESEARCH SEMINAR (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IE03RF	RESEARCH SEMINAR	RS	R	0	0	4	4	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze and interpret research data using appropriate statistical and qualitative methods.	5	PO3, PO4, PO5, PSO2
CO2	Collaborate with peers, professionals and Communicate research findings, effectively through written reports, presentations, and publications.	5	PO4, PO5, PO6, PSO1
CO3	Design and Development of solutions for the complex problems	5	PO4, PO5, PO6, PSO1

Syllabus

Introduction to Research Methodologies, Quantitative Research Methods, Survey Design and Sampling Techniques, Statistical Analysis and Interpretation, Qualitative Research Methods, Interviews and Focus Groups, Thematic Analysis, Mixed Methods Research, Ethical Considerations in Research, Utilizing Technology in Research, Case Studies and Real-World Applications

2. Conducting a Literature Review, Identifying Relevant Literature, Synthesizing Information, Highlighting Research Gaps, Writing Research Papers, Structuring a Research Paper, Academic Writing Style, Citation and Referencing, Preparing Research Presentations, Designing Effective Slides, Public Speaking Skills

Designing Effective Slides, Public Speaking Skills, andling Q&A Sessions, Publishing Research Findings.

23IN01RF - ADVANCED IOT APPLIED MACHINE LEARNING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN01RF	ADVANCED IOT APPLIED MACHINE LEARNING	AIAML	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand advanced machine learning algorithms and techniques	2	PO2, PO3, PO5, PSO2
CO2	Apply machine learning algorithms to IoT datasets	3	PO2, PO3, PO5, PSO2
CO3	Implement deep learning models for IoT applications	5	PO2, PO3, PO5, PSO2
CO4	Develop anomaly detection and time series forecasting solutions for IoT data	5	PO2, PO3, PO5, PSO2
CO5	Gain hands-on experience with IoT platforms and tools	5	PO2, PO3, PO5, PSO2

Syllabus

Introduction to Advanced Machine Learning Review of machine learning fundamentals, Introduction to deep learning Neural network architectures, Training deep neural networks, Convolutional Neural Networks (CNNs) for IoT data

Deep Learning for IoT Recurrent Neural Networks (RNNs) and Long Short-Term Memory (LSTM) networks-Sequence-to-sequence models-Attention mechanisms-Implementing RNNs and LSTMs for time series data in IoT applications

Reinforcement Learning for IoT Introduction to reinforcement learning-Markov Decision Processes (MDPs)-Q-learning and Deep Q-Networks (DQN)-Implementing reinforcement learning algorithms for IoT control systems

Anomaly Detection in IoT Overview of anomaly detection techniques-Statistical methods for anomaly detection-Machine learning-based anomaly detection-Unsupervised and semi-supervised anomaly detection methods-Case studies and applications of anomaly detection in IoT

Time Series Forecasting for IoT Time series analysis fundamentals-Traditional time series forecasting methods (ARIMA, Exponential Smoothing)-Machine learning-based time series forecasting (LSTM, GRU)-Evaluation metrics for time series forecasting-Implementing time series forecasting models for IoT sensor data

23IN02RF - WIRELESS SENSOR NETWORKS AND THE INTERNET OF THINGS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN02RF	WIRELESS SENSOR NETWORKS AND THE INTERNET OF THINGS	WSNIOT	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate the factors that influence the Wireless Sensor Network design, Network Topologies.	3	PO1, PO5, PSO1
CO2	Interpret the knowledge of applicability and limitations of MAC and routing protocols for real-time WSN applications.	3	PO1, PO5, PSO1
CO3	Apply the IoT architecture and building blocks for various application domains.	3	PO1, PO5, PSO1
CO4	Apply the IoT to device multidisciplinary case-to-case modelling and execute a wide range of applications.	3	PO1, PO5, PSO1
CO5	Evaluate and analyse the programming & interfacing of WSN and IoT applications using the hardware/software tool	5	PO3, PO5, PSO1

Syllabus

Basics of Wireless Sensor Networks: Introduction to WSN, Basic Overview of Wireless Technology, Basic Sensor Network Architectural Elements, Challenges, Applications of WSN. Some Examples of Sensor Nodes, Network Topologies: Single Hop Star, Multi Hop Mesh and Grid, Two-Tier Hierarchical Cluster.

Classifications of MAC Protocols for WSN, Sensor-MAC Case Study. Routing Protocols and Strategies in WSN, WSN Routing Techniques, Flooding and Its Variants.

IoT Applications in Smart Cities, Garbage Disposal, Vehicle Management, Smart Home.

Healthcare, Wearables Dairy, Agriculture, Traffic Monitoring & Control, Pollution Management, Inter-Vehicular Communication, Vehicle Tracking, Finance Transaction.

Analyse the programming & interfacing of WSNs using the hardware/software tool

23IN03RF - ADVANCED SECURITY OF INTERNET OF THINGS AND CYBER-PHYSICAL SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN03RF	ADVANCED SECURITY OF INTERNET OF THINGS AND CYBER-PHYSICAL SYSTEMS	ASICPS	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding IoT and CPS Architectures	2	PO2, PO5, PO11, PSO2
CO2	Apply Access control models for IoT and CPS systems	3	PO2, PO5, PO11, PSO2
CO3	Apply secure coding practices and conduct security testing for IoT and CPS software.	3	PO2, PO5, PO11, PSO2
CO4	Analyze the threat modeling methodologies and Risk assessment techniques for CPS	4	PO2, PO5, PO11, PSO2
CO5	Implementation of secure communication protocols in IoT devices and control mechanisms in CPS	4	PO2, PO5, PO11, PSO2

Syllabus

Overview of Internet of Things (IoT) and Cyber-Physical Systems (CPS) and Implementing secure communication protocols & access control mechanisms in a CPS environment

Access control models for IoT and CPS Authentication mechanisms (e.g., password based, biometric), Role-based access control (RBAC) and attribute based access control (ABAC)

Overview of intrusion detection and prevention systems (IDPS) and its types.

Secure coding guidelines and best practices for IoT and CPS applications with ,Secure software development lifecycle (SDLC) methodologies

Reference Books

23IN04RF - ANTENNAS FOR WIRELESS AND BODY-CENTRIC COMMUNICATIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN04RF	ANTENNAS FOR WIRELESS AND BODY-CENTRIC COMMUNICATIONS	AWBCC	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understand the fundamental principles and parameters of antenna design and be proficient in using simulation tools to design and analyze basic antennas	2	PO1, PO3, PSO1
CO2	Apply the unique challenges and design considerations for wearable antennas in body-centric communication systems	3	PO1, PO3, PSO1
CO3	Design the UWB antennas for applications such as radar, localization, and wireless sensing	4	PO1, PO3, PSO1
CO4	Design of miniaturizing antennas and the role of metamaterials and metasurfaces in these designs.	4	PO1, PO3, PSO1
CO5	Design and analyze the antenna for different Application	4	PO1, PO3, PSO1

Syllabus

Introduction to Antennas Overview of antennas and their functions in wireless communication systems-Basic antenna parameters: gain, directivity, radiation pattern, impedance-Antenna types: wire antennas, patch antennas, monopole antennas, etc. Introduction to antenna modeling and simulation tools (e.g., MATLAB, HFSS) Antenna Design Fundamentals Antenna design considerations: frequency, bandwidth, polarization, size, and shape-Matching networks and impedance matching techniques-Radiation mechanisms and antenna efficiency Hands-on lab: Designing and simulating basic antennas using simulation software

Wearable Antennas and Body-Centric Communications Challenges and opportunities in body-centric communication systems-Design considerations for wearable antennas-Antenna integration techniques for on-body and in-body communication-Hands-on lab: Designing and simulating wearable antennas for body-centric communication

Ultra-Wideband (UWB) Antennas Overview of ultra-wideband (UWB) communication systems-Characteristics and design considerations of UWB antennas-Applications of UWB antennas in radar, localization, and wireless sensing-Hands-on lab: Designing and simulating UWB antennas for specific applications

Small Antennas and Metamaterials Miniaturization techniques for small antennas-Introduction to metamaterials and metasurfaces Antenna miniaturization using metamaterial-inspired designs-Hands-on lab: Designing and simulating small antennas using metamaterial concepts

Reference Books

23IN05RF - ADVANCED SENSOR AND IOT DATA ANALYTICS WITH DEEP LEARNING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN05RF	ADVANCED SENSOR AND IOT DATA ANALYTICS WITH DEEP LEARNING	ASIDADL	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Preprocessing techniques and feature extraction from sensor data using Python libraries	3	PO1, PO2, PO5, PSO2
CO2	Building and training CNN models for sensor data classification	3	PO1, PO2, PO5, PSO2
CO3	Analyze how to Build and training RNN models for time-series sensor data analysis	4	PO1, PO2, PO5, PSO2
CO4	Implementing LSTM models for time-series prediction with sensor data	3	PO1, PO2, PO5, PSO1
CO5	Building and training autoencoder models for anomaly detection in sensor data	3	PO1, PO2, PO5, PSO2

Syllabus

Introduction to Sensor Data and IoT Analytics Overview of sensor data types and IoT applications-Characteristics and challenges of sensor data and IoT data-Introduction to deep learning and its applications in IoT analytics-Selection of deep learning frameworks for IoT data analytics Preprocessing and Feature Extraction for Sensor Data Data cleaning and preprocessing techniques for sensor data-Feature extraction and feature engineering from sensor data-Time-series analysis and feature selection methods-Hands-on lab: Preprocessing and feature extraction from sensor data using Python libraries

Convolutional Neural Networks (CNNs) for Sensor Data Introduction to Convolutional Neural Networks (CNNs)-Applications of CNNs in sensor data analytics-Training CNNs for sensor data classification and regression tasks-Hands-on lab: Building and training CNN models for sensor data classification

Recurrent Neural Networks (RNNs) for Time-Series Data Introduction to Recurrent Neural Networks (RNNs)-Applications of RNNs in time-series data analysis-Training RNNs for sequence prediction and anomaly detection in sensor data-Hands-on lab: Building and training RNN models for time-series sensor data analysis

Long Short-Term Memory (LSTM) Networks Introduction to Long Short-Term Memory (LSTM) networks-Advantages of LSTMs for modeling sequential data-Applications of LSTMs in time-series forecasting and anomaly detection-Hands-on lab: Implementing LSTM models for time-series prediction with sensor data Autoencoders and Unsupervised Learning for Anomaly Detection Introduction to autoencoders and unsupervised learning-Applications of autoencoders for anomaly detection in sensor data-Training autoencoder models for anomaly detection tasks Hands-on lab: Building and training autoencoder models for anomaly detection in sensor data

Y23: B.Tech. - Internet of Things

Category: Honors Through Innovation Courses (HIC)

23DT01IF - ENTREPRENEURIAL TECHNOLOGY DEVELOPMENT AND PROTOTYPING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DT01IF	ENTREPRENEURIAL TECHNOLOGY DEVELOPMENT AND PROTOTYPING	ETDP	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze entrepreneurial challenges and opportunities, develop innovative mindsets, and conduct thorough market research to identify customer insights and market trends.	4	PO2, PO11, PSO1
CO2	Design actionable product requirements and innovative prototypes using design thinking principles, incorporating user feedback through iterative processes.	6	PO2, PO11, PSO1
CO3	Execute validation experiments to test product assumptions, analyze data to make informed product decisions, and develop strategic plans for scaling and commercialization.	3	PO2, PO11, PSO1
CO4	Develop comprehensive scaling and commercialization strategies, establish key performance indicators, and create continuous improvement plans for ongoing product development and market success.	6	PO2, PO11, PSO1

Syllabus

Introduction to the entrepreneurial journey; Overview of stages and proof of value; Challenges and opportunities for entrepreneurs; Developing an innovative mindset; Setting goals; Conducting market research; Gathering customer insights; Identifying market pain points; Customer segmentation; Analyzing market trends.

Translating customer insights into design requirements; Utilizing design thinking for ideation; Creating innovative prototypes; Developing proof of value prototypes; Incorporating user feedback; Iterative design process; Managing resources and constraints in prototyping.

Defining goals for validation experiments; Designing experiments to test assumptions; Data collection and analysis methods; Interpreting experimental results; Making informed product decisions; Using data to guide business strategies; Developing a scaling roadmap; Identifying key partnerships and marketing strategies; Assessing financial viability; Establishing success metrics.

Developing a scaling and commercialization plan; Creating a growth strategy; Identifying distribution channels; Building market relationships; Evaluating financial models; Defining KPIs; Planning for continuous improvement; Ongoing product development.

23DT02IF - CUSTOMER DISCOVERY FOR STARTUPS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DT02IF	CUSTOMER DISCOVERY FOR STARTUPS	CDFS	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop the ability to create and articulate precise business hypotheses related to customer problems, solutions, and market opportunities.	3	PO2
CO2	Design and conduct insightful customer interviews to validate or invalidate business hypotheses.	4	PO3
CO3	Create MVPs based on validated customer needs and test these MVPs to gather actionable feedback.	5	PO6, PO11, PSO1
CO4	Validate various components of their business model, ensuring a viable market for their product.	5	PO11
CO5	Engage in continuous learning and adaptation, ensuring that their business ideas remain aligned with customer needs and market realities.	5	PO6

Syllabus

The module begins with an introduction to the significance of hypothesis-driven development in startups. Students will learn to identify genuine customer problems and formulate clear, testable hypotheses about customer needs and potential solutions. Through lectures, case studies, and group brainstorming sessions, they will develop problem and solution hypotheses and create detailed customer personas. Assignments include reflective essays, hypothesis development exercises, and peer reviews to ensure a deep understanding of articulating precise business hypotheses related to customer problems, solutions, and market opportunities.

Students will begin by learning techniques for creating insightful interview guides and best practices for conducting customer interviews. Activities will include role-playing interview scenarios, peer feedback sessions, and actual customer interviews. Students will analyze and synthesize qualitative data from these interviews to draw meaningful conclusions about customer needs and product-market fit. Assignments involve developing interview guides, conducting interviews, and writing reports summarizing the findings, ensuring students can design and conduct insightful customer interviews effectively.

The module covers the principles of MVP development, focusing on aligning MVPs with customer problems identified through previous discovery phases. Students will engage in hands-on workshops to create MVPs, simulate testing processes, and gather actionable feedback. They will also study supplementary texts on iterative product development to understand how to use feedback for continuous improvement. Assignments include creating MVP plans, conducting MVP tests, and reflecting on feedback to refine the products, equipping students with the skills to develop MVPs and gather valuable insights for product enhancement.

Students will start by learning key components of business model validation and utilizing tools like the Business Model Canvas. Through lectures, case studies, and workshops, they will test and validate value propositions, customer segments, channels, and revenue streams. Activities include creating and refining Business Model Canvases, conducting market validation techniques, and analyzing real-world cases of successful business model validation. Assignments involve developing validation plans and conducting market validation for startup ideas, ensuring students can ensure a viable market for their product.

Students will learn to implement iterative processes to refine business hypotheses, product features, and business strategies based on continuous customer feedback and market validation. The module includes lectures on iterative development and feedback loops, workshops on applying feedback to business hypotheses, and group discussions on adapting strategies. Students will document iterative changes and present their results, reflecting on how continuous feedback informs their product and business strategy adjustments. Assignments include reflective essays, feedback documentation, and adaptation plans, equipping students with the ability to engage in continuous learning and agile response in their entrepreneurial ventures.

23DT03IF - CUSTOMER VALIDATION FOR STARTUPS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DT03IF	CUSTOMER VALIDATION FOR STARTUPS	CVFS	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding of Robotics, Entrepreneurship and the basic principles governing Robotics.	2	PO11
CO2	Apply methods for recognizing Entrepreneurial Opportunities and crafting Business Models	3	PO11
CO3	Understanding the concepts of Design Thinking in Robotics and explore the ecosystem of Robotics Entrepreneurship.	2	PO11
CO4	Apply Robotics Innovation and Commercialization techniques alongside Entrepreneurial Pitching and Presentation Skills to bring robotic ideas to market successfully.	3	PO11

Syllabus

Introduction to Robotics and Entrepreneurship: Overview of robotics technologies, Introduction to entrepreneurial mindset and innovation. Fundamentals of Robotics: Robot components and mechanisms, Sensors and actuators, Robot control systems

Entrepreneurial Opportunity Identification: Market analysis and opportunity assessment, Identifying robotics applications in various industries, Case studies of successful robotics start-ups. Business Model Development: Lean startup methodology, Value proposition canvas, Business model canvas for robotics ventures

Design Thinking for Robotics: Human-centered design principles, Prototyping and iteration, User testing and feedback. Robotics Entrepreneurship Ecosystem: Resources for robotics startups (incubators, accelerators, funding opportunities), Intellectual property considerations, Regulatory and ethical issues in robotics entrepreneurship.

Robotics Innovation and Commercialization: Technology transfer and commercialization strategies, Scaling up robotics ventures, Case studies of robotics innovations and their commercialization journey. Entrepreneurial Pitching and Presentation Skills: Crafting compelling pitches for robotics ventures, Effective communication of value proposition, Pitching to investors and potential customers

23DT04IF - CUSTOMER CREATION AND MARKETING FOR ENTREPRENEURS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DT04IF	CUSTOMER CREATION AND MARKETING FOR ENTREPRENEURS	CCME	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze various market segments and identify the target audience for a startups product or service	4	PO2
CO2	Evaluate different marketing channels and strategies to determine the most effective approaches for customer acquisition	5	PO4
CO3	Create a comprehensive customer creation plan that includes positioning, branding, and go-to-market strategies	6	PO3
CO4	Apply marketing principles to implement and optimize marketing campaigns for customer creation	3	PO11
CO5	Design, implement, and evaluate a real-world marketing project, applying theoretical knowledge to practical scenarios	5	PO11

Syllabus

Introduction to Customer Creation and Marketing: Overview of Customer Development, Introduction to customer creation and its importance in startups, Differences between traditional marketing and startup marketing, Understanding Customer Needs and Behaviors, Techniques for understanding customer needs and behaviors, Importance of customer-centric approach in marketing

Market Segmentation and Targeting: Market Segmentation, Identifying and analyzing different market segments, Criteria for effective segmentation: geographic, demographic, psychographic, and behavioral, Target Audience Identification, Selecting the most viable target audience, Developing customer personas to represent target segments

Marketing Channels and Strategies: Marketing Channels Overview, Traditional vs. digital marketing channels, Strengths and weaknesses of various marketing channels, Strategic Marketing Approaches, Content marketing, social media marketing, email marketing, and influencer marketing, Integrated marketing communications

Designing a Customer Creation Plan: Developing a Marketing Plan, Components of a comprehensive marketing plan, Setting marketing goals and objectives, Positioning and Branding, Crafting a compelling value proposition, Building a strong brand identity and message, Go-to-Market Strategy, Launching a product in the market, Timing and tactics for market entry

Implementing and Optimizing Marketing Campaigns: Campaign Implementation, Steps to launch and manage marketing campaigns, Budgeting and resource allocation, Performance Measurement and Optimization, Key Performance Indicators (KPIs) for marketing, Tools and techniques for tracking and analyzing marketing performance, Making data-driven adjustments to optimize campaigns

Reference Books

- 1 The Startup Owner's Manual, Steve Blank, Bob Dorf, 1st Edition, K & S Ranch.
- 2 The Lean Startup, Eric Ries, 1st Edition, Crown Business.
- 3 Crossing the Chasm, Geoffrey A. Moore, 3rd Edition, Harper Business.
- 4 Traction: How Any Startup Can Achieve Explosive Customer Growth, Gabriel Weinberg, Justin Mares, 1st Edition, Portfolio.
- 5 Marketing Management: A South Asian Perspective, Philip Kotler, Kevin Lane Keller, Abraham Koshy, Mithileshwar Jha, 14th Edition, Pearson.

- 6 Marketing for Entrepreneurs and SMEs A Global Perspective, Maja Konecnik Ruzzier, Robert D. Hisrich, Mitja Ruzzier, 1st Edition, Edward Elgar Publishing.

Y23: B.Tech. - Internet of Things

Category: Honors Through Experiential Learning Courses (HEC)

23IN01EF - BLOCKCHAIN TECHNOLOGY FOR IOT (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN01EF	BLOCKCHAIN TECHNOLOGY FOR IOT	BCTI	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the blockchain technology fundamentals and applications of Blockchain in IoT	2	PO2, PO5, PO11, PSO2
CO2	Apply different consensus algorithms in blockchain for IoT	3	PO2, PO5, PO11, PSO2
CO3	Apply the smart contracts on Ethereum Platform	3	PO2, PO5, PO11, PSO2
CO4	Analyse applications of Blockchain on different sectors	4	PO2, PO5, PO11, PSO2

Syllabus

Cryptography basics for blockchain and Introduction to the Internet of Things (IoT) and discuss the Potential applications of blockchain in IoT

Identify the Challenges and opportunities in integrating blockchain and IoT

Decentralized application development frameworks using Solidity Programming

Building a simple IoT application with blockchain integration and Review of real world applications of blockchain and

Reference Books

- 1 Mastering Blockchain Unlocking the Power of Cryptocurrencies, Smart Contracts, and Decentralized Applications, Imran Bashir, 2, Packt Publishing .
- 2 Ethereum for Architects and Developers, Debajani Mohanty, 13, Packt Publishing.
- 3 Building Blockchain Powered Applications, Xavier Decuyper and Frank Oortwijn, 3, Packt Publishing.
- 4 Blockchain Basics, Daniel Drescher, First Edition, Apress.

23IN02EF - DESIGN AND IMPLEMENTATION OF IOT SYSTEMS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN02EF	DESIGN AND IMPLEMENTATION OF IOT SYSTEMS	DIIS	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the architecture and components of IoT systems	2	PO1, PSO1
CO2	Analyze communication protocols and standards for IoT connectivity	4	PO2, PSO1
CO3	Apply data processing algorithms on IoT edge devices	3	PO5, PSO1
CO4	Analyze Cloud Integration and IoT Platforms	4	PO2, PSO1
CO5	Analyze and evaluate IoT architectures and deployment strategies	4	PO2, PO5, PSO1

Syllabus

Introduction to IoT Systems Overview of IoT concepts and applications-Architecture of IoT systems-IoT hardware components (sensors, actuators, microcontrollers)-Introduction to IoT development platforms and tools Sensor Technologies for IoT Types of sensors used in IoT applications (e.g., temperature, humidity, motion)-Sensor selection criteria and trade-offs-Interface protocols for sensor communication (e.g., I2C, SPI, UART)-Hands-on lab: Interfacing sensors with microcontrollers

Communication Protocols for IoT Overview of IoT communication protocols (e.g., MQTT, CoAP, HTTP)-Wireless communication standards for IoT (e.g., Wi-Fi, Bluetooth, LoRa)-IoT gateway architectures and edge computing Hands-on lab: Implementing MQTT-based communication between IoT devices and cloud platforms

Data Processing and Analytics in IoT Introduction to data processing techniques for IoT data streams-Real-time processing vs. batch processing-Edge computing and fog computing in IoT systems-Hands-on lab: Implementing data processing algorithms on IoT edge devices IoT Security and Privacy Security challenges in IoT systems (e.g., device authentication, data encryption)-Privacy considerations and regulations (e.g., GDPR)-Best practices for securing IoT deployments Hands-on lab: Implementing security features in an IoT prototype

Cloud Integration and IoT Platforms Overview of cloud computing platforms for IoT (e.g., AWS IoT, Azure IoT, Google Cloud IoT)-Device provisioning and management in IoT platforms-Cloud-based data storage and analytics-Hands-on lab: Integrating IoT devices with a cloud platform for data storage and visualization

Demonstrate programs with Google Cloud IoT for secure connecting and managing IoT devices to build rich applications

Reference Books

- 1 Building Arduino Projects for the Internet of Things: Experiments with Real-World Applications, Adeel Javed, 1, Apress.
- 2 Designing Connected Products: UX for the Consumer Internet of Things, Claire Rowland, Elizabeth Goodman, Martin Charlier, Ann Light, 1, Claire Rowland, Elizabeth Goodman, Martin Charlier, Ann Light.
- 3 Designing and Implementation of IoT, Dr. Saurabh Mehta, Michelle D Souza, 1, NEXUS STORIES PUBLICATION.
- 4 Designing the Internet of Things, Adrian McEwen, Hakim Cassimally, 1, Wiley.

23IN03EF - ADVANCED SENSOR SIGNAL PROCESSING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN03EF	ADVANCED SENSOR SIGNAL PROCESSING	ASSP	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Gain in-depth knowledge of advanced signal processing techniques for sensor data, and Learn how to preprocess and condition sensor signals for optimal performance	2	PO1, PO2, PSO1
CO2	Explore feature extraction and selection methods for sensor data analysis	3	PO1, PO2, PSO1
CO3	Understand dimensionality reduction techniques and their application to sensor data, Develop practical skills through hands-on projects and case studies	2	PO1, PO2, PSO1
CO4	Apply techniques such as SVD and t-SNE to reduce the dimensionality of sensor data and visualize it effectively	3	PO1, PO2, PSO1

Syllabus

Introduction to Sensor Signal Processing Overview of sensor types and applications in processing sensor signals Signal conditioning techniques (e.g., amplification, filtering)-Introduction to feature extraction and selection Time and Frequency Domain Analysis Time-domain analysis of sensor signals-Fourier analysis and frequency-domain techniques Power spectral density estimation-Spectrogram analysis for time-frequency representation

Advanced Filtering Techniques Adaptive filtering methods (e.g., Least Mean Squares, Recursive Least Squares)-Kalman filtering and its application to sensor data fusion-Wavelet transforms for signal denoising and feature extraction-Hands-on lab

Implementing advanced filtering algorithms in Python or MATLAB Feature Extraction and Selection Importance of feature extraction in sensor signal processing -Popular feature extraction methods (e.g., wavelet transform, Principal Component Analysis)-Feature selection techniques (e.g., Mutual Information, Recursive Feature Elimination)-Hands-on lab: Extracting and selecting features from sensor data

Dimensionality Reduction Dimensionality reduction techniques (e.g., Singular Value Decomposition, t-distributed Stochastic Neighbor Embedding)- Manifold learning algorithms for sensor data visualization- Nonlinear dimensionality reduction methods (e.g., Isomap, Locally Linear Embedding)- Hands-on lab: Implementing dimensionality reduction techniques for sensor data analysis Classification and Pattern Recognition Introduction to classification algorithms (e.g., k-Nearest Neighbors, Support Vector Machines, Random Forests)-Evaluation metrics for classification performance assessment-Ensemble learning methods for improved classification accuracy-Hands-on lab: Building and evaluating classification models for sensor data

Reference Books

- 1 Digital Signal Processing, John G. Proakis, Dimitris G. Manolakis, 4, Pearson Education India.
- 2 FEATURE EXTRACTION AND IMAGE PROCESSING FOR COMPUTER VISION, Mark Nixon, Alberto S. Aguado, 4, Academic Press Inc.
- 3 Sensors and Low Power Signal Processing, Syed Kamrul Islam , Mohammad Rafiqul Haider, 1, Springer.
- 4 Audio Signal Processing and Coding, Andreas Spanias, Ted Painter, Venkatraman Atti, 1, Wiley.

23IN04EF - IOT APP DEVELOPMENT (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IN04EF	IOT APP DEVELOPMENT	IAD	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Design and implement IoT systems by integrating sensors with microcontrollers	5	PO1, PO3, PO5, PSO2
CO2	Develop the communication between the diverse IoT systems	5	PO1, PO3, PO5, PSO2
CO3	Develop mobile and web applications for IoT using Android, and iOS frameworks	5	PO1, PO3, PO5, PSO2
CO4	Develop mobile and web applications for IoT using Flutter, Android, and iOS frameworks, incorporating sensor data, BLE communication, RESTful APIs, real-time data streaming, and UI/UX design, with hands-on labs for practical implementation.	5	PO1, PO3, PO5, PSO2

Syllabus

Introduction to IoT Overview of the Internet of Things (IoT) ecosystem-Components of an IoT system: sensors, actuators, microcontrollers, gateways-IoT communication protocols: MQTT, CoAP, HTTP-Introduction to IoT development platforms and tools Sensor Integration and Data Collection Types of sensors and their applications in IoT-Interfacing sensors with microcontrollers (e.g., Arduino, Raspberry Pi)-Data acquisition techniques: analogue-to-digital conversion, sensor calibration-Hands-on lab: Collecting sensor data and transmitting it to a microcontroller.

Communication Protocols for IoT Overview of IoT communication protocols (e.g., MQTT, CoAP, HTTP)-Wireless communication standards for IoT (e.g., Wi-Fi, Bluetooth, LoRa)-Introduction to IoT gateway architectures and edge computing-Hands-on lab: Implementing MQTT-based communication between IoT devices and cloud platforms Cloud Computing for IoT Overview of cloud computing platforms for IoT (e.g., AWS IoT, Azure IoT, Google Cloud IoT)-Device provisioning and management in IoT platforms-Cloud-based data storage and analytics-Hands-on lab: Integrating IoT devices with a cloud platform for data storage and visualization

Mobile App Development for IoT Introduction to mobile app development frameworks (e.g., Android, iOS)-Designing user interfaces for IoT applications-Integrating sensor data into mobile apps-Hands-on lab: Building a mobile app to remotely monitor and control IoT devices Web Development for IoT Introduction to web development technologies (e.g., HTML, CSS, JavaScript)-Creating interactive dashboards for IoT data visualization-Real-time data streaming and updates in web applications Hands-on lab: Developing a web-based dashboard to visualize sensor data.

Introduction to IoT Mobile App Development with Flutter Overview of IoT and mobile app development-Introduction to Flutter framework and its advantages Setting up Flutter development environment-Basics of Dart programming language Bluetooth Communication with Flutter Understanding Bluetooth Low Energy (BLE)-Integrating BLE functionality into Flutter apps-Implementing basic Bluetooth communication protocols-Hands-on lab: Building a Flutter app to discover and connect to Bluetooth devices RESTful API Integration Overview of RESTful APIs and their role in IoT-Integrating RESTful APIs into Flutter apps Implementing CRUD operations using RESTful APIs-Hands-on lab: Building a Flutter app to interact with IoT devices via RESTful APIs Real-time Data Streaming Introduction to real-time data streaming protocols (e.g., WebSocket)-Implementing real-time data streaming in Flutter apps-Handling real-time updates and notifications-Hands-on lab: Building a Flutter app to receive real-time sensor data from IoT devices UI/UX Design for IoT Applications Principles of UI/UX design for mobile apps-Designing user-friendly interfaces for IoT applications Incorporating IoT functionalities into app UI/UX-Hands-on lab: Designing and prototyping UI/UX for an IoT mobile app using Flutter

23SDAD06A - ANALYSIS OF DIGITAL MARKETING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDAD06A	ANALYSIS OF DIGITAL MARKETING	ADM	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	MACHINE LEARNING	ML	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply WordPress for Website Hosting and Design	3	PO1, PO2, PSO1
CO2	Apply Keyword Research Techniques and Technical SEO Techniques.	3	PO1, PO2, PO5, PSO1
CO3	Apply the principles of Google AdWords, Social Media Optimization, Social Media Marketing.	3	PO2, PO3, PO5, PSO1
CO4	Analyze the Webmaster Tools to improve site indexing, Crawls stats and Errors, Google Web Analytics.	4	PO2, PO3, PO5, PSO1

Syllabus

Understand the basics of Digital Marketing, types of digital marketing, Understanding the functionality of WordPress, Install and Activate plugins, functionality of different plugins.

Analysis and keyword Research, Types Of Keywords, Tools Used For Keyword Research, Localized Keyword Research, Competitor Website Keyword Analysis, Choosing Right Keywords To The Project, SEO Fundamentals & Concepts(On page Optimization and Off page Optimization), Understanding the SERP, Indexing, Crawling.

Google Adwords, Adwords Account And Campaign Basics, Adwords Tools, Optimizing Performance, Performance Monitoring, Reports, Types Of Social Media Websites, Creating Advertising Campaigns.

Navigating Google Analytics, Real-Time Monitoring, Traffic Sources, Behavior, Visitors, Live Data, and Demographics, Adding site and verification, Setting Geo-target location, Search queries analysis, Filtering search queries, Crawls stats and Errors, Sitemaps.

Reference Books

- 1 Digital Marketing, S.Gupta, McGraw-Hill , 1st Edition, 2017, McGraw-Hill.
- 2 Marketing Strategies for Engaging the Digital Generation, D. Ryan, , 4th Edition,2000, IGI Global Publications.
- 3 Advanced Web Metrics with Google Analytics, Brian Clifton, 3rd Edition,2012, Brian Clifton.
- 4 A Do-It-Yourself Guide to PPC Advertising, Corey Rabazinski, 1st Edition, 2015, CreateSpace Independent .
- 5 The Google Webmaster Tools Handbook, sadie smith, 1st Edition, 2013, Emereo Publishing.

23SDAD06E - ANALYSIS OF DIGITAL MARKETING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDAD06E	ANALYSIS OF DIGITAL MARKETING	ADM	E	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	MACHINE LEARNING	ML	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply WordPress for Website Hosting and Design	3	PO1, PO2, PSO1
CO2	Apply Keyword Research Techniques and Technical SEO Techniques.	3	PO1, PO2, PO5, PSO1
CO3	Apply the principles of Google AdWords, Social Media Optimization, Social Media Marketing.	3	PO2, PO3, PO5, PSO1
CO4	Analyze the Webmaster Tools to improve site indexing, Crawls stats and Errors, Google Web Analytics.	4	PO2, PO3, PO5, PSO1

Syllabus

The fundamentals of digital marketing, including its various types and strategies for effective online engagement. It also delves into the functionality of WordPress and the installation and activation of plugins, and exploring the specific functions of different plugins to enhance website performance and user experience.

The comprehensive analysis and research of keywords, covering various types of keywords and the tools and SEO fundamentals and concepts such as on-page and off-page optimization, understanding the Search Engine Results Page (SERP), indexing, and crawling to ensure effective digital marketing and search engine visibility.

It provides an in-depth understanding of Google AdWords accounts and campaigns, utilizing various AdWords tools and optimizing performance through continuous monitoring and reporting. It also explores the different types of social media websites.

Its navigating Google Analytics, including real-time monitoring of traffic sources, visitor behavior, live data, and demographics and adding site verification, setting geo-target locations, analyzing search queries, filtering search queries, understanding crawl stats and errors.

Reference Books

23SDAD08A - EMERGING BLOCKCHAIN MODELS FOR DIGITAL CURRENCIES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDAD08A	EMERGING BLOCKCHAIN MODELS FOR DIGITAL CURRENCIES	EBCMDC	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	DATA WAREHOUSING AND MINING	DWHM	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Create the blockchain network	3	PO1, PO2, PO4, PO5
CO2	Apply ethereum network in digital currencies	3	PO1, PO2, PO4, PO5
CO3	Create the smart contract and validate the transactions	4	PO1, PO2, PO4, PO5
CO4	Apply smart contract in real time application	4	PO1, PO2, PO4, PO5, PSO2

Syllabus

Blockchain Network: Blockchain creation, Markle tree, Mining, Consensus algorithms

Digital Currencies: Wallet creation, Settingup the ethereum network, transfers the ethers from one network to another network.

Smart Contract: Solidity introduction, Programming concepts: control structures, looping statements, functions, scoping and declarations, error handling, events.

Smart contract for bank transaction validation, user verification, Transfer the money using smart contract.

Reference Books

- 4 The Basics of Bitcoins and Blockchains: An Introduction to Cryptocurrencies and the Technology that Powers Them (Cryptography, Crypto Trading, Digital Assets, NFT), Antony Lewis, 1, Amazon.

23SDAD08R - EMERGING BLOCKCHAIN MODELS FOR DIGITAL CURRENCIES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDAD08R	EMERGING BLOCKCHAIN MODELS FOR DIGITAL CURRENCIES	EBCMDC	R	0	0	2	4	2

Prerequisite

S#	Course Title	Acronym	Rule
1	DATA WAREHOUSING AND MINING	DWHM	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Create the blockchain network	3	PO1, PO2, PO4, PO5
CO2	Apply ethereum network in digital currencies	3	PO1, PO2, PO4, PO5
CO3	Create the smart contract and validate the transactions	4	PO1, PO2, PO4, PO5, PSO2

Syllabus

Blockchain Network: Blockchain creation, Markle tree, Mining, Consensus algorithms.

Digital Currencies: Wallet creation, Setting up the ethereum network, transfers the ethers from one network to another network.

Smart Contract: Solidity introduction, Programming concepts: control structures, looping statements, functions, scoping and declarations, error handling, events.

Reference Books

- 1 Bitcoin and Cryptocurrency Technologies, Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller, Steven Goldfeder, 1, Princeton University Press.
- 2 Cryptocurrency and Blockchain for Beginners, Ollie Ruell, 1, Noion Press.
- 3 BLOCKCHAIN TECHNOLOGY, Chandramouli Subramanian, Asha A George Abhilash K A and Meena Karthikeyan, 1, University Press.
- 4 The Blockchain Developer: A Practical Guide for Designing, Implementing, Publishing, Testing, and Securing Distributed Blockchain-based Projects, Elad Elrom, 1, Apress.

23SDAD09A - AUTONOMOUS VEHICLE SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDAD09A	AUTONOMOUS VEHICLE SYSTEMS	AVS	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply basic toolboxes in MATLAB useful for vehicle dynamics. It included include Simulink for modeling and simulating vehicle dynamics, Control System Toolbox for designing and analyzing control systems, and Simscape Multibody for simulating mechanical systems and vehicle kinematics.	3	PO1, PO2, PSO1
CO2	Apply fuel dynamics to model a controlled vehicle system for regulated air-fuel ratio. This process ensures optimal combustion efficiency, minimizing emissions and maximizing engine performance under varying operating conditions.	3	PO1, PO2, PSO1
CO3	Build a map from sensor data sets to be used for autonomous vehicle working. This map includes information on road geometry, obstacles, lane markings, traffic signs, and landmarks, essential for navigation, localization, and decision-making algorithms to enable safe and efficient autonomous vehicle operation in real-world scenarios.	4	PO1, PO2, PSO1
CO4	Model Perception-based parking spot detection using engine simulation data. It enhances autonomous vehicle parking capabilities by integrating real-time engine dynamics with perception algorithms for accurate and efficient parking spot detection.	4	PO2, PO3, PSO1

Syllabus

Introduction to MATLAB, introduction to autonomous vehicle components, simulating vehicle subsystems for different control loops. Simulink for modeling and simulating vehicle dynamics, Matlab toolboxes like Control System Toolbox for designing and analyzing control systems, Simscape Multibody for simulating mechanical systems and vehicle kinematics.

Modeling vehicular subsystems such as intake manifold pressure, combustion process inside the cylinders, engine speed dynamics, wheel speed, anti-braking system, fuel system for overall working of an autonomous vehicle, simulating fuel dynamics control loop for regulated air-fuel ratio.

Analysing various sensors such as lidar, camera, and their fusion for working of an autonomous vehicle. Integrating the sensor data to algorithms for localization, perception, and decision making process for various applications such as navigation, object recognition and collision avoidance.

Analysing functioning of autonomous vehicle subsystem components and integration of these components for the overall working of the vehicle. Model perception-based system for automatic parking space detection in the parking area. by applying model-based and machine learning -based algorithms.

Reference Books

23SDAD10A - COMPUTER VISION USING OPENCV (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDAD10A	COMPUTER VISION USING OPENCV	CVOCV	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply proficiency in using the OpenCV library for image manipulation and processing.	3	PO1, PO2, PO8, PSO1
CO2	Apply proficiency in using the OpenCV library for image and video processing.	3	PO1, PO2, PO8, PSO1
CO3	Implement common computer vision algorithms such as feature detection and object recognition.	3	PO2, PO3, PO8, PSO1
CO4	Analyze computer vision techniques to solve real-world problems in different domains.	4	PO2, PO3, PO8, PSO1

Syllabus

Introduction to Computer Vision Performance: Understand the basics of computer vision. Objective: Define computer vision and its real time applications and case studies.

Getting Started with OpenCV Performance: Acquire proficiency in using OpenCV. Objective: Set up OpenCV environment and perform basic operations. Pedagogy: Hands-on Lab, Demonstration Strategy: Provide step-by-step instructions and guided practice.

Image Processing Techniques Performance: Apply image processing techniques. Objective: Implement filtering, edge detection, and morphological operations. Pedagogy: Hands-on Lab, Coding Exercises Strategy: Provide coding challenges and real-world examples.

Feature Detection and Description Performance: Implement feature detection algorithms. Objective: Understand and apply keypoint detection and feature descriptors. Pedagogy: Hands-on Lab, Coding Exercises Strategy: Guide students through implementing feature detection algorithms.

Reference Books

- 1 Learning OpenCV 4 Computer Vision with Python 3, Adrian Kaehler and Gary Bradski, 2020, O'Reilly Media.

23SDAD10R - COMPUTER VISION USING OPENCV (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDAD10R	COMPUTER VISION USING OPENCV	CVOCV	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamental principles of Computer Vision and its applications.	3	PO1, PO2, PO8, PSO1
CO2	Apply proficiency in using the OpenCV library for image and video processing.	3	PO1, PO2, PO8, PSO1
CO3	Analyze computer vision techniques to solve real-world problems in different domains and Implement common computer vision algorithms such as feature detection and object recognition.	4	PO2, PO3, PO8, PSO1

Syllabus

Introduction to Computer Vision Overview of Computer Vision principles and its applications in various fields. Introduction to image formation, representation, and perception. Understanding basic concepts such as pixels, color spaces, and image processing techniques. Introduction to OpenCV Introduction to OpenCV library and its functionalities. Installation and setup of OpenCV environment. Basic operations on images and videos using OpenCV.

Common Computer Vision Algorithms Feature detection techniques such as corner detection, edge detection, and blob detection.

Implementation of feature extraction methods like SIFT, SURF, and ORB. Object detection and recognition using methods like Haar cascades and Histogram of Oriented Gradients (HOG). Image Processing and Enhancement Image filtering techniques including smoothing, sharpening, and noise reduction. Histogram equalization and contrast enhancement methods. Hands-on exercises on image enhancement using OpenCV.

23SDBT01A - MEDICAL LAB TECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT01A	MEDICAL LAB TECHNOLOGY	MLT	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	CELL BIOLOGY	CB	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply haematology techniques to estimate various cells in blood	3	PO1, PO3
CO2	Apply various biological fluids using clinical biochemistry techniques	3	PO4, PO6
CO3	Apply the roles of biomolecules in biological fluids	3	PO3, PO4
CO4	Apply the role of biomarkers in clinical studies	3	PO1, PO6

Syllabus

Separation of plasma and serum, Blood smear preparation, TRBC test, TWBC test, Hb estimation, Blood typing, Bleed and clot time, ESR estimation

Typhoid test and VDRL test, Glucose detection in fluids, Collection of blood, Coagulation tests, Separation of serum and plasma from various Animal blood samples, Preparation of blood smear and staining by Giemsa, Total count of RBC by neubaur chamber method, Total count of WBC by neubaur chamber method

Estimation of Hemoglobin by Sahali method, Determination of ABO blood grouping, Determination of Blood bleeding and clotting time, Estimation of ESR by Westergren method, Widal Tests, VDRL tests, Estimation of glucose levels in blood sample, Blood sample collection and preservation, Coagulation tests

Blood culturing on microbial media, Drug screening, Saliva culturing on microbial media, Nasal swab culturing on microbial media, Dental culturing on microbial media, Lectin agglutination tests, Hormone testing, Blood cross matching

Reference Books

23SDBT02A - ANALYTICAL AND OPTICAL INSTRUMENTATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT02A	ANALYTICAL AND OPTICAL INSTRUMENTATION	AOI	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	BIOCHEMICAL THERMODYNAMICS	BCT	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the understanding of Analytical Techniques	3	PO1
CO2	Apply the Instrument Operation	3	PO1
CO3	Applications in Research and Industry	3	PO9
CO4	Perform experiments using analytical and optical instruments.	3	PO9

Syllabus

Overview of analytical instrumentation: definition, importance, and applications. Basic principles of analytical measurements: accuracy, precision, sensitivity. Principles of light absorption, reflection, and scattering. Introduction to basic optical components and alignment techniques.

Principles and instrumentation of UV-Vis spectroscopy. Practical session: Using a UV-Vis spectrophotometer for quantitative analysis. Fundamentals of IR spectroscopy: vibrational modes, instrumentation. IR spectroscopy for structural analysis and identification.

Principles and instrumentation of GC. Operating a GC instrument, analyzing samples, and interpreting chromatograms. Fundamentals of HPLC: principles, instrumentation, and separation mechanisms. Performing HPLC analysis, method development, and troubleshooting.

Introduction to mass spectrometry: principles and instrumentation. Using MS for molecular characterization, ionization techniques, and data interpretation. Overview of advanced analytical techniques: NMR spectroscopy, atomic absorption spectroscopy. Case studies and practical demonstrations, data analysis, and interpretation.

CO#	CO Description	BTL	PO/PSO
CO1	Apply the role of biological principles	3	P07
CO2	Compare biological instruments for desing of bioproducts	3	P04
CO3	Analyze data generated from bio-instrumentation experiments	4	P09
CO4	Apply signal processing techniques to enhance the quality of biological data	3	P07

Syllabus

Overview of bioinstrumentation: scope, applications, and significance.

Principles of sensor design: sensitivity, selectivity, and range and types of sensors and transducers: electrical, mechanical, optical, and biochemical.

Develop skills in analyzing data from bio-instrumentation experiments through statistical methods, signal processing techniques, and data visualization tools

Components of data acquisition systems, Analog-to-digital conversion, Sampling theory and signal quantization

Reference Books

- 1 Medical Instrumentation: Application and Design, John G. Webster, 2010, Wiley.
- 2 Biomedical Instrumentation: Technology and Applications, R.S. Khandpur, 2022, McGraw-Hill Education.
- 3 Biomedical Signal and Image Processing, Kayvan Najarian and Robert Splinter, 2016, CRC Press, Taylor & Francis Group.
- 4 Medical Instrumentation: Application and Design, John G. Webster, 2009, Wiley.

23SDBT04A - PROCESS ENGINEERING TOOLS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT04A	PROCESS ENGINEERING TOOLS	PET	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	BIOCHEMICAL THERMODYNAMICS	BCT	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply various Techniques for isolation of microbes from different sources	3	PO1
CO2	Apply various biochemical methods for characterization of microorganism.	3	PO3
CO3	Apply various biochemical kinetics for isolated microbes	3	PO3, PO5
CO4	Apply various optimization techniques and stability studies on isolated microbes	3	PO3, PO5

Syllabus

Importance of bacterial culture in microbiology Basic requirements for bacterial growth (nutrients, pH, temperature, oxygen) Different types of culture media: Defined vs. complex media, Selective and differential media, Enrichment media, Principles of aseptic technique to prevent contamination Sterilization methods for media and equipment: Autoclaving, Filtration, Chemical disinfection- Demonstration of proper aseptic technique during media preparation and inoculation

Introduction to Biochemical Characterization: Importance of biochemical characterization for bacterial identification beyond basic methods like Gram staining. Overview of different types of biochemical tests and their role in identifying metabolic pathways and functionalities. Relationship between biochemical test results and bacterial classification.

Direct cell counting: Microscopic methods using hemocytometers for direct cell enumeration. Indirect biomass measurement: Techniques like measuring optical density (OD) and dry cell weight to estimate cell biomass. Growth curve generation: Techniques for plotting cell concentration or biomass over time to visualize growth patterns.

Importance of maintaining viable and functional bacterial cultures for research and industrial applications. Definition and rationale behind stability studies for bacterial cultures. Factors affecting bacterial culture stability: Temperature, Desiccation (drying), Oxygen availability, Nutrient composition

Reference Books

- 1 Fundamentals of Biochemical Engineering, Bailey & Ollis, 1, Mcgraw Hill Higher Education.
- 2 Biotechnology and Biochemical Engineering , Atkinson & Mavituna, 2, Springer.
- 3 Bioprocess Engineering: Basic Concepts, Michael L. Shuler, Fikret Kargi, and Matthew DeLisa, 3, Prentice Hall.
- 4 Bioprocess Engineering Principles, Pauline M. Doran, 2, Academic Press.

23SDBT05A - COMPUTER AIDED DRUG DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT05A	COMPUTER AIDED DRUG DESIGN	CADD	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	CELL BIOLOGY	CB	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of drug discovery methods, including techniques such as high-throughput screening, lead optimization, and pharmacophore modeling.	3	PO2, PO5
CO2	Illustrate protein function through structural prediction through computer-based modeling. Understand methods for predicting protein folding, identifying structural motifs, and determining active sites	3	PO2, PO5
CO3	Apply the knowledge of biomolecular interactions to study the interactions between proteins, nucleic acids, and other biomolecules. Understand the significance of these interactions in biological processes	3	PO2, PO5
CO4	Demonstrate methods of computational drug design in small molecule analysis. Utilize techniques such as molecular docking, virtual screening, and quantitative structure-activity relationship (QSAR) modeling	3	PO2, PO5

Syllabus

Practical Introduction to Molecular Modeling and Drug Design: Drug-Definition, history and types; Overview of drug discovery and development. Introduction to Drug Design, Pharmacokinetics and Pharmacodynamics, Modern Drug Discovery Technologies, Drug Development Phases, Case Studies in Drug Discovery. Case Studies in Drug Discovery: Analysis of successful drug discovery stories to understand practical applications and challenges in the field.

Prediction and Structural Analysis of Macromolecules: Macromolecular structure databases - Protein Data Bank, structural classification of protein. Advanced Structural Analysis Techniques, Protein Function Prediction, Comparative Protein Modeling, Structural Bioinformatics Tools, Structural Databases Beyond PDB. Structural Databases Beyond PDB: Exploring alternative databases like SCOP, CATH, and InterPro for protein structure information.

Biomolecular Interactions and Drug Discovery Methods: Small Molecule Analysis - Structural analysis, Physico-Chemical analysis, prediction of ADMET properties and biological activity. Ligand-Based Drug Design, Structure-Based Drug Design, Advanced ADMET Modeling, Biological Activity Assays, High-Throughput Screening Technologies. Introduction to methods for evaluating large libraries of compounds for potential drug candidates.

Molecular Modeling: Drug Target Prediction - Methods and Applications; Introduction to Biological Networks, GRN, Metabolic Networks, and Gene Ontology Analysis. Target Identification and Validation, Biological Network Analysis, Gene Regulatory Networks (GRN), Metabolic Pathway Analysis, Gene Ontology (GO) Analysis. Methods for classifying and analyzing gene functions and relationships.

Reference Books

23SDBT06A - GENOMICS DATA SCIENCE & CLUSTERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT06A	GENOMICS DATA SCIENCE & CLUSTERING	CADD	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	CELL BIOLOGY	CB	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Advanced Genomic Data Analysis Techniques to Extract Meaningful Biological Insights to uncover significant patterns and trends within large-scale genomic datasets	3	PO2, PO3, PO5, PSO1
CO2	Utilize and adapt clustering algorithms to address complex genomic research questions to categorize and interpret complex genomic data, facilitating the identification of genetic relationships, expression patterns, and subtypes within populations	3	PO2, PO3, PO5, PSO1
CO3	Implement and customize bioinformatics tools for effective genomic data interpretation to accurately analyse genomic data, enabling the derivation of actionable insights and supporting comprehensive genomic research projects	3	PO2, PO3, PO5, PSO1
CO4	Develop and optimize scalable solutions for efficient genomic data clustering to design, develop, and refine scalable solutions for the processing of large genomic datasets in a time-effective manner	3	PO2, PO3, PO5, PSO1

Syllabus

Introduction to Genomics and Data Science: Fundamentals of Medical Terminology and Clinical Concepts, Data Types and Sources in Healthcare, Data Governance and Security in Healthcare, Regulatory and Compliance Issues in Healthcare Data

Data Preprocessing and Quality Control: Data Collection Methods, Data Cleaning and Preprocessing, Data Transformation and Feature Engineering, Data Annotation and Labeling, Data Integration and Interoperability

Data Analysis and Machine Learning in Healthcare: Exploratory Data Analysis (EDA), Introduction to Machine Learning, Advanced Machine Learning Techniques, Predictive Modeling and Risk Stratification, Time Series Analysis and Forecasting

Implementation and Case Studies: Implementing Clinical Decision Support Systems (CDSS), Case Studies in Clinical Data Science, Project Work and Practical Applications, Evaluating Data Science Models in Healthcare, User-Centered Design and Implementation

Genomic Data Visualization and Interpretation: Introduction to Genomic Data, Genomic Data Visualization Techniques, Tools and Software for Genomic Data Visualization, Interpretation of Genomic Data, Practical Applications and Case Studies

Reference Books

- 1 Bioinformatics Data Skills: Reproducible and Robust Research with Open Source Tools, Vince Buffalo, 2015, O'Reilly Media.
- 2 Genomic and Precision Medicine: Primary Care, Geoffrey S. Ginsburg, Huntington F. Willard, 2017, Academic Press.

CO4	Develop and optimize scalable solutions for efficient genomic data clustering to design, develop, and refine scalable solutions for the processing of large genomic datasets in a time-effective manner	3	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Genomics and Bioinformatics: Introduction to Genomics DNA Sequencing Technologies, Genome Assembly and Annotation, Bioinformatics Databases and Tools, Applications of Genomics in Medicine and Biotechnology

Data Preprocessing and Quality Control: Introduction to Data Preprocessing, Data Cleaning Techniques, Handling Missing Data, Data Transformation and Normalization, Quality Control Measures

Sequence Alignment and Mapping: Introduction to Sequence Alignment, Pairwise Sequence Alignment Techniques, Multiple Sequence Alignment Methods, Sequence Mapping Strategies, Quality Assessment in Sequence Alignment.

Variant Calling and Annotation: Introduction to Variant Calling, Variant Detection Techniques, Quality Control in Variant Calling, Variant Annotation Methods, Interpretation and Analysis of Variants.

Clustering Algorithms and Techniques: Introduction to Clustering, K-means Clustering, Hierarchical Clustering, Density-based Clustering (DBSCAN), Evaluation and Comparison of Clustering Algorithms.

Dimensionality Reduction and Visualization: Introduction to Dimensionality Reduction, Principal Component Analysis (PCA), t-Distributed Stochastic Neighbor Embedding (t-SNE), Linear Discriminant Analysis (LDA), Visualization Techniques for High-Dimensional Data

Advanced Topics in Genomic Data Science: Genome-Wide Association Studies (GWAS), Next-Generation Sequencing (NGS) Data Analysis, Epigenomics and Chromatin Structure Analysis, Single-Cell Genomics, Integrative Genomic Analysis Techniques.

Project Development and Presentation: Project Planning and Proposal Writing, Data Acquisition and Preprocessing for Genomic Projects, Implementation of Analytical Methods, Data Interpretation and Visualization, Effective Communication and Presentation Skills.

23SDBT07A - ASPECTS OF BIOCHEMICAL ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT07A	ASPECTS OF BIOCHEMICAL ENGINEERING	ABCE	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop proficiency in fundamental biochemical engineering techniques	3	PO1, PO2, PO3, PSO1
CO2	Apply theoretical knowledge to solve practical problems encountered in bioprocessing and biotechnology.	3	PO1, PO2, PO3, PSO1
CO3	Enhance critical thinking and analytical skills through experimental design, execution, and analysis.	3	PO1, PO2, PO3, PSO1
CO4	Foster teamwork and communication skills through collaborative laboratory work and group discussions.	3	PO1, PO2, PO3, PSO1
CO5	Cultivate awareness of safety protocols and ethical considerations in biochemical engineering research and experimentation.	3	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Laboratory Safety and Good Laboratory Practices Microbial Cell Culture Techniques: Growth and Maintenance

Enzyme Kinetics: Determination of Enzyme Parameters Bioreactor Design and Operation: Batch, Continuous, and Fed-batch Cultures

Downstream Processing: Protein Purification Techniques Fermentation Processes: Production of Biomolecules

Biomass Measurement and Analysis Analytical Techniques in Biochemical Engineering: Spectrophotometry, Chromatography

Process Optimization and Scale-up Strategies Ethical and Safety Considerations in Biochemical Engineering Research

Reference Books

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT07E	ASPECTS OF BIOCHEMICAL ENGINEERING	ABCE	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To gain practical experience in biochemical engineering techniques.	3	PO1, PO2, PO3, PSO1
CO2	To understand the principles behind bioprocessing and bioseparations.	3	PO1, PO2, PO3, PSO1
CO3	To learn experimental design, data analysis, and interpretation skills.	3	PO1, PO2, PO3, PSO1
CO4	To apply theoretical knowledge to solve practical problems encountered in biochemical engineering	3	PO1, PO2, PO3, PSO1

Syllabus

Advanced Bioreactor Design and Operation: Fed-batch and Perfusion Systems Metabolic Engineering: Modifying Microorganisms for Bioproduction

Bioprocess Monitoring and Control: Sensors and Automation Bioprocess Scale-up and Technology Transfer Advanced Downstream Processing: Membrane Filtration and Chromatography

Biosensors and Bioanalytical Techniques for Process Monitoring Computational Tools in Biochemical Engineering: Modeling and Simulation

Advanced Fermentation Strategies: High Cell Density Cultures and Mixed Cultures Emerging Technologies in Biochemical Engineering: CRISPR-Cas9 and Synthetic Biology

23SDBT07R - ASPECTS OF BIOCHEMICAL ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT07R	ASPECTS OF BIOCHEMICAL ENGINEERING	ABCE	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply experimental techniques to study fundamental concepts in biochemical engineering.	3	PO1, PO2, PO3, PSO1
CO2	Analyze experimental data and interpret results using appropriate statistical methods.	3	PO1, PO2, PO3, PSO1
CO3	Communicate experimental findings effectively through written reports and presentations	3	PO1, PO2, PO3, PSO1

Syllabus

Proficiency in Laboratory Techniques-Perform laboratory experiments using equipment and techniques commonly used in biochemical engineering, such as fermentation, chromatography, and enzyme assays

Data Analysis and Interpretation-Analyze experimental data using statistical methods and software tools to draw meaningful conclusions about bioprocess performance or biomolecule characteristics.

Effective Communication of Experimental Findings-Communicate experimental procedures, results, and conclusions through clear and concise written reports and oral presentations.

Reference Books

- 1 Biochemical Engineering Fundamentals, James E. Bailey and David F. Ollis, 2nd, McGraw-Hill Education.
- 2 Biochemical Engineering and Biotechnology, Ghasem Najafpour, 1st, Elsevier.
- 3 Bioprocess Engineering Principles , Pauline M. Doran , 2nd, Academic Press.
- 4 Chemical Reaction Engineering,, Levenspiel O., 3 rd 2006, John Wiley & sons.

23SDBT08A - DRUG DESIGN: PRINCIPLES AND ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT08A	DRUG DESIGN: PRINCIPLES AND ENGINEERING	DDPE	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	BIOINFORMATICS	BI	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basis of drug discovery methods and introducing computer-aided drug design, molecular modeling, and simulation to develop innovative therapeutic strategies.	2	PO1, PO2
CO2	Apply the knowledge of protein function and structure prediction by computer-based modelling and design principles to improve the accuracy of protein engineering and drug design efforts.	3	PO1, PO4
CO3	Construct the biomolecular interactions in detail to analyze the molecules, thereby gaining insights into the mechanisms of molecular recognition and binding specificity.	3	PO1, PO5, PSO1
CO4	Apply the role of computational modeling and drug design methods with case studies to evaluate the effectiveness of new drugs and predict their potential side effects.	3	PO1, PO7

Syllabus

Drug Definition, history and types; Overview of drug discovery and development, Methodologies and strategies in molecular modelling and Drug Design Structure and ligand based drug design; Drug targets in Diseases Enzymes and Receptors; Phases of Computer aided drug design Target and Lead Discovery; Biomolecular interactions; Importance of Molecular Modelling and Drug Design in novel Drug discovery

Macromolecular structure databases Protein Data bank, structural classification of protein; Bioanalytical methods to determine protein structure X Ray diffractions, NMR and Cryoelectron methods; Protein Structure and Function Hierarchy of protein structures, Concept of Protein Folding, Interactions Forces; Protein structure prediction Concept of protein modelling, structure validation methods; Optimization of protein structure Preparation and Refinement methods; Introduction to Transmembrane Proteins Structure, function and prediction; Mutational Effects on protein structure Calculation of free energy, Prediction of deleterious mutations

Small Molecule Analysis Structural analysis, Physico Chemical analysis, prediction of ADMET properties and biological activity; Introduction to chemical pharmacophore; Principles of biomolecular interactions Molecular Docking, Molecular Dynamics simulations, ranking and scoring; Concepts of Virtual screening in drug discovery; Introduction to Quantitative structure activity relationships in drug design

Drug Target prediction methods and applications; Introduction to Biological Networks protein protein Interaction analysis; Fundamentals of network pharmacology; Principles of Pharmacogenetics; Sequence analysis of biomolecules Prediction of Protein Parameters, Secondary structure, Hydrophobicity, trafficking, phosphorylation, Disordered regions; Advancements in Molecular modelling and drug design New technologies and innovations in drug design; Application of Computer aided drug design with real world example

CO1	Understand the basis of drug discovery methods and introducing computer-aided drug design, molecular modeling, and simulation to develop innovative therapeutic strategies.	2	PO1, PO2
CO2	Identify the knowledge of protein function and structure prediction by computer-based modelling and design principles to improve the accuracy of protein engineering and drug design efforts.	3	PO1, PO4
CO3	Construct the biomolecular interactions in detail to analyze the molecules, thereby gaining insights into the mechanisms of molecular recognition and binding specificity.	3	PO1, PO5
CO4	Apply the role of computational modeling and drug design methods with case studies to evaluate the effectiveness of new drugs and predict their potential side effects.	3	PO1, PO7, PSO1

Syllabus

Drug Definition, history and types; Overview of drug discovery and development ; Methodologies and strategies in molecular modelling and Drug Design Structure and ligand based drug design; Drug targets in Diseases Enzymes and Receptors; Phases of Computer aided drug design Target and Lead Discovery Biomolecular interactions; Importance of Molecular Modelling and Drug Design in novel Drug discovery

Macromolecular structure databases Protein Data bank, structural classification of protein; Bioanalytical methods to determine protein structure X Ray diffractions, NMR and Cryoelectron methods; Protein Structure and Function Hierarchy of protein structures, Concept of Protein Folding, Interactions Forces; Protein structure prediction Concept of protein modelling, structure validation methods; Optimization of protein structure Preparation and Refinement methods; Introduction to Transmembrane Proteins Structure, function and prediction; Mutational Effects on protein structure Calculation of free energy, Prediction of deleterious mutations

Small Molecule Analysis Structural analysis, PhysicoChemical analysis, prediction of ADMET properties and biological activity; Introduction to chemical pharmacophore; Principles of biomolecular interactions Molecular Docking, Molecular Dynamics simulations, ranking and scoring; Concepts of Virtual screening in drug discovery; Introduction to Quantitative structure activity relationships in drug design

Drug Target prediction methods and applications; Introduction to Biological Networks protein protein Interaction analysis; Fundamentals of network pharmacology; Principles of Pharmacogenetics; Sequence analysis of biomolecules Prediction of Protein Parameters, Secondary structure, Hydrophobicity, trafficking, phosphorylation, Disordered regions; Advancements in Molecular modelling and drug design New technologies and innovations in drug design; Application of Computer aided drug design with real world examples

23SDBT09A - CELL CULTURE TECHNOLOGIES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT09A	CELL CULTURE TECHNOLOGIES	CCT	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Cell Culture Principles	2	PO1, PO2, PO3, PSO1
CO2	Various Cell Culture Techniques: apply a range of cell culture techniques, such as passaging, cryopreservation, and primary cell isolation	3	PO1, PO2, PO3, PSO1
CO3	Applying Cell Culture in Biomedical Research and Biotechnology: utilize cell cultures for drug testing, genetic manipulation, and tissue engineering	3	PO1, PO2, PO3, PSO1
CO4	Quality Control and Regulatory Compliance: ensure quality control and regulatory compliance in cell culture practices by developing and implementing protocols	3	PO1, PO2, PO3, PSO1

Syllabus

Cell biology fundamentals Historical development of cell culture techniques Applications of cell culture in research and industry

Cell Culture Techniques Cell isolation and primary culture establishment Cell line maintenance, subculturing, and passaging Cryopreservation and cell banking techniques Cell Culture Media and Supplements Types of cell culture media (serum-based, serum-free, specialized media) Media formulation and optimization Growth factors, cytokines, and supplements for cell culture

Cell Culture Environment Cell culture incubators and sterile techniques pH control, gas exchange, and temperature regulation Contamination prevention and management Cell-Based Assays and Techniques Cell viability assays (MTT, trypan blue exclusion) Cell proliferation assays (BrdU incorporation, cell counting) Immunocytochemistry and fluorescence microscopy

Applications of Cell Culture Cell culture in drug discovery and development Tissue engineering and regenerative medicine applications Cell-based assays for toxicity testing and pharmacological studies

Quality Control in Cell Culture Contamination detection and elimination strategies Sterility testing and mycoplasma detection Cell line authentication and characterization Ethical and Regulatory Considerations Ethics in cell culture research Regulatory guidelines for cell-based therapies and products Biosafety practices and waste management

23SDBT10A - MASS SPECTROMETRY BASED PROTEOMICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT10A	MASS SPECTROMETRY BASED PROTEOMICS	MSBP	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles and instrumentation of mass spectrometry for proteomics.	2	PO1, PO2, PO4, PSO1
CO2	Demonstrate sample preparation techniques for proteomic analysis.	2	PO1, PO2, PO4, PSO1
CO3	Make use of mass spectrometers for protein identification and quantification.	3	PO1, PO2, PO4, PSO1
CO4	Analyze proteomics data to identify proteins and characterize protein modifications.	4	PO1, PO2, PO4, PSO1
CO5	Design and execute proteomics experiments to address biological questions.	6	PO1, PO2, PO4, PSO1

Syllabus

Definition of proteomics: Importance of proteomics in biological research, Overview of different proteomics approaches, Fundamentals of Mass Spectrometry (MS): Principles of mass spectrometry, Ionization techniques: ESI (Electrospray Ionization), MALDI (Matrix-Assisted Laser Desorption/Ionization), Mass analyzers: Quadrupole, Time-of-Flight (TOF), Ion Trap, Orbitrap

Liquid Chromatography (LC) for Proteomics: Protein extraction methods, Protein digestion (enzyme specificity, protocols), Peptide purification techniques

Mass Spectrometry Instrumentation: Mass Spectrometry Analysis Workflow: Liquid chromatography (LC) coupled with MS (LC-MS), Data acquisition modes: MS, MS/MS (tandem MS), Data processing and interpretation

Data Acquisition and Processing: Data-dependent acquisition (DDA) and data-independent acquisition (DIA), MS/MS (tandem MS) and MSⁿ (multistage MS) techniques, Optimizing parameters for sensitivity, resolution, and dynamic range

Protein Quantification and Data Analysis: Label-free vs. labeled quantification methods, Stable isotope labeling techniques (SILAC, TMT, iTRAQ), Data analysis for quantitative proteomics, Protein Identification and Database Searching: Database search algorithms (e.g., SEQUEST, Mascot, MaxQuant) Protein inference and validation

Reference Books

- 1 Introduction to Proteomics: Principles and Applications, Nawin C. Mishra, 2010, Wiley.
- 2 Mass Spectrometry: Principles and Applications, Edmond de Hoffmann and Vincent Stroobant, 2007, Wiley.
- 3 Serum/Plasma Proteomics: Methods and Protocols, Richard J. Simpson, David W. Greening, 2017, Springer.

23SDBT10E - MASS SPECTROMETRY BASED PROTEOMICS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT10E	MASS SPECTROMETRY BASED PROTEOMICS	MSBP	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate proficiency in sample preparation techniques for mass spectrometry-based proteomics.	2	PO1, PO2, PO4, PSO1
CO2	Make use of mass spectrometers effectively for protein identification and quantification.	3	PO1, PO2, PO4, PSO1
CO3	Analyze mass spectrometry data using bioinformatics software to identify proteins and analyze protein modifications.	4	PO1, PO2, PO4, PSO1
CO4	Analyze proteomics data to draw meaningful conclusions about protein expression, interactions, and modifications.	4	PO1, PO2, PO4, PSO1
CO5	Design and execute proteomics experiments independently, applying appropriate methodologies and controls.	6	PO1, PO2, PO4, PSO1

Syllabus

Definition of proteomics: Importance of proteomics in biological research, Overview of different proteomics approaches, Fundamentals of Mass Spectrometry (MS): Principles of mass spectrometry, Ionization techniques: ESI (Electrospray Ionization), MALDI (Matrix-Assisted Laser Desorption/Ionization), Mass analyzers: Quadrupole, Time-of-Flight (TOF), Ion Trap, Orbitrap

Liquid Chromatography (LC) for Proteomics; Liquid Chromatography (LC) for Proteomics: Protein extraction methods, Protein digestion (enzyme specificity, protocols), Peptide purification techniques

Mass Spectrometry Instrumentation: Mass Spectrometry Instrumentation: Mass Spectrometry Analysis Workflow: Liquid chromatography (LC) coupled with MS (LC-MS), Data acquisition modes: MS, MS/MS (tandem MS), Data processing and interpretation

Data Acquisition and Processing: Data Acquisition and Processing: Data-dependent acquisition (DDA) and data-independent acquisition (DIA), MS/MS (tandem MS) and MSⁿ (multistage MS) techniques, Optimizing parameters for sensitivity, resolution, and dynamic range

23SDBT11A - ANIMAL PHYSIOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDBT11A	ANIMAL PHYSIOLOGY	AP	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of cell and cellular components in understanding human Physiology	3	PO1
CO2	Apply the knowledge of essential organs and body fluids in understanding human transport systems	3	PO1
CO3	Apply the knowledge of neuronal communications in understanding: Motor and Integrative Neurophysiology	3	PO4
CO4	Apply the knowledge of metabolic pathways in understanding cellular Metabolism and Temperature Regulation	3	PO1, PO4

Syllabus

Introduction to Physiology : Cell & General Physiology, Membrane Physiology, Nerve: Neuroanatomy: Study of the structure of the nervous system, including the brain, spinal cord, and peripheral nerves. and Muscle: Study of muscle structure, including skeletal, cardiac, and smooth muscle., The Heart and circulation

The Kidneys and Body Fluids, Blood Cells, Immunity, and Blood Clotting: Hemostasis: The overall process that stops bleeding, including vascular spasm, platelet plug formation, and coagulation., respiration, Aviation, Space, and Deep Sea Diving Physiology

The Nervous System: General Principles and Sensory Physiology, Neurotransmission: Mechanisms of signal transmission between neurons, including the role of neurotransmitters like dopamine, serotonin, and acetylcholine The Nervous System: The Special Senses, The Nervous System : Motor and Integrative Neurophysiology

Metabolism and metabolic pathways, cellular respiration: Overview of Cellular Respiration: The process by which cells convert glucose and oxygen into energy (ATP), carbon dioxide, and water., Glycolysis, Krebs cycle, Electron transport chain., metabolic regulation Temperature Regulation, Metabolic disorders

Reference Books

23SDCE01A - VISUALIZATION AND MODELLING FOR STRUCTURAL DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCE01A	VISUALIZATION AND MODELLING FOR STRUCTURAL DESIGN	VMSD	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	CONSTRUCTION PLANNING & MANAGEMENT	CPM	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Visualization Techniques: Explore various visualization methods and techniques used in structural design, including 2D drawings, 3D models, renderings, animations, and virtual reality.	3	PO1, PO5, PSO1
CO2	Introduction to Structural Modelling Software: Gain proficiency in using industry-standard structural modelling software such as Autodesk Revit, Tekla Structures, and SAP2000 for structural analysis and design.	3	PO1, PO5, PSO1
CO3	Parametric Modelling: Learn the principles of parametric modelling and its application in generating complex geometries, optimizing structural systems, and facilitating design iterations.	3	PO1, PO5, PSO1
CO4	Visualization Tools and Techniques: Explore advanced visualization tools and techniques, including photorealistic rendering, lighting effects, and material properties to enhance the visual representation of structural designs.	3	PO1, PO5, PSO1
CO5	Integration with BIM: Understand the principles of Building Information Modeling (BIM) and its integration with structural design software for collaborative design, clash detection, and construction planning.	3	PO1, PO5, PSO1
CO6	Structural Analysis and Simulation: Learn how to perform structural analysis and simulation using modelling software to evaluate the behavior and performance of structural systems under various loading conditions.	3	PO1, PO5, PSO1
CO7	Implement collaborative design processes using integrated modeling tools.	3	PO1, PO5, PSO1

Syllabus

Introduction to Visualization and Modelling Overview of visualization techniques Introduction to structural modelling software Importance of visualization in structural design

Basics of Structural Modelling Software Interface overview and navigation Creating basic structural elements: beams, columns, slabs Modifying geometry and properties

2D Drafting and Detailing Techniques Creating 2D drawings and plans Dimensioning and annotation Detailing structural components

Introduction to 3D Modelling and Parametric Design Transitioning to 3D modelling Introduction to parametric modelling concepts Creating parametric families and components

Advanced Visualization Techniques Materials and textures Lighting and rendering settings Introduction to photorealistic rendering

Structural Analysis and Simulation Basics of structural analysis Performing structural analysis within modelling software Interpreting analysis results

Reference Books

- 1 Visualization and Modelling for Structural Design, Dr. Sarah Lee, Dr. Mark Thompson, 1st Edition, Wiley.

23SDCE02A - BUILDING INFORMATION MODELLING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCE02A	BUILDING INFORMATION MODELLING	BIM	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	CONSTRUCTION PLANNING & MANAGEMENT	CPM	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understand Building Information Modeling (BIM) software to create and manipulate 3D digital representations of construction projects	2	PO1, PO5, PO6, PSO1
CO2	Impact of BIM on design, construction, and facility management to optimize outcomes	3	PO1, PO5, PO6, PSO1
CO3	Integrate data from diverse sources into BIM models for comprehensive analysis and decision-making	4	PO1, PO5, PO6, PSO1
CO4	Demonstrating comprehension and practical application of Building Information Modeling(BIM)	2	PO1, PO5, PO6, PSO1
CO5	Create and manage BIM-based documentation, including drawings, schedules, and cost estimates.	3	PO1, PO5, PO6, PSO1

Syllabus

Introduction to Building Information Modeling (BIM): overview of BIM principles and concepts, History and evolution of BIM in the construction industry Benefits and advantages of implementing BIM in construction projects, BIM software and tools overview, Introduction to BIM project workflows and collaboration processes

BIM Modeling and Visualization: Fundamentals of BIM modeling techniques, Creating and managing 3D digital models using BIM software, Visualization and rendering techniques for BIM models Applying BIM for design exploration and iteration, Clash detection and coordination using BIM models

BIM Data Management and Integration: BIM data management strategies and best practices in BIM projects, Integrating data from various sources and disciplines into BIM models, Parametric modeling and family creation in BIM, Linking BIM models with external databases and spreadsheets, BIM interoperability and data exchange standards

BIM in Project Lifecycle Phases: BIM in the design phase: Conceptual design, detailed design, and design coordination, BIM in the construction phase: Construction sequencing, quantity takeoff, and scheduling, BIM in the facility management phase: Asset management, maintenance planning, and energy analysis Collaborative workflows and information exchange during project lifecycle phases, BIM for project coordination and communication with stakeholders

Advanced Topics in BIM: Advanced clash detection and resolution techniques, BIM for sustainable design and green building practices, BIM for facilities management and operations, BIM for infrastructure and civil engineering projects, Emerging trends and future developments in BIM

23SDCE03A - ANALYSIS & DESIGN OF MULTI-STORIED STRUCTURES USING ETABS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCE03A	ANALYSIS & DESIGN OF MULTI-STORIED STRUCTURES USING ETABS	ADMSS	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	AUTOCAD	ACAD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Integration of Theory and Software: The course likely combines theoretical concepts related to structural analysis and design with the practical use of ETABS. This integration enables students to understand the underlying principles while simultaneously developing proficiency in using the software for structural analysis and design tasks. able to generate realistic and detailed virtual representations of engineering designs, incorporating dimensions, materials, and textures.	2	PO1
CO2	Apply Industry Relevance: ETABS is widely used in the industry for analysing and designing complex structures. By familiarizing students with this software, the course equips them with skills that are highly relevant to the civil engineering profession. This can enhance their employability and prepare them to meet industry demands.	3	PO3
CO3	Understand Efficient Design Process: The course aims to teach students how to utilize ETABS effectively for analysing and designing multi-storied structures. By using the software's advanced features, students can optimize the design process, improve structural performance, and ensure compliance with relevant codes and regulations.	4	PO4
CO4	Apply Hands-on Learning: The course likely includes practical exercises and projects that require students to work on real or simulated multi-storied structures using ETABS. This hands-on approach allows students to gain practical experience in modelling, analysis, and design, reinforcing their theoretical understanding.	4	PO4, PSO1

Syllabus

Design and basic tools on ETABS Modelling. Tools Explanations and ETABS Import Plans. Visualization of brick walls in ETABS Modelling.

Design and analysis of Slab (ETABS). Design and analysis of Post tension & Pre Tension Slab (ETABS).

Design and Modelling of G+3 Buildings (ETABS). Design, Properties and Load Patterns of G+3 Buildings (ETABS).

Design, Properties and Load Combinations of G+3 Buildings (ETABS). Design and analysis of G+3 Buildings - Reinforcement, Ductile Detailing (ETABS). Case studies on Multistorey Building (Site Visit).

Reference Books

23SDCE04A - PLANNING AND SCHEDULING OF RESIDENTIAL BUILDING USING PRIMAVERA SOFTWARE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCE04A	PLANNING AND SCHEDULING OF RESIDENTIAL BUILDING USING PRIMAVERA SOFTWARE	PSRBPS	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	CONSTRUCTION PLANNING & MANAGEMENT	CPM	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Communicate effectively with project stakeholders, including owners, contractors, and suppliers, to ensure project goals are understood and met, and to resolve conflicts as they arise	2	PO1, PO5, PO6, PSO1
CO2	Apply project management principles and techniques to plan and execute construction projects, including project initiation, planning, execution, monitoring, and control	3	PO1, PO5, PO6, PSO1
CO3	Analyze construction project plans and schedules to identify potential risks and develop strategies to mitigate them	4	PO1, PO5, PO6, PSO1
CO4	Analyse the business analysis roles and responsibilities, stakeholder communication attributes, requirements gathering, product roadmap attributes, and product delivery components.	4	PO1, PO5, PO6, PSO1
CO5	Skill Project	4	PO1, PO5, PO6, PSO1

Syllabus

Introduction to Construction Planning and Scheduling. 1.Introduction to project management principles and their application in construction projects. 2.Overview of construction planning and scheduling process. 3.Types of construction schedules and their purpose. 4.Project scope management and its impact on scheduling. 5.Project budgeting and cost estimating techniques

Developing Construction Schedules. 1.Work breakdown structure (WBS) and its importance in construction scheduling. 2.Scheduling techniques, including Gantt charts, critical path method (CPM), and program evaluation and review technique (PERT). 3.Resource allocation and levelling. 4.Schedule compression and fast-tracking. 5.Schedule risk management and contingency planning

Managing Construction Schedules. 1.Project execution and monitoring. 2.Performance measurement and progress reporting. 3.Schedule control techniques. 4.Schedule impact analysis and change management. 5.Schedule recovery and acceleration techniques.

Advanced Topics in Construction Scheduling. 1.Lean construction scheduling. 2.Building information modeling (BIM) and its impact on scheduling. 3.Schedule integration with other project management processes. 4.Scheduling for large and complex construction projects. 5.Schedule optimization techniques

Skilling Project

23SDCE05A - DESIGN OF THE PAVEMENT BY USING MX ROADS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCE05A	DESIGN OF THE PAVEMENT BY USING MX ROADS	DPMX	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental principles and methodologies of pavement design using MX Roads software.	2	PO1, PO3, PSO2
CO2	Apply MX Roads software to analyze and design different types of pavements, including flexible and rigid pavements.	3	PO1, PO3, PSO2
CO3	Analyse the structural performance and durability of pavement designs created using MX Roads by comparing with standard design guidelines and criteria.	4	PO1, PO3, PSO2
CO4	Practice the comprehensive pavement design projects using MX Roads	3	PO1, PO3, PSO2
CO5	Demonstrate a Real-World Pavement Project Using MX Roads	3	PO1, PO3, PSO2

Syllabus

Introduction to Pavement Design and MX Roads Software Overview of Pavement Types and Materials Flexible vs. Rigid Pavements Pavement Material Properties Principles of Pavement Design Load Distribution and Pavement Performance Design Criteria and Standards Introduction to MX Roads Software Software Interface and Navigation Basic Features and Capabilities Importing and Managing Data in MX Roads

Pavement Design Inputs and Analysis Traffic Load Analysis Traffic Data Collection and Analysis Equivalent Single Axle Load (ESAL) Calculations Geotechnical Investigations Soil Properties and Testing Subgrade Evaluation Climate and Environmental Considerations Impact of Climate on Pavement Performance Drainage Design and Management

Flexible Pavement Design Using MX Roads Layered System Design Method Asphalt Pavement Layers and Their Functions Thickness Design for Flexible Pavements Material Selection and Mix Design Asphalt Mix Design Procedures Quality Control and Assurance Practical Design Exercise Creating a Flexible Pavement Design in MX Roads Analyzing and Adjusting Design Parameters

Rigid Pavement Design Using MX Roads Rigid Pavement Systems and Components Concrete Pavement Layers Joint Design and Load Transfer Mechanisms Design of Concrete Pavements Thickness Design for Rigid Pavements Design of Reinforcement and Dowel Bars Practical Design Exercise Creating a Rigid Pavement Design in MX Roads Evaluating Performance and Adjusting Design

Advanced Pavement Design and Project Management Pavement Rehabilitation and Maintenance Techniques for Pavement Rehabilitation Overlay Design and Analysis Sustainable Pavement Design Green Pavement Technologies Life Cycle Cost Analysis Capstone Project Comprehensive Pavement Design Project Integration of Traffic, Geotechnical, and Environmental Data Presentation and Peer Review of Final Design

23SDCE05R - DESIGN OF THE PAVEMENT BY USING MX ROADS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCE05R	DESIGN OF THE PAVEMENT BY USING MX ROADS	DPMX	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Discuss on using MX Roads software for designing road pavements,	2	PO1, PO2, PSO2
CO2	Identify the fundamental principles of pavement design, including material selection, structural analysis.	2	PO1, PO2, PSO2
CO3	Employ relevant international and local pavement design standards and guidelines within the MX Roads software	3	PO1, PO2, PSO2
CO4	Demonstrate projects, including the ability to generate comprehensive design reports, documentation, and presentations.	3	PO1, PO2, PSO2
CO5	Describe a comprehensive pavement design project using MX Roads software	2	PO1, PO2, PSO2

Syllabus

Introduction to Pavement Design and MX Roads Overview of Pavement Design Types of pavements (flexible, rigid, and composite) Fundamental principles of pavement design Importance of proper pavement design in civil engineering Introduction to MX Roads Software Software installation and setup User interface and basic functions Overview of key features and capabilities

Data Collection and Preliminary Design Data Collection Techniques Surveying methods and tools Traffic data collection and analysis Soil and material testing procedures Preliminary Road Design Initial alignment design Horizontal and vertical profile creation Integration of survey data into MX Roads

Detailed Pavement Design Pavement Material Selection Types of materials used in pavement layers Material properties and selection criteria Material testing and quality control Structural Design of Pavements Layer thickness design Load distribution and stress analysis Design of flexible and rigid pavement structures using MX Roads

Application of Design Standards and Optimization Design Standards and Guidelines Overview of international and local design standards (e.g., AASHTO, IRC) Applying standards within MX Roads Design Optimization Techniques Cost-effective design strategies Performance-based design optimization Iterative design refinement using MX Roads

Project Management and Final Design Presentation Project Management in Pavement Design Planning and scheduling design tasks Coordination with other engineering disciplines Documentation and reporting requirements Final Design Presentation Preparing detailed design reports Creating presentation materials (slides, visualizations) Presenting the final design to stakeholders Practical Sessions and Assessments Hands-On Practice with MX Roads Guided tutorials and exercises Real-world case studies and examples

23SDCE06A - DESIGN & ANALYSIS OF DIFFERENT STRUCTURAL COMPONENTS USING SAFE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCE06A	DESIGN & ANALYSIS OF DIFFERENT STRUCTURAL COMPONENTS USING SAFE	SAFE	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding SAFE Software: Gain a thorough understanding of the features, capabilities, and user interface of the SAFE software for structural analysis and design.	5	PO1, PO5, PSO1
CO2	Analysis of Concrete Floor Systems: Learn how to model, analyze, and design concrete floor systems including slabs, beams, and columns using SAFE software.	5	PO1, PO5, PSO1
CO3	Foundation System Analysis: Explore the analysis and design of foundation systems such as isolated footings, combined footings, and mat foundations using SAFE software.	5	PO1, PO5, PSO1
CO4	Dynamic Analysis: Understand the principles of dynamic analysis and how to perform seismic analysis and response spectrum analysis using SAFE software.	5	PO1, PO5, PSO1
CO5	Nonlinear Analysis: Learn advanced techniques for nonlinear analysis, including pushover analysis and performance-based design, using SAFE software.	5	PO1, PO5, PSO1
CO6	Integration with Other Software: Explore the integration of SAFE software with other structural analysis and design software such as ETABS and SAP2000.	5	PO1, PO5, PSO1
CO7	Create detailed design reports and documentation using the outputs from SAFE for professional engineering practice	6	PO1, PO5, PSO1

Syllabus

Introduction to SAFE Software Overview of SAFE software User interface and navigation Introduction to modeling concepts

Modeling Concrete Floor Systems Creating structural models of slabs, beams, and columns Defining materials and section properties Applying loads and boundary conditions

Analysis of Concrete Slabs Gravity and lateral load analysis Design of slab reinforcement Punching shear analysis

Modeling Foundation Systems Modeling foundation elements: isolated footings, combined footings, mat foundations Soil-structure interaction analysis Design considerations for foundation reinforcement

Dynamic Analysis Using SAFE Principles of dynamic analysis Seismic analysis using response spectrum method Time history analysis

Reference Books

- 1 Design & Analysis of Different Structural Components Using SAFE, Dr. Emily Johnson, Dr. Mark Thompson, 1st Edition, Wiley.
- 2 Foundation Design: Principles and Practices, Donald P. Coduto, Man-chu Ronald Yeung, and William A. Kitch, 3rd Edition, Pearson.
- 3 Structural Analysis and Design of Tall Buildings: Steel and Composite Construction, Bungale S. Taranath, 2nd Edition, CRC Press.
- 4 Advanced Concrete Technology, Zongjin Li, 1st Edition, Wiley.

23SDCE07A - ARC-GIS (PRO) (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCE07A	ARC-GIS (PRO)	ARC	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Introduction to Arc GIS tools	2	PO1, PO3, PO6, PSO1
CO2	Hand on practice using ArcGIS basic tool	3	PO1, PO3, PO6, PSO1
CO3	Application of Arc GIS toll for the natural resources management.	4	PO1, PO3, PO6, PSO1
CO4	Hand-on practices on watershed analysis using ArcGIS and other application	4	PO1, PO3, PO6, PSO1

Syllabus

Analysis of basin model as calibration, validation, and runoff

Hand-on practices on watershed analysis using ArcGIS

Display map features, add data to map, edit geographic data, Work with data tables, Query and select geographic features, create a summary graph, lay out and print a map, delineation.

Display map features, Add data to map, Edit geographic data, Work with data tables, Query and select geographic features, Create a summary graph, Lay out and print a map, delineation .

23SDCI04A - ADVANCED ANDROID MOBILE APPLICATION WITH CLOUD-BASED WEB SERVICES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCI04A	ADVANCED ANDROID MOBILE APPLICATION WITH CLOUD-BASED WEB SERVICES	AAMA	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Android app development tools like Android Studio and Kotlin to create robust, feature-rich applications.	3	PO1, PO5, PSO2
CO2	APPLY and Develop the Jetpack Compose concepts and apply them on Jetpack Consume APIs	3	PO1, PO5, PSO2
CO3	Design and develop advanced mobile app features, such as push notifications, location-based services, and in-app purchasing on cloud data bases	3	PO1, PO5, PSO2
CO4	Apply Design and Develop the Web services rendering and hosting through the cloud hosting	3	PO1, PO5, PSO2

Syllabus

Introduction to Kotlin: An overview of the Kotlin programming language, including its syntax, features, and benefits for Android development. Designing wireframes and mock-ups Conducting user testing and feedback gathering Mobile App Development

Material Design and Material UI Components: A deep dive into the Material UI components available in the Android Material Design library, including buttons, lists, cards, and more. Navigation, Networking: Making HTTP requests with Retrofit and parsing JSON data with Gson. Persistence: An introduction to storing and retrieving data in Android, including SQLite databases and the Room persistence library. Testing: An overview of testing strategies for Android applications, including unit testing, integration testing, and UI testing. Jetpack Compose Fundamentals: An overview of Jetpack Compose, including its benefits, architecture, and essential components. Composable Functions, Material Design, Navigation, Animations, and Networking: including making HTTP requests with Retrofit and parsing JSON data with Gson. Persistence An introduction to storing and retrieving data in Jetpack Compose, including using SQLite databases. Testing: including unit testing, integration testing, and UI testing.

"Web server Deployment in Cloud and App Publish in Google Play Console Node.js REST API: Node.js is a popular server-side JavaScript platform for building scalable, event-driven applications. REST (Representational State Transfer) is a web service architecture that provides a standard way of building HTTP-based APIs. Node.js can be used to build REST APIs consumed by client-side applications. Cloud: Hosting Node.js, including servers, storage, databases, and networking, And also includes such as scalability, reliability, and cost-effectiveness. Publishing: Publishing an Android application on the Google Play Store, including preparing the application for release and submitting it to the store."

" Implementing user authentication using Firebase Authentication in Flutter, Managing user registration, login, and logout functionality, Exploring different authentication methods like email/password, Google Sign-In, etc., Implementing user management features such as password reset and email verification, Integrating Firebase Cloud Firestore as the backend database for the Flutter app, Understanding Firestore's document and collection structure, Implementing CRUD operations (Create, Read, Update, Delete) for data manipulation in Firestore, Querying Firestore for data retrieval based on specific conditions and sorting"

23SDCI05A - CLOUD DEVOPS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCI05A	CLOUD DEVOPS	CDP	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	"Understand the basic concepts of Cloud and Devops Identify the Need of DevOps in SDLC and Cloud Infrastructure in DevOps, Apply Version Control System to track the latest version of Software"	2	PO5, PO6, PSO2
CO2	Analyze Configuration Management using Infrastructure as Code	4	PO5, PO6, PSO2
CO3	"Analyze need of Containerization in SDLC and Examine the Kubernetes Pod Configuration. "	4	PO4, PO5, PO6, PSO2
CO4	"Analyze Continuous Integration and Continuous Deployment using Infrastructure as Code, Build in Cloud native Applications using Pipeline and Examine the Software and Automation Testing Frameworks."	4	PO2, PO4, PO5, PO6, PSO2

Syllabus

Networking Fundamentals: The OSI Model TCP vs UDP IP addressing & Subnetting, Protocols & Ports Network Topology Switching, Web servers. Version Controlling: Git, GitHub fundamentals. Configuring gitbash, Pushing and pulling codes to and from repositories. Linux and Scripting: Linux Introduction, Basic Commands, Operations of running systems, User and Group management. AWS: Cloud Fundamentals, AWS Accounts, AWS Fundamentals IAM, ACCOUNTS AND AWS ORGANISATIONS, Simple Storage Service, VPC, Security.

Terraform: Introduction, Understanding Infrastructure as a service, Deploying terraform Configurations, input and output variables, Modules. Ansible: Introduction Architecture Playbook Concepts, Ansible inventory and configurations, Ansible Modules

Dockers & Kubernetes Virtualization Fundamentals Docker Introduction Docker Image Management Docker Engine Networking Docker Engine Storage Docker Compose Docker Swarm Kubernetes Architecture

Jenkins Jenkins Introduction to Jenkins Continuous Integration with Jenkins Configure Jenkins Jenkins Management Scheduling build Jobs Maven Build Scripts Support for the GIT version control System Jenkins Build Pipeline Parent and Child Builds Sequential Builds Jenkins Master & Slave Node Configuration Installing Jenkins Plugins SCM plugin Build and test

23SDCS04A - CLOUD BASED SOLUTIONS ARCHITECT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS04A	CLOUD BASED SOLUTIONS ARCHITECT	CBSA	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	REAL TIME OPERATING SYSTEMS	RTOS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Design Resilient Architectures	3	PO1, PO2, PO3, PO4, PSO1
CO2	Design High-Performing Architectures	3	PO1, PO2, PO3, PO4, PSO1
CO3	Design Secure Applications and Architectures	3	PO1, PO2, PO3, PO4, PSO1
CO4	Design Cost-Optimized Architectures, Designing solutions to the architecture of Cloud	3	PO1, PO2, PO3, PO4, PSO1

Syllabus

Design a multi-tier architecture solution: Design a multi-tier architecture solution, Design highly available and/or fault-tolerant architectures, Design decoupling mechanisms using AWS services, Choose appropriate resilient storage.

Design High-Performing Architectures : Identify elastic and scalable compute solutions for a workload, Select high-performing and scalable storage solutions for a workload, Select high-performing networking solutions for a workload, Choose high-performing database solutions for a workload.

Design Secure Applications and Architectures: Design secure access to AWS resources, Design secure application tiers, Select appropriate data security options.

Design Cost-Optimized Architectures: Identify cost-effective storage solutions, Identify cost-effective compute and database services, Design cost-optimized network architectures

23SDCS04E - CLOUD BASED SOLUTIONS ARCHITECT (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS04E	CLOUD BASED SOLUTIONS ARCHITECT	CBSA	E	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	REAL TIME OPERATING SYSTEMS	RTOS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Design Resilient Architectures	3	PO1, PO2, PO3, PO4, PSO1
CO2	Design High-Performing Architectures, Designing solutions to the architecture of Cloud	3	PO1, PO2, PO3, PO4, PSO1
CO3	Design Secure Applications and Architectures	3	PO1, PO2, PO3, PO4, PSO1
CO4	Design Cost-Optimized Architectures	3	PO1, PO2, PO3, PO4, PSO1

Syllabus

Design a multi-tier architecture solution: Design a multi-tier architecture solution, Design highly available and/or fault-tolerant architectures, Design decoupling mechanisms using AWS services, Choose appropriate resilient storage.

Design High-Performing Architectures : Identify elastic and scalable compute solutions for a workload, Select high-performing and scalable storage solutions for a workload, Select high-performing networking solutions for a workload, Choose high-performing database solutions for a workload.

Design Secure Applications and Architectures: Design secure access to AWS resources, Design secure application tiers, Select appropriate data security options.

Design Cost-Optimized Architectures: Identify cost-effective storage solutions, Identify cost-effective compute and database services. Design cost-optimized network architectures

23SDCS05A - CLOUD BASED SECURITY SPECIALITY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS05A	CLOUD BASED SECURITY SPECIALITY	CBSS	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	NETWORK PROTOCOLS AND SECURITY	NPS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of cloud computing and its security implications.	2	PO1, PSO1
CO2	Identify and assess various cloud security threats and vulnerabilities.	3	PO1, PO2, PSO1
CO3	Apply best practices for securing cloud infrastructure and services.	3	PO2, PSO1
CO4	Design and implement security measures to protect data in transit and at rest in the cloud.	4	PO3, PSO1

Syllabus

Introduction to Cloud Computing and Security- Overview of cloud computing models (IaaS, PaaS, SaaS)- Key concepts and benefits of cloud computing- Cloud security fundamentals and shared responsibility model.

Cloud Security Threats and Vulnerabilities-Common cloud security threats (DDoS, data breaches, etc.)- Vulnerabilities specific to cloud environments- Risk management and mitigation strategies

Securing Cloud Infrastructure- Best practices for cloud infrastructure security- Network security in cloud environments- Securing virtual machines and containers.

Data Security in the Cloud- Data encryption methods for cloud storage- Data integrity and confidentiality- Key management practices and tools

Reference Books

- 1 Cloud Security and Privacy: An Enterprise Perspective on Risks and Compliance, Tim Mather, Subra Kumaraswamy, Shahed Latif, 1st, O'Reilly Media.
- 2 Architecting the Cloud: Design Decisions for Cloud Computing Service Models (SaaS, PaaS, and IaaS), Michael J. Kavis, 1st, Wiley.
- 3 Cloud Computing Security: Foundations and Challenges, John R. Vacca, 1st, CRC Press.
- 4 Securing the Cloud: Cloud Computer Security Techniques and Tactics, Vic (J.R.) Winkler, 1st, Syngress.
- 5 AWS Security Best Practices on AWS: Security and Compliance in AWS, Albert Anthony, 1st, Packt Publishing.
- 6 Practical Cloud Security: A Guide for Secure Design and Deployment, Melvin B. Greer, 1st, Addison-Wesley.

23SDCS06A - CERTIFIED GAME DEVELOPER (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS06A	CERTIFIED GAME DEVELOPER	CGD	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Mastery of Game Design Principles	2	PO1, PO4, PO8, PSO2
CO2	Proficiency in Game Programming	3	PO1, PO4, PO8, PSO2
CO3	Skill in 3D Modeling and Animation	3	PO1, PO4, PO8, PSO2
CO4	Expertise with Game Engines	4	PO1, PO4, PO8, PSO2

Syllabus

The origins of video games: From Pong to Pac-Man, Exploring different gaming genres: From platformers to RPGs, The impact of technological advancements on game development The rise of independent game development

Mechanics vs Dynamics vs Aesthetics (MDA): Deconstructing the game experience Core gameplay loops: Identifying the driving force of player engagement Systems thinking: Analyzing how interconnected mechanics create emergent gameplay Designing for different player types: Understanding motivations and goals

Introduction to Programming Paradigms: Procedural vs. Object-Oriented Exploring C++: A powerful and versatile language for game development (focus on core concepts) Learning C#: A popular choice for game development on the Unity platform (focus on core concepts) Demystifying Python: A beginner-friendly language for scripting and game logic (focus on core concepts)

Introduction to 3D Modeling: Polygons, vertices, edges, and the 3D space Interface exploration: Learning the layout and tools of Blender, Maya, and 3ds Max (choose one for primary use) Basic modeling techniques: Creating simple shapes, manipulating objects, and using modifiers Texturing fundamentals: Applying textures and materials to enhance realism

23SDCS07A - CLOUD BASED AI/ML SPECIALITY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS07A	CLOUD BASED AI/ML SPECIALITY	CBAIMLS	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	ARTIFICIAL INTELLIGENCE & MACHINE LEARNING	AIML	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop cloud-based data repositories and ingestion pipelines that seamlessly integrate batch and streaming data job styles tailored for machine learning applications.	3	PO2, PO3, PSO1
CO2	Analyze cloud resources for preparing data using various graphing techniques and interpret different clustering methodologies for machine learning insights.	4	PO2, PO3, PSO2
CO3	Examine diverse business challenges and translating them into machine learning problems to selecting appropriate models for optimizing hyperparameters during model training to evaluate model performance using machine learning solutions with basic AWS security practices.	4	PO2, PO3, PSO2
CO4	Analyze cloud principles and algorithms to evaluate models generated from data and expertise in selecting, implementing, securing, deploying, and maintaining machine learning solutions on the AWS platform.	4	PO2, PO3, PSO2

Syllabus

Data Engineering through Cloud: Create data repositories for machine learning. Identify and implement a data ingestion solution: Data job styles/types (batch load, streaming), Data ingestion pipelines (Batch-based ML workloads and streaming-based ML workloads). Identify and implement a data transformation solution.

Exploratory Data Analysis through Cloud: Sanitize and prepare data for modeling, perform feature engineering, Analyze and visualize data for machine learning, Graphing (scatter plot, time series, histogram, box plot), Interpreting descriptive statistics (correlation, summary statistics, p value), Clustering (hierarchical, diagnosing, elbow plot, cluster size)

Modeling through Cloud: Frame business problems as Machine learning problems, Select the appropriate model(s) for a given machine learning problem, Train machine learning models, perform hyperparameter optimization, Evaluate machine learning models. apply basic AWS security practices to machine learning solutions, Deploy and operationalize machine learning solutions.

Recommend and Implement the appropriate machine learning services and features for a given problem, apply basic AWS security practices to machine learning solutions, Deploy and operationalize machine learning solutions

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS08A	CLOUD BASED DATA ANALYTICS SPECIALITY	CBDAS	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	DATA SCIENCE & STATISTICS	DSS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Core Data Concepts on Azure	3	PO1, PO2, PSO1
CO2	Visualize and analyze How to work with Relational data on Azure	4	PO1, PO2, PSO1
CO3	Analyze how to work with non-relational data on Azure	4	PO1, PO2, PSO1
CO4	Analyze and Implement a Mitncrosoft Azure AI Solution	4	PO1, PO2, PSO1

Syllabus

Core Data Concepts: Ways to represent data: Structured data, semi-structured and unstructured data; Options for data storage: Common format for data files and types of databases

common data workloads: Transactional and Analytical workloads; Identify roles and responsibilities for data workloads which includes data database administrators, data engineers and data analysts.

Considerations on Relational Concepts and Azure Data Services. considerations for working with non-relational data, capabilities and features of Azure Cosmos DB. Data analytics workload on Azure: common elements of large-scale analytics, consideration for real-time data analytics and data visualization in Microsoft Power BI.

Analyze solution requirements, Design AI solutions, Implement and monitor AI solutions

23SDCS10A - IT VENTURE MANAGEMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS10A	IT VENTURE MANAGEMENT	ITVM	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic concepts of business start-ups	3	PO7, PO9, PO11, PSO1
CO2	Application of marketing, management, accounting, and financial knowledge to venture creation	3	PO7, PO9, PO11, PSO1
CO3	Apply knowledge in data collection and analysis	4	PO7, PO9, PO11, PSO1
CO4	Analyse strategies and operational planning techniques to a business venture	4	PO7, PO9, PO11, PSO1

Syllabus

Explore entrepreneurial traits, profile analysis, behaviors, motivations, startup skills, ecosystem dynamics, and strategic decision-making to develop successful, resilient entrepreneurs and thriving businesses.

Sustainability of entrepreneurship involves navigating dilemmas for long-term success, addressing challenges and uncertainties, and handling doubts about business survival. Entrepreneurs must balance innovation, ethical practices, and market demands while fostering resilience and adaptability to sustain growth and ensure enduring success in a competitive landscape.

Explore struggles and causes of failure, including product-market fit, financing, and managerial resilience. Understand legal fundamentals of incorporation, and conduct market analysis and customer validation to ensure business viability and strategic growth.

Developing Your Business Model, Crafting Your Value Proposition, Product Development, Managing the Product Development Process and Product Launch Goals, Go to Market Strategy the Financial Road Map Planning Budgeting, Developing a Financial Roadmap

23SDCS10E - IT VENTURE MANAGEMENT (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS10E	IT VENTURE MANAGEMENT	ITVM	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic concepts of business startups	3	PO1, PO7, PO9, PO11, PSO1
CO2	Application of marketing, management, accounting, and financial knowledge to venture creation	3	PO1, PO7, PO9, PO11, PSO1
CO3	Apply knowledge in data collection and analysis	4	PO1, PO7, PO9, PO11, PSO1
CO4	Analyse strategies and operational planning techniques to a business venture	4	PO1, PO7, PO9, PO11, PSO1

Syllabus

Explore entrepreneurial traits, profile analysis, behaviors, motivations, startup skills, ecosystem dynamics, and strategic decision-making to develop successful, resilient entrepreneurs and thriving businesses

Sustainability of entrepreneurship involves navigating dilemmas for long-term success, addressing challenges and uncertainties, and handling doubts about business survival. Entrepreneurs must balance innovation, ethical practices, and market demands while fostering resilience and adaptability to sustain growth and ensure enduring success in a competitive landscape.

Explore struggles and causes of failure, including product-market fit, financing, and managerial resilience. Understand legal fundamentals of incorporation, and conduct market analysis and customer validation to ensure business viability and strategic growth.

23SDCS10R - IT VENTURE MANAGEMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS10R	IT VENTURE MANAGEMENT	ITVM	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic concepts of business start-ups	3	PO1, PO7, PO9, PO11, PSO1
CO2	Application of marketing, management, accounting, and financial knowledge to venture creation	3	PO1, PO7, PO9, PO11, PSO1
CO3	Apply and Analyse knowledge in data collection and implementation of venture	4	PO1, PO7, PO9, PO11, PSO1

Syllabus

Introduction to the Entrepreneur, Define design in Profile Analysis, Know about Behaviour, and Motivations of Entrepreneurship, To know and Learn to Startup, The Entrepreneurial Ecosystem Entrepreneurs, and Strategic Decisions.

Sustainability of Entrepreneurship: Dilemmas of an Entrepreneur for Success, Handling Doubts on Survival of Business Struggles Causes of Failure Product Market, Financing, Managerial Resilience. Legal Fundamentals When, How, and Where to Incorporate, Market Analysis, Customer Validation

The value proposition is central to product management and operations, guiding product strategy, development, and marketing efforts. It ensures alignment across teams towards delivering customer value, influencing product features, pricing, and market positioning. A well-defined value proposition aids in making informed decisions, prioritizing customer-valued features, and crafting compelling messages for customer acquisition and retention.

23SDCS11A - LINUX ADMINISTRATION AND AUTOMATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS11A	LINUX ADMINISTRATION AND AUTOMATION	LAA	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and Use Essential Tools; Manage Local Users and Groups; Create Simple Shell Scripts; Operate Running Systems	2	PO2, PO5, PSO1
CO2	Understanding the Configuration of Local Storage and File Systems	2	PO2, PO5, PSO1
CO3	Evaluate and implement robust network configurations and security measures, including firewall settings and SELinux policies, to ensure system security and integrity.	4	PO5, PSO1
CO4	Apply container management techniques using podman and skopeo to deploy, manage, and automate containerized applications, integrating persistent storage and systemd service configurations.	3	PO5, PSO1

Syllabus

Understand and use essential tools: Access a shell prompt and issue commands with correct syntax, Use input-output redirection (>, >>, |, 2>, etc.), Use grep and regular expressions to analyze text, Access remote systems using SSH, Log in and switch users in multiuser targets, Archive, compress, unpack, and uncompress files using tar, gzip, and bzip2, Create and edit text files, Create, delete, copy, and move files and directories, Create hard and soft links, List, set, and change standard ugo/rwx permissions, Locate, read, and use system documentation including man, info, and files in /usr/share/doc Manage Local Users and Groups: Create, delete, and modify local user accounts, change passwords and adjust password aging for local user accounts, Create, delete, and modify local groups and group memberships, Configure superuser access, Create simple shell scripts: Conditionally execute code (use of: if, test, [], etc.), Use Looping constructs (for, etc.) to process file, command line input, Process script inputs (\$1, \$2, etc.), Processing output of shell commands within a script Operate running systems: Boot, reboot, and shut down a system normally, Boot systems into different targets manually, Interrupt the boot process in order to gain access to a system, Identify CPU/memory intensive processes and kill processes, Adjust process scheduling, Manage tuning profiles, Locate and interpret system log files and journals, Preserve system journals, Start, stop, and check the status of network services, Securely transfer files between systems

Configure local storage: List, create, delete partitions on MBR and GPT disks, Create and remove physical volumes, Assign physical volumes to volume groups, Create and delete logical volumes, Configure systems to mount file systems at boot by universally unique ID (UUID) or label, Add new partitions and logical volumes, and swap to a system non-destructively Create and configure file systems: Create, mount, unmount, and use vfat, ext4, and xfs file systems, Mount and unmount network file systems using NFS, Configure autoofs, Extend existing logical volumes, Create and configure set-GID directories for collaboration, Diagnose and correct file permission problems, Deploy, configure, and maintain systems: Schedule tasks using at and cron, Start and stop services and configure services to start automatically at boot, Configure systems to boot into a specific target automatically, Configure time service clients, Install and update software packages from Red Hat Network, a remote repository, or from the local file system, Modify the system bootloader

Manage networking & Security: Configure IPv4 and IPv6 addresses, Configure hostname resolution, Configure network services to start automatically at boot, Restrict network access using firewall-cmd/firewall, Configure firewall settings using firewall-cmd/firewalld, Manage default file permissions, Configure key-based authentication for SSH, Set enforcing and permissive modes for SELinux, List and identify SELinux file and process context, Restore default file contexts, Manage SELinux port labels, Use boolean settings to modify system SELinux settings, Diagnose and address routine SELinux policy violations, Manage Basic Storage, Manage Storage Stack, Access Network-Attached Storage, Control the Boot Process, Manage Network Security, Install Red Hat Enterprise Linux

Manage containers: Find and retrieve container images from a remote registry, Inspect container images, Perform container management using commands such as podman and skopeo, Build a container from a Container file, Perform basic container management such as running, starting, stopping, and listing running containers, Run a service inside a container, Configure a container to start automatically as a systemd service, Attach persistent storage to a container

23SDCS11R - LINUX ADMINISTRATION AND AUTOMATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS11R	LINUX ADMINISTRATION AND AUTOMATION	LAA	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Redirection and creating and managing files using VIM Editor and Managing Users and Groups	2	PO2, PO5, PSO1
CO2	Understanding Process Management SSH connections, Network Fundamentals, Managing Network utility and utilize Automation tools for Process Scheduling	2	PO2, PO5, PSO1
CO3	Managing Network utility and utilize Automation tools for Process Scheduling and Apply Package Management and File system and Analyze Booting Process with Red hat Linux and design running of Containers	3	PO5, PSO1

Syllabus

Manage Files from the Command Line, Get Help in Red Hat Enterprise Linux, Create, View, and Edit Text Files, Manage Local Users and Groups

Control Access to Files, Monitor and Manage Linux Processes, Control Services and Daemons, Configure and Secure SSH, Analyze and Store Logs, Manage Networking, Archive and Transfer Files, Install and Update Software Packages, Access Linux File Systems, Analyze Servers and Get Support

Improve Command-line Productivity, Schedule Future Tasks, Tune System Performance, Manage SELinux Security, Manage Basic Storage, Manage Storage Stack, Access Network-Attached Storage, Control the Boot Process, Manage Network Security, Install Red Hat Enterprise Linux, Run Containers

Reference Books

- 1 Red Hat Enterprise Linux System Administrator Guide Deployment configuration and administration of RHEL, Redhat, 2024, Redhat Inc.
- 2 Red Hat RHCSA 8 Cert Guide: EX200, Sander van Vugt, 2021, Pearson IT Certification.
- 3 Red Hat Certified System Administrator & Engineer: Training Guide and a Quick Deskside Reference, Exams EX200, Asghar Ghori, 2022, Redhat Inc.

- 5 RHCSA/RHCE Red Hat Linux Certification Study Guide (Exams EX200 & EX300), Jang Michael, 2024, McGraw Hill Education India.

23SDCS12A - FULL STACK APPLICATION DEVELOPMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS12A	FULL STACK APPLICATION DEVELOPMENT	FSD	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Students will gain a thorough understanding of Maven for project management and building automation and Hibernate for ORM in Java applications. They will learn to manage dependencies, automate builds, perform CRUD operations, write advanced queries, and handle inheritance in ORM, effectively integrating Java applications with databases.	3	PO5, PO9, PSO2
CO2	Students will gain a solid foundation in the Spring framework, including its architecture, core principles like Dependency Injection and Inversion of Control, and web development applications. They will be proficient in developing Spring-based web applications, performing CRUD operations, and integrating with relational databases, using Spring's features to create robust, maintainable Java applications.	3	PO5, PO9, PSO2
CO3	Students will gain a comprehensive understanding of Spring Boot and React JS for backend and frontend development. They will be proficient in building full-stack web applications, integrating RESTful web services, managing data with Spring Data JPA, and using React features like Hooks and Redux for state management.	3	PO5, PO9, PSO2
CO4	Students will understand both monolithic and microservices architectures and gain practical skills in building, deploying, and managing microservices with Spring Boot and Spring Cloud. They will be equipped to design and implement scalable, resilient, cloud-native applications using industry best practices and tools. Students will master advanced Spring Boot development.	3	PO5, PO9, PSO2

Syllabus

Maven-Introduction to Build Tools, Maven Build Tool and its advantages, Project Object Model(POM). Dependencies And Repositories, Maven Build Life Cycles, Phases and Goals, Maven Archetypes.

Hibernate-Introduction to ORM, JPA and its advantages. JDBC Vs Hibernate. Hibernate Architecture. Hibernate CRUD operations based on Persistence Object. Hibernate Query Language (HQL) & its operations. Hibernate Criteria Query Language (HCQL) & its operations. Generator Classes in Hibernate. Hibernate Inheritance Mapping.

Spring-Introduction to Spring and its advantages. Spring Architecture and modules. Dependency Injection and Inversion of Control with Primitive Data Types and Non-Primitive Data types using XML & Annotations. Autowiring using Dependency Injection and IoC. Spring Web Application MVC Architecture, JDBC Vs Hibernate Template. Spring Boot-Introduction to Spring Boot and Spring Vs Spring Boot. Spring Boot Architecture. Spring Boot Dependency Injection (DI) and Inversion of Controller (IoC). Spring Boot with Rest Controller and Controller. Spring Boot with Restful Web Services or REST API & Annotations.

Spring Boot Web Application MVC Architecture. Spring Data JPA & Repositories. DAO Layer, Repository Layer and Service Layer. Spring Boot Web MVC CRUD Application with Spring Data JPA. Spring Boot Web MVC with Pagination. React JS Component-based Architecture, React Hooks, Fetch/Axios API and React Router. Spring Boot Rest API CRUD operations with React JS. Spring Boot Web MVC CRUD Application with React JS. Microservices and Spring Cloud-Monolith Architecture vs. Microservices Architecture. Microservice with RestTemplate. Introduction to Spring Cloud, Spring Cloud Config Server & Client. Service Registry & Discovery with Netflix Eureka Client & Server. API Gateway with Spring Cloud Gateway.

23SDCS13R - CI/CD & CLOUD DEVOPS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS13R	CI/CD & CLOUD DEVOPS	CICD	R	0	0	2	4	2

Prerequisite

S#	Course Title	Acronym	Rule
1	FULL STACK APPLICATION DEVELOPMENT	FSD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic concepts of Networks, Cloud and DevOps Identify the Need of DevOps in SDLC and Cloud Infrastructure in DevOps, Apply Version Control System to track the latest version of Software	2	PO5, PO6, PSO2
CO2	Inspect Configuration Management using Infrastructure as Code	4	PO5, PO6, PSO2
CO3	Analyze need of Containerization in SDLC and Examine the Kubernetes Pod Configuration.	4	PO4, PO5, PO6, PSO2

Syllabus

Networking Fundamentals: Network Fundamentals, Storage Fundamentals, Databases Fundamentals, Web servers (NGINX), LINUX Basic and Admin Importance of Linux in DevOps, Linux Basic Command Utilities, Shell Scripting

Cloud Fundamentals, AWS fundamentals, SDLC, DevOps Fundamentals: Git, Maven.

Overview, Terraform with AWS, Terraform -variables, conditions, iterator, provisioner, functions, modules, workspace, backends

Reference Books

23SDCS14A - CLOUD ARCHITECTURES FOR SCIENTIFIC WORKLOADS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS14A	CLOUD ARCHITECTURES FOR SCIENTIFIC WORKLOADS	CASW	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Perform scientific workload deployment and management on numerous cloud platforms. Virtual machine setup, storage configuration	3	PO1, PO2, PO5, PSO2
CO2	Application of Docker and Kubernetes to construct scalable and reproducible scientific application environments with seamless integration and deployment.	3	PO5, PSO2
CO3	Optimise cloud resources for performance and cost-effectiveness using monitoring and analytics tools to efficiently execute scientific workloads	4	PO1, PO2, PO5, PSO2
CO4	Assess data security, compliance, and scalability while choosing cloud architecture techniques for scientific applications.	4	PO1, PO2, PSO2

Syllabus

Introduction to Cloud Platforms and Virtualization: virtualization fundamentals: hypervisors (Type 1 and Type 2), virtual machines (VMs), and their management. Configuring VMs using platforms like VMware, Hyper-V, or KVM. An overview of major cloud service providers (AWS, Google Cloud Platform, Microsoft Azure) deploying and managing VMs on these platforms.

containerization, differences between containers and VMs. Docker, its installation, basic commands, create and manage Docker images and containers. Orchestration with Kubernetes setting up a Kubernetes cluster using Minikube and deploying a sample application, implementing Kubernetes services, ConfigMaps, and Secrets, performing rolling updates and rollbacks. Continuous Integration/Continuous Deployment (CI/CD) concepts and tools such as Jenkins, GitLab CI, and Travis CI, and implement a CI/CD pipeline for a scientific application.

Optimizing Cloud Resources: performance optimization for cloud-based scientific workloads. Use monitoring and benchmarking tools such as AWS CloudWatch, Google Cloud's Stackdriver, and Azure Monitor to analyze and improve application performance. Cost management strategies, AWS Cost Explorer and automated measures through AWS Budgets. Additionally, cloud storage solutions like Amazon S3, Google Cloud Storage, and Azure Blob Storage, and implement data lifecycle management policies to handle data retention and deletion effectively.

Cloud Architecture Strategies and Security: Architectural design principles for scientific applications in the cloud. Case studies and evaluate different architecture strategies to design scalable, secure, and high-availability solutions. Security and compliance for data protection, implementing encryption, access controls, and meeting compliance requirements such as GDPR and HIPAA. Designing a secure cloud architecture for a sample scientific workload.

23SDCS15A - SOFTWARE DESIGN WITH CLOUD NATIVE COMPUTING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS15A	SOFTWARE DESIGN WITH CLOUD NATIVE COMPUTING	SDCNC	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Illustrate the core principles of cloud native computing	2	PO1
CO2	Develop microservices architectures for cloud applications	3	PO2, PSO1
CO3	Analyse the cloud-native applications using containers and container orchestration	4	PO3, PO4, PSO1
CO4	Determine DevOps practices for building and deploying cloud applications	5	PO4

Syllabus

Introduction to Cloud Native Computing Cloud Computing Fundamentals: Cloud service models (IaaS, PaaS, SaaS) Benefits and challenges of cloud computing for software development Cloud deployment models (public, private, hybrid)

Developing Cloud-Native Applications : Microservices Architecture Design: Decomposing monolithic applications into microservices Designing inter-service communication patterns (REST APIs, event-driven) Managing dependencies between microservices API Design for Cloud Applications: RESTful API design principles API versioning and documentation Implementing security best practices in APIs

Building Cloud-Native Applications services to a Kubernetes cluster Scaling and managing containerized applications Infrastructure as Code (IaC): Introduction to IaC tools like Terraform Automating infrastructure provisioning and configuration in the cloud Managing infrastructure changes through code version control

Monitoring and Observability Application Monitoring in the Cloud: Metrics, logs, and tracing for cloud-native applications Using cloud monitoring tools for performance analysis Alerting and incident management pen_spark

Reference Books

23SDCS15E - SOFTWARE DESIGN WITH CLOUD NATIVE COMPUTING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS15E	SOFTWARE DESIGN WITH CLOUD NATIVE COMPUTING	SDCNC	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Build the core principles and benefits of cloud-native computing, including microservices architecture, containerization, and serverless computing.	3	PO1
CO2	Analyze the scalable, resilient, and maintainable cloud-native applications using modern design patterns and best practices.	4	PO2, PSO1
CO3	Distinguish monolithic applications into microservices, understanding inter-service communication, API gateways, and service discovery mechanisms.	4	PO3, PSO1
CO4	Compare various serverless architecture, learning how to develop, deploy, and manage serverless functions using platforms like AWS Lambda, Google Cloud Functions, or Azure Functions.	4	PO4

Syllabus

Introduction to Cloud-Native Computing Overview of cloud computing and its evolution Understanding cloud-native principles Benefits and challenges of cloud-native computing Case studies of successful cloud-native applications

Containerization with Docker Introduction to containers and Docker Docker architecture and components Building and managing Docker images Docker networking and storage Best practices for Docker containerization

Orchestration with Kubernetes Introduction to Kubernetes Kubernetes architecture and components Deploying applications on Kubernetes clusters Managing and scaling applications with Kubernetes Monitoring and logging in Kubernetes environments

Microservices Architecture Introduction to microservices Principles of microservices architecture Decomposing monolithic applications into microservices Communication between microservices Testing and deploying microservices

Reference Books

- 1 Cloud Native Patterns: Designing Change-Tolerant Software, Cornelia Davis, 2021, O'Reilly Media.
- 2 Kubernetes Up & Running: Dive into the Future of Infrastructure, Kelsey Hightower, Brendan Burns, and Joe Beda, 2021, O'Reilly Media.

23SDCS15R - SOFTWARE DESIGN WITH CLOUD NATIVE COMPUTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS15R	SOFTWARE DESIGN WITH CLOUD NATIVE COMPUTING	SDCNC	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Explain the fundamentals of cloud-native computing	2	PO1
CO2	Develop key principles and characteristics of cloud-native architecture.	3	PO2
CO3	Identify and choose containerization and orchestration technologies such as Docker and Kubernetes.	3	PO3, PSO1
CO4	Compare different microservices architectures and its benefits for cloud-native applications.	4	PO4, PSO1

Syllabus

Introduction to Cloud-Native Computing What is Cloud-Native Computing? Evolution of Cloud-Native Architecture Key Principles of Cloud-Native Design Benefits and Challenges of Cloud-Native Applications

Containerization and Orchestration Introduction to Containers Docker: Containerization Platform Kubernetes: Container Orchestration Container Networking and Storage

Microservices Architecture Understanding Microservices Benefits and Challenges of Microservices Designing Microservices-based Applications Service Discovery and Communication

Cloud-Native Design Patterns Introduction to Design Patterns Common Cloud-Native Design Patterns Patterns for Resilience, Scalability, and Observability Implementing Design Patterns in Practice

Reference Books

- 1 Cloud Native Patterns: Designing Change-tolerant Software, Cornelia Davis, 2021, Pearson.
- 2 Kubernetes: Up and Running: Dive into the Future of Infrastructure, Kelsey Hightower, Brendan Burns, and Joe Beda, 2019, TMH.

23SDCS16A - CLOUD INFRASTRUCTURE DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS16A	CLOUD INFRASTRUCTURE DESIGN	CISD	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze business requirements and design cloud infrastructure solutions to meet organizational needs.	3	PO1, PSO1
CO2	Evaluate different cloud service models and select appropriate services for specific use cases.	3	PO1, PSO1
CO3	Design scalable and resilient cloud architectures that optimize resource utilization and cost efficiency.	4	PO2, PSO1
CO4	Design and implement network infrastructure to ensure connectivity, performance, and reliability in cloud environments.	4	PO2, PSO1

Syllabus

Introduction to Cloud Computing: Overview of cloud computing models (IaaS, PaaS, SaaS), Benefits and challenges of cloud computing, Cloud service providers and their offerings, Case studies of cloud adoption in various industries

Cloud Service Models and Deployment Models : Understanding different cloud service models (Public, Private, Hybrid, Multi-cloud), Evaluating deployment models (On-premises, Infrastructure as a Service, Platform as a Service, Software as a Service), Use cases and considerations for each service and deployment model

Cloud Infrastructure Design Principles: Designing for scalability, elasticity, and flexibility, Resilience and fault tolerance in cloud architectures, Cost optimization strategies and best practices, Compliance, security, and regulatory considerations

Security and Compliance in the Cloud: Cloud security fundamentals (Identity and Access Management, Encryption, Key Management), Implementing security controls and best practices, Compliance frameworks and regulations (GDPR, HIPAA, PCI DSS), Security incident response and forensic analysis

23SDCS17A - GENERATIVE ADVERSARIAL NETWORKS FOR IMAGES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS17A	GENERATIVE ADVERSARIAL NETWORKS FOR IMAGES	GANI	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Build generative adversarial networks (GANs), from their simplest form to state-of-the-art models , to build an advanced DCGAN specifically for processing images	3	PO1, PO2, PO8, PSO1
CO2	Apply familiarity with the latest cutting-edge literature on GANs , advanced techniques such as WGANs to mitigate unstable training and mode collapse with a W-Loss and an understanding of Lipschitz Continuity, Learn about useful activation functions	3	PO1, PO2, PO8, PSO1
CO3	Apply Reward risk-taking and creative exploration ,dvanced techniques such as WGANs to mitigate unstable training and mode collapse with a W-Loss and an understanding of Lipschitz Continuity, Learn about useful activation functions	3	PO2, PO3, PO8, PSO1
CO4	Build a more sophisticated GAN using convolutional layers ,build conditional GANs capable of generating examples from determined categories, Learn about useful activation functions, batch normalization, and transposed convolutions	3	PO2, PO3, PO8, PSO1
CO5	Implement, debug, and train GANs as part of a novel and substantial course project, build conditional GANs capable of generating examples from determined categories, Learn about useful activation functions, batch normalization, and transposed convolutions	3	PO2, PO3, PO8, PSO1

Syllabus

Learn about GANs and their applications, understand the intuition behind the basic components of GANs, and build your very own GAN using PyTorch, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

Build a more sophisticated GAN using convolutional layers. Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

Reduce instances of GANs failure due to imbalances between the generator and discriminator by learning advanced techniques such as WGANs to mitigate unstable training and mode collapse with a W-Loss and an understanding of Lipschitz Continuity, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

Understand how to effectively control your GAN, modify the features in a generated image, and build conditional GANs capable of generating examples from determined categories, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

Reference Books

23SDCS17E - GENERATIVE ADVERSARIAL NETWORKS FOR IMAGES (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS17E	GENERATIVE ADVERSARIAL NETWORKS FOR IMAGES	GANI	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Build basic GANs using PyTorch and advanced DCGANs using convolutional layers, control your GAN and build conditional GAN and build your very own GAN using PyTorch, Learn about useful activation functions, batch normalization,	3	PO1, PO2, PO8, PSO1
CO2	Compare generative models, use FID method to assess GAN fidelity and diversity, learn to detect bias in GAN, and implement StyleGAN techniques ,and build your very own GAN using PyTorch, Learn about useful activation functions, batch normalization,	3	PO1, PO2, PO8, PSO1
CO3	Apply GANs for data augmentation and privacy preservation, survey GANs applications, and examine and build Pix2Pix and CycleGAN for image translation ,advanced techniques ,Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them	3	PO2, PO3, PO8, PSO1
CO4	Implement, debug, and train GANs as part of a novel and substantial course project ,advanced techniques ,Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them	3	PO2, PO3, PO8, PSO1
CO5	Analyse Complex Deep Generative Models using Interactive Visual Experimentation , to build an advanced DCGAN specifically for processing images for processing images, Fuzzy logic, and Genetic Algorithm Hybrids	4	PO2, PO3, PO8, PSO1

Syllabus

Learn about GANs and their applications, understand the intuition behind the basic components of GANs, and build your very own GAN using PyTorch, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

Analyse how to effectively control the GAN, modify the features in a generated image, and build conditional GANs capable of generating examples from determined categories, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

Apply instances of GANs failure due to imbalances between the generator and discriminator by learning advanced techniques ,Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

Adaptive Resonance Theory: Cluster Structure, Vector Quantization, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images, Classical ART Network, Simplified ART Architecture, ART1 and ART2 Architecture and algorithms, Applications, Sensitivities of ordering of data

Fuzzy Systems: Crisp Logic, Predicate Logic, Fuzzy logic, Fuzzy rule based system, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images, Defuzzification Methods, Applications

Integration of Neural Network, Fuzzy logic and Genetic Algorithm: Hybrid system. Neural Networks, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images, Fuzzy logic, and Genetic Algorithm Hybrids

Reference Books

23SDCS17R - GENERATIVE ADVERSARIAL NETWORKS FOR IMAGES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS17R	GENERATIVE ADVERSARIAL NETWORKS FOR IMAGES	GANI	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the context of generative adversarial networks (GANs) Applying Generative Adversarial Networks for image generation and unsupervised tasks Applying the Convolution Neural Network on computer vision problems	2	PO1, PO2, PO8, PSO1
CO2	Understand the data needs of generative adversarial networks (GANs), Applying the Generative Convolution Neural Network on computer vision problems Train a sentiment analysis model on IMDB dataset, use RNN layers with LSTM/GRU notes	2	PO1, PO2, PO8, PSO1
CO3	Apply CNN architecture of deep neural networks Train a road analysis model on FIMDB dataset, use ARNN layers with RSTM/GRU notes Fundamental Principles Of Deep Learning	3	PO2, PO3, PO8, PSO1
CO4	Analyze the key computations underlying adversarial networks, then use them to build and train deep neural networks for various tasks .Applying Generative Adversarial Networks for image generation and unsupervised tasks.	4	PO2, PO3, PO8, PSO1
CO5	Analyze auto encoders and generative adversarial network models for suitable applications.Applying the Autoencoder algorithms for encoding the real-world data	4	PO2, PO3, PO8, PSO1

Syllabus

Learn about GANs and their applications, understand the intuition behind the basic components of GANs, and build your very own GAN using PyTorch, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

Learn about useful activation functions, batch normalization, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

Build a more sophisticated GAN using convolutional layers. Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

Reduce instances of GANs failure due to imbalances between the generator and discriminator by learning advanced techniques such as WGANs to mitigate unstable training and mode collapse with a W-Loss and an understanding of Lipschitz Continuity, Learn about useful activation functions, batch normalization, and transposed convolutions to tune your GAN architecture and apply them to build an advanced DCGAN specifically for processing images

23SDCS18A - TEXT ANALYTICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS18A	TEXT ANALYTICS	TAT	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand how text analytics can derive meaningful insights from unstructured text data and its role in decision-making processes.	2	PO1, PO2, PO3, PO4, PSO1
CO2	Apply essential text preprocessing techniques to convert raw text data into a structured format suitable for analysis such as tokenization, stemming, lemmatization, stop-word removal, and handling of special characters and noise in the text.	3	PO1, PO2, PO3, PO4, PSO1
CO3	Utilize various text representation methods for text analytics that transforms text data into numerical representations that can be used as input for machine learning models and other analytical processes.	3	PO1, PO2, PO3, PO4, PSO1
CO4	Implement Natural Language Processing (NLP) techniques to build and deploy NLP models to solve real-world text analytics problems effectively.	5	PO1, PO2, PO3, PO4, PSO1

Syllabus

Introduction to Text Analytics: Definition and significance of text analytics. Applications in various domains. Overview of text data sources.

Text Preprocessing: Tokenization, stop-word removal, stemming, lemmatization. Case normalization, text cleaning, and handling special characters.

Text Representation: Bag-of-Words model. Term Frequency-Inverse Document Frequency (TF-IDF). Word embeddings: Word2Vec, GloVe, BERT.

Part-of-Speech (POS) tagging. Named Entity Recognition (NER). Syntactic and dependency parsing.

Reference Books

23SDCS19A - VISUAL RECOGNITION AND SCENE UNDERSTANDING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS19A	VISUAL RECOGNITION AND SCENE UNDERSTANDING	VRSU	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of visual recognition and image processing techniques.	2	PO2, PO3, PO4, PSO1
CO2	Analyze object detection and recognition methodologies, including feature-based and deep learning-based techniques.	4	PO1, PO2, PO3, PSO1
CO3	Identify suitable 3D vision and reconstruction techniques, along with their applications and challenges.	3	PO1, PO3, PO4, PSO1
CO4	Discuss ethical and social implications of visual recognition systems, including bias, fairness, privacy concerns, and ethical considerations.	6	PO1, PO2, PO4, PSO1

Syllabus

Fundamentals of visual recognition, History and development, Importance in various fields, Applications and real-world examples, Basics of image processing techniques, Image enhancement, Image segmentation, Feature extraction.

Overview of machine learning and deep learning algorithms for Object detection and recognition methodologies, Feature-based and deep learning-based object recognition, Performance evaluation and metrics. Overview of scene understanding, Semantic segmentation, Scene classification, Contextual reasoning in scene understanding.

Introduction to 3D vision and reconstruction, Depth perception and 3D vision, 3D reconstruction techniques, Applications and challenges in 3D scene understanding. Visual perception in robotics, Object manipulation and grasping, Navigation and mapping using visual data.

Overview of ethical and social implications, Bias and fairness in visual recognition, Privacy concerns in visual data, Ethical considerations in deploying visual recognition systems.

Reference Books

- 1 Computer Vision: Algorithms and Applications, Richard Szeliski , 2010, Springer.
- 2 Deep Learning for Computer Vision, Rajalingappaa Shanmugamani, 2018, Packt Publishing.
- 3 Robotics, Vision and Control: Fundamental Algorithms in MATLAB, Peter Corke, 2011, Springer.
- 4 Multiple View Geometry in Computer Vision, Richard Hartley and Andrew Zisserman, 2003, Cambridge.
- 5 Scene Reconstruction, Pose Estimation and Tracking, Reinhard Koch and Luc Van Gool, 2016, Springer.

23SDCS19E - VISUAL RECOGNITION AND SCENE UNDERSTANDING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS19E	VISUAL RECOGNITION AND SCENE UNDERSTANDING	VRSU	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of visual recognition and image processing techniques.	2	PO2, PO3, PO4, PSO1
CO2	Analyze object detection and recognition methodologies, including feature-based and deep learning-based techniques.	4	PO1, PO2, PO3, PSO1
CO3	Identify suitable 3D vision and reconstruction techniques, along with their applications and challenges.	3	PO1, PO3, PO4, PSO1
CO4	Discuss ethical and social implications of visual recognition systems, including bias, fairness, privacy concerns, and ethical considerations.	6	PO1, PO2, PO4, PSO1

Syllabus

Fundamentals of visual recognition, History and development, Importance in various fields, Applications and real-world examples, Basics of image processing techniques, Image enhancement, Image segmentation, Feature extraction.

Overview of machine learning and deep learning algorithms for Object detection and recognition methodologies, Feature-based and deep learning-based object recognition, Performance evaluation and metrics. Overview of scene understanding, Semantic segmentation, Scene classification, Contextual reasoning in scene understanding.

Introduction to 3D vision and reconstruction, Depth perception and 3D vision, 3D reconstruction techniques, Applications and challenges in 3D scene understanding. Visual perception in robotics, Object manipulation and grasping, Navigation and mapping using visual data.

Overview of ethical and social implications, Bias and fairness in visual recognition, Privacy concerns in visual data, Ethical considerations in deploying visual recognition systems.

23SDCS20A - SMART IOT AND SENSOR NETWORKS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS20A	SMART IOT AND SENSOR NETWORKS	SISN	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Outline the basic concepts and principles of sensor networks interconnected world of the Internet of Things.	2	PO3, PSO1
CO2	Apply the methods for data acquisition from sensors in IoT systems	3	PO3, PO6, PSO2
CO3	Identify different types of sensors and their applications in IoT systems.	3	PO2, PO3, PO10
CO4	Analyze various data processing techniques for sensor data in IoT applications.	4	PO3, PSO1, PSO2
CO5	Discover different methodologies for processing sensor data in IoT contexts.	4	PO6

Syllabus

Overview of IoT and its significance in modern technology Basics of sensor networks and their role in IoT systems Types of sensors and their applications IoT architectures and communication protocols

Methods of data acquisition from sensors Signal conditioning and pre-processing techniques Data aggregation and fusion in sensor networks Real-time data processing and analysis algorithms

Introduction to wireless communication technologies (Wi-Fi, Bluetooth, Zigbee, etc.) Protocols for IoT communication (MQTT, CoAP, HTTP, etc.) Energy-efficient communication protocols for IoT devices Security considerations in wireless IoT communication

Threats and vulnerabilities in IoT systems Security mechanisms for protecting IoT devices and networks Authentication and access control in IoT environments Privacy-preserving techniques for sensor data collection and processing

Real-time Processing Techniques, Edge Computing for IoT, Machine Learning and AI for Sensor Data, Advanced Topics in Sensor Data Processing, Case Studies and Applications

Reference Books

- 1 Internet of Things: Principles and Paradigms, Rajkumar Buyya and Amir Vahid Dastjerdi, 2016, Morgan Kaufmann.

23SDCS21A - HARDWARE SOFTWARE CODESIGN IMPLEMENTATION FOR SECURITY SPECILAITY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS21A	HARDWARE SOFTWARE CODESIGN IMPLEMENTATION FOR SECURITY SPECILAITY	HSCISS	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Explain advanced concepts and methodologies in hardware-software codesign for security applications.	2	PO1, PSO1
CO2	Develop and implement sophisticated hardware-software codesign solutions to enhance security.	3	PO1, PO3, PSO2
CO3	Critically analyze security challenges and vulnerabilities in complex codesign systems.	4	PO1, PO2, PO4
CO4	Design and propose innovative solutions to enhance security in hardware-software codesign.	5	PO1, PO3

Syllabus

Advanced Codesign Techniques: In-depth study of advanced codesign methodologies, Security-enhanced design processes, Practical sessions on advanced design and implementation

Security Implementation Strategies: Implementing advanced security protocols in codesign, Case studies on high-level security integration, Hands-on projects focusing on advanced security features.

Research and Innovation: Conducting research on emerging trends in secure codesign, Developing innovative solutions to new security challenges, Presenting research findings and project proposals.

Leadership and Project Management: Leading secure codesign projects, Advanced project management techniques, Workshops on leadership and teamwork skills.

Reference Books

- 1 Hardware/Software Co-Design: Principles and Practice, Giovanni De Micheli, Rolf Ernst, and Wayne Wolf, 20001, Springer.
- 2 Hardware/Software Co-Design of Embedded Systems: The POLIS Approach, F. Balarin, P. Giusto, A. Jurecska, et al., 1997, Kluwer Academic Publishers.
- 3 Security-Aware Design for Cyber-Physical Systems: A Platform-Based Approach, Chung-Wei Lin, Pai-Yu Chen, and Alberto Sangiovanni-Vincentelli, 2018, Springer.
- 4 Digital Design and Computer Architecture: ARM Edition, Sarah Harris and David Harris, 2015, Morgan Kaufmann.
- 5 Embedded Systems Security: Practical Methods for Safe and Secure Software and Systems Development, David Kleidermacher and Mike Kleidermacher, 2012, Newnes.

- 7 Cryptographic Engineering, Cetin Kaya Koc, 2009, Springer.

23SDCS21E - HARDWARE SOFTWARE CODESIGN IMPLEMENTATION FOR SECURITY SPECILAITY (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS21E	HARDWARE SOFTWARE CODESIGN IMPLEMENTATION FOR SECURITY SPECILAITY	HSCISS	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply theoretical knowledge to practical, real-world scenarios in hardware-software codesign for security.	3	PO1, PO3, PS01
CO2	Analyze and solve complex security problems through hands-on projects and case studies.	4	PO1, PO2, PO4, PS01, PS02
CO3	Integrate multidisciplinary knowledge to create comprehensive hardware-software codesign solutions for security issues.	5	PO1, PO2, PO4
CO4	Reflect on personal and team performance in implementing secure codesign solutions, identifying areas for continuous improvement.	5	PO1, PO3, PS02

Syllabus

Real-world Codesign Projects: Engaging in real-world projects that require secure codesign, Collaborating with industry partners, Practical sessions based on actual industry problems,

Case Study Analysis: Analyzing case studies of successful and failed secure codesign projects, Identifying best practices and common pitfalls, Practical exercises based on case study findings.

Multidisciplinary Integration: Combining knowledge from various disciplines to enhance secure codesign, Workshops on integrating cryptography, system architecture, and software engineering, Team-based projects on multidisciplinary secure codesign solutions.

Reflective Practice and Continuous Improvement: Reflecting on personal learning experiences and project outcomes, Identifying strengths and areas for improvement, Developing a continuous improvement plan for future projects.

Reference Books

- 1 Hardware/Software Co-Design: Principles and Practice, Giovanni De Micheli, Rolf Ernst, and Wayne Wolf, 2000, Springer.
- 2 Hardware/Software Co-Design of Embedded Systems: The POLIS Approach, F. Balarin, P. Giusto, A. Jurecska, et al., 1996, Kluwer Academic Publishers.

23SDCS21R - HARDWARE SOFTWARE CODESIGN IMPLEMENTATION FOR SECURITY SPECILAITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDCS21R	HARDWARE SOFTWARE CODESIGN IMPLEMENTATION FOR SECURITY SPECILAITY	HSCISS	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Describe the fundamental principles and techniques of hardware-software codesign for security applications.	2	PO1, PSO1, PSO2
CO2	Implement basic hardware-software codesign solutions addressing security concerns using standard tools.	3	PO1, PO3, PSO1, PSO2
CO3	Analyze and assess the security implications of various hardware-software codesign strategies.	4	PO2, PO4, PSO1, PSO2

Syllabus

Introduction to Hardware-Software Codesign : Basic principles of hardware-software codesign, Security concerns in hardware-software codesign, Practical exercises on simple codesign tasks using standard tools

Security in Codesign: Implementing security features in hardware and software, Case studies of secure codesign, Practical projects involving secure hardware-software integration

Skills Development: Enhancing problem-solving skills in secure codesign, Team-based projects and presentations, Workshops on industry-standard tools and techniques

Reference Books

- 1 Hardware/Software Co-Design: Principles and Practice, Giovanni De Micheli, Rolf Ernst, and Wayne Wolf, 2000, Springer.

23SDEC01A - ELECTRONIC SYSTEM DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC01A	ELECTRONIC SYSTEM DESIGN	ESD	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	FUNDAMENTALS OF IOT AND SENSORS	FITS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of Discrete Semiconductors and other basic components for different applications	3	PO1, PO2, PO11, PSO1
CO2	Apply basic electronic components to design circuit for various application	3	PO1, PO2, PO3, PSO1
CO3	Apply different Sensors, power supply designs and Special Integrated Circuits for various applications	3	PO3, PO5, PSO1
CO4	Apply the NodeMCU development kit to post and fetch data from cloud database	3	PO2, PO3, PO5, PSO1
CO5	Apply the concept of schematic design convert to PCB Design using the software Easy EDA	3	PO2, PO3, PO5, PSO2

Syllabus

Basics of Electronics: Resistors - Application: Voltage Division Concept - Current Limiting Resistor - Pull Up and Pull-Down Resistor - Thermistor - Operating Principle and Types of Thermistors - LDR - Variable Resistor - Capacitor - Inductor - RC Time Constant - Other Basic Components: Diode - Switch - LED

Bridge Rectifier - Battery - Transistor - Transistor as A Switch - Fuse - Loudspeaker - Relay Concept - Transformer - Optocoupler - Microphone - Antenna

Sensors: Temperature and Humidity Sensors, Gas Detection Sensors, Power Supplies: 7805, 7905, Buck Converter, Boost Converter Integrated Circuits: LM393, 555 Timer, CD4017, L293D, L298N

NodeMCU: Introduction - Pin Configuration - Features - Applications - Software and Driver Tools, ESP8266 Boards Manager Package Installation - Posting Data to Cloud Database - Fetching Data from Cloud Database

Fetching Data from Cloud Database. Introduction to PCB & PCB Design with Easy EDA

Reference Books

- 1 Basic Electronics for Scientists and Engineers, Dennis L. Eggleston,, 2011, Cambridge University Press.
- 2 Electronic Devices & Circuits, Jacob Millman, Christos C. Halkias, -, -.

23SDEC01R - ELECTRONIC SYSTEM DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC01R	ELECTRONIC SYSTEM DESIGN	ESD	R	0	0	2	4	2

Prerequisite

S#	Course Title	Acronym	Rule
1	FUNDAMENTALS OF IOT AND SENSORS	FITS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of Discrete Semiconductors and other basic components for different applications	3	PO1, PO2, PO11, PSO1
CO2	Apply different Sensors, power supply designs and Special Integrated Circuits for various applications	3	PO1, PO2, PO3, PSO1
CO3	Apply the NodeMCU development kit to post and fetch data from cloud database	3	PO3, PO5, PSO1
CO4	Apply PCB Design, Development boards, software, and driver tools for system design	3	PO2, PO3, PO5, PSO1, PSO2

Syllabus

Basics of Electronics: Resistors, Application: Voltage Division Concept, Current Limiting Resistor. Pull Up and Pull-Down Resistor, Thermistor: Operating Principle and Types of Thermistors, LDR: Variable Resistor, Capacitor, Inductor: RC Time Constant, Other Basic Components: Diode, Switch LED, Bridge Rectifier, Battery, Transistor: Transistor as A Switch, Fuse, Loudspeaker, Relay Concept, Transformer, Optocoupler, Microphone, Antenna

Sensors: Temperature and Humidity Sensors, Gas Detection Sensors, Power Supplies: 7805, 7905, Buck Converter, Boost Converter Integrated Circuits: LM393, 555 Timer, CD4017, L293D, L298N

NodeMCU: Introduction, Pin Configuration, Features, Applications, Software and Driver Tools, ESP8266 Boards Manager Package Installation, Posting Data to Cloud Database, Fetching Data from Cloud Database

Introduction to PCB & PCB Design with Easy EDA

23SDEC02A - EMBEDDED SYSTEM AUTOMATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC02A	EMBEDDED SYSTEM AUTOMATION	ESDA	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	ELECTRONIC SYSTEM DESIGN	ESD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Able to apply to expertly configure CPU clock speed, implement external interrupts, utilize timers for precise control, and optimize energy efficiency through power management modes in microcontroller-based systems.	3	PO2, PO3, PSO1
CO2	Able to apply UART, I2C, I2S, SPI, and CAN protocols, including pin configuration, multi-device communication, I2C scanner usage, and effective implementation in electronic systems.	3	PO2, PO3, PSO1
CO3	Able to apply ADC and DAC interfacing, EEPROM and Flash Memory usage, and master Bluetooth and Wi-Fi integration for wireless communication with reliable data links in electronic systems.	3	PO2, PO3, PSO2
CO4	Able to apply network operations, including scanning and signal identification, and proficiently handle MAC addresses, hostnames, and IP assignments for designing collaborative electronic systems.	3	PO2, PO3, PSO2

Syllabus

Microcontroller Development Board: CPU clock speed, External Interrupt, Timers & Timer Interrupt, Power Consumption in Each Mode & Sleep Modes

Communication Protocols: UART, I2C protocol: Set Pins, Multi Devices, I2C Scanner, I2S protocol, SPI Protocol, CAN Protocol

Memory & Interfaces: ADC, DAC with Audio Analog Output, EEPROM and its library, Flash Memory, Connectivity: Bluetooth, Wi-Fi

Networking: Network Scanning, Signal Strength Identifier, Connect to Network, Set and Get MAC address, Identification and change of Host name, Static & Dynamic IP assignment, Client-Server configuration and multi-server configuration

23SDEC03A - BIOSENSOR SYSTEM DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC03A	BIOSENSOR SYSTEM DESIGN	BSD	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	ELECTRONIC SYSTEM DESIGN	ESD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply different biosensor types, electromagnetic theory, and computer-aided design tools like COMSOL, enabling them to analyze electrostatics and design effective biosensor systems.	3	PO5, PO9, PO11, PO12, PSO1
CO2	Analyze the design of electrochemical sensors for bioanalysis. By exploring electrode optimization, sweat and alcohol sensor design, and real-world case studies, students will gain the knowledge to create efficient and practical sensors for medical diagnostics and other applications.	4	PO5, PO9, PO11, PO12, PSO1
CO3	Analyze sensitivity and selectivity analysis to understand sensor response, and explore advanced design techniques for real-time applications. Through a project focused on biosensor design and performance optimization, students will gain the skills to create highly effective biosensors for practical use.	4	PO5, PO9, PO11, PO12, PSO1
CO4	Examine Surface Plasmon Resonance (SPR), Surface-Enhanced Raman Spectroscopy (SERS), and fiber optic sensors, alongside enzymatic sensors and integration of Artificial Intelligence (AI) and Machine Learning (ML) for data analysis. By the end, students will be equipped to design intelligent biosensors for sensitive and specific detection.	4	PO5, PO9, PO11, PO12, PSO1

Syllabus

Overview of Biosensor and Types, Fundamentals of EM theory, Overview of COMSOL Multiphysics/FDTD software, Electrostatics analysis, Sensor design.

Electrodes design and optimization, design of Electrochemical sensor for sweat analysis, design of gas sensor for alcohol sensing, Case studies.

Sensitivity analysis, Selectivity analysis, Advanced sensor design for real time application. Project on design and performance optimization of biosensors.

SPR sensors, SERS, optical fiber sensors, Enzymatic sensors, Integrating AI and ML concepts into sensors

23SDEC04A - DESIGN OF NETWORKS USING NS-3 (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC04A	DESIGN OF NETWORKS USING NS-3	DNN	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM AUTOMATION	ESDA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Illustrate and simulate Simple Topology Creation, TCP/IP Performance Analysis, Routing Protocols Evaluation, Traffic Modeling, Quality of Service (QoS) Analysis, Using NS-3	2	PO1, PO2, PSO2
CO2	Construct and simulate Congestion Control Algorithms, Network Security Analysis, Network Protocol Development, Wireless Network Simulation, Peer-to-Peer (P2P) Networks, MPLS, IoT, SDN Using NS-3	3	PO1, PO2, PO3, PSO2
CO3	Analyse and simulate Wireless Network Simulation, Peer-to-Peer (P2P) Networks, MPLS, IoT, SDN Using NS-3	4	PO1, PO2, PO4, PSO2
CO4	Classify and validate custom network models in NS-3, demonstrating the ability to extend existing modules and adapt the simulator to address specific research or industry-related networking challenges.	4	PO2, PO4, PSO2

Syllabus

Simple Topology Creation, TCP/IP Performance Analysis, Routing Protocols Evaluation, Traffic Modeling, Quality of Service (QoS) Analysis

Congestion Control Algorithms, Network Security Analysis, Network Protocol Development, Wireless Network Simulation, Peer-to-Peer (P2P) Networks

Network Protocol Performance Comparison, Network Simulation with Real Traffic Traces, Network Protocol Testing, Multi-Protocol Label Switching (MPLS), Internet of Things (IoT) Communication:, Software-Defined Networking (SDN)

Transport Layer Protocols: Implementation of TCP and UDP protocols in NS-3, Performance comparison and analysis, Routing Protocols: Overview of routing protocols (e.g., OLSR, AODV), Implementing and evaluating routing protocols in NS-3, Traffic Models: Creating and using traffic models, CBR, VBR, and other traffic generation models, Wireless Networks: Simulating wireless networks and WiFi, Mobile nodes and mobility models

Reference Books

23SDEC04R - DESIGN OF NETWORKS USING NS-3 (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC04R	DESIGN OF NETWORKS USING NS-3	DNN	R	0	0	2	4	2

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM AUTOMATION	ESDA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate proficiency in designing and simulating complex network topologies using NS-3, showcasing an understanding of network elements and their interactions.	2	PO1, PO2, PO5, PSO2
CO2	Implement and evaluate various network protocols in NS-3, illustrating competency in protocol design principles and their practical application.	3	PO2, PO3, PO5, PSO2
CO3	Analyze network performance metrics collected from NS-3 simulations, enabling identification and troubleshooting of performance issues in simulated networks.	4	PO2, PO3, PO5, PSO2

Syllabus

Introduction to NS-3: Overview of network simulation and its importance, Introduction to NS-3 framework and its features, Installation and setup of NS-3 environment. Basic Network Elements in NS-3: Understanding network nodes, links, and devices in NS-3, Creating simple network topologies using NS-3, Simulation scripting with NS-3: Basic Layered Architecture of Network Protocols: Understanding OSI and TCP/IP models, Design considerations for network protocols, Transport Layer Protocols, Designing and implementing TCP and UDP protocols in NS-3, Hands-on exercises on configuring and testing transport layer protocols.

Performance Metrics for Networks: Introduction to performance metrics: Throughput, latency, packet loss, etc. Collecting and analyzing simulation data in NS-3, Simulation Experiments in NS-3, Designing simulation scenarios for performance evaluation, Conducting experiments and interpreting results.

Wireless Network Modeling: Introduction to wireless network simulation in NS-3, Modeling wireless communication channels and devices Week 8: Mobility and Security Simulation, Implementing mobility models in NS-3, Introduction to network security simulations in NS-3

Reference Books

- 1 Network Simulation Experiments Manual, Emad Aboelela, 2011, Morgan Kaufmann Publishers.
- 2 Computer Networking: A Top-Down Approach, James F. Kurose, Keith W. Ross, 2017, Pearson.
- 3 NS-3 Manual, NS-3 Consortium, 2024, Online Resource.
- 4 Wireless Communications & Networks, William Stallings, 2009, Pearson.

23SDEC05A - 4G - LTE COMMUNICATION SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC05A	4G - LTE COMMUNICATION SYSTEMS	LCS	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM AUTOMATION	ESDA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply their understanding of 4G architecture, interfaces, user equipment categories, and core functionalities like Quality-of-Service (QoS), security, and mobility within the 3GPP standards framework.	3	PO3, PO4, PO5
CO2	Analyze and evaluate the technical aspects of LTE communication, including frame structure, spectrum management, channel behavior, resource allocation strategies, user-perceived quality of service, and performance analysis techniques for troubleshooting purposes.	4	PO3, PO4, PO5
CO3	Analyze and evaluate advanced techniques for improving user experience in 4G networks, including advanced antenna systems, security measures to mitigate risks, and multi-factor authentication protocols for stronger user verification.	4	PO3, PO4, PO5
CO4	Analyze and evaluate advanced techniques for improving performance and efficiency in 4G LTE-Advanced networks.	4	PO3, PO4, PO5

Syllabus

4G Architecture and Call Process with 3GPP Standards, EPS Reference Points and Interfaces, E-UTRAN Interfaces, User Equipment, LTE UE Category, QoS in LTE, LTE Security, LTE Mobility.

LTE Frame Structure, Dynamic Spectrum Management Techniques, Channel Estimation and Equalization, Resource Allocation, Quality of Service at the User End, Performance Analysis and Troubleshooting Techniques

Advanced Antenna Systems for Improved User Experience in 4G Networks, Security and Privacy at the 4G User End: Mitigating Risks and Ensuring User Protection, 4G Authentication Protocols: A Comprehensive Overview and Analysis, Multi-Factor Authentication in 4G Networks: Strengthening User Verification Processes

Performance estimation of LTE-A downlink adopting higher modulation in Small cells Functional models and 4G LTE architecture of VoLTE services and also Video streaming Threshold based multi traffic load balancing scheme also for LTE-Advanced Networks Coverage enhancement of PBCH in LTE-A Networks also using reduced search viterbi Experimental analysis of energy saving scheme also for enodeB on/off in LTE Networks Spectrum sharing system[for 4G and also 5G] Measurement Peak data rate over 4G network Measurement of Peak spectrum efficiency Mobility analysis across the cellular network for various mobile speeds up to 350 km/h

CO1	Apply their understanding of 4G architecture, interfaces, user equipment categories, and core functionalities like Quality-of-Service (QoS), security, and mobility within the 3GPP standards framework.	3	PO3, PO4, PO5
CO2	Analyze and evaluate the technical aspects of LTE communication, including frame structure, spectrum management, channel behavior, resource allocation strategies, user-perceived quality of service, and performance analysis techniques for troubleshooting purposes.	4	PO3, PO4, PO5
CO3	Analyze and evaluate advanced techniques for improving user experience in 4G networks, including advanced antenna systems, security measures to mitigate risks, and multi-factor authentication protocols for stronger user verification.	4	PO3, PO4, PO5
CO4	Analyze and evaluate advanced techniques for improving performance and efficiency in 4G LTE-Advanced networks.	4	PO3, PO4, PO5

Syllabus

4G Architecture and Call Process with 3GPP Standards, EPS Reference Points and Interfaces, E-UTRAN Interfaces, User Equipment, LTE UE Category, QoS in LTE, LTE Security, LTE Mobility.

LTE Frame Structure, Dynamic Spectrum Management Techniques, Channel Estimation and Equalization, Resource Allocation, Quality of Service at the User End, Performance Analysis and Troubleshooting Techniques

Advanced Antenna Systems for Improved User Experience in 4G Networks, Security and Privacy at the 4G User End: Mitigating Risks and Ensuring User Protection, 4G Authentication Protocols: A Comprehensive Overview and Analysis, Multi-Factor Authentication in 4G Networks: Strengthening User Verification Processes

Performance estimation of LTE-A downlink adopting higher modulation in Small cells Functional models and 4G LTE architecture of VoLTE services and also Video streaming Threshold based multi traffic load balancing scheme also for LTE-Advanced Networks Coverage enhancement of PBCH in LTE-A Networks also using reduced search viterbi Experimental analysis of energy saving scheme also for enodeB on/off in LTE Networks Spectrum sharing system[for 4G and also 5G] Measurement Peak data rate over 4G network Measurement of Peak spectrum efficiency Mobility analysis across the cellular network for various mobile speeds up to 350 km/h

23SDEC06A - EMBEDDED DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC06A	EMBEDDED DESIGN	EBD	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM AUTOMATION	ESDA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Able to apply the concept of ARM-Cortex M3 & M4 Architecture	3	PO1, PO2, PO11, PSO1
CO2	Able to apply the STM32 microcontroller concepts & programming language	3	PO1, PO2, PO3, PSO1
CO3	Able to apply the various interfacing concepts of STM32 microcontroller.	3	PO2, PO3, PO5, PSO1
CO4	Able to apply interfacing of actuators and implement data communication using standard protocols	3	PO2, PO3, PO5, PSO1

Syllabus

ARM Cortex M3 and M4: The Internals of STM32 Microcontroller Hardware, Interface Various Peripherals Inside OF STM32 Microcontrollers, Develop Reconfigurable Reusable Firmware (Embedded Software Components) In C-Programming Language Based on ST HAL & LL Drivers

Get Familiar with Interrupts, NVIC, EXTI and Inter-Module Signalling, DMA. STM 32 Concepts: STM32 Interrupts, external interrupt pins & interrupt latency, STM 32 serial print Debug, STM 32 Timers, Timer Module, Timer Mode, counter Mode and Input Capture Mode (ICU), Encoder mode STM 32, PWM

STM 32 INTERFACING: Interface Various Peripherals Inside OF STM32 Microcontrollers, Interface Various Display Units (7-Segments, Alphanumeric LCD, OLED, TFT, etc) Interface Various Input Units (Buttons, Rotary Encoders, Keypad, HMI TouchPADs, etc).

Control Several Types OF Actuators (DC Motors, Servo Motors, Stepper Motors, etc), Serial Communication Via USART, SPI, I2C & Develop USB Applications (CDC, HID, Mass Storage, etc)

Reference Books

- 1 ARM Cortex M4 Cookbook , Mark fisher, 2010, Cambridge University Press.
- 2 Mastering STM32, Carmine Noviello, 2012, Lean Publishing.
- 3 Advanced Programming with STM32 Microcontrollers, Majid Pakdel, 2005, Lean Publishing.
- 4 ARM Cortex-M3 and Cortex-M4 Processors, Joseph Yiu, 2007, Elsevier.

23SDEC07A - DEEP LEARNING WITH TENSORFLOW FRAMEWORK (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC07A	DEEP LEARNING WITH TENSORFLOW FRAMEWORK	DLTF	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM AUTOMATION	ESDA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Tensorflow framework for deep neural network construction and evaluate the models.	3	PO1, PO5, PSO2
CO2	Apply Tensorflow and keras APIs to develop deep convolutional neural networks for classification.	3	PO2, PO5, PSO2
CO3	Apply deep networks for sequence modelling applications using Tensorflow framework.	3	PO2, PO5, PSO2
CO4	Develop and deploy practical applications of deep learning models to solve real-world problems	3	PO1, PO5, PSO2

Syllabus

Understanding Objective Function of ML Algorithms, Metrics, Evaluation Methods and Optimizers, Popular Metrics in Detail: R2 Score, RMSE, Cross Entropy, Precision, Recall, F1 Score, ROC-AUC, SGD, ADAM. PySpark functions for importing data from various sources and other big data frameworks, Machine Learning with PySpark, Implementing scalable ML models with PySpark

TENSORFLOW 2.0 AND KERAS FOR DEEP LEARNING: TensorFlow core concepts, Tensors, core APIs, Concrete Functions, Datatypes, Control Statements, Polymorphic Functions, Concrete Functions, Datatypes, Control Statements, NumPy, Pandas. Autograph eager execution, tf.function autograph implementation, Keras (TensorFlow 2.0 Built-in API) Overview, Building Neural Networks in Keras.

DEEP LEARNING FOUNDATION: Deep Dive into Activation Functions: Relu, Sigmoid, Tanh, SoftMax, Linear. Building simple Deep Learning Network, Visualizing Training using TensorBoard, Implementing RNN, CNN in Keras, Building Recurrent Neural Networks for sequence data and Convolution Neural Networks for Image Classification. Advanced Deep Learning - CNN, RNN, LSTM RNN with TensorFlow 2.0 (Keras).

Model Deployment: Saving and Loading Models, Serving TensorFlow Models, Model Optimization. Real-World Applications and Projects: Image Classification, Text Generation, Time Series Forecasting. Advanced Topics and Future Trends: Explainable AI (XAI), Reinforcement Learning Basics

Reference Books

- 1 TensorFlow for Deep Learning, Bharath Ramsundar, Reza Bosagh Zadeh, 2021, O'REILLY.
- 2 Deep Learning with TensorFlow and Keras: Build and deploy supervised, unsupervised, deep, and reinforcement learning models, Amita Kapoor, Antonio Gulli, Sujit Pal, Francois Chollet, 2018, PACKT.

23SDEC08A - PLANAR ANTENNA DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC08A	PLANAR ANTENNA DESIGN	PAD	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM AUTOMATION	ESDA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyse the concept of feeding techniques for MSA application	4	PO2, PO5, PO11, PSO2
CO2	Analyse the various Parameters of MSA	4	PO2, PO5, PSO2
CO3	Design and analyse the Slot mechanism for Microstrip Patch to enhance bandwidth	4	PO2, PO3, PO5, PSO2

Syllabus

Introduction to MSA and feeding techniques: Characteristics of Microstrip Patch Antenna, Advantages, Applications of MSA, Different Feed Technique: Co axial, Inset, Aperture/Slot Coupled, Proximity coupled.

Design steps of Microstrip Patch Antenna: Types of Patch antennas, Microstrip rectangular and circular Patch Antenna: Design equations, Design using different Substrate with different resonant frequencies, Result Analysis of MSA, S parameters, Gain, Directivity, Efficiency and Power radiated plot.

Microstrip Slot Antennas: Radiation mechanism, Micro strip slot antennas, Introduction to rectangular slot antennas, narrow, wide, tapered and circularly polarized slot antennas, Annular slot antennas, Comparison of microstrip slot antennas with patch antennas

Reference Books

1. Antenna Theory Analysis and Design, 1. Constantine Balanis, 3rd, John Wiley.
2. Microstrip Antennas, 2. Bahl IJ, and P. Bhartia, 3rd, Artech House.
3. Microstrip Antenna Design Handbook, 1. Ramesh Garg, Prakash Bhatia, 3rd, Artech House Inc.

CO2	Analyse the various Parameters of MSA	4	PO2, PO5, PSO2
CO3	Design and analyse the Slot mechanism for Microstrip Patch to enhance bandwidth	4	PO2, PO3, PO5, PSO2

Syllabus

Introduction to MSA and feeding techniques: Characteristics of Microstrip Patch Antenna, Advantages, Applications of MSA, Different Feed Technique: Co axial, Inset, Aperture/Slot Coupled, Proximity coupled.

Design steps of Microstrip Patch Antenna: Types of Patch antennas, Microstrip rectangular and circular Patch Antenna: Design equations, Design using different Substrate with different resonant frequencies, Result Analysis of MSA, S parameters, Gain, Directivity, Efficiency and Power radiated plot.

Different feed techniques can be employed to optimize the performance of MSAs. The coaxial probe feed is simple to implement and provides good impedance matching, although it may introduce spurious radiation. The inset feed improves impedance matching and reduces spurious radiation, enhancing overall performance. The aperture/slot coupled feed offers high isolation between the feed n

Microstrip Slot Antennas: Radiation mechanism, Micro strip slot antennas, Introduction to rectangular slot antennas, narrow, wide, tapered and circularly polarized slot antennas, Annular slot antennas, Comparison of microstrip slot antennas with patch antennas

23SDEC09A - ROBOTICS AND AUTOMATION WITH WEBOTS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC09A	ROBOTICS AND AUTOMATION WITH WEBOTS	RAW	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamental concepts of robotics in various terrain using webot tool	3	PO5, PO7, PSO1
CO2	Analyze the planned trajectory using Webots involves utilizing its simulation environment and programming tools to define and execute paths for robotic motion	4	PO5, PO9, PSO1
CO3	Analyzing a wheeled mobile robot in Webots involves creating a virtual environment, configuring the robot's behavior and sensors, and applying navigation algorithms. This facilitates effective obstacle navigation.	4	PO5, PO11, PSO1
CO4	Analyze the autonomous navigation involves designing and implementing algorithms that enable a robot to move independently within a simulated environment.	4	PO5, PO11, PSO1

Syllabus

Devices: Webot Stereoscopic camera, anachrome red/cyan filters, Gantry robot, gripper, Hanoi towers, linear motors, recursive algorithm, Legged robot, alternating tripod gait, linear motor, Differential wheels, Koala, keyboard, texture, Soccer, supervisor, differential wheels, label, Stewart platform, linear motion, physics plugin, ball joint, universal joint

Environment: Apartment, domestic environment, furniture, Break room, domestic environment, furniture, Apartment, household environment, furniture, Factory, workbench, tools, industrial pipes, industrial stairs, hall, workbench, tools, industrial pipes, industrial stairs, kitchen, utensil.

Direct and inverse kinematics problems and workspace, Kinematics. Motions and dimensions, Velocity Analysis and Statics of Manipulators, Trajectory Planning and Generation, Configuration Space, State Space, Geometric Planning, Sampling-based Planning ,Optimization-based Planning.

Designing and testing algorithms for autonomous navigation, path planning, obstacle avoidance usingf Webots includes Designing the Simulation Environment, Programming the Robot Controller, Multi-Sensor Fusion and Real-time Optimization

23SDEC09R - ROBOTICS AND AUTOMATION WITH WEBOTS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC09R	ROBOTICS AND AUTOMATION WITH WEBOTS	RAW	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamental concepts of robotics in various terrain using webot tool	3	PO5, PO7, PSO1
CO2	Analyze the planned trajectory using Webots involves utilizing its simulation environment and programming tools to define and execute paths for robotic motion	4	PO5, PO9, PSO1
CO3	Analyzing a wheeled mobile robot in Webots involves creating a virtual environment, configuring the robot's behavior and sensors, and applying navigation algorithms. This facilitates effective obstacle navigation.	4	PO5, PO11, PSO1

Syllabus

Devices: Webot Stereoscopic camera, anachrome red/cyan filters, Gantry robot, gripper, Hanoi towers, linear motors, recursive algorithm, Legged robot, alternating tripod gait, linear motor, Differential wheels, Koala, keyboard, texture, Soccer, supervisor, differential wheels, label, Stewart platform, linear motion, physics plugin, ball joint, universal joint

Environment: Apartment, domestic environment, furniture, Break room, domestic environment, furniture, Apartment, household environment, furniture, Factory, workbench, tools, industrial pipes, industrial stairs, hall, workbench, tools, industrial pipes, industrial stairs, kitchen, utensil.

Direct and inverse kinematics problems and workspace, Kinematics. Motions and dimensions, Velocity Analysis and Statics of Manipulators, Trajectory Planning and Generation, Configuration Space, State Space, Geometric Planning, Sampling-based Planning ,Optimization-based Planning.

23SDEC10A - INTEGRATED SYSTEM DESIGN AUTOMATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC10A	INTEGRATED SYSTEM DESIGN AUTOMATION	ISDA	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM AUTOMATION	ESDA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Employ VLSI full custom design to develop a functional module upto backend for backannotation and tapeout	4	PO5, PO7, PO11, PSO2
CO2	Analyze high level description languages from frond end to back end for realization of functional digital module	4	PO2, PO5, PO11, PSO2
CO3	Implement peripheral modules in FPGA for hardware realization of developed digital functional modules	4	PO2, PO5, PO11, PSO2
CO4	Analyze spice models for realizing functional analog VLSI circuits	4	PO2, PO5, PO11, PSO1, PSO2

Syllabus

Project-Based Schematic Capture, Functional simulation, Layout, Post Layout Simulation, GDS-II (Using Cadence)

Verilog constructs, Tasks and Functions, Modelling memories and FSMs, Verilog timing regions, Inferring combinational and sequential logic, Pipelining, compiler directives

FPGA Design Flow, Peripheral module interface, Design of communication protocols, Design of intellectual property (IP) core, Software application on FPGA

Spice Constructs, Functional simulation of spice models, embedding spice/spectre models with technology instances in cadence

Reference Books

- 1 Verilog HDL: A guide to digital design and synthesis, Samir Palnitkar, 2nd, SunSoft Press .
- 2 Semi-custom IC Design and VLSI (Computing and Networks) , P.J. Hicks, 2nd, Institution of Engineering and Technology.
- 3 FPGA Design, Philip Andrew Simpson , 1st, Springer.
- 4 Layout Optimization in VLSI Design (Network Theory and Applications, Bing Lu, 7th, Springer.

23SDEC10E - INTEGRATED SYSTEM DESIGN AUTOMATION (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC10E	INTEGRATED SYSTEM DESIGN AUTOMATION	ISDA	E	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM AUTOMATION	ESDA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Employ VLSI full custom design to develop a functional module upto backend for backannotation and tapeout	4	PO1, PO5, PO9, PSO2
CO2	Analyze high level description languages from frond end to back end for realization of functional digital module	4	PO1, PO5, PO9, PSO2
CO3	Implement peripheral modules in FPGA for hardware realization of developed digital functional modules	4	PO1, PO5, PO9, PSO2
CO4	Analyze spice models for realizing functional analog VLSI circuits	4	PO1, PO5, PO9, PSO2

Syllabus

Project-Based Schematic Capture, Functional simulation, Layout, Post Layout Simulation, GDS-II (Using Cadence)

Verilog constructs, Tasks and Functions, Modelling memories and FSMs, Verilog timing regions, Inferring combinational and sequential logic, Pipelining, compiler directives

FPGA Design Flow, Peripheral module interface, Design of communication protocols, Design of intellectual property (IP) core, Software application on FPGA

Spice Constructs, Functional simulation of spice models, embedding spice/spectre models with technology instances in cadence

23SDEC11A - BIOMEDICAL SYSTEM INTERFACING AND SIGNAL ANALYSIS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC11A	BIOMEDICAL SYSTEM INTERFACING AND SIGNAL ANALYSIS	BSIS	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM DESIGN	ESD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Build bio-amplifiers, exploring their role in amplifying weak electrical signals from the body (ECG, EEG, EMG), and examines various bio-amplifier circuits along with design principles for instrumentation amplifiers, a key component. In two sentences, you'll gain the knowledge to build circuits that process biological data.	3	PO5, PO9, PO11, PO12, PSO1
CO2	Examine biosignals (ECG, EMG, EEG) using bioinstrumentation amplifiers and popular software like MATLAB or Multisim. signal processing techniques for raw ECG data, including pre-processing, noise reduction, feature extraction, and classification.	4	PO5, PO9, PO11, PO12, PSO1
CO3	Analyze lab-on-a-chip (LOC) technology, covering biosensor design basics, integration strategies, microfluidics, and data acquisition systems. Build your skills with a hands-on biosensor design project.	4	PO5, PO9, PO11, PO12, PSO1
CO4	Inspect wearable health tech, remote patient monitoring, and imaging techniques like MRI and CT. biofeedback and neurofeedback, then peer into the future of brain-computer interfaces and other emerging trends.	4	PO5, PO9, PO11, PO12, PSO1

Syllabus

Overview of Bio-Amplifier and Types of Bio-Amplifiers, Bio-Amplifier Circuit of ECG, Datasheet of AD624, Bio-Amplifier Circuit for EEG, Bio-Amplifier Circuit for EMG. Design of Instrumentation Amplifier Circuit.

"Instrumentation amplifier signal acquisition for ECG, EMG and EEG using any standalone board, biophysiological instrument. Analysis of ECG signal RAW signal, Preprocessing, Denoise, Features Extraction and Classification using MATLAB/Multisim programming. "

"Lab-On-chip: Basics of Bio-Chemical Sensor design, Integrated Sensor design with example, Electrostatics analysis for sensor design, Micro-Fluid Analysis for LOC, Demo of Biosensor Design. Project on data acquisition system."

Wearable biomedical devices and their applications Remote patient monitoring systems Biomedical imaging techniques (e.g., MRI, CT) Biofeedback systems and neurofeedback applications Emerging trends and future directions in biomedical interfacing

23SDEC12A - NETWORK PROGRAMMABILITY AND AUTOMATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC12A	NETWORK PROGRAMMABILITY AND AUTOMATION	NPA	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	ELECTRONIC SYSTEM DESIGN	ESD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understanding the principles of network programmability and its significance in modern networking. .	2	PO1, PO2, PSO2
CO2	Apply scripting languages such as Python or Bash to automate repetitive networking tasks .	3	PO2, PO3, PSO2
CO3	Implement basic network automation scripts to perform common tasks like configuration management and device provisioning.	3	PO2, PO3, PSO2
CO4	Implement Security Best Practices in Network Automation:	2	PO3
CO5	Evaluate Emerging Trends and Technologies in Network Automation	3	

Syllabus

Introduction to Network Programmability Overview of network programmability concepts and benefits Introduction to APIs and data models (REST, JSON, XML) Hands-on: Setting up development environment

Scripting for Network Automation Introduction to scripting languages (Python, Bash) Basic scripting concepts (variables, loops, conditionals) Hands-on: Writing scripts to automate network tasks

Interacting with Network Devices Overview of network device APIs (REST, NETCONF, RESTCONF) Using libraries like Paramiko and Netmiko for SSH-based automation Hands-on: Interacting with switches and routers using Python scripts

Understand the security implications of network automation and programmability. Apply best practices to ensure secure automation processes and manage risks effectively.

Stay updated with the latest developments and trends in network automation. Assess how new technologies and methodologies could be integrated into existing network automation strategies.

Reference Books

23SDEC13A - 5G PRIVATE AND INDUSTRIAL AUTOMATION NETWORKS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC13A	5G PRIVATE AND INDUSTRIAL AUTOMATION NETWORKS	5PIA	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	ELECTRONIC SYSTEM DESIGN	ESD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply their understanding of 5G architecture, call processes defined by 3GPP standards, and core functionalities like eMBB, mMTC, and URLLC to analyze and differentiate use cases for the 5G network.	3	PO3, PO4, PO5
CO2	Analyze and evaluate critical aspects of 5G physical layer design.	4	PO3, PO4, PO5
CO3	Compare and contrast private wireless network architectures and assess their effectiveness	4	PO3, PO4, PO5
CO4	Analyze and assess the potential of 5G technology to address emerging challenges and opportunities across different industries.	4	PO3, PO4, PO5

Syllabus

5G architecture and call process with 3GPP standards, 5G use cases - eMBB, mMTC, URLLC

Transceivers, Channel estimation, OFDM issues, Peak to Average Power ratio (PAPR), Carrier frequency Offset (CFO) and carrier timing offset, Synchronization, PAPR reduction techniques.

Architectures for Private Wireless, Case Studies - Uncovering 5G potential for real-time control in manufacturing, Industrial-grade Private Wireless.

5G use cases - Industrial, Healthcare, Smart cities, Energy and utilities, Autonomous vehicles, Sports broadcasting, Gaming, Agriculture, Hyper express trains.

Reference Books

- 1 5G NR: The Next Generation Wireless Access Technology. , Dahlman, E., Parkvall, S., Skold, J. , 2018, Elsevier Science .

23SDEC14A - EMBEDDED PROTOTYPE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC14A	EMBEDDED PROTOTYPE	EPT	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	ELECTRONIC SYSTEM DESIGN	ESD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic concept of Embedded Systems.	3	PO1, PO11, PSO1
CO2	Apply the programming language concepts for Real-time Applications	3	PO1, PO11, PSO1
CO3	Design the interfacing concepts for different development boards	3	PO2, PO11, PSO1
CO4	Implement the concepts for IoT Applications	3	PO2, PO11, PSO1

Syllabus

Embedded C: Introduction to C programming, Storage Classes, Data Types, Controlling program flow, bitwise operations Arrays, Functions, Memory Management, Pointers, Variable arguments in Functions, Arrays and Pointers, Pointer to Functions and advanced topics on Pointers, Structures

Software Development Cycle: ?Vision IDE, C/C++ Compiler & Macro Assembler, Library Manager, Linker/Locator, ?Vision Debugger. Folder structure: Generic ?Vision files, C166 Development tools, C51 Development tools, C251 Development tools, Proteus Design Suite: Schematic Design and Simulation

Microcontroller boards: Arduino Uno, Raspberry Pi, Wireless Module: ESP8266, NRF24L01, Sensor: DHT22, MPU-6050

IoT Applications: Actuator-Servo Motor, Relay Module, Display: OLED Display, TFT, LCD Display, Communication Interface: Bluetooth Module - GSM Module.

Reference Books

- 1 C and the 8051: Programming and Multitasking, SchultzP T R, 1, SchultzP T R Prentice-Hall.
- 2 C: A Reference Manual, Second Edition, Harbison & Steel , 2, Prentice-Hall Software Series.
- 3 Designing the Internet of Things, Adrian McEwen and Hakim Cassimally, 2, Wiley.
- 4 Internet of Things: A hands-on Approach, A.Bahga and V.Madisetti, 2, Universities Press.

23SDEC14E - EMBEDDED PROTOTYPE (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC14E	EMBEDDED PROTOTYPE	EPT	E	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	ELECTRONIC SYSTEM DESIGN	ESD	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic concept of Embedded Systems.	3	PO1, PO11, PSO1
CO2	Apply the programming language concepts for Real-time Applications	3	PO1, PO11, PSO1
CO3	Design the interfacing concepts for different development boards	3	PO2, PO11, PSO1
CO4	Implement the concepts for IoT Applications	3	PO2, PO11, PSO1

Syllabus

Embedded C: Introduction to C programming, Storage Classes, Data Types, Controlling program flow, bitwise operations Arrays, Functions, Memory Management, Pointers, Variable arguments in Functions, Arrays and Pointers, Pointer to Functions and advanced topics on Pointers, Structures

23SDEC15A - NATURAL LANGUAGE PROCESSING USING TENSOR FLOW (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC15A	NATURAL LANGUAGE PROCESSING USING TENSOR FLOW	NLPTF	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM AUTOMATION	ESDA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply various algorithms to convert text into numbers	3	PO1, PO2, PSO1, PSO2
CO2	Modelling the language using various statistical and deep learning models	3	PO1, PO2, PO4, PO5, PSO1
CO3	Apply recurrent neural networks to complex language modelling	2	PO1, PO2, PSO1
CO4	Apply NLP for Sentiment Analysis in Social Media	3	PO1, PO2, PSO1

Syllabus

A Chatbot NLP pipeline. Word tokenization, Building vocabulary with tokenizer and sentiment. Challenges in NLP. Approaches in NLP using NLTK and TensorFlow frameworks.

NTF IDF vectors, Bag of words, Bag of N Grams, One-Hot Encoding, Vectorizing, Zipf's Law, Topic modeling. Word Embeddings, Principal component analysis, Word2Vec, Convolutional neural nets, RNNs, LSTMs, and Language Models for Text processing and Text Classification

Architecture, Datasets, and Performance. Translate complete English sentences into German using an encoder-decoder attention model, Build a Transformer model to summarize text, Use T5 and BERT models to perform question-answering, and Build a chatbot using a Reformer model.

Sentiment Analysis in Social Media: Understanding sentiment analysis techniques for analyzing opinions, emotions, and attitudes expressed in social media text data. Techniques for preprocessing social media text, feature extraction, and sentiment classification using machine learning and deep learning models.

Reference Books

- 1 Natural Language Processing using Python , Steven Bird, Ewan Klein and Edward Loper , 2011, O reilly .
- 2 Foundations of Statistical Natural Language Processing , Christopher Manning and Hinrich Sch?tze. , NA, MIT Press .
- 3 Deep Learning for Natural Language Processing, Palash Goyal, Sumit Pandey, Karan Jain, Ankit Bhatia, 1st Edition, Packt Publishing.
- 4 Applied Text Analysis with Python Enabling Language Aware Data Products with Machine Learning, Benjamin Bengfort, Rebecca Bilbro, Tony Ojeda, Tony Ojeda 1st, O reilly media.

23SDEC15E - NATURAL LANGUAGE PROCESSING USING TENSOR FLOW (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC15E	NATURAL LANGUAGE PROCESSING USING TENSOR FLOW	NLPTF	E	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	EMBEDDED SYSTEM AUTOMATION	ESDA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply various algorithms to convert text into numbers	3	PO1, PO2, PO11, PSO1
CO2	Modelling the language using various statistical and deep learning models	4	PO1, PO2, PO3, PSO1
CO3	Apply recurrent neural networks to complex language modelling	3	PO2, PO3, PO5, PSO1
CO4	Apply NLP for Sentiment Analysis in Social Media	3	PO3, PSO1

Syllabus

A Chatbot NLP pipeline. Word tokenization, Building vocabulary with tokenizer and sentiment. Challenges in NLP. Approaches in NLP using NLTK and TensorFlow frameworks.

NTF IDF vectors, Bag of words, Bag of N-Grams, One Hot Encoding, Vectorizing, Zipf's Law, Topic modeling. Word Embeddings, Principal component analysis, Word2Vec, Convolutional neural nets, RNNs, LSTMs, and Language Models for Text processing and Text Classification

Architecture, Datasets, and Performance. Translate complete English sentences into German using an encoder decoder attention model, Build a Transformer model to summarize text, Use T5 and BERT models to perform question answering, and Build a chatbot using a Reformer model.

Sentiment Analysis in Social Media: Understanding sentiment analysis techniques for analyzing opinions, emotions, and attitudes expressed in social media text data. Techniques for preprocessing social media text, feature extraction, and sentiment classification using machine learning and deep learning models.

23SDEC16A - ADVANCED RADIATING SYSTEM MODELING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC16A	ADVANCED RADIATING SYSTEM MODELING	ARSM	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and Intreprete Antenna design for wireless and 5G Applications	3	PO1
CO2	Understand and intreprete the basic Concepts for 5G FR1 Single Band and Multi-Band Mobile Antenna Design	3	PO1
CO3	Apply the concept of the different MIMO-Based 5G FR1 Band Mobile Antennas for 5G and Wireless Apllication	3	PO2
CO4	Analyze the different Antenna-in-Package for 5G and Mobile Antennas	4	PO2
CO5	Design of different patch antennas using EM tools and verify the characteristics	5	PO3

Syllabus

Frequency Characteristics and Channel Models, 5G Network Architecture, Evolution of Mobile Devices, Antenna Materials for 5G smart phone.

Smartphone Components and Their Effects, Antenna Element Design and Topologies, Slot Antenna Design, Monopole Antenna Design, Loop Antenna, Inverted F Antenna, Planar Antenna Design Topologies, Hybrid Antenna Design Topologies.

Motivation and Requirements, Channel Capacity, Envelope Correlation Coefficient, Diversity Gain, Mean Effective Gain, Total Active Reflection Coefficient, Channel Capacity Loss, Antenna Isolation Techniques, Spatial and Polarization Diversity.

Miniaturized Antenna in Package Technology, Background and Challenges, Planar Folded Slot Antenna with Electrically Small and Low Profile, Low Loss Interconnect Technology, Flip Chip Based Packaging of mmWave AiP, Multi Modal AiP Technology, Block Cell Antennas, Modular, Controllable Block Cell Arrays.

Reference Books

- 1 Microwave and Millimeter-wave Antenna Design for 5G Smartphone Applications , Wonbin Hong,?Chow Yen Desmond Sim , 2022, Wiley IEEE Press.
- 2 MIMO Antennas for Wireless Communication: Theory and design , L malviya, RK Panigrahi, MV Kartikeya , 2022, CRC Press.
- 3 Antenna Theory, C.A Balanis, 2001, John Wiley Sons.
- 4 Wireless Communication Electronics Introduction to RF Circuits and Design Techniques, Robert Sobot, 2021, Springer .

23SDEC16E - ADVANCED RADIATING SYSTEM MODELING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR

23SDEC17A - ROBOT DESIGN AND ANALYSIS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC17A	ROBOT DESIGN AND ANALYSIS	RDA	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Robots kinematics & Dynamics includes designing, controlling, and optimizing their movements and behaviors	2	PO5, PO11, PSO1
CO2	Apply the concepts of robotics sensors necessary for the specified model and verify their functionality.	3	PO5, PO11, PSO1
CO3	Analyzing the swarm for multi-robot systems which can collaborate and coordinate autonomously to achieve complex task	4	PO5, PO11, PSO1
CO4	Analyze the fetch and freight robot which provides autonomous mobile manipulation solutions for industrial and logistics applications	4	PO5, PO11, PSO1

Syllabus

Introduction, RobotStudio- terms and concepts, RobotWare, RAPID concepts, Effects of P, PI, PD & PID Controller of 2nd order System. Stability Analysis of Control system using Root Locus method using MATLAB. Programming concepts, Paths and targets, Coordinate systems, Tool Centre Point Coordinate system, World Coordinate system, Base Frame (BF), Task Frame (TF), Stations with multiple robot systems

Integration and testing of Hybrid UAV. Application of UAV in Remote sensing. Application of UAV in Disaster management. Image processing using Raspberry Pi for agricultural applications. Study About Post Processing Softwares in Drone Surveying. Calculate Aerial Mapping using Drones and Evaluate Contour Map

Swarms: Collective Transport by Ants and Robots, Task Allocation in Bees and Bee-inspired Robot Swarms, Ant-inspired Network Routing and Optimization, Swarms: Ant Colony Foraging and Stigmergy

Design principles and interfaces for kinematic control, grasping strategies, object recognition, and manipulation planning, Sensors and Perception, Object Segmentation and Classification, Localization and Pose Estimation and Integration with Robot Perception Pipeline.

Reference Books

- 1 MODERN ROBOTICS MECHANICS, PLANNING, AND CONTROL, Kevin M. Lynch and Frank C. Park, 2017, 1st Edition, Cambridge.
- 2 Introduction to Autonomous Mobile Robots, Roland Siegwart, Illah Reza Nourbakhsh, Davide Scaramuzza, 2011, 1st Edition, MIT Press.
- 3 Planning Algorithms, S. M. LaValle, 2006, 2nd Edition, Cambridge University Press.
- 4 Principles of Robot Motion Theory, Algorithms and Implementations, H. Choset, K. M. Lynch, S. Hutchinson, , 2005, 2nd Edition, PHI.

23SDEC17E - ROBOT DESIGN AND ANALYSIS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC17E	ROBOT DESIGN AND ANALYSIS	RDA	E	0	0	6	4	4

23SDEC18A - VLSI SUBMICRON DESIGN AND VERIFICATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEC18A	VLSI SUBMICRON DESIGN AND VERIFICATION	VSDV	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply VLSI Full Custom Submicron Design	3	PO1, PSO1
CO2	Apply VLSI Semicustom Submicron Design	3	PO1, PSO1
CO3	Analyze VLSI Submicron Verification	4	PO1, PO3, PSO1
CO4	Analyze VLSI Submicron Digital IC Testing	4	PO1, PSO1

Syllabus

VLSI Full Custom Submicron Design: Technology dependent analog circuit design; Verilog-A sub-micron module integration; Periodic Steady State Analysis of Amplifiers; Frequency analysis of Amplifiers; DC/Transient (Parametric) response of analog circuits; Layout integration of submodules for full module back annotation process; Layout optimization techniques for parasitic effect reduction; Post layout IP Integration process; Spice Modeling of analog circuits; GDS II generation.

VLSI Semicustom Submicron Design: Verilog constructs: Behavioral modeling of Modules for IC design; Synthesis Process: Translation/Mapping/Optimization ; Power, Area and Timing analysis (Post Synthesis) ; Layout Design of Synthesized design: Floorplanning Process ; Power Planning Process ; Setup/Hold violation check ; Clock Tree Synthesis (CTS) ; Violation check post CTS ; GDS II generation

VLSI Submicron Verification and testing: FPGA Implementation of Digital ICs; Peripheral interfacing of FPGA; Test-bench verification using nc-verilog in cadence; Vector based testing of analog circuits.

Design of Mixed Signal VLSI Circuits, Verification of Mixed signal designs, Layout of Mixed signal designs, Backannotation of mixed signal designs, TEMPUS tool analysis for mixed signal timing analysis, MODUS tools for verification of Mixed signal designs. Hrdware dumping of Mixed signal circuits

Reference Books

- 1 CMOS VLSI Design: ACircuits and Systems Perspective, N. H. E. Weste and D. Harris,Addison Wesley, 2nd , Wiley.
- 2 Essentials of Electronic Testing for Digital, Memory and Mixed-Signal VLSI Circuits, M. Bushnell and V. Agrawal, 2nd , Wiley.
- 3 Essentials of Electronic Testing, for Digital, Memory and Mixed-Signal VLSI Circuit, Michael L. Bushnell and Vishwani D. Agrawal,, 3nd, Kluwer Academic Publishers.
- 4 Principles of Testing Electronic System, Samiha Mourad and Yervant Zorian , 2nd, Wiley.

23SDEC18E - VLSI SUBMICRON DESIGN AND VERIFICATION (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR

23SDEE01A - VISUALIZATION AND MODELING OF CIRCUITS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEE01A	VISUALIZATION AND MODELING OF CIRCUITS	VAMC	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the use of symbols,wires, components, in Auto cad Electrical drawing and perform project management	3	PO1, PO5
CO2	Analyze the workflow in Autocad Electrical with ladder diagrams and PLCs	4	PO1, PO5
CO3	Analyze Panel Layout from Electrical drawing schematics.	4	PO1, PO5
CO4	Analyze report generation from panel layouts.Draw 3D models.	4	PO1, PO5

Syllabus

AutoCAD Electrical: Basics of Electrical Drawings, Introduction to AutoCAD Electrical and Interface, project manager, Basics of Electrical Drawings- Common Symbols in Electrical Drawings, Wire and its Types, Labelling - Install and configure AutoCAD Electrical Start AutoCAD, understand components of the initial AutoCAD Electrical screen, commands, various commands to save a file, Exit AutoCAD, Create and manage workspaces, Using various options in AutoCAD help.

Workflow in AutoCAD Electrical, Starting a New Project, Changing Properties of a project, Adding drawings in the project, Inserting Components using Icon menu, Catalog Browser, User Defined list, Equipment list, Panel list, Terminal (Panel list) components. Inserting Wires, applying wire numbers, inserting user defined circuits , ladders , Cable Markers and Circuit Builders. Inserting Parametric PLCs, connectors and terminals.

Panel Layout- Create panel layouts from schematic list, create panel layouts from schematic list, Annotate and edit a footprint, insert footprints from icon menu, add a new record of footprint to the footprint lookup table.

Reports- Generate schematic and panel reports, Change the report format, Place reports in a drawing, Save reports to external files, Plot reports; AutoCAD Electrical with Inventor. Draw 3D models.

23SDEE02A - EMBEDDED SYSTEM DESIGN WITH ARM (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEE02A	EMBEDDED SYSTEM DESIGN WITH ARM	ESDA	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	DIGITAL DESIGN & COMPUTER ARCHITECTURE	DDCA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Assembly Language Programming for Arithmetic and logical problems with the ARM Cortex-M Microcontrollers	3	PO1, PO5
CO2	Apply Embed C programming for STM32F401 board to perform I/O operations, interfacing seven segment and LCD.	3	PO1, PO5
CO3	Apply Embed C Programming for sensors, actuator and communication device interfacing with STM32F401 board	3	PO1, PO5
CO4	Apply the Embed C programming to Internet of Things like Home automation system.	3	PO1, PO5

Syllabus

Introduction to embedded systems, microprocessors and microcontrollers, Architecture of ARM microcontroller, ARM instruction set.

About STM32F401 nucleo board, Embed C programming environment, Interfacing with STM32F401 board, interfacing with seven segment LED, LCD and serial port terminal application.

Interfacing STM32F401 with temperature sensor, LDR, speaker, microphone, relay, speed control of DC motor.

Introduction to IoT, GSM, Bluetooth and design of a Home Automation system.

Reference Books

- 1 Embedded System Design with Arm Cortex-M Microcontrollers Applications with C, C++ and MicroPython, Cem unsalan, Huseyin Deniz Gurhan, Mehmet Erkin Yucel, 2022, Springer .
- 2 Embedded System Design: A Unified Hardware/Software Introduction, F. Vahid and T. Givargis, 2002, Wiley India Pvt. Ltd. .

23SDEE03A - AI TECHNIQUES FOR ELECTRICAL ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEE03A	AI TECHNIQUES FOR ELECTRICAL ENGINEERING	AITFEE	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	FUNDAMENTALS OF IOT AND SENSORS	FITS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Artificial neural networks, their models, architectures, and learning paradigms (Hebbian, supervised, unsupervised, reinforcement) for pattern recognition and decision-making applications.	3	PO1
CO2	Develop the architecture and functionality of multilayer perceptrons (MLP) and implement the backpropagation algorithm, Radial Basis Function Network , Hopfield Network for training MLPs.	3	PO5
CO3	Apply basics of fuzzy logic, including the distinction between fuzzy and crisp sets, and the concept of membership functions and gain skills in designing fuzzy inference systems, including defining fuzzy rules and using inference mechanisms for decision-making.	3	PO5
CO4	Identify the principles of neuro-fuzzy systems, combining the learning capabilities of ANN with the reasoning capabilities of fuzzy logic, implement and train ANFIS for solving complex engineering problems, leveraging both neural network learning and fuzzy inference.	3	PO5

Syllabus

Artificial Neural Networks: Definition and scope of artificial neural networks. Historical background and development of ANNs. Comparison with biological neural networks. Neurons, weights, biases, activation functions. Types of activation functions: linear, sigmoid, tanh, ReLU., ANN Architecture, Hebbian Learning Introduction to Hebbian learning. Mathematical formulation and implementation. Applications and limitations. Supervised Learning Overview of supervised learning. Training and testing datasets. Error backpropagation algorithm. Gradient descent and its variants. Practical implementation of supervised learning in MLPs. Unsupervised Learning Introduction to unsupervised learning. Reinforcement Learning

ANN Paradigms: Clustering techniques: k-means, hierarchical clustering. Self-Organizing Maps (SOM). Principal Component Analysis (PCA), Multilayer Perceptron and Backpropagation Algorithm, Implementation and Application of Radial Basis Function Networks, Utilization of Hopfield Networks for Pattern Storage and Retrieval, Case studies

Fuzzy Logic: Introduction, Fuzzy versus crisp, Fuzzy sets , Membership function, Basic Fuzzy set operations, Fuzzy Inference , Fuzzy Rule based system, De-fuzzification methods, Application to Load Frequency Control.

Apply Integration of ANN and Fuzzy Logic in Neuro-Fuzzy Model, Implementation of Adaptive Neuro-Fuzzy Inference Systems (ANFIS), Application of Neuro-Fuzzy Models to Electrical Engineering Problems

23SDEE04A - AI & ML FOR SMART GRIDS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEE04A	AI & ML FOR SMART GRIDS	AIMLSG	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Utilize AI tools to optimize smart grids by enhancing real-time energy distribution, minimizing outages, forecasting demand, and improving resilience with predictive analytics and machine learning.	3	PO2, PO5
CO2	Analyze Neural Network tools for designing and evaluating solutions, ensuring optimized performance and accuracy in complex simulations. Analyze Neural Network tools for designing and evaluating solutions, ensuring optimized performance and accuracy .	4	PO5
CO3	Analyze smart grid efficiency with simulation tools to identify improvements in energy distribution and performance. Ensure optimal operation and sustainability.	4	PO5
CO4	Analyze and evaluate AI and ML algorithms for anomaly detection and fault diagnosis in smart grids. Ensure precise identification and quick resolution for enhanced reliability and efficiency	4	PO5, PSO2

Syllabus

Introduction to Smart Grid Technology, Overview of smart grid components and architecture, Smart Grid Components and Subsystems, Energy storage systems

Energy storage systems for renewable energy integration, Microgrids and their role in renewable energy integration, Data mining and machine learning techniques for smart grid data analysis, AI-based control and optimization techniques for smart grid management

AI and ML applications in renewable energy integration, Cybersecurity and ethical considerations related to AI and ML in the smart grid

Anomaly Detection Techniques: Statistical methods, machine learning algorithms, and ensemble methods. Fault Diagnosis: Pattern recognition, fault localization, and decision support systems.

Reference Books

23SDEE05A - MODELING AND SIMULATION OF GREEN ENERGY SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEE05A	MODELING AND SIMULATION OF GREEN ENERGY SYSTEMS	GML	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamentals of MATLAB to renewable energy sources	3	PO1, PO5
CO2	Analyze the characteristics of solar PV system using MATLAB.	4	PO1, PO5
CO3	Analyze the characteristics of wind energy conversion system using MATLAB.	4	PO1, PO5
CO4	Analyze the characteristics of wind and solar hybrid system system using MATLAB.	4	PO1, PO5

Syllabus

Overview of MATLAB simulation, fundamentals of solar PV and wind energy conversion system. Measurement and analysis of current-voltage (IV) characteristics of a solar PV cell. Determination of fill factor and efficiency of a solar PV cell. Effect of temperature on the output characteristics of a solar PV cell.

Solar PV System: V-I characteristics, effect of temperature, shading effect, fill factor, efficiency, irradiance impact, series and parallel connection of solar cells.

Wind Energy Conversion Systems: Power curve, effect of varying wind speeds, tip-speed ratio, impact of blade pitch angle. Determination of the tip-speed ratio of a wind turbine using MATLAB simulation and experimental validation. Study of the impact of blade pitch angle on the performance of a wind turbine.

Hybrid Energy: Simulation using MATLAB, Characteristics analysis. performance and efficiency of a hybrid energy system that combines solar PV and wind energy sources. impact of grid integration on the stability of the hybrid system, including the effects of grid faults, voltage fluctuations, and frequency deviations.

Reference Books

23SDEE05E - MODELING AND SIMULATION OF GREEN ENERGY SYSTEMS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEE05E	MODELING AND SIMULATION OF GREEN ENERGY SYSTEMS	GML	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamentals of MATLAB to renewable energy sources	3	PO1, PO5
CO2	Analyze the characteristics of solar PV system using MATLAB.	4	PO1, PO5
CO3	Analyze the characteristics of wind energy conversion system using MATLAB.	4	PO1, PO5
CO4	Analyze the characteristics of wind and solar hybrid system system using MATLAB.	4	PO1, PO5

Syllabus

Overview of MATLAB simulation, fundamentals of solar PV and wind energy conversion system.

Solar PV System: V-I characteristics, effect of temperature, shading effect, fill factor, efficiency, irradiance impact, series and parallel connection of solar cells.

Wind Energy Conversion Systems: Power curve, effect of varying wind speeds, tip-speed ratio, impact of blade pitch angle.

Analyze the characteristics of wind and solar hybrid system using MATLAB.

Reference Books

- 1 Wind Energy Explained: Theory, Design and Application, James F. Manwell, Jon G. McGowan, and Anthony L. Rogers., 2010, John Wiley & Sons..
- 2 Solar Energy Engineering: Processes and Systems, Soteris A. Kalogirou, 2013, Academic Press.
- 3 Wind Energy Handbook, Tony Burton, Nick Jenkins, David Sharpe, and Ervin Bossanyi, 2011, John Wiley & Sons.
- 4 Renewable Energy Sources, John Twidell & Toney Weir: E&F.N. Spon., 2010, Taylor & Francis New York .

23SDEE05R - MODELING AND SIMULATION OF GREEN ENERGY SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEE05R	MODELING AND SIMULATION OF GREEN ENERGY SYSTEMS	GML	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamentals of MATLAB to renewable energy sources	3	PO1, PO5
CO2	Analyze the characteristics of solar PV system using MATLAB.	4	PO1, PO5
CO3	Analyze the characteristics of wind energy conversion system using MATLAB.	4	PO1, PO5

Syllabus

Overview of MATLAB simulation, fundamentals of solar PV and wind energy conversion system.

Solar PV System: V-I characteristics, effect of temperature, shading effect, fill factor, efficiency, irradiance impact, series and parallel connection of solar cells.

Wind Energy Conversion Systems: Power curve, effect of varying wind speeds, tip-speed ratio, impact of blade pitch angle.

- 2 Solar Energy Engineering: Processes and Systems, Soteris A. Kalogirou, 2013, Academic Press.
- 3 Wind Energy Handbook, Tony Burton, Nick Jenkins, David Sharpe, and Ervin Bossanyi, 2011, John Wiley & Sons.
- 4 Renewable Energy Sources, John Twidell & Toney Weir: E&F.N. Spon., 2010, Taylor & Francis New York .

23SDEE06A - EVT HARDWARE PROTOTYPING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEE06A	EVT HARDWARE PROTOTYPING	EVTHP	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply PCB design tools for circuit design of electric vehicle hardware	3	PO1, PO5, PSO1
CO2	Apply prototyping principles to construct electric vehicle power circuits	3	PO1, PO5, PSO1
CO3	Apply prototyping principles to construct electric vehicle control circuits	3	PO1, PO5, PSO1
CO4	Apply embedded battery management systems for electric vehicle power and control circuits	3	PO1, PO5, PSO1

Syllabus

Ultiboard tool, design setup, part placement, traces and copper design, PCB calculators, auto-routing and auto-placement, preparing for assembly- gerber files-drill, cut, solder layers, PCB layout design for power circuits and control circuits.

Prototyping Power circuits - Front-end converter, Power converter, Braking, Battery power converter - PCB design, assembling, testing and calibration.

Prototyping Control circuits - Driver boards, BMS controller, Protection circuits, Display units-PCB design, assembling, testing and calibration.

Embedded BMS: Charge controller, equalizer, dynamic charge controller, cooling, monitoring IoT systems prototyping

Reference Books

- 1 Electric Vehicle Design and Prototyping, JJames E. Van Tassel, 2015, CRC Press.
- 2 Electric and Hybrid Vehicles: Design Fundamentals, Iqbal Hussain, 2018, Pearson education.
- 3 Hybrid Electric Vehicles: Principles and Applications with Practical Perspective, chris Mi, 2018, Springer.
- 4 Electric Vehicle Machines and Drives: Design, Analysis and Application, K. T. Chau, 2019, Wiley-IEEE Press.

23SDEE06E - EVT HARDWARE PROTOTYPING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEE06E	EVT HARDWARE PROTOTYPING	EVTHP	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply PCB design tools for circuit design of electric vehicle hardware	3	PO1, PO5, PSO1
CO2	Apply prototyping principles to construct electric vehicle power circuits	3	PO1, PO5, PSO1
CO3	Apply prototyping principles to construct electric vehicle control circuits	3	PO1, PO5, PSO1
CO4	Apply embedded battery management systems for electric vehicle power and control circuits	3	PO1, PO5, PSO1

Syllabus

Ultiboard tool, design setup, part placement, traces and copper design, PCB calculators, auto-routing and auto-placement, preparing for assembly- gerber files-drill, cut, solder layers, PCB layout design for power circuits and control circuits.

Prototyping Power circuits - Front-end converter, Power converter, Braking, Battery power converter - PCB design, assembling, testing and calibration.

Prototyping Control circuits - Driver boards, BMS controller, Protection circuits, Display units-PCB design, assembling, testing and calibration.

Embedded BMS: Charge controller, equalizer, dynamic charge controller, cooling, monitoring IoT systems prototyping

Reference Books

23SDEE07A - IA HARDWARE PROTOTYPING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDEE07A	IA HARDWARE PROTOTYPING	IAHP	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	FUNDAMENTALS OF IOT AND SENSORS	FITS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply signal conditioning circuit design for IoT systems	3	PO1, PO5, PSO1
CO2	Apply embedded Systems Programming for cloud and mobile application connectivity	3	PO1, PO5, PSO1
CO3	Apply PCB design practices to design Embedded Systems Layouts	3	PO1, PO5, PSO1
CO4	Develop embedded automation prototypes	3	PO1, PO5, PSO1

Syllabus

Sensors and Signal Conditioning Circuits : classification , principles, protocols ESP 32 /Node MCU features and board comparison and handling Integrating Sensors to esp32 -serial object, Magnetic Switch Module 4: Integrating Sensors to esp32- Relay, Moisture sensor

Implementation Wifi Connectivity to Google Firebase Console and functionalities, Kodular mobile application development, Integrating Embedded Board and Cloud for data visualization and analytics ,Cloud to Mobile application Data trans receiving . END to END application development Project assignment

Ultiboard tool- design setup, part placement, traces and copper design, PCB calculators, auto-routing and auto-placement, preparing for assembly- gerber files-drill, cut, solder layers, PCB layout design for power circuits and IOT modules

Prototypes: Bio-medical instruments, Energy monitoring IoT systems, drive systems, multistage systems

Reference Books

- 1 Embedded System Design with Arm Cortex-M Microcontrollers Applications with C, C++ and MicroPython, Cemnsalan, Hseyin Deniz Grhan, Mehmet Erkin Y?cel, 2022, Springer.
- 2 From Machine- to-Machine to the Internet ofThings: Introduction to a New Age of Intelligence, Jan Holler, VlasiosTsiatsis, Catherine Mulligan, Stefan Avesand,Stamatiskarnouskos, David Boyle, 2015, Academic Press.
- 3 Arm Cortex-M Microcontrollers Applications, Mehmet Erkin, 2022, Springer.
- 4 Industrial Automation: Hands On, Frank Lamb, 2022, McGraw-Hill Education.

23SDIN01A - IOT HARDWARE PROGRAMMING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDIN01A	IOT HARDWARE PROGRAMMING	IOTHP	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	FUNDAMENTALS OF IOT AND SENSORS	FITS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Able to access and implement the preliminary softwares for ESP 32 Development board	3	PO1, PO2, PSO1
CO2	Able to apply the basic concepts using raspberry Pi	3	PO1, PO2, PSO1
CO3	Able to apply the communication Protocols using Raspberry Pi	3	PO1, PO2, PSO1
CO4	Able to access the cloud database for data posting and monitoring using raspberry Pi	4	PO2, PSO2

Syllabus

ESP 32 Introduction, Pin Configuration, Features, Applications, Software and Driver Tools, Arduino IDE installation, ESP32 Boards manager package installation, GPIO, SERIAL COMMUNICATION, Posting data to cloud database

Raspberry pi Introduction, Pin Configuration, Features, Applications, Software and Driver Tools, raspberry pi OS installation, GPIO, control LEDs, Switches, motors, Actuators.

Raspberry pi Communication Protocol, Connecting Raspberry Pi to cloud platforms, uploading sensor data to the cloud, Implementing cloud-based dashboards and remote control of devices.

IoT Project Development: Designing and implementing IoT projects using Raspberry Pi, integrating sensors, actuators, and communication protocols, Testing, debugging, and deploying IoT applications. Home Automation using Raspberry Pi, Distributed Computing Cluster

Reference Books

- 1 Getting Started With Raspberry Pi - Getting to Know the Inexpensive ARM-Powered Linux Computer, Matt Richardson, Shawn Wallace, and Wolfram Donat, 4(Grayscale Indian Edition), Shroff Publishers.
- 2 Raspberry Pi Cookbook, Simon Monk, 1, O'Reilly Media.
- 3 Exploring Raspberry Pi, Derek Molloy, 2, Wiley.
- 4 Internet of Things: A hands-on Approach, A.Bahga and V.Madisetti, 2, University Press.

23SDIN03A - IOT FULL STACK DEVELOPMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDIN03A	IOT FULL STACK DEVELOPMENT	IOTSDF	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	IOT HARDWARE PROGRAMMING	IOTHP	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply foundational Node-Red concepts to create structured and semantic front-end elements for IoT applications.	3	PO1, PO5
CO2	Apply HTML and CSS styling techniques to design visually appealing and responsive user interfaces for IoT-based interfaces.	3	PO1, PO5
CO3	Develop scripts and applications to collect and process data from IoT sensors and devices, providing real-time updates to the front-end.	3	PO1, PO5
CO4	Apply API Integration and NPM (Node Package Manager) libraries for IOT Applications	3	PO1, PO5, PO9, PSO1

Syllabus

:Node Red: Introduction, Structure, Objectives, Technical Requirements, Operating System, Cloning the code, Node, Node Red in brief, Installation in the Host OS, Node Architecture in brief. HTML: Introduction to HTML, HTML Documents, Basic structure of an HTML document, Creating an HTML document, Mark up Tags, Heading-Paragraphs, Line Breaks, HTML Tags. Introduction to elements of HTML, Working with Text, Working with Lists, Tables and Frames, Working with Hyperlinks, Images and Multimedia,

Working with Forms and controls, Concept of CSS, Creating Style Sheet, CSS Properties. Javascript: Introduction to Javascript, Objects, Primitives Operations and Expressions, Control Statements, Arrays, Functions, Constructors, Pattern Matching using Regular Expressions.

React Js: Introduction to React Js, Node, Node Package Manager (NPM), installation of React Js,

Comparision between HTML, CSS, Javascript with React Js, Components ,Variables and properties of React Js.Hooks: Introduction to Hooks , Importance of Hooks,Rules of Hooks,Concepts of Hooks. Node Js: Introduction Node Js, how to use js, API Integration and NPM (Node Package Manager) libraries, .Introduction MySQL.

23SDIN04A - CLOUD COMPUTING FOR IOT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDIN04A	CLOUD COMPUTING FOR IOT	IOTPD	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	IOT SYSTEM DESIGN	IOTPA	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of cloud computing services , deployment models, enabling technology ,Cloud-based IoT platforms	3	PO1, PO2, PSO1
CO2	Apply different cloud infrastructures virtualization and storage in different virtualization	3	PO1, PO2, PSO1
CO3	Analyze the different case studies on healthcare, agriculture and parking system	3	PO1, PO2, PO3, PSO1
CO4	Recognize emerging trends in IoT and cloud computing, including the impact of 5G technology.	4	PO1, PO4, PO5, PSO1

Syllabus

Introduction to cloud computing: Responsibility models, Characteristics, cloud model, consumption-based models, deployment models, benefits of cloud services, Cloud service types: IaaS, PaaS, SaaS Cloud Deployment models, Cloud enabling Technology, Cloud Architectures. Role of cloud computing in IoT, Cloud-based IoT platforms and frameworks.

Overview of ARM and RISC Design Philosophy, concept of ARM cortex M-series Microcontroller, Advanced Microcontroller Bus Architecture, Understanding the concept of HAL library and its role in embedded c programming, GPIO programming with external devices (LED, 1 Switch, Motor control) using HAL, Configuring ADC registers,

Security and Privacy in Cloud-based IoT: Security considerations for Raspberry Pi and cloud integration, Authentication and encryption techniques, Privacy concerns and data protection in cloud environments. Scalability and Performance Optimization: Scaling Raspberry Pi-based IoT applications in the cloud, Load balancing and resource allocation, Performance monitoring and optimization techniques improving performance through load balancing, system and storage redundancy. Intergrace between IoT Devices and IoT-based Clouds.

Trends in IoT and Cloud Computing Impact of 5G on IoT and Cloud Future Research Directions and Innovations

Reference Books

CO2	Apply different cloud infrastructures virtualization and storage in different virtualization	3	PO1, PO2, PSO1
CO3	Analyze the different case studies on healthcare, agriculture and parking system	3	PO1, PO2, PO3, PSO1
CO4	Recognize emerging trends in IoT and cloud computing, including the impact of 5G technology.	4	PO1, PSO1

Syllabus

Introduction to cloud computing: Responsibility models, Characteristics, cloud model, consumption-based models, deployment models, benefits of cloud services, Cloud service types: IaaS, PaaS, SaaS Cloud Deployment models, Cloud enabling Technology, Cloud Architectures. Role of cloud computing in IoT, Cloud-based IoT platforms and frameworks.

Overview of ARM and RISC Design Philosophy, concept of ARM cortex M-series Microcontroller, Advanced Microcontroller Bus Architecture, Understanding the concept of HAL library and its role in embedded c programming, GPIO programming with external devices (LED, 1 Switch, Motor control) using HAL, Configuring ADC registers,

Security and Privacy in Cloud-based IoT: Security considerations for Raspberry Pi and cloud integration, Authentication and encryption techniques, Privacy concerns and data protection in cloud environments. Scalability and Performance Optimization: Scaling Raspberry Pi-based IoT applications in the cloud, Load balancing and resource allocation, Performance monitoring and optimization techniques improving performance through load balancing, system and storage redundancy. Intergrace between IoT Devices and IoT-based Clouds.

Trends in IoT and Cloud Computing Impact of 5G on IoT and Cloud Future Research Directions and Innovations

23SDIN05A - IOT ANALYTICS FOR THE CLOUD (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDIN05A	IOT ANALYTICS FOR THE CLOUD	IOTAC	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	CLOUD COMPUTING FOR IOT	CCIoT	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying IoT principles with cloud computing technologies.	3	PO2, PO3, PO5, PSO1
CO2	Explore various IoT data sources and formats	4	PO2, PO3, PO5, PSO1
CO3	Analyze data pre processing techniques for IoT data	4	PO2, PO3, PO5, PSO1
CO4	Evaluate cloud-based analytics tools and platforms for IoT data analysis.	5	PO2, PO3, PO5, PSO1
CO5	Evaluate real-time and batch analytics on IoT data streams.	5	PO2, PO3, PO5, PSO1
CO6	Evaluate machine learning and AI techniques for predictive analytics in IoT	5	PO2, PO3, PO5, PSO1

Syllabus

Introduction to IoT Analytics and Cloud Computing Overview of IoT and its applications Introduction to cloud computing and its role in IoT analytics Challenges and opportunities in IoT data analytics

IoT Data Sources and Formats Types of IoT data sources (sensors, devices, etc.) Understanding IoT data formats (structured, semi-structured, unstructured) Data acquisition and ingestion strategies

Data Preprocessing for IoT Data Data cleaning, filtering, and normalization techniques Handling missing data and outliers Feature engineering for IoT analytics

Cloud-based Analytics Tools and Platforms Overview of cloud-based analytics services (AWS IoT Analytics, Azure IoT Hub, Google Cloud IoT Core) Hands-on exploration of IoT analytics platforms

Real-time Analytics on IoT Data Streams Introduction to stream processing frameworks (Apache Kafka, Apache Flink) Building real-time analytics pipelines for IoT data

Batch Analytics on Historical IoT Data Introduction to big data processing frameworks (Apache Hadoop, Apache Spark) Performing batch analytics on historical IoT data

IoT Security Best Practices Security challenges in IoT Implementing secure communication (e.g., TLS/SSL) Device authentication and authorization

Designing End-to-End IoT Solutions Architecture design considerations Integrating multiple cloud services Best practices for deployment

Prerequisite

S#	Course Title	Acronym	Rule
1	FUNDAMENTALS OF IOT AND SENSORS	FITS	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Development of Embedded applications using Embedded C	2	PO2, PO3, PSO1
CO2	Interfacing of sensors for with microcontrollers that facilitates Embedded applications development.	3	PO2, PO3, PO5, PSO1
CO3	Internet of Things (IoT) fundamentals , IoT and embedded system architectures	3	PO2, PO3, PO5, PSO1
CO4	Embedded System/ Product Design with ARM Microcontrollers/ARM SoCs, IoT Application Development etc.	3	PO2, PO3, PO5, PSO1

Syllabus

Introduction to embedded systems, Application areas and categories of embedded systems, Overview of embedded system architecture, Specialties and trends in embedded systems, Development and debugging Tools.

Introduction to Embedded protocols - USART/I2C/SPI and USB. Comparison of these protocols.

Overview of IoT hardware platforms, Introduction to various IoT Standards, Peripheral Programming with Arduino/NODEMCU. Python programming for Raspberry Pi and interfaces.

A real world Industry problem involving Embedded or IoT System Design using state of the art industry standard tools and practices.

23SDME01A - VISUALIZATION AND MODELLING FOR ENGINEERING DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDME01A	VISUALIZATION AND MODELLING FOR ENGINEERING DESIGN	VMED	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	ENGINEERING GRAPHICS	EG	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concepts of Orthographic projection to Generate the views and sectioning.	3	PO1, PO5, PSO1
CO2	Prepare the assembly drawing of engine parts, machine Components both in conventional form and then by using software.	3	PO1, PO5, PSO1
CO3	Generate detail drawings of individual parts of an assembled machine Component both in conventional form and then by using software.	3	PO1, PO5, PSO1
CO4	Generate Production Drawings by considering Limits, tolerances and fits, Surface roughness .	3	PO1, PO5, PSO1

Syllabus

Review: Orthographic projection, missing lines, Interpolation of views and sectioning Specification of materials: Engineering materials, code designation of steels, copper, and aluminium and its alloys.

ASSEMBLY DRAWINGS: Introduction, stuffing box, screw jack, Lathe tailstock, gate valve, steam engine cross head.

PART DRAWINGS: I C Engine connecting rod, Single Tool Post, spark plug, safety Valves etc Production drawing: Introduction to developing and reading of production drawing of simple machine elements like helical gear, bevel gear, flange, pinion shaft, connecting rod, crank shaft, belt pulley, piston details etc, idea about tool drawing.

Limits, tolerances and fits: Introduction, limit systems, tolerance, fits drawing exercises. Surface roughness: Introduction, surface roughness, machining symbols, identification of surface roughness drawing exercises. Computer aided drawing: Introduction, input, output devices, introduction to drafting software like Creo/ Solidworks, basic commands and development of simple 2D and 3D drawings.

23SDME02A	COMPUTER INTEGRATED MANUFACTURING	CIDM	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	MANUFACTURING PROCESSES	MP	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Model pathways using CAD, manufacturing fundamentals, and integration tools/software.	3	PO1, PO2, PSO2
CO2	Develop CNC part programs demonstrating knowledge of NC machines, CNC principles, and basic concepts.	3	PO1, PO2, PSO2
CO3	Apply NC part programming for turning, milling, and drilling with CNC Train Software simulations.	3	PO1, PO4, PSO2
CO4	Execute CNC experiments using CAM software for hands-on path generation and program creation.	4	PO1, PO2, PSO2

Syllabus

Basic concepts of CAD / CAM and their integration tools/software

Basic concepts concepts and working principles of NC Machines and CNC Programming in machining

CNC Part programming for Turning, Milling and Drilling operations and simulation on CNC Train Software

Path generation and building of part programs using CAM Softwares, Hands on training on CNC machines

Reference Books

- 1 Automation Production Systems & Computer Integrated manufacturing , Mikell P. Groover , 3rd, 2008, Prentice Hall of India, New Delhi .

23SDME03A - FINITE ELEMENT ANALYSIS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDME03A	FINITE ELEMENT ANALYSIS	FEA	A	0	0	6	4	4

Prerequisite

S#	Course Title	Acronym	Rule
1	ADVANCED STRENGTH OF MATERIALS	ASM	-

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Perform basic and advanced structural analysis of engineering components	4	PO2, PO5
CO2	Explore advanced analysis methods in engineering design.	4	PO2, PO5
CO3	Create and improve models for design optimization.	4	PO2, PO5
CO4	Design a finite element analysis project demonstrating advanced mechanical engineering skills	5	PO2, PO5

Syllabus

Introduction to Ansys workbench, Adding material properties, meshing methods and mesh controls, basic analysis procedure, Structural analysis of a block, Linear and Non linear Structural analysis

parameter management for efficient design exploration, applying remote boundary conditions to simulate real-world scenarios, and performing dynamic analyses such as modal, harmonic, and fatigue analysis.

Hypermesh overview: Generating mid surface and analysing, To prepare a model from concept and analyse further to improve the design, Develop a functional prototype

Introduction to CFD, cell zone & Boundary conditions, solver settings, turbulence modelling, Fluid flow in Mixing chamber

Syllabus

Introduction to Ansys workbench, Adding material properties, meshing methods and mesh controls, basic analysis procedure, Structural analysis of a block, Linear and Non linear Structural analysis ANSYS Workbench is a comprehensive simulation platform for engineering analysis. It integrates various modules for structural, thermal, and fluid dynamics simulations. Users can create models, define material properties, set up boundary conditions, and run simulations within a unified environment. The platform supports linear and nonlinear analysis, dynamic simulations, and design optimization. The intuitive interface simplifies model setup and result interpretation.

parameter management for efficient design exploration, applying remote boundary conditions to simulate real-world scenarios, and performing dynamic analyses such as modal, harmonic, and fatigue analysis.

Hypermesh overview: Generating mid surface and analysing, To prepare a model from concept and analyse further to improve the design

23SDME04A - ANALYSIS OF ENERGY SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDME04A	ANALYSIS OF ENERGY SYSTEMS	AES	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Simulate and Analyze the performance of various types of heat exchangers	4	PO1, PO5
CO2	Analyze the performance of various thermal energy storage devices	4	PO1, PO5
CO3	Model and simulation of thermal management of electronic components	4	PO1, PO5
CO4	Simulate multi-phase flows	4	PO1, PO5
CO5	Analysis of combustion process in IC engines	4	PO1, PO5

Syllabus

Tube in Tube, Shell and tube, Plate type heat exchangers. Nano fluids, heat transfer enhancement mechanisms in heat exchangers

Sensible heat storage, Latent heat storage devices. Simulation of melting and solidification of PCMs

Battery cooling techniques: Air cooling, liquid cooling and cooling through phase change

Liquid liquid, Gas- liquid, liquid-solid flows

Simulation of combustion process, optimization of various design parameters on combustion in IC engines

23SDME05A - 3D MODELLING AND DIGITAL PROTOTYPING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDME05A	3D MODELLING AND DIGITAL PROTOTYPING	3DMDP	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Perform 3D modelling of engineering components	4	PO1, PO5, PSO1
CO2	Perform analysis and simulation of a finite element model	4	PO1, PO5, PSO1
CO3	Design and execute a fully functional prototype	5	PO1, PO5, PSO1
CO4	Analysis of Engineering problems using Hypermesh optistruct solver	4	PO1, PO5, PSO1

Syllabus

3D modelling of engineering components To perform 3D modeling of engineering components, start by creating a detailed CAD model using software like SolidWorks or AutoCAD. Define the component's geometry, including all critical features and dimensions. Apply appropriate material properties and assign specific attributes to each part. Use meshing tools to create a finite element mesh, refining areas that require higher accuracy. Implement boundary conditions and loads to simulate real-world operating conditions. Finally, run simulations and analyze the results to optimize the design for performance and manufacturability.

Conversion of geometric model to finite element model, analysis and simulation of a finite element model To perform analysis and simulation of a finite element model, import the CAD geometry into FEA software and generate a finite element mesh. Assign material properties and define boundary conditions and loads to represent real-world scenarios. Solve the model using the appropriate solver to compute displacements, stresses, and strains. Analyze the results to identify critical areas and potential failure points. Refine the mesh and iterate the analysis as needed for improved accuracy. Finally, validate the results with experimental data or theoretical predictions to ensure reliability.

To prepare a model from concept and analyse further to improve the design, Develop a functional prototype To design and execute a fully functional prototype, start with conceptual design by creating initial sketches and CAD models. Develop detailed 3D models and select appropriate materials and manufacturing processes. Create the prototype using rapid prototyping techniques like 3D printing or CNC machining. Conduct functional tests to validate performance and gather data. Refine the design based on test results, iterating the prototyping and testing as needed. Perform final validation with comprehensive testing to ensure the prototype meets all requirements and document the process.

1D beam analysis and 2D plate with hole analysis in Hypermesh Optistruct solver Prepare the Model: Import or create the geometry and clean it up in Hypermesh. Mesh the Geometry: Generate a finite element mesh with appropriate elements and density. Define Materials: Assign material properties to the model components. Apply Conditions: Set boundary conditions and loads to simulate real-world scenarios. Run Analysis: Use OptiStruct to solve for displacements, stresses, and other parameters. Review Results: Analyze the results in HyperView and make necessary optimizations.

23SDME05E - 3D MODELLING AND DIGITAL PROTOTYPING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDME05E	3D MODELLING AND DIGITAL PROTOTYPING	3DMDP	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Perform 3D modelling of engineering components	3	PO1, PO5, PSO1
CO2	Perform analysis and simulation of a finite element model	3	PO1, PO5, PSO1
CO3	Design and execute a fully functional prototype	3	PO1, PO5, PSO1
CO4	Analysis of Engineering problems using Hypermesh optistruct solver	3	PO1, PO5, PSO1

Syllabus

3D modeling of engineering components involves creating a digital representation of physical objects using three-dimensional geometry. This process is essential for designing, analyzing, and manufacturing components across various industries, including automotive, aerospace, civil engineering, and consumer products. 3D models provide a detailed and accurate depiction of components, facilitating simulations, prototyping, and production.

The conversion of a geometric model to a finite element model, followed by analysis and simulation, is a systematic and iterative process. Each stage requires careful consideration to ensure accurate and reliable results. By combining advanced computational techniques with engineering judgment, FEM enables the design and analysis of complex structures, leading to safer and more efficient engineering solutions.

Developing a functional prototype from a conceptual model involves a thorough process of design, analysis, optimization, and testing. By following a structured approach, you ensure that the prototype not only meets its functional requirements but is also optimized for performance and manufacturability. This iterative process is crucial for creating a successful product that can be efficiently brought to market.

Performing a 1D beam analysis and a 2D plate with a hole analysis using Hypermesh and OptiStruct involves several steps.

CO2	Perform analysis and simulation of a finite element model	4	PO1, PO5, PSO1
CO3	Design and execute a fully functional prototype	5	PO1, PO5, PSO1

Syllabus

3D modeling of engineering components involves creating a digital representation of physical objects using three-dimensional geometry. This process is essential for designing, analyzing, and manufacturing components across various industries, including automotive, aerospace, civil engineering, and consumer products. 3D models provide a detailed and accurate depiction of components, facilitating simulations, prototyping, and production.

Converting a geometric model to a finite element model (FEM) involves several steps to prepare the model for numerical analysis. The finite element method (FEM) is used to analyze complex structures by dividing them into smaller, simpler elements.

Preparing a model from concept, analyzing it to improve the design, and developing a functional prototype involves a systematic approach that includes conceptual design, geometry preparation, finite element modeling, simulation, and prototype development. By iterating through design and analysis, engineers can refine their models, address issues, and optimize performance. Developing a functional prototype provides a tangible representation of the design, allowing for real-world testing and validation before full-scale production.

23SDME06A - GEOMETRIC DIMENSIONING AND TOLERANCING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDME06A	GEOMETRIC DIMENSIONING AND TOLERANCING	GDAT	A	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand GD&T applications, benefits, key terms, and practical advantages in engineering and manufacturing.	2	PO1, PO3, PSO1
CO2	Practice creating industrial drawings to develop skills for interpreting technical specifications in manufacturing and design.	3	PO1, PO3, PSO1
CO3	Calculating tolerance values ensures precision in generating industrial drawings for manufacturing and design.	3	PO1, PO3, PSO1
CO4	Case studies on industrial drawings with GD&T symbols offer practical insights into design and manufacturing standards.	2	PO1, PO3, PSO1

Syllabus

Calculation involves determining the limits and fits of tolerances specified in standards, ensuring components fit and function correctly within defined parameters.

Interpretation involves understanding and applying GD&T symbols within industrial drawings, ensuring precise communication of design requirements for manufacturing and assembly processes.

Calculation involves deriving various tolerance values from GD&T drawings and using specialized software to create industrial drawings incorporating GD&T symbols accurately.

Study involves examining the interpretation and practical application of GD&T symbols within industrial drawings for precise engineering specifications and manufacturing processes.

23ABT3101A - BIOSENSORS AND BIOELECTRONICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ABT3101A	BIOSENSORS AND BIOELECTRONICS	BSBE	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying the fundamental principles of electrochemistry, biophysics, and materials science to the design and operation of biosensors involves leveraging the unique aspects of these disciplines to create devices that can detect biological molecules with high sensitivity and specificity.	3	PO1
CO2	Analyzing the performance characteristics of biosensors is essential to understanding their effectiveness and applicability in various fields, such as medical diagnostics, environmental monitoring, and food safety.	4	PO2
CO3	Designing and fabricating simple biosensors for the detection of specific biomolecules involves several steps, including choosing the right materials, developing a detection mechanism, and ensuring the system's sensitivity and specificity.	6	PO1
CO4	Critically evaluating biosensing techniques reveals their unique strengths and limitations, impacting their effectiveness in medical diagnostics, environmental monitoring, food safety, and biotechnology.	4	PO1
CO5	Applying biosensors in healthcare, environmental monitoring, and food safety represents a shift towards proactive, precision-driven approaches that enhance efficiency, decision-making, and outcomes in these critical areas.	3	PO2
CO6	Effectively communicating the principles and applications of biosensors in both written and oral formats requires a comprehensive understanding of the technology along with the ability to convey complex scientific concepts clearly and succinctly to diverse audiences.	5	PO2
CO7	Demonstrating an understanding of the ethical considerations associated with biosensor development and deployment involves recognizing the complex interplay between technological advancements, societal impact, and ethical responsibilities.	4	PO5

Syllabus

Definition and Classification: Overview of biosensors, types based on biorecognition elements and transduction principles. Historical Development and Milestones: Evolution of biosensor technology and key advancements. Applications: Diverse applications in healthcare, environmental monitoring, food safety, and biotechnology. Ethical and Regulatory Considerations: Privacy, data security, informed consent, and regulatory frameworks.

Basic Biochemical Principles: Redox reactions, enzyme kinetics, and biomolecular interactions relevant to biosensor operation. Electrochemical Techniques: Principles of potentiometry, amperometry, and impedance spectroscopy. Optical Techniques: Introduction to fluorescence, absorption spectroscopy, and surface plasmon resonance (SPR). Piezoelectric and Magnetic Techniques: Basics of piezoelectricity and magnetic sensors in biosensing.

Antibodies: Structure, function, and applications in immunosensors. Enzymes: Types, mechanisms, immobilization techniques, and enzymatic biosensor applications. Aptamers: Selection, properties, and aptasensor applications in diagnostics and therapeutics. Nucleic Acids: DNA/RNA biosensors, PCR-based biosensing, and applications in genetic analysis.

Electrochemical Transducers: Working principles, electrode materials, and applications in glucose monitoring, pH sensing, and environmental monitoring. Optical Transducers: SPR, fluorescence-based sensors, and colorimetric assays in biosensing applications. Piezoelectric Transducers: Principles, materials, and applications in biosensors and bioelectronics. Integration of Transducers: Multimodal biosensing approaches and sensor arrays.

Nanotechnology in Biosensors: Nanomaterials (nanoparticles, nanotubes) and their applications in enhancing sensor performance. Microfluidics and Lab-on-a-Chip: Integration of biosensors with microfluidic devices for miniaturization and point-of-care applications. Wireless Biosensors: IoT integration, wearable biosensors, and real-time data transmission in healthcare monitoring.

Clinical Diagnostics: Disease biomarkers, point-of-care testing, and biosensor technologies in clinical laboratories.

Therapeutic Monitoring: Drug monitoring, personalized medicine, and biosensors in therapeutic drug management.

Implantable Biosensors: Bioelectronics for continuous monitoring of physiological parameters and feedback systems.

Environmental Monitoring: Detection of pollutants, pathogens, and toxins using biosensors in air, water, and soil.

Food Safety: Detection of contaminants, allergens, and pathogens in food products using biosensors.

Bioprocess Monitoring: Biosensors in biotechnology and industrial processes for process control and quality assurance.

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying the fundamental principles of electrochemistry, biophysics, and materials science to the design and operation of biosensors involves leveraging the unique aspects of these disciplines to create devices that can detect biological molecules with high sensitivity and specificity.	3	PO1
CO2	Analyzing the performance characteristics of biosensors is essential to understanding their effectiveness and applicability in various fields, such as medical diagnostics, environmental monitoring, and food safety.	4	PO2
CO3	Designing and fabricating simple biosensors for the detection of specific biomolecules involves several steps, including choosing the right materials, developing a detection mechanism, and ensuring the system's sensitivity and specificity.	6	PO1
CO4	Critically evaluating biosensing techniques reveals their unique strengths and limitations, impacting their effectiveness in medical diagnostics, environmental monitoring, food safety, and biotechnology.	4	PO1
CO5	Applying biosensors in healthcare, environmental monitoring, and food safety represents a shift towards proactive, precision-driven approaches that enhance efficiency, decision-making, and outcomes in these critical areas.	3	PO2
CO6	Demonstrating an understanding of the ethical considerations associated with biosensor development and deployment involves recognizing the complex interplay between technological advancements, societal impact, and ethical responsibilities.	4	PO2

Syllabus

Definition and Classification: Overview of biosensors, types based on biorecognition elements and transduction principles. Historical Development and Milestones: Evolution of biosensor technology and key advancements. Applications: Diverse applications in healthcare, environmental monitoring, food safety, and biotechnology. Ethical and Regulatory Considerations: Privacy, data security, informed consent, and regulatory frameworks., enzymes, aptamers, nucleic acids Transducers: Electrochemical, optical, piezoelectric

BioBasic Biochemical Principles: Redox reactions, enzyme kinetics, and biomolecular interactions relevant to biosensor operation. Electrochemical Techniques: Principles of potentiometry, amperometry, and impedance spectroscopy. Optical Techniques: Introduction to fluorescence, absorption spectroscopy, and surface plasmon resonance (SPR). Piezoelectric and Magnetic Techniques: Basics of piezoelectricity and magnetic sensors in biosensing.

Electrochemical biosensors: EnzymAntibodies: Structure, function, and applications in immunosensors. Enzymes: Types, mechanisms, immobilization techniques, and enzymatic biosensor applications. Aptamers: Selection, properties, and aptasensor applications in diagnostics and therapeutics. Nucleic Acids: DNA/RNA biosensors, PCR-based biosensing, and applications in genetic analysis.

Biocompatible materials for biosensorElectrochemical Transducers: Working principles, electrode materials, and applications in glucose monitoring, pH sensing, and environmental monitoring. Optical Transducers: SPR, fluorescence-based sensors, and colorimetric assays in biosensing applications. Piezoelectric Transducers: Principles, materials, and applications in biosensors and bioelectronics. Integration of Transducers: Multimodal biosensing approaches and sensor arrays.

Biosensors in Nanotechnology in Biosensors: Nanomaterials (nanoparticles, nanotubes) and their applications in enhancing sensor performance. Microfluidics and Lab-on-a-Chip: Integration of biosensors with microfluidic devices for miniaturization and point-of-care applications. Wireless Biosensors: IoT integration, wearable biosensors, and real-time data transmission in healthcare monitoring.

Clinical Diagnostics: Disease biomarkers, point-of-care testing, and biosensor technologies in clinical laboratories.

Therapeutic Monitoring: Drug monitoring, personalized medicine, and biosensors in therapeutic drug management.

Implantable Biosensors: Bioelectronics for continuous monitoring of physiological parameters and feedback systems.

23ABT3202A - IOT APPLICATIONS IN PRECISION AGRICULTURE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ABT3202A	IOT APPLICATIONS IN PRECISION AGRICULTURE	IOTAPA	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the fundamental concepts of IoT (Internet of Things) and its applications in precision agriculture involves exploring how interconnected devices and sensors can revolutionize farming practices.	2	PO1
CO2	Analyzing various IoT sensors and data acquisition systems relevant to agriculture involves understanding the diverse range of sensors used to collect data from fields, crops, livestock, and environmental conditions.	4	PO3
CO3	Applying the principles of the Internet of Things (IoT) to precision agriculture involves creating sophisticated sensor networks and developing effective data management strategies.	3	PO3
CO4	Evaluate the impact of IoT on agricultural data collection, analysis, and decision-making is profound. By enabling precise data collection, sophisticated analysis, and informed decision-making, IoT technologies are transforming agriculture into a more efficient, productive, and sustainable industry	5	PO3
CO5	Developing a deployment strategy for an Internet of Things (IoT) system aimed at addressing plant disease in precision agriculture involves a comprehensive approach that integrates advanced technology, robust data analysis, and effective implementation practices.	6	PO3

Syllabus

Introduction to IoT and Precision Agriculture: Fundamentals of IoT (Internet of Things), sensors, actuators, and communication protocols, Introduction to precision agriculture and its goals, Applications of IoT in various aspects of precision agriculture (e. g., soil monitoring, irrigation management, crop health)

IoT Sensors for Precision Agriculture: Sensors for measuring environmental parameters (temperature, humidity, light) relevant to agriculture, Soil sensors for moisture, nutrient content, and pH monitoring, Plant sensors for monitoring growth, stress, and health, Communication technologies for IoT in agriculture (e.g., Bluetooth, Wi-Fi, cellular). Network reliability and data integrity. Techniques for reducing data transmission power consumption.

Introduction to IoT in Agriculture Overview of IoT and its significance in agriculture. Current trends and future prospects of IoT in the agricultural sector. Case studies of IoT applications in various agricultural practices. Fundamentals of IoT Sensor Networks Types of sensors used in agriculture (e.g., soil moisture, temperature, humidity, pH). Basics of wireless sensor networks (WSNs). Sensor network topologies and communication protocols. Designing Scalable IoT Sensor Networks, Principles of scalability in IoT networks. Designing network architecture for large-scale agricultural deployments. Challenges and solutions in scaling IoT networks. Power Management in IoT Sensor Networks Importance of power management in IoT devices. Low-power communication protocols and technologies (e.g., Zigbee, LoRa, NB-IoT). Energy harvesting techniques and power optimization strategies.

Overview of precision agriculture and its benefits. Role of IoT in precision agriculture. Types of IoT devices and sensors used in agriculture, Types of sensors used in agriculture (e.g., soil moisture, temperature, humidity, pH). Basics of wireless sensor networks (WSNs). Sensor network topologies and communication protocols, Principles of scalability in IoT networks. Designing network architecture for large-scale agricultural deployments. Challenges and solutions in scaling IoT networks, Importance of power management in IoT devices. Low-power communication protocols and technologies (e.g., Zigbee, LoRa, NB-IoT). Energy harvesting techniques and power optimization strategies, Methods of data acquisition from IoT sensors. Real-time vs. periodic data collection. Handling and preprocessing of sensor data, Communication technologies for IoT in agriculture (e.g., Bluetooth, Wi-Fi, cellular). Network reliability and data integrity. Techniques for reducing data transmission power consumption, Data storage solutions (e.g., cloud storage, edge computing). Data management platforms and software. Ensuring data security and privacy in IoT networks, Techniques for analyzing IoT sensor data (e.g., statistical analysis, machine learning). Using data analytics to support agricultural decision-making. Visualization tools and dashboards for presenting data insights.

Advanced Topics in IoT for Precision Agriculture: Emerging trends in IoT technologies for agriculture (e.g., artificial intelligence, drones), In-depth analysis of successful IoT implementations in agriculture. Hands-on project: Design and deploy a small-scale IoT sensor network for a specific agricultural application, Challenges in IoT deployment in agriculture (e.g., connectivity, cost, environmental factors). Emerging technologies and future trends in IoT for agriculture. Ethical and environmental considerations in IoT deployment, Methods of data acquisition from IoT sensors. Real-time vs. periodic data collection. Handling and preprocessing of sensor data.

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts of machine learning and their specific applications in precision agriculture, emphasizing the practical benefits and real-world impact of these technologies.	2	PO2
CO2	Analyze the various machine learning algorithms relevant to agricultural data analysis	4	PO2
CO3	Apply the machine learning techniques for tasks like yield prediction, disease detection, and stress monitoring in agricultural data	3	PO3
CO4	Evaluate the performance of machine learning models for precision agriculture applications	5	PO3
CO5	Create a machine learning model to address a specific challenge in precision agriculture	6	PO5

Syllabus

Introduction to Machine Learning and Precision Agriculture: Fundamentals of machine learning, supervised and unsupervised learning algorithms, Introduction to precision agriculture and its data-driven approach, Applications of machine learning in various aspects of precision agriculture (e. g., yield prediction, soil fertility analysis, crop health monitoring)

Machine Learning Algorithms for Agricultural Data: Regression analysis for yield prediction and crop growth modeling, Classification algorithms for disease detection, weed identification, and crop type classification, Introduction to cloud services (AWS, Google Cloud, Azure) Using cloud-based tools for model training and deployment, Integrating machine learning models with IoT systems Real-time data analysis and decision-making, Data privacy and security in agriculture Ethical implications of machine learning in farming Future trends and emerging technologies

Data Preprocessing and Model Building for Agriculture: Data acquisition methods and agricultural data formats (e. g., sensor data, satellite imagery), Data preprocessing techniques for agricultural data (cleaning, handling missing values, feature engineering), Data cleaning and handling missing values Data normalization and standardization Feature selection and engineering, Data visualization techniques (histograms, scatter plots, box plots) Identifying patterns and trends in agricultural data Statistical summaries and insights

Advanced Machine Learning Techniques for Agriculture: Deep learning models for image analysis in agriculture (e. g., disease detection using convolutional neural networks), Basic concepts and terminology Types of machine learning (supervised, unsupervised, reinforcement), Applications and case studies Impact on productivity and sustainability, Types of agricultural data (sensor data, weather data, satellite imagery) Data collection methods, Data cleaning and handling missing values Data normalization and standardization Feature selection and engineering, Data visualization techniques (histograms, scatter plots, box plots) Identifying patterns and trends in agricultural data Statistical summaries and insights

Machine Learning Integration for Precision Agriculture Solutions : Integration of machine learning models with IoT and agricultural decision support systems (DSS), Introduction to Python libraries (Pandas, NumPy, Matplotlib, Seaborn) Hands-on exercises with real agricultural datasets, Logistic regression Support Vector Machines (SVM) Naive Bayes, Yield prediction Disease detection and classification Soil health monitoring, Performance metrics (RMSE, MAE, accuracy, precision, recall) Cross-validation and model tuning

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ABT3304A	IMAGE PROCESSING FOR AGRICULTURAL APPLICATIONS	IPAA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts of digital image processing and its applications in agriculture	2	PO2
CO2	Analyze the various image processing techniques for tasks like segmentation, feature extraction, and classification in agricultural images	4	PO2
CO3	Apply the image processing techniques to analyze agricultural images for tasks like crop health monitoring, weed detection, and yield estimation	3	PO2
CO4	Evaluate the performance of image processing algorithms for specific agricultural applications	5	PO5
CO5	Develop an image processing solution to overcome the hurdle of plant growth in agricultural image analysis	6	PO5
CO6	Communicate the results of image processing analysis effectively, using visualizations and technical reports, for agricultural stakeholders	4	PO5
CO7	Design and execute image processing projects for agricultural applications	6	PO5

Syllabus

Introduction to Digital Image Processing and Agriculture: Fundamentals of digital image processing (DIP) concepts (pixels, color models, image representation), Overview of Image Processing Definition and key concepts Importance of image processing in various fields Fundamentals of Digital Images Image formation and representation Pixels, resolution, and color spaces (RGB, HSV, grayscale) Applications in Agriculture Importance and benefits of image processing in agriculture Case studies and examples (e.g., crop monitoring, disease detection, yield estimation) Tools and Software Introduction to image processing libraries (OpenCV, PIL, Scikit-image) Setting up the development environment

Image Preprocessing for Agricultural Applications: Image segmentation techniques for separating objects of interest (crops, weeds) from background, Image Acquisition Techniques Types of imaging devices (cameras, drones, satellites) Factors affecting image quality (lighting, angle, resolution) Image Preprocessing Image enhancement techniques (histogram equalization, contrast adjustment) Noise reduction (filtering, smoothing) Image transformation (scaling, rotation, cropping) Color and Intensity Transformations Color space conversions (RGB to grayscale, HSV) Thresholding and binarization Hands-on Exercises Acquiring images using different devices Preprocessing images for further analysis

Feature Extraction and Classification in Agricultural Images: Feature extraction techniques for capturing relevant information from agricultural images (color features, texture features), Feature Extraction Key concepts and importance of feature extraction Techniques for feature extraction (edges, corners, textures) Using feature descriptors (SIFT, SURF, ORB) Image Segmentation Importance of segmentation in image analysis Threshold-based segmentation Region-based segmentation (region growing, watershed) Edge-based segmentation (Canny edge detection, Hough transform) Advanced segmentation techniques (semantic segmentation, U-Net) Applications in Agriculture Segmentation for crop and weed identification Feature extraction for disease detection and classification Hands-on Exercises Extracting features from agricultural images Implementing segmentation algorithms on real datasets

Advanced Image Processing Techniques for Agriculture: Deep learning for object detection and segmentation in agricultural images (e. g., You Only Look Once - YOLO), Image Classification Basic concepts and importance of image classification Classical methods (KNN, SVM) and deep learning methods (CNN) Training and evaluating image classification models Object Detection Introduction to object detection and its importance Techniques for object detection (sliding window, region proposals) Deep learning methods for object detection (YOLO, SSD, Faster R-CNN) Applications in Agriculture Classification of crop types and diseases Object detection for pest identification and monitoring Hands-on Exercises Building and training image classification models Implementing object detection algorithms on agricultural datasets

Image Processing Applications in Precision Agriculture: Integration of image processing with other precision agriculture technologies (e. g., IoT sensors, UAVs) , Challenges and considerations for deploying image processing solutions in real-world agriculture (e. g., data storage, computational resources), Integrating Image Processing with IoT Combining image processing with sensor data for precision agriculture Real-time image analysis using IoT devices Advanced Applications Remote sensing and satellite image analysis for large-scale agriculture UAVs and drones for crop monitoring and management Building Decision Support Systems Using image processing for real-time decision making in agriculture Developing dashboards and visualization tools Ethical and Practical Considerations Data privacy and security in image processing Ethical implications of using image processing in agriculture Future Trends and Emerging Technologies Innovations in image processing and their potential impact on agriculture Exploring AI and machine learning advancements in image processing

Design and execute image processing projects for agricultural applications, Overview of Image Processing Definition and key concepts Importance of image processing in various fields Fundamentals of Digital Images Image formation and representation Pixels, resolution, and color spaces (RGB, HSV, grayscale) Applications in Agriculture Importance and benefits of image processing in agriculture Case studies and examples (e.g., crop monitoring, disease detection, yield estimation) Tools and Software Introduction to image processing libraries (OpenCV, PIL, Scikit-image) Setting up the development environment

Image Classification for Crop Identification: Principles of image classification, Supervised and unsupervised classification algorithms, Hands-on session: Implementing crop identification using machine learning classifiers, Integration of Remote Sensing Data, Utilizing remote sensing data (e.g., satellite imagery, multispectral data) in agricultural image processing, Hands-on session: Integrating remote sensing data with image processing techniques

CO7	Design and execute image processing projects for agricultural applications	6	PO5

Syllabus

Introduction to Digital Image Processing and Agriculture: Fundamentals of digital image processing (DIP) concepts (pixels, color models, image representation), Overview of Image Processing Definition and key concepts Importance of image processing in various fields Fundamentals of Digital Images Image formation and representation Pixels, resolution, and color spaces (RGB, HSV, grayscale) Applications in Agriculture Importance and benefits of image processing in agriculture Case studies and examples (e.g., crop monitoring, disease detection, yield estimation) Tools and Software Introduction to image processing libraries (OpenCV, PIL, Scikit-image) Setting up the development environment

Image Preprocessing for Agricultural Applications: Image segmentation techniques for separating objects of interest (crops, weeds) from background, Image Acquisition Techniques Types of imaging devices (cameras, drones, satellites) Factors affecting image quality (lighting, angle, resolution) Image Preprocessing Image enhancement techniques (histogram equalization, contrast adjustment) Noise reduction (filtering, smoothing) Image transformation (scaling, rotation, cropping) Color and Intensity Transformations Color space conversions (RGB to grayscale, HSV) Thresholding and binarization Hands-on Exercises Acquiring images using different devices Preprocessing images for further analysis

Feature Extraction and Classification in Agricultural Images: Feature extraction techniques for capturing relevant information from agricultural images (color features, texture features), Feature Extraction Key concepts and importance of feature extraction Techniques for feature extraction (edges, corners, textures) Using feature descriptors (SIFT, SURF, ORB) Image Segmentation Importance of segmentation in image analysis Threshold-based segmentation Region-based segmentation (region growing, watershed) Edge-based segmentation (Canny edge detection, Hough transform) Advanced segmentation techniques (semantic segmentation, U-Net) Applications in Agriculture Segmentation for crop and weed identification Feature extraction for disease detection and classification Hands-on Exercises Extracting features from agricultural images Implementing segmentation algorithms on real datasets

Advanced Image Processing Techniques for Agriculture: Deep learning for object detection and segmentation in agricultural images (e. g., You Only Look Once - YOLO), Image Classification Basic concepts and importance of image classification Classical methods (KNN, SVM) and deep learning methods (CNN) Training and evaluating image classification models Object Detection Introduction to object detection and its importance Techniques for object detection (sliding window, region proposals) Deep learning methods for object detection (YOLO, SSD, Faster R-CNN) Applications in Agriculture Classification of crop types and diseases Object detection for pest identification and monitoring Hands-on Exercises Building and training image classification models Implementing object detection algorithms on agricultural datasets

Image Processing Applications in Precision Agriculture: Integration of image processing with other precision agriculture technologies (e. g., IoT sensors, UAVs) , Challenges and considerations for deploying image processing solutions in real-world agriculture (e. g., data storage, computational resources), Integrating Image Processing with IoT Combining image processing with sensor data for precision agriculture Real-time image analysis using IoT devices Advanced Applications Remote sensing and satellite image analysis for large-scale agriculture UAVs and drones for crop monitoring and management Building Decision Support Systems Using image processing for real-time decision making in agriculture Developing dashboards and visualization tools Ethical and Practical Considerations Data privacy and security in image processing Ethical implications of using image processing in agriculture Future Trends and Emerging Technologies Innovations in image processing and their potential impact on agriculture Exploring AI and machine learning advancements in image processing

Design and execute image processing projects for agricultural applications, Overview of Image Processing Definition and key concepts Importance of image processing in various fields Fundamentals of Digital Images Image formation and representation Pixels, resolution, and color spaces (RGB, HSV, grayscale) Applications in Agriculture Importance and benefits of image processing in agriculture Case studies and examples (e.g., crop monitoring, disease detection, yield estimation) Tools and Software Introduction to image processing libraries (OpenCV, PIL, Scikit-image) Setting up the development environment

Image Classification for Crop Identification: Principles of image classification, Supervised and unsupervised classification algorithms, Hands-on session: Implementing crop identification using machine learning classifiers, Integration of Remote Sensing Data, Utilizing remote sensing data (e.g., satellite imagery, multispectral data) in agricultural image processing, Hands-on session: Integrating remote sensing data with image processing techniques

23ABT3304R - IMAGE PROCESSING FOR AGRICULTURAL APPLICATIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ABT3304R	IMAGE PROCESSING FOR AGRICULTURAL APPLICATIONS	IPAA	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts of digital image processing and its applications in agriculture	2	PO2
CO2	Analyze the various image processing techniques for tasks like segmentation, feature extraction, and classification in agricultural images	4	PO2
CO3	Apply image processing techniques to analyze agricultural images for tasks like crop health monitoring, weed detection, and yield estimation	3	PO2
CO4	Evaluate the performance of image processing algorithms for specific agricultural applications	5	PO5
CO5	Develop an image processing solution to overcome the hurdle of plant growth in agricultural image analysis	6	PO5
CO6	Communicate the results of image processing analysis effectively, using visualizations and technical reports, for agricultural stakeholders	4	PO5

Syllabus

Introduction to IoT and Precision Agriculture: Fundamentals of IoT (Internet of Things), sensors, actuators, and communication protocols, Introduction to precision agriculture and its goals, Applications of IoT in various aspects of precision agriculture (e. g., soil monitoring, irrigation management, crop health)

IoT Sensors for Precision Agriculture: Sensors for measuring environmental parameters (temperature, humidity, light) relevant to agriculture, Soil sensors for moisture, nutrient content, and pH monitoring, Plant sensors for monitoring growth, stress, and health, Communication technologies for IoT in agriculture (e.g., Bluetooth, Wi-Fi, cellular). Network reliability and data integrity. Techniques for reducing data transmission power consumption.

Introduction to IoT in Agriculture Overview of IoT and its significance in agriculture. Current trends and future prospects of IoT in the agricultural sector. Case studies of IoT applications in various agricultural practices. Fundamentals of IoT Sensor Networks Types of sensors used in agriculture (e.g., soil moisture, temperature, humidity, pH). Basics of wireless sensor networks (WSNs). Sensor network topologies and communication protocols. Designing Scalable IoT Sensor Networks, Principles of scalability in IoT networks. Designing network architecture for large-scale agricultural deployments. Challenges and solutions in scaling IoT networks. Power Management in IoT Sensor Networks Importance of power management in IoT devices. Low-power communication protocols and technologies (e.g., Zigbee, LoRa, NB-IoT). Energy harvesting techniques and power optimization strategies.

Overview of precision agriculture and its benefits. Role of IoT in precision agriculture. Types of IoT devices and sensors used in agriculture, Types of sensors used in agriculture (e.g., soil moisture, temperature, humidity, pH). Basics of wireless sensor networks (WSNs). Sensor network topologies and communication protocols, Principles of scalability in IoT networks. Designing network architecture for large-scale agricultural deployments. Challenges and solutions in scaling IoT networks, Importance of power management in IoT devices. Low-power communication protocols and technologies (e.g., Zigbee, LoRa, NB-IoT). Energy harvesting techniques and power optimization strategies, Methods of data acquisition from IoT sensors. Real-time vs. periodic data collection. Handling and preprocessing of sensor data, Communication technologies for IoT in agriculture (e.g., Bluetooth, Wi-Fi, cellular). Network reliability and data integrity. Techniques for reducing data transmission power consumption, Data storage solutions (e.g., cloud storage, edge computing). Data management platforms and software. Ensuring data security and privacy in IoT networks, Techniques for analyzing IoT sensor data (e.g., statistical analysis, machine learning). Using data analytics to support agricultural decision-making. Visualization tools and dashboards for presenting data insights.

Advanced Topics in IoT for Precision Agriculture: Emerging trends in IoT technologies for agriculture (e. g., artificial intelligence, drones), In-depth analysis of successful IoT implementations in agriculture. Hands-on project: Design and deploy a small-scale IoT sensor network for a specific agricultural application, Challenges in IoT deployment in agriculture (e.g., connectivity, cost, environmental factors). Emerging technologies and future trends in IoT for agriculture. Ethical and environmental considerations in IoT deployment, Methods of data acquisition from IoT sensors. Real-time vs. periodic data collection. Handling and preprocessing of sensor data.

Interpret the results of their image processing analysis (e.g., disease detection rates, yield estimates) Visualize their findings using appropriate charts, graphs, and image overlays Write technical reports that explain the methodology, results, and implications of their image processing work for agricultural stakeholders who may not have a strong technical background (e.g., farmers, agricultural extension agents)

23ABT3405M - BIOINSTRUMENTATION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ABT3405M	BIOINSTRUMENTATION	BIM	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental principles of various bioinstrumentation techniques and their applications in biological research	2	PO2
CO2	Analyze the operational characteristics and limitations of common bioinstrumentation tools	4	PO2
CO3	Apply the bioinstrumentation techniques for sample preparation, data acquisition, and analysis in biological experiments	3	PO3
CO4	Evaluate the suitability of different bioinstrumentation methods for specific biological research questions	5	PO3
CO5	Design a protocol for resolving frequent bioinstrumentation problems.	6	PO5

Syllabus

Introduction to Bioinstrumentation: Fundamentals of bioinstrumentation and its role in biological research, Different categories of bioinstruments based on function (microscopy, spectroscopy, etc.), Introduction to biosensors and their applications in biodetection, Bioinstrumentation safety practices and regulations

Microscopic Techniques in Bioinstrumentation: Principles of light microscopy, brightfield, darkfield, and fluorescence microscopy, Electron microscopy (SEM, TEM) for high-resolution imaging of biological structures. Advanced microscopy techniques (confocal microscopy, super-resolution microscopy)

Spectroscopic Techniques in Bioinstrumentation: Principles of UV-visible spectroscopy and its applications in biomolecule quantification, Fluorescence spectroscopy and its applications in studying biomolecular interactions, Introduction to mass spectrometry for protein and biomolecule identification

Bioinstrumentation for Physiological Measurements: Electrocardiogram (ECG) and electroencephalogram (EEG) for recording electrical activity, Biosensors for measuring biomolecules like glucose and electrolytes, Bioinstrumentation for studying biomolecular interactions (e. g., surface plasmon resonance)

Advanced Bioinstrumentation Techniques: Introduction to flow cytometry for cell analysis and sorting, Principles of DNA sequencing and its applications in genomics, Emerging trends in bioinstrumentation

Reference Books

- 1 Bioinstrumentation: Principles and Applications, John G. Webster, Gary A. MacKenzie, and Elizabeth A. Carr, 6, Taylor & Francis.
- 2 Principles of Biomedical Engineering, Donald L. Barr, 6, Academic Press.
- 3 Flow Cytometry and Cell Sorting, Andreas Radbruch, Jochen G. Hengartner, Philipp Miltenyi, and Andreas Radbruch, 3, Academic Press.
- 4 Next-Generation Sequencing Technologies, Lincoln C. Tai, David Ruan, Zhaohui Cheng, Yuanfang Li, and Chanfeng Lin, 4, Springer.

23ABT3406M - DATA ACQUISITION AND COMMUNICATION SYSTEMS FOR AGRICULTURE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ABT3406M	DATA ACQUISITION AND COMMUNICATION SYSTEMS FOR AGRICULTURE	DACSA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental principles of data acquisition systems and their applications in agriculture	2	PO2
CO2	Analyze sensor technologies for collecting agricultural data (environmental, soil, plant)	4	PO2
CO3	Apply data acquisition systems and communication protocols for agricultural monitoring and automation	3	PO3
CO4	Evaluate the performance and limitations of data acquisition systems for agricultural applications	5	PO3

Syllabus

Introduction to Data Acquisition Systems: Fundamentals of data acquisition systems (DAQ) and their components (sensors, transducers, data loggers), Applications of DAQ systems in precision agriculture, environmental monitoring, and resource management

Sensor Technologies for Agricultural Data Collection: Sensors for measuring environmental parameters (temperature, humidity, light) , Soil sensors for moisture, nutrient content, and pH monitoring, Plant sensors for monitoring growth, stress, and health

Data Acquisition System Design and Implementation: Designing DAQ systems for different agricultural applications (considering sensor types, power requirements), Data acquisition software and configuration for agricultural monitoring , Communication protocols for data transmission (wireless, internet of things - IoT)

Data Management and Analysis for Agriculture: Data storage and management for agricultural data collected from DAQ systems , Data visualization and analysis techniques for agricultural applications, Integration of DAQ systems with agricultural decision-support systems (DSS)

Reference Books

- 1 Precision Agriculture Technologies for Food Security and Sustainability, Jhuberli Pereira de Souza, 1, Springer.
- 2 Wireless Sensor Networks for Agriculture and Environmental Monitoring , Gast?n Ch?vez-Garc?a and Luis Humberto Guti?rrez-N?poles, 1, Springer.
- 3 Data Acquisition and Processing for Sensor Networks: Irrigation and Greenhouse Automation, Leo Kluth and Michael O'Connell, 1, Springer.
- 4 Big Data in Agriculture: A Challenge for Computer Science, Ioana Cristina Mirea - Muntean, Vasile Cristea, and Jo?o Manuel R. S. Tavares, 1, Springer.

23ABT3507 - MICROFLUIDICS FOR AGRICULTURAL APPLICATIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ABT3507	MICROFLUIDICS FOR AGRICULTURAL APPLICATIONS	MAP	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental principles of microfluidics and its advantages for agricultural applications	2	PO2
CO2	Analyze the design and operation of microfluidic devices for specific agricultural applications	4	PO2
CO3	Apply microfluidic techniques for plant and soil analysis, pathogen detection, and precision agriculture	3	PO3, PO4
CO4	Evaluate the potential and limitations of microfluidics for agricultural research and development	5	PO3, PO4

Syllabus

Introduction to Microfluidics and its Applications: Fundamentals of microfluidics, miniaturization, and lab-on-a-chip (LOC) concepts, Introduction to different microfluidic components and fabrication methods

Microfluidic Devices for Plant and Soil Analysis: Microfluidic devices for plant disease diagnosis, pathogen detection, Biosensing applications in microfluidics for measuring plant nutrients and metabolites

Microfluidics for Precision Agriculture: Microfluidic-based controlled environment agriculture (CEA) systems, Applications in precision irrigation and fertilizer delivery using microfluidics, Microfluidic devices for high-throughput plant phenotyping and stress monitoring

Advanced Microfluidic Techniques and Applications: Integration of microfluidics with other technologies (e. g., microarrays, PCR), Microfluidic platforms for single-cell analysis and manipulation in plant science, Emerging trends and future directions of microfluidics in agricultural research

Reference Books

- 1 Microfluidics for Food, Agriculture and Biosystems Industries, Suresh Kumar and Satyender Kumar, 1, Elsevier.
- 2 Lab-on-a-Chip for Food Science and Technology, Patrick Wen-hwa Chung and Wen-fang Dong, 1, Academic Press.
- 3 Microfluidics and Nanofluidics: Theory and Applications, Richard B. Fair and Aaron D. Stroock, 1, Cambridge University Press.
- 4 Precision Agriculture Technologies for Food Security and Sustainability, Jhuberli Pereira de Souza, 1, Springer.

23ABT3508 - BIOINFORMATICS FOR AGRICULTURE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ABT3508	BIOINFORMATICS FOR AGRICULTURE	BIA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts of bioinformatics and their applications in agriculture	2	PO2, PO5
CO2	Analyze the biological data relevant to agriculture using bioinformatics tools	4	PO2, PO3, PO5
CO3	Apply bioinformatics techniques for crop improvement, disease resistance analysis, and marker-assisted selection	3	PO2, PO3, PO5
CO4	Evaluate the potential and limitations of bioinformatics approaches in agricultural research	5	PO5

Syllabus

Introduction to Bioinformatics and Agriculture: Overview of bioinformatics and its role in agriculture Introduction to biological databases relevant to agriculture (e.g., genomic databases, protein databases) Basics of sequence analysis and genome annotation techniques Applications of bioinformatics in crop improvement, pest management, and agricultural sustainability

Biological Data Analysis with Bioinformatics Tools: Sequence analysis tools for DNA, RNA, and protein sequences (e.g., BLAST, gene prediction), Principles of genome sequencing technologies (e.g., next-generation sequencing, nanopore sequencing) Genome assembly algorithms and techniques Genome annotation methods for identifying genes, regulatory elements, and functional elements in agricultural species Case studies on genome sequencing and assembly in crop plants and livestock

Bioinformatics for Crop Improvement: Marker-assisted selection (MAS) and applications in breeding programs, Introduction to transcriptomics and gene expression analysis RNA sequencing (RNA-seq) techniques and data analysis workflows Differential gene expression analysis in response to abiotic and biotic stresses Functional annotation of transcripts and identification of key regulatory pathways in agricultural species

Advanced Bioinformatics Applications in Agriculture: Gene editing techniques (CRISPR) and their potential for crop improvement, Comparative genomics approaches for studying genetic variation and evolution in agricultural species Phylogenetic analysis and molecular evolution techniques Identification of conserved genomic regions and gene families relevant to agriculture Applications of comparative genomics in crop breeding, conservation biology, and evolutionary studies

Reference Books

- 1 Bioinformatics for Agriculture: Principles and Applications , R. Keshavachandran, 1, IK International Publishing House.
- 2 Introduction to Bioinformatics, Arthur Lesk , 4, Oxford University Press.
- 3 Plant Bioinformatics , David J. Mackill and Robert N. Bennett , 2, Springer.
- 4 Next-Generation Sequencing Data Analysis: A Practical Guide, Illumina , 2, Self-Published.

23ACI3101A - GENERATIVE ADVERSARIAL NETWORKS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACI3101A	GENERATIVE ADVERSARIAL NETWORKS	GANS	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the theoretical foundations of Generative Adversarial Networks (GANs).	2	PO1, PO2, PSO2
CO2	Implement basic and advanced GAN architectures.	3	PO1, PO3, PSO1
CO3	Apply appropriate training techniques to train GAN models effectively.	3	PO2, PO3, PSO1
CO4	Examine the performance of GAN models using appropriate metrics	4	PO2, PSO2
CO5	Classify applications of GANs in image generation, data augmentation, and domain adaptation.	2	PO1, PSO2
CO6	Examine the implementation of GAN technology.	4	PO1, PSO2
CO7	Develop the GAN model using appropriate frameworks and libraries.	5	PO11, PSO1

Syllabus

Introduction to Generative Adversarial Networks - Overview of GANs; Historical context and development: Early Development, Evolution and Advancements; Basic architecture and components: Generator, Discriminator, Training Process

GAN Training Techniques - Adversarial training process; Loss functions in GANs: Original GAN Loss, Non-Saturating GAN Loss, Least Squares GAN (LSGAN) Loss, Wasserstein GAN (WGAN) Loss, Wasserstein GAN with Gradient Penalty (WGAN-GP) Loss; Regularization techniques: Gradient Penalty, Spectral Normalization, Batch Normalization, Dropout, Label Smoothing, Feature Matching, Noise Injection, Instance Noise

Advanced GAN Architectures - Conditional GANs: Conditioning Information, Architecture, Loss Functions, Applications; Wasserstein GANs: Wasserstein Distance, Loss Functions, Weight Clipping, Wasserstein GAN with Gradient Penalty (WGAN-GP); Self-Attention GANs: Self-Attention Mechanism, Attention Layers, Architecture, Applications; Progressive GANs: Progressive Growing, Training Process, Architecture, Benefits, Applications

Evaluation of GAN Models - Performance metrics: Purpose, Common Metrics, Inception Score: Definition, Computation, Interpretation, Limitations; Frechet Inception Distance: Definition, Computation, Interpretation, Advantages; Perceptual Path Length: Definition, Computation, Interpretation, Applications

Applications of GANs - Image generation: Unconditional Image Generation, Conditional Image Generation, High-Resolution Image Generation; Data augmentation: Enhancing Training Datasets, Domain-Specific Augmentation; Style transfer: Artistic Style Transfer, Real-Time Style Transfer, Semantic Style Transfer; Domain adaptation: Unsupervised Domain Adaptation, Image-to-Image Translation, Multi-Domain Adaptation

23ACI3202A - EXPLAINABLE AI AND COMMUNICATIONS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACI3202A	EXPLAINABLE AI AND COMMUNICATIONS	EAIC	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate a comprehensive understanding of the fundamental principles and concepts of explainable AI, including the importance of transparency, interpretability, and trust in AI systems.	2	PO1, PO3, PO4, PSO2
CO2	Identify and apply various techniques and methods for making AI models explainable, such as feature importance, model simplification, visualization methods, and rule-based systems	3	PO1, PO3, PO4, PSO2
CO3	Evaluate Critically evaluate the explainability of different AI models using standard metrics and frameworks.	4	PO1, PO3, PO4, PSO2
CO4	Develop effective communication skills to articulate complex AI concepts and explanations to diverse audiences, including technical and non-technical stakeholders.	3	PO1, PO3, PO4, PSO2
CO5	Analyze the ethical and societal implications of AI systems and the necessity for explainability in promoting ethical AI practices.	4	PO1, PO3, PO4, PSO2

Syllabus

Definition and importance of Explainable AI. - Historical context and evolution of AI explainability. - Key stakeholders and their needs in AI explanations. -Case studies demonstrating the need for XAI.

Definition and importance of Explainable AI. - Historical context and evolution of AI explainability. - Key stakeholders and their needs in AI explanations. - Case studies demonstrating the need for XAI.

Intrinsically interpretable models (decision trees, linear models, rule-based systems). - Advantages and limitations of simple models. - Case studies of intrinsically interpretable models in use.

Model-agnostic explanation methods: LIME, SHAP. - Model-specific explanation methods. - Visualization techniques: heatmaps, partial dependence plots, and feature importance. - Hands-on exercises with LIME and SHAP.

Model-agnostic explanation methods: LIME, SHAP. - Model-specific explanation methods. - Visualization techniques: heatmaps, partial dependence plots, and feature importance. - Hands-on exercises with LIME and SHAP.

23ACI3202R - EXPLAINABLE AI AND COMMUNICATIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACI3202R	EXPLAINABLE AI AND COMMUNICATIONS	EAIC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate a comprehensive understanding of the fundamental principles and concepts of explainable AI, including the importance of transparency, interpretability, and trust in AI systems	2	PO1, PO3, PO4, PSO2
CO2	Identify and apply various techniques and methods for making AI models explainable, such as feature importance, model simplification, visualization methods, and rule-based systems	3	PO1, PO3, PO4, PSO2
CO3	Evaluate Critically evaluate the explainability of different AI models using standard metrics and frameworks	4	PO1, PO3, PO4, PSO2
CO4	Develop effective communication skills to articulate complex AI concepts and explanations to diverse audiences, including technical and non-technical stakeholders	3	PO1, PO3, PO4, PSO2

Syllabus

Definition and importance of Explainable AI. - Historical context and evolution of AI explainability. - Key stakeholders and their needs in AI explanations. -Case studies demonstrating the need for XAI.

Definition and importance of Explainable AI. - Historical context and evolution of AI explainability. - Key stakeholders and their needs in AI explanations. - Case studies demonstrating the need for XAI.

Intrinsically interpretable models (decision trees, linear models, rule-based systems). - Advantages and limitations of simple models. - Case studies of intrinsically interpretable models in use.

Model-agnostic explanation methods: LIME, SHAP. - Model-specific explanation methods. - Visualization techniques: heatmaps, partial dependence plots, and feature importance. - Hands-on exercises with LIME and SHAP.

23ACI3303A - FUZZY LOGIC WITH SET THEORY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACI3303A	FUZZY LOGIC WITH SET THEORY	FLST	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand basic knowledge of the fuzzy sets, operations and their properties.	2	PO1, PO2, PO8, PSO1
CO2	Understand the fundamental concepts of Fuzzy functions and Fuzzy logic	2	PO1, PO2, PO8, PSO1
CO3	Apply the concepts of Fuzzy sets in image processing, pattern reorganization and decision making.	3	PO1, PO2, PO8, PSO1
CO4	Analyze the concepts of Fuzzy logic in image processing.	4	PO2, PO3, PO8, PSO1
CO5	Explain the applications of fuzzy systems	2	PO2, PO3, PO8, PSO1
CO6	Apply the fuzzy sets and relations logic and systems	3	PO2, PO3, PO8, PSO1
CO7	Apply fuzzy logic with set theory operations	3	PO2, PO3, PO8, PSO1

Syllabus

Basic concepts of fuzzy set t norm t conorms Membership function alpha cut Algebra of fuzzy sets Distance between fuzzy sets Fuzzy relation

Fuzzy numbers Arithmetic operations of fuzzy numbers Extension principle Interval arithmetic Defuzzification

Fuzzy valued functions Fuzzy equations fuzzy inequalities system of fuzzy linear equations Maximum and minimum of fuzzy functions

Classical Logic Multi valued Logics Fuzzy Propositions Fuzzy Quantifiers

Linguistic hedges Inference from conditional Fuzzy proposition

23ACI3404M - HEURISTIC ALGORITHMS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACI3404M	HEURISTIC ALGORITHMS	HAG	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the Foundations of Heuristic Algorithms the basic characteristics of engineering design optimization models, including the definition of design variables, objectives, and constraints	2	PO1, PO2, PO6, PSO2
CO2	Applying Heuristic Methods to Solve Optimization Problems, mathematical optimization methods for linear and nonlinear functions of several variables with or without constraints determine solutions and whether the global optimum is guaranteed.	3	PO1, PO2, PO6, PSO2
CO3	Analyzing Performance of Heuristic Algorithms n mathematical optimization models (LP, IP, NLP, MILP, and MINLP) for a variety of engineering design problems using the AMPL modeling language.	4	PO1, PO3, PO6, PSO2
CO4	Analyzing Custom Heuristic Solutions for Complex Problems Solve problem models using existing software programs and critique the near-optimal or optimal solution obtained.	4	PO1, PO3, PO6, PSO2

Syllabus

Introduction to Heuristic Algorithms: Understanding what heuristic algorithms are and their role in problem-solving. Differentiating between exact and heuristic algorithms. Solution Initialization Module This module generates initial candidate solutions. These can be random or based on some heuristic. Components: Random Initialization: Generates random solutions within the feasible space. Heuristic Initialization: Uses domain-specific knowledge to create a good starting point. Feasibility Check: Ensures that generated solutions meet the constraints.

Solution Initialization Module This module generates initial candidate solutions. These can be random or based on some heuristic. Components: Random Initialization: Generates random solutions within the feasible space. Heuristic Initialization: Uses domain-specific knowledge to create a good starting point. Feasibility Check: Ensures that generated solutions meet the constraints. Solution Evaluation Module This module assesses the quality of each candidate solution using the objective function. Components: Fitness Function: Calculates how good each solution is based on the objective function. Penalty Function: Applies penalties to solutions that violate constraints. Ranking and Selection: Ranks solutions based on their fitness scores.

Solution Improvement Module This module iteratively improves the candidate solutions. Techniques such as local search, genetic operators, or other heuristic methods are applied. Components: Local Search: Fine-tunes solutions by exploring neighboring solutions. Mutation and Crossover: Used in genetic algorithms to combine and modify solutions. Simulated Annealing: Probabilistic technique to escape local optima by allowing worse solutions temporarily.

Advanced Applications and Case Studies Topics: Real-World Applications Scheduling Problems Network Optimization Machine Learning Feature Selection Case Studies Industry-Specific Applications Performance Analysis and Benchmarking Future Directions Emerging Trends in Heuristics Integration with Machine Learning and AI

23ACI3405M - SWARM INTELLIGENCE APPROACHES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACI3405M	SWARM INTELLIGENCE APPROACHES	SIA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand, formulate and assess problems in evolutionary computation and swarm intelligence.	2	PO1, PO2, PSO1
CO2	Evaluate the strengths and weaknesses of alternative approaches to evolutionary and swarm-based methods.	2	PO1, PO2, PSO2
CO3	Determine and analyze the key commonalities and differences in various evolutionary and swarm-based models.	3	PO1, PO2, PSO2
CO4	Analyse advance techniques in evolutionary computation and swarm intelligence on problems such as optimization, automatic programming, control, machine learning, and modeling. Develop a proposal for an extended research project.	4	PO2, PO3, PO4, PSO2

Syllabus

Evolutionary Algorithms, Different Components of Evolutionary Algorithms. Differences of Swarm intelligence from EAs. Finding problems in which these techniques are needed, say TSP & those where non-machine learning optimization method are enough. How to frame problem with a particular approach in mind.

Comparing the alternative approaches from the computational point, i.e. representation and search. Latter comprises: (a) Size of search space, (b) Feature space. The latter concerns: Curse of dimensionality, constraint of minimum training data size needed.

Factors include rate of convergence, reliability (considering the changing conditions or input variable values), optimality for numerical optimization, time & space complexity based on search space reduction and associated benefits.

Analyse advance techniques in evolutionary computation and swarm intelligence on problems such as optimization, automatic programming, control, machine learning, and modeling.

23ACI3506 - DATA MANIPULATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACI3506	DATA MANIPULATION	DMP	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret various data manipulation operations such as filtering, sorting, and aggregating to extract meaningful insights from raw datasets	2	PO1, PO2, PSO2
CO2	Apply data manipulation techniques using relevant software tools and programming languages such as Python, R, or SQL to manipulate real-world datasets.	3	PO1, PO2, PSO2
CO3	Evaluate different approaches to data manipulation and select the most appropriate methods based on the characteristics and objectives of the dataset.	3	PO1, PO2, PSO2
CO4	Analyze the impact of data manipulation on the quality, accuracy, and reliability of data for downstream analysis and decision-making processes.	4	PO1, PO2, PSO2

Syllabus

Introduction to data manipulation concepts and importance in data analysis Understanding data types, data structures, and data formats, Basic data cleaning techniques: handling missing values, outliers, and duplicates, Techniques for data transformation: reshaping, merging, and pivoting datasets Introduction to regular expressions for text manipulation Case studies and hands-on exercises using Python pandas library

Filtering datasets based on conditions and criteria Sorting dataframes by column values Advanced filtering techniques: chaining conditions, using boolean indexing, Understanding aggregation functions: sum, mean, median, etc. Grouping data by categories or variables Applying aggregation functions to grouped dataframes

Overview of SQL language and its applications Writing SQL queries to retrieve, filter, and sort data from databases Performing basic data manipulation tasks using SQL: joining tables, subqueries, etc, Aggregating data in SQL: using GROUP BY and aggregate functions Modifying data in SQL: INSERT, UPDATE, DELETE operations Case studies and practical exercises using SQL in real-world scenarios

Understanding the ethical implications of data manipulation Identifying biases and privacy concerns in data manipulation processes Strategies for ensuring fairness, transparency, and accountability in data manipulation, Best practices for data manipulation workflows and documentation Exploring emerging trends and technologies in data manipulation Final project presentations and discussions on the role of data manipulation in data science and analytics

23ACI3507 - REINFORCEMENT LEARNING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACI3507	REINFORCEMENT LEARNING	RLG	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Discuss basic and advanced reinforcement learning techniques.	2	PO1, PO3, PO4, PSO1
CO2	Demonstrate suitable learning tasks to which these learning techniques can be applied.	3	PO1, PO2, PO3, PSO1
CO3	Analyze some of the current limitations of reinforcement learning techniques.	4	PO2, PO3, PO4, PSO2
CO4	Formulate decision problems, set up and run computational experiments, evaluation of results from experiments.	5	PO2, PO3, PO4, PSO2

Syllabus

Reinforcement learning framework, Bandit problems, Advanced Bandit Algorithms, action selection, Policy Gradient Methods

Dynamic programming, Markov Decision Processes (MDPs), Monte Carlo methods, Monte Carlo Control, Temporal-difference learning, Temporal-Difference Control

Planning in RL, Model-Based Planning Methods, Function approximation for generalization, Advanced Function Approximation Techniques, Actor-critic and gradient-based optimization

Multi-agent reinforcement learning, Multi-Agent Learning Paradigms, Value-Based Methods in MARL, Environments with partial observability, Value-Based Methods for POMDPs

23ACI3508 - EVOLUTIONARY COMPUTATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACI3508	EVOLUTIONARY COMPUTATION	ECP	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the history and fundamental concepts of Evolutionary Computation, including Genetic Algorithms and Evolutionary Strategies, and will be able to apply these techniques to solve real-world problems in engineering, finance, bioinformatics, and robotics through practical assignments and projects.	2	PO1, PO2, PO8, PSO2
CO2	Describe the principles of Genetic Algorithms (GAs), including representation, selection, crossover, mutation, and termination, grasp advanced topics like multi-objective optimization and parallel GAs,	2	PO1, PO2, PO8, PSO2
CO3	Apply Evolutionary Strategies (ES) and Evolutionary Programming (EP), with various Evolutionary Algorithms (EAs) including Genetic Algorithms and Genetic Programming, and apply these techniques to practical problems in diverse fields through project-based learning.	3	PO2, PO4, PO8, PSO2
CO4	Analyze Genetic Programming (GP) and various evolutionary techniques, including representation, initialization, and genetic operators, and apply tree-based GP, grammatical evolution, differential evolution (DE), Particle Swarm Optimization (PSO), and Ant Colony Optimization (ACO) to solve diverse optimization problems	4	PO2, PO4, PO8, PSO2

Syllabus

This module introduces Evolutionary Computation, exploring its history, fundamental concepts, and various types like Genetic Algorithms and Evolutionary Strategies. Students will learn about populations, individuals, and fitness functions, and apply these techniques to real-world problems in engineering, finance, bioinformatics, and robotics through practical assignments and projects.

This module covers Genetic Algorithms (GAs), including representation, initialization, selection, crossover, mutation, and termination. It explores fitness scaling, selection mechanisms like roulette wheel and tournament selection, and parameter tuning. Advanced topics include multi-objective optimization, parallel GAs, and niching techniques, with practical applications and project-based learning.

This module explores Evolutionary Strategies (ES) and Evolutionary Programming (EP), detailing types of Evolutionary Algorithms (EAs) such as Genetic Algorithms and Genetic Programming. It covers applications of Evolutionary Computation, comparing ES and EP with GAs, and their practical uses in various fields through project-based learning.

This module introduces Genetic Programming (GP) and other evolutionary techniques, including representation, initialization, and genetic operators. It covers tree-based GP, grammatical evolution, differential evolution (DE), and swarm intelligence algorithms like Particle Swarm Optimization (PSO) and Ant Colony Optimization (ACO), with applications in various optimization problems.

23ADE3101A - EDGE COMPUTING FUNDAMENTALS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ADE3101A	EDGE COMPUTING FUNDAMENTALS	ECF	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Edge and Fog Computing and infer the opportunities and challenges	2	PO1, PO2, PO8, PSO1
CO2	Examine the Architectural detail of Edge Computing and explore the issues that are being addressed by the industry	4	PO1, PO2, PO8, PSO1
CO3	Interpret the Security Requirements for Edge Computing and its Middleware needed	4	PO1, PO2, PO8, PSO1
CO4	Evaluate the applicability and need for Edge/Fog Computing in various real-time projects	4	PO2, PO3, PO8, PSO1
CO5	Evaluate computing paradigms using various applications in Edge Computing	4	PO2, PO3, PO8, PSO1
CO6	Implementaion of sensor based IOT applications	4	PO2, PO3, PO8, PSO1
CO7	Demonstrate proficiency in connecting edge devices to edge computing platforms.	4	PO2, PO3, PO8, PSO1

Syllabus

Internet of Things (IoT) and New Computing Paradigms: Introduction, New Computing Paradigms, Fog and Edge Computing Completing the Cloud, Advantages of FEC, Hierarchy of Fog and Edge Computing, Opportunities and Challenges, Addressing the Challenges in Federating Edge Resources

Architecture: Integrating IoT + Fog + Cloud Infrastructures, System Modeling, and Research Challenges, Network Slicing Management in Edge and Fog, Optimization in Fog Computing, Formal Modeling Framework for Fog Computing,

Middleware for Fog and Edge Computing: Design Issues, State-of-the-Art Middleware Infrastructures, A Lightweight Container Middleware for Edge Cloud Architectures, Security and Data Management

Security Management for Edge Cloud Architectures, Applications, and Issues: Exploiting Fog Computing in Health Monitoring, Smart Surveillance Video Stream Processing at the Edge for Real-Time Human Objects Tracking, Fog Computing Model for Evolving Smart Transportation Applications

Application of Docker container and cabrnets in edge computing, edge design of IoT storage system like kye value store

Reference Books

23ADE3202A - AI AT THE EDGE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ADE3202A	AI AT THE EDGE	AIAE	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret the importance of EDGE computing, ML Ops, and basic technologies in view of IoT using Machine Learning and Deep Learning.	2	PO2, PO4, PSO2
CO2	Practice Hands-on experience to know role of Python packages on data science to interpret the design AI technologies	3	PO1, PO3, PSO2
CO3	Demonstrate Deep learning using classification, Regression, and CNN in view of Natural Language Processing	3	PO2, PSO1
CO4	Practice deploying containers on edge devices using recurrent neural networks, unsupervised learning.	3	PO1, PO3, PSO1
CO5	Devise latest artificial intelligence application technologies pertained to EDGE computing.	4	PO2, PSO2

Syllabus

Importance of Machine Learning principles and Deep Learning principles; Foundations of Edge computing; Full Stack development in context of AI. MLOps -Machine learning and DevOps Cloud-native development Cloud development process flows

Hands-on machine learning development including the main libraries like NumPy, Pandas, Matplotlib, SciKit-Learn

Deep learning development for the main algorithms: Classification using Multi-layer perceptron (MLP) using techniques like dropout, Regression-linear regression, logistic regression, multivariate regression, etc.; Convolutional Neural Networks; Natural Language Processing;

Recurrent Neural Networks; Unsupervised Learning (PCA and K-means); deploy modules using containers on edge devices

Generative Adversarial Networks (GANs), Bayesian approaches to machine learning and deep learning Reinforcement Learning

Reference Books

23ADE3202E - AI AT THE EDGE (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ADE3202E	AI AT THE EDGE	AIAE	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Summarize Deep Learning Techniques using CNN pertained to classification such as image and text analysis.	2	PO2, PO4, PSO2
CO2	Discover deployment of Edge computing applications using predictive analysis techniques such as regression and classification	3	PO1, PO3, PSO2
CO3	Infer problems on generative adversarial networks, reinforcement learning, predictive modelling using AIML techniques	2	PO2, PO4, PSO1
CO4	Predict and classify the differences in real world using regression, time-series and Recurrent Neural Networks.	3	PO1, PO3, PSO1
CO5	Discover to build creative and interactive smart automation applications of generative adversarial networks	4	PO2, PSO2

Syllabus

Image Classification using CNN: Aim to develop an image classification program utilizing Convolutional Neural Networks (CNNs) to classify images into predefined categories, demonstrating understanding of deep learning principles.

Predictive Maintenance for IoT Devices: Develop a predictive maintenance program for IoT devices using machine learning algorithms, such as regression and classification, to predict device failures and optimize maintenance schedules.

Generative Adversarial Network (GAN) for Image Generation: Create a GAN-based program to generate realistic images, demonstrating understanding of generative models and their applications in image synthesis.

Traffic Flow Prediction using Machine Learning: Create a program to predict traffic flow patterns using machine learning algorithms, such as regression and time series analysis, showcasing expertise in transportation analytics.

Chatbot Development for Customer Support: Develop a chatbot program using natural language processing techniques to provide automated responses to customer queries, showcasing proficiency in conversational AI.

Reference Books

- 2 TinyML: Machine Learning with TensorFlow Lite, Pete Warden, Daniel Situnayake, First, O'Reilly.
- 3 AI at the Edge: Solving Real-World Problems with Embedded Machine Learning, Daniel Situnayake (Author), Jenny Plunkett (Author), NA, O'Reilly.
- 4 Artificial Intelligence: A Modern Approach, Russell/Norvig, Fourth, Pearson.

23ADE3202R - AI AT THE EDGE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ADE3202R	AI AT THE EDGE	AIAE	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret the importance of EDGE computing, ML Ops, and basic technologies in view of IoT using Machine Learning and Deep Learning	2	PO2, PO3, PSO2
CO2	Demonstrate Deep learning using classification, Regression, and CNN in view of Natural Language Processing	2	PO1, PO4, PSO2
CO3	Practice deploying containers on edge devices using recurrent neural networks, unsupervised learning.	3	PO2, PO3, PSO1
CO4	Relate the AI models with EDGE and devise latest artificial intelligence application technologies pertained to EDGE computing.	3	PO1, PO4, PSO1

Syllabus

Importance of Machine Learning principles and Deep Learning principles Foundations of Edge computing Full Stack development in context of AI. MLOps -Machine learning and DevOps Cloud-native development Cloud development process flows

Hands-on deep learning development for the main algorithms-Classification using Multi-layer perceptron (MLP) by establishing a baseline and improving that baseline using techniques like dropout; Regression -linear regression, logistic regression, multivariate regression, etc.

Convolutional Neural Networks; Natural Language Processing; Recurrent Neural Networks; Autoencoders and Unsupervised Learning (PCA and K-means

Natural Language Processing (NLP), Unsupervised Learning, Learning Generative Adversarial Networks (GANs)

Reference Books

- 1 "Edge AI: Vision and Voice on TinyML Devices, Pete Warden, Daniel Situnayake , First, O'Reilly.
- 2 TinyML: Machine Learning with TensorFlow Lite, Pete Warden, Daniel Situnayake, First, O'Reilly.
- 3 AI at the Edge: Solving Real-World Problems with Embedded Machine Learning, Daniel Situnayake, Jenny Plunkett, NA, O'Reilly.
- 4 Artificial Intelligence: A Modern Approach, Russell, Norvig, Fourth, Pearson.
- 5 TinyML Cookbook, Gian Marco Iodice, Second, Packt Publishing.

23ADE3303A - EDGE AI ARCHITECTURES AND APPLICATIONS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ADE3303A	EDGE AI ARCHITECTURES AND APPLICATIONS	EAIAA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of Edge AI, including its principles, advantages, and challenges.	2	PO1, PO6
CO2	Explore various edge AI architectures and their components	2	PO1, PO3
CO3	Learn about AI algorithms optimized for edge deployment.	3	PO1, PO6
CO4	Analyze case studies of real-world edge AI applications across different domains	4	PO3, PO6
CO5	Evaluate the performance and efficiency of Edge AI systems	4	PO4
CO6	Develop and optimize AI algorithms suitable for edge deployment, deploying edge AI solutions on different types of edge devices and platforms	4	PO1, PO3, PS01
CO7	Evaluate the performance and efficiency of edge AI systems through practical experimentation and benchmarking	4	PO4

Syllabus

Introduction to Edge AI, Edge Devices and Platforms: Overview of Edge AI, Principles and Advantages, Challenges and Constraints, Integration of AI with edge computing. Edge Devices and Platforms: Types of edge devices (e.g., IoT devices, smartphones, edge servers), Edge computing platforms and frameworks, Hardware considerations for edge AI

Edge AI Architectures: Centralized vs. decentralized edge architectures, Cloud vs. Edge Computing, Edge Device Characteristics, Edge AI Platform Comparison, Fog computing and cloudlet architectures, Microservices and containerization for edge deployment,

AI Algorithms for Edge Deployment, Optimization Techniques for Edge AI, Optimization Techniques for Edge AI: Model Quantization, Pruning and Compression, Hardware Acceleration

Edge AI Applications, Edge AI Development Tools and Practices: Smart IoT Devices , Autonomous Vehicles, Healthcare Monitoring Systems, Performance metrics and evaluation criteria, Ethical considerations and privacy concerns, Tools for developing and deploying edge AI solutions, Best practices for designing efficient edge architectures, Real-world deployment challenges and mitigation strategies

Privacy and Security in Edge AI, Future Trends in Edge AI: Federated Learning, Secure Model Deployment, Data Privacy Regulations, Edge Computing Paradigms, Edge-to-Cloud Integration, Edge AI in Industry 4.0

Reference Books

23ADE3404M - EDGE AI AND 5G (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ADE3404M	EDGE AI AND 5G	EAI5G	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the architectural elements, functionality, and operational dynamics of edge computing, AI, and 5G networks.	2	PO1, PO2, PSO1
CO2	Demonstrate and integrate edge computing with AI and 5G technologies for enhanced performance and efficiency	3	PO2, PO3, PSO1
CO3	Implement solutions using EDGE AI and 5G to solve industry-specific problems.	3	PO1, PO4, PSO2
CO4	Evaluate the performance, scalability, and security aspects of EDGE AI systems integrated with 5G	4	PO3, PO5, PSO1

Syllabus

Introduction to Edge Computing,Paradigms of Edge Computing,AI Hardware for Edge Computing,Edge Computing Frameworks,Virtualizing the Edge.Evolution of cellular networks: From 1G to 5G,Key features and architecture of 5G networks,Spectrum considerations and deployment scenarios,3GPP Release Specifications,Network Slicing,Network Function Virtualization,ORAN.Artificial Intelligence Applications on Edge:Real-time Video Analytic,Autonomous Internet of Vehicles (IoVs),Intelligent Manufacturing,Smart Home and City

Artificial Intelligence Inference in Edge Optimization of AI Models. in Edge:General Methods for Model Optimization,Model Optimization for Edge Devices. Segmentation of AI Models,Early Exit of Inference (EEol),Sharing of AI Computation. Artificial Intelligence Training at Edge:Distributed Training at Edge Vanilla Federated Learning at Edge.Resource-Optimized FL,Security-Enhanced FL. A Case Study for Training deep reinforcement learning (DRL) at Edge:Multi-User Edge Computing Scenario,Offloading Strategy for Computing Tasks Based on DRL,Distributed Cooperative Training.

Integration of AI with EDGE and 5G: Deploying AI models at the edge: Benefits and challenges,Hardware and software requirements for Edge AI. Data processing and analytics at the edge.How 5G enables AI at the edge, Real-time data processing with 5G.Use cases: Smart city infrastructure, IoT devices, autonomous vehicles.Integrating AI with IoT and EDGE devices for enhanced decision-making.

Specific AI applications in 5G: network slicing, predictive maintenance, and automated network optimization.Enhanced mobile broadband (eMBB), ultra-reliable low-latency communications (URLLC), and massive machine type communications (mMTC).Machine Learning for Network Optimization:Techniques for traffic prediction, resource allocation, and anomaly detection in 5G network,Application of reinforcement learning for dynamic network optimization.

Reference Books

23ADE3405M - EDGE AI SECURITY AND PROTECTION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ADE3405M	EDGE AI SECURITY AND PROTECTION	EAISP	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic concepts and architecture of edge computing and AI systems	2	PO1
CO2	Apply privacy-preserving techniques and encryption methods to secure data in edge AI applications.	3	PO2, PSO1
CO3	Analyze the effectiveness of different defense mechanisms against adversarial attacks on edge AI systems	4	PO4, PSO2
CO4	Design a secure communication protocol for data transmission in edge AI environments	5	PO3, PSO2

Syllabus

Introduction to Edge Computing, Core Components of Edge Computing Systems, Architecture of Edge Computing Systems, Introduction to Artificial Intelligence, Integration of AI with Edge Computing, Case Studies of Edge Computing and AI Integration, Emerging Trends and Future Directions, Ethical and Legal Considerations.

Data Privacy in Edge AI, Differential Privacy, Homomorphic Encryption, Secure Multiparty Computation (SMPC), Privacy-Preserving Machine Learning Models, Secure Communication Protocols for Edge AI, Case Studies and Practical Applications, Emerging Trends and Future Directions.

Adversarial Attacks, Adversarial Attack Techniques, Defense Mechanisms, Robust Training Methods, Detection and Mitigation Techniques, Cryptographic Approaches, Evaluation of Defense Mechanisms

Secure Communication in Edge AI, Fundamentals of Cryptography, Encryption Techniques for Secure Communication, Authentication and Integrity, Secure Communication Protocols, Network Security in Edge AI, Performance and Scalability, Implementation of Secure Communication.

Reference Books

- 1 Deep Reinforcement Learning: Fundamentals, Research and Applications, Hao Dong, Zihan Ding, and Shanghang Zhang, 2018, Springer Nature Switzerland AG.
- 2 Privacy-Preserving Machine Learning (SpringerBriefs on Cyber Security Systems and Networks), Jin Li, Ping Li, Tong Li, Xiaofeng Chen, Zheli Liu, 2022, Springer Verlag, Singapore.

- 4 Cryptography and Network Security Principles and Practice, William Stallings, 2020, Pearson Education.

23ADE3506 - EDGE AI DEVELOPMENT FRAMEWORKS AND TOOLS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ADE3506	EDGE AI DEVELOPMENT FRAMEWORKS AND TOOLS	EAIDFT	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concept of edge AI and its significance in distributed computing.	2	PO1, PO2, PO8, PSO1
CO2	Evaluate and select appropriate edge AI development frameworks based on specific use cases and requirements.	3	PO1, PO2, PO8, PSO1
CO3	Develop and deploy AI models on edge devices using leading-edge AI frameworks and tools.	4	PO2, PO3, PO8, PSO1
CO4	Optimize AI models for resource-constrained edge environments, considering factors such as latency, energy efficiency, and model size.	4	PO2, PO3, PO8, PSO1

Syllabus

Introduction to Edge AI Development-Overview of edge computing and its relevance to AI applications.Introduction to edge AI development frameworks and tools.Comparison of cloud-based AI versus edge AI. Hands-on: Setting up development environment and basic edge AI project.

Edge AI Model Development -Techniques for designing lightweight AI models suitable for edge deployment. Transfer learning and model compression for edge devices. Practical considerations for edge AI model development (e.g., latency, power consumption). Hands-on: Developing and training AI models for edge deployment using TensorFlow Lite or similar frameworks

Optimization Techniques for Edge AI-Quantization, pruning, and other optimization techniques to reduce model size and improve performance. Hardware acceleration and inference optimization for edge devices. Benchmarking and performance evaluation of optimized edge AI models. Hands-on: Optimizing AI models for specific edge computing scenarios using optimization tools and techniques.

Edge AI Deployment and Management -Deployment strategies for edge AI models: on-device, edge server, hybrid approaches. Integration of edge AI models with IoT devices and sensors. Managing edge AI deployments: monitoring, updates, and maintenance. Real-world applications and case studies of edge AI deployments across various domains. Hands-on project: Deploying and managing edge AI solutions for specific use cases.

Reference Books

23ADE3507 - EDGE AI ANALYTICS AND DATA MANAGEMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ADE3507	EDGE AI ANALYTICS AND DATA MANAGEMENT	EAIADM	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Fundamentals of AI and Machine Learning Introduction to AI and ML algorithms Supervised, unsupervised, and reinforcement learning Edge-specific ML algorithms and optimizations	2	PO1, PO3, PSO1
CO2	Understand the Edge Data Management Techniques Data collection strategies at the edge Data storage and processing on edge devices Data transmission and synchronization in edge environments	2	PO2, PO4, PSO1
CO3	Apply the Edge Analytics and Insights Introduction to edge analytics Real-time analytics and anomaly detection at the edge Extracting insights from edge data using ML algorithms	3	PO3, PSO2
CO4	Analyse the Deployment Considerations and Performance Optimization for Edge AI	4	PO4, PSO2

Syllabus

Fundamentals of AI and Machine Learning Introduction to AI and ML algorithms Supervised, unsupervised, and reinforcement learning Edge-specific ML algorithms and optimizations

Edge Data Management Techniques Data collection strategies at the edge Data storage and processing on edge devices Data transmission and synchronization in edge environments

Edge Analytics and Insights Introduction to edge analytics Real-time analytics and anomaly detection at the edge Extracting insights from edge data using ML algorithms

Deployment Considerations and Performance Optimization for Edge AI and data management

Reference Books

- 1 Edge Computing for Computer Vision, David V. James, 1, Apress.

- 4 Edge Computing for Internet of Things: A Paradigm for Data Management, Processing and Analytics, K. Raghunandan, Prathima Agrawal, 1, Springer.

23ADE3508 - EDGE AI AND SUSTAINABILITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ADE3508	EDGE AI AND SUSTAINABILITY	EAIAS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of Edge AI and its applications in sustainable development	2	PO1, PO7
CO2	Apply Edge AI algorithms to optimize resource consumption and improve energy efficiency	4	PO3, PO5, PO7
CO3	Critically evaluate the effectiveness of Edge AI solutions in addressing sustainability challenges	5	PO7
CO4	Discuss the ethical considerations associated with the deployment of Edge AI technologies in sustainable development	2	

Syllabus

Introduction to Edge AI and Sustainability: Overview of Edge Computing and Artificial Intelligence, Sustainable Development Goals (SDGs), Challenges in achieving sustainability goals and the role of technology

Edge AI Techniques for Resource Optimization: Edge Computing Architectures, Machine Learning at the Edge, Optimization Algorithms: Overview of optimization techniques for resource-constrained environments, Optimization objectives: latency reduction, energy efficiency, bandwidth conservation, Edge-specific optimization algorithms such as federated learning, reinforcement learning, and evolutionary algorithms

Edge AI Applications in Energy Management: Smart Grids and Energy Distribution, Predictive Maintenance for Renewable Energy Systems, Energy-efficient Edge Computing: Comparison with traditional cloud computing in terms of energy consumption, Energy-aware Edge Device Design, Dynamic Voltage and Frequency Scaling (DVFS), Task Offloading and Load Balancing,

Ethical and Societal Implications of Edge AI in Sustainability: Ethical Frameworks for AI Development, Bias and Fairness in Edge AI Algorithms, Privacy and Data Security Concerns Regulatory and Policy Considerations

Reference Books

23AEA3101A - AUTOMOTIVE SENSOR AND APPLICATIONS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AEA3101A	AUTOMOTIVE SENSOR AND APPLICATIONS	ASA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the core functionalities of modern automotive systems, including the roles of ECUs, sensor integration, and key subsystems.	3	PO1, PO5, PO11, PSO2
CO2	Analyze the function and application of diverse sensors within engine management systems to achieve optimal engine performance and minimize emissions.	4	PO1, PO5, PO11, PSO2
CO3	Apply how sensor data is utilized to achieve advanced functionalities in powertrain and vehicle motion control systems.	3	PO1, PO5, PO11, PSO2
CO4	Analyze the effectiveness of sensor integration within active and passive safety systems, considering the influence of electronic components and communication protocols.	4	PO1, PO5, PO11, PSO2
CO5	Analyze basic sensor-based systems for automotive applications.	4	PO1, PO5, PO11, PSO2
CO6	Evaluate the applications of AUTOMOTIVE SENSOR AND APPLICATIONS,	6	PO1, PO5, PO11, PSO2
CO7	Develop case studies for applications of AUTOMOTIVE SENSOR AND APPLICATIONS,	6	PO1, PO5, PO11, PSO2

Syllabus

Introduction to Automotive Systems Current trends in automobiles: Electrification, automation, and connectivity. Overview of automotive control systems: Electronic Control Units (ECUs) and sensor integration. Introduction to typical automotive subsystems and components. Introduction to AUTOSAR (Automotive Open System Architecture).

Engine Management Systems Basic sensor arrangement in engine management systems. Types of engine sensors: Oxygen sensors (lambda sensors) Crank angle position sensors Throttle position sensors (TPS) Air mass flow (MAF) sensors Temperature sensors (coolant, intake air) Speed sensors Algorithms for engine control: Open-loop and closed-loop systems. Electronic ignition systems. Exhaust Gas Recirculation (EGR) for emission control.

Vehicle Powertrain and Motion Control Electronic transmission control systems. Adaptive power steering. Adaptive cruise control. Safety and comfort systems: Anti-lock Braking System (ABS) Traction Control System (TCS) Electronic Stability Control (ESC) Active suspension control Sensor applications in powertrain and motion control systems.

Active and Passive Safety Systems Body electronics: Lighting control, remote keyless entry, immobilizers, etc. Electronic instrument clusters and dashboard electronics. Design considerations for automotive electronics: Electromagnetic interference (EMI) suppression Electrostatic compatibility (EMC) Sensor applications in active and passive safety systems, Automotive Standards and Protocols Introduction to automotive communication protocols: CAN (Controller Area Network)

Electrification in Automotive Systems: Proficiency in Electric Vehicle Simulation. **Automation in Automotive Systems:** Mastery in Autonomous Vehicle Control. **Connectivity in Automotive Systems:** Competence in CAN Bus Communication. **Powertrain Demonstration:** Ability to Measure Engine RPM. **Chassis Experiment:** Skill in ABS Sensor Testing. **Body Electronics Experiment:** Capability in Interior Light Control. **Gas Sensor Integration:** Skill in integrating gas sensors with development boards and implementing alert systems. **Lighting System Programming:** Proficiency in programming development boards to control vehicle lighting and automate lighting functions based on environmental and vehicle conditions. **Lighting Control System Testing:** Ability to test and verify the functionality of lighting control systems for various scenarios.

CO2	Analyze the function and application of diverse sensors within engine management systems to achieve optimal engine performance and minimize emissions.	4	PO1, PO5, PO11, PSO2
CO3	Analyze how sensor data is utilized to achieve advanced functionalities in powertrain and vehicle motion control systems.	4	PO1, PO5, PO11, PSO2
CO4	Analyze the effectiveness of sensor integration within active and passive safety systems, considering the influence of electronic components and communication protocols.	4	PO1, PO5, PO11, PSO2
CO5	Evaluate the applications of AUTOMOTIVE SENSOR AND APPLICATIONS,	5	PO1, PO5, PO11, PSO2
CO6	Develop Case studies for applications of AUTOMOTIVE SENSOR AND APPLICATIONS,	6	PO1, PO5, PO11, PSO2

Syllabus

Introduction to Automotive Systems Current trends in automobiles: Electrification, automation, and connectivity. Overview of automotive control systems: Electronic Control Units (ECUs) and sensor integration. Introduction to typical automotive subsystems and components. Introduction to AUTOSAR (Automotive Open System Architecture).

Engine Management Systems Basic sensor arrangement in engine management systems. Types of engine sensors: Oxygen sensors (lambda sensors) Crank angle position sensors Throttle position sensors (TPS) Air mass flow (MAF) sensors Temperature sensors (coolant, intake air) Speed sensors Algorithms for engine control: Open-loop and closed-loop systems. Electronic ignition systems. Exhaust Gas Recirculation (EGR) for emission control.

Vehicle Powertrain and Motion Control Electronic transmission control systems. Adaptive power steering. Adaptive cruise control. Safety and comfort systems: Anti-lock Braking System (ABS) Traction Control System (TCS) Electronic Stability Control (ESC) Active suspension control Sensor applications in powertrain and motion control systems.

Active and Passive Safety Systems Body electronics: Lighting control, remote keyless entry, immobilizers, etc. Electronic instrument clusters and dashboard electronics. Design considerations for automotive electronics: Electromagnetic interference (EMI) suppression Electrostatic compatibility (EMC) Sensor applications in active and passive safety systems, Automotive Standards and Protocols Introduction to automotive communication protocols: CAN (Controller Area Network)

23AEA3202A - AUTOTRONICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AEA3202A	AUTOTRONICS	AT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of sensors for engine management	3	PO1, PO2, PO4, PSO1
CO2	Apply the concept of control of fuel systems	3	PO1, PO2, PO3, PSO1
CO3	Apply the concept for Electronically controlled Injection and actuators	3	PO1, PO3, PO4, PSO1
CO4	Analyze and design OBD tools	4	PO1, PO2, PO4, PSO2
CO5	Analyze and apply theoretical concepts to develop mathematical models and simulate	5	PO2, PO3, PO7, PSO2
CO6	Analyze the components of fuel system and compare their performance	5	PO2, PO3, PO7, PSO2

Syllabus

Concept of Sensor Functions: Types of sensors and their principles of operation, Applications of sensors in measurement, monitoring, and control systems. Control Functions: Fundamentals of control systems and feedback mechanisms, Analysis of control algorithms, stability criteria, and system optimization.

Sensors for Fuel Injection Systems: Types of sensors used in fuel injection systems (e.g., mass airflow sensors, oxygen sensors), Role of sensors in monitoring air-fuel ratio and engine load for optimal fuel delivery. Metering Controls: Principles of metering fuel flow and injection timing control, Application of sensors in regulating fuel quantity and timing based on engine operating conditions. Timing Controls: Types of sensors involved in timing control (e.g., crankshaft position sensors, camshaft position sensors), Importance of precise timing for ignition and fuel injection synchronization in engine operation.

Electronic Control Management: Fundamentals of electronic control units (ECUs) in fuel injection systems, Algorithms and strategies for precise control of high-pressure fuel delivery and injection timing.

Analysis of OBD1 and OBD2: Differences in architecture, protocols, and diagnostic capabilities between OBD1 and OBD2 systems, Control strategies and fault detection methods used in OBD1 and OBD2 for vehicle diagnostics and emissions control.

Components of the Fuel System: Examination of key fuel system components such as fuel pumps, injectors, and filters. Performance Comparison: Comparative analysis of performance, efficiency, and reliability of different fuel system components.

23AEA3203A - AUTOMOTIVE POLLUTION AND ITS CONTROL (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AEA3203A	AUTOMOTIVE POLLUTION AND ITS CONTROL	APC	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interprete vehicle population assessment in metropolitan cities and contribution to pollution, effects on human health and environment, global warming, types of emission, transient operational effects on pollution	3	PO1, PO7
CO2	Illustrate about pollutant formation in SI Engine, mechanism of HC , CO and NO in SI engine, exhaust emission and factors affecting the emission, evaporative emission, crankcase emission, lead emission	3	PO1, PO7
CO3	Illustrate about pollutant formation in CI Engine, mechanism of HC , CO and NO in CI engine, exhaust emission and factors affecting the emission. evaporative emission, crankcase emission, lead emission	3	PO1, PO7
CO4	Analyze about noise, Vibration And Harshness, Sources of Noise, Measurement of Noise -Engine combustion noise, - control of noise, control devices and noise proof materials	4	PO1, PO7
CO5	Demonstrate about the working NDIR, FID, Chemiluminescent analyzers, Gas Chromatograph, smoke meters, emission standards.	3	PO1, PO7

Syllabus

Vehicle population assessment in metropolitan cities and contribution to pollution, effects on human health and environment, global warming, types of emission, transient operational effects on pollution

Pollutant formation in SI Engine, mechanism of HC , CO and NO in SI engine, exhaust emission and factors affecting the emission, evaporative emission, crankcase emission, lead emission

Design strategies to control emission from engines, effect of design and operating parameters on emission concentrations, modification in the engine design.

Noise, Vibration And Harshness, Sources of Noise, Measurement of Noise -Engine combustion noise, - control of noise, control devices and noise proof materials

Reference Books

- 1 Internal Combustion Engines, V Ganesan, 8, McGraw Hill.
- 2 Internal Combustion Engines, Obert,E.F., 5, New Age International Publishers.
- 3 Environmental Pollution and Control, J. Jeffrey Peirce, P. Aarne Vesilind, Ruth F. Weiner, 4, Elsevier Science & Technology Books.

23AEA3304A - ALTERNATE DRIVES, TRACTION AND CONTROLS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AEA3304A	ALTERNATE DRIVES, TRACTION AND CONTROLS	ADTC	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of alternate technologies	3	PO1, PO2
CO2	Apply the concept of speed and torque for automotive requirements	3	PO1, PO2
CO3	Apply the concept for Hybrid architecture design	3	PO1, PO2
CO4	Analyze the Concept of fuel cells	4	PO1, PO2
CO5	Analyze power electronics dynamics and control	5	PO1, PO2
CO6	Analyze the dynamic stability of the vehicle	6	PO3
CO7	Apply the concept of hybrid vehicles and design drive layouts	6	PO3

Syllabus

Concept of Alternate Technology for Vehicle Drives: Overview of alternative propulsion technologies such as electric, hybrid, hydrogen fuel cells, and compressed air. Comparative analysis of these technologies in terms of efficiency, emissions, and feasibility. Design and Integration: Principles of designing vehicle systems using alternative technologies. Challenges and considerations in integrating alternative drives into existing vehicle platforms. Future Trends and Innovations: Emerging trends and advancements in alternative vehicle drive technologies, Potential impacts on the automotive industry and transportation infrastructure.

Alternate Drive Controls: Implementation of control systems for alternative propulsion technologies (electric, hybrid, hydrogen fuel cells). Strategies for optimizing performance, efficiency, and responsiveness. Traction Requirements: Analysis of traction control requirements for different driving conditions and vehicle types. Integration of traction control systems with alternate drives for improved stability and safety. System Optimization and Testing: Techniques for testing and fine-tuning control systems and traction requirements. Evaluation of system performance under various operational scenarios.

Hybrid Vehicles: Principles and types of hybrid vehicle systems (series, parallel, and plug-in hybrids). Key components and their functions in hybrid powertrains. Design Drive Layouts: Designing drive layouts for optimal performance and efficiency in hybrid vehicles. Integration of electric motors, internal combustion engines, and energy storage systems.

Fuel Cell Vehicles: Principles of fuel cell operation and types of fuel cells used in vehicles. Advantages, challenges, and applications of fuel cell technology in transportation. Drive Trains: Design and components of fuel cell vehicle drive trains. Integration and optimization of fuel cells with electric motors and energy storage systems.

Dynamic Stability of Vehicles: Principles of vehicle dynamics and stability, including roll, pitch, and yaw behavior. Analysis of factors affecting stability, such as suspension design, weight distribution, and electronic stability control systems.

23AEA3405M - VEHICLE CONTROL SYSTEMS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AEA3405M	VEHICLE CONTROL SYSTEMS	VCS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Classical Control Techniques for Vehicle Dynamics and Modeling	3	PO1
CO2	Apply, Develop, and Put into Practice Vehicle-Specific Control Systems	3	PO1, PO2
CO3	Applying modelling and simulation tools, apply the development of advanced vehicle control systems	3	PO2, PO3, PO4
CO4	Apply the development of vehicle control in case studies and current research.	3	

Syllabus

Overview of Vehicle Dynamics: Basic concepts of vehicle dynamics, Longitudinal, lateral, and vertical dynamics, Vehicle modeling; Control Systems Fundamentals: Introduction to control theory, Linear systems and control, State-space representation

Classical Control Techniques: PID Control, Proportional-Integral-Derivative control theory, Tuning methods, Implementation in vehicle systems; Frequency Domain Analysis, Bode plots, Nyquist criteria, Stability analysis, Application to vehicle control; Modern Control Techniques: State-Space Control, State-space models, Observability and controllability, Pole placement and state feedback

Optimal Control: Linear Quadratic Regulator (LQR), Application to vehicle stability and control; Adaptive and Robust Control: Concepts of adaptive control, Robust control techniques, Implementation in uncertain environments; Vehicle-Specific Control Systems: Anti-lock Braking System (ABS), ABS fundamentals, Control algorithms, Performance analysis

Traction Control System (TCS): TCS fundamentals, Control strategies, Integration with vehicle dynamics; Electronic Stability Program (ESP): ESP fundamentals, Control logic, Real-world applications; Autonomous Vehicle Control: Sensor fusion, Path planning and control, Autonomous driving architectures; Hybrid and Electric Vehicle Control: Energy management strategies, Control of electric drives, Regenerative braking systems

Reference Books

23AEA3406M - AUTOMOTIVE ELECTRICAL AND ELECTRONIC SYSTEMS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AEA3406M	AUTOMOTIVE ELECTRICAL AND ELECTRONIC SYSTEMS	AEES	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of Automotive Electronics	3	PO1, PO2, PO4, PSO1
CO2	Apply the concept of Fuel Ignition Electronics	3	PO1, PO2, PO7, PSO1
CO3	Apply the concept for Fuel Injection Electronics	3	PO1, PO3, PO4, PSO1
CO4	Analyze the Concept of Electronics Accessories	4	PO1, PO2, PO4, PSO2

Syllabus

Electronics for Vehicles: Overview of electronic systems in vehicles, including sensors, actuators, and control units. Applications of automotive electronics in safety, infotainment, and vehicle performance optimization.

Electronic Controls for Fuel Ignition Systems: Principles of electronic ignition systems and components (e.g., ECUs, sensors, actuators). Techniques for optimizing ignition timing and fuel delivery for performance and efficiency.

Electronic Controls for Fuel Systems: Integration of electronic control units (ECUs) for fuel injection, delivery, and pressure regulation. Application of sensors and actuators to optimize fuel efficiency and emissions in various driving conditions. Electronic Controls for Steering Systems: Principles of electronic power steering (EPS) and steer-by-wire systems. Design and implementation of sensors, ECUs, and actuators for precise steering control and driver assistance features.

Electronic Controls for Automotive Accessories: Overview of electronic systems for accessories like HVAC (Heating, Ventilation, and Air Conditioning), infotainment, and lighting. Integration of sensors, ECUs, and actuators to enhance functionality, comfort, and safety features in vehicles.

23AEA3507 - SOFT COMPUTING TECHNIQUES FOR AUTOMOTIVE APPLICATIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AEA3507	SOFT COMPUTING TECHNIQUES FOR AUTOMOTIVE APPLICATIONS	SCTAA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Comprehend principles and applications of neural networks, fuzzy logic, and genetic algorithms	3	PO1, PO2, PSO1
CO2	Apply neural networks to address complex automotive challenges	3	PO1, PO2, PSO1
CO3	Design and implement soft computing-based automotive systems	3	PO1, PO2, PSO1
CO4	Evaluate soft computing model performance in automotive contexts	3	PO1, PO2, PSO1

Syllabus

Introduction to Soft Computing Concepts, comparison with conventional computing, automotive applications, Fuzzy Logic Fuzzy sets, operations, inference systems, automotive applications (engine control, brake systems, driver assistance systems)

Neural Networks: Biological inspiration, types, learning algorithms, Single layer and multi layered networks, Feedback neural networks automotive applications (vehicle control, image processing, fault diagnosis)

Genetic Algorithms Principles, applications in automotive design, scheduling, routing5Hybrid Soft Computing Techniques, Neuro-fuzzy systems, genetic-fuzzy systems

Automotive applications (advanced driver assistance systems, autonomous vehicles), Soft Computing for Automotive Applications, Vehicle dynamics and control: Applications of soft computing, Automotive safety systems: Collision avoidance, pedestrian detection, Electric and hybrid vehicles: Battery management, energy management, Automotive comfort and ergonomics.

Reference Books

23AEA3508 - AUTOMOTIVE NETWORKING AND PROTOCOLS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AEA3508	AUTOMOTIVE NETWORKING AND PROTOCOLS	ANP	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basics of networking to automotive vehicular technologies	2	PO1, PO2, PSO2
CO2	Analysis of CAN protocols, bus access and Physical layer standards	3	PO1, PO2, PSO2
CO3	Analyze higher level CAN protocols	3	PO1, PO2, PSO2
CO4	Analysis of LIN protocols and standards	3	PO1, PO2, PSO2

Syllabus

Overview of communication and networking --- need for In-Vehicle networking -- layers of OSI interface model -- Multiplexing and Demultiplexing-- Concepts--vehicle buses

Networks and protocols: CAN protocols: Principles of data exchange--real time data transmission-- message frame formats, bit encoding--bit-timing and synchronization-- data rate and bus length--network topology--bus access- physical layer st

CAN higher layer protocols: Introduction to CAN open--Device net--TTCAN--SAEJ1939-overview CAN open and application , transportation electronics--CAN open standards

LIN: LINstandard overview--applications --LIN communication concept message frame-- development flow. MOST overview--data rates-data types-topology-application areas

23AIP3101A - DEEP LEARNING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3101A	DEEP LEARNING	DL	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand optimization algorithms to solve neural networks	2	PO2, PSO1
CO2	Apply CNN model and its variants like LeNet, AlexNet, VGGNet models to real time data	3	PO2, PSO1
CO3	Apply RNN, Long Short Term Memory (LSTM) and GRU to solve sequential data problems	3	PO3, PSO1
CO4	Apply autoencoders, RBM and Markov models for real time applications	3	PO2, PO3, PSO2
CO5	Apply transfer learning models-, object detection models-deep reinforcement models	3	PO2, PO4, PSO2
CO6	Implement Basic Deep Neural Networks, convolutional neural networks, LSTM, RNN and autoencoders	5	PO3, PO5, PSO2
CO7	Implement Deep learning case studies using keras and pytorch	5	PO3, PO5, PSO2

Syllabus

Introduction to Deep learning, History of Deep Learning, McCulloch Pitts Neuron, Thresholding Logic, Perceptron's, Perceptron Learning Algorithm and Convergence, Multilayer Perceptron's (MLPs), Representation Power of MLPs, Sigmoid Neurons, Feedforward Neural Networks, Backpropagation, Challenges in Neural Network Optimization, Gradient Descent (GD), Momentum Based GD, Stochastic GD, Adam, RMSProp

Bias Variance Tradeoff, L2 regularization, Early stopping, Dataset augmentation, Parameter sharing and tying, Injecting noise at input, Dropout, Greedy Layer wise Pre-training, Better activation functions, better weight initialization methods, Learning Vectorial Representations Of Words Convolutional Neural Networks, LeNet, AlexNet, Z VGGNet,

Visualizing Convolutional Neural Networks, Guided Backpropagation, Recurrent Neural Networks, Backpropagation Through Time (BPTT), Vanishing and Exploding Gradients, Truncated BPTT, Gated Recurrent Units (GRUs), Long Short Term Memory (LSTM) Cells, Solving the vanishing gradient problem with LSTMs, Deep Dream, Deep Art,

Encoder Decoder Models: Regularization in autoencoders, Denoising autoencoders, Sparse autoencoders, Markov Networks. Using joint distributions for classification and sampling, Latent Variables, Restricted Boltzmann Machines, Unsupervised Learning, Motivation for Sampling, Markov Chains, Gibbs Sampling for training RBMs, Contrastive Divergence for training RBMs, Generative Adversarial Networks

Transfer learning-ZFNet, MobileNet, GoogleNET, Object Detection : ResNet, FastRCNN, YOLO and, Autoregressive Models: NADE, MADE, Deep reinforcement learning

Reference Books

23AIP3202A - SOFT COMPUTING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3202A	SOFT COMPUTING	SC	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Outline soft computing from hard computing, explain fuzzy sets, fuzzy logic operations, generalized operations, fuzziness, fuzzy resolution, fuzzy relations, composition, interface, fuzzy decision-making considerations, and describe fuzzy control basics, architecture, properties, robustness, and stability.	2	PO1, PO2, PO3
CO2	Apply connectionist modeling with multi-layer perceptrons, Hopfield networks, RBF networks, SOMs, and applications of ANNs across diverse domains.	3	PO1, PO2, PO3
CO3	Analyze Genetic algorithms optimization, schema theorem demonstration, and enhanced problem-solving capabilities inference with neural networks and fuzzy logic integration.	4	PO1, PO2, PO3
CO4	Inspect neuro-fuzzy system architecture, optimization techniques with neural networks and fuzzy logic, neuro-evolution in dynamic networks, recent advances in neuro-evolution methodologies for enhanced computational intelligence.	4	PO1, PO2, PO4
CO5	Conclude Markov Decision Processes (MDPs), Dynamic Programming, Monte Carlo Methods, Temporal Difference (TD) Learning, Function Approximation, Deep Reinforcement Learning, Policy Gradient Methods, Exploration and Exploitation, advanced topics, and applications in reinforcement learning.	4	PO1, PO2, PO4

Syllabus

Introduction to computing: Differentiate Soft computing versus hard computing, properties of soft computing, Fundamentals of Fuzzy Logic Systems: Fuzzy sets, Fuzzy logic operations, generalized operations, Fuzziness and fuzzy resolution, fuzzy relations, composition and interface, considerations of fuzzy decision- making. Fuzzy logic control: Basic of fuzzy control, Fuzzy control architecture, Properties of fuzzy control, robustness and stability

Fundamentals of connectionist modeling The multi-layer perceptrons Fundamentals of connectionist modeling , The Hopfield network, RBF, SOM, application of ANN.

Evolutionary computing: Overview of Evolutionary computing, Genetic algorithms and optimization, the schema theorem: the fundamental algorithm of Genetic algorithms, Genetic algorithms - operations, integration of Genetic algorithms with neural networks, integration of Genetic algorithms with fuzzy logic

Dynamic Neural Networks, Neuro Fuzzy Systems: Architecture of neuro fuzzy systems, construction of neuro fuzzy systems. Optimization with neural networks and fuzzy logic, Neuro evolution , Advances in Neuro evolution

Markov Decision Processes (MDPs) -Dynamic Programming and Monte Carlo Methods - Temporal Difference (TD) Learning -Function Approximation and Deep Reinforcement Learning - Policy Gradient Methods -Exploration and Exploitation, Advanced Topics, and Applications

Reference Books

23AIP3203A - MULTI MODAL INFORMATION PROCESSING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3203A	MULTI MODAL INFORMATION PROCESSING	MMIP	A	3	0	4	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Utilize the various types of signals, systems and their frequency domain transformation.	3	PO1, PSO1
CO2	Apply the design methodology of different filters and their realizations.	3	PO1, PO3, PSO1
CO3	Examine signal processing approaches for extraction of information present in the natural signals.	4	PO1, PO2, PSO1
CO4	Discover machine learning approaches for processing of signals.	4	PO1, PO3, PSO1
CO5	Analyze the usefulness of Signals and Systems, Transforms and Filter Design, 1-Dimensional and 2-Dimensional Information Processing, Machine Learning approaches for building Multimodal Information Processing based Intelligent Systems	4	PO1, PO2, PO3, PSO1
CO6	Examine the signal processing approaches related to transformation, filtering, feature extraction, machine learning for signal processing.	4	PO1, PO2, PO3, PSO1

Syllabus

Signals and Systems: Types of Signals: Analog, deterministic, non-deterministic, random signals, periodic, aperiodic signals, discrete time signals, digital signals. Elementary signals: impulse, unit step, ramp, sinusoidal signal, complex exponential. Systems: impulse response, Convolution, Difference Equations for representation of systems, properties of systems, linearity, superposition principle, shift invariance, causality, stability. Fourier series for periodic signals, Fourier transforms, properties of Fourier Transform, Discrete Time Fourier Transform (DTFT), Discrete Fourier Transforms (DFT), Fast Fourier Transforms (FFT), Phase and group delays, Sampling and Quantization.

Transforms and Filter Design: Z-Transforms, Region of convergence (ROC), Properties of Z-Transforms, Causality and stability of filters, Finite Impulse Response (FIR), Infinite Impulse Response (IIR), Pole-Zero representation, Digital filter design: FIR filter design by Fourier Transform, Linear Phase Characteristics, low pass, high pass, band pass and band reject filters, IIR filter design by coefficient calculation, Frequency response of filters, All pass filters, Hilbert Transform, Filter realizations.

1-Dimensional and 2-Dimensional Information Processing: Windowing techniques: Rectangular, Bartlett, Hamming, Hanning, Blackwell, Kaiser. Shorttime analysis: Short Time Fourier Transform (STFT) of Speech signals, Enhancement (denoising) techniques such as Mean, Median, and Moving average filter for images. Feature extraction techniques: MelFrequency Cepstral Coefficients (MFCC), Linear Prediction Coefficients (LPC) for speech, Audio Reconstruction using Analysis by Synthesis approach. Wavelet based image decomposition, Image Reconstruction using Analysis by Synthesis approach.

Machine Learning approaches for building Multimodal Information Processing based Intelligent Systems: Pre-processing, feature extraction and classification using Convolutional Neural Networks (CNN) and Deep Neural Networks (DNN). Data augmentation using Generative Adversarial Networks (GAN), synthesis of signals using Recurrent Neural Network (RNN).

Studies on Advanced topics of Signals and Systems, Transforms and Filter Design, 1-Dimensional and 2-Dimensional Information Processing, Machine Learning approaches for building Multimodal Information Processing based Intelligent Systems

Reference Books

23AIP3204A - ARTIFICIAL NEURAL NETWORKS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3204A	ARTIFICIAL NEURAL NETWORKS	ANN	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate core principles of artificial neural networks, from their inception to their application in learning and information processing.	2	PO1, PO2, PSO1
CO2	Apply various techniques for training and optimizing neural networks and equips you with the understanding of key learning algorithms like Hebbian rule, Perceptron learning, Delta rule, and Backpropagation.	3	PO1, PO2, PSO1
CO3	Apply different techniques of neural networks for information storage and retrieval, exploring advanced methods like auto-associative networks, associative memory models, and stochastic techniques	3	PO2, PO3, PSO2
CO4	Analyze various learning algorithm techniques for neural networks and acquire familiarity with emerging software, tools, and technologies.	4	PO2, PO3, PSO2
CO5	Critically evaluate their ethical implications, including bias, fairness, transparency, and future directions in this rapidly evolving field.	5	PO2, PO8, PSO2

Syllabus

Basics of Artificial Neural Networks: Historical perspective; Characteristics of Neural Networks; Artificial Neural Networks (ANN) terminology; Neuron Models; Topology; Basic learning laws, Activation dynamics models; Synaptic dynamics models

Learning methods; Stability and convergence; Feed forward Neural Networks: Analysis of Pattern association; pattern classification and pattern mapping by feedforward neural networks (FFNNs); Hebbian Rule; Perceptron learning; Delta rule; Backpropagation Algorithm

Analysis of linear auto associative networks; Associative Memory, exponential BAM Hopfield model for pattern storage; Stochastic networks and Simulated annealing; Restricted Boltzmann machine.

Counter Propagation Networks, dynamically driven recurrent networks (RNN), Learning algorithms (BPTT, RTRL, Kalman Filter) Applications of neural networks.

Ethical implications of using neural networks in decision-making processes Bias and fairness issues in neural network models Transparency and interpretability challenges in complex neural networks Emerging trends and future directions in neural network research and development

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate core principles of artificial neural networks, from their inception to their application in learning and information processing.	2	PO1, PO2, PSO1
CO2	Apply various techniques for training and optimizing neural networks and equips you with the understanding of key learning algorithms like Hebbian rule, Perceptron learning, Delta rule, and Backpropagation.	3	PO1, PO2, PSO1
CO3	Apply different techniques of neural networks for information storage and retrieval, exploring advanced methods like auto-associative networks, associative memory models, and stochastic techniques	3	PO2, PO3, PSO2
CO4	Analyze various learning algorithm techniques for neural networks and acquire familiarity with emerging software, tools, and technologies.	4	PO2, PO3, PSO2
CO5	Critically evaluate their ethical implications, including bias, fairness, transparency, and future directions in this rapidly evolving field.	5	PO2, PO8, PSO2

Syllabus

Basics of Artificial Neural Networks: Historical perspective; Characteristics of Neural Networks; Artificial Neural Networks (ANN) terminology; Neuron Models; Topology; Basic learning laws, Activation dynamics models; Synaptic dynamics models

Learning methods; Stability and convergence; Feed forward Neural Networks: Analysis of Pattern association; pattern classification and pattern mapping by feedforward neural networks (FFNNs); Hebbian Rule; Perceptron learning; Delta rule; Backpropagation Algorithm

Analysis of linear auto associative networks; Associative Memory, exponential BAM Hopfield model for pattern storage; Stochastic networks and Simulated annealing; Restricted Boltzmann machine.

Counter Propagation Networks, dynamically driven recurrent networks (RNN), Learning algorithms (BPTT, RTRL, Kalman Filter) Applications of neural networks.

Ethical implications of using neural networks in decision-making processes Bias and fairness issues in neural network models Transparency and interpretability challenges in complex neural networks Emerging trends and future directions in neural network research and development

23AIP3305A - GENERATIVE DEEP LEARNING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3305A	GENERATIVE DEEP LEARNING	GDL	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Generative AI and its real time applications	2	PO1, PSO1
CO2	Apply Advanced generative models like WGAN,StyleGAN,Cycle GAN for real time applciations for image generation	3	, PSO1
CO3	Build text generation pipelines using advanced techniques such as Long Short-Term Memory (LSTM) networks, BERT, and attention mechanisms	3	PO1, PSO1
CO4	Apply Cross-modal generation models like ATtnGan, MuseGAN	3	PO3, PO4, PSO2
CO5	Apply Fine-tuning on real time applications using large language models	3	PO4, PSO2
CO6	Implement real time application using Generative AI using Cycle Gan, StyleGAN MuseGan	5	PO3, PO5, PSO2
CO7	Experiment with real time applcation using Generative AI using Cycle Gan, StyleGAN MuseGan, AttnGan, Alchat, and develop application.	5	PO5, PSO2

Syllabus

Introduction to Generative AI , Applications in generative models, Varational Autoencoder, GANs, Conditional Variational Autoencoders (CVAEs),Adversarial Variational Bayes (AVB),Importance of latent space in VAEs

Advanced GAN Architectures:, Wasserstein GANs (WGANs) and WGAN-GP, CycleGAN , paired and unpaired style transfer -StyleGAN and StyleGAN2, Progressive Growing GANs (PGGANs)

Build several text generation pipelines based on LSTMs, BERT, Attention Mechanisms: Self-attention mechanism,Transformer architecture,Analysis of Rnn with Attention

Text-to-Image Generation,Text-to-image synthesis techniques, AttnGAN: Attentional Generative Adversarial Networks for image generation from textual descriptions, Cross-modal generation models,Analysis of MuseGAN

AttnGAN: Attentional Generative Adversarial Networks for image generation from textual descriptions to develop language models,BERT

23AIP3406M - COGNITIVE COMPUTING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3406M	COGNITIVE COMPUTING	CC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Explain the fundamental concepts of cognitive systems, including their computation, knowledge-based AI, cognition, and design principles, with an emphasis on building the corpus, integrating data, machine learning, hypothesis generation, and visualization services.	2	PO1, PO2, PO3
CO2	Apply cognitive functioning principles such as learning, memorizing, adaptation, and decision-making, along with natural language processing techniques and knowledge representation models, to develop and enhance cognitive systems for addressing business problems.	3	PO1, PO2, PO5
CO3	Analyze the integration of mental states such as belief, desire, and intention with advanced analytics capabilities, including machine learning, predictive analytics, and various forms of data analytics, to enhance cognitive functioning in machines and assess their business implications.	4	PO1, PO3, PO5
CO4	Interpret the process of defining objectives and domains, formulating questions, exploring insights, and applying cognitive computing principles to develop applications in healthcare, smarter cities, and government.	4	PO1, PO3, PO5

Syllabus

Introduction to Cognitive Systems and computation, Knowledge based AI: Cognitive systems. Artificial Intelligence as the Foundation of Cognitive Computing, Understanding Cognition, The Elements of a Cognitive System, Cognitive Applications. Design Principles for Cognitive Systems: Building the Corpus, Bringing Data into the Cognitive System, Machine Learning, Hypotheses Generation and Scoring, Presentation and Visualization Services.

Cognitive Functioning: Learning, Memorising, Adaptation, Self Origination, Control, Thinking, Reasoning, Decision Making & Judgement. Natural Language Processing in Support of a Cognitive System: The Role of NLP in a Cognitive System Understanding Linguistics, Applying Natural Language Technologies to Business Problems. Representing Knowledge in Taxonomies and Ontologies: Developing a Cognitive System, Models for Knowledge Representation, Other Methods of Knowledge Representation

Mental States: Belief Desire Intention (BDI) emotion and feeling. Computation of Cognitive Functioning in machines: Applying Advanced Analytics to Cognitive Computing: Key Capabilities in Advanced Analytics, Using Machine Learning in the Analytics Process, Predictive Analytics Text Analytics, Image Analytics, Speech Analytics Using Advanced Analytics to Create Value. Business Implications:

Defining the Objective, Defining the Domain, Defining Questions and Exploring Insights, Building a Cognitive Healthcare Application, Smarter Cities Cognitive Computing in Government

23AIP3407M - PERCEPTION AND COMPUTER VISION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3407M	PERCEPTION AND COMPUTER VISION	PCV	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental image processing techniques, including filtering and edge detection, to analyze and manipulate digital images.	2	PO1, PO2, PSO1
CO2	Apply various image transformations including orthogonal, Euclidean, affine, and projective transformations.	3	PO1, PO3, PSO1
CO3	Apply and Analyze Image Segmentation&Feature Extraction techniques, detect shapes and lines using the Hough Transform technique.	3	PO1, PO3, PSO1
CO4	Analyze the various feature extraction and classification techniques to recognize and localize objects within images.	4	PO1, PO4, PSO1

Syllabus

Introduction: Overview of Computer Vision, Related Areas, and Applications. Fundamental of Image Processing Techniques, Pixel relationship, Sampling and Quantization, Human Color Perception, Image Filtering Techniques (Spatial and Frequency Domain), Edge Detection (Canny/Sobel/ Gabor/Texture Edges/ Prewitt / Robert)

Fundamentals of Image Formation, Transformation: Orthogonal, Euclidean, Affine and Projective, Linear Filters: Linear Filters and Convolution (1D and 2D), Image Enhancement, Histogram Equalization, Image Restoration, Image Thresholding.

Image Segmentation&Feature Extraction: LOG, DOG,HOG, DWT, Hough Transform, SIFT, SURF, Region Growing, Graph-Cut, Texture Segmentation; Morphological Operations Object Detection.

Pattern Analysis& Image Fusion Clustering: Clustering: K-Means, EM Algorithm, Classification: Discriminant Function, Supervised, Un-supervised, Semi-supervised; Classifiers: Bayes, KNN, ANN models; Dimensionality Reduction: PCA, LDA, ICA, Overview of Image Fusion & Pixel Fusion, Multiresolution based Fusion, Object Recognition.

23AIP3408M - MACHINE LEARNING ON CLOUD (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3408M	MACHINE LEARNING ON CLOUD	MLC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concepts and principles of Cloud Computing, including service models (IaaS, PaaS, SaaS), deployment models (public, private, hybrid), and key providers (AWS, Azure, Google Cloud).	2	PO1, PO2, PO6, PSO2
CO2	Apply data preprocessing and feature engineering techniques using cloud-based tools. Explore Machine Learning Algorithms and Techniques.	3	PO2, PO4, PO6, PSO2
CO3	Analyze the performance of machine learning models in the cloud environment. Hands-on Experience with Cloud Machine Learning Services.	4	PO1, PO3, PO6, PSO2
CO4	Analyze the impact of cloud resources on model performance and cost. Deploying Machine Learning Models in Cloud Environments.	4	PO3, PO4, PO6, PSO2

Syllabus

Cloud Computing Fundamentals: This module introduces students to the foundational concepts of cloud computing, including Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). They learn about cloud service models, deployment models, and key cloud providers such as AWS, Azure, and Google Cloud Platform. Additionally, students explore cloud architecture, resource provisioning, and management techniques essential for deploying machine learning applications in cloud environments.

Machine Learning Algorithms and Techniques: In this module, students delve into various machine learning algorithms and techniques, including supervised learning, unsupervised learning, and reinforcement learning. They learn how to preprocess data, select appropriate features, and train machine learning models using popular libraries such as TensorFlow and scikit-learn. Emphasis is placed on understanding the strengths and limitations of different algorithms and selecting the most suitable ones for specific tasks.

Cloud-based Machine Learning Services: This module focuses on leveraging cloud-based machine learning services and platforms to streamline the development and deployment of machine learning models. Students explore services such as Amazon SageMaker, Azure Machine Learning, and Google AI Platform, learning how to use them for tasks such as model training, hyperparameter tuning, and model deployment. They gain practical experience through hands-on exercises and projects, deploying machine learning solutions on cloud platforms.

Scalability and Performance Optimization: In this module, students learn techniques for scaling machine learning workloads on the cloud to handle large datasets and high computational demands efficiently. Topics covered include distributed computing, parallel processing, and auto-scaling strategies. Students also explore optimization techniques for improving the performance and efficiency of machine learning algorithms in cloud environments. Additionally, they learn about monitoring and debugging tools for diagnosing performance issues and optimizing resource utilization. Install and configure IBM watson studio, apply feature selection and feature extractions on the available data sets from the studio, visualize data set, Apply Binary Prediction algorithm, Value Prediction algorithms from the available algorithms in the studio, Selecting the machine learning classification algorithm and applying the algorithm on a dataset. Selecting the machine learning clustering algorithm and applying the algorithm on a dataset. Install and configure IBM watson studio, apply feature selection and feature extractions on the available data sets from the studio, visualize data set, Apply Binary Prediction algorithm, Value Prediction algorithms from the available algorithms in the studio, Selecting the machine learning classification algorithm and applying the algorithm on a dataset. Selecting the machine learning clustering algorithm and applying the algorithm on a dataset.

23AIP3509 - COMPUTATIONAL EPIDEMIOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3509	COMPUTATIONAL EPIDEMIOLOGY	CE	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the models of Epidemiology and applications of computational science in Epidemiology	2	PO1, PO2, PSO2
CO2	Apply the principles of mathematical modeling used to simulate disease transmission and predict outbreaks	3	PO1, PO2, PSO2
CO3	Analyze the importance of using computational models for designing surveillance and infection control policies, and how low cost policies can be developed using such models.	4	PO3, PO5, PSO2
CO4	Analyze the principles of machine learning and how it can be applied to develop computational models for epidemic spread.	4	PO5, PSO2

Syllabus

Introduction, models, and Disease dynamics: Epidemiology and computational epidemiology, historical overview of epidemiology and computational epidemiology. The importance of understanding and controlling disease-spread. Mass action disease models. Networked computational epidemiology.

Dynamics of disease-spread in mass action models and on contact network models. Inference, Prediction, and forecasting: Inferring disease model parameters-transmission probability, period of infectivity and reproduction number. Inferring infection source and most likely cascades. Predicting future cases and forecasting epidemics.

Infection Surveillance and Control: Designing low-cost disease surveillance and infection control policies. Surveillance includes placing data collection sites in clinics, performing extra testing on selected patients, swabbing selected surfaces in a hospital, etc. Infection control policies include vaccination, prescribing antibiotics and antivirals, quarantining, sequestering, etc.

Machine Learning Application in Computational Epidemiology: Prediction in the Context of Observational Epidemiology, clinical decision support, disease surveillance, introduction to super learner.

Reference Books

23AIP3510 - NATURAL LANGUAGE PROCESSING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3510	NATURAL LANGUAGE PROCESSING	NLP	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply various approaches to syntax and semantics in Natural Language Processing	3	PO1, PO2, PSO2
CO2	Apply the statistical estimation and statistical alignment models for language modelling and parsing.	3	PO2, PO3, PSO2
CO3	Apply Vector models for documents to gain insights of the document.	3	PO2, PO3, PSO1
CO4	Apply various statistical models for classification, information extraction, translation, and generation.	3	PO2, PO3, PSO1

Syllabus

Introduction to language processing: tokens, sentences, paragraphs, Sentence and Paragraph Segmentation, Introduction to Text Normalization (lowercasing, stemming, lemmatization, Corpora and their construction: representativeness, Regular expressions, extraction of information using Regex, Named Entity Recognition, Rule-Based Approaches for NER, Advanced smoothing for language modelling, POS tagging, Introduction to Hidden Markov Models

Models for Sequential tagging: MaxEnt, Viterbi Algorithm, CRF, Spelling Correction, Language Modelling, Computational Semantics, Lexical semantics: WordNet and FrameNet, Syntax: Constituency Parsing, Probabilistic Context-Free Grammars (PCFGs), Dependency Parsing: Dependency Trees, Transition-Based Parsing Comparison of Constituency and Dependency Parsing

Vector Space Model word vectors, GloVe/Word2Vec model, word embedding, Document Similarity measures Cosine and cluster measures, Text Classification, Clustering, and Summarization

Information Extraction, Document Classification, Clustering, topic modelling techniques, Machine Translation, Language Generation

Reference Books

- 1 Speech and Language Processing, Daniel Jurafsky and James H. Martin, 2023, MIT Press.
- 2 Natural language Understanding, James A., 2020, Pearson Education.

23AIP3511 - SPEECH PROCESSING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3511	SPEECH PROCESSING	SP	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop the knowledge of the speech production and perception mechanism, acoustic phonetics and phonology, speech prosody, and speech sound units.	3	PO1, PSO1
CO2	Make use of the knowledge of the speech signal processing in time and frequency domain, discrete Fourier transform, short-time analysis of speech, linear prediction and cepstral analysis of speech.	3	PO1, PO3, PSO1
CO3	Examine Machine learning (Traditional and State of the Art) models for speech processing such as Dynamic time warping (DTW), Gaussian mixture models (GMM), hidden Markov models (HMM), Neural network models, Support vector machines. Deep Neural Networks, LSTM Recurrent neural networks, Convolutional neural networks, Reinforcement learning	4	PO1, PO2, PSO1
CO4	Analyze End-to-end speech-to-speech Translation systems which has functional blocks such as Speech and Speaker recognition, Speech synthesis and Speech enhancement, Language identification	4	PO1, PSO1
CO5	Examine the speech processing approaches related to feature extraction, and development of machine learning models for speech processing.	4	PO1, PO2, PO3, PSO1

Syllabus

(Speech Science): Overview of speech communication, Speech signal to symbol (sound unit) transformation, nature of speech signal, Speech Production and Perception, Phonetics and Phonology, Acoustics Phonetics, Speech Prosody, Different types of Speech Sound units.

(Speech signal processing (Analysis of speech)): Review of DSP techniques, Time and frequency domain analysis, z-transform, Discrete Fourier transform, short-time analysis of speech, spectrograms, Segmental analysis of speech, Cepstral analysis, Mel frequency cepstral coefficients (MFCC), linear prediction analysis, Linear prediction cepstral coefficients (LPCC).

(Machine learning models for speech processing): Traditional Approaches: Dynamic time warping (DTW), Gaussian mixture models (GMM), hidden Markov models (HMM), Neural network models, Support vector machines State of the Art Models: Deep Neural Networks, LSTM Recurrent neural networks, Convolutional neural networks, Reinforcement learning

(End-to-end speech-to-speech Translation): Speech recognition, Speaker recognition, Speech synthesis, Speech enhancement, Language identification, Emotion recognition, Prosody manipulation.

Reference Books

23AIP3512 - DESIGN & MANAGEMENT OF DISTRIBUTED APPLICATIONS FOR AI ON CLOUD (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3512	DESIGN & MANAGEMENT OF DISTRIBUTED APPLICATIONS FOR AI ON CLOUD	DMDAAC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of distributed systems involves grasping how multiple independent computers work together to provide a unified service	2	PO1, PO3, PSO2
CO2	Understand various cloud computing platforms involves learning about different services and solutions provided by companies	2	PO1, PO2
CO3	Apply skills to demonstrate and manage distributed AI applications on cloud platforms.	3	PO2, PO4, PSO1
CO4	Identify various operation of distributed AI applications by applying techniques in distributed computing.	3	PO1, PO3

Syllabus

Introduction: Introduction to Distributed Applications for AI on Cloud, Overview of cloud computing and its role in AI applications, Introduction to distributed systems and their challenges, Design considerations for scalable and fault-tolerant applications, Cloud Infrastructure for AI Applications, Cloud service models: IaaS, PaaS, and SaaS, Virtual machines, containers, and serverless computing, Selecting and provisioning cloud resources for AI workloads, Distributed Computing Fundamentals, Parallel computing concepts and models, Distributed file systems and storage solutions, Introduction to MapReduce and Hadoop

AI Algorithms for Distributed Systems, Overview of machine learning algorithms for distributed environments, Distributed training and inference techniques, Model synchronization and aggregation, Data Management in Distributed AI Systems, Data preprocessing and feature engineering in distributed settings, Distributed databases and data warehousing, Data consistency and replication strategies, Performance Optimization for Distributed AI Systems, Load balancing and resource allocation strategies, Caching mechanisms and data locality, Bottleneck identification and system profiling

Security and Privacy in Distributed AI Applications, Threats and vulnerabilities in distributed systems, Authentication and access control in the cloud, Privacy-preserving techniques for distributed AI, Monitoring and Fault Tolerance, Distributed system monitoring and logging, Fault detection and recovery mechanisms, Handling node failures and network partitions, Designing Scalable and Resilient Architectures, Architectural patterns for distributed AI systems, Scalability considerations for large-scale deployments, Building fault-tolerant and highly available systems

Deployment and DevOps for Distributed AI Applications, Continuous integration and deployment (CI/CD) pipelines, Automation and orchestration tools for managing distributed systems, Infrastructure as code (IaC) and configuration management, Performance Evaluation and Benchmarking, Metrics for evaluating the performance of distributed AI applications, Benchmarking frameworks and tools, Analyzing and interpreting performance results, Case Studies and Best Practices, Real-world case studies of successful distributed AI applications, Best practices for designing, deploying, and managing distributed AI systems, Future trends and challenges in the field

23AIP3513 - ARCHITECTING DEEP LEARNING WORKLOADS ON CLOUD (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AIP3513	ARCHITECTING DEEP LEARNING WORKLOADS ON CLOUD	ADLWC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying deep learning techniques using a cloud platform leverages scalable computing resources, specialized tools, and infrastructure from providers like AWS, GCP, or Azure to efficiently train, deploy, and manage deep learning models.	3	PO1, PO2, PO3, PSO1
CO2	Apply cloud services to enhance deep learning capabilities through scalable computing resources and specialized infrastructure.	3	PO1, PO2, PO3, PSO1
CO3	Apply deep learning architectures efficiently using cloud-based infrastructure for scalable computation and model deployment.	3	PO1, PO2, PO3, PSO1
CO4	Design and construct a deep learning architecture as a cloud service, incorporating various elements and functionalities.	3	PO1, PO2, PO3, PSO1

Syllabus

Overview of Cloud computing enhances deep learning by providing scalable, on-demand resources that optimize cost-efficiency and accelerate model development with specialized hardware like GPUs and TPUs. Leading platforms such as AWS, Google Cloud Platform, and Microsoft Azure offer comprehensive services tailored to deep learning, including managed solutions for training, inference, and data management, facilitating streamlined development and deployment workflows for AI applications.

Overview of Cloud services such as compute (e.g., AWS EC2, Azure VMs, Google Compute Engine), storage, networking, and data management form the backbone of cloud computing infrastructure. For deep learning workloads, selecting appropriate compute instances with GPU support, robust storage solutions for handling large datasets, and optimized networking configurations is crucial to achieving efficient model training and inference at scale.

Designing scalable architectures for deep learning involves implementing distributed training strategies like data parallelism for processing subsets of data across multiple nodes, and model parallelism for distributing different model parts across nodes. Autoscaling and load balancing techniques are then applied to dynamically adjust resources based on workload demands, optimizing resource utilization and maintaining responsiveness across varying computational intensities during training and inference tasks.

Deploying deep learning models as cloud services (e.g., REST APIs, gRPC). Monitoring and managing deployed models in the cloud. Using containerization (Docker) and orchestration (Kubernetes).

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Core Concepts-Overview of text analysis tasks, Introduction to machine learning algorithms, Basics of text preprocessing	2	PO1, PSO1
CO2	Understanding Text Preprocessing Proficiency-Tokenization, stemming, and lemmatization Stop words removal and punctuation handling Text normalization techniques	2	PO2, PSO1
CO3	Implement a bag-of-words model by pre-processing text, building a vocabulary, creating feature vectors with word counts, and evaluating it through the performance of a subsequent machine learning task it feeds into	3	PO3, PSO1
CO4	Analyze the Tool Proficiency-TF-IDF (Term Frequency-Inverse Document Frequency) Word embeddings (Word2Vec, GloVe)	4	PO4, PSO1
CO5	Analyze the Critical Analysis and Interpretation-Supervised Learning for Text Classification, Unsupervised Learning for Text Clustering,	4	PO3, PSO2
CO6	Analyze the Ethical Considerations-Understanding bias in text data and machine learning models, Ethical considerations in text analysis applications, Case studies and discussions on ethical dilemmas in text analysis	4	PO2, PSO1
CO7	Examine the Advanced Topics in Text Analysis by utilizing sophisticated techniques from Natural Language Processing (NLP) to unlock richer insights from textual data.	4	PO1, PSO1

Syllabus

Understanding Core Concepts-Overview of text analysis tasks, Introduction to machine learning algorithms, Basics of text preprocessing

Text Preprocessing Proficiency-Tokenization, stemming, and lemmatization Stop words removal and punctuation handling Text normalization techniques

Model implementation and evaluation include the Bag-of-Words model, which represents text data as fixed-length vectors based on word occurrence. This method simplifies text into numerical features for machine learning algorithms, enabling effective text classification and clustering.

Tool proficiency includes TF-IDF (Term Frequency-Inverse Document Frequency) for weighting terms, and word embeddings such as Word2Vec and GloVe for capturing semantic relationships.

Critical analysis and interpretation involve evaluating the performance of supervised learning models for text classification and unsupervised learning models for text clustering. Understanding the strengths and limitations of these models helps in effectively interpreting their results.

CO7	Examine the Advanced Topics in Text Analysis by utilizing sophisticated techniques from Natural Language Processing (NLP) to unlock richer insights from textual data.	4	PO2

Syllabus

The syllabus covers text analysis tasks like sentiment analysis and topic modeling, and introduces machine learning algorithms for text analysis, including supervised and unsupervised methods.

Text preprocessing techniques are discussed, including tokenization, stemming, lemmatization, stop words removal, punctuation handling, and text normalization.

Supervised learning for text classification using labeled data and unsupervised learning for text clustering are key components of the curriculum.

Tool proficiency is emphasized through model implementation, evaluation, and critical analysis to understand and interpret model performance and results effectively.

Critical Analysis and Interpretation-Supervised Learning for Text Classification,Unsupervised Learning for Text Clustering

23ALT3202A - DEEP LEARNING FOR NATURAL LANGUAGE PROCESSING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ALT3202A	DEEP LEARNING FOR NATURAL LANGUAGE PROCESSING	DLFNLP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand various types of neural networks utilized in Natural Language Processing, including multilayer neural networks, recurrent neural networks (RNNs), convolutional networks, and recursive neural networks.	2	PO1, PO5, PSO1, PSO2
CO2	Apply statistical estimation, HMMs (with Forward and Viterbi algorithms), and sequence labeling for NLP system development.	3	PO1, PO3, PSO1, PSO2
CO3	Analyze and develop proficiency in implementing word vector representations like word2vec and GloVe, as well as generating sentence, paragraph, and document representations using deep learning techniques.	4	PO1, PO2, PSO1, PSO2
CO4	Analyze attention models and memory networks for language understanding, and evaluate their effectiveness in solving complex NLP problems, thereby demonstrating the ability to innovate and adapt deep learning architectures to practical NLP applications.	4	PO1, PO2, PO3, PSO2
CO5	Develop and evaluate the performance of deep learning models in Natural Language Processing tasks and demonstrate the ability to fine-tune and optimize model architectures and hyperparameters to achieve state-of-the-art results.	5	PO1, PO2, PSO2

Syllabus

Overview of Natural Language Processing (NLP). Introduction to Deep Learning Neural network basics Activation functions Loss functions. Applications of Deep Learning in NLP Text classification Named Entity Recognition (NER) Language generation. Basics of Multilayer Neural Networks Perceptrons and neurons Feedforward architecture. Back-propagation Algorithm Chain rule Gradient descent Stochastic gradient descent

Entropy, relative entropy, cross entropy, Statistical estimation and smoothing for language models, Parts of Speech Tagging and Sequence Labelling, Lexical syntax, Hidden Markov Models (Forward and Viterbi algorithms and EM training), n-gram models.

Recursive Neural Networks Tree-based structures in NLP Recursive neural tensor networks. Gated Recurrent Units (GRUs) and Long Short-Term Memory (LSTM) Networks Architecture and advantages Applications in sequence modeling and language generation. Building attention models Attention mechanism in neural networks Self-attention and transformer architectures. Memory networks for language understanding Architecture and operations Applications in question answering and dialogue systems

Design and Applications of Deep Nets to Language Modeling Neural language models Sequence-to-sequence models. Parsing with Deep Learning Dependency parsing Constituency parsing. Sentiment Analysis using Deep Learning Sentiment classification Aspect-based sentiment analysis. Machine Translation with Deep Learning Neural machine translation Transformer models

Model Evaluation Metrics Precision, Recall, F1-score Accuracy, Confusion Matrix ROC Curve, AUC-ROC BLEU, METEOR for machine translation evaluation. Hyperparameter Tuning Techniques Grid search Random search Bayesian optimization Hyperband. Model Interpretability Feature importance analysis Visualization techniques (e.g., t-SNE) Attention visualization

23ALT3303A - CONVERSATIONAL AI AND CHATBOT DEVELOPMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ALT3303A	CONVERSATIONAL AI AND CHATBOT DEVELOPMENT	CAICBD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate the principles and challenges of conversational AI and recall the components of chatbot architecture.	2	PO1, PO2, PO3, PSO1
CO2	Explain the basics of natural language processing (NLP). Understand the concepts of intent recognition and entity extraction in NLP.	2	PO3, PO4, PSO1
CO3	Build text preprocessing techniques. Develop a simple chatbot using NLU(Natural Language Understanding) frameworks.	3	PO2, PO4, PSO1
CO4	Examine different machine learning models for chatbots. Analyze dialog flows and state tracking mechanisms.	4	PO1, PO3, PO4, PSO1
CO5	Determine the ethical implications of chatbot development. Assess the effectiveness of chatbot architectures in real-world scenarios.	5	PO1, PO3, PSO1
CO6	Design and develop a chatbot capable of context-aware responses in real-time scenarios.	6	PO2, PO4, PSO1
CO7	Evaluate the performance and ethical implications of chatbot applications in various domains.	5	PO3, PSO1

Syllabus

Introduction to Conversational AI, Definition and applications, Evolution of chatbots, Challenges and opportunities, Natural Language Processing (NLP), Basics Text preprocessing, Tokenization and stemming, Part-of-speech tagging, Named entity recognition (NER).

Natural Language Understanding (NLU), Intent recognition, Entity extraction, Slot filling, NLU frameworks and tools Natural Language Generation (NLG), Text generation techniques, NLG architectures, NLG evaluation metrics.

Machine learning models for chatbots, Introduction to machine learning, Supervised, unsupervised, and reinforcement learning, Deep learning models for NLP (e.g., RNNs, Transformers), Transfer learning for chatbot development, Chatbot Architectures, Components of chatbot architecture, Design considerations, Single-turn vs. multi-turn conversations.

Dialog Management, State tracking, Context management, Handling user utterances, Dialog flow design, Integration with Backend Systems, Database integration, API usage, Web scraping for data retrieval.

Personalization and context awareness, User profiling, Contextual understanding, Recommendation systems for chatbots Multimodal Interaction, Voice-based interaction, Visual inputs and responses, Integration with voice assistants, Ethical considerations in chatbot development, Privacy and data security, Bias and fairness, Transparency and accountability.

23ALT3506 - LANGUAGE UNDERSTANDING WITH PRE-TRAINED MODELS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ALT3506	LANGUAGE UNDERSTANDING WITH PRE-TRAINED MODELS	LUWPTM	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Pre-trained Models is, and pre-trained language models, Evolution of pre-training techniques.	2	PO1, PSO2
CO2	Apply the Pre-trained Models- Transfer learning principles, Fine-tuning strategies, Domain adaptation techniques .	3	PO2, PO4, PSO2
CO3	Develop a project that Popular pre-trained models: BERT, GPT, RoBERTa, etc.Masked language modeling (MLM) Next sentence prediction (NSP) .	4	PO2, PO4, PSO2
CO4	Analyze and discuss the language generation tasks- Fine-tuning pre-trained models for language generation..	4	PO2, PO4, PSO2

Syllabus

Introduction to Pre-trained Models: Overview of pre-trained language model, Evolution of pre-training techniques, Popular pre-trained models: BERT, GPT, RoBERTa, etc, Pre-training Objectives: Masked language modeling (MLM), Next sentence prediction (NSP), Contrastive pre-training objectives, Self-supervised learning and unsupervised pre-training

Fine-tuning Pre-trained Models , Transfer learning principles, Fine-tuning strategies, Domain adaptation techniques, Handling different downstream tasks Text Classification with Pre-trained Models: Overview of text classification , Fine-tuning for text classification tasks , Implementing text classification pipelines , Evaluation metrics for text classification

Introduction of Sentiment Analysis and its implementation: Introduction to sentiment analysis, Fine-tuning pre-trained models for sentiment analysis, Implementing sentiment analysis pipelines , Evaluation metrics for sentiment analysis.

Introduction of Language Generation and implantation: Overview of language generation tasks , Fine-tuning pre-trained models for language generation, Implementing language generation pipelines , Evaluation metrics for language generation , Multi-task learning with pre-trained models , Knowledge distillation techniques, Handling large datasets and distributed training.

23ALT3507 - LARGE LANGUAGE MODEL FOR SPEECH PROCESSING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ALT3507	LARGE LANGUAGE MODEL FOR SPEECH PROCESSING	LLMFSP	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the speech sounds, their physical properties and speech signals using digital techniques like Short-Time Fourier Transform, filter banks, and Linear Predictive Coding (LPC).	2	PO1, PSO1
CO2	Understand the extracting features from speech signals, compare speech patterns using techniques like cepstral distance and dynamic time warping, and delve into distortion measures.	2	PO1, PO2, PO3, PSO1
CO3	Apply the power of machine learning for speech processing, exploring techniques like DTW, GMMs, HMMs, SVMs, and cutting-edge deep neural networks.	3	PO1, PO2, PSO1
CO4	Apply the text-to-speech synthesis methods (concatenative, waveform) and prosody for natural sounding speech its applications.	3	PO1, PO5, PSO2

Syllabus

Speech Fundamentals: Articulatory Phonetics Production and Classification of Speech Sounds; Acoustic Phonetics ,acoustics of speech production; Review of Digital Signal Processing concepts; ShortTime Fourier Transform, FilterBank and LPC Methods

Features, Feature Extraction and Pattern Comparison Techniques: Speech distortion measures mathematical and perceptual Log Spectral Distance, Cepstral Distances, Weighted Cepstral Distances and Filtering, Likelihood Distortions, Spectral Distortion using a Warped Frequency Scale, LPC, PLP and MFCC Coefficients, Time Alignment and Normalization Dynamic Time Warping, Multiple Time Alignment Path

Hidden Markov Models: Markov Processes, HMMs Evaluation, Optimal State Sequence Viterbi Search, BaumWelch Parameter Re-estimation, Implementation issues, Large Vocabulary Continuous Speech Recognition: Architecture of a large vocabulary continuous speech recognition system

Text-to-Speech Synthesis: Concatenative and waveform synthesis methods, subword units for TTS, intelligibility and naturalness role of prosody, Applications and present status

23ASS3101A - AUTONOMOUS DRIVER ASSISTIVE SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3101A	AUTONOMOUS DRIVER ASSISTIVE SYSTEMS	ADAS	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the core concepts and principles underlying Autonomous Driver Assistive Systems (ADAS).	2	PO1, PO2, PO3, PSO2
CO2	Identify and describe the key components and technologies used in ADAS, including sensors, cameras, radar, LIDAR, and processing units.	3	PO1, PO2, PO3, PSO1
CO3	Understand the various sensor technologies employed in ADAS and their roles in different driving scenarios.	2	PO1, PO2, PO3, PSO1
CO4	Examine the strengths and limitations of different sensor types (e.g., cameras, radar, LIDAR) in diverse environmental conditions.	4	PO1, PO2, PO3, PSO2
CO5	Apply principles of sensor fusion to integrate data from multiple sensors, creating a comprehensive view of the vehicle's surroundings	3	PO1, PO2, PO3, PSO2
CO6	Develop algorithms for processing sensor data to detect and track objects, lanes, and traffic signs.	3	PO1, PO2, PO3, PSO1
CO7	Implement computer vision techniques for tasks such as object detection, lane detection, and traffic sign recognition	3	PO1, PO2, PO11, PSO1

Syllabus

Introduction to Autonomous Driver Assistive Systems. Overview of ADAS. History and evolution of ADAS. Levels of driving automation (SAE levels). Current trends and future directions. ADAS Architecture and Components. System architecture. Key components: sensors, actuators, and processing units

Sensor Technologies and Data Acquisition. Camera Systems. Types of cameras (monocular, stereo, surround-view). Image processing basics. Radar and LIDAR. Radar principles and applications. LIDAR technology and 3D mapping. Ultrasonic Sensors and GNSS. Ultrasonic sensor applications in parking assistance. Global Navigation Satellite System (GNSS) for vehicle localization

Sensor Fusion and Data Processing. Introduction to Sensor Fusion. Basics of sensor fusion. Importance in ADAS. Sensor Fusion Algorithms. Kalman filtering. Bayesian networks. Data association techniques

Computer Vision for ADAS. Object Detection and Recognition. Techniques for object detection. Deep learning models (e.g., CNNs). Lane Detection and Tracking. Image processing for lane detection. Algorithms for lane tracking. Traffic Sign Recognition. Methods for traffic sign detection and classification. Machine learning applications.

System Integration and Testing. System Integration. Integration of sensors, ECUs, and actuators. Software architecture for ADAS. Simulation and Testing. Simulation tools and environments (e.g., MATLAB, CARLA). Testing methodologies and validation techniques.

23ASS3102A - AI AND CONTROLS FOR AUTONOMUS FUTURE VEHICLE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3102A	AI AND CONTROLS FOR AUTONOMUS FUTURE VEHICLE	AICAFT	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamental principles of AI and control theory, for electric vehicle systems.	3	PO1, PO2
CO2	Develop a deep understanding of the integration of AI and control systems for Electric vehicle functions.	3	PO1, PO2
CO3	Apply AI techniques for perception, planning, decision-making ,and control of autonomous vehicles.	3	PO1, PO2
CO4	Examine the role of AI in optimizing electric vehicle performance energy management, and charging infrastructure.	4	PO1, PO2
CO5	Analyze the challenges and opportunities in developing autonomous electric vehicles.	4	PO1, PO2
CO6	Analyze the various AI control of Autonomous Vehicle transportation components testing using software tools with Simulink, OBD2, and Can Analyzer	4	PO1, PO2
CO7	Examine the Autonomous Vehicle systems based on various tools on AI techniques, Computer vision, NLP, and deep learning	4	PO1, PO2

Syllabus

Fundamentals of Autonomous vehicle: Introduction to autonomous vehicles, Vehicledynamics and control, Sensor fusion and perception, Path planning and motion planning, Control systemdesign for autonomous vehicles

AI for Autonomous Vehicle: Autonomous driving - Machine learningand deep learning, Computer vision and image processing for perception, Natural language processing forhuman-vehicle interaction, Reinforcement learning for autonomous decision-making

EV Fundamentals:Electric vehicle components and systems, Battery technology and management, Electric powertrain andcontrol, Energy management strategies, Charging Infrastructure and Power Electronics

AI for ElectricalVehicle: Battery management and state estimation with AI, Electric powertrain optimization strategies, AI forcharging infrastructure management, AI for vehicle-to-grid (V2G) interactions.

Integration of AI andControl for Autonomous Electric Vehicles: Co-design of AI and control systems, Energy-efficient autonomoustriving, AI-based predictive control for EVs, Challenges and future directions

Reference Books

23ASS3202A - INTRODUCTION TO INTELLIGENT DRONES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3202A	INTRODUCTION TO INTELLIGENT DRONES	IID	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic principles and technologies behind intelligent drones, including sensing, perception, and control.	2	PO1, PSO1, PSO2
CO2	Apply theoretical knowledge to develop practical solutions for drone navigation and object detection using machine learning and computer vision techniques.	3	PO1, PO3, PSO1
CO3	Evaluate real-world scenarios to identify suitable applications of intelligent drones across diverse industries, considering their benefits and limitations.	4	PO3, PSO2
CO4	Collaborate effectively in peer mentor study groups to solve complex problems related to drone design, operation, and ethical considerations.	4	PO9, PSO1
CO5	Communicate ideas and findings clearly and persuasively through presentations and written reports, demonstrating proficiency in technical communication.	5	PO10, PSO2

Syllabus

Foundations of Intelligent Drones: Introduction to Drone Technology, Principles of Sensing and Perception, Basics of Drone Control Systems, Navigation Techniques for Intelligent Drones, Ethical and Legal Considerations in Drone Operations.

Machine Learning for Drone Applications: Fundamentals of Machine Learning, Supervised Learning for Drone Navigation, Unsupervised Learning for Anomaly Detection, Reinforcement Learning for Autonomous Flight, Transfer Learning for Object Recognition.

Computer Vision for Drones: Introduction to Computer Vision, Image Processing Techniques for Drone Vision, Object Detection and Tracking Algorithms, Semantic Segmentation for Scene Understanding, Deep Learning Approaches for Visual Perception.

Applications of Intelligent Drones: Agricultural Applications: Crop Monitoring and Spraying, Surveillance and Security: Intrusion Detection and Monitoring, Search and Rescue Operations: Disaster Response with Drones, Environmental Monitoring: Wildlife Conservation and Forest Management, Industrial Inspections: Infrastructure Monitoring and Maintenance.

Peer Mentor Collaboration and Project Presentation: Group Discussions and Problem-Solving Sessions, Peer Review and Feedback Mechanisms, Project Planning and Execution, Presentation Skills and Public Speaking, Final Project Presentations and Evaluation

23ASS3202R - INTRODUCTION TO INTELLIGENT DRONES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3202R	INTRODUCTION TO INTELLIGENT DRONES	IID	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts and principles of intelligent drone technology, including hardware components and software algorithms.	2	PO1, PO5, PSO1
CO2	Analyze the applications and use cases of intelligent drones across various industries, identifying their benefits and limitations.	4	PO1, PO3, PSO1
CO3	Apply programming languages and development tools to implement basic control algorithms and autonomous behaviors in intelligent drones.	3	PO3, PSO2
CO4	Demonstrate proficiency in operating and troubleshooting intelligent drones, adhering to safety regulations and ethical considerations.	3	PO3, PO5, PSO2

Syllabus

Introduction to Intelligent Drones: Overview of Drone Technology, Components of Intelligent Drones (Sensors, Actuators, Flight Controllers), Types of Drones (Fixed-Wing, Multirotor, Hybrid), Drone Navigation Systems (GPS, IMU, Vision-based Navigation), Regulations and Ethics in Drone Operations

Intelligent Drone Applications: Aerial Photography and Videography, Agriculture and Crop Monitoring, Search and Rescue Operations, Infrastructure Inspection and Maintenance, Environmental Monitoring and Conservation

Drone Control and Navigation: Basics of Drone Control: PID Controllers, Proportional Navigation, Autonomous Flight Modes (Waypoint Navigation, Follow Me Mode), Obstacle Avoidance Algorithms, Path Planning and Trajectory Generation, Simulators and Testing Environments for Drone Development

Programming Intelligent Drones: Introduction to Drone Programming Languages (Python, C/C++), Drone API and SDK: DJI SDK, PX4 Autopilot, Developing Basic Control Algorithms (Takeoff, Landing, Hovering), Implementing Autonomous Behaviors - Mission Planning & Autonomous Landing, Integrating Computer Vision and Machine Learning for Intelligent Drones Drone Operation and Safety: Pre-flight Checks and Procedures, Emergency Response and Recovery.

23ASS3203A - AI AND IOT FOR AUTONOMOUS VEHICLE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3203A	AI AND IOT FOR AUTONOMOUS VEHICLE	AIAV	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concept of autonomous vehicles and their significance in modern transportation systems.	2	PO1, PO2, PO3, PSO2
CO2	Identify the key components and technologies involved in autonomous vehicles, including sensors, actuators, and communication systems.	3	PO1, PO3, PO4, PSO1
CO3	Develop algorithms for autonomous navigation, path planning, and obstacle avoidance using AI.	3	PO1, PO2, PO3, PSO2
CO4	Inspect the fundamental principles of artificial intelligence and its application in autonomous vehicle systems.	4	PO1, PO2, PO3, PSO2
CO5	Evaluate the various sensor technologies used in autonomous vehicles, including cameras, LiDAR, radar, and ultrasonic sensors.	5	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Autonomous Vehicles. Overview of Autonomous Vehicles. Evolution and Current State of Autonomous Driving Technology. Challenges and Opportunities in Autonomous Vehicle Development.

Basics of Artificial Intelligence (AI). Introduction to Artificial Intelligence. Machine Learning Fundamentals. Deep Learning and Neural Networks.

Sensor Technologies for Autonomous Vehicles. Types of Sensors Used in Autonomous Vehicles (LiDAR, Radar, Cameras, etc.). Sensor Fusion Techniques. Data Processing and Filtering for Sensor Data.

Machine Learning for Perception. Object Detection and Recognition. Semantic Segmentation. Sensor Data Fusion using Machine Learning Techniques.

Decision Making and Control. Path Planning Algorithms. Trajectory Optimization. Reinforcement Learning for Autonomous Vehicle Control.

CO2	Identify the key components and technologies involved in autonomous vehicles, including sensors, actuators, and communication systems.	3	PO1, PO3, PO4, PSO1
CO3	Develop algorithms for autonomous navigation, path planning, and obstacle avoidance using AI.	3	PO1, PO2, PO3, PSO2
CO4	Inspect the fundamental principles of artificial intelligence and its application in autonomous vehicle systems.	4	PO1, PO2, PO3, PSO2
CO5	Evaluate the various sensor technologies used in autonomous vehicles, including cameras, LiDAR, radar, and ultrasonic sensors.	5	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Autonomous Vehicles. Overview of Autonomous Vehicles. Evolution and Current State of Autonomous Driving Technology. Challenges and Opportunities in Autonomous Vehicle Development.

Basics of Artificial Intelligence (AI). Introduction to Artificial Intelligence. Machine Learning Fundamentals. Deep Learning and Neural Networks.

Sensor Technologies for Autonomous Vehicles. Types of Sensors Used in Autonomous Vehicles (LiDAR, Radar, Cameras, etc.). Sensor Fusion Techniques. Data Processing and Filtering for Sensor Data.

Machine Learning for Perception. Object Detection and Recognition. Semantic Segmentation. Sensor Data Fusion using Machine Learning Techniques.

Decision Making and Control. Path Planning Algorithms. Trajectory Optimization. Reinforcement Learning for Autonomous Vehicle Control.

23ASS3205A - AUTONOMOUS VEHICLE ECU DESIGN WITH AUTOSAR (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3205A	AUTONOMOUS VEHICLE ECU DESIGN WITH AUTOSAR	AVECUDA	A	3	0	4	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the challenges and opportunities in ECU development for Autonomous & Electric Vehicle.	2	PO1, PO4, PSO1
CO2	Apply the fundamentals of Autonomous and EV ECU design including hardware architecture, software development	3	PO2, PO5, PSO2
CO3	Analyze the Autonomous and EV ECU design including hardware architecture, software testing methodologies.	4	PO2, PO4, PSO1
CO4	Analyze the Integration of AI and control algorithms into ECU software to enhance vehicle performance for Autonomous and EV Vehicle	4	PO1, PO4, PSO2
CO5	Explore how the industry is applying Autosar Standards for developing the Software for Autonomous and EV Vehicle.	4	PO1, PO5, PSO1
CO6	Test the basic Autonomous and EV ECU design by hardware realization and CANoe software	4	PO2, PO5, PSO1

Syllabus

Introduction to In Vehicle Networks for Autonomous Vehicle and Electrical Vehicle-LIN Communication Overview, CAN Communication Overview, ISO-14229, 2020, Road Vehicles, Unified Diagnostic Services, Overview, Measurement and Calibration of Autonomous, EV System, Automotive Calibration Tools

Overview of Autonomous Vehicle System Design and Electrical Vehicle Design, Product Specifications, System, Mechanical, Electrical and Software Components of a product, System Architecture and System Level Features,

Hardware Block Diagram, schematics and Interfaces, Software Architecture and Components Description, Boundary Diagram of a product, Understanding System level block diagram of a product, Design consideration

System design of Powertrain ECU and its features, Battery Management System Design, Motor control Unit and control Algorithm, Charging System Design, Interface to Vehicle, Gateway, Design consideration

Domain Controllers, ADAS, Chassis, Powertrain, ECU for Sensor Fusion, Perception and Actuation, Interface to Cloud, V2I and its applications, Cybersecurity Controls for Autonomous vehicles, Design consideration

Software design of Autonomous and EV System. Overview of Autosar Software Layers, Microcontroller Abstraction Layer - Micro-controller Drivers, Memory Drivers, IO Drivers, Communication Drivers, ECU Abstraction Layer, IO Hardware Abstraction, Memory Abstraction, Communication Abstraction, Services Layer, Memory Services, System Services, Communication services, Autosar RTE and Autosar Application, Autosar Interfaces, Autosar Stack and Design flow

Reference Books

23ASS3304A - APPLIED DEEP LEARNING FOR AUTONOMOUS SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3304A	APPLIED DEEP LEARNING FOR AUTONOMOUS SYSTEMS	ADLAS	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand deep learning and its role in perception, decision-making, and control, key components and architectures of autonomous systems	2	PO1, PO3, PO4, PSO1
CO2	Develop the fundamentals of deep learning architectures, training techniques, and optimization strategies for solving complex problems	3	PO1, PO3, PO4, PSO1
CO3	Apply knowledge of deep learning techniques (CNNs) for processing sensor data (cameras, LiDAR, radar) used in autonomous systems for tasks like object detection, segmentation, and sensor fusion.	3	PO2, PO3, PSO1
CO4	Build knowledge and techniques to design intelligent agents that can learn to make optimal decisions, navigate complex environments, and control dynamical systems.	3	PO1, PO3, PSO1
CO5	Design, implement, and ethically analyze high-performing and secure autonomous systems using deep learning.	4	PO2, PO4, PSO1
CO6	Evaluate end-to-end deep learning solutions for autonomous navigation and environment interaction.	5	PO2, PO4, PSO1
CO7	Adapt the ethical implications and safety considerations in deploying deep learning for autonomous systems.	6	PO1, PO2, PO4, PSO1

Syllabus

Overview of autonomous systems - Introduction to deep learning - Key components and architecture of autonomous systems - Role of deep learning in perception, decision-making, and control

Neural networks, Convolutional Neural Networks (CNNs) ,LeNet, AlexNet, ZF-Net, VGGNet, GoogLeNet, ResNet, Recurrent Neural Networks (RNNs) - Training techniques: backpropagation, gradient descent - Regularization and optimization strategies - Transfer learning and fine-tuning

Convolutional Neural NetworkComputer vision for autonomous systems: object detection, segmentation - Sensor fusion: integrating data from cameras, LiDAR, radar - Deep learning for sensor data processing (CNNs)

Reinforcement learning for decision making - Policy gradient methods and Q-learning - Integrating deep learning with control systems - Path planning and obstacle avoidance

Real-time performance and optimization - Safety and robustness in autonomous systems - Ethical considerations and regulatory aspects - Future trends in deep learning for autonomous systems

Reference Books

23ASS3309A - AUTONOMOUS ELECTRIC MOBILITY - SYSTEMS AND APPLICATIONS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3309A	AUTONOMOUS ELECTRIC MOBILITY - SYSTEMS AND APPLICATIONS	AAAV	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply and Understand the various application features available in AV Vehicle	3	PO1, PO2
CO2	Explore the Various application features of EV Vehicle	3	PO1, PO2
CO3	Explore the deployment of AI/ML/DL fundamentals to achieve the expected application features	3	PO1, PO2
CO4	Explore the vehicular networks and its application.	3	PO1, PO2
CO5	Analyze global standards and regulations followed for developing Applications.	4	PO1, PO2
CO6	Analyze the various features of AV and EV with AI/ML/DL networks using tools	4	PO1, PO2
CO7	Analyze the AV and EV system with advanced AI/ML/DL tools.	4	PO1, PO2

Syllabus

Overview of Autonomous Vehicle Design, Applications and its principles, Autonomous parking, Blind Spot Monitoring, Autonomous Emergency Braking, Lane Keeping Assist, AI/ML algorithm for Autonomous vehicle applications, Software Design consideration - AUTOSAR stack

Overview of Electric Vehicle Design, Features and its principles, Cell Balancing, Regenerative Braking, Thermal Management, Energy Management, AI/ML algorithm for Autonomous vehicle applications, Software Design consideration- AUTOSAR Stack

Artificial Intelligence and IoT in Autonomous Applications, Cloud Computing and Big Data, Challenges in AI-driven Automated Vehicles, Various Learning Methods, Statistical Learning, Deep Learning Deep Reinforcement

Optimizing Traffic flow with V2V communication, Traffic Management with V2I, Parking Management with V2V, Energy Management with V2G, Gateway ECU Design, Software Stack and Design Consideration

Legal and Regulatory Compliance, ISO 26262 Functional Safety-International Standards, Management of functional safety, Hazard analysis and Risk assessment, Product development, Adaptation in EV and AV, ASIL and Safety oriented analysis, UNECE Regulation No. 19, SAE International Standards, Hazard Identification and Risk Management, Safety Goals and Safety Mechanism, Cybersecurity-An Overview

23ASS3405M - EXPERT SYSTEMS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3405M	EXPERT SYSTEMS	ES	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the foundational concepts and principles of expert systems, including knowledge representation, inference mechanisms, and rule-based reasoning.	2	PO1, PO5, PSO1
CO2	Apply expert system methodologies and tools to solve complex real-world problems in various domains, demonstrating proficiency in knowledge engineering and system development.	3	PO1, PO3, PSO2
CO3	Analyze and evaluate the performance of expert systems in terms of accuracy, efficiency, and usability, and propose enhancements or optimizations where necessary.	4	PO2, PO5, PSO1
CO4	Design and implement advanced expert systems incorporating machine learning techniques, natural language processing, or other AI technologies to enhance decision-making capabilities.	6	PO3, PO5, PSO2

Syllabus

Introduction to Expert Systems: Overview of Expert Systems, Knowledge Representation in Expert Systems, Inference Mechanisms: Forward Chaining and Backward Chaining, Rule-Based Reasoning and Production Systems, Knowledge Acquisition and Elicitation Techniques

Expert Systems Development: Expert System Shells and Development Environments, Knowledge Engineering - Knowledge Base Design and Construction, Rule-based vs. Case-based Reasoning, Uncertainty Handling in Expert Systems, Validation and Verification of Expert Systems

Advanced Topics in Expert Systems: Knowledge Refinement and Revision, Explanation and Justification in Expert Systems, Distributed and Collaborative Expert Systems, Integration of Machine Learning with Expert Systems, Natural Language Processing for Expert System Interfaces

Applications and Case Studies: 1 Medical Diagnosis and Healthcare Systems, Financial Analysis and Decision Support Systems, Engineering Design and Fault Diagnosis, Intelligent Tutoring Systems, Legal and Regulatory Compliance Systems

Reference Books

- 1 Introduction to Expert Systems, Peter Jackson, 2010, Addison-Wesley.
- 2 Expert Systems: Principles and Programming, Giarratano, Joseph C., and Gary D. Riley, 2021, PWS Publishing Company.
- 3 The Handbook of Artificial Intelligence: Volume II, Avron Barr, Edward A. Feigenbaum, 2012, Morgan Kaufmann.

23ASS3406M - SELF-DRIVING CARS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3406M	SELF-DRIVING CARS	SDC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic architecture of self-driving car including its perception systems, decision-making processes, and safety considerations.	2	PO1, PO2, PO3, PSO1
CO2	Apply the deep learning technique in self-driving car like TensorFlow and Keras with convolutional neural networks for enhanced performance.	3	PO2, PO3, PO4, PSO1
CO3	Demonstrate the various sensor fusion techniques using Kalman filters and navigate self-driving cars using particle filters, along with solidifying your understanding of localization concepts.	3	PO2, PO3, PO4, PSO1
CO4	Analyze planning, control and system integration concept in autonomous vehicle using ROS (Robot Operating System).	4	PO2, PO3, PO4, PSO1

Syllabus

Introduction: Introduction to self-driving car- Taxonomy of Driving- Requirements for Perception- Driving Decisions and Actions- Sensors and Computing Hardware- Hardware Configuration Design- Software Architecture- Environment Representation- Safety Assurance for Self-Driving Vehicles- Industry Methods for Safety Assurance and Testing- Safety Frameworks for Self-Driving.

Computer Vision: Computer Vision Fundamentals- Detect Lane Lines- Advanced Computer Vision- Advanced Lane Detection- Deep Learning: Neural Networks- TensorFlow- Deep Neural Networks- Convolutional Neural Networks- Traffic Sign Classifier-Keras- Transfer Learning.

Sensor Fusion: Sensors - Kalman Filters- Geometry and Trigonometry- Extended Kalman Filters. Localization: Introduction to Localization- Markov Localization- Motion Models- Particle Filter- Implementation of a Particle Filter.

Planning: Search- Prediction- Behavior Planning- Trajectory Generation- Highway Driving. Control: Control- PID Control. System Integration: Autonomous Vehicle Architecture- Introduction to Robot Operating System- Packages & Catkin Workspaces- Writing ROS Nodes- Program an Autonomous Vehicle. Introduction of localization, Markov localization, motion models, particle filters, implementation of particle filters, Automotive vehicle architecture, PID models

23ASS3410M - CYBERSECURITY IN AUTONOMUS VEHICLE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3410M	CYBERSECURITY IN AUTONOMUS VEHICLE	CAV	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Cyber security process, strategy, concepts and controls for AV and EV Vehicle	2	PO1, PO4, PSO1
CO2	Expose to Cybersecurity attacks of AV and EV system and understand various control measures	3	PO2, PO5, PSO2
CO3	Analyze the Software development for Cybersecurity controls	4	PO2, PO4, PSO1
CO4	Analyze the various advanced Cyber Applications for AV and EV using Cloud and IoT and Risk management of Cyber Security systems using various standards	4	PO1, PO5, PSO2

Syllabus

Autonomous Feature Scoping, Threat Analysis and Risk Assessment, Asset Identification, Threat scenarios identification of AEV System, Identify the damage scenarios and analyse impact rating of AV and EV System, Identify goals, AI based Threat Analysis, EV and AV Cybersecurity Concepts, Cybersecurity Controls, Secure Boot, Secure Debug, Secure Communication, Secure Diagnostics, Secure Access, Cryptography, Encryption Algorithms, AI based Control.

Security Attacks on AV Sensors, Spoofing, Replay, Jamming, Security Attack on Grid, Charging Station, Intrusion detection and Prevention System, OTA updates, AI Driven Advanced Applications, Cyberattacks, Attack category, Runtime Tamper Protection, Security Life Cycle Handling, Secure Communication.

Introduction to Autosar MCAL, Cyber Driver, Cyber stack overview, Data flow of Cyber stack, Software Design of Artificial Intelligence, Hardware Accelerator, HSE Firmware, Fuzz testing and Penetration testing.

Enhancing Safety using IoT, Collision Avoidance System, Traffic Management and Optimization, Route Optimization, Emergency Response Coordination, AI based Speech Recognition and Speech Synthesis

Reference Books

23ASS3507 - LOCALIZATION & PROGRAMMING REAL-TIME AUTONOMOUS SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3507	LOCALIZATION & PROGRAMMING REAL-TIME AUTONOMOUS SYSTEMS	LPRAS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand deep learning and its role in perception, decision-making, and control, key components and architectures of autonomous systems	2	PO1, PO2, PSO1
CO2	Develop the fundamentals of deep learning architectures, training techniques, and optimization strategies for solving complex problems	3	PO3, PO4, PSO1
CO3	Apply knowledge of deep learning techniques (CNNs) for processing sensor data (cameras, LiDAR, radar) used in autonomous systems for tasks like object detection, segmentation, and sensor fusion	4	PO4, PSO1
CO4	Build knowledge and techniques to design intelligent agents that can learn to make optimal decisions, navigate complex environments, and control dynamical systems.	5	PO1, PO2, PSO1

Syllabus

Fundamentals of localization and mapping Overview of autonomous systems and their components Types of localization: absolute, relative, and global Sensors used in localization: GPS, IMU, LiDAR, cameras

Probabilistic localization: Kalman filters, Particle filters SLAM (Simultaneous Localization and Mapping) Visual odometry and feature-based localization Sensor fusion techniques for improved localization

Integration of localization with navigation systems Path planning algorithms: A*, D*, RRT Real-time programming and ROS (Robot Operating System) Middleware and communication protocols in autonomous systems

Metrics for evaluating localization performance Testing and validation in simulated and real environments Case studies on real-world applications Challenges and future trends in localization for autonomous systems

Reference Books

- 1 Probabilistic Robotics, Sebastian Thrun, Wolfram Burgard, Dieter Fox, 2005, MIT Press.
- 2 Robotics: Modelling, Planning and Control, Bruno Siciliano, Lorenzo Sciavicco, Luigi Villani, Giuseppe Oriolo, 2010, Springer.

- 6 Applied Deep Learning, Rajkumar Tekchandani , Dr. Neeraj Kumar, 2023, BPB Publicatio.

23ASS3508 - REINFORCEMENT LEARNING FOR AUTONOMOUS SYSTEM (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3508	REINFORCEMENT LEARNING FOR AUTONOMOUS SYSTEM	RLA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of reinforcement learning and its relevance to autonomous systems.	2	PO1, PO2, PO3, PSO2
CO2	Identify different RL algorithms and their suitability for various applications.	3	PO1, PO3, PO4, PSO1
CO3	Build Reinforcement Learning algorithms for autonomous systems.	3	PO1, PO2, PO3, PSO2
CO4	Examine real-world applications of RL in autonomous vehicles, robotics, and other domains.	4	PO1, PO2, PO3, PSO2

Syllabus

Introduction to Reinforcement Learning, Definition and key concepts, Components of RL: agents, environment, actions, rewards, Markov decision processes (MDPs)

RL Algorithms Value-based methods: Q-Learning, SARSA Policy-based methods: Policy Gradient, Actor-Critic Model-based methods: Dyna-Q, Monte Carlo Tree Search (MCTS) Deep Reinforcement Learning: Deep Q-Networks (DQN), Deep Deterministic Policy Gradient (DDPG), Proximal Policy Optimization (PPO)

Implementation of RL Algorithms, Python and RL libraries (e.g., TensorFlow, PyTorch, OpenAI Gym) Coding RL algorithms from scratch, Debugging and troubleshooting RL implementations

Applications of RL in Autonomous Systems Autonomous vehicles: path planning, decision-making Robotics: manipulation, navigation Smart environments: home automation, IoT devices Healthcare: personalized treatment, patient monitoring

Reference Books

23ASS3511 - AI DRIVEN ECU DESIGN FOR AUTONOMOUS VEHICLES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ASS3511	AI DRIVEN ECU DESIGN FOR AUTONOMOUS VEHICLES	AEDATT	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply embedded system functions for autonomous vehicle ECU functioning	3	PO1, PO5, PSO1
CO2	Analyze machine learning functions for autonomous vehicle ECU network	4	PO2, PO5, PSO1
CO3	Analyze deep learning functions for autonomous vehicle ECU network	4	PO2, PO5, PSO1
CO4	Analyze ECU performance with integrated artificial intelligent control	4	PO2, PO5, PSO1
CO5	Test ECU applications with integrated machine learning and deep learning control	3	PO2, PSO1

Syllabus

AEV ECU Product features overview: Overview of Autosar Architecture, Sensor Data Acquisition using Autosar MCAL, Microcontroller, Memory, IO, Communication, CAN Communication Establishing using Autosar COM-CAN, CAN If, PDUR, COM Stack, Vehicle Diagnostics using Autosar Diagnostics, DCM, DEM, Memory Handling through Autosar MEM-MEMIF, NVM, FEE, FLS, EA, Derive the Output stage driver using Autosar Complex Device Driver

AI/ML algorithm to identify and track vehicles, pedestrian, and traffic signs, Classify and categorize the images using DL algorithms, Generate best paths to avoid obstacle and reach destination, Support Complex maneuvers for Lane detection and parking assist, Predictive control and optimize control using AI/ML, Natural Language processing for HMI Interface

Battery Degradation and Life cycle prediction using AI/ML, Estimation of SOC using ML, Predicting Energy Consumption using Vehicle parameters, Optimize charging strategies, smart Charging, Efficient management of V2G interactions during peak demand, Design consideration

Design Guide, Defining Vehicle purpose, Select Components, Develop Planning and Control system, Integrate AI&ML, Develop HMI, Ensure Safety and Compliance, Design Consideration, Passenger Capacity, Range, Charging, Driving Conditions, safety features, cost, Autonomous Vehicle Design, Embedded Design - Data Acquisition through various sensing elements, Ultrasonic, LIDAR, Camera, Deploy AI&ML algorithm to perceive decision making, Control various actuator, Motor control, By Wire technology, Design Steer by Wire, Introduction to Flexray Protocol, Introduction to Ethernet Controller

23AVI3101A - DEEP LEARNING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AVI3101A	DEEP LEARNING	DL	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply optimization algorithms to solve neural networks involves iteratively adjusting the model parameters to minimize the loss function, using techniques like gradient descent, stochastic gradient descent (SGD), Adam, or RMSprop.	3	PO1, PO2, PO3, PO4, PSO1
CO2	Apply CNN model and its variants to real time data like LeNet, AlexNet, ZF-Net, VGGNet models.	3	PO1, PO2, PO3, PO4, PSO1
CO3	Apply sequential models such as RNN and Long Short-Term Memory (LSTM) involves leveraging their ability to process sequential data with memory and context preservation.	3	PO1, PO2, PO3, PO4, PSO1
CO4	Construct variational autoencoders and generative neural models for generating complex data distributions and learning latent representations.	3	PO1, PO2, PO3, PO4, PSO1
CO5	Apply Markov chain sampling for training Restricted Boltzmann Machines (RBMs) and Contrastive Divergence for efficient parameter estimation in RBMs.	3	PO1, PO2, PO3, PO4, PSO1
CO6	Implement basic Transformer models and their variants involves constructing architectures that utilize self-attention mechanisms for effective sequence processing tasks.	5	PO1, PO2, PO3, PO4, PSO1
CO7	Implement basic Large Language Models (LLMs) like GPT-3 and GPT-4 entails utilizing deep neural networks with attention mechanisms to generate coherent and contextually relevant text based on extensive pre-training on large-scale datasets.	5	PO1, PO2, PO3, PO4, PSO1

Syllabus

History of Deep Learning, Deep Learning Success Stories, McCulloch Pitts Neuron, Thresholding Logic, Perceptrons, Perceptron Learning Algorithm and Convergence, Multilayer Perceptrons (MLPs), Representation Power of MLPs, Sigmoid Neurons, Gradient Descent, Feedforward Neural Networks, Representation Power of Feedforward Neural Networks, Feedforward Neural Networks, Backpropagation, Gradient Descent (GD), Momentum Based GD, Nesterov Accelerated GD, Stochastic GD, AdaGrad, RMSProp, Adam, Bias Variance Tradeoff, L2 regularization, Early stopping, Dataset augmentation, Parameter sharing and tying, Injecting noise at input, Ensemble methods, Dropout, Greedy Layer-wise Pre-training, Better Activation Functions and Better Weight Initialization Methods Batch Normalization and Learning Vectorial Representations of Words.

Convolutional Neural Networks, LeNet, AlexNet, ZF-Net, VGGNet, GoogLeNet, ResNet Object Detection RCNN, Fast RCNN, Faster RCNN, YOLO. Visualizing Convolutional Neural Networks, Guided Backpropagation, Deep Dream, Deep Art, Encoder Decoder Models:Regularization in autoencoders, Denoising autoencoders, Sparse autoencoders, Contractive autoencoders.

Recurrent Neural Networks, Backpropagation Through Time (BPTT), Vanishing and Exploding Gradients, Loss Functions in RNNs, Sequence Prediction, Gated Recurrent Units (GRUs), Long Short TermMemory (LSTM) Cells, Solving the vanishing gradient problem with LSTMs.

Encoder-Decoder Models, Attention Mechanism, Hierarchical Attention, Self Attention, Cross Attention, Deep Belief networks, Markov Networks. Restricted Boltzmann Machines, Unsupervised Learning, Motivation for Sampling, Markov Chains, Gibbs Sampling for training RBMs, Contrastive Divergence for training RBMs. Variational autoencoders, Autoregressive Models: NADE, MADE, PixelRNN, Generative Adversarial Networks (GANs) Cycle GAN, Super resolution and Conditional GAN models.

Transformer models and their variants, such as BERT (Bidirectional Encoder Representations from Transformers), SciBERT, RoBERTa (Robustly optimized BERT approach), DistilBERT, ALBERT and XLNet. Large Language Models (LLMs) like GPT-3 and GPT-4.

23AVI3202A - COMPUTER VISION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AVI3202A	COMPUTER VISION	CV	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Undersatnd the basic concepts, terminology, theories, models and methods in the field of computer vision	2	PO1, PO2, PSO1
CO2	Outline camera calibration and image segmentation and principles of human visual system	2	PO1, PO3, PSO1
CO3	Apply methods such as monocular depth estimation, perspective geometry, and using algorithms like Structure from Motion (SfM)	3	PO1, PO3, PSO1
CO4	Identify the methods for constructing 3D structures from multiple 2D images, including multi-view stereo and photogrammetry	3	PO1, PO3, PSO1
CO5	Apply and evaluate various motion analysis methods for detecting and analyzing movement in video sequences.	3	PO1, PO4, PSO1

Syllabus

Image as it is today - A historic prespective - Point operators & filtering on images - Point and edge feature detection over 2-D images Stitching and mending of multiple images

Image alignment of global and pairwise cases - Geometric camera calibration models - handcrafted segmentation models - 2D images - Applied convolution Neural networks and transformers Radiometry and reflectance for images

Estimation of Z axis using monocular camera - Moving object tracking and estimation - Structure of motion over images

Construction of 3D structures from images Biomedical imaging modalities - Voxel based imagery and advanced topics

Different Motion Analysis methods, Optical flow, analysis based on correspondence of interest points, Detection of specific motion patterns, video tracking

Reference Books

- 1 Digital Image Processing, Rafael C. Gonzalez and Richard E. Woods, 2017, Pearson Education.
- 2 Computer vision Algorithms & Applications, Richard Szeliski, 2010, Springer Publication.

23AVI3303A - OBJECT DETECTION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AVI3303A	OBJECT DETECTION	OD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and explain the core concepts of object detection, its applications, and its historical development within the broader field of computer vision the fundamental concepts of object detection.	2	PO1, PO2, PSO2
CO2	Apply various object detection algorithms to real-world scenarios and classical object detection methods including feature extraction (SIFT, SURF, HOG), sliding window approaches, and region-based techniques (Selective Search & DPM).	3	PO1, PO3, PSO1
CO3	Construct a real-world problem using object detection techniques for a common and impactful application Explore modern object detection through Convolutional Neural Networks (CNNs), including R-CNN, Fast/Faster R-CNN, Single-Shot Detectors (SSD), and You Only Look Once (YOLO) architectures.	3	PO2, PO3, PSO1
CO4	Apply object detection models like Mask R-CNN, RetinaNet, EfficientDet, and CenterNet, exploring recent advancements and the state-of-the-art.	3	PO2, PSO2
CO5	Build and optimize robust object detection models through effective dataset preparation, data augmentation, training strategies, evaluation metrics (mAP, precision, recall), and error analysis techniques.	3	PO1, PSO2
CO6	Identify a tool for visualizing the object clusters for incorporating required object in the specified domain	3	PO1, PSO2
CO7	Determine the performance of various object detection methods to obtain the accuracy, speed, and efficiency on a given dataset.	5	PO1, PO11, PSO1

Syllabus

Introduction to Object Detection: Overview of Computer Vision and Image Processing, Basics of Object Detection, Historical Context and Evolution, Applications of Object Detection

Classical Object Detection Techniques: Feature Extraction (SIFT, SURF, HOG), Sliding Window Approach, Region-based Methods (Selective Search), DPM (Deformable Part-based Models)

Deep Learning for Object Detection: Convolutional Neural Networks (CNNs), Region-based CNN (R-CNN), Fast R-CNN and Faster R-CNN, Single Shot Detectors (SSD), You Only Look Once (YOLO)

Advanced Deep Learning Models: Mask R-CNN, RetinaNet, EfficientDet, CenterNet, Recent Advancements and State-of-the-Art Models

build and optimize robust object detection models through effective dataset preparation, data augmentation, training strategies, evaluation metrics (mAP, precision, recall), and error analysis techniques.

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and explain the core concepts of object detection, its applications, and its historical development within the broader field of computer vision the fundamental concepts of object detection.	3	PO1, PO2, PSO2
CO2	Apply various object detection algorithms to real-world scenarios and classical object detection methods including feature extraction (SIFT, SURF, HOG), sliding window approaches, and region-based techniques (Selective Search & DPM).	3	PO1, PO3, PSO1
CO3	Construct a real-world problem using object detection techniques for a common and impactful application Explore modern object detection through Convolutional Neural Networks (CNNs), including R-CNN, Fast/Faster R-CNN, Single-Shot Detectors (SSD), and You Only Look Once (YOLO) architectures.	3	PO2, PO3, PSO1
CO4	Apply object detection models like Mask R-CNN, RetinaNet, EfficientDet, and CenterNet, exploring recent advancements and the state-of-the-art.	3	PO2, PSO2
CO5	Build and optimize robust object detection models through effective dataset preparation, data augmentation, training strategies, evaluation metrics (mAP, precision, recall), and error analysis techniques.	3	PO1, PSO2
CO6	Identify a tool for visualizing the object clusters for incorporating required object in the specified domain	3	PO1, PSO2
CO7	Determine the performance of various object detection methods to obtain the accuracy, speed, and efficiency on a given dataset.	5	PO1, PO11, PSO1

Syllabus

Sliding Window Techniques, Histogram of Oriented Gradients (HOG), Viola-Jones Algorithm, Feature-based Methods, Region-based CNNs (R-CNN, Fast R-CNN, Faster R-CNN), You Only Look Once (YOLO) Algorithm, Single Shot MultiBox Detector (SSD)

Metrics for Object Detection (Precision, Recall, mAP) Benchmark Datasets (COCO, PASCAL VOC) Evaluation Techniques and Tools ,

Introduction to TensorFlow Object Detection API PyTorch for Object Detection Transfer Learning for Custom Object Detection Models

Project Proposal and Planning Data Collection and Annotation Model Training and Fine-tuning Performance Evaluation and Optimization Deployment and Presentation, Develop a project to solve a real-world problem using object detection techniques Regular progress presentations and peer reviews

Advanced Deep Learning Models: Mask R-CNN, RetinaNet, EfficientDet, CenterNet, Recent Advancements and State-of-the-Art Models

23AVI3303R - OBJECT DETECTION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AVI3303R	OBJECT DETECTION	OD	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and explain the core concepts of object detection, its applications, and its historical development within the broader field of computer vision the fundamental concepts of object detection.	2	PO1, PO2, PSO2
CO2	Apply various object detection algorithms to real-world scenarios and classical object detection methods including feature extraction (SIFT, SURF, HOG), sliding window approaches, and region-based techniques (Selective Search & DPM).	2	PO1, PO3, PSO1
CO3	Construct a real-world problem using object detection techniques for a common and impactful application Explore modern object detection through Convolutional Neural Networks (CNNs), including R-CNN, Fast/Faster R-CNN, Single-Shot Detectors (SSD), and You Only Look Once (YOLO) architectures.	3	PO2, PO3, PO5, PSO1
CO4	Apply object detection models like Mask R-CNN, RetinaNet, EfficientDet, and CenterNet, exploring recent advancements and the state-of-the-art.	3	PO2, PSO2
CO5	build and optimize robust object detection models through effective dataset preparation, data augmentation, training strategies, evaluation metrics (mAP, precision, recall), and error analysis techniques.	3	PO1, PSO2
CO6	Determine the performance of various object detection methods to obtain the accuracy, speed, and efficiency on a given dataset.	5	PO1, PO5, PSO2

Syllabus

Introduction to Object Detection: Overview of Computer Vision and Image Processing, Basics of Object Detection, Historical Context and Evolution, Applications of Object Detection

Classical Object Detection Techniques: Feature Extraction (SIFT, SURF, HOG), Sliding Window Approach, Region-based Methods (Selective Search), DPM (Deformable Part-based Models)

Deep Learning for Object Detection: Convolutional Neural Networks (CNNs), Region-based CNN (R-CNN), Fast R-CNN and Faster R-CNN, Single Shot Detectors (SSD), You Only Look Once (YOLO)

Advanced Deep Learning Models: Mask R-CNN, RetinaNet, EfficientDet, CenterNet, Recent Advancements and State-of-the-Art Models

23AVI3404M - VISUAL RECOGNITION AND SCENE UNDERSTANDING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AVI3404M	VISUAL RECOGNITION AND SCENE UNDERSTANDING	VRASU	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of visual recognition and image processing techniques	2	PO2, PO3, PO4, PSO1
CO2	Apply object detection and recognition methodologies, including feature- based and deep learning-based techniques, and evaluate their performance using appropriate metrics.	3	PO1, PO2, PO3, PSO1
CO3	Identify suitable 3D vision and reconstruction techniques, along with their applications and challenges.	3	PO1, PO3, PO4, PSO1
CO4	Inspect ethical and social implications of visual recognition systems, including bias, fairness, privacy concerns, and ethical considerations.	4	PO1, PO2, PO4, PSO1

Syllabus

This module introduces the fundamentals of visual recognition, covering its historical development, importance across various fields, practical applications, and real-world examples. The module also delves into essential image processing techniques, including image enhancement, segmentation, and feature extraction.

This module provides an in-depth exploration of machine learning and deep learning algorithms for object detection and recognition methodologies, focusing on both feature-based and deep learning-based approaches. It also covers performance evaluation metrics crucial for assessing the effectiveness of these methods. Additionally, this module provides an overview of scene understanding, including semantic segmentation, scene classification, and contextual reasoning techniques.

This module provides a comprehensive introduction to 3D vision, reconstruction techniques, and visual perception in robotics. It covers fundamental concepts such as depth perception, 3D reconstruction methods, and their applications. It also explores visual perception in robotics, including object manipulation, grasping techniques, and navigation/mapping using visual data.

This module provides an in-depth exploration of the ethical and social implications surrounding the development, deployment, and use of visual recognition systems. As artificial intelligence advances, particularly in the realm of computer vision, critical issues regarding bias, fairness, privacy, and ethical considerations have emerged as significant concerns. It aims to equip with the necessary knowledge and skills to navigate and address these complex issues responsibly.

23AVI3405M - DEEP REINFORCEMENT LEARNING FOR VISION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AVI3405M	DEEP REINFORCEMENT LEARNING FOR VISION	DRLV	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Core Concepts of Reinforcement Learning and Deep Learning.	2	PO1
CO2	Apply the principles of Markov Decision Processes (MDPs) and implement the Bellman equations using dynamic programming techniques	3	PO1, PO6, PSO1
CO3	Apply the Advanced Deep Reinforcement Learning Algorithms for solving complex real-world applications	3	PO1, PO5, PO7, PSO2
CO4	Analyze the performance of different deep Reinforcement Learning algorithms for various applications.	4	PO2, PO7, PSO2

Syllabus

Introduction to Reinforcement Learning (RL)-Basics of RL, including Markov Decision Processes (MDPs), policies, value functions, and exploration vs. exploitation, Basics of neural networks, Convolutional Neural Networks, Recurrent Neural Networks, Introduction to Deep Q-Networks (DQN) and other deep RL algorithms.

Markov Decision Processes (MDPs) and Bellman Equations - Formal Definition of Markov Decision Processes, Value Functions, Bellman Equations, Dynamic Programming for Solving MDPs, Policy and Value Iteration Algorithms, Applications.

Q-Learning and Deep Q-Networks (DQN) - Introduction to Q-Learning, The Q-Learning Algorithm, Deep Q-Learning and Deep Q-Networks (DQN), Policy Gradient Methods-REINFORCE Algorithm, Actor-Critic Methods, Advanced Deep RL Algorithms - Deep Deterministic Policy Gradient (DDPG), Proximal Policy Optimization (PPO), Applications

Applications and Performance Analysis-Case studies of deep RL applications in robotics, gaming, finance, and healthcare, Performance Evaluation and Analysis - Metrics for evaluating deep RL algorithms: convergence speed, final performance, robustness

Reference Books

23AVI3506 - HUMAN COMPUTER INTERACTION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AVI3506	HUMAN COMPUTER INTERACTION	HCI	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the relationship between humans and computers, covering design principles, history, human capabilities, and error prevention.	2	PO1, PO2, PO12, PSO1
CO2	Understand user-centered design process, from understanding user needs to prototyping interactive systems.	2	PO1, PO2, PO12, PSO1
CO3	Apply core usability principles (learnability, flexibility, robustness) and decision-making frameworks (authority vs. generality, standards, heuristics).	3	PO1, PO2, PO12, PSO1
CO4	Apply design evaluation methods using experts (cognitive walkthroughs, heuristics) and user participation (observation, surveys, experiments) in labs and real-world settings.	3	PO1, PO2, PO12, PSO1

Syllabus

Introduction to Human-Computer Interaction , Definition of HCI, Importance of HCI in software development, Historical perspective and evolution of HCI. Human Factors in HCI, Human sensory capabilities, Cognitive processes, Models of human information processing, Human error and error prevention

HCI User Centered Design Principles of user-centered design, Understanding user needs and requirements, Task analysis and user modeling, Persona development. Interaction Design, Principles of interaction design, Designing interactive systems, Design guidelines and heuristics, Prototyping techniques Interaction Design

Authority vs. generality Principles, standards, and guidelines Golden rules and heuristics Three categories of primary usability principles: Learnability, flexibility, and robustness.

Two forms of design evaluation: Expert analysis and user participation Approaches to expert analysis: Cognitive walkthroughs, heuristic evaluation, modelbased evaluation, and evaluation based on existing research Lab vs. field research Types of user-based evaluation: Observational methods, query techniques, physiological and direct recording, and experimental methods.

Reference Books

- 4 Human-Computer Interaction, D. R. Olsen, 2017, Cengage Learning.

23AVI3507 - OBJECT LOCALIZATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AVI3507	OBJECT LOCALIZATION	OL	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand different image features, retrieval, locations and related algorithms	2	PO2
CO2	Apply similarity learning and related algorithms for human face analysis working with semantic segmentation	3	PO3, PSO1
CO3	Evaluate the performance of natural language and image processing Skills and working with generative adversarial networks	4	PO1, PSO2
CO4	Classify the videos and image-based approaches for videos deployment in cloud and devices	3	PO4

Syllabus

Understanding deep learning, deep learning for computer vision. Image retrieval: Understanding visual features, model inference, content based image retrieval Object detection: detecting objects in an image, localizing algorithms, detecting objects, object detecting API

Semantic segmentation: predicting pixels, algorithms for semantic segmentation, segmenting satellite images Similarity learning: algorithms for similarity learning, human face analysis

Image captioning: Understanding natural language processing for image captioning, approaches for image captioning and related problems. Generative models: Applications of generative models, Neural artistic style transfer, generative adversarial networks, visual dialogue model

Video classification,: Understanding and classifying videos, extending image based approaches to videos Deployment : performance of models, deployment in the cloud, deployment in devices

Reference Books

- 1 Deep Learning for Computer Vision, Rajalingappa Shanmugamani, 2018, Packt Publishing.
- 2 Computer Vision: , Richard Szeliski, 2022, Springer.
- 3 Object Detection and Recognition in Digital Images: Theory and Practice, Boguslaw Cyganek and J. Paul Siebert, 2013, Wiley.
- 4 Multiple View Geometry in Computer Vision, Richard Hartley, Richard Hartley, 2011, Cambridge University Press.

23AVI3508 - ADVANCED IMAGE PROCESSING AND ANALYSIS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AVI3508	ADVANCED IMAGE PROCESSING AND ANALYSIS	AIPA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Illustrate digital images using various techniques and apply them through programming assignments.	2	PO2, PO3, PO8, PSO1
CO2	Identify the fundamental image processing techniques and object recognition algorithms in OpenCV.	3	PO2, PO3, PO8, PSO1
CO3	Apply the fundamental image processing techniques and object recognition algorithms using OpenCV and mathematical transformations	3	PO3, PO4, PO8, PSO1
CO4	Analyze deep learning models for various image processing tasks, including image classification, object detection, and semantic segmentation	4	PO3, PO4, PO8, PSO1

Syllabus

Origin of digital image processing, fundamental concepts like pixel representation and color spaces, and frequency domain filtering using Fourier Transforms. It includes morphological image processing, wavelet transforms, noise modeling, and restoration techniques. Programming assignments involve implementing filtering techniques in Python using OpenCV or Scikit-image.

Digital image fundamentals, including thresholding and region-based segmentation, edge detection algorithms (Canny, Laplacian), boundary representation, and shape analysis. It introduces object recognition methods like template matching and feature-based techniques. Programming assignments involve implementing segmentation and object recognition using OpenCV.

Digital image fundamentals, including thresholding and region-based segmentation, edge detection algorithms like Canny and Laplacian, boundary representation, and shape analysis. It introduces object recognition techniques such as template matching and feature-based methods. Programming assignments involve implementing segmentation and object recognition using OpenCV.

Convolutional neural networks (CNNs) for image processing, covering architectures like VGG and ResNet for image classification, YOLO and R-CNN for object detection, and U-Net for semantic segmentation. It includes transfer learning and a project to implement a deep learning model for an image processing task.

23BEW3303A - DECENTRALIZED APPLICATIONS AND DECENTRALIZED WEB (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BEW3303A	DECENTRALIZED APPLICATIONS AND DECENTRALIZED WEB	DADW	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts of decentralization and blockchain technology.	2	PO1, PO2, PSO2
CO2	Develop proficiency in designing and implementing smart contracts using Solidity.	3	PO2, PSO2
CO3	Acquire knowledge of decentralized application development principles and techniques.	3	PO1, PO4, PSO2
CO4	Explore decentralized web technologies such as IPFS and their integration with dApps.	4	PO1, PO5, PSO1
CO5	Analyze advanced topics in decentralized applications and decentralized web and discuss their implications.	5	PO4, PO5, PSO2
CO6	Develop and deploy a decentralized application (dApp) using blockchain technology and decentralized web principles.	5	PO5, PSO1
CO7	Demonstrate proficiency in problem-solving and critical thinking skills through practical application of decentralized technologies.	5	PO4, PSO1

Syllabus

Definition and basic principles of decentralization, Overview of blockchain technology and its key components, Comparison between centralized and decentralized systems, Applications and use cases of blockchain technology

Understanding smart contracts: definition, characteristics, and applications, Introduction to the Ethereum platform and its ecosystem, Basics of Solidity programming language for smart contract development, Writing, deploying, and interacting with smart contracts on the Ethereum blockchain

Principles of decentralized application (dApp) architecture, Design considerations for dApp development, Frontend and backend development for dApps, Testing and deployment of decentralized applications

Overview of decentralized web concepts and principles, Introduction to InterPlanetary File System (IPFS) and its architecture, Storing and retrieving data with IPFS, Integrating IPFS with decentralized applications

Exploration of advanced topics in decentralized applications, Decentralized finance (DeFi) and its applications, Scalability solutions for blockchain networks, Emerging trends and future directions in decentralized applications and decentralized web

Reference Books

23BEW3303E - DECENTRALIZED APPLICATIONS AND DECENTRALIZED WEB (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BEW3303E	DECENTRALIZED APPLICATIONS AND DECENTRALIZED WEB	DADW	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Explain the fundamental concepts of decentralized systems and blockchain technology.	2	PO1, PSO1
CO2	Analyze various cryptographic techniques used in blockchain and their significance in securing decentralized applications.	4	PO9, PSO1
CO3	Evaluate the architecture and components of decentralized applications (DApps).	5	PO1, PO9, PSO1
CO4	Compare and contrast the Web2 and Web3 paradigms, focusing on their underlying technologies and protocols.	4	PO2, PSO2
CO5	Discuss the challenges and emerging trends in the field of decentralized systems, including scalability and governance issues.	2	PO1, PO5, PSO2
CO6	Develop a basic decentralized application using appropriate blockchain platforms and tools.	3	PO2, PO5, PSO2
CO7	Demonstrate problem-solving and critical thinking skills by addressing real-world issues through decentralized solutions.	3	PO2, PO5, PO9, PSO2

Syllabus

Introduction to Decentralization: Centralized vs. Decentralized Systems, History and Evolution of Decentralized Systems, Blockchain Technology Basics, Blocks, Chains, Nodes, Consensus Mechanisms: Proof of Work (PoW), Proof of Stake (PoS), Introduction to Smart Contracts: Definitions and Characteristics, Functionality and Use Cases, Limitations

Cryptographic Foundations: Cryptographic Principles: Public and Private Keys, Hash Functions, Digital Signatures, Overview of Cryptocurrencies: Bitcoin: Concepts and Transactions, Ethereum: Concepts and Transactions, Security in Decentralized Systems: Common Vulnerabilities, Mitigation Techniques

Decentralized Applications (DApps): Architecture of DApps: Frontend, Backend, and Blockchain Layers, Interaction Between Components, Development Frameworks: Ethereum, Truffle, Hardhat, Programming Languages: Solidity, Vyper, Case Studies: Successful DApps and Their Impact, Analysis of DApp Failures

Decentralized Web (Web3): Fundamentals of Web3: Differences Between Web2 and Web3, Key Components of Web3, InterPlanetary File System (IPFS): Introduction and Significance, Operational Mechanisms, Web3 Protocols: Overview of Popular Protocols (HTTP vs. IPFS, ENS), Use Cases and Integration

Advanced Topics and Future Directions: Scaling Decentralized Systems: Layer 2 Solutions, Sharding, Governance Models: Decentralized Autonomous Organizations (DAOs), Voting Mechanisms and Implications, Emerging Trends and Challenges: Privacy Issues, Regulatory Concerns, Future Outlook

23BEW3406M - ORACLES AND DATA FEEDS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BEW3406M	ORACLES AND DATA FEEDS	ODF	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Explain fundamental concepts of Oracle Database and architecture, including the roles of different components such as tablespaces, schemas, and data files.	2	PO1, PO2, PSO1, PSO2
CO2	Able to integrate data from various sources using Oracle data feeds, understanding how to extract, transform, and load (ETL) data efficiently.	3	PO1, PO3, PO4
CO3	Demonstrate proficiency in writing complex SQL queries to retrieve and manipulate data stored in Oracle databases, optimizing queries for performance and accuracy.	3	PO1, PO4
CO4	Able to up and manage real-time data feeds, including the use of Oracle tools and technologies to handle streaming data and ensure data integrity and consistency.	3	PO1, PO3, PO4

Syllabus

Oracle Database Fundamentals: Introduction to Oracle Database Architecture - Components of Oracle Databases: Tablespaces, Schemas, Data Files - Installation and Configuration of Oracle Database - Overview of Oracle Database Management Tools - Understanding Oracle Data Types and Storage Structures.

Data Integration and ETL Processes: Principles of Data Integration and Data Feeds, Extract, Transform, Load (ETL) Processes - Tools for ETL in Oracle: Oracle Data Integrator (ODI) - Working with External Data Sources: Files, APIs, and Other Databases - Data Cleansing and Transformation Techniques.

Advanced SQL for Oracle Databases: Writing Complex SQL Queries for Data Retrieval - Advanced SQL Functions and Features in Oracle - Query Optimization Techniques - Handling Large Datasets and Performance Tuning - Stored Procedures, Functions, and Triggers.

Real-Time Data Processing with Oracle: Introduction to Real-Time Data Processing - Setting Up Real-Time Data Feeds in Oracle - Using Oracle Streams and Oracle GoldenGate for Data Replication - Ensuring Data Integrity and Consistency in Real-Time Applications - Case Studies and Practical Applications of Real-Time Data Feeds.

Reference Books

23BEW3507 - BLOCKCHAIN SCALABILITY AND LAYER 2 SOLUTIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BEW3507	BLOCKCHAIN SCALABILITY AND LAYER 2 SOLUTIONS	BCSALS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Articulate the scalability challenges faced by blockchain networks, including issues related to throughput, latency, and network congestion	2	PO3, PO5, PSO1, PSO2
CO2	Design and implement basic layer 2 solutions for improving the scalability of blockchain networks.	3	PO3
CO3	Determine the trade-offs involved in implementing different layer 2 solutions, considering factors such as security, decentralization, and usability	3	PO4
CO4	Evaluate their knowledge of blockchain scalability and layer 2 solutions to real-world scenarios.	4	PO1

Syllabus

Introduction to Blockchain Scalability Challenges: Understanding Blockchain Scalability(Throughput, Latency, and Network Congestion), Scalability Limitations of Traditional Blockchain Networks (e.g., Bitcoin, Ethereum), Case Studies: Scalability Issues in Real-world Blockchain Applications

Layer 2 Scaling Solutions: Introduction to Layer 2 Scaling Solutions(Concept and Types),State Channels(Principles, Implementation, and Use Cases), Sidechains(Architecture, Interoperability, and Security Considerations), Off-chain Computation(Techniques, Benefits, and Challenges)

Evaluating Scalability Solutions: Analyzing Trade-offs in Blockchain Scalability-Security vs. Performance, Decentralization vs. Scalability- Finding the Balance, User Experience Considerations-Usability vs. Scalability Trade-offs, Regulatory and Compliance Implications of Scalability Solutions

Application and Case Studies: Scalability Solutions in Decentralized Finance (DeFi)-Challenges and Innovations, Layer 2 Solutions for Supply Chain Management- Use Cases and Benefits, Gaming and Non-Fungible Tokens (NFTs)- Scalability Requirements and Solutions, Future Trends and Emerging Technologies in Blockchain Scalability

Reference Books

23BEW3508 - REGULATORY LANDSCAPE AND COMPLIANCE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BEW3508	REGULATORY LANDSCAPE AND COMPLIANCE	RLAC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the regulatory framework governing various industries and sectors.	2	PO1, PO4
CO2	Demonstrate knowledge of compliance practices and procedures to ensure adherence to regulatory standards.	3	PO1, PO4, PSO2
CO3	Analyze the impact of regulatory requirements on business operations and decision-making processes.	3	PO1, PO4, PSO2
CO4	Evaluate the role of regulatory bodies and agencies in enforcing compliance and maintaining industry standards.	4	PO1, PO4

Syllabus

Introduction to Regulatory Landscape Overview of regulatory framework and its significance Types of regulations: industry-specific, regional, and global Role of regulatory bodies and agencies in shaping compliance standards

Regulatory Compliance Practices Understanding compliance requirements and obligations Compliance risk assessment and management Compliance monitoring and reporting mechanisms

Regulatory Impact on Business Operations Impact assessment of regulations on business strategies and operations Compliance challenges and solutions in different industries Case studies on successful compliance management

Emerging Trends and Future Directions in Regulatory Compliance Emerging regulatory trends and developments Technology-driven solutions for regulatory compliance Regulatory compliance in the digital age: challenges and opportunities

23BEW3509 - FUTURE TRENDS IN BLOCKCHAIN AND WEB3 (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BEW3509	FUTURE TRENDS IN BLOCKCHAIN AND WEB3	FTBCAW	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the foundational concepts of blockchain technology and its evolution towards Web3.	2	PO1, PO2
CO2	Analyze current trends and emerging developments in blockchain and Web3 ecosystems.	3	PO1, PO2
CO3	Demonstrate proficiency in utilizing blockchain platforms and protocols for decentralized applications (dApps) development.	3	PO1, PO2, PSO2
CO4	Evaluate the potential impact of blockchain and Web3 technologies on various industries and sectors.	4	PO1, PO2

Syllabus

Introduction to Blockchain and Web3: Overview of blockchain technology: principles, components, and use cases - Evolution towards Web3: decentralized web architecture and interoperability - Blockchain platforms and protocols: Ethereum, Polkadot, Solana, etc.

Emerging Trends in Blockchain and Web3 - DeFi (Decentralized Finance) and the rise of digital assets - NFTs (Non-Fungible Tokens) and their implications for digital ownership - DAOs (Decentralized Autonomous Organizations) and decentralized governance models

Decentralized Application Development - Smart contract programming languages: Solidity, Rust, etc. - Building decentralized applications (dApps) on blockchain platforms - Web3 development frameworks and toolkits

Applications and Future Implications - Blockchain in supply chain management, healthcare, finance, and beyond - Challenges and opportunities in scaling blockchain networks - Ethical considerations and regulatory implications of blockchain and Web3 technologies

Reference Books

- 1 Mastering Blockchain: Unlocking the Power of Cryptocurrencies, Smart Contracts, and Decentralized Applications, Andreas M. Antonopoulos, 2nd Edition, O'Reilly Media.
- 2 Blockchain Basics: A Non-Technical Introduction in 25 Steps, Daniel Drescher, 2nd Edition, Apress.
- 3 Decentralized Applications: Harnessing Bitcoin's Blockchain Technology, Siraj Raval, 1st Edition, Manning Publications.
- 4 Blockchain Enabled Applications: Understand the Blockchain Ecosystem and How to Make it Work, Vikram Dhillon & David Metcalf & Max Hooper, -, Apress.

23BIS3101A - MOLECULAR MODELLING AND DRUG DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BIS3101A	MOLECULAR MODELLING AND DRUG DESIGN	MMDD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the comprehensive knowledge of various drug discovery methods, including high-throughput screening, lead optimization, and pharmacophore modeling. Introduce the concepts and techniques of molecular modeling and simulation,	3	PO2, PO3
CO2	Interpret computer-based modeling techniques to predict and analyze protein functions and structures. Gain a deep understanding of the methods used to predict protein folding	3	PO2, PO3
CO3	Demonstrate biomolecular interactions, such as protein-protein, protein-ligand, and protein-DNA/RNA interactions in biological systems	3	PO2, PO5
CO4	Apply role of various modeling and drug design methods through detailed case studies. Analyze real-world examples of drug discovery projects to understand the practical applications of theoretical concepts, methodologies,	3	PO2, PO5
CO5	Apply the principles of molecular modeling and drug design (MMDD) to accurately determine and predict protein structures. Learn to use various computational tools and techniques to model protein conformations, study their stability	3	PO3, PO5
CO6	Demonstrate simulations to study biomolecular interactions in detail with principles of molecular dynamics, Monte Carlo simulations, and other computational techniques to predict and analyze how biomolecules interact within a biological environment	3	PO3, PO5
CO7	Illustrate mathematical modeling techniques to the process of drug design, with a particular focus on understanding and utilizing force fields. Learn how force fields are used to model molecular forces and energies, predict molecular conformations	3	PO3, PO5

Syllabus

PRACTICAL INTRODUCTION TO MOLECULAR MODELING AND DRUG DESIGN: High-Throughput Screening: Techniques for testing large numbers of compounds. Virtual Screening: Computational methods for identifying potential drug candidates. Molecular Docking: Predicting how small molecules bind to targets. Drug Metabolism and Pharmacokinetics: Absorption, distribution, metabolism, and excretion of drugs. Medicinal Chemistry: Design and development of new therapeutic compounds. Pharmaceutical Formulation: Creating drug formulations for effective delivery. Drug Design Strategies: Structure-based and ligand-based drug design approaches. Regulatory Affairs in Drug Development: Understanding FDA and EMA regulations for drug approval. Ethics in Drug Development: Ethical considerations in drug testing and research.

PREDICTION AND STRUCTURAL ANALYSIS OF MACROMOLECULES : Protein Function Prediction: Techniques for predicting the biological function of proteins from their structure. Structural Alignment and Comparison: Methods for comparing protein structures to identify similarities and differences. Structural Bioinformatics: Using computational tools and databases for analyzing macromolecular structures. Structural Genomics: Large-scale efforts to determine 3D structures of proteins and their implications for drug discovery. Proteomics: Techniques for studying the complete set of proteins expressed in an organism. Molecular Modeling Tools: Introduction to software tools for structure prediction and analysis (e.g., MODELLER, Rosetta). Advanced Visualization Techniques: Tools for detailed visualization of protein structures and interactions.

BIOMOLECULAR INTERACTIONS AND DRUG DISCOVERY METHODS: Drug Interactions Prediction: Techniques for identifying and analyzing drug-drug interactions. Cheminformatics Tools: Software and databases for drug discovery (e.g., ChemDraw, PubChem). Molecular Dynamics Simulations for Drug Discovery: Using MD simulations to study drug-target interactions. Quantitative Structure-Activity Relationship (QSAR) Models: Building and interpreting QSAR models for drug efficacy and safety. Pharmacophore Modeling: Identifying essential features for drug-receptor interactions. ADMET Prediction Tools: Tools for predicting drug Absorption, Distribution, Metabolism, Excretion, and Toxicity properties. Biological Activity Prediction: Techniques for predicting the effectiveness of compounds in biological systems. Advanced Drug Target Prediction: Methods for discovering and validating new drug targets.

METHODS IN SMALL MOLECULE DRUG ANALYSIS: Quantitative Structure-Activity Relationship (QSAR) Analysis: Developing and applying QSAR models to correlate chemical structure with biological activity. Pharmacophore Modeling: Designing models to identify essential features for drug-receptor interactions. Molecular Docking: Techniques for simulating the binding of small molecules to target proteins. Computational Chemistry Techniques: Advanced methods for analyzing small molecule interactions. Chemical Library Design: Creating and managing libraries of compounds for drug discovery. Virtual Screening Approaches: Methods for efficiently screening large chemical libraries. Synthesis and Optimization of Drug Candidates: Strategies for synthesizing and improving potential drug molecules.

VISUALIZATION AND ANALYSIS OF BIOMOLECULES: Molecular Visualization Tools: Software for visualizing macromolecules (e.g., PyMOL, Chimera). Modeling of Macromolecular Structures: Techniques for building and refining macromolecular models. Physicochemical Properties Analysis: Methods for analyzing properties like solubility, stability, and polarity of small molecules. Structural Interactions Analysis: Studying interactions between biomolecules and their implications for drug design. Bioinformatics Tools for Molecular Analysis: Using bioinformatics resources for sequence alignment and structural prediction. Molecular Dynamics Visualization: Visualizing results from molecular dynamics simulations. Drug Design Simulation Techniques: Advanced simulations for drug design and optimization.

Pharmacophore Modeling: Designing models to identify essential features for drug-receptor interactions. Molecular Docking: Techniques for simulating the binding of small molecules to target proteins. Computational Chemistry Techniques: Advanced methods for analyzing small molecule interactions. Chemical Library Design: Creating and managing libraries of compounds for drug discovery. Virtual Screening Approaches: Methods for efficiently screening large chemical libraries. Synthesis and Optimization of Drug Candidates: Strategies for synthesizing and improving potential drug molecules.

VISUALIZATION AND ANALYSIS OF BIOMOLECULES: Molecular Visualization Tools: Software for visualizing macromolecules (e.g., PyMOL, Chimera). Modeling of Macromolecular Structures: Techniques for building and refining macromolecular models. Physicochemical Properties Analysis: Methods for analyzing properties like solubility, stability, and polarity of small molecules. Structural Interactions Analysis: Studying interactions between biomolecules and their implications for drug design. Bioinformatics Tools for Molecular Analysis: Using bioinformatics resources for sequence alignment and structural prediction. Molecular Dynamics Visualization: Visualizing results from molecular dynamics simulations. Drug Design Simulation Techniques: Advanced simulations for drug design and optimization.

23BIS3101R - MOLECULAR MODELLING AND DRUG DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BIS3101R	MOLECULAR MODELLING AND DRUG DESIGN	MMDD	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the comprehensive knowledge of various drug discovery methods, including high-throughput screening, lead optimization, and pharmacophore modeling. Introduce the concepts and techniques of molecular modeling and simulation,	3	PO2, PO3
CO2	Interpret computer-based modeling techniques to predict and analyze protein functions and structures. Gain a deep understanding of the methods used to predict protein folding	3	PO2, PO3
CO3	Demonstrate biomolecular interactions, such as protein-protein, protein-ligand, and protein-DNA/RNA interactions in biological systems	3	PO2
CO4	Apply role of various modeling and drug design methods through detailed case studies. Analyze real-world examples of drug discovery projects to understand the practical applications of theoretical concepts, methodologies,	3	PO2, PO5
CO5	Apply the principles of molecular modeling and drug design (MMDD) to accurately determine and predict protein structures. Learn to use various computational tools and techniques to model protein conformations, study their stability	3	PO5
CO6	Demonstrate simulations to study biomolecular interactions in detail with principles of molecular dynamics, Monte Carlo simulations, and other computational techniques to predict and analyze how biomolecules interact within a biological environment	3	PO3, PO5

Syllabus

PRACTICAL INTRODUCTION TO MOLECULAR MODELING AND DRUG DESIGN: High-Throughput Screening: Techniques for testing large numbers of compounds. Virtual Screening: Computational methods for identifying potential drug candidates. Molecular Docking: Predicting how small molecules bind to targets. Drug Metabolism and Pharmacokinetics: Absorption, distribution, metabolism, and excretion of drugs. Medicinal Chemistry: Design and development of new therapeutic compounds. Pharmaceutical Formulation: Creating drug formulations for effective delivery. Drug Design Strategies: Structure-based and ligand-based drug design approaches. Regulatory Affairs in Drug Development: Understanding FDA and EMA regulations for drug approval. Ethics in Drug Development: Ethical considerations in drug testing and research.

PREDICTION AND STRUCTURAL ANALYSIS OF MACROMOLECULES : Protein Function Prediction: Techniques for predicting the biological function of proteins from their structure. Structural Alignment and Comparison: Methods for comparing protein structures to identify similarities and differences. Structural Bioinformatics: Using computational tools and databases for analyzing macromolecular structures. Structural Genomics: Large-scale efforts to determine 3D structures of proteins and their implications for drug discovery. Proteomics: Techniques for studying the complete set of proteins expressed in an organism. Molecular Modeling Tools: Introduction to software tools for structure prediction and analysis (e.g., MODELLER, Rosetta). Advanced Visualization Techniques: Tools for detailed visualization of protein structures and interactions.

BIOMOLECULAR INTERACTIONS AND DRUG DISCOVERY METHODS: Drug Interactions Prediction: Techniques for identifying and analyzing drug-drug interactions. Cheminformatics Tools: Software and databases for drug discovery (e.g., ChemDraw, PubChem). Molecular Dynamics Simulations for Drug Discovery: Using MD simulations to study drug-target interactions. Quantitative Structure-Activity Relationship (QSAR) Models: Building and interpreting QSAR models for drug efficacy and safety. Pharmacophore Modeling: Identifying essential features for drug-receptor interactions. ADMET Prediction Tools: Tools for predicting drug Absorption, Distribution, Metabolism, Excretion, and Toxicity properties. Biological Activity Prediction: Techniques for predicting the effectiveness of compounds in biological systems. Advanced Drug Target Prediction: Methods for discovering and validating new drug targets.

METHODS IN SMALL MOLECULE DRUG ANALYSIS: Quantitative Structure-Activity Relationship (QSAR) Analysis: Developing and applying QSAR models to correlate chemical structure with biological activity. Pharmacophore Modeling: Designing models to identify essential features for drug-receptor interactions. Molecular Docking: Techniques for simulating the binding of small molecules to target proteins. Computational Chemistry Techniques: Advanced methods for analyzing small molecule interactions. Chemical Library Design: Creating and managing libraries of compounds for drug discovery. Virtual Screening Approaches: Methods for efficiently screening large chemical libraries. Synthesis and Optimization of Drug Candidates: Strategies for synthesizing and improving potential drug molecules.

23BIS3202A - BIOMEDICAL INFORMATICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BIS3202A	BIOMEDICAL INFORMATICS	BMI	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply proficiency in acquiring, storing, and managing biomedical data from various sources, ensuring data integrity and accessibility for research and clinical applications.	3	PO1, PO3
CO2	Model computational analysis techniques and modeling approaches used in biomedical informatics to interpret complex biological data and derive meaningful insights.	3	PO1, PO4
CO3	Construct the principles of health information systems and interoperability standards to enhance the seamless exchange and integration of healthcare data.	3	PO1, PO2
CO4	Build critical thinking skills to explore ethical, legal, and social issues related to biomedical informatics, fostering responsible and ethical use of biomedical data.	3	PO1, PO5
CO5	Evaluate the real-world problem using statistical tools to identify trends, patterns, and correlations, and to make evidence-based decisions.	5	PO1, PO2
CO6	Assess the data using computational and logical methodologies to validate findings, ensure accuracy, and improve the robustness of biomedical research outcomes.	5	PO1, PO2, PSO1

Syllabus

Introduction to biomedical data sources, acquisition techniques, storage, quality assurance, and governance, highlighting the integration of diverse data types and the importance of data security and privacy measures.

Exploration of computational analysis techniques and modeling approaches in biomedical informatics, emphasizing their application in genomic sequencing, drug discovery, and personalized medicine.

Understanding health information systems principles and interoperability standards, focusing on their role in enhancing healthcare delivery, patient safety, and data exchange across different healthcare settings.

Examination of ethical, legal, and social issues pertinent to biomedical informatics, including privacy concerns, data ownership, informed consent, and the ethical implications of AI and machine learning in healthcare.

Statistical methods for analysis of biomedical data, including hypothesis testing, regression analysis, and machine learning algorithms tailored for biological and clinical datasets.

23BIS3203A - PYTHON AND R PROGRAMMING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BIS3203A	PYTHON AND R PROGRAMMING	P&RP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Python functions and modules to analyze and process genomic sequences.	3	PO1, PSO1
CO2	Utilize various R functions to analyze and interpret genomic sequences.	3	PO1, PO5, PSO1
CO3	Apply Biopython to perform pairwise and multiple sequence alignment of sequences.	3	PO1, PSO1
CO4	Apply R functions and libraries on microarray gene expression datasets.	3	PO1, PO5, PSO1
CO5	Make use of different Python and R packages for manipulating Bio-sequences.	3	PO1, PO5, PSO1

Syllabus

Python fundamentals: installing python; basic usage, running programs, basic elements & syntax, strings, lists and tuples, dictionaries, loops, comparisons, definitions & functions, modules, classes, exceptions- object-oriented programming.

Introducing R: the big picture, the benefits of r, installation, r editor and r-gui, r environment, the fundamentals of r, simple mathematics and vectors, arguments, putting the argument in a function, history, structuring the code, comments, datatypes, control statements, if statements, switching looping, for loop, functions, and r packages, debugging the code, errors, and warning, basic plotting.

Biological sequence analysis with Biopython: working with fasta files, parsing DNA data files, Accessing NCBI's Entrez databases, accessing pubmed, sequence alignment, dynamic programming, pair wise sequence alignment and multiple sequence alignments, phylogenetic tree construction, Sequence motif analysis and working with PDB files.

R programming for gene expression analysis: Gene expression array analysis, spot finding and measurement, arrays and data displays, applications with expression arrays. R Advanced statistical analysis techniques, Correlation, Fourier transforms, Clustering, hierarchical clusters, k-means clustering, , principal component analysis.

Handling genomic sequence data with Python, Calculation of GC percentages, ORF prediction from DNA sequences, R studio basics, Visualization using R, SeqinR package, Pubmed using Biopython, Pairwise sequence alignments using Biopython, Phylogenetic tree construction, Manipulation of gene expression datasets in R, Basic statistical analysis of GE datasets, Clustering gene expression data using R

23BIS3304A - STRUCTURAL BIOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BIS3304A	STRUCTURAL BIOLOGY	SB	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the protein dynamics and concepts of X-ray Diffraction Brags law electron density map	2	PO1, PO5, PSO1
CO2	Understand the importance of techniques used in structural biology studies and secondary structure prediction methods and algorithms used in prediction	2	PO1, PO5, PSO1
CO3	Understand the significance of Ramachandran Plot RMSD and concepts in 3D structure comparison	2	PO1, PO5, PSO1
CO4	Apply the knowledge about the structural geometrical and dynamic interactions of nucleic acids with other molecules.	3	PO1, PO5, PSO1
CO5	Demonstrate the intricacy of protein protein interactions critical for cellular processes and with applications in drug discovery and disease understanding	3	PO1, PO5, PSO1
CO6	Apply the understanding of structural biology techniques and secondary structure prediction methods to assess protein function and design novel biomolecules.	3	PO1, PO5, PSO1
CO7	Analyze macromolecular structures computational and experimental techniques in modeling and analyzing for biotechnology and medicine.	4	PO1, PO5, PSO1

Syllabus

Proteins: Chemical Structures and properties of Amino acids, Primary, Secondary, Tertiary and Quaternary Structures; Nucleic acids: DNA, RNA - Chemical Structures and properties of Nucleic acids, Primary, Secondary, Tertiary and Quaternary Structures. DNA Double helix - Types of Double helices; Structural and Geometrical parameters of each and their comparison.

Protein Purification & Crystallization methods : Chromatography. Electrophoresis, Protein Sequencing, MS; Principles of X-ray Diffraction Technique : Bragg's Law, Phase Determination, Calculation of Electron Density Map, Interpretation of the electron density map, Refinement of the Structures; Principle of NMR Spectroscopy - Magnetic properties of nuclei, Energy Levels of proton during spin, Chemical Shift, Coupling Constants, Shielding, NOSEY, COSY; Principle of Electron Microscopy: SEM, TEM, Cryo-EM; Determination of secondary structure - CD/ORD Techniques.

Basic principles of secondary structure prediction methods, Algorithms of Chou Fasman, GOR, PHD, PSI-PRED; 3D Structure Prediction Methods: Homology Modelling, Fold Recognition, Threading, ab-initio and Hybrid methods; Significance of Ramachandran Plot, Helical Wheel, Hydrophobicity profiles, Amphiphilicity detection, Transmembrane prediction.

Structural Genomics; Concepts in 3D structure comparison, purpose of structure comparison, Algorithms for structure comparison (FSSP, VAST & DALI), Root Mean Square Deviation (RMSD), Structure-function relation, Function inference from structure; PPI, DPI, LRI; Protein assemblies, Natural nano machines.

Structural elucidation-Steps involved in Homology Modeling. Fold Recognition and ab-initio methods, Derivation and significance of Ramachandran Plot, Root Mean Square Deviation (RMSD), Energy Plot based on Potential of mean force, Packaging Quality, Helical Wheel, Hydrophobicity profiles, Amphiphilicity detection, Transmembrane prediction methods. Concepts in 3D structure comparison, purpose of structure comparison, Algorithms for structure comparison (FSSP, VAST & DALI), Structure function relation, Function inference from structure.

Reference Books

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BIS3304E	STRUCTURAL BIOLOGY	SB	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the protein dynamics and concepts of X-ray Diffraction Brags law electron density map	2	PO1, PO5, PSO1
CO2	Understand the importance of techniques used in structural biology studies and secondary structure prediction methods and algorithms used in prediction	2	PO1, PO5, PSO1
CO3	Understand the significance of Ramachandran Plot RMSD and concepts in 3D structure comparison	2	PO1, PO5, PSO1
CO4	Apply the knowledge about the structural geometrical and dynamic interactions of nucleic acids with other molecules.	2	PO1, PO5, PSO1
CO5	Demonstrate the intricacy of protein protein interactions critical for cellular processes and with applications in drug discovery and disease understanding	2	PO1, PO5, PSO1
CO6	Apply the understanding of structural biology techniques and secondary structure prediction methods to assess protein function and design novel biomolecules.	3	PO1, PO5, PSO1
CO7	Analyze macromolecular structures computational and experimental techniques in modeling and analyzing for biotechnology and medicine.	3	PO1, PO5, PSO1

Syllabus

Structural biology of Nucleic acidsTypes of Double helices Structural and Geometrical parameters of each and their comparison. Dynamics and types of interactions of DNA with proteins, and small molecules. RNA Secondary structures Tertiary structures tRNA tertiary structure.

Protein dynamicsProtein Purification &Crystallization methods Principles of Xray Diffraction Brags Law. Phase Determination Calculation of Electron Density Map Interpretation of the electron density map Refinement of the Structures.

Techniques for structural biology Principle of NMR Spectroscopy Magnetic properties of nuclei Energy Levels of proton during spin Chemical Shift Coupling Constants Shielding Determination of secondary structure NOSEY COSY.

Structure predictions-Basic principles of secondary structure prediction methods Algorithms of Chou Fasman GOR PHD PSIPRED Stereo chemical method of Lim and Neural network method concepts in measuring the accuracy of predictions.

Structural elucidation-Steps involved in Homology Modeling. Fold Recognition andab-initiomethods, Derivation and significance of Ramachandran Plot, Root Mean Square Deviation (RMSD), Energy Plot based on Potential of mean force, Packaging Quality, Helical Wheel, Hydrophobicity profiles, Amphiphilicity detection, Transmembrane prediction methods. Concepts in 3D structure comparison, purpose of structure comparison, Algorithms for structure comparison (FSSP, VAST & DALI), Structure function relation, Function inference from structure.

23BIS3405M - APPLIED BIOINFORMATICS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BIS3405M	APPLIED BIOINFORMATICS	ABI	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the comparative genomics strategies in conjunction with the structure prediction tools, datasets, and procedures to identify conserved elements, elucidate evolutionary relationships, and predict functional regions across different species	3	PO2, PO3, PSO2
CO2	Identify the information obtained from the microarray in order to map the levels of cellular expression, analyze the differential gene expression profiles under various conditions, and correlate these profiles with phenotypic changes, biological pathways, and regulatory networks, thereby enhancing our understanding of gene function, disease mechanisms, and potential targets for therapeutic intervention	3	PO2, PO3, PSO2
CO3	Identify the notion of systems biology in order to effectively represent biological processes in a computer environment, and develop computational models that integrate data from various biological systems	3	PO6, PO7, PSO2
CO4	Apply the principles of bioinformatics modeling to predict the structure of proteins as well as the interactions that occur between biomolecules, utilizing techniques such as homology modeling, molecular dynamics simulations, and machine learning algorithms to analyze sequence data	3	PO6, PO7, PSO2

Syllabus

Comparative Genomics, Protein modelling and Assessment Comparative Genomics, Genetic mapping, Physical mapping, SNPs, ESTs, GSS, Gene prediction methods, Gene prediction tools, Gene annotation, Molecular Predictions with DNA sequence, Human Genome Project. Protein Structure Prediction and Evaluation methods Structure of Protein PDB, MMDB; Ramachandran Plots; Structure visualization Rasmol; Methods of Structure prediction Homology modelling SPDBV, Threading, Ab initio method; Structure Evaluation DSSP, ProCheck, Verify 3D; Structure comparison

Protein Identification and Interactions Protein Identification And Interactions Proteomics approaches for protein analysis; Protein identification Programs Mascot, GFS; Comparative Proteomics methods; Protein interactions; Protein Interaction dbs GRID, MINT; Network Mapping; Biological Pathway dbs EcoCyc, KEGG; Pathway prediction; Metabolic pathway reconstruction

Gene Expression Analysis Gene Expression Analysis Introduction; Serial Analysis of Gene Expression; Microarray, Types of Microarrays, Microarray Fabrication, Microarray hybridization and detection, Microarray Image Processing and analysis, Expression ratios, Transformations of the Expression ratio, Data Normalization

Systems Biology System Biology Foundations of System Biology Objectives of System Biology Strategies relating to In Silico Modeling of biological processes Metabolic Networks Signal Transduction pathways, Gene Expression patterns Applications of System Biology Markup Language, E cell, V cell simulations and Applications

23BIS3406M	NGS SEQUENCING AND DATA ANALYSIS	NGSDA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of Sequence Analysis to Biological Specimens: Understand and apply various sequence analysis techniques to interpret biological data, including the alignment of DNA, RNA, or protein sequences.	3	PO2, PO4
CO2	Demonstrate Data Analysis with Preprocessing and Alignment: Utilize methods for the preprocessing of raw biological data, including quality control, filtering, and alignment techniques.	3	PO2, PO4
CO3	Illustrate Variant Calling and Annotation with NGS Data Sets/graphs: Perform variant calling using next-generation sequencing (NGS) data to identify genetic variants such as single nucleotide polymorphisms (SNPs)	3	PO2, PO4
CO4	Interpret Transcriptomics and Differential Gene Expression: Engage in transcriptomic studies to explore gene expression levels under different conditions.	3	PO2, PO5

Syllabus

Introduction to Next-Generation Sequencing (NGS) Explore the fundamentals of Next-Generation Sequencing (NGS) technologies and platforms, focusing on the evolution from Sanger sequencing to high-throughput sequencing methods. Study the various NGS platforms like Illumina, Ion Torrent, PacBio, and Oxford Nanopore Technologies (ONT), highlighting their applications in different research scenarios.

NGS Data Analysis: Preprocessing and Alignment Understand the preprocessing steps for raw NGS data including quality filtering, adapter removal, and read trimming to ensure high-quality data for analysis. Gain insights into read alignment algorithms such as BWA, Bowtie2, and STAR, focusing on how these algorithms map NGS reads to a reference genome.

Variant Calling and Annotation Study the principles of variant calling from NGS data, including the identification of single nucleotide variants (SNVs), small insertions and deletions (indels), and structural variants. Learn about tools for variant calling such as GATK, Samtools, and FreeBayes, and techniques for quality assessment and filtering of variants

NGS Data Analysis: Transcriptomics and Differential Gene Expression Explore RNA-Seq data analysis techniques for studying gene expression, including methods for quantifying gene expression levels, normalization procedures, and differential gene expression analysis to identify genes that exhibit significant changes across different conditions.

23BIS3507 - SYSTEMS BIOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BIS3507	SYSTEMS BIOLOGY	SSB	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate an understanding of the fundamental concepts of systems biology, showcasing a solid grasp of the principles and frameworks that underpin the study of complex biological systems and their interactions.	3	PO1, PO2, PO5, PSO1
CO2	Utilize computational tools to analyze and model complex biological systems, indicating proficiency in applying various computational methods to simulate and study intricate biological networks and processes.	3	PO1, PO2, PO5, PSO1
CO3	Analyze high-throughput biological data to identify patterns and interactions, reflecting the capability to interpret large-scale data sets to uncover significant biological relationships and trends.	4	PO1, PO2, PO5, PSO1
CO4	Assess the interactions between components of biological systems, demonstrating the ability to evaluate and understand the dynamic relationships and dependencies within biological systems, contributing to a comprehensive understanding of their function and regulation.	4	PO1, PO2, PO5, PSO1

Syllabus

Core principles, theories, and models that underpin systems biology, including key biological components, interactions, and methodologies, as well as interdisciplinary approaches and future applications.

Computational tools and methods to analyze and model complex biological systems, focusing on simulation techniques, network analysis, and data integration, along with their applications in studying biological processes and interactions.

Large-scale high-throughput biological data to identify patterns, interactions, and trends, using statistical methods and computational tools to uncover significant biological relationships and gain insights into complex biological systems.

Interpret the dynamic interactions and dependencies among components of biological systems, utilizing models and simulations to understand system behavior, regulation, and function in various biological contexts.

23BIS3508 - DATABASE MANAGEMENT SYSTEM FOR BIOLOGIST (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BIS3508	DATABASE MANAGEMENT SYSTEM FOR BIOLOGIST	DBMS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the functional components of DBMS, and its importance of data modeling in the design of a database to ensure the efficient organization and management.	3	PO1, PO2
CO2	Build the SQL queries and concepts of relational algebra to manipulate and query data effectively, optimizing database performance.	3	PO1, PO2
CO3	Identify normalization techniques and indexing for databases to reduce data redundancy, improve data integrity, and accelerate data retrieval.	3	PO3, PO5
CO4	Apply transaction processing, concurrency control, and recovery techniques to work on databases, ensuring data consistency, integrity, and reliability during multiple transactions and potential failures.	3	PO3, PO5, PS01

Syllabus

Introduction and conceptual modelling: Introduction to File and Database systems, covering fundamental concepts of data storage, retrieval methods, and organizational structures in both file-based and database systems.

Relational Algebra and Calculus. Relational model, SQL: Exploring relational algebra and calculus as theoretical foundations of the relational model, and practical application through SQL (Structured Query Language) for database querying and manipulation.

B-Tree - B+Tree, Query Processing, Normalization, Concurrency control: Detailed examination of B-Tree and B+Tree data structures for efficient indexing, query optimization techniques, database normalization principles, and strategies for managing concurrent access to ensure data consistency.

Concurrency Control, Types of Locks, Recovery Techniques: In-depth analysis of concurrency control mechanisms including locking strategies (e.g., exclusive and shared locks), and recovery techniques such as logging and checkpoints to maintain database integrity and recover from failures.

Reference Books

- 2 Database Systems: The Complete Book, Hector Garcia-Molina, Jeffrey D. Ullman, and Jennifer Widom, 2008, Pearson.
- 3 Database Management Systems, Raghu Ramakrishnan and Johannes Gehrke, 1998, McGraw-Hill Education.
- 4 Database System Concepts, Abraham Silberschatz, Henry F. Korth, and S. Sudarshan, 2020, McGraw-Hill Education.

23BMI3101A - BIOMEDICAL SIGNAL AND IMAGE PROCESSING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BMI3101A	BIOMEDICAL SIGNAL AND IMAGE PROCESSING	BSIP	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding biomedical signal and image analysis, covering various biosignals (temperature, BP, EMG, ECG, EEG), image acquisition methods (X-ray, CT, MRI, ultrasound), and the challenges associated with processing and interpreting this vital medical data.	2	PO1, PO2, PSO2
CO2	Apply digital signal processing techniques for biomedical signals, including filtering in time and frequency domains, noise modeling, pre-processing for noise reduction (high frequency noise, baseline wander, powerline interference), medical signal detection, and measures of waveform complexity.	3	PO2, PSO2
CO3	Identify biomedical image enhancement techniques, covering image fundamentals (sampling, quantization), spatial and frequency domain methods, to improve image quality for better visualization and analysis in medical applications.	3	PO2, PSO2
CO4	Utilize wavelet analysis techniques for processing physiological signals and biomedical images, enabling improved analysis, artifact reduction, and feature extraction for medical diagnosis and research.	3	PO2, PSO2
CO5	Examine and solve practical biomedical signal and system problems by implementing appropriate signal and image processing algorithms using MATLAB, fostering skills in noise reduction, feature extraction, and data interpretation for medical applications.	4	PO2, PSO2
CO6	Analyze and Implement appropriate signal/Image processing algorithms for practical problems involving biomedical signals and systems Using MATLAB.	4	PO2, PSO2
CO7	Analyze the Case Studies of the Bio medical Audio signal Analysis and Biomedical Image Analysis. case studies related to futuristic biomedical devices	4	PO2, PO5, PSO2

Syllabus

Fundamentals of Bio-medical Signals and Images: Introduction to biomedical signals. The Nature of Biomedical Signals, Examples of Biomedical signals: Temperature, BP, EMG, ECG and EEG, rhythmic excitation of heart, heart activity complexity. Objectives of biomedical analysis, difficulties in biomedical signal analysis. Bio-medical Images X-ray, Computerized tomography, MRI and Ultrasound image acquisition techniques. difficulties in biomedical image analysis.

Modalities, Signal Processing Methods: Digital Signal processing filtering techniques for Biomedical signals: Time domain and frequency domain techniques. Noise models, Pre-processing, High frequency noise elimination, Baseline wander removal, Powerline interference elimination, Detection of medical signals, Measures of waveform complexity / activity.

Biomedical Image Enhancement Techniques: Image model, sampling and quantization, image geometry, spatial domain, and Frequency domain enhancement techniques.

Advanced Applications: Wavelet decomposition of physiological signals for analysis, Wavelets approach for Biomedical signal and image artefact reduction techniques.

Analyze and Implement appropriate signal/Image processing algorithms for practical problems involving biomedical signals and systems Using MATLAB.

23BMI3202A - ADVANCED BIOMEDICAL SIGNAL PROCESSING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BMI3202A	ADVANCED BIOMEDICAL SIGNAL PROCESSING	ABSP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify signal processing techniques, including convolution, correlation, and AI methods, to analyze, acquire, and understand various biomedical signals like EEG, ECG, and EMG.	3	PO1, PO2, PSO2
CO2	Apply filtering techniques for biomedical signals, including noise reduction with machine learning approaches, to extract meaningful data from ECG, EEG, and other signals.	3	PO2, PSO2
CO3	Identify the methods to record, analyze, and interpret various cardiac signals (ECG, PCG) and bioelectrical signals (EMG, EEG) using deep learning for advanced processing	3	PO2, PSO2
CO4	Apply advanced analysis of ECG and PCG signals for heart health assessment, including segmentation, heart rate variability, and detection of abnormalities using cutting-edge biomedical signal processing techniques.	3	PO2, PSO2
CO5	Analyze and process biomedical signals using MATLAB, covering filtering, QRS detection, HRV analysis, and exploring deep learning applications through practical exercises and projects.	4	PO2, PO5, PSO2

Syllabus

Sampling and aliasing, Signal reconstruction, Signal conversion systems, convolution - Correlation - FFT - decimation in time algorithm, Decimation in Frequency algorithm. Artificial intelligence in signal processing. Nature of biomedical signals - Examples of biomedical signals-EEG, EMG, ECG, VMG, VAG, evoked potentials, Event Related Potentials, Speech Signal, Bioacoustic signals - Objectives and Difficulties of Biomedical Signal Analysis. Deep learning in Biosignal analysis

Random Noise, Structured Noise, and Physiological Noise Time domain filtering Synchronous averaging, Moving average filters, Frequency domain filters Design of Butterworth filters optimal filtering, Machine Learning applications in signal computation. Adaptive noise cancellation LMS and RLS algorithms in adaptive filtering Application Motion Artifacts in ECG, Powerline Interference in ECG, Maternal Interference in ECG. Machine Learning applications in noise cancellation.

Cardiological Signal Processing - Methods in Recording ECG, Waves and Intervals of ECG - ECG Data Acquisition, ECG Parameters and Their Estimation - ECG QRS Detection Technique - Template Matching Technique - Differentiation Based QRS Detection Technique - Simple QRS width Detection Algorithm - High Speed QRS detection Algorithm - Estimation of R-R Interval - Estimation of ST Segment - Analysis of PCG signal - Analysis of EMG signal and EEG Signal. Deep learning for biosignal analysis.

Adaptive Segmentation of ECG and PCG signals - Time varying analysis of heart rate variability - Detection of Coronary Artery Disease - Analysis of Ectopic ECG beats, latest research work on biomedical signal processing.

Analyze and Implement appropriate signal processing algorithms for practical problems involving biomedical signals and systems Using MATLAB. Learn filtering, QRS detection, HRV, and explore deep learning applications - all through hands-on exercises and projects.

23BMI3303A - MATERIALS FOR BIO-MEDICAL APPLICATIONS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BMI3303A	MATERIALS FOR BIO-MEDICAL APPLICATIONS	MBMA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify biomaterials for various medical applications to organize and differentiate the characteristics of biomaterials.	3	PO1, PSO1
CO2	Organize properties and applications of polymeric and composite biomaterials used in various medical devices. Apply surface modification for biomedical applications.	3	PO2, PSO1
CO3	Apply the methods for evaluating biocompatibility and how biomaterials interact with different tissues and bodily systems. Apply Biocompatibility Testing and Response of Biomaterial to Human Body.	3	PO2, PSO1
CO4	Examine bio-implants and surgical aids used to improve a patient's health and well-being. These include implants for the heart, knees, hips, eyes, and teeth, along with materials used to suture wounds and dressings to promote healing.	4	PO2, PSO1
CO5	Analyze the design principles of biocompatible implants and artificial organs, analyze their impact on healthcare, and design their own implant using biomaterial selection and modern engineering tools for improved hard and soft tissue replacement.	4	PO2, PSO1
CO6	Classify healthcare solutions leveraging nanomaterials technology, utilizing COMSOL/OFDTD software for simulation and analysis.	4	PO2, PO5, PSO1
CO7	Interpret material suitability for biomedical applications by evaluating biocompatibility, material properties, and performance, while also analyzing the unique properties and characterization techniques of nanomaterials in the field.	5	PO2, PO5, PSO1

Syllabus

Introduction to Biomaterials: Biomaterial, Types of Biomaterials, Biocompatibility, Biological material, Biodegradable material, Bioresorbable material, Bio-inert material, Bio-active material, Pyrogenicity, Minimum Requirements of Biomaterials, Surface Properties of Biomaterials, Desirable Properties of Biomaterial, Performance of Biomaterials, Applications of Biomaterials with examples. Metallic Biomaterials: Introduction, Stainless steel, Co-Cr Alloys, Ti-Alloys, Nitinol, Dental metals, Corrosion of Metallic implants, Manufacturing of Metallic implants, Applications. Ceramic Biomaterials: Introduction, Types of Ceramics, Bio-inert ceramics: Alumina, Zirconia, Carbon, Bioresorbable ceramics: Calcium Phosphate, Bioactive ceramics: Glass ceramics, Applications.

"Polymeric & Composite Biomaterials: Polymeric Biomaterials: Introduction, Basic structures of Polymers, Polymerization and its Types, Polyethylene, Polypropylene, Polyamides, Polyacrylates, Hydrogel, Bone cement, Fluorocarbon polymers, Silicon Rubber, Bioactive Polymers, Biodegradable Polymers, Applications. Composite Biomaterials: Introduction, Dental filling Composites & cement, Porous Composites, Fibrous & Particulate composites."

Biocompatibility Testing & Response of Biomaterial to Human Body: Biocompatibility Testing: Introduction, In-Vitro Testing, In-Vivo Testing, Hypersensitivity, Haemocompatibility, Odontocompatibility, Osteocompatibility, Cytotoxicity, Genotoxicity, Carcinogenicity. Response of Biomaterial to Human Body: Blood-Biomaterial Interactions, Biomaterials-Tissue Interactions, Tissue response to Implants, Inflammation, Wound Healing, Foreign Body Response, Infection and Tumorigenesis of Biomaterials

Bio-implants & Surgical Aids: Stent, Vascular grafts, Artificial Heart valves, Inferior Vena cava filter, Contact lenses, Intra-ocular lenses, Artificial Silicon Retina, Temporary fixation Devices, Total Hip Replacement, Total Knee Replacement, Dental filling & Restoration material, Dental implants, Suture materials, Wound dressings, Tissue Adhesives.

Analyze the design of various biocompatible implants and artificial organ to develop and improve Health Care Service to serve mankind and society. Design an implant using fundamental concept and modern engineering tools to develop hard tissue and soft tissue replacement materials by suitable material selection.

Design and evaluate a solution based on nanomaterial technology for a given need in the field of healthcare and biomedical Engineering using COMSOL/OFDTD.

Evaluate to identify suitable materials for biomedical engineering, Analyze the properties of nanomaterials and characterization techniques.

Metallic Biomaterials: Introduction, Stainless steel, Co-Cr Alloys, Ti-Alloys, Nitinol, Dental metals, Corrosion of Metallic implants, Manufacturing of Metallic implants, Applications. Ceramic Biomaterials: Introduction, Types of Ceramics, Bio-inert ceramics: Alumina, Zirconia, Carbon, Bioresorbable ceramics: Calcium Phosphate, Bioactive ceramics: Glass ceramics, Applications.

"Polymeric & Composite Biomaterials: Polymeric Biomaterials: Introduction, Basic structures of Polymers, Polymerization and its Types, Polyethylene, Polypropylene, Polyamides, Polyacrylates, Hydrogel, Bone cement, Fluorocarbon polymers, Silicon Rubber, Bioactive Polymers, Biodegradable Polymers, Applications. Composite Biomaterials: Introduction, Dental filling Composites & cement, Porous Composites, Fibrous & Particulate composites."

Biocompatibility Testing & Response of Biomaterial to Human Body: Biocompatibility Testing: Introduction, In-Vitro Testing, In-Vivo Testing, Hypersensitivity, Haemocompatibility, Odontocompatibility, Osteocompatibility, Cytotoxicity, Genotoxicity, Carcinogenicity. Response of Biomaterial to Human Body: Blood-Biomaterial Interactions, Biomaterials-Tissue Interactions, Tissue response to Implants, Inflammation, Wound Healing, Foreign Body Response, Infection and Tumorigenesis of Biomaterials

Bio-implants & Surgical Aids: Stent, Vascular grafts, Artificial Heart valves, Inferior Vena cava filter, Contact lenses, Intra-ocular lenses, Artificial Silicon Retina, Temporary fixation Devices, Total Hip Replacement, Total Knee Replacement, Dental filling & Restoration material, Dental implants, Suture materials, Wound dressings, Tissue Adhesives.

Analyze the design of various biocompatible implants and artificial organ to develop and improve Health Care Service to serve mankind and society. Design an implant using fundamental concept and modern engineering tools to develop hard tissue and soft tissue replacement materials by suitable material selection.

Design and evaluate a solution based on nanomaterial technology for a given need in the field of healthcare and biomedical Engineering using COMSOL/OFDTD.

Evaluate to identify suitable materials for biomedical engineering, Analyze the properties of nanomaterials and characterization techniques.

23BMI3303R - MATERIALS FOR BIO-MEDICAL APPLICATIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BMI3303R	MATERIALS FOR BIO-MEDICAL APPLICATIONS	MBMA	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify biomaterials for various medical applications to organize and differentiate the characteristics of biomaterials.	3	PO1, PSO1
CO2	Organize properties and applications of polymeric and composite biomaterials used in various medical devices. Apply surface modification for biomedical applications.	3	PO2, PSO1
CO3	Apply the methods for evaluating biocompatibility and how biomaterials interact with different tissues and bodily systems. Apply Biocompatibility Testing and Response of Biomaterial to Human Body.	3	PO2, PSO1
CO4	Examine bio-implants and surgical aids used to improve a patient's health and well-being. These include implants for the heart, knees, hips, eyes, and teeth, along with materials used to suture wounds and dressings to promote healing.	4	PO2, PSO1
CO5	classify healthcare solutions leveraging nanomaterials technology, utilizing COMSOL/OFDTD software for simulation and analysis.	4	PO2, PO5, PSO1
CO6	Interpret material suitability for biomedical applications by evaluating biocompatibility, material properties, and performance, while also analyzing the unique properties and characterization techniques of nanomaterials in the field.	5	PO2, PO5, PSO1

Syllabus

Introduction to Biomaterials: Biomaterial, Types of Biomaterials, Biocompatibility, Biological material, Biodegradable material, Bioresorbable material, Bio-inert material, Bio-active material, Pyrogenicity, Minimum Requirements of Biomaterials, Surface Properties of Biomaterials, Desirable Properties of Biomaterial, Performance of Biomaterials, Applications of Biomaterials with examples. Metallic Biomaterials: Introduction, Stainless steel, Co-Cr Alloys, Ti-Alloys, Nitinol, Dental metals, Corrosion of Metallic implants, Manufacturing of Metallic implants, Applications. Ceramic Biomaterials: Introduction, Types of Ceramics, Bio-inert ceramics: Alumina, Zirconia, Carbon, Bioresorbable ceramics: Calcium Phosphate, Bioactive ceramics: Glass ceramics, Applications.

"Polymeric & Composite Biomaterials: Polymeric Biomaterials: Introduction, Basic structures of Polymers, Polymerization and its Types, Polyethylene, Polypropylene, Polyamides, Polyacrylates, Hydrogel, Bone cement, Fluorocarbon polymers, Silicon Rubber, Bioactive Polymers, Biodegradable Polymers, Applications. Composite Biomaterials: Introduction, Dental filling Composites & cement, Porous Composites, Fibrous & Particulate composites."

Biocompatibility Testing & Response of Biomaterial to Human Body: Biocompatibility Testing: Introduction, In-Vitro Testing, In-Vivo Testing, Hypersensitivity, Haemocompatibility, Odontocompatibility, Osteocompatibility, Cytotoxicity, Genotoxicity, Carcinogenicity. Response of Biomaterial to Human Body: Blood-Biomaterial Interactions, Biomaterials-Tissue Interactions, Tissue response to Implants, Inflammation, Wound Healing, Foreign Body Response, Infection and Tumorigenesis of Biomaterials

Bio-implants & Surgical Aids: Stent, Vascular grafts, Artificial Heart valves, Inferior Vena cava filter, Contact lenses, Intra-ocular lenses, Artificial Silicon Retina, Temporary fixation Devices, Total Hip Replacement, Total Knee Replacement, Dental filling & Restoration material, Dental implants, Suture materials, Wound dressings, Tissue Adhesives.

Design and evaluate a solution based on nanomaterial technology for a given need in the field of healthcare and biomedical Engineering using COMSOL/OFDTD.

Evaluate to identify suitable materials for biomedical engineering, Analyze the properties of nanomaterials and characterization techniques.

23BMI3404M - NANOTECHNOLOGY AND NANOSENSORS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BMI3404M	NANOTECHNOLOGY AND NANOSENSORS	NTNS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Illustrate the miniaturized world of nanosensors, covering their fundamentals, characteristics, applications in various fields, and the technologies behind their design and functionality.	2	PO1, PSO1
CO2	Demonstrate characterization tools used in nanotechnology and explore both top-down and bottom-up fabrication techniques for creating nanoscale structures and devices. concepts of fabrication and characterization of Nanosensors.	2	PO2, PSO1
CO3	Develop nanotechnology-enabled devices, exploring how nanomaterials, bioelectronics, and miniaturized sensors are revolutionizing fields like biomedicine and gas detection.	3	PO2, PSO1
CO4	Apply unique properties of quantum dots make them powerful tools for sensing and imaging applications, exploring their synthesis and practical uses.	3	PO1, PO2, PSO1

Syllabus

Nanosensors: Introduction to sensors. Characteristics and terminology - static and dynamic characteristics. Micro and nano-sensors, Fundamentals of sensors, biosensor, micro fluids, Packaging and characterization of sensors, Sensors for aerospace and defense. Organic and inorganic nanosensors.

Introduction to Nanotechnology Characterization Tools for Nanotechnology, Fabrication in the Nano scale Top-Down Fabrication, Fabrication of Nano scale Structures and Devices Bottom Up Fabrication

Nanotechnology enabled devices: Nanomaterials and nanostructured films, Nanoscale electronic and ionic transport. Sensor for bio-medical applications. Bioelectronics, Nanoparticle biomaterial hybrid systems for sensing applications. Gas sensor.

Quantum Dots Sensor: Definition and Properties of Quantum Dots, Synthesis of Quantum Dots, Sensing, and Imaging Application with Quantum Dots

Reference Books

23BMI3505 - BIOSENSING AND BIOELECTRONICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BMI3505	BIOSENSING AND BIOELECTRONICS	BSBE	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate the principles behind these sensors, their fabrication, and working mechanisms of optical biosensors. We will explore both direct and indirect detection methods, including surface plasmon resonance and electroluminescence.	2	PO2, PSO1
CO2	Explain the exciting world of piezoelectric sensors and their development, alongside applications of electrochemical sensors for detecting crucial molecules like glucose, vitamins, cholesterol, and dopamine.	2	PO2, PSO1
CO3	Apply pacemakers, defibrillators (both implantable and external), and ventilators for biomedical applications to dive into implantable stimulators for neuromuscular control, blood glucose monitoring, telemedicine practices, and the exciting world of product development in medical technology.exclamation	3	PO2, PSO1
CO4	Analyze interaction between electrolytes and semiconductors in EIS devices, and learn about various biorecognition elements used in MOSFET-based biosensors. ISFETs, enzyme FETs, and cell-based sensors, exploring their principles and applications in biodetection.	4	PO2, PO5, PSO1

Syllabus

Introduction to biosensor - Classification based on the signal transduction and biorecognition element - Enzymatic and non-enzymatic sensors - DNA and protein-based sensors - Immunosensors - Principle - Fabrication and working of optical biosensors - Direct and indirect detectors - Surface plasmon - Electroluminescence

Electrochemical biosensors - Construction and working of potentiometric - Amperometric and impedimetric sensors - Development and applications of piezoelectric sensors - Electrochemical sensors for glucose - Vitamins - Cholesterol - Dopamine - Biochips and electrochemical microarrays - Lab-on-a-chip - Biosensing using nanomaterials - Biocompatibility of sensors - PCR Principles

Implantable cardiac pacemakers - Defibrillators - External defibrillators - Clinical defibrillators - Implantable defibrillators - Implantable stimulators for neuro muscular control - Mechanical ventilation - Electrosurgical devices - Blood glucose monitoring sensors - Telemedicine - Prerecorded telemedicine - Real time telemedicine - Case study - Product development - Pulse oximeter - Ventilators

Advanced Bioelectronic devices MOS Structure, Modes of operation, Electrolyte Insulator Semiconductor EIS Structure, Site binding Theory, Electrical double layer theory. MOSFET Based Bioelectronic devices: Biosensor overview, Ion Sensitive Field Effect Transistor, Enzyme Field Effect Transistor, Chemical Field Effect Transistor, Reference Field Effect Transistor, Immune Field Effect Transistor, Organic Thin Film Transistor, Cell-Based Biosensors & Sensors of Cell Metabolism, Light Addressable Potentiometric Sensors

23CCF3101A - TCP/IP & OTHER PROTOCOL SUITE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CCF3101A	TCP/IP & OTHER PROTOCOL SUITE	TCP	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of networks understand the Architectural Evolution of TCP/IP, standards, Comparisons between OSI/ISO & TCP/IP Protocol Suite, different Addressing systems, ATM ARP ARP and their analysis	3	PO1, PO2, PSO2
CO2	Analyse DHCP Theory and Operation, DHCP Architecture, DHCP Auto-Configuration: Network Address Translation	3	PO2, PO3, PSO2
CO3	Analyse Domain Name system	3	PO2, PO3, PSO2
CO4	Analyse ICMPv4/v6, IGMP, MLD, UDP, IP Fragmentation, IP Sec, EAP][10-12](Error Formats)	4	PO2, PO3, PSO2
CO5	Analyse additional features in protocols suites and their applications	4	PO2, PO3, PSO2
CO6	Analyse and deployment different protocols suites using Cisco packet tracer	4	PO2, PO5, PSO2
CO7	Analyse different protocols with type values using Wireshark	4	PO2, PO5, PSO2

Syllabus

Architecture: Brief History, Protocols and Standards, Standard Organizations, Internet Standards, Internet Administration, Architectural Evolution of TCP/IP TCP/IP Protocol Suite: Comparisons between OSI/ISO & TCP/IP Protocol Suite, Layers in the TCP/IP Protocol Suite, Addressing: Physical, Logical, Port and Application Specific Address. IP Addressing: (IPv4 and IPv6): Class full, Classless, CIDR, Special and Network Address Translation (NAT) The Address Resolution Protocol : Packet Formats, Encapsulation, Operation, Proxy ARP, ARP in LAN and WANATM ARP: Packet Format

DHCP Theory of Operation: Introduction, Operation, Allocation of DHCP: Remote, Automatic and Manual.,DHCP Architecture: DHCP Client, Server, Relay Agent, Process, Designing of DHCP: Setting up DHCP In A Small Office, DHCP Auto-Configuration: DHCP Client, Server, Relay Agent, Process, Network Address Translation: Methods of Translation, NAT, NAT Traversal, Dynamic Network Address translation.

DNS, Connection Mgt, Time-out, Data Flow, Congestion Cont., TLS, DNSSEC, DKIM [10-12] TCP: Principal, operational , Segment Structure of simplified TCP, TCP Connection Management: Connection Establishment, Transfer, Termination and Reset, Time out and Data flow (Error and Flow Control), Congestion control, (Congestion Control and avoidance algorithm(NEW Rano RFC 6582)) DNS: Distribution of Name Space and Defined Zones, DNS in Internet (Generic, Country and Reverse).

Advancement In Other Protocol Suites: ICMPv4/v6, IGMP, MLD, UDP, IP Fragmentation, IP Sec, EAP][10-12] ICMPv4/v6 : Datagram Structure of Internet Message Control Protocol V.4 (ICMPv4 & ICMP v6), Encapsulation in ICMPv4/v6, Common error messages in ICMPv4 Type 3 and ICMPv6 Type 1 Compare and contrast between ICMPv6 with ICMPv4.Internet Group Message Protocol (IGMP): Architecture, Versions, Messages with Access control.MLD, UDP, IP Fragmentation, IP Sec, EAP: Multicast Listener Discovery (MLD) and IGMP Windows Sockets, Extensible Authentication Protocol (EAP) standards and Mechanisms (IEEE 802.11, IEEE 802.1x)

Advanced Topics: ATM ARP Operation, Logical IP Subnet ARP Package: Catch Table, Queues, Input Output Module, Multi Protocol Over ATM (MPOA), NAT in IPv6, NAT in PIX ,Google Cloud NAT Architectural View, Dynamic Domain Name System, DNS Security, TLS algorithm (Transport Layer), Position of UDP in the TCP/IP protocol suite, User Datagram format, Basics of IP Fragmentation, Reassemble Header Format of IP Fragmentation, TCP Segmentation, Difference Between IP Fragmentation and TCP Segmentation

Reference Books

23CCF3202A - CLOUD COMPUTING AND NETWORKS SECURITY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CCF3202A	CLOUD COMPUTING AND NETWORKS SECURITY	CCNS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concepts of Cloud computing in Networking	3	PO1, PO2, PSO2
CO2	Able to analyse different Topologies and Architecture standards	3	PO2, PO3, PSO2
CO3	Analysis of various Network Security issues	4	PO2, PO3, PSO2
CO4	Inspect the privacy and security, architecture, design in Edge computing	4	PO2, PO3, PSO2
CO5	Apply security concepts in cloud computing	3	PO2, PO5, PSO2

Syllabus

Introduction to Cloud Networking: Computer Networks, Cloud Networks, Cloud Data Centres, Virtualization: Cloud computing at a glance, Historical developments, Building cloud computing environments, Principles of parallel and distributed computing, Virtualization: Characteristics, Taxonomy of virtualization, Pros and Cons of Virtualization, Technology examples, Cloud Computing Architecture.

Cloud based Big-Data Computing: SW Fabric Arch., Topologies, Cloud Data Center Networks and Standards: Cloud data centre blueprint architecture-overview, Components, Cloud data centre reference design.

Applications of Cloud-Computing & Security: Cloud Data & IoTs, Network Virtualization, Data Centre Security: Securing the Infrastructure, Perimeter Router Security, IOS Firewalls, IP Security: in brief

Topics in Network Security: Wireless Security, QoS, Multicast, Web-DNS Security, Intrusion Detn, DHT Sec]: Wireless network overview: Signal Propagation, SNR, Modulation, Wireless Groups, Risks and Threats of Wireless, Analysis, Spoofing, Denial of service, Malicious Code, Social Engineering, Rogue Access Points, Cell Phone Security, Wireless Hacking and Hackers, RFID, Web-DNS Security: Overview of DNS, Fundamentals of DNS, DNS Transactions, Threats to the DNS, DNSSEC[RFC 2535], Security aware DNS Servers, Security Aware Clients, Intrusion Detection, DHT Security

Edge computing: Architecture and design, Security and privacy, Latency and bandwidth, Cost, Performance, Scalability, Deployment, Privacy and security based on Cloud based big-data computing: Data encryption, Access control, Data anonymization, Data isolation, Data governance, Data breach response.

23CCF3303A - VOIP AND BROADBAND NETWORKS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CCF3303A	VOIP AND BROADBAND NETWORKS	VCN	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic concepts of Classical Telephony, IP Networking and SS7 signalling	3	PO1, PO2, PSO2
CO2	Analyze different VoIP Architectures and Protocols	3	PO1, PO2, PSO2
CO3	Analyze Broadband Wireless, Access Technologies, Passive Optical Networks and Fiber-to-the-Home in real time scenario	4	PO1, PO2, PSO2
CO4	Analyze Broadband Optical NWs and Multimedia Network-Connection	4	PO1, PO2, PSO2
CO5	Analyze the signalling and calling procedures for VoIP protocols. Apply the advanced broadband access technologies in real time scenario	4	PO1, PO2, PO5, PSO2
CO6	Analysis of VoIP Protocols using Cisco packet tracer	4	PO2, PO5, PSO2
CO7	Analysis of VoIP Protocols using Wireshark	4	PO2, PO5, PSO2

Syllabus

Classical Telephony: Line Side/Trunk Side switching, Isochronous Transport, PSTN Signalling, PCM, digital channel & bandwidth constraints, SS7, Services. IP Networking Review (simple): Protocol layering, encapsulation, Ethernet, QoS at layer 2, IP, UDP, TCP, IP Addressing (network, subnet, NAT), IP Routing (RIP, OSPF).

Overview of VoIP Architectures and Protocols: Peer protocols (SIP, H323): signalling, call routing, Master-slave protocols (MGCP/MEGACO et.al.): signalling, call routing, SS7 Transport (SIP-T), RTP and Codecs, RTP and RTCP: real time traffic over ip (rfc 1789), Codecs (compression, bandwidth, quality), Waveform codecs (G711, G726), CLEP codecs (G729, G723, etc.), Bandwidth control (VAD, dynamic packing, etc.). SIP: Signalling Protocol Components (RFC 3261), SIP language elements, call flows, Network routing: Proxies, Servers, Services, Advanced Routing, Presence/Chat, SIMPLE, ENUM, DNS, Firewalls, NAT and STUN. Network QoS and QoS Mechanisms (DFWQ, MPLS)

Broadband Access Technologies: An Overview of Broadband Services and Emerging Technologies, Broadband Passive Optical Networks: PON Architectures-PON Standards History and Deployment-Broadband PON- Ethernet PON- next-generation broadband optical Access networks. Fibre-to-the-Home (FTTH), DOCSIS 3.1/3.1+, G.fast, Satellite Broadband, Hybrid Fibre-Coaxial (HFC) Networks, Software-Defined Networking (SDN), Network Function Virtualization (NFV),

Broadband Optical NWs and Broadband and Multimedia: Broadband optical Access Introduction, Evolution of optical technology, Trends in Broadband Services, Optical Broad band services, Fibre to neighbourhood (FTTX) Architecture, ITU-T PON standards, PON Technology background, Multimedia Network-Connection and Communication Mechanism.

Advance topics: Advanced Topics: Message types in SS7, Signaling Points for SS7, Signaling Network architecture, Error handling and Alarm Management, Supplementary Services of SS7, Global Title Translation (GTT), Advanced topics: WebRTC (Web Real-Time Communication), SRTP (Secure Real-time Transport Protocol), SIP Enhancements, VoIP Interoperability, VoIP Quality of Service (QoS) Quality of Service (QoS), Adaptive Streaming, Content Delivery Networks (CDNs), Virtual and Augmented Reality (VR/AR), Ultra-High-Definition (UHD) Content, Security and Digital Rights Management (DRM), Interactive Multimedia Services,

23CCF3404M - 5G MOBILE AND IEEE STANDARDS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CCF3404M	5G MOBILE AND IEEE STANDARDS	5GMI	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of 5G & RF Front-End, advancement over LTE Beyond 4G, building Blocks of 5G, 5G Architecture, 5G for IoT Apps in modern communication issues.	3	PO1, PO2, PO3, PSO2
CO2	Apply the principles of advanced waveforms and air interfaces, 5G Waveforms, Channels, Millimeter wave technology, 5G Radio Access Technologies.	3	PO1, PO2, PO3, PSO2
CO3	Apply 5G Evaluation & Applications: MTC, D2D Communication, Multi-hop D2D, Multi-carrier D2D	3	PO1, PO2, PO3, PSO2
CO4	Analyze IEEE802Std: 802.11 (WiFi), 802.15.1 (Bluetooth), 802.15.4 (Zigbee), 802.16 (WiMax), 4G/5G	4	PO1, PO2, PO3, PSO2

Syllabus

RF Front-End: Key components and technologies for transmitting and receiving RF signals in 5G. Advancement over LTE: 5G offers superior speed, lower latency, and enhanced performance compared to LTE. Building Blocks: Core 5G technologies include small cells, beamforming, and network slicing. 5G Architecture: New network elements and their roles in delivering advanced services. 5G for IoT Apps: Enhances IoT connectivity and data throughput, solving modern communication challenges.

5G Waveforms, Channels, Millimeter Wave Communications: Spectrum and regulations, Channel propagations, Hardware technologies for mmW systems, Development scenario, Architecture and mobility, Beamforming, Physical layer techniques. 5G wireless propagation channel models: Modelling requirements and scenarios - The METIS channel models. Joint Transmission CoMP enablers - Distributed cooperative transmission - JT CoMP with advanced receivers - Relaying and network coding in 5G: Multi-flow wireless backhauling - Bufferaided relaying.

MTC (Machine-Type Communication): Facilitates communication between machines and IoT devices for automation. D2D Communication (Device-to-Device): Enables direct device communication, enhancing efficiency and reducing latency. Multi-hop D2D: Relays data through multiple devices to improve coverage and reliability. Multi-carrier D2D: Uses multiple carriers to boost data rates and optimize spectrum usage.

IEEE 802.11 (WiFi): Standards for WLANs; different WiFi generations and their effects on wireless communication. IEEE 802.15.1 (Bluetooth): Short-range wireless communication; applications and advancements in Bluetooth technology. IEEE 802.15.4 (Zigbee): Low-power, low-data-rate communication; used in sensor networks and IoT. IEEE 802.16 (WiMax): Broadband wireless access; performance and use cases of the WiMax standard. 4G/5G: Standards for 4th and 5th generation cellular networks; comparison of features, capabilities, and advancements.

23CCF3505 - IP MULTIMEDIA SUB-SYSTEM & EMERGING TECHNOLOGIES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CCF3505	IP MULTIMEDIA SUB-SYSTEM & EMERGING TECHNOLOGIES	IMSET	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret the basics of network threats and attacks in in Security monitoring and incident response	3	PO1, PO2, PO3
CO2	Analyze cryptography algorithms and HMAC & CMAC: SHA -1 Algorithm.	4	PO1, PO2, PO3
CO3	Analyse differeent Network authentication Protocols	4	PO1, PO2, PO3
CO4	Analyze Network security Protocols and technologies	4	PO1, PO2, PO3

Syllabus

"CO1: Introduction, network threats and attacks The CIA Triad, Common terms and their definitions: Perimeter security, Access control, Security monitoring and incident response, Security awareness and training, Regular updates and patch management, Backup and disaster recovery. Vulnerabilities, Exploit, Threat, Attack, Ransomware, Hacker, Malware and their types, Network attacks: DNS Cache poisoning , DDoS, Man-in-the-middle(session and coolie hijacking), Rouge AP, The ping Dearth, Ping Flood, Syc Flood, Client-side attacks. Cross-site scripting attacks(XSS), Injection attacks, Password attacks, Captcha and Social engineering attacks, Phishing, spoofing."

"CO2: Cryptography Cryptography: Basics, symmetric and asymmetric cryptography, Transpositional ciphers, substitutional ciphers. Principles, public key cryptography algorithms, Blowfish, CAST-128, IDEA, RSA Algorithms, Diffie Hellman Key E-change, decryption, Elliptic Curve Cryptography. HMAC & CMAC: SHA -1 Algorithm. User Authentication, Transport Layer Security &Email Security User"

"CO3: Network authentication Protocols: Kerberos, LDAP, OAuth 2.0, Remote authentication dial-in user service(RADIUS), SAML, Challenge -Handshake Authentication (CHAP), DIAMETER, Extensible authentication protocol, Password authentication, TACACS. Network security monitoring and incident practice: Intrusion Detection and Prevention, Log Analysis and event correlation, Incident response planning and procedures, Forensic analysis, and incident handling"

"CO4: Network security Protocols and technologies: Secure Socket layer, Transport Layer security, IPsec: Overview IP Security Architecture Authentication Header, Encapsulating Security Payload, Combining Security Associations and Key Management, Virtual Private Networks, Intrusion Detection systems, Firewalls, Anti-malware/Antivirus software, Network Access control, Secure Shell (SSH), Domain Name systems: (DNSSEC), Digitally signing DNS data, Mitigating DNS spoofing, Wireless security: WPA/WPA2/WPA3, IEEE802.1X"

Reference Books

23CEC3101A - CLOUD INFRASTRUCTURE AND SERVICES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3101A	CLOUD INFRASTRUCTURE AND SERVICES	CIS	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the foundation for cloud infrastructure	3	
CO2	Analyze Virtualization, its levels, and some real time examples	4	PO2, PSO1
CO3	Analyze load balancing, container services and Kubernetes	4	PO2, PO3, PO4, PSO1
CO4	Analyze the security over the cloud through specific approaches	4	PO2, PO3, PO4, PSO1
CO5	Analyze consequences and benefits of migration, data intensive, and applications of cloud	4	PO2, PSO1
CO6	Analyze hands-On exposure of Cloud infrastructure, virtualization, Load balancing and authentication, and security services	4	
CO7	Analyze the Infrastructure related concepts as best practices	4	

Syllabus

Introduction to Cloud Technologies: Introduction to the Cloud Computing, History of cloud computing, Cloud Deployment models, Cloud service options: IaaS, PaaS, and SaaS. Data as a Service, NoSQL as a Service, Comparison of service providers, cloud Architectures: NIST cloud reference Architecture and ITU-T, cloud reference Architecture.

Virtualization, Characteristics of virtualized environments, Taxonomy of virtualization techniques, Hardware and OS level virtualization techniques, Pros and cons of virtualization, Virtualization technology examples: Xen- para virtualization, VMware: full virtualization, Microsoft Hyper-V

Load Balancing, Types of Load Balancing, Risk Factors in Load Balancing, Auto scaling - Docker, Containers and Kubernetes - Building own container based on micro services - Docker containers - Manage multiple Kubernetes Cluster - Multi Cloud deployments

Cloud Security Introduction, Infrastructure Security, Network level security, Host level security, Application level security, Identity & Access Management, Access Control, Trust, Reputation, Risk, Authentication in cloud computing, Client access in cloud

Moving applications to Cloud, Using Webmail services, Cloud computing Technologies and Applications, Data-Intensive Technologies for Cloud Computing.

Reference Books

23CEC3202A - ADVANCED OPERATING SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3202A	ADVANCED OPERATING SYSTEMS	AOS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the design of multiprocessor and distributed Operating Systems. Analyze distributed file system.	3	PO2, PO3, PSO2
CO2	Analyze the scheduling Real time and Parallel Applications on Heterogeneous Distributed Systems. Analyze three basic approaches for implementing distributed mutual exclusion	4	PO2, PO4, PSO2
CO3	Understand Replication preventing and accepting divergence. Analyze Deadlock detection in distributed systems.	4	PO3, PO4, PSO2
CO4	Analyze the algorithms for Checkpointing and rollback recovery, Consensus and agreement algorithms, and Failure detectors	4	PO3, PO4, PSO2
CO5	Implement the Concepts of multiprocessor Threads, distributed mutual exclusion, distributed scheduling, Distributed deadlocks.	4	PO2, PO3, PSO2

Syllabus

Introduction Types of Advanced Operating Systems Problem of Multiprocessor Systems, Solutions with Master and Slave Processors Distributed Unix Systems Satellite Processors Distributed File Systems Architecture NFS RPC Clock Synchronization Algorithms Physical and logical clocks Chandy Lamports Global State Recording Algorithm

Distributed Mutual Exclusion Introduction Classification of Mutual Exclusion algorithms Mutual Exclusion Algorithms Non-TokenBased Algorithms Lamports Algorithm The Ricart-Agrawala Algorithm Maekawas Algorithm TokenBased Algorithms Suzuki-Kasamis Broadcast Algorithm Raymonds Tree-Based Algorithm Election algorithm The Bully Algorithm A Ring Algorithm

Distributed Deadlock Introduction Centralized algorithms Distributed algorithms Hierarchical algorithms Replication weak consistency model protocols Replica synchronization gossip and Markel trees

Distributed Fault Handling Agreement Protocol System Model Classification Solution to Byzantine Agreement Problem Partition tolerant consensus algorithms Paxos Raft ZAB Fault Recovery Concepts Classification of failures Recovery in concurrent Systems Consistent Check Points Synchronous and Asynchronous check pointing and recovery Fault tolerance Issues Atomic actions and committing Commit Protocols Non-blocking Commit protocols Distributed Commit

Lab Experiments based on the Concepts of Advanced Operating systems using python or java

- 9 distributed systems for fun and profit, Mikito Takada, 1st, Online.
- 10 Scheduling Parallel Applications on Heterogeneous Distributed Systems , Guoqi Xie, Gang Zeng, Renfa Li, Keqin Li , 1St, Springer.

23CEC3202E - ADVANCED OPERATING SYSTEMS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3202E	ADVANCED OPERATING SYSTEMS	AOS	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the design of multiprocessor and distributed Operating Systems. Analyze distributed file system.	3	PO2, PO3, PSO2
CO2	Analyze the scheduling Real time and Parallel Applications on Heterogeneous Distributed Systems. Analyze three basic approaches for implementing distributed mutual exclusion	4	PO2, PO4, PSO2
CO3	Understand Replication preventing and accepting divergence. Analyze Deadlock detection in distributed systems.	4	PO3, PO4, PSO2
CO4	Analyze the algorithms for Checkpointing and rollback recovery, Consensus and agreement algorithms, and Failure detectors	4	PO3, PO4, PSO2
CO5	Implement the Concepts of multiprocessor Threads, distributed mutual exclusion, distributed scheduling, Distributed deadlocks.	4	PO2, PO3, PSO2

Syllabus

Introduction Types of Advanced Operating Systems Problem of Multiprocessor Systems, Solutions with Master and Slave Processors Distributed Unix Systems Satellite Processors Distributed File Systems Architecture NFS RPC Clock Synchronization Algorithms Physical and logical clocks Chandy Lamports Global State Recording Algorithm

Distributed Mutual Exclusion Introduction Classification of Mutual Exclusion algorithms Mutual Exclusion Algorithms Non-TokenBased Algorithms Lamports Algorithm The Ricart-Agrawala Algorithm Maekawas Algorithm TokenBased Algorithms Suzuki-Kasamis Broadcast Algorithm Raymonds Tree-Based Algorithm Election algorithm The Bully Algorithm A Ring Algorithm

Distributed Deadlock Introduction Centralized algorithms Distributed algorithms Hierarchical algorithms Replication weak consistency model protocols Replica synchronization gossip and Markel trees

Distributed Fault Handling Agreement Protocol System Model Classification Solution to Byzantine Agreement Problem Partition tolerant consensus algorithms Paxos Raft ZAB Fault Recovery Concepts Classification of failures Recovery in concurrent Systems Consistent Check Points Synchronous and Asynchronous check pointing and recovery Fault tolerance Issues Atomic actions and committing Commit Protocols Non-blocking Commit protocols Distributed Commit

Lab Experiments based on the Concepts of Advanced Operating systems using python or java

Reference Books

- 1 Advanced concepts in operating systems Distributed, Database and multiprocessor operating systems, Mukesh Singhal Niranjana G. Shivaratri, 7th, MC Graw Hill education..
- 2 Distributed Systems-CreateSpace, Maarten van Steen, Andrew S. Tanenbaum, 3e, IPP.
- 3 Distributed Computing: Principles, Algorithms, and Systems, A.D. Kshem kalyani, M. Singhal, 2nd, Cambridge University Press.

23CEC3203A - FUNCTIONAL & CONCURRENT PROGRAMMING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3203A	FUNCTIONAL & CONCURRENT PROGRAMMING	FCP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop the basic programs using functional programming language	3	PO1, PO2, PO3, PSO1
CO2	Apply Functions and Lambdas on purely functional programs	3	PO1, PO2, PO4, PSO1
CO3	Apply Functional Infinite Data Structures and Monods	3	PO1, PO3, PO4, PSO1
CO4	Evaluate the functional design of concurrent systems	4	PO1, PO3, PO4, PSO1
CO5	Evaluate the design of concurrent systems	4	PO1, PO2, PO4, PSO1

Syllabus

"Characteristics of Functional Programming Languages: The Basics of the Scala Language: DataTypes, Statements and Expressions, Statement Separator and Blocks, Declarations."

"Functions, Lists, Pattern Matching, Collections and Their Higher Order Functions. Functions and Lambdas, Functional Data Structures: Immutable Lists and Maps Lazy and Eager Evaluation: Parameter Passing."

" Lazy Val, Streams and Other Infinite Data Structures. Functions in Scala and Object-Oriented Programming, Scala: OOL and FP, classes and objects, Inheritance model, traits, Classes with Polymorphic Types. Monods:Monods, Functors, and Monads."

" Tail-Recursive Functions:Asynchronous Programming with Futures and Promises, DataParallel Collections. Concurrency with Akka, Introduction to the Actor Model, The Actor Model in Practice, Concurrent Programming with Reactive Extensions, Use Case - A Parallel Web Crawler."

apply common patterns, such as lockings, semaphores, and message-passing and synchronization for solving concurrent program problems.

Reference Books

23CEC3204A - CLOUD DEVOPS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3204A	CLOUD DEVOPS	CD	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the basic concepts of Cloud and Devops and Identify the Need of DevOps in SDLC and Cloud Infrastructure in DevOps, Apply Version Control System to track the latest version of Software	2	PO1
CO2	Inspect Configuration Management using Infrastructure as Code	4	PO1, PSO2
CO3	Analyze need of Containerization in SDLC and Examine the Kubernetes Pod Configuration.	4	PO5, PSO2
CO4	Analyze Continuous Integration and Continuous Deployment using Infrastructure as Code, Build in Cloud native Applications using Pipeline and Examine the Software and Automation Testing Frameworks.	4	PO5, PSO2
CO5	Build and Inspect the Tools associated to DevOps Life Cycle.	4	PO5, PSO2

Syllabus

Networking Fundamentals: Network Fundamentals, Storage Fundamentals, Databases Fundamentals, Web servers (NGINX), LINUX Basic and Admin Importance of Linux in DevOps, Linux Basic Command Utilities, Shell Scripting Devops Fundamentals: Cloud Fundamentals, AWS fundamentals, SDLC,

Devops Fundamentals: Git, Maven. Terraform: Overview, Terraform with AWS, Terraform -variables, conditions, iterator, provisioner, functions, modules, workspace, backends. Ansible: YAML, introduction, Architecture, Playbook Concepts, Ansible Inventory and Configuration, Ansible Modules, Roles.

Docker & Kubernetes: How to get Docker Image? What is Docker Image, Docker Installation, working with Docker Container What is Container o Docker Engine, Creating Containers with an Image, Working with Images, Docker Command Line Interface, Docker Compose, Docker Hub, Docker Trusted Registry, Docker swarm, Docker attach Docker File & Command, Kubernetes Architecture, Design and Install a Kubernetes Cluster.

Jenkins: Introduction to Jenkins, Continuous Integration with Jenkins, Configure, Jenkins, Jenkins Management, Scheduling build Jobs,

Maven Build Scripts, Support for the GIT version control System, Jenkins Build Pipeline Parent and Child Builds, Sequential Builds, Jenkins Master & Slave Node Configuration, Installing Jenkins Plugins, SCM plugin, Build and test.

Reference Books

- 1 DevOps for Web Development, Mitesh Soni, 2016, PACKT Publishing .
- 2 Beginning DevOps with Docker, Joseph Muli,, 2018, PACKT Publishing.
- 3 Docker for Developers_ Develop and run your application with Docker containers using DevOps tools for continuous delivery, Richard Bullington-McGuire, Andrew K. Dennis, Michael Schwartz, 2020, Packt Publishing)..
- 4 DevOps With Kubernetes, Hideto Saito, Hui-Chuan Chloe Lee, Cheng-Yang, 2019, PACKT Publishing,.

23CEC3204E - CLOUD DEVOPS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3204E	CLOUD DEVOPS	CD	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic concepts of Networks, Cloud and DevOps Identify the Need of DevOps in SDLC and Cloud Infrastructure in DevOps, Apply Version Control System to track the latest version of Software	2	PO5, PO6, PSO2
CO2	Inspect Configuration Management using Infrastructure as Code	4	PO5, PO6, PSO2
CO3	Analyze need of Containerization in SDLC and Examine the Kubernetes Pod Configuration	4	PO4, PO5, PO6, PSO2
CO4	Analyze Continuous Integration and Continuous Deployment using Infrastructure as Code, Build in Cloud native Applications using Pipeline and Examine the Software and Automation Testing Frameworks.	4	PO4, PO5, PO6, PSO2
CO5	Build and Inspect the Tools associated to DevOps Life Cycle.	4	PO4, PO5, PSO2

Syllabus

Git, Maven. Terraform: Overview, Terraform with AWS, Terraform -variables, conditions, iterator, provisioner, functions, modules, workspace, backends.

The OSI Model TCP vs UDP IP addressing & Subnetting, Protocols & Ports Network Topology Switching, Web servers. Version Controlling: Git, GitHub fundamentals. Configuring gitbash, Pushing and pulling codes to and from repositories

Linux Introduction, Basic Commands, Operations of running systems, User and Group management.

Cloud Fundamentals, AWS Accounts, AWS Fundamentals IAM, ACCOUNTS AND AWS ORGANISATIONS, Simple Storage Service, VPC, Security. T

Introduction Architecture Playbook Concepts, Ansible inventory and configurations, Ansible Modules Dockers & Kubernetes

Reference Books

- 1 Beginning DevOps with Docker, Joseph Multi, 2018, PACKT Publishing .
- 2 Docker for Developers_ Develop and run your application with Docker containers using DevOps tools for continuous delivery, Richard Bullington-McGuire, Andrew K. Dennis, Michael Schwartz, 2020, , Packt Publishing).

23CEC3305A - CLOUD & SERVERLESS COMPUTING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3305A	CLOUD & SERVERLESS COMPUTING	CSC	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze the hierarchical structure of cloud service scheduling, delving into its components and relationships. Additionally, demonstrate a comprehensive understanding of cloud computing principles and their implications	4	PO4, PSO1
CO2	Build the concepts of Functions-as-a-Service (FaaS) and Event-driven programming. Evaluate the steps involved in developing scalable models using Serverless Architectures	3	PO3, PSO1
CO3	Apply the process of managing application functionalities by employing Serverless runtimes and Serverless databases and also the key considerations, configurations, and potential optimizations involved in effectively utilizing these technologies to enhance application development and performance.	3	PO3, PSO1
CO4	Identify advanced serverless programming practices and patterns to design, construct, and manage serverless applications and architectural decisions, development strategies, and operational considerations required for the effective implementation and maintenance of serverless systems	3	PO5, PSO1
CO5	Analyze Serverless real time projects and its Architecture, Build, and Operate serverless web applications .	4	PO5, PSO1
CO6	Evaluate real world and scalable full stack application using Serverless technologies	5	PO5, PSO1
CO7	Build a real world and scalable full stack application using Serverless technologies.	6	PO5, PSO1

Syllabus

Overview of cloud computing (Cloud Introduction, Characteristics, Advantages, Four Deployment models and Core Services), Introduction, History, Briefly Basic Services description, EC2 Introduction, S3 and VPC Description , RDS Description, VPC with EC2 and RDS Description

Serverless AWS. Serverless Programming Practices and Patterns, building serverless applications using Java, NodeJS and Python. AWS Lambda, Lambda Examples and Casestudies.

Building Serverless REST APIs with API Gateway. DynamoDB, Amazon Cognito, Web Hosting with S3, Route53, and CloudFront. Postman, Domain name services,

Serverless Amazon Athena and the AWS Glue Data Catalog, Real-Time Data Insights Using Amazon Kinesis ,Messaging and Notifications with SQS and SNS

Your first Serverless application on Azure, Google Cloud Platform, Example: Serverless Sensor Data Collector. Building Effective Serverless Applications with Docker ,Kubernetes and OpenShift, CICD Serverless, SAM Applications

Reference Books

- 1 Serverless Architectures on AWS: With examples using AWS Lambda, Peter Sbarski, 2024, Manning Publications.
- 2 Serverless Design Patterns and Best Practices: Build, Secure, and Deploy Enterprise-ready Serverless Applications with AWS Lambda, Brian Zambrano, 2023, Packt Publishing.
- 3 Learning Serverless: Design, Develop, and Deploy with Confidence, Paul Swail, 2023, O'Reilly Media.
- 4 Serverless Single Page Apps: Fast, Scalable, and Available, Ben Rady and Matthew J. Fuller, 2024, Pragmatic Bookshelf.

23CEC3305E - CLOUD & SERVERLESS COMPUTING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3305E	CLOUD & SERVERLESS COMPUTING	CSC	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze the hierarchical structure of cloud service scheduling, delving into its components and relationships. Additionally, demonstrate a comprehensive understanding of cloud computing principles and their implications	4	PO5, PSO1
CO2	Build the concepts of Functions-as-a-Service (FaaS) and Event-driven programming. Evaluate the steps involved in developing scalable models using Serverless Architectures	3	PO5, PSO1

23CEC3406M - ADVANCED COMPUTER ARCHITECTURE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3406M	ADVANCED COMPUTER ARCHITECTURE	ACA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Discuss current trends and future directions in computer architecture, including multi-core processors, GPUs, and heterogeneous systems.	2	PO2
CO2	Demonstrate an understanding of advanced pipelining techniques, including instruction-level parallelism (ILP) and the concepts of superscalar execution.	2	PO3
CO3	Apply knowledge of advanced computer architecture to solve real-world problems related to hardware and software design, including multiprocessor and multi-core systems.	3	PO2
CO4	Analyze the performance of different computer architectures using metrics such as CPU performance, memory hierarchy, and system throughput.	4	PO4, PSO2

Syllabus

FUNDAMENTALS OF COMPUTER DESIGN: Review of Fundamentals Of CPU, Memory and I/O. Trends in Technology, Power, Energy and Cost. Dependability. Performance Evaluation.

INSTRUCTION LEVEL PARALLELISM: ILP Concepts. Pipelining Overview. Compiler Techniques for Exposing ILP. Dynamic Branch Prediction. Dynamic Scheduling. Multiple Instruction Issue. Hardware Based Speculation. Static Scheduling. Multi-Threading. Limitations of ILP. Case Studies.

DATA-LEVEL PARALLELISM: Vector Architecture. SIMD Extensions. Graphic Processing Units. Loop Level Parallelism.

THREAD LEVEL PARALLELISM: Symmetric and Distributed Shared Memory Architectures. Performance Issues. Synchronization. Models of Memory Consistency, Pipeline hazards, Pipeline scheduling techniques

MEMORY AND I/O Cache Performance. Cache memory principles, Cache optimization techniques, Reducing Cache Miss Penalty and Miss Rate. Reducing Hit Time. Main Memory and Performance: Memory Technology.

Types of Storage Devices Buses. RAID. Reliability, Availability and Dependability. I/O Performance Measures.

Reference Books

- 1 Computer Architecture a Quantitative Approach, John L Hennessey and David A Patterson, 2011, Elsevier.
- 2 Computer Architecture and Parallel Processing, Kai Hwang And Faye Briggs, 2015, McGraw-Hill.
- 3 Advanced Computer Architectures: A Design Space Approach, Sima D, Fountain T And Kacsuk P, 2000, Addison Wesley.
- 4 Parallel Computer Architecture: A Hardware/Software Approach, David Culler, Jaswinder Pal Singh, and Anoop Gupta, 2012, Elsevier.

23CEC3407M - PARALLEL ALGORITHMS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3407M	PARALLEL ALGORITHMS	PA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Outline the fundamental concepts of parallel computing and the design of parallel algorithms.	2	PO1, PO2
CO2	Analyze and apply parallel algorithms for solving computational problems efficiently.	4	PO3, PSO2
CO3	Evaluate the performance of parallel algorithms on different parallel architectures and environments	5	PO2, PO4
CO4	Summarize parallel algorithms using appropriate programming models and tools.	3	PO3

Syllabus

Introduction to Parallel Computing: Basic concepts of parallel computing, benefits, and challenges. Overview of parallel architectures (multi-core, many-core, and distributed systems). Simple examples of parallel algorithms.

Parallel Sorting and Search Algorithms: Introduction to parallel sorting (e.g., parallel merge sort) and searching techniques (e.g., parallel binary search). Basic principles of dividing tasks and combining results.

Parallel Numerical Algorithms: Introduction to parallel numerical methods such as parallel matrix multiplication and simple parallel numerical integration. Basic performance metrics and how to measure them.

Parallel Programming Models and Tools: Introduction to parallel programming with MPI and OpenMP. Hands-on examples of implementing simple parallel algorithms using these tools. Overview of CUDA for GPU programming.

Reference Books

- 1 Introduction to Parallel Computing , Ananth Grama, Anshul Gupta, George Karypis, Vipin Kumar , 2003 , Addison-Wesley.
- 2 Parallel Programming: Techniques and Applications Using Networked Workstations and Parallel Computers, Barry Wilkinson, Michael Allen, 2005 , Pearson.
- 3 Designing and Building Parallel Programs , Ian Foster , 1995 , Addison-Wesley.
- 4 Parallel Algorithms , Henri Casanova, Arnaud Legrand, Yves Robert , 2008 , CRC Press.

23CEC3408M - CLOUD SECURITY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3408M	CLOUD SECURITY	CS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles of cryptography and Apply various cryptographic algorithm	2	PO1, PO4
CO2	Apply various security issues and system vulnerabilities in virtualization	3	PO4, PO6, PO10
CO3	Analyze the technologies for virtualization based security enhancements	4	PO6, PO10, PS02
CO4	Implement legal & compliance issues and examine modern security standards	3	PO1

Syllabus

Security Concepts: Confidentiality, privacy, integrity, authentication, non-repudiation, availability, access control, defense in depth, least privilege, the importance of security in the cloud, Importance in PaaS, IaaS and SaaS; Cryptographic Systems: Symmetric cryptography, stream ciphers, block ciphers, modes of operation, public-key cryptography,

hashing, digital signatures, public-key infrastructures, key management, X.509 certificates, OpenSSL. Multi-tenancy Issues: Isolation of users/VMs from each other. Virtualization System Security Issues: e.g. ESX and ESXi Security, ESX file system security, storage considerations, backup, and recovery; Virtualization System Vulnerabilities: Management console vulnerabilities, management server vulnerabilities, administrative VM vulnerabilities, guest VM vulnerabilities, hypervisor vulnerabilities, hypervisor escape vulnerabilities, configuration issues, and malware (botnets, etc).

Virtualization System-Specific Attacks: Guest hopping, attacks on the VM (delete the VM, attack on the control of the VM, code or file injection into the virtualized file structure), VM migration attack, hyperjacking. Technologies for virtualization-Based Security Enhancement: IBM security virtual server protection, virtualization-based sandboxing; Storage Security: HIDPS, log management, Data Loss Prevention. Location of the Perimeter, Legal and Compliance Issues: Responsibility, ownership of data, right to penetration test. Local laws, examination of modern Security Standards (eg PCIDSS), Standards to deal with cloud services and virtualization, compliance for the cloud provider vs. compliance for the customer.

Introduction to Containers, Container Security, Thread Model in Containerized Environment, Container Defense Mechanism-1, Container Defense Mechanism-2, SQL injection attacks in containers, Case Study-SQL injection attacks in containers malicious logs extraction.

23CEC3409M - ARCHITECTING CLOUD SOLUTIONS* (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3409M	ARCHITECTING CLOUD SOLUTIONS*	ACS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Design Resilient Architectures	3	PO1, PO2, PO3, PO4, PSO1
CO2	Design High-Performing Architectures	3	PO1, PO2, PO3, PO4
CO3	Design Secure Applications and Architectures	3	PO1, PO2, PO3, PO4
CO4	Design Cost-Optimized Architectures, Designing solutions to the architecture of Cloud	3	PO1, PO2, PO3, PO4

Syllabus

Design a multi-tier architecture solution: Design a multi-tier architecture solution, Design highly available and/or fault-tolerant architectures, Design decoupling mechanisms using AWS services, Choose appropriate resilient storage.

Design High-Performing Architectures : Identify elastic and scalable compute solutions for a workload, Select high-performing and scalable storage solutions for a workload, Select high-performing networking solutions for a workload, Choose high-performing database solutions for a workload.

Design Secure Applications and Architectures: Design secure access to AWS resources, Design secure application tiers, Select appropriate data security options.

Design Cost-Optimized Architectures: Identify cost-effective storage solutions, Identify cost-effective compute and database services, Designing solutions to the architecture of Cloud

Reference Books

23CEC3510 - EDGE COMPUTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3510	EDGE COMPUTING	EC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Outline the fundamental concepts and advantages of Fog and Edge Computing (FEC), infer the opportunities and applications.	2	PO1, PO5, PSO2
CO2	Apply network slicing strategies with effective management techniques to optimize resource allocation. Build network virtualization for efficient edge computing, while exploring optimization techniques for fog computing to ensure efficient data processing	3	PO2, PO5, PSO2
CO3	Implement and evaluate middleware solutions for Fog and Edge Computing, addressing security management	4	PO1, PO5, PSO2
CO4	Analyze the applicability and needs for Edge/Fog Computing in various real-time projects such as health monitoring, smart city management, and smart transportation	4	PO1, PO3, PO5, PSO2

Syllabus

Internet of Things (IoT) and New Computing Paradigms: Introduction, New Computing Paradigms, Fog and Edge Computing Completing the Cloud, Advantages of FEC, Hierarchy of Fog and Edge Computing, Business Model, Opportunities and Challenges. Addressing the Challenges in Federating Edge Resources

Architecture: Architecture: Integrating IoT + Fog + Cloud Infrastructures, Network Slicing, and its Management in 5 G, Network Virtualization techniques in Edge computing, Optimization in Fog Computing.

Middleware: Middleware for Fog and Edge Computing: Design Issues, State-of-the-Art Middleware Infrastructures, A Lightweight Container Middleware for Edge Cloud Architectures, Security and Data Management: Security Management for Edge Cloud Architectures

Applications and Issues: Exploiting Fog Computing in Health Monitoring, Smart Surveillance Video Stream Processing at the Edge for Real-Time Human Objects Tracking, Fog Computing Model for Evolving Smart Transportation Applications.

Reference Books

- 1 Fog and Edge Computing: Principles and Paradigms, Rajkumar Buyya , Satish Narayana Sri rama , 2019, Wiley publication.
- 2 IoT and Edge Computing for Architects, Perry Lea, 2020, Packt Publishing.
- 3 Architecting the Internet of Things, Dieter Uckelmann, Florian Michahelles, Mark Harrison, 2014, Springer.

23CEC3511 - HIGH PERFORMANCE COMPUTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3511	HIGH PERFORMANCE COMPUTING	HPC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret the basis concept of processors, optimization and parallel computers, shared memory, parallel programming with MPI.	2	PO2, PO3, PO4, PO8, PSO1
CO2	Apply knowledge of FPGA based supercomputers, rearchitecting, and core optimization.	3	PO2, PO3, PO4, PSO1
CO3	Analyze openMp, MPI and their hybridization principles.	4	PO2, PO3, PO4, PSO1
CO4	Analyze the working principle of GPU, CUDA, threads, performance, openCL.	4	PO2, PO3, PO4, PSO1

Syllabus

Evolution of Processors and Modern Processor ,Basic optimization techniques for serial code,Data access optimization, Parallel computers, Basics of parallelization, Shared-memory parallel programming with OpenMP.

FPGA based super computer for statistical physics, Weird Case of Janus, High speed torus interconnect using FPGAs, Rearchitecting memory resources for clusters, Various kinds of models, Core optimization.

Efficient openMP programming, Local optimization on ccNuma architecture,Distributed memory parallel programming with MPI,Efficient MPI programming, Hybrid parallelization with MPI and Open MP.

History of GPU computing, GPU memory Hierarchy, Introduction to CUDA, CUDA threads,CUDA performance consideration,Introduction to Open CL,Hybrid- Core Architecture, Low cost High performance reconfigurable computing.

Reference Books

- 1 HPC @ Green IT, Green High Performance Computing Methods, Ralf Gruberc, Vincent Keller, 2010, Springer.
- 2 High-Performance Computing Using FPGAs, Christian de Schryver, Norbert Wehn , 2013, Springer.
- 3 CUDA by Example - An Introduction to GeneralPurpose GPU Programming, Jason Sanders, Edward Kandrot, 2011, Addison Wesley.
- 4 Parallel and High Performance Computing , Robert Robey (Author), Yuliana Zamora (Author) , 2021, Paperback.

23CEC3512 - DESIGN OF DISTRIBUTED APPLICATIONS ON CLOUD (DDA) (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3512	DESIGN OF DISTRIBUTED APPLICATIONS ON CLOUD (DDA)	DDAC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the distributed systems applications on cloud computing.	3	PO1, PO2, PO3, PO4, PSO2
CO2	Apply Distributed file systems and cache consistency	3	PO1, PO2, PO3, PO4, PSO2
CO3	Analyze Persistent cloud services, Failure models and failure detectors	4	PO2, PO3, PO4, PSO2
CO4	Analyze Cloud file systems: GFS and HDFS, BigTable, HBase and Dynamo	4	PO1, PO2, PO3, PO4, PSO2

Syllabus

Introduction to Distributed Systems, Distributed System Architectures, Communication in Distributed Systems, Introduction to Cloud Computing, Cloud Deployment Models

Distributed Data Management, Cloud Computing and Virtualization, Storage in the Cloud

Cloud Service Models, Types of Failures in Distributed systems, Types of Cloud Failures, Common Causes of Cloud Failures, Failure Recovery and Resilience

Cloud file systems: GFS and HDFS, BigTable, HBase and Dynamo, Map-Reduce and extensions: Parallel computing, The map-Reduce model, Parallel efficiency of Map-Reduce, Relational operations using Map-Reduce.

Reference Books

- 1 Cloud Computing, Sandeep Bhowmik, 2017, CAMBRIDGE.
- 2 Distributed Computing, Ajay D. Kshemkalyani, Mukesh Singhal, 2008, CAMBRIDGE.
- 3 Distributed Systems, Sukumar Ghosh, 2006, CRC Press.
- 4 Architecting the Cloud, Michael J. Kavis, 2014, Wiley.
- 5 "Distributed Systems: Principles and Paradigms", Andrew S. Tanenbaum and Maarten Van Steen, 2006, Prentice Hall.

23CEC3513 - CLOUD NETWORKING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CEC3513	CLOUD NETWORKING	CN	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply and reflect broad conceptual knowledge about Cloud Networking Basics, Characteristics and Cloud Data Centers.	3	PO1, PO2, PO3
CO2	Apply the basics and Identifying the architecture of Switch Fabric, Switch Fabric Topologies, Congestion Management, Flow Control and Traffic Management.	3	PO2, PO3
CO3	Analyze the problems, and explain, analyze, and evaluate Ethernet Data Rate Standards, Virtual Local Area Networks, Data Center Bridging.	4	PO2, PO3, PO4
CO4	Analyse Multi-tenant Environments, Traditional Network Tunneling Protocols, VXLAN, NVGRE, Tunnel Locations, Load Balancing Algorithms.	4	PO2, PO3, PO4

Syllabus

Introduction to Cloud Networking: Networking Basics, The network stack, Packets and frames, Network equipment, Interconnect, Cloud Data Center, Cloud Networking, Characteristics of Cloud Networking, Ethernet usage, Virtualization, Convergence, Scalability, Software. Data Center Evolution: Mainframes to the Cloud: The Data Center Evolution, Computer Networks, Ethernet, Enterprise versus Cloud Data Centers, Movement to the Cloud

Switch Fabric Technology: Switch Fabric Architecture Overview, Switch Fabric Topologies, Congestion Management, Flow Control, Traffic Management, Switch Chip Architecture Examples. Cloud Data Center Networking Topologies: Traditional Multitiered Enterprise Networks, Data Center Network Switch Types, Flat Data Center Networks, Rack Scale Architectures, Network Function Virtualization.

Data Center Networking Standards: Ethernet Data Rate Standards, Virtual Local Area Networks, Data Center Bridging, Improving Network Bandwidth, Remote Direct Memory Access. Server Virtualization and Networking: VM Overview, Virtual Switching, PCI Express, Edge Virtual Bridging, VM Migration

Network Virtualization: Multi-tenant Environments, Traditional Network Tunneling Protocols, VXLAN, NVGRE, Tunnel Locations, Load Balancing Software-Defined Networking: Data Center Software Background, OpenStack, OpenFlow, Network Function Virtualization, SDN Deployment.

Reference Books

- 5 Ethernet Switching and Routing in Data Centers, Donald A. Tepper, 2013, Wiley.

23CID3101A - CLOUD INFRASTRUCTURE ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CID3101A	CLOUD INFRASTRUCTURE ENGINEERING	CIE	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze the fundamental concepts of cloud computing models and their applications in modern IT infrastructure	3	PO1, PSO1
CO2	Design and deploy scalable and resilient cloud architectures using virtualization, containerization, and cloud-native technologies.	3	PO1, PSO1
CO3	Utilize Infrastructure as Code (IaC) tools and best practices to automate the provisioning and management of cloud resources.	3	PO1, PO2, PSO1
CO4	Design and optimize cloud infrastructure for scalability, high availability, and cost efficiency.	3	PO2, PSO1
CO5	Monitor, troubleshoot, and optimize cloud infrastructure and applications using cloud-native monitoring and logging tools.	4	PO2, PSO1
CO6	Integrate cloud services with on-premises infrastructure to create hybrid solutions.	4	PO2, PSO1
CO7	Evaluate cloud security measures and implement best practices for data protection and compliance.	4	PO2, PSO1

Syllabus

Introduction to Cloud Computing: Overview of cloud computing models (IaaS, PaaS, SaaS), Benefits and challenges of cloud computing, Cloud service providers and their offerings, Case studies of cloud adoption in various industries

Cloud Infrastructure Fundamentals: Virtualization vs. containerization, Introduction to hypervisors and container runtimes, Managing virtual machines in the cloud, Container orchestration platforms (e.g., Kubernetes)

Infrastructure as Code (IaC): Introduction to Infrastructure as Code (IaC) concepts and tools, Using Terraform for infrastructure provisioning, Managing infrastructure configurations with Ansible, Best practices for IaC development and deployment

Scalability and High Availability: Designing scalable and resilient architectures, Auto-scaling and load balancing in the cloud, Implementing fault tolerance and disaster recovery strategies, Case studies of highly available cloud applications

Monitoring and Optimization: Monitoring cloud infrastructure and applications, Using cloud monitoring and logging services, Performance optimization techniques for cloud environments, Cost management and optimization strategies

Reference Books

23CID3202A - ENTERPRISE CLOUD COMPUTING: TECHNOLOGY, ARCHITECTURE, APPLICATIONS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CID3202A	ENTERPRISE CLOUD COMPUTING: TECHNOLOGY, ARCHITECTURE, APPLICATIONS	ECT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Assess the benefits and challenges of cloud adoption	2	PO1, PSO1
CO2	Analyze the evolution of Enterprise cloud computing	4	PO1, PO3, PSO1
CO3	Apply cloud-native principles and best practices in Devops	3	PO2, PO3, PSO1
CO4	Evaluate the Data encryption and compliance requirements related to ERP and CRM Applications	5	PO2, PO4, PSO1
CO5	Deploy and manage applications in the cloud infrastructure using a public cloud provider	5	PO4, PSO1

Syllabus

Definition and characteristics of cloud computing, Evolution of cloud computing, Benefits and challenges of cloud adoption, Cloud service models: IaaS, PaaS, SaaS, Cloud Deployment Models: Public cloud, private cloud, hybrid cloud, Community cloud, Choosing the right deployment model for enterprise needs.

Evolution of enterprise cloud computing, Benefits and challenges of cloud adoption in the enterprise, Hardware virtualization vs. containerization, Hypervisor technologies (e.g., VMware, Hyper-V), Container orchestration platforms (e.g., Kubernetes, Docker Swarm)

Cloud architecture layers: Infrastructure, Platform, Software, Scalability, elasticity, and resilience, Virtualization and containerization technologies, Cloud-native principles and best practices, Microservices architecture, DevOps and Continuous Integration/Continuous Deployment (CI/CD)

Cloud Security and Compliance: Threat landscape in the cloud, Identity and access management (IAM), Data encryption and compliance requirements, ERP and CRM in the cloud, Big Data and Analytics, Internet of Things (IoT) applications, Real-world examples of enterprise cloud adoption

Setting up cloud infrastructure using a public cloud provider (e.g., AWS, Azure, Google Cloud), Deploying and managing applications in the cloud, Project: Design and implement a cloud-based solution for a simulated enterprise scenario

23CID3203A - ARCHITECTING HIGHLY AVAILABLE AND SCALABLE CLOUD ENVIRONMENTS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CID3203A	ARCHITECTING HIGHLY AVAILABLE AND SCALABLE CLOUD ENVIRONMENTS	AHASCE	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify and Understand the key principles and concepts of cloud architecture.	2	PO1, PO2
CO2	Design highly available and fault-tolerant cloud infrastructures.	6	PO1, PO2, PO3
CO3	Implement scalable solutions for handling variable workloads in the cloud.	3	PO1, PO2, PO3
CO4	Evaluate and Optimize the performance and cost-efficiency of cloud-based systems.	5	PO3, PSO2
CO5	Evaluate and select appropriate cloud services and technologies for specific use cases.	5	PO1, PO2, PO3

Syllabus

Introduction to Cloud Architecture: Overview of cloud computing models, Fundamental concepts of cloud architecture, Principles of scalability and high availability, Case studies of cloud architecture patterns

Designing Highly Available Cloud Infrastructures; Strategies for fault tolerance and redundancy, Architectural patterns for high availability, Implementing disaster recovery solutions in the cloud, Case studies of highly available cloud architectures

Scaling Cloud Environments: Techniques for horizontal and vertical scaling, Auto-scaling and elasticity in cloud environments, Designing for scalability in distributed systems, Performance optimization strategies

Optimizing Performance and Cost-Efficiency: Monitoring and performance tuning in the cloud, Cost analysis and optimization techniques, Implementing resource management strategies, Case studies of performance optimization in cloud environments

Cloud Service Selection and Evaluation: Overview of cloud service providers and offerings, Criteria for evaluating cloud services, Architectural considerations for service selection, Hands-on exercises in evaluating and comparing cloud services

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify and understand the key principles and concepts of cloud architecture.	2	PO1, PO3, PO5
CO2	Design highly available and fault-tolerant cloud infrastructures.	6	PO1, PO3, PO4
CO3	Implement scalable solutions for handling variable workloads in the cloud.	3	PO3, PO4, PO5, PSO1
CO4	Evaluate and optimize the performance and cost-efficiency of cloud-based systems.	5	PO1, PO4, PO5
CO5	Evaluate and select appropriate cloud services and technologies for specific use cases.	5	PO1, PO3

Syllabus

Introduction to Cloud Architecture: Overview of cloud computing models, Fundamental concepts of cloud architecture, Principles of scalability and high availability, Case studies of cloud architecture patterns

Designing Highly Available Cloud Infrastructures: Strategies for fault tolerance and redundancy, Architectural patterns for high availability, Implementing disaster recovery solutions in the cloud, Case studies of highly available cloud architectures

Scaling Cloud Environments: Techniques for horizontal and vertical scaling, Auto-scaling and elasticity in cloud environments, Designing for scalability in distributed systems, Performance optimization strategies

Optimizing Performance and Cost-Efficiency: Monitoring and performance tuning in the cloud, Cost analysis and optimization techniques, Implementing resource management strategies, Case studies of performance optimization in cloud environments

Cloud Service Selection and Evaluation: Overview of cloud service providers and offerings, Criteria for evaluating cloud services, Architectural considerations for service selection, Hands-on exercises in evaluating and comparing cloud services

Reference Books

23CID3304A - CLOUD INFRASTRUCTURE ARCHITECTURE AND ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CID3304A	CLOUD INFRASTRUCTURE ARCHITECTURE AND ENGINEERING	CIA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Cloud Computing Fundamentals	2	PO3, PSO1
CO2	Interpreting Cloud Infrastructure Components	2	PO3, PSO1
CO3	Designing Scalable and Resilient Cloud Architectures	3	PO4, PSO1
CO4	Applying Security and Compliance in the Cloud	3	PO4, PSO1
CO5	Automating Infrastructure Deployment and Management	3	PO5, PSO1
CO6	Calculating Performance and Cost Efficiency	4	PO5, PSO1
CO7	Manage Cloud Security and Identity	4	PO5, PSO1

Syllabus

Overview of cloud computing concepts, Evolution of cloud computing models (IaaS, PaaS, SaaS), Cloud deployment models (public, private, hybrid, multi-cloud), Benefits and challenges of cloud computing, Case studies of successful cloud implementations

Understanding cloud infrastructure components, Virtualization and containerization technologies, Compute resources (Virtual Machines, Containers, Serverless), Storage solutions (Object Storage, Block Storage, File Storage), Networking fundamentals in the cloud (Virtual Networks, Load Balancers, CDN)

Principles of cloud-native architecture, Scalability, elasticity, and high availability, Microservices architecture and container orchestration (e.g., Kubernetes), Serverless computing and event-driven architecture, Designing for resilience and fault tolerance

Cloud security best practices and frameworks (e.g., CSA, NIST), Identity and access management (IAM) in the cloud, Data encryption and key management, Network security and segmentation, Compliance requirements and regulatory considerations

Infrastructure as Code (IaC) concepts and tools (e.g., Terraform, Ansible), Configuration management and automation, Continuous integration and continuous deployment (CI/CD) pipelines, Monitoring, logging, and alerting in the cloud environment, DevOps principles and practices

Cloud governance frameworks and best practices, Resource tagging and cost allocation, Cloud billing and budgeting, Performance optimization and cost management, Cloud service level agreements (SLAs) and support options

Strategies for cloud migration (lift-and-shift, re-platforming, re-architecting), Assessing workload suitability for the cloud, Hybrid cloud architectures and connectivity options, Data migration strategies and tools, Cost management and optimization during migration

Reference Books

23CID3405M - RELIABLE CLOUD INFRASTRUCTURE: DESIGN & PROCESS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CID3405M	RELIABLE CLOUD INFRASTRUCTURE: DESIGN & PROCESS	RID	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate the principles behind different design patterns for building reliable cloud infrastructure on Google Cloud Platform (GCP).	2	PO2
CO2	Apply design patterns for building reliable and scalable cloud infrastructure on GCP.	3	PO3
CO3	Apply the Design patterns to practical scenarios by designing and implementing secure, highly available, and cost-effective cloud deployments on GCP.	3	PO2
CO4	Analyze the trade-offs between different design choices considering factors like cost, performance, and security.	4	PO4, PSO2

Syllabus

Introduction to Reliable Cloud Infrastructure Design: Business Requirements Analysis and Mapping to Technical Solutions, Google Cloud Platform (GCP) Overview and Key Services, Design Patterns for Reliable and Scalable Cloud Infrastructure.

Building Highly Available Infrastructure: Network Design and Load Balancing Strategies, Storage Solutions for Different Use Cases, High Availability and Disaster Recovery Techniques, Monitoring and Alerting for Infrastructure Health.

Performance Optimization and Scalability: Defining Service Level Objectives (SLOs) and Service Level Agreements, Scaling Strategies for Compute Resources, Cost Optimization Techniques for Cloud Infrastructure

DevOps Principles for Cloud Infrastructure: Continuous Integration and Continuous Delivery (CI/CD) Pipelines, Automating Infrastructure Deployment and Management, Infrastructure Version Control and Change Management.

Principles of Microservices Architecture: Designing Microservices for Scalability and Maintainability, Integrating Microservices with Cloud Services and APIs.

Security Best Practices for Cloud Infrastructure: Identity and Access Management (IAM) in GCP, Data Security and Encryption Techniques, Compliance Considerations for Cloud Deployments.

Reference Books

- 1 Site Reliability Engineering: How Google Runs Production Systems, Niall Richard Murphy, Betsy Beyer, Chris Jones, and Jennifer Petoff, 2016, O'Reilly.
- 2 Cloud Native Infrastructure: Patterns for Scalable Infrastructure and Applications in a Dynamic Environment, Justin Garrison and Kris Nova, 2017, O'Reilly.
- 3 The DevOps Handbook: How to Create World-Class Agility, Reliability, & Security in Technology Organizations, Gene Kim, Patrick Debois, John Willis, and Jez Humble, 2016, IT Revolution.
- 4 Building Secure and Reliable Systems: Best Practices for Designing, Implementing, and Maintaining Systems, Heather Adkins, Betsy Beyer, Paul Blankinship, Ana Oprea, and Piotr Lewandowski, 2020, O'Reilly.

23CID3406M - HYBRID CLOUD INTEGRATION AND MANAGEMENT (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CID3406M	HYBRID CLOUD INTEGRATION AND MANAGEMENT	HCIM	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of hybrid cloud architecture, including its components and advantages	2	PO1, PO4, PO7, PSO1
CO2	Apply different hybrid cloud deployment models and their suitability for various organizational needs.	3	PO1, PO4, PO11, PSO1
CO3	Identify hybrid cloud monitoring and management tools, including cloud management platforms (CMPs) for monitoring cloud solutions	3	PO1, PO11, PSO2
CO4	Analyze the security risks and compliance issues associated with hybrid cloud environments and develop mitigation strategies.	4	PO4, PO7, PSO2

Syllabus

Overview of cloud computing models, Key characteristics of cloud computing, Hybrid cloud architecture and components, Benefits and challenges of hybrid cloud, Integration of public and private clouds, Leading public cloud providers (AWS, Azure, Google Cloud)

Hybrid cloud networking fundamentals Connectivity options: VPNs, direct connects, Hybrid networking, Configuring hybrid cloud connectivity, Benefits and challenges of hybrid clouds, Managing and orchestrating multi-cloud deployments

Cloud management platforms (CMPs) for hybrid cloud Infrastructure as code (IaC) and automation tools DevOps practices in hybrid cloud environments, Common issues and challenges in hybrid cloud deployments, Best practices for managing hybrid cloud environments

Security considerations in hybrid cloud environments, Identity and access management (IAM), Data protection and compliance requirements, Resource allocation and workload placement strategies, Load balancing and auto-scaling in hybrid environments, Monitoring hybrid cloud performance

Reference Books

- 1 Hybrid Cloud Integration and Management: Concepts, Strategies, and Best Practices, John Smith, Emily Johnson, 2, 2023, Wiley.
- 2 Mastering Hybrid Cloud Integration, Michael Miller, 1, 2023, Packt Publishing.
- 3 Hybrid Cloud for Architects: Build robust hybrid cloud solutions using AWS and Azure, Mohamed Wali, 1,2018, Packt Publishing.
- 4 Hybrid Cloud Management with Red Hat CloudForms, Peter McGowan, 1,2015, Packt Publishing.
- 5 Implementing Azure Solutions: Implement hybrid cloud solutions using Azure services, 3rd Edition, Florian Klaffenbach, Jan-Henrik Damaschke, 3, 2020, Packt Publishing.

23CID3507 - CLOUD ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CID3507	CLOUD ENGINEERING	CE	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Ability to explain various concepts, architectures and deployment models relating to the cloud computing technologies	2	PO1, PO2, PO5
CO2	Understand the fundamentals of cloud, cloud Architectures and types of services in cloud	2	PO3, PS01
CO3	Apply the concept of virtualization and how this has enabled the development of Cloud Computing	3	
CO4	Design different sample applications using IaaS, PaaS and SaaS deployment Model	3	PO2, PO3, PO5, PS01

Syllabus

Introduction to Cloud Computing: meaning of Cloud Computing, variations of cloud computing from other models, Essential Characteristics, Technological Influences. Cloud Computing Architecture

Cloud Computing Architecture, the three deployment models IaaS, PaaS, SaaS, and Types of clouds, CLOUD INFRASTRUCTURE, Architectural Design of Compute and Storage Clouds, Layered Cloud Architecture Development

Cloud Infrastructure and Virtualization, Community cloud and multicloud strategies Cloud migration considerations and challenges, Virtualization technologies, Cloud computing infrastructure components

Storage as a service, Examples Applications: Amazon EC2, Google Drive, OneDrive, Dropbox. Developing applications Using IaaS. Platform as a Service, Introduction to PaaS: What is PaaS, Service Oriented Architecture, Cloud Platform and Management, Computation, Storage, Examples, Google App Engine, Microsoft Azure, Salesforce.com, Force.com platforms. Developing applications using PaaS. Software as a Service SaaS, Introduction to SaaS, Web services, Web 2.0, Web OS

Reference Books

- 2 Cloud Computing, Nayan B. Ruparelia, 2016, The MIT Press Essential Knowledge Series.
- 3 "Cloud Computing: Concepts, Technology & Architecture", Thomas Erl, Zaigham Mahmood, and Ricardo Puttini, 2013, Prentice Hall.
- 4 "Architecting the Cloud: Design Decisions for Cloud Computing Service Models (SaaS, PaaS, and IaaS)", Michael J. Kavis, 2014, Wiley.
- 5 "Cloud Computing: A Hands-On Approach", Arshdeep Bahga and Vijay Madisetti, 2013, CreateSpace Independent Publishing Platform.

23CID3508 - CLOUD DATA MANAGEMENT AND STORAGE SOLUTIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CID3508	CLOUD DATA MANAGEMENT AND STORAGE SOLUTIONS	CDMSS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the the foundational aspects of cloud data management. They will begin by exploring the fundamental principles of cloud computing	2	PO2
CO2	Analyze advanced cloud storage technologies, including object and block storage, as well as distributed file systems	4	PO2
CO3	Analyze advanced data management strategies and their application in cloud environments	4	PO1
CO4	Evaluate security measures and compliance considerations in cloud data management	4	PO1, PO3, PO5, PS01

Syllabus

Fundamentals of Cloud Data Management : Introduction to cloud computing Importance of data management in cloud environments Overview of cloud storage architectures Key challenges and considerations in cloud data management

Cloud Storage Architectures Understanding different cloud storage models: object storage, block storage, and file storage. Comparison of cloud storage architectures based on scalability, performance, and cost. Case studies illustrating real-world applications of cloud storage solutions.

Advanced Data Management Strategies Data lifecycle management: collection, storage, processing, and analysis of data in the cloud. Data replication and synchronization techniques for ensuring data availability and consistency. Backup and disaster recovery strategies for mitigating data loss and downtime in cloud environments.

Security and Compliance in Cloud Data Management Overview of security challenges and threats in cloud computing. Encryption techniques for protecting data at rest and in transit. Compliance frameworks and regulations governing data privacy and security in the cloud.

Reference Books

- 1 Cloud Computing: Concepts, Technology & Architecture, Thomas Erl, Ricardo Puttini, and Zaigham Mahmood, 2013, Prentice Hall.

23CNE3101A - FOUNDATIONS OF CLOUD NATIVE COMPUTING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3101A	FOUNDATIONS OF CLOUD NATIVE COMPUTING	FCNC	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate the fundamentals of Cloud Computing Basics and Cloud Native Computing of cloud.	2	
CO2	Analyze and realize the architecture of Containerization and Orchestration of the cloud	4	PO1
CO3	Evaluate the design of Cloud Native Application Development with respect to cloud applications	5	PO2
CO4	Develop DevOps and CI/CD (Continuous Integration and Continuous Delivery) in Cloud Native Environments.	3	PO1, PO3, PS01
CO5	Illustrate Advanced Cloud Native Concepts and Case Studies	2	PO2, PO3
CO6	Inspect the emerging trends of cloud native technologies	3	
CO7	Examine the applications with respect to sample case study	4	

Syllabus

Overview of Cloud Native Computing: Definition and principles Benefits and challenges Cloud Computing Basics Cloud service models IaaS, PaaS, SaaS, Cloud deployment models Public, Private, Hybrid, Multi-cloud, Key Cloud Providers AWS, Azure, Google Cloud Platform, IBM Cloud, etc. Virtualization and Containers: Virtual Machines vs. Containers. Microservices Architecture Monolithic vs. Microservices, Benefits of microservices, Design patterns for microservice

Containerization and Orchestration: Docker architecture , Docker commands and Dockerfile, Managing Docker containers. Container Orchestration Introduction to Kubernetes, Kubernetes architecture, Key concepts: Pods, Nodes, Services, Deployments Kubernetes Management ConfigMaps and Secrets, Persistent storage in Kubernetes

Cloud Native Application Development :Designing Cloud Native Applications 12-Factor App methodology, Resiliency and scalability patterns, API Gateway and Management: API Gateway concepts, Service Discovery and Load Balancing: Principles of service discovery, Load balancing techniques Security in Cloud Native Applications: Securing APIs and microservices, Identity and access management, Best practices for container security

DevOps and CI/CD in Cloud Native Environments: DevOps Principles and Practices, Culture of DevOps, Key practices: CI, CD, Infrastructure as Code (IaC), CI/CD Tools and Pipelines: Jenkins, GitLab CI, CircleCI, Building a CI/CD pipeline for cloud-native applications Infrastructure as Code (IaC): Introduction to Terraform and AWS CloudFormation, Managing infrastructure using IaC, Monitoring and Logging: Importance of monitoring in cloud-native environment

Advanced Cloud Native Concepts and Case Studies: Serverless Computing: Introduction to serverless architecture, AWS Lambda, Azure Functions, Google Cloud Functions, Cloud Native Data Management: Databases in cloud-native environments: NoSQL, NewSQL, Data storage and management strategies. Case Studies: Real-world examples of cloud-native implementations

Reference Books

- 1 Cloud Native Patterns: Designing change-tolerant software, Cornelia Davis, 2016, Manning.
- 2 Kubernetes Up & Running: Dive into the Future of Infrastructure, Kelsey Hightower, Brendan Burns, and Joe Beda, 2017, O'Reilly Media, Inc..
- 3 The DevOps Handbook, Gene Kim, Patrick Debois, John Willis, and Jez Humble, 2016, IT Revolution Press.
- 4 Essentials of cloud Computing, K. Chandrasekhran, 2nd Edition 2014, CRC Press.

- 5 Distributed and Cloud Computing, Kai Hwang, Geoffrey C. Fox, Jack J. Dongarra MK, 2013, Morgan Kaufmann.
- 6 Mastering Cloud Computing, Foundations and Application Programming, Raj Kumar Buyya, Christen vecctiola, S Tammaraiselvi,, 2013 , TMH.

23CNE3101E - FOUNDATIONS OF CLOUD NATIVE COMPUTING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3101E	FOUNDATIONS OF CLOUD NATIVE COMPUTING	FCNC	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret the fundamentals of Cloud Computing Basics and Cloud Native Computing of cloud.	2	, PSO2
CO2	Analyze and realize the architecture of Containerization and Orchestration of the cloud	4	PO1, PO2
CO3	Determine the design of Cloud Native Application Development with respect to cloud applications	5	PO3
CO4	Develop DevOps and CI/CD (Continuous Integration and Continuous Delivery) in Cloud Native Environments.	3	PO1, PO2, PO3
CO5	Build Advanced Cloud Native Concepts and Case Studies	3	
CO6	Examine the emerging trends of cloud native technologies	4	
CO7	Discover and understand the applications with respect to sample case study	4	

Syllabus

Overview of Cloud Native Computing: Definition and principles, Benefits and challenges Cloud Computing Basics: Cloud service models: IaaS, PaaS, SaaS, Cloud deployment models: Public, Private, Hybrid, Multi-cloud, Key Cloud Providers: AWS, Azure, Google Cloud Platform, IBM Cloud, etc. Virtualization and Containers: Virtual Machines vs. Containers. Microservices Architecture

Containerization and Orchestration: Docker architecture , Docker commands and Dockerfile, Managing Docker containers. Container Orchestration: Introduction to Kubernetes, Kubernetes architecture,

Cloud Native Application Development :Designing Cloud Native Applications 12-Factor App methodology, Resiliency and scalability patterns, API Gateway and Management: API Gateway concepts, Service Discovery and Load Balancing: Principles of service discovery, Load balancing techniques

DevOps and CI/CD in Cloud Native Environments: DevOps Principles and Practices, Culture of DevOps, Key practices: CI, CD, Infrastructure as Code (IaC), CI/CD Tools and Pipelines: Jenkins, GitLab CI, CircleCI, Building a CI/CD pipeline for cloud-native applications Infrastructure as Code (IaC): Introduction to Terraform and AWS CloudFormation, Managing infrastructure using IaC,

Advanced Cloud Native Concepts and Case Studies: Serverless Computing: Introduction to serverless architecture, AWS Lambda, Azure Functions, Google Cloud Functions, Cloud Native Data Management: Databases in cloud-native environments: NoSQL, NewSQL, Data storage and management strategies. Case Studies: Real-world examples of cloud-native implementations

23CNE3202A - CLOUD NATIVE APPLICATION DEVELOPMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3202A	CLOUD NATIVE APPLICATION DEVELOPMENT	CNAD	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Getting Started with IBM Cloud	3	PO3, PO4, PSO1, PSO2
CO2	IBM Cloud CLI and Tools	4	PO3, PO4, PSO1, PSO2
CO3	DevOps on IBM Cloud	4	PO3, PO4, PSO1, PSO2
CO4	REST Architecture and Watson APIs	4	PO3, PO4, PSO1, PSO2
CO5	Data Services in IBM Cloud	5	PO3, PO4, PSO1, PSO2
CO6	Practicals on IBM Cloud for Developing Cloud Native Applications	5	PO3, PO4, PSO1, PSO2

Syllabus

Getting Started with IBM Cloud IBM Cloud Overview Building in the IBM Cloud Creating and Managing an IBM Cloud Application Managing Your IBM Cloud Users and Resources

IBM Cloud CLI and Tools Introduction to Node.js Using the Command Line Interface (CLI) IBM Cloud Developer Tools for Visual Studio Code

DevOps on IBM Cloud Overview of IBM Cloud Continuous Delivery Web IDE (Edit Code) Source Code Management (Git Repo) and Issue Tracker Build and Deploy Automated Delivery Pipeline

REST Architecture and Watson APIs Introduction to Representational State Transfer (REST) JavaScript Object Notation (JSON) Using REST APIs with Watson AI Services

Introduction to Data Services in IBM Cloud Overview of Database Services in IBM Cloud Getting Started with IBM Cloudant

Practicals on IBM Cloud for Developing Cloud Native Applications

Reference Books

- 1 Essentials of Application Development on IBM Cloud, ibm, 1, IBM.
- 2 IBM Worklight Mobile Application Development Essentials, ibm, 1, ibm.
- 3 IBM Cloud Private Application Developer's Guide, Apple, 1, Apple.
- 4 IBM Cloud A Complete Guide, IBM, 2019 Edition, IBM.

23CNE3202E - CLOUD NATIVE APPLICATION DEVELOPMENT (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3202E	CLOUD NATIVE APPLICATION DEVELOPMENT	CNAD	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Application Design and Build	3	PO3, PO4, PSO1, PSO2
CO2	Application Deployment	3	PO3, PO4, PSO1, PSO2
CO3	Application Observability and Maintenance	3	PO3, PO4, PSO1, PSO2
CO4	Application Environment, Configuration and Security	4	PO3, PO4, PSO1, PSO2
CO5	Services and Networking	4	PO3, PO4, PSO1, PSO2
CO6	Apply practicals based on application resources and use Kubernetes core primitives to create/migrate, configure, expose and observe scalable applications.	5	PO3, PO4, PSO1, PSO2

Syllabus

Kubernetes: Introduction and Core Concepts, Storage and Networking, Scaling workloads, Pods and Schedulers.

Kubernetes: Cluster Architecture, Installation & Configuration, Cluster and Networking Troubleshooting Techniques.

Kubernetes: primitives to implement common deployment strategies, Helm package manager to deploy existing packages Customize, Implement probes and health checks Use built-in CLI tools to monitor Kubernetes applications, container logs Debugging in Kubernetes

Security Applications: authentication, authorization and admission control, requests, limits, quotas, ConfigMaps, ConfigMaps .

Kubernetes: NetworkPolicies, Provide and troubleshoot access to applications via services, Analyze Ingress rules to expose applications.

Reference Books

- 1 Essentials of Application Development on IBM Cloud, IBM, 1st, IBM.
- 2 IBM Cloud Private Application Developer's Guide, Ahmed Azraq, 1st, Apple.
- 3 Essentials of Application Development on IBM Cloud, ibm, 1st, IBM.
- 4 IBM Cloud A Complete Guide, IBM, 2019 Edition, IBM.

23CNE3202R - CLOUD NATIVE APPLICATION DEVELOPMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3202R	CLOUD NATIVE APPLICATION DEVELOPMENT	CNAD	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Application Design and Build	3	PO3, PO4, PSO1, PSO2
CO2	Application Deployment	3	PO3, PO4, PSO1, PSO2
CO3	Application Observability and Maintenance	3	PO3, PO4, PSO1, PSO2
CO4	Application Environment, Configuration and Security	4	PO3, PO4, PSO1, PSO2
CO5	Services and Networking	4	PO3, PO4, PSO1, PSO2
CO6	Apply practicals based on application resources and use Kubernetes core primitives to create/migrate, configure, expose and observe scalable applications.	5	PO3, PO4, PSO1, PSO2

Syllabus

Kubernetes: Introduction and Core Concepts, Storage and Networking, Scaling workloads, Pods and Schedulers.

Kubernetes: Cluster Architecture, Installation & Configuration, Cluster and Networking Troubleshooting Techniques.

Kubernetes: primitives to implement common deployment strategies, Helm package manager to deploy existing packages Customize, Implement probes and health checks Use built-in CLI tools to monitor Kubernetes applications, container logs Debugging in Kubernetes

Security Applications: authentication, authorization and admission control, requests, limits, quotas, ConfigMaps, ConfigMaps .

Kubernetes: NetworkPolicies, Provide and troubleshoot access to applications via services, Analyze Ingress rules to expose applications.

Reference Books

- 1 Certified Kubernetes Application Developer (CKAD) Study Guide., Benjamin Muschko, 1st, O'REILLY.
- 2 Essentials of Application Development on IBM Cloud, IBM , 1ST, ibm.
- 3 IBM Cloud Private Application Developer's Guide, Apple, 1st, Apple.
- 4 IBM Cloud A Complete Guide, IBM, 2019 Edition, IBM.

23CNE3203A - CLOUD NATIVE DESIGN PROCESS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3203A	CLOUD NATIVE DESIGN PROCESS	CNDP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the Cloud Native Principles	2	PO1, PO9, PO12
CO2	Analyse the Proficiency in cloud Native Technologies	4	PO1, PO4, PS02
CO3	Implement the Cloud Native Applications	4	PO4, PO9
CO4	Understanding of Devops and Continuous Delivery	2	PO4, PO12
CO5	Apply the Knowledge of Security and Compliance in Cloud-Native Environments	3	

Syllabus

Introduction to Cloud-Native Applications: cloud-native principles and benefits, Cloud Native Architecture, Comparison with traditional Monolithic Applications, Microservices Architecture, Docker and containerization, Building and managing Docker containers, Docker networking and storage, Container orchestration with Docker Swarm

Introduction to Kubernetes, Overview of Kubernetes architecture, Pods, Deployments, ReplicaSets, Deploying applications with Kubernetes, Managing Kubernetes clusters, Scaling and self-healing with Kubernetes

Microservices Architecture-Designing Microservices, Principles and patterns, Communication between microservices, Service Mesh-Introduction to service mesh, Traffic management, security, and observability with service mesh

Continuous Integration and Continuous Deployment (CI/CD)-CI/CD Principles, Importance and benefits of CI/CD, Tools and frameworks, Implementing CI/CD Pipelines, Setting up CI pipelines, Automating deployment with CD pipelines, Blue-green deployments, canary releases, Rollbacks and version control

Security in Cloud Native Applications-Security Principles, Cloud-native security challenges, Security best practices, Implementing Security, Monitoring Cloud Native Applications, Implementing Observability, Logging, metrics, and tracing, Integrating monitoring solutions with Kubernetes

Reference Books

23CNE3304A - SOFTWARE ENGINEERING FOR CLOUD COMPUTING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3304A	SOFTWARE ENGINEERING FOR CLOUD COMPUTING	SEC	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Organize core concepts of cloud computing, including its history, characteristics, advantages, and challenges.	3	PO1
CO2	Identify the different cloud service models (IaaS, PaaS, SaaS) and discuss their suitability for various applications. U	3	PO2
CO3	Analyze and apply cloud programming models to develop software solutions on the cloud.	4	PO4
CO4	Compare security risks in cloud computing environments and implement appropriate security measures, including identity and access management, data encryption, and compliance with regulatory frameworks.	4	PO3
CO5	Determine cloud platforms and services from major providers such as AWS, Azure, and Google Cloud, including infrastructure as code (IaC), storage, databases, and monitoring tools.	5	PO4, PSO1
CO6	Compare software applications that leverage cloud resources for scalability, elasticity, and fault tolerance.	5	PO3, PO4, PSO1
CO7	Distinguish various cloud infrastructures based on managing load balancing using cloud provider tools and APIs.	5	PO4, PSO1

Syllabus

Introduction to Cloud Computing Definition and characteristics of cloud computing Cloud service models: IaaS, PaaS, SaaS Cloud deployment models: public, private, hybrid Benefits and challenges of cloud computing for software engineering

Software Engineering Methodologies for the Cloud Traditional vs. cloud-based software development processes Agile methodologies in cloud environments DevOps culture and practices Continuous Integration/Continuous Deployment (CI/CD)

Cloud-Native Application Development Microservices architecture Containerization with Docker Orchestration with Kubernetes Serverless computing

Cloud Security and Compliance Security challenges in cloud computing Identity and access management Data encryption and privacy Compliance frameworks (e.g., GDPR, HIPAA) in the cloud

Cloud Platforms and Services Overview of major cloud providers (AWS, Azure, Google Cloud) Infrastructure as Code (IaC) with tools like Terraform Cloud storage, databases, and messaging services Monitoring and logging in cloud

Reference Books

23CNE3304E - SOFTWARE ENGINEERING FOR CLOUD COMPUTING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3304E	SOFTWARE ENGINEERING FOR CLOUD COMPUTING	SEC	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply design principles for scalability, fault tolerance, elasticity, and cost optimization in cloud applications.	3	PO1
CO2	Build containerization technologies like Docker and Kubernetes.	3	PO1, PO2
CO3	Compare familiarity with a specific cloud platform (e.g., AWS, Azure, GCP) and its core services.	4	PO2, PO3
CO4	Distinguish software applications leveraging cloud-based resources.	4	PO3, PO4, PSO1
CO5	Determine basic cloud monitoring and logging practices.	5	PO3, PO4, PSO1
CO6	Explore best practices for scalability, reliability, and performance optimization in cloud environments	5	PO4, PSO1
CO7	Compare DevOps practices for continuous integration, deployment, and monitoring in cloud-based software development	5	PO4

Syllabus

Introduction to cloud computing: Definition, deployment models (IaaS, PaaS, SaaS), service models, benefits and challenges. Cloud architecture: Understanding core components, virtualization, containers, and serverless computing. Cloud security: Identity and access management (IAM), encryption, compliance considerations.

Software Development for the Cloud: Designing for the cloud: Scalability, fault tolerance, elasticity, and cost optimization principles. Infrastructure as Code (IaC): Tools like Terraform and CloudFormation for automating infrastructure provisioning. Containerization: Docker and Kubernetes for building, deploying, and managing containerized applications. DevOps for Cloud: CI/CD pipelines and automation practices for continuous integration and delivery in the cloud.

Popular Cloud Platforms: In-depth exploration of a specific cloud platform (e.g., AWS, Azure, Google Cloud Platform). Learning the platform's core services (compute, storage, databases, networking). Hands-on labs to deploy, manage, and scale applications on the chosen platform.

Serverless computing: Exploring platforms like AWS Lambda and Azure Functions. Cloud microservices architecture: Building and deploying distributed applications.

To learn strategies for ensuring reliability and fault tolerance in cloud-based software systems, including redundancy, failover mechanisms, and disaster recovery planning

To comprehend security principles and best practices for cloud computing environments, including identity and access management (IAM), data encryption, network security, and compliance standards

To develop skills in DevOps practices for cloud-based software development, including continuous integration (CI), continuous deployment (CD), infrastructure as code (IaC), and automated testing

To guide how to monitor and analyze cloud-based applications for performance optimization, utilizing tools for logging, monitoring, and performance testing.

Reference Books

- 1 Cloud Computing: Concepts, Technology & Architecture , Thomas Erl and Ricardo PuttiniThis, 2019, The Pearson Service Technology Series from Thomas Erl.

- 2 Building Microservices: Designing Fine-Grained Systems, Sam Newman , 2020, Oreily.
- 3 AWS: The Complete Certified Cloud Practitioner Guide, Alan Gaffney, 2021, Pearson.
- 4 Software Architecture Patterns for Serverless Systems: Architecting for innovation with events, autonomous services, and micro frontends, John Gilbert, 2021, O'Reilly Media.

23CNE3304R - SOFTWARE ENGINEERING FOR CLOUD COMPUTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3304R	SOFTWARE ENGINEERING FOR CLOUD COMPUTING	SEC	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Explain basic software related Infrastructure as Code (IaC) concepts and tools.	2	PO1
CO2	Identify DevOps practices and CI/CD pipelines in the context of cloud development.	3	PO2
CO3	Build various containerized applications.	3	PO3, PSO2
CO4	Analyse design principles for scalability, fault tolerance, elasticity, and cost optimization in cloud applications.	4	PO4
CO5	Categorize basic cloud monitoring and logging practices.	4	PO4
CO6	Compare various strategies for ensuring reliability and fault tolerance in cloud-based software systems, including redundancy, failover mechanisms, and disaster recovery planning	4	PO4
CO7	Distinguish security principles and best practices for cloud computing environments, including identity and access management (IAM)	4	PO4

Syllabus

Introduction to Cloud Computing Overview of cloud computing concepts and models Cloud service models: IaaS, PaaS, SaaS Cloud deployment models: public, private, hybrid Benefits and challenges of cloud computing for software engineering

Cloud-Native Architecture Principles of cloud-native architecture Microservices architecture and its advantages Containerization technologies: Docker and Kubernetes

Designing Cloud-Native Applications Principles of cloud-native application design Microservices architecture and its benefits for cloud applications Containerization with Docker and container orchestration with Kubernetes Serverless computing and its advantages for cloud-based applications Best practices for designing resilient, scalable, and fault-tolerant cloud-native applications

Cloud Application Development Choosing the right programming languages and frameworks for cloud development Developing and deploying applications on major cloud platforms (AWS, Azure, Google Cloud) Integrating cloud services and APIs into applications Testing strategies for cloud applications: unit testing, integration testing, and end-to-end testing Continuous integration and continuous deployment (CI/CD) pipelines for cloud applications

Data Management in the Cloud Overview of cloud databases: relational, NoSQL, and NewSQL databases Data storage options in the cloud: object storage, block storage, and file storage Data security and compliance considerations in cloud environments Big data and analytics services in the cloud: Hadoop, Spark, and data warehousing solutions Data governance and data lifecycle management in cloud computing

Reference Books

- 1 Cloud Computing: Concepts, Technology & Architecture, Thomas Erl, Ricardo Puttini, and Zaigham Mahmood, 2018, Prentice hall.
- 2 Software Engineering: A Practitioner's Approach, Roger S. Pressman and Bruce Maxim, 1987, Mc Graw Hill.
- 3 Software Engineering for Internet Applications, Eve M. Andersson and Philip Greenspun, 2021, MIT Press.
- 4 Cloud Computing Patterns: Fundamentals to Design, Build, and Manage Cloud Applications, Christoph Fehling, Frank Leymann, Ralph Retter, Walter Schupeck, and Peter Arbitter, 2020, Springer.

23CNE3405M - SERVERLESS COMPUTING AND EVENT-DRIVEN ARCHITECTURES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3405M	SERVERLESS COMPUTING AND EVENT-DRIVEN ARCHITECTURES	SCEDA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify the core concepts of cloud computing, its benefits, deployment models, and describe essential services like EC2, S3, RDS, and VPC.	3	PO4, PSO1
CO2	Build Functions-as-a-Service (FaaS) and Event-driven programming. Evaluate the steps involved in developing scalable models using Serverless Architectures	3	PO4, PSO1
CO3	Identify the process of managing application functionalities by employing Serverless runtimes and Serverless databases. Analyze the key considerations, configurations, and potential optimizations involved in effectively utilizing these technologies to enhance application development and performance.	3	PO3, PSO1
CO4	Develop advanced serverless programming practices and patterns to design, construct, and manage serverless applications and apply the architectural decisions, development strategies, and operational considerations required for the effective implementation and maintenance of serverless systems	3	PO3, PSO1

Syllabus

Overview of cloud computing (Cloud Introduction, Characteristics, Advantages, Four Deployment models and Core Services), Introduction, History, Briefly Basic Services description, EC2 Introduction, S3 and VPC Description , RDS Description, VPC with EC2 and RDS Description

Serverless AWS. Serverless Programming Practices and Patterns, building serverless applications using Java,NodeJS and Python. AWS Lambda, Lambda Examples and Casestudies.

Building Serverless REST APIs with API Gateway. DynamoDB, Amazon Cognito, Web Hosting with S3, Route53, and CloudFront. Postman, Domain name services,

Serverless Amazon Athena and the AWS Glue Data Catalog, Real-Time Data Insights Using Amazon Kinesis ,Messaging and Notifications with SQS and SNS

Reference Books

- 1 Serverless Design Patterns and Best Practices: Build, Secure, and Deploy Enterprise-ready Serverless Applications with AWS Lambda, Brian Zambrano, 2023, Packt Publishing.
- 2 Serverless Architectures on AWS: With examples using AWS Lambda, Peter Sbarski, 2024, Manning Publications.
- 3 Programming AWS Lambda: Build and Deploy Serverless Applications with JavaScript and Python, John Chapin and Mike Roberts, 2024, O'Reilly Media.
- 4 Serverless Single Page Apps: Fast, Scalable, and Available, Ben Rady and Matthew J. Fuller, 2023, Pragmatic Bookshelf.
- 5 Building Serverless Applications with Google Cloud Run: Design and Deploy Production-Ready Applications, Wietse Venema, 2023, Packt Publishing.

23CNE3406M - CLOUD NATIVE SOFTWARE ARCHITECTURES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3406M	CLOUD NATIVE SOFTWARE ARCHITECTURES	CNSA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding of Cloud-Native Concepts	2	PO1, PO2, PO3, PO4, PSO1
CO2	Proficiency in Cloud-Native Tools and Technologies	3	PO1, PO2, PO3, PSO1
CO3	Ability to Design and Implement Cloud-Native Solutions	4	PO1, PO2, PO3, PO4, PSO1
CO4	Critical Analysis of Cloud-Native Architectures	5	PO1, PO2, PO3, PSO1

Syllabus

Overview of cloud computing and its evolution Introduction to cloud-native architecture principles Characteristics and benefits of cloud-native applications Challenges and considerations in adopting cloud-native approaches

Principles of microservices architecture Decomposition strategies for monolithic applications Design patterns and best practices for microservices Communication and coordination between microservices

Introduction to containerization with Docker Creating Docker images and containers Orchestration with Kubernetes Deploying and scaling containerized applications

Principles of CI/CD and automated testing Setting up CI/CD pipelines with Jenkins or GitLab CI Automating software build, test, and deployment processes Infrastructure as Code (IaC) for provisioning and managing cloud resources

Reference Books

- 1 Cloud Computing: Concepts, Technology & Architecture, Rajkumar Buyya, S. Thamarai Selvi, and Arun Kumar Sangaiah, 2022, Wiley India.
- 2 The DevOps Handbook: How to Create World-Class Agility, Reliability, & Security in Technology Organizations, Gene Kim, Patrick Debois, John Willis, and Jez Humble, 2016, IT Revolution .
- 3 Building Microservices: Designing Fine-Grained Systems, Sam Newman, 2014, O'Reilly Media.
- 4 Cloud Native Infrastructure: Patterns for Scalable Infrastructure and Applications in a Dynamic Environment, O'Reilly Media, 2017, Justin Garrison, Kris Nova.
- 5 Cloud Computing: A Hands-On Approach, Arshdeep Bahga and Vijay Madiseti , 2013, CreateSpace Independent Publishing Platform.

23CNE3507 - CLOUD NATIVE NETWORKING AND STORAGE SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3507	CLOUD NATIVE NETWORKING AND STORAGE SYSTEMS	CNNSS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding and reflect broad conceptual knowledge about Cloud Networking Basics, Characteristics and Cloud Data Centers.	3	PO1, PO2, PO3, PO4, PSO1
CO2	Understanding the basics and Identifying the architecture of Switch Fabric, Switch Fabric Topologies, Congestion Management, Flow Control and Traffic Management.	3	PO1, PO2, PO3, PO4, PSO1
CO3	Identify problems, and explain, analyze, and evaluate Ethernet Data Rate Standards, Virtual Local Area Networks, Data Center Bridging.	3	PO1, PO2, PO3, PO4, PSO1
CO4	Understand and Analyse Multi-tenant Environments, Traditional Network Tunneling Protocols, VXLAN, NVGRE, Tunnel Locations, Load Balancing Algorithms. Understand and analyse the storage systems	3	PO1, PO2, PO3, PO4, PSO1

Syllabus

Introduction to Cloud Networking: Networking Basics, The network stack, Packets and frames, Network equipment, Interconnect, Cloud Data Center, Cloud Networking, Characteristics of Cloud Networking, Ethernet usage, Virtualization, Convergence, Scalability, Software. Data Center Evolution: Mainframes to the Cloud: The Data Center Evolution, Computer Networks, Ethernet, Enterprise versus Cloud Data Centers, Movement to the Cloud

Switch Fabric Technology: Switch Fabric Architecture Overview, Switch Fabric Topologies, Congestion Management, Flow Control, Traffic Management, Switch Chip Architecture Examples. Cloud Data Center Networking Topologies: Traditional Multitiered Enterprise Networks, Data Center Network Switch Types, Flat Data Center Networks, Rack Scale Architectures, Network Function Virtualization

Data Center Networking Standards: Ethernet Data Rate Standards, Virtual Local Area Networks, Data Center Bridging, Improving Network Bandwidth, Remote Direct Memory Access. Server Virtualization and Networking: VM Overview, Virtual Switching, PCI Express, Edge Virtual Bridging, VM Migration.

Network Virtualization: Multi-tenant Environments, Traditional Network Tunneling Protocols, VXLAN, NVGRE, Tunnel Locations, Load Balancing Software-Defined Networking: Data Center Software Background, OpenStack, OpenFlow, Network Function Virtualization, SDN Deployment..Introduction to Storage Systems,Storage media, Storage access mechanisms, Storage Protocols,Communication Protocols for Networked Storage Systems,Types of Storage Devices and Systems, Long-term Storage,Storage Interfaces and Device Drivers,Storage Filesystem Design,Storage Reliability, Performance, Security.

Reference Books

- 1 Cloud Networking Understanding Cloud-based Data Center Networks, Gary Lee, 2014, Elsevier.
- 2 Storage Systems: Organization, Performance, Coding, Reliability, and Their Data Processing, Alexander Thomasian , first edition, Morgan Kaufmann.
- 3 Cloud Native Data Center Networking: Architecture, Protocols, and Tools , Dinesh Dutt, first edition, Shroff/O'Reilly.
- 4 Cloud Native Architecture And Design A Handbook For Modern Day Architecture And Design With Enterprise Grade Examples, Goniwada S R, 2022, Apress.

23CNE3508 - CLOUD INFRASTRUCTURE AND VIRTUALIZATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNE3508	CLOUD INFRASTRUCTURE AND VIRTUALIZATION	CIAV	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Summarizing the fundamentals of cloud concepts.	2	PO2, PO3, PO4, PSO1
CO2	Determining the knowledge of virtualization through different virtualization tools	3	PO2, PO3, PO4, PSO1
CO3	Applying economic considerations to launch businesses online.	3	PO2, PO3, PO4, PSO1
CO4	Integrating your private cloud as per business needs.	3	PO2, PO3, PO4, PSO1

Syllabus

Introduction to Cloud, Cloud Service Models

Cloud Deployment Models, Introduction to Hypervisor, Introduction to Virtualization

Virtualization on IT Assets

Installation and Configuration ,Practical Approach and Experiments , Resource Management in Cloud ,Security in private Cloud

Reference Books

- 1 Cloud Computing: Concepts, Technology & Architecture, Thomas Erl, Ricardo Puttini, Zaigham Mahmood, 1, Prentice Hall.
- 2 Virtualization Essentials, Matthew Portnoy, 2, Sybex.
- 3 Mastering VMware vSphere 7, Nick Marshall, Mike Brown, G. Blair Fritz, 1, Sybex.
- 4 Kubernetes: Up and Running" Kelsey Hightower, Brendan Burns, Joe Beda, 2, O'Reilly Media.

23CNS3101A - INTRODUCTION TO CLOUD NATIVE COMPUTING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3101A	INTRODUCTION TO CLOUD NATIVE COMPUTING	ITCNC	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concept of Introduction to Cloud Native Computing	2	PO1, PO5, PSO1
CO2	Understand the concept of Containerization with Docker	2	PO1, PO5, PSO2
CO3	Apply Container Orchestration with Kubernetes	3	PO2, PO5, PSO1
CO4	Apply Microservices Architecture to container orchestration	3	PO2, PO5, PSO2
CO5	Integrating Cloud-Native Applications	3	PO3, PO5, PSO2
CO6	Analyzing and Mashing Cloud-Native Applications	4	PO1, PO5, PSO1
CO7	Analyzing DevOps Practices in Cloud-Native Environments	4	PO1, PO5, PSO1

Syllabus

Introduction to Cloud Native Computing Overview of cloud-native architecture Characteristics and benefits of cloud-native applications

Containerization with Docker Introduction to Docker containers Dockerfile and Docker images Docker Compose for multi-container applications

Container Orchestration with Kubernetes Introduction to Kubernetes Pods, Deployments, and Services Kubernetes architecture and components

Microservices Architecture Principles of microservices Communication patterns between microservices Benefits and challenges of microservices

Applying Cloud-Native Applications Design considerations for cloud-native applications Implementing microservices with Spring Boot or Flask Testing strategies for cloud-native applications

Reference Books

23CNS3101E - INTRODUCTION TO CLOUD NATIVE COMPUTING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3101E	INTRODUCTION TO CLOUD NATIVE COMPUTING	ITCNC	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concept of Introduction to Cloud Native Computing	2	PO1, PO5, PSO1
CO2	Understand the concept of Containerization with Docker	2	PO2, PO5, PSO2
CO3	Apply Container Orchestration with Kubernetes	3	PO2, PO5, PSO2
CO4	Apply Microservices Architecture to container orchestration	3	PO1, PO5, PSO1
CO5	Integrating Cloud-Native Applications	3	PO1
CO6	Analyzing and Mashing Cloud-Native Applications	4	PO1
CO7	Analyzing DevOps Practices in Cloud-Native Environments	4	PO1

Syllabus

Introduction to Cloud Native Computing Overview of cloud-native architecture Characteristics and benefits of cloud-native applications

Containerization with Docker Introduction to Docker containers Dockerfile and Docker images Docker Compose for multi-container applications

Container Orchestration with Kubernetes Introduction to Kubernetes Pods, Deployments, and Services Kubernetes architecture and components

Microservices Architecture Principles of microservices Communication patterns between microservices Benefits and challenges of microservices

Applying Cloud-Native Applications Design considerations for cloud-native applications Implementing microservices with Spring Boot or Flask Testing strategies for cloud-native applications

Reference Books

23CNS3202A - FUNDAMENTALS OF CLOUD SECURITY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3202A	FUNDAMENTALS OF CLOUD SECURITY	FOCS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Illustrate compute services in cloud computing and its significance for security.	2	PO1, PSO1
CO2	Identify the security controls to implement IAM for monitoring and auditing cloud deployment.	3	PO1, PO3
CO3	Examine the effectiveness of different security architectures and strategies for cloud environments.	4	PO4
CO4	Analyze about different compliance frameworks and their implications for cloud security.	4	PO5
CO5	Determine the strengths and weaknesses of managing security in multi cloud environment	5	PO5

Syllabus

Introduction to Cloud Security, Cloud Service, Cloud Deployment Models, why we need security, What is the shared responsibility model. Securing Compute Services, Technical requirements securing VMs, Securing managed Database services, securing container, Securing serverless as a service Securing Storage Services, securing object storage, securing block storage, securing file storage, securing the CSI.

Securing Networking Services, securing virtual networking, Securing DNS services, Securing CDN services, Securing VPN services, Securing DDOS protection services, Securing WAF services, Effective Strategies to Implement IAM Solutions, Failing to manage identities, securing cloud-based IAM services, Security Directory services, Configuring MFA, Monitoring and Auditing Your Cloud Environments

Applying Encryption in Cloud Services, Introduction to encryption, Best practices for deploying KMSes, Best practices for deploying secrets management services, Best practices for using encryption in transit, Best practices for using encryption at rest, Understanding Common Security Threats to Cloud Services, The MITRE ATT&CK, Framework, Detecting and mitigating data breach, Detecting and mitigating misconfigurations in cloud services.

Handling Compliance and Regulation, Compliance and the shared responsibility model, Introduction to compliance with regulatory requirements and industry best practices, What are the common ISO standards related to cloud computing, SOC report, CSA STAR program, PCI DSS, GDPR, HIPAA, Engaging with Cloud Providers, Data Privacy and Sovereignty, Migration Capabilities, Authentication, Conducting penetration testing in cloud environments.

Advanced Use of Cloud Services, Managing Hybrid Clouds, Hybrid cloud strategy, Compute services for hybrid cloud environments, Managing Multi Cloud Environments, Data security in multi-cloud environments, Cost management in multi cloud environments, Cloud Security Posture Management (CSPM) Security in Large-Scale Environments, managing governance and policies at a large scale, Automation using IaC, Security in large-scale cloud environments

23CNS3303A - CONTAINER SECURITY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3303A	CONTAINER SECURITY	CTSY	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concept of Containerization and Security	2	PO1, PO5, PSO1
CO2	Understand Container Image Security, Container Runtime Security	2	PO3, PO5
CO3	Apply Container Orchestration Security	3	PO2, PO5
CO4	Apply Network Security for Containers	3	PO2, PO5, PSO2
CO5	Apply the concept of Identity and Access Management, Monitoring and Logging	3	PO1, PO5
CO6	Analyzing Security in Continuous Integration/Continuous Deployment (CI/CD)	4	PO3, PO5, PSO1
CO7	Analyzing Compliance and Governance for container security	4	PO2, PO5

Syllabus

Overview of container technology Benefits and challenges of containerization Security considerations in containerized environments

Image composition and vulnerability management Secure image registries and scanning tools Best practices for building and managing secure container images Container Runtime Security Container isolation mechanisms Securing container runtimes (e.g., Docker, containerd) Runtime monitoring and protection

Container orchestration platforms (e.g., Kubernetes) Securing Kubernetes clusters Network security and access control in container orchestrators

Container network models and architecture Network segmentation and isolation techniques Container firewalling and network policies. Integrating security into CI/CD pipelines Automated security testing and validation Infrastructure as code (IaC) security considerations

Authentication and authorization in container environments Role-based access control (RBAC) for containers Secrets management and secure communication Monitoring and Logging Container monitoring tools and practices Log management and analysis for containers Security event detection and response, Regulatory compliance requirements for containerized environments Auditing and compliance monitoring Security standards and frameworks (e.g., CIS benchmarks)

Reference Books

23CNS3404M - MICROSERVICES SECURITY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3404M	MICROSERVICES SECURITY	MSS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying security challenges in various applications	3	PO1, PSO1
CO2	Apply authentications by implementing different mechanisms	3	PO1, PO2
CO3	Applying protocols for microservices and various controls to be implemented for data encryption	3	PO2, PO3
CO4	Analyzing various anomalies and incident responses in security monitoring	4	PO3, PSO1

Syllabus

Overview of microservices architecture, Security challenges in microservices-based applications, Principles of defense-in-depth security, Identifying security threats and vulnerabilities, Threat modeling techniques for microservices, Risk assessment and mitigation strategies

Introduction to authentication mechanisms, Single sign-on (SSO) and OAuth for microservices, Implementing authentication using JWT (JSON Web Tokens), Role-based access control (RBAC) in microservices, Attribute-based access control (ABAC), Implementing authorization policies with API gateways

Secure Communication Protocols for Microservices, Transport Layer Security (TLS) and Encryption, Service Meshes for Enhanced Security, Practical Implementation of Secure Communication, Data Protection Strategies for Microservices, Data Encryption and Tokenization, Secure Storage and Access Controls, Compliance Requirements and Data Governance

Proactive Monitoring of Microservices Security, Identifying Anomalies and Security Incidents, Incident Response Strategies and Playbooks, Continuous Improvement in Security Monitoring, Exploring, Emerging Trends in Microservices Security, Future Challenges and Opportunities, Blockchain and Decentralized Identity, Quantum-Safe Cryptography and Post-Quantum Security

Reference Books

- 1 Microservices, IoT, and Azure: Leveraging DevOps and Microservice Architecture to Deliver SaaS Solutions, Bob Familiar and Brian Johnson, 2015, APRESS.
- 2 Blockchain Basics, Daniel Drescher, 2017, APRESS.

- 4 Microservices Security in Action, Wajjakkara Kankanamge Anthony Nuwan Dias, Prabath Siriwardena, August 2020, Manning Publications.

23CNS3405M - INFRASTRUCTURE AS CODE SECURITY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3405M	INFRASTRUCTURE AS CODE SECURITY	ISACS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify the fundamental principles of Infrastructure as Code (IaC) and its importance in modern IT infrastructure management.	3	PO3, PO4, PO6, PSO1
CO2	Analyze and describe the various security vulnerabilities and threats specific to Infrastructure as Code.	4	PO3, PO4, PO6, PSO1
CO3	Analyze security best practices and methodologies for creating secure Infrastructure as Code deployments.	4	PO3, PO4, PO6, PSO1
CO4	Analyze and recommend improvements to existing Infrastructure as Code implementations for enhanced security and compliance.	4	PO3, PO4, PO6, PSO1

Syllabus

Introduction to IaC and its evolution, Importance of IaC in automation and scalability, Key concepts: declarative vs. imperative approaches, Overview of popular IaC tools (Terraform, Integration of IaC in DevOps practices, Ansible, Puppet, Chef),

Common security vulnerabilities in IaC (e.g., hard-coded secrets, improper configurations), Threat modeling for IaC environments, Real-world examples of IaC security incidents, Impact of insecure IaC on overall system security

Best practices for secure IaC development, Implementation of security controls in IaC, Role-based access control (RBAC) and principle of least privilege, Techniques for secret management in IaC

Assessment of existing IaC implementations for security flaws, Conducting security audits and compliance checks, Remediation strategies for identified issues, Policy-as-code for enforcing security standards

Reference Books

- 1 Infrastructure as Code: Managing Servers in the Cloud, Kief Morris, 1st (2016) and 2nd (2020), O'Reilly Media.
- 2 Terraform: Up & Running: Writing Infrastructure as Code, Yevgeniy Brikman, 3rd (2022), O'Reilly Media.
- 3 Infrastructure as Code (IaC) Cookbook, Stephane Jourdan and Pierre Pomes, 1st (2020), Packt Publishing.
- 4 Continuous Delivery and DevOps: A Quickstart Guide, Paul Swartout, 2nd (2018), Packt Publishing.

23CNS3406M - IDENTITY AND ACCESS MANAGEMENT IN CLOUD NATIVE ENVIRONMENTS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3406M	IDENTITY AND ACCESS MANAGEMENT IN CLOUD NATIVE ENVIRONMENTS	IAMCNE	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the core concepts and principles of IAM in cloud-native environments.	2	PO3, PSO2
CO2	Understand IAM policies and role-based access control (RBAC) models.	2	PO3, PO5, PSO2
CO3	Understand and implement secure authentication and authorization mechanisms	3	PO3, PSO2
CO4	Manage identities across multiple platforms and services. Ensure compliance and security through logging, monitoring, and incident response.	4	PO3, PO5, PSO2

Syllabus

Overview of IAM, Definitions and Concepts, Differences between traditional and cloud-native IAM Importance of IAM in Cloud Computing, IAM Architecture and Components, Users, Groups, Roles, and Policies, Authentication vs. Authorization. IAM Standards and Protocols OAuth 2.0, OpenID Connect, SAML, LDAP and Kerberos, Challenges in IAM for Cloud-Native Environments, Scalability, Flexibility, Security and Case Studies with Real-world IAM implementations.

IAM Solutions for Cloud Providers, AWS Identity and Access Management, IAM Users, Groups, Zero Trust Architecture, Roles, Policies, AWS Organizations and Service Control Policies (SCP), AWS SSO and AWS Cognito, Azure Identity and Access Management, Azure Active Directory (AD), Role-Based Access Control (RBAC) in Azure. Google Cloud Identity and Access Management, Cloud IAM Policies and Roles, Google Identity Platform, IAM and Organization Policies. Comparative Analysis, Choosing the Right IAM Solution.

Implementing IAM in Cloud-Native Applications, IAM Integration in Microservices, Securing Service-to-Service Communication, API Gateway and IAM Integration, IAM in Kubernetes Environments, RBAC in Kubernetes, Kubernetes Authentication and Authorization. IAM for Serverless Architectures, Managing Access for AWS Lambda, Azure Functions, Google Cloud Functions, Best Practices for Serverless IAM. Automation and IAM, Using Infrastructure as Code (IaC) for IAM, Integrating IAM in CI/CD Pipelines.

Security Best Practices for IAM, IAM Policy Design, Principles of Least Privilege, Policy Development and Testing. Identity Federation and SSO, Federation Concepts and Implementation, SSO Integration with Cloud Services. IAM Monitoring and Auditing, Logging and Monitoring IAM Activities, Implementing Auditing and Compliance Checks. Incident Response and IAM, Detecting and Responding to IAM Breaches, Case Studies on IAM Security Incidents. Emerging Trends in IAM, Zero Trust Security Model, Identity as the New Perimeter. Advanced IAM Topics and Future Directions, IAM for Hybrid and Multi-Cloud Environments, IAM and DevSecOps, Integrating Security into DevOps Practices, Identity Management for IoT and Edge Computing, IAM Challenges and Solutions in IoT, Using ML for IAM Threat Detection

Reference Books

- 1 Cloud Native Applications with Docker and Kubernetes: Design and Build Cloud Architecture and Applications with Microservices, EMQ, and Multi-Site Configurations, Jonathan Bartlett, 2022 published , Apress, 2022.
- 2 Active Directory Administration Cookbook: Proven solutions to everyday identity and authentication challenges for both on-premises and the cloud, Sander Berkouwer, 2nd Edition, Packt Publishing.
- 3 Okta Administration: Up and Running: Implement enterprise-grade identity and access management for on-premises and cloud apps., Lovisa Stenb?cken Stjernl?f, HenkJan de Vries, 2022 published, Packt Publishing.
- 4 Practical Spring Cloud Function: Developing Cloud-Native Functions for Multi-Cloud and Hybrid-Cloud Environments , Banu Parasuraman, 1st Edition , Apress.

23CNS3407M - NETWORK SECURITY IN CLOUD NATIVE ARCHITECTURES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3407M	NETWORK SECURITY IN CLOUD NATIVE ARCHITECTURES	NSCNA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Comprehensive understanding of cloud native architectures, including containerization, microservices, and orchestration tools such as Kubernetes.	2	PO3, PO5, PSO2
CO2	To implement security best practices specific to cloud native environments, ensuring the integrity, confidentiality, and availability of services.	2	PO3, PO5, PSO2
CO3	Identify and mitigate common security threats and vulnerabilities in cloud native architectures, utilizing monitoring, logging, and alerting tools effectively.	3	PO3, PSO2
CO4	Acquire the skills to secure containerized applications, including understanding container isolation, image security, and runtime protection. To implement the regulatory and compliance requirements related to cloud native environments and how to implement governance policies to meet these standards	3	PO3, PSO2

Syllabus

Introduction to Cloud Native Architectures, Overview of Cloud Native Concepts, Definition and benefits of cloud native, Key components: containers, microservices, DevOps, and CI/CD. Containerization and Orchestration, Introduction to Docker and Kubernetes, Basic container operations and orchestration fundamentals. Microservices Security Challenges, Security implications of microservices architecture, Service mesh and API security.

Security Fundamentals in Cloud Native Environments, Identity and Access Management (IAM), IAM principles and practices in cloud native architectures, Role-based access control (RBAC) in Kubernetes. Network Security, Securing service communications, Network policies and segmentation. Data Security and Encryption, Data-at-rest and data-in-transit encryption methods, Secrets management.

Threat Detection and Incident Response, Monitoring and Logging, zero trust based cloud security, Implementing monitoring and logging in cloud native environments, Tools: Prometheus, Grafana, Fluentd, and Elasticsearch. Vulnerability Management, Scanning and patching vulnerabilities in containers and clusters, Tools for vulnerability management (e.g., Clair, Trivy). Incident Response, Building an incident response plan for cloud native environments, Case studies of real-world incidents and response strategies

Advanced Security Strategies and Compliance, Advanced Security Tools and Techniques, Service meshes (e.g., Istio) and their role in security, Policy enforcement with Open Policy Agent (OPA). Compliance and Governance, Overview of compliance frameworks (e.g., GDPR, HIPAA), Implementing governance policies in cloud native setups. a Capstone Project: Designing and implementing a secure cloud native application with Peer reviews and presentations

Reference Books

- 1 Kubernetes Security: Operating Kubernetes Clusters and Applications Safely, Liz Rice, First Edition, 2018, O'Reilly, 2018.
- 2 Cloud Native Security: Patterns and Practices, Chris Binnie, First Edition, 2021, Wiley, 2021.
- 3 Kubernetes Up & Running: Dive into the Future of Infrastructure, Kelsey Hightower, Brendan Burns, and Joe Beda, first edition , 2017, O'Reilly.
- 4 Practical Cloud Security: A Guide for Secure Design and Deployment, Chris Dots, Second Edition, 2023 , O'Reilly.

23CNS3508 - MONITORING AND LOGGING FOR CLOUD NATIVE SECURITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3508	MONITORING AND LOGGING FOR CLOUD NATIVE SECURITY	MLCNS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the importance of monitoring and logging in cloud-native security	2	PO1, PO5, PSO1, PSO2
CO2	Implement monitoring infrastructure using cloud-native tools and services	2	PO2, PO5, PSO2
CO3	Analyze log data to identify patterns, anomalies, and potential security threats	3	PO3, PO5, PSO1
CO4	Design comprehensive monitoring and logging architectures tailored to specific cloud-native security requirements	4	PO3, PO5, PSO2

Syllabus

Introduction to Cloud Native Security Monitoring and Logging: Overview of cloud-native security principles Importance of monitoring and logging in cloud-native environments Fundamentals of log management and real-time alerting Key concepts and terminologies in security monitoring and logging

Cloud-Native Monitoring Infrastructure: Understanding cloud-native monitoring architectures Selection and implementation of monitoring tools and services Configuring logging solutions for cloud-native applications Best practices for instrumenting applications and services for monitoring

Log Analysis and Threat Detection: Techniques for log analysis and interpretation Identifying patterns, anomalies, and potential security threats in log data Real-time alerting based on security criteria and detection rules Integration of machine learning and AI for advanced threat detection

Incident Response and Forensic Investigation: Developing incident response strategies leveraging monitoring and logging data Forensic analysis of security incidents using log data Creating incident response playbooks for cloud-native environments Continuous improvement and optimization of monitoring and logging practices

Reference Books

- 1 Monitoring and Logging in the Cloud, Scott Lowe, Nathaniel Avery, Mike Preston, 1st Edition, O'Reilly Media.
- 2 Cloud Native Security Monitoring and Logging: A Practical Guide to Monitoring and Securing Cloud-Native Applications, Abhay Bhargav, Rashmi Nanda, 1st Edition, Packt Publishing.
- 3 Cloud Security Monitoring and Logging Handbook, Ankur Tyagi, Navneet Mehra, 1st Edition, Apress.
- 4 Monitoring and Logging Best Practices: A Comprehensive Guide for Cloud-Native Environments, Mark Smith, 1st Edition, Wiley.

23CNS3509 - COMPLIANCE AND GOVERNANCE IN CLOUD NATIVE ENVIRONMENTS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand cloud provider tools for activity logging and basic governance controls	2	PO1, PO5
CO2	Apply Infrastructure as Code and Compliance as Code tools for automated governance.	3	PO2, PSO2
CO3	Demonstrate the effectiveness of different governance frameworks for a specific cloud-native project.	3	PO5, PSO2
CO4	Compare and contrast cloud provider tools for security and compliance automation.	4	PO1, PSO2

Syllabus

Importance of activity logging in the cloud, various cloud activity log types, principles of cloud governance, essential governance controls using cloud provider tools

The core principles of IaC and CaC, integrity security practices into IaC pipelines, implement CaC rules to enforce security and compliance requirements, Leverage automation tools to streamline governance processes.

The importance of governance frameworks in cloud-native deployments, understand popular cloud governance frameworks like CCM, NIST cyber security framework, CSA, CCF,

Compare and contrast cloud provider tools for security and compliance automation, understand popular cloud provider tools for security automation like AWS security hub, Azure sentinel, GCP cloud IDS

23CNS3510 - SERVERLESS SECURITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3510	SERVERLESS SECURITY	SLSY	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of serverless computing and its security implications	2	PO1, PO5, PSO1
CO2	Identify common security risks and vulnerabilities in serverless architectures.	2	PO2, PO5
CO3	Apply security best practices in designing, developing, and deploying serverless applications.	3	PO2, PO5
CO4	Apply authentication, authorization, and data protection mechanisms in serverless environments.	3	PO1, PO5, PSO2

Syllabus

Introduction to Serverless Computing and Security Overview of serverless architectures Security challenges and considerations

Authentication and Authorization in Serverless Environments Identity and access management Role-based access control (RBAC) API security

Data Protection and Privacy Encryption techniques Key management Compliance requirements (GDPR, HIPAA, etc.) Secure Development Practices for Serverless Applications Secure coding principles OWASP Top 10 vulnerabilities in serverless environments Static code analysis and code review

Monitoring, Logging, and Incident Response Importance of logging and monitoring Real-time threat detection Incident response strategies Security Tools and Services for Serverless Applications Serverless-specific security tools Third-party security services Integration with DevSecOps pipelines

Reference Books

- 1 Security in Serverless Computing Principles and Practices, John Doe, 2018, XYZ Publications.
- 2 Serverless Security Understand Assess and Implement Secure and Reliable Applications in AWS Microsoft Azure and Google Cloud, Miguel A. Calles, 2019, Apress.
- 3 Serverless Architectures on AWS, Peter Sbarski and Yan Cui, 2020, Manning Publications.
- 4 Software Architecture Patterns for Serverless Systems, John Gilbert, 2019, Packt Publishing.

23CNS3511 - CLOUD NATIVE SECURITY TOOLS AND SOLUTIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3511	CLOUD NATIVE SECURITY TOOLS AND SOLUTIONS	CNSTAS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles of cloud-native security and the shared responsibility model.	2	PO3, PO4, PO6, PSO1
CO2	Identify and describe the functionalities of key cloud-native security tools and solutions.	3	PO3, PO4, PO6, PSO1
CO3	Analyze and assess security risks and mitigation strategies in cloud-native environments.	4	PO3, PO4, PO6, PSO2
CO4	Analyze and design secure cloud-native architectures using industry best practices and frameworks.	4	PO3, PO4, PO6, PSO2

Syllabus

Introduction to cloud-native security concepts, Overview of cloud service models (IaaS, PaaS, SaaS), Understanding the shared responsibility model in cloud security, Key principles, Differences between traditional and cloud-native security approaches of cloud-native security (e.g., zero trust, defense in depth)

Overview of cloud-native security tools (e.g., AWS Security Hub, Azure Security Center, Google Cloud Security Command Center), Functions of container security tools (e.g., AquaSecurity features in Kubernetes (e.g., RBAC, network policies), Security, Twistlock), Cloud-native CI/CD security tools (e.g., Snyk, Jenkins X), Identity and access management (IAM) in cloud native environments

Risk assessment methodologies for cloud-native applications, Identifying common vulnerabilities and threats in cloud-native environments, Techniques for securing data in transit and at rest, Implementing network security measures (e.g., microsegmentation, VPNs)

Principles of secure cloud-native architecture design, Frameworks and guidelines for cloud security (e.g., CSA, NIST) Designing secure container orchestration environments Implementing security automation and DevSecOps practices, Continuous security monitoring and incident response in cloud-native environments

Reference Books

- 1 Cloud Native Security: Securing Microservices and Containers, Chris Binnie and Roland Huss, 1st Edition (2021), O'Reilly Media.
- 2 Cloud Native Security: Patterns and Practices, by Alex Homer, 1st Edition (2021), Microsoft Press.
- 3 Cloud Native Software Security Handbook, David Okeyo, Matt Tesauo, and Mark Curphey, 1st Edition (2022), Packt Publishing.
- 4 Practical Cloud Security: A Guide for Secure Design and Deployment, Chris Dotson, 1st Edition (2019), O'Reilly Media.

23CNS3512 - FUTURE TRENDS IN CLOUD NATIVE SECURITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CNS3512	FUTURE TRENDS IN CLOUD NATIVE SECURITY	FTCNS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles of cryptography and Apply various cryptographic algorithms	2	PO4
CO2	Analyze various security issues and system vulnerabilities in virtualization	3	PO1, PO2, PO4, PSO1
CO3	Apply the technologies for virtualization based security enhancements	3	PO1, PO2, PO3, PO4, PSO1
CO4	Analyze legal and Compliance issues and examine modern security standards	4	PO2, PO3

Syllabus

Security Concepts: Confidentiality, privacy, integrity, authentication, non-repudiation, availability, access control, defence in depth, least privilege, importance of security in the cloud, Importance in PaaS, IaaS and SaaS; Cryptographic Systems: Symmetric cryptography, stream ciphers, block ciphers, modes of operation, public-key cryptography, hashing, digital signatures, public-key infrastructures, key management, X.509 certificates, OpenSSL. Multi-tenancy Issues: Isolation of users/VMs from each other

Virtualization System Security Issues: e.g. ESX and ESXi Security, ESX file system security, storage considerations, backup and recovery; Virtualization System Vulnerabilities: Management console vulnerabilities, management server vulnerabilities, administrative VM vulnerabilities, guest VM vulnerabilities, hypervisor vulnerabilities, hypervisor escape vulnerabilities, configuration issues, malware (botnets etc).

Virtualization System-Specific Attacks: Guest hopping, attacks on the VM (delete the VM, attack on the control of the VM, code or file injection into the virtualized file structure), VM migration attack, hyperjacking. Technologies for Virtualization-Based Security Enhancement: IBM security virtual server protection, virtualization-based sandboxing; Storage Security: HIDPS, log management, Data Loss Prevention.

Location of the Perimeter, Legal and Compliance Issues: Responsibility, ownership of data, right to penetration test. Local laws, examination of modern Security Standards (eg PCIDSS), Standards to deal with cloud services and virtualization, compliance for the cloud provider vs. compliance for the customer.

23CPD3101A - FUNDAMENTALS OF MOBILE APPLICATION DEVELOPMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPD3101A	FUNDAMENTALS OF MOBILE APPLICATION DEVELOPMENT	FMAD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basics of kotlin object-oriented programming language	3	PO3, PO5, PO9, PSO1
CO2	Apply the concepts of XAML Concepts and Designing of different widgets for android	3	PO5, PO11, PSO2
CO3	Apply the Mobile app with Views, Layouts, and Navigation on Android	3	PO5, PSO1
CO4	Apply the concepts of the database and Memory storage concept to build the dynamic Android applications	4	PO3, PO5, PO9, PSO2
CO5	Develop the Mobile Apps With Android Basics and MongoDB Concepts	4	PO3, PO5, PO11, PSO1
CO6	Develop the Mobile Application using XAML and Kotlin in Android Environment	4	PO3, PO5, PSO2
CO7	Design and Develop the Mobile Application using different relative Problems	4	PO5, PO9, PSO2

Syllabus

Kotlin: Introduction to Kotlin, Annotations, Arrays, Basic Lambdas, Collections, Conditional Statements, coroutines, Delegated Properties, Exceptions, and OOPs Concepts. Introduction to Android, setting up Android Studio Android Architecture,

Introduction to Android, setting up Android Studio Android Architecture, Core Building Blocks, Android Emulator, Install Android, Setup of Android Studio. Android Widgets UI Widgets, Working with Button, Toast, Custom Toast, Alert Dialog, Spinner, Auto Complete Text View, List View, Custom List View, Rating Bar, WebView, Seek Bar, Date Picker, Time Picker, Analog and Digital, Progress Bar.

Vertical Scroll View, Horizontal Scroll View, Image Switcher, Image Slider, View Stub, Tab Layout, Tab Linear Layout, Relative Layout, Search View, Search View on Toolbar, Edit Text with Text Watcher Activity and Intents Activity Life Cycle, Implicit Intent, Explicit Intent, Start Activity for Result, Beautiful Layouts with Card View, GRID View, Paging and Swiping Navigation Drawer and Fragment

Share App Data, Android Service, Android Alarm Manager, Android Storage, Internal Storage, External Storage, Android SQLite, SQLite Tutorial, SQLite Spinner, XML and JSON, XML Parsing SAX, XML Parsing DOM, XML Pull Parser, JSON Parsing, APK Generation, Publishing in Google Play Console.

"Installation and setup of MongoDB. Working with MongoDB shell and basic command operations. Introduction to NoSQL data modeling and document-based databases. Integrating Android with MongoDB: Connecting Android apps to MongoDB databases. Utilizing MongoDB's official driver for Android. Performing CRUD operations on MongoDB documents from an Android app. Handling data synchronization and real-time updates. "

23CPD3202A - REACT NATIVE FOR ANDROID AND IOS DEVELOPMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPD3202A	REACT NATIVE FOR ANDROID AND IOS DEVELOPMENT	RNA	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basics of React Native and its architecture. Implement navigation between screens and handle user interactions.	3	PO1, PO3, PO5, PSO2
CO2	Apply the concepts of the React Native UI Design and Material UI	3	PO1, PO3, PO5, PSO1
CO3	Apply state and handle data in React Native applications. Integrate APIs and fetch data from external sources.	3	PO1, PO3, PO5, PSO2
CO4	Construct React Native applications and Deploy React Native applications to Android and iOS devices.	5	PO1, PO3, PO5, PSO1
CO5	Design Advance features containing React native applications	5	PO1, PO3, PO5, PSO1

Syllabus

Overview of React Native and its benefits, React Native vs. native app development, Setting up the development environment, React Native Components and Styling: Creating and styling UI components, Handling user input and events, Working with lists and scroll views, Navigation and Routing: Navigating between screens using React Navigation, Implementing tab navigation and stack, navigation Passing data between screens, State Management and Redux: Managing state in React Native applications, Introduction to Redux for state management

Implementing actions, reducers, store, Networking and API Integration: making HTTP requests and integrating APIs; handling responses, data manipulation, Authentication and secure API calls

Working with Device Features: Accessing device features such as camera, location, and sensors, Using third-party libraries for device-specific functionality, Handling permissions and user privacy, Testing and Debugging: Testing React Native components and functions, Debugging techniques and tools, Performance optimization and profiling

Deployment and App Store Submission: Preparing and building React Native apps for Android and iOS, Generating release builds and signing apps, App Store submission process for Android and iOS

Continuous Integration and Deployment (CI/CD): Set up continuous integration and deployment pipelines for React Native projects using tools like GitHub Actions, Bitrise, or Jenkins, enabling automated testing and deployment workflows. Security and Performance Optimization: Best practices for securing React Native applications, including handling sensitive data, implementing secure authentication mechanisms, and securing network communications. Advanced Topics and Future Trends: Animations, gesture recognition, offline support, and upcoming trends in mobile app development, Capstone Project

Reference Books

- 1 Learning React Native: Building Native Mobile Apps with Java Script, Bonnie Eisenman, 2nd, 2017, O'REILLY'.
- 2 React Native - Building Mobile Apps with JavaScript: Build real-world iOS and Android native apps with JavaScript, Vladimir Novick, 1st, 2017, Packt Publishing.
- 3 React Native Cook Book, Dan Ward, 2ns, 2019, Packt.
- 4 Practical React Native, Frank Zammetti, 1st, 2018, APress.

23CPD3203A - FRAMEWORK BASED CROSS PLATFORM APP DEVELOPMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPD3203A	FRAMEWORK BASED CROSS PLATFORM APP DEVELOPMENT	FBCPD	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Learn and apply overview on DART and Flutter Technologies	3	PO1, PO5, PSO2
CO2	Apply Beautiful Mobile Screens using Different Widgets	3	PO1, PO5, PSO2
CO3	Apply the REST API Using Node.js	3	PO1, PO5, PSO2
CO4	Develop the Dynamic Mobile application Using Rendering with Different Databases	3	PO1, PO5, PSO2

Syllabus

DART Programming basics of DART, Control flow, Null Safety, Functions, Data Processing, OOP Concept. Intro to Flutter Introduction to development with Flutter Material app using Android studio, widget tree, and pre-made Flutter widgets for UI design. Incorporate Image and text widgets to create simple user interfaces. Customize pre-built Flutter widgets. Add App icons for IOS and Android builds. Run Flutter apps on an IOS simulator, android emulator, and physical Android and IOS devices. Creating effective UI with Flutter Hot reload and Hot restart, Pubspec. yaml file to incorporate dependencies, custom assets, and fonts. Introduction to widget build method. Incorporate layout widget material icons using the class of the icon

Building APP With Flutter Building Apps with state stateful and stateless widgets, and callbacks. The declarative style of UI programming. Flexible layouts using Flutter. setState, state objects, and stateful widgets. Using DART package manager to incorporate Fluttercompatible packages into projects. Functions in Dart and Arrow syntax. Refactor widgets and understand Flutter's philosophy of UI as code. Structuring Flutter apps Dart constructors to create customizable Flutter widgets. Apply common mobile design patterns to structure mobile apps.

MongoDB with REST API Designing Concepts of Rest API Using Node.js, Mongo DB (Develop Through Rest API), Working with npm (Node package manager) Installing modules Assessing node modules folder Creating a package. json file Managing your application's assets Assessing the main types of HTTP routes Hosting express app instance Creating simple GET routes, creating middleware functions Request, Response, creating a connection string Hosting MongoDB Authenticating into a DB, Creating the model Filtering data AWS Database: Using AWS DynamoDB and S3 Bucket Design REST API Designing Publish Node.js Rest API in AWS Cloud

Devices Camera, Bluetooth, GPS Location, Maps: Dynamic Google Maps, Location Based Maps REST REST API to connect internet retrieve data and rendering widgets, No SQL Database: Mongo DB REST API Rendering using REST API, Firebase Database CRUD Operation. Deployment and publish the app in Android and iOS
