DART Programming basics of DART, Control flow, Null Safety, Functions, Data Processing, OOP Concept. Intro to Flutter Introduction to development with Flutter Material app using Android studio, widget tree, and pre-made Flutter widgets for UI design. Incorporate Image and text widgets to create simple user interfaces. Customize pre-built Flutter widgets. Add App icons for IOS and Android builds. Run Flutter apps on an IOS simulator, android emulator, and physical Android and IOS devices. Creating effective UI with Flutter Hot reload and Hot restart, Pubspec. yaml file to incorporate dependencies, custom assets, and fonts. Introduction to widget build() method. Incorporate layout widget material icons using the class of the icon

Building APP With Flutter Building Apps with state stateful and stateless widgets, and callbacks. The declarative style of UI programming. Flexible layouts using Flutter. setState, state objects, and stateful widgets. Using DART package manager to incorporate Flutter compatible packages into projects. Functions in Dart and Arrow syntax. Refactor widgets and understand Flutter's philosophy of UI as code. Structuring Flutter apps Dart constructors to create customizable Flutter widgets. Apply common mobile design patterns to structure mobile apps.

MongoDB with REST API Designing Concepts of Rest API Using Node.js, Mongo DB , Working with npm (Node package manager) Installing modules Assessing node modules folder Creating a package. json file Managing your applications assets Assessing the main types of HTTP routes Hosting express app instance Creating simple GET routes, creating middleware functions Request, Response, creating a connection string Hosting MongoDB Authenticating into a DB, Creating the model Filtering data AWS Database: Using AWS DynamoDB and S3 Bucket Design REST API Designing Publish Node.js Rest API in AWS Cloud

Devices Camera, Bluetooth, GPS Location, Maps: Dynamic Google Maps, Location Based Maps REST REST API to connect internet retrieve data and rendering widgets, No SQL Database Mongo DB REST API Rendering using REST API, Firebase Database CRUD Operation. Deployment and publish the app in Android and iOS

advanced animations in Flutter, enabling the creation of smooth, engaging transitions and animations. It includes performance optimization techniques such as widget tree management, efficient state management, and minimizing rebuilds. Students will explore advanced state management solutions like Provider, Riverpod, and Bloc. The module also involves the integration of third-party services, incorporating features such as push notifications, analytics, and in-app purchases. Additionally, it introduces CI/CD pipelines using tools like GitHub Actions, Travis CI, and Firebase App Distribution, to automate testing, building, and deploying Flutter apps. The module concludes with app maintenance practices, focusing on debugging, error handling, and implementing feedback mechanisms.

23CPD3304A - SECURE MOBILE APPLICATION DEVELOPMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPD3304A	SECURE MOBILE APPLICATION DEVELOPMENT	SMAD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concepts of the Kotlin and Jet Compose and Core UI controls	3	PO1, PO5, PSO1
CO2	Apply the concepts of state management using compose	3	PO1, PO5, PSO1
CO3	apply the concepts Views, View Models and rendering data from the database.	3	PO1, PO5, PSO1
CO4	Developing Security and authentication techniques in apps	4	PO1, PO5, PSO1
CO5	Implement CRUD operations (Create, Read, Update, Delete) using MongoDB with Node.js, ensuring efficient data management	4	PO1, PO5, PSO2
CO6	Design and develop secure mobile applications and deploy using Jet Compose	4	PO1, PO5, PSO2
CO7	Design and Develop the Secure mobile application	4	PO1, PO5, PSO2

Syllabus

"Overview of Kotlin, basics of JETPACK Compose, Android Installation, Creating new Compose Project, using Text, lazy lists, composable functions, buttons, modifiers, and adding clicking, Core UI Compose Elements Surface, wrap content of composable, align composable, Multiple composes, Compose State and recompositing, Composing Layouts: Row, Column, and Box in compose, extract composable for reuse, Nesting columns and rows "

Introduction to Module, declarative paradigm shift, Dynamic content concept, examples of Dynamic Content, State, and composition, adding list state, lifting State, adding Text field with State, Examples on theming card layout dynamically, Dynamic Lists, Navigation Compose.

Patterns of MVVM, adding a View Model and repository, Picking database API, Getting the data in JSON, room database, Retrofit for networking, call back for network responses, coroutines, suspend function, scopes dispatch, using coroutine in compose, hosting state coroutine in the model, Working with Sqlite

Privacy and Security, Secured Device location, sharing data, Network related, Two-factor authentication, JWT tokenization in REST API, Composing Secured OTPs, Secured authentication in Social Media

"Overview of Node.js and its features.Setting up the Node.js development environment. Understanding the Node.js event-driven architecture and non-blocking I/O. Introduction to MongoDB: Introduction to MongoDB and its advantages as a NoSQL database. Installation and setup of MongoDB. Basic CRUD (Create, Read, Update, Delete) operations with MongoDB. Building RESTful APIs with Node.js and Express: Creating a basic Node.js server using Express.js framework.Implementing RESTful API endpoints for data retrieval and manipulation. Handling HTTP requests and responses in Node.js.Working with MongoDB and Mongoose:Connecting Node.js with MongoDB using Mongoose ORM.Defining data models and schemas with Mongoose. Performing CRUD operations with MongoDB using Mongoose.User Authentication and Authorization:Implementing user authentication and authorization using libraries like Passport.js. Managing user sessions and implementing secure login/logout functionality. Utilizing JSON Web Tokens (JWT) for token-based authentication.Real-time Communication with Socket.io: Introduction to real-time communication and websockets. Building real-time chat applications with Socket.io and Node.js. Implementing features like real-time notifications and live updates. Deployment to AWS Cloud: Introduction to Amazon Web Services (AWS) and its cloud services. Deploying Node.js applications on AWS Elastic Beanstalk. Setting up MongoDB Atlas for cloud-based MongoDB database hosting. Scaling and Performance Optimization"

23CPD3405M - UX DESIGN (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPD3405M	UX DESIGN	UXD	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and discuss about User Experience Design Process	3	PO1, PO2, PO5, PSO1
CO2	Apply User interface and differentiate from User Experience and principles of User Interface	3	PO2, PO4, PO5, PO8, PSO1
CO3	Analysing and distinguishing about components of UI Design process with interactive Devices	3	PO1, PO2, PO4, PO5, PO8, PSO2
CO4	Determine graphic design techniques and psychology principles of User Experience	3	PO1, PO4, PO8, PSO2
CO5	Designing wire frames using Adobe XD, UX Pressia and whimsical	3	, PSO2

Syllabus

Introduction to UX: Introduction to UX, Elements of UX Design, Core Research, Heuristic Evaluation, who is the User, Persona, Customer Journey Map, Empathy, Business Model and Strategy, understanding various technology and devices enabling technology. Introduction To UI: Human Factors, of Interactive Software: Goals of System Engineering, Goals of UI Design, Motivations for Human Factors in Design, Accommodation of Human Diversity, Goals of our Profession.

Survey Components of UI & Effective UI Design Process: Menu Selection, Form Filling, Dialog Boxes-Introduction, Task Related Organization, Item Presentation Sequence, Response time and Display Rate, Fast Movement through menus, Menu Layout, Form Filling, Dialog Boxes, Interactive Devices, Specification methods, Interface Building tools, Evaluation and pretty critiquing tools, material.io

Importance of Colour theory and colour wheel while designing in XD /Figma, Introduction to Typography and its importance in visual design, Introduction to Iconography and its importance in visual design, Menu, selection, formfilling and Dialog boxes: Task related organization, Item presentation Sequence, logo and importance of brand guidelines for logo, Bitmap images and Vector Graphics, Different illustrator elements and their working procedure in adobe illustrator.

Designing UI Using Adobe XD Tool: Getting started with your Adobe XD project, what is UI VS UX Vs product Designer, Wireframing Low Fidelity, Type, colour & Icon Introduction, prototyping a website introduction, Symbols & Repeat Grids, Prototyping an app-Introduction, Colours, Drawing, Images, AssetPanel, Micro Interactions, Voice Interactions, User Testing

Demonstrate and Experiment using UXPressia and whimsical and Demonstrate Experiments using Adobe XD

23CPD3406M - META REACT NATIVE SPECIALIZATION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPD3406M	META REACT NATIVE SPECIALIZATION	MRNS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	apply the skills required to create apps across different platforms and devices	3	PO1, PO5, PSO1
CO2	apply the programming fundamentals, how to create a user interface (UI) and best practices for designing the UI.	3	PO1, PO5, PSO1
CO3	design and develop in React Native, React, JavaScript, GitHub repositories and version control.	4	PO1, PO5, PSO1
CO4	Implement project-based portfolio that demonstrates your skills to employers.	4	PO1, PO5, PSO1

Syllabus

Introduction to Mobile Development ,JavaScript is the programming language that powers the modern web. In this course, you will learn the basic concepts of web development with JavaScript. You will work with functions, objects, arrays, variables, data types, the HTML DOM, and much more. You will learn how to use JavaScript and discover interactive possibilities with modern JavaScript technologies. Finally, you will learn about the practice of testing code and how to write a unit test using Jest.

Version Control: Learn how modern software developers collaborate across the world without messing up each other's code. You will look at the different version control systems and how to create an effective software development workflow. You will be introduced to some of the most commonly used Linux commands that you can use to work with files on your hard drive and create powerful workflows that will automate your work, saving you time and effort. Finally, you will see how Git can be used in software development projects to manage team files. And you will create a repository that can manage code revisions. React is a powerful JavaScript library that you can use to build user interfaces for web and mobile applications (apps). In this course, you will explore the fundamental concepts that underpin the React library and learn the basic skills required to build a simple, fast, and scalable app.

Introduction to React Native and Data Management Overview of React Native and its advantages for mobile app development Introduction to data management in React Native applications Understanding state and props in React Native components Working with APIs in React Native, Introduction to the Fetch API and its usage, Making HTTP requests and handling responses, Handling errors and managing loading states, Introduction to state management libraries like Redux and MobX, Setting up Redux or MobX in a React Native project

Understanding the role of UX/UI design in product development, Differentiating between user experience (UX) and user interface (UI) Exploring the principles and importance of good UX/UI design, User Research and Analysis, Conducting user research to understand target audience and user needs, Techniques for gathering user feedback and conducting usability testing, Analyzing user data to inform design decisions Information Architecture and Wireframing Creating effective information architecture for intuitive navigation Techniques for organizing content and creating user flows, Wireframing tools and best practices for creating low-fidelity prototypes

23CPD3507 - ADVANCED MOBILE APPLICATION DEVELOPMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPD3507	ADVANCED MOBILE APPLICATION DEVELOPMENT	AMAD	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Learn and Apply Kotlin and Design Basic Features of the Android XAML Code	2	PO1, PO7, PSO2
CO2	Apply the concepts of the Android with Kotlin and access the different mobile sensors	3	PO1, PO7, PSO2
CO3	apply the REST API using Node.js and AWS MongoDB	3	PO1, PO7, PSO2
CO4	Developing Security and authentication techniques in apps	3	PO1, PO7, PSO2

Syllabus

Introduction to Kotlin- kotlin basics, OOPs concept in Kotlin App life cycle, Android UI, UI Controls Layouts- Linear Layouts, Relative Layouts, Constrain Layout, Grid Layout, Table Layout Views: - Grid View, List View, Recycler View, Card View

Navigation Enhance users ability to navigate across, into, and back out from various screens within the Android app for a consistent and predictable user experience. BottomUp Navigation, Top-Down navigation, Menus Implicit Intent, Explicit Intent, Start Activity for Result, Beautiful Layouts with Card View, fragments, Sensors Camera, Bluetooth, GPS Location, Google Maps

Database Connectivity SQLite3 CRUD Operation with Android Android with REST API Build Dynamic Mobile Application Using REST API, Consume REST Endpoints to render the Material Widgets (SQL, MongoDB, AWS DynamoDB) Play Store Publishing Generate Signed APK published in Google Play Console

MongoDB with REST API Designing Concepts of Rest API Using Node.js, Mongo DB (Develop Through Rest API), Working with npm (Node package manager) Installing modules Assessing node modules folder Creating a package. Json file Managing your applications assets Assessing the main types of HTTP routes Hosting express app instance Creating simple GET routes, creating middleware functions Request, Response, Creating a connection string Hosting MongoDB Authenticating into a DB, Creating the model Filtering data AWS Database: Using AWS DynamoDB and S3 Bucket Design REST API Designing Publish Node.js Rest API in AWS Cloud

23CPD3508 - CROSS PLATFORM USER INTERFACE DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPD3508	CROSS PLATFORM USER INTERFACE DESIGN	CPED	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Learn user-centered design principles and best practices to create effective and engaging mobile app interfaces in Flutter.	2	PO1, PO2, PSO2
CO2	Apply the user research and user testing to inform their design decisions and create designs that meet user needs and preferences	3	PO1, PO2, PSO2
CO3	Apply the cocepts of animations and motion design in Flutter, enhancing the user experience and making the app more engaging and intuitive.	3	PO1, PO2, PSO2
CO4	Design and develop prototype and wireframe in Flutter to test their designs and gather user feedback.	3	PO1, PO2, PSO2

Syllabus

Overview of UI/UX design principles and best practices, Introduction to Flutter framework and its capabilities, setting up a development environment for Flutter with UI/UX design tools, User Research, and User-Centered Design, Understanding the importance of user research in UI/UX design, Conducting user research for mobile apps Implementing user-centered design principles in Flutter app design

Designing User Interfaces for Flutter Designing user interfaces and user flows for Flutter apps Implementing visual design principles and best practices in Flutter Using Flutter UI widgets and components to design interfaces Prototyping and User Testing in Flutter Prototyping and wireframing in Flutter for UI/UX design Conducting user testing for Flutter app designs Using feedback from user testing to improve app designs.

Animation and Motion Design in Flutter Introduction to animation and motion design concepts Creating basic animations and transitions with Flutter Creating complex animations and physics-based motion design.

Flutter and Material Design Overview of Material Design principles and guidelines Implementing Material Design components and patterns in Flutter Customizing Material Design components for a unique look and feel

23CPS3101A - IOT SENSING AND ACTUATING DEVICES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPS3101A	IOT SENSING AND ACTUATING DEVICES	ISAD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying the role of sensor and actuators in real time aspects and	3	PO1, PO2, PSO2
CO2	Apply the role of signal conditioning circuits and Impedance Matching circuits	3	PO2, PO3, PSO1
CO3	Analyze different generation of sensors for the development of IoT based Networks	4	PO1, PO2, PSO1
CO4	Analyze different IoT sensor technologies for the enhancement of various IoT devices	4	PO2, PO3, PSO2
CO5	Analyse the role of different Energy sources and power management in IoT	4	PO2, PO3, PSO1
CO6	Implementation and Evaluation of the practical IoT	5	PO2, PO3, PSO2
CO7	Implementation and Evaluation of the skilling IoT	6	PO1, PO3, PSO2

Syllabus

The Introduction to IoT explores the fundamentals of interconnected devices, while Applications & Domain Specific of IoT highlight its diverse uses in sectors like healthcare, agriculture, and smart cities. Understanding the Characteristics of IoT, such as scalability and real-time data processing, is essential for effective implementation. Various Enabling Technologies in IoT, including cloud computing and AI, support these systems. Signal transmission in IoT involves different Types of Signal: pneumatic, hydraulic, and electronic. The Workflow and Classification of Transducers, Sensors, and Actuators are critical in system design, with the Role of Sensors and Actuators being pivotal for data collection and action execution. The evolution of IoT sensors can be traced through Generations - First, Advanced & Integrated IoT Sensors, reflecting advancements from basic to highly integrated systems.

Sensors and Actuators in Automobile Systems play a crucial role in enhancing vehicle performance and safety. Similarly, Sensors and Actuators in the Feedback Control System are essential for maintaining system stability and performance. The Importance of Estimation in Sensing lies in improving the accuracy and reliability of sensor data. Innovative Sensor Technologies are continuously emerging, expanding the potential Application Scenarios across various fields. Specific technologies such as Light to Voltage Converters and Capacitance to Voltage Converters are integral in modern sensing applications. The Importance of Impedance Matching in Analog & Digital Transducers and Actuators cannot be overstated, as it ensures signal integrity and efficient energy transfer. Additionally, Interferometers are critical tools in precision measurement and optical sensing applications.

Components Interconnections and Signal Conditioning involve crucial processes like ADC (Analog-to-Digital Conversion), DAC (Digital-to-Analog Conversion), and the Conversion of ADC to DAC and vice versa. Proper Component Interconnection and Signal Modification Conditioning are vital for system accuracy and efficiency. The Importance of Impedance Matching in Component Interconnection ensures optimal signal transfer and system performance, utilizing Various Impedance Matching Methods. Resistive Sensors, such as Resistive Temperature Detectors, Light-Dependent Resistors, and Gas Sensors, require precise Signal Conditioning for Resistive Sensors to function correctly. Devices like the Potentiometer and Phase Sensor, which include Phase Detection and Polarization Maintaining Fibers, are essential for accurate measurement and signal control in advanced systems.

Components Interconnections and Signal Conditioning encompass processes like ADC (Analog-to-Digital Conversion) and DAC (Digital-to-Analog Conversion), including the Conversion of ADC to DAC and vice versa. Effective Component Interconnection and Signal Modification Conditioning are essential, with the Importance of Impedance Matching in Component Interconnection ensuring optimal performance through Various Impedance Matching Methods. Resistive Sensors, such as Resistive Temperature Detectors, Light-Dependent Resistors, and Gas Sensors, require precise Signal Conditioning for Resistive Sensors. Devices like the Potentiometer and Phase Sensor, involving Phase Detection and Polarization Maintaining Fibers, are critical for accurate measurement and signal control.

Energy Storage solutions involve various Energy and Power Models, utilizing Batteries, Super Capacitors, and Radioactive Power Sources. Advanced Processing Techniques such as Chemical Vapour Deposition, Electroplating, Photolithography, Silicon Micromachining, and the LIGA Process are essential for manufacturing precision components. The Industrial Internet of Things (IIoT), a key aspect of Industry 4.0, includes Applications of Industrial IoT driven by Drivers of Industry 4.0. Technologies like Cloud and Fog Computing for Industrial IoT enable efficient data management and analysis, while Smart Sensors and Industrial Sensors play a crucial role in monitoring and automating industrial processes.

23CPS3101E - IOT SENSING AND ACTUATING DEVICES (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPS3101E	IOT SENSING AND ACTUATING DEVICES	ISAD	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying the role of sensor and actuators in real time aspects	3	PO2, PO3, PSO2
CO2	Apply the role of signal conditioning circuits and Impedance Matching circuits	3	PO1, PO2, PSO1
CO3	Analyze different generation of sensors for the development of IoT based Networks	4	PO1, PO2, PO3, PSO2
CO4	Analyze different IoT sensor technologies for the enhancement of various IoT devices	4	PO2, PO3, PSO2
CO5	Analyse the role of different Energy sources and power management in IoT	4	PO1, PO2, PSO1
CO6	Implementation and Evaluation of the practical IoT	5	PO1, PO3, PSO1
CO7	Implementation and Evaluation of the skilling IoT	6	PO2, PO3, PSO2

Syllabus

The Introduction to IoT provides a foundation for understanding Applications & Domain-Specific Uses of IoT, highlighting the Characteristics of IoT such as connectivity and scalability. Various Enabling Technologies in IoT support these applications. Signal Transmission involves different Types of Signals, including Pneumatic, Hydraulic, and Electronic Signals. The Workflow and Classification of Transducers, Sensors, and Actuators are essential for system design, emphasizing the Role of Sensors and Actuators in data collection and execution. The evolution of IoT devices is marked by Generations-First, Advanced, and Integrated IoT Sensors, showcasing technological advancements in the field.

Sensors and Actuators in Automobile Systems and Sensors and Actuators in Feedback Control Systems play crucial roles in enhancing performance and stability. The Importance of Estimation in Sensing ensures accuracy and reliability, while Innovative Sensor Technologies expand potential Application Scenarios. Devices such as Light to Voltage Converters and Capacitance to Voltage Converters are pivotal in modern applications. The Importance of Impedance Matching in Analog & Digital Transducers and Actuators ensures efficient signal transfer, and Interferometers are essential for precision measurement and optical sensing.

Components Interconnections and Signal Conditioning involve processes such as ADC (Analog-to-Digital Conversion) and DAC (Digital-to-Analog Conversion), including the Conversion of ADC to DAC and vice versa. Effective Component Interconnection and Signal Modification Conditioning are critical, with the Importance of Impedance Matching in Component Interconnection ensured through Various Impedance Matching Methods. Specific sensors like Resistive Sensors, Resistive Temperature Detectors, Light-Dependent Resistors, and Gas Sensors require precise Signal Conditioning for Resistive Sensors. Devices such as Potentiometers and Phase Sensors, which include Phase Detection and Polarization Maintaining Fibers, are essential for accurate measurement and signal control.

Description & Characteristics of emerging technologies include Polytronics Systems, Sensor Swarms, and Printed Electronics, each with unique attributes. The Description & Characteristics: IoT Generation Roadmap outlines the evolution of IoT technologies. Wireless Sensor Technologies and Magnetic Sensors play critical roles in data collection, while Stepper Motors and Thermodynamic IoT Sensors are vital for precise control and measurement. In terms of Energy Sources and Power Management, methods such as Energy Harvesting, Solar Harvesting, Piezo Mechanical Harvesting, and RF Energy Harvesting are essential. These energy solutions support Actuator and Control Applications in various IoT systems.

Energy Storage, including Energy and Power Models, Batteries, Supercapacitors, and Radioactive Power Sources, are crucial for sustaining various applications. Advanced Processing Techniques such as Chemical Vapour Deposition, Electroplating, Photolithography, Silicon Micromachining, and the LIGA Process are essential for manufacturing precision components. The Industrial Internet of Things (IIoT) underpins Industry 4.0, driven by Applications of Industrial IoT and Drivers of Industry 4.0, with Cloud and Fog Computing for Industrial IoT facilitating efficient data management and analysis. Case studies illustrate the impact of Smart Sensors and Industrial Sensors on optimizing operations and enhancing productivity in real-world scenarios.

23CPS3101R - IOT SENSING AND ACTUATING DEVICES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPS3101R	IOT SENSING AND ACTUATING DEVICES	ISAD	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying the role of sensor and actuators in real time aspects	3	PO1, PO2, PO3, PSO1
CO2	Apply the role of signal conditioning circuits and Impedance Matching circuits	3	PO2, PO3, PSO1
CO3	Analyze different generation of sensors for the development of IoT based Networks	4	PO1, PO2, PO3, PSO2
CO4	Analyse the role of different Energy sources and power management in IoT	4	PO1, PO3, PSO1
CO5	Implementation and Evaluation of the practical IoT	5	PO1, PO2, PO3, PSO2
CO6	Implementation and Evaluation of the skilling IoT	6	PO1, PO2, PO3, PSO2

Syllabus

Introduction to IoT provides a foundational understanding of interconnected devices, while Applications & Domain-Specific Uses of IoT highlight its diverse practical applications. Understanding the Characteristics of IoT, such as scalability and real-time data processing, is crucial for effective implementation. Various Enabling Technologies in IoT support these applications. The Workflow and Classification of Transducers, Sensors, and Actuators are essential for designing efficient IoT systems, emphasizing the Role of Sensors and Actuators in data collection and execution. IoT sensor technology has evolved through Generations-First, Advanced, and Integrated IoT Sensors, marking significant advancements in functionality and integration.

Understanding The Importance of Estimation in Sensing is crucial for enhancing accuracy and reliability in data collection. Innovative Sensor Technologies continually expand the range of Application Scenarios, optimizing performance across various fields. The Importance of Impedance Matching in Analog & Digital Transducers and Actuators ensures efficient signal transmission and response. Effective Components Interconnections and Signal Conditioning, including ADCs and DACs, facilitate seamless Conversion of ADC to DAC and vice versa, enhancing overall system functionality through precise Signal Modification and Conditioning.

Resistive Sensors, Resistive Temperature Detectors, Light-Dependent Resistors, and Gas Sensors are essential components in various applications, requiring specific Signal Conditioning for Resistive Sensors to ensure accurate data acquisition. Devices like Potentiometers and Phase Sensors, including Phase Detection and Polarization Maintaining Fibers, play critical roles in precise measurement and control. Description & Characteristics of emerging technologies such as Polytronics, Sensor Swarms, and Printed Electronics highlight their innovative attributes and diverse applications in modern systems.

Wireless Sensor Technologies and Magnetic Sensors enable efficient data collection, complemented by Stepper Motors and Thermodynamic IoT Sensors for precise control in diverse applications. Energy Sources and Power Management, including Energy Harvesting methods like Solar, Piezo Mechanical, and RF Energy Harvesting, support Actuator and Control Applications. Energy Storage solutions such as Batteries, Supercapacitors, and Radioactive Power Sources ensure continuous operation. Applications of Industrial IoT are enhanced by Cloud and Fog Computing, illustrated through various Case Studies showcasing improved efficiency and innovation in industrial processes.

23CPS3202A - INTERNET OF THINGS ARCHITECTURES AND PROTOCOLS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPS3202A	INTERNET OF THINGS ARCHITECTURES AND PROTOCOLS	IOTAP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Architectural Overview of IoT	2	PO1, PO7, PSO1
CO2	Understand the IoT reference Architecture and Real World Design Constraints	2	PO1, PO7, PSO1
CO3	Apply various IoT Protocols in Datalink Layers	3	PO1, PO7, PSO1
CO4	Apply various IoT Protocols in Network Layers	3	PO1, PO2, PO5, PSO1
CO5	Apply various IoT Protocols in Transport Layers	3	PO1, PO2, PO5, PSO1
CO6	Apply various IoT Protocols in Session Layers	3	PO1, PO2, PO5, PSO1
CO7	Create IoT based applications using IoT Protocols	5	PO1, PO2, PO5, PSO1

Syllabus

Internet of Things: An overview: IOT conceptual framework, IoT architectural and standards, Technology behind IoT, Protocols and Communication. Design Principle for connected Devices: IoT system layer and design standardization, communication technologies, data enrichment, data consolidation, and device management at the gateway.

IoT Architecture -State of the Art: Introduction, Architecture Reference Model- Introduction, Reference Model and architecture, IoT Reference Architecture- Introduction, Functional View, Information View, Deployment and Operational View, Other Relevant architectural views.

IoT Link Layer & Network Layer Protocols: PHY/MAC Layer protocols, Z-Wave, Bluetooth Low Energy, DASH7

Network Layer IPv4, IPv6, 6LoWPAN, 6TiSCH, DHCP, ICMP, CORPL, CARP.

Transport Layer, TCP, UDP, DCCP

Reference Books

23CPS3303A - CYBER PHYSICAL SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPS3303A	CYBER PHYSICAL SYSTEMS	CPS	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply mathematical concepts for modeling to design automation	3	PO1, PO2, PO3
CO2	Apply Middle and High Level Design Decisions to design the automation	3	PO1, PO2, PO3
CO3	Analyze the Human interaction with CPS by making use of IoT Sensors	4	PO1, PO2, PSO2
CO4	Analyze AADL and make use of it for modelling the automation	4	PO1, PO2, PSO2
CO5	Analyze security techniques and issues for Cyber Physical Systems.	4	PO1, PO2, PSO2
CO6	Design and implement smart models for automobiles, medical devices and home appliances.	6	PO3, PO5, PO7, PSO2
CO7	Devise Specific services that are essential for a CPS/Internet of Things (IoT) implementation	6	PO3, PO5, PO7, PSO2

Syllabus

Cyber Physical Systems: Introduction, CPS definition, CPS Examples, Fundamental Approach, Mathematical Concepts for Modeling, Nature and Computational models, Decision Making - Low Level Design Decision, Feedback Algorithm, Linear Controls, Low Level Control.

Middle Level Design Decision Requirements Trajectory Planning, Middle Level Design Decisions Guidance Techniques, High Level Design Decisions: High Level Decision Making; Linear Temporal Logic, High Level Logic Feron-G, Low Level Human CPS Interaction, Aviation, Short Period, Equivalent Systems, Automotive Example, Caravan Trailer Sway

Human Automation Interaction Aviation, FA4 MCP, Automation as a State Machine, Hardware Software CoDesign, Processors and Sensors, Sensors in CPS, MEMs, Pressure Sensors, Actuator Trends Servo, Embedded CPS Architectures, Systems Engineering-General Approach, Tools and Frameworks, System and Electronics Interface AADL Virtual Integration and Analysis

AADL General Principles and Positioning Why Modeling, Model Usage, How Modeling, Model, Process and Tools, AADL Introduction AADL Elements, AADL Properties, AADL Crazyflie Case Study, Formal Methods Main Mechanisms; Abstractions, Lattices, Model Checking Tools for Model Checking, Examples Stop Light Example, Car Example, Hunting for Invariants, Bicycle Example, Future of CPS Backup Strategies; Legacy CPS Systems and Safety, Internet of Things, Design Tools, Technology Push Vs. Market Pull.

Security of Cyber-Physical Systems Introduction to CPS Securities, Basic Techniques in CPS Securities, Cyber Security Requirements, Attack Model and Countermeasures, advanced Techniques in CPS Securities. CPS Application Health care and Medical Cyber-Physical Systems, Smart grid and Energy Cyber Physical Systems, WSN based Cyber-Physical Systems, Smart Cities

23CPS3404M - FOUNDATIONS OF HYBRID AND EMBEDDED SYSTEMS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPS3404M	FOUNDATIONS OF HYBRID AND EMBEDDED SYSTEMS	DVP	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand The Advance structure of the Hybrid Embedded System and its Outlook is outlined with state of the art example and Remembering the Basic Operational behavior of Microprocessors and Controllers	2	PO1, PO2, PO6
CO2	Relating the Hybrid embedded Operation in relation with Modern day Real-Time Operating System	2	PO2, PO5, PO8
CO3	Examining the placements of Various Wireless Sensor Unit and sensing Nodes and Utilization of various Protocols and methodology in the operations of Hybrid Embedded System	3	PO2, PO3, PO5, PO11
CO4	Analyzing Various data gathered and involved in the monitoring and controlling of Hybrid Embedded Systems	4	PO1, PO2, PO5, PSO1

Syllabus

Learning the way and method to identify the suitable processor to the corresponding intended architecture.

Examining the importance and need of Real Time Operating System (RTOS) while executing simple task using any one of the RTOS\S

Listing out various real-time Embedded Structured used in the prominent industry and developing simple project using the learned methodology.

Analyzing Various data acquisition system with real-time prospective.

23CPS3505 - CLOUD COMPUTING FOR IOT ENGINEERS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPS3505	CLOUD COMPUTING FOR IOT ENGINEERS	CCIOTE	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of cloud computing services, including deployment models and enabling technology, as well as cloud-based IoT platforms.	3	PO1, PO2, PO3, PSO2
CO2	Apply various cloud infrastructures, virtualization techniques, and storage solutions across different virtualization environments.	3	PO1, PO2, PO3, PSO2
CO3	Apply and Incorporate data security and privacy measures within virtual machines.	3	PO3, PO4, PSO2
CO4	Analyze the different case studies on healthcare, agriculture and parking system and asses the Monitoring, debugging, and performance optimization of cloud-based IoT systems	4	PO3, PO4, PSO2

Syllabus

This module covers introduction to cloud computing covers responsibility models, characteristics, consumption-based and deployment models, cloud service types (IaaS, PaaS, SaaS), cloud enabling technology, architectures, and its role in IoT and cloud-based IoT platforms

This module covers cloud computing virtualization techniques, including hypervisors and server virtualization, with case studies in healthcare, finance, and architecture. They also explore cloud storage options, data migration, and handling structured and unstructured data.

This module covers security and privacy for cloud-based IoT, including authentication, encryption, and data protection, as well as scalability, performance optimization, load balancing, resource allocation, and interfacing IoT devices with IoT-based clouds.

This module cover clouds computing in IoT with case studies on smart parking, home automation, farming, scientific and healthcare applications, and integrating IoT devices with cloud platforms like AWS IoT and Azure IoT Hub.

Reference Books

23CPS3506 - WIRELESS SENSOR NETWORKS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPS3506	WIRELESS SENSOR NETWORKS	WSN	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the various theoretical concepts related to wireless sensors and networking of the sensors	2	PO2, PSO1
CO2	Apply WSNs Architectures, Energy consumption of Sensor nodes for the development of the IoT based Systems	3	PO2, PSO1
CO3	Apply different MAC protocols, Routing mechanism used for the development of WSNs Application	3	PO5, PO7, PSO1
CO4	Apply node and network management related concepts for real time application of WSNs	3	PO2, PSO1

Syllabus

Background of Sensor Network Technology, Sensor network architecture, Hardware components, Sensor node hardware overview, Controller, Memory, Communication device, Sensors and actuators, Power supply of sensor nodes. Challenges and Hurdles for WSNs, Enabling Technologies for Wireless Sensor Networks, Application of sensor networks, Traffic Control, Health Care, Pipeline Monitoring, Precision Agriculture.

ARCHITECTURES, Single node architecture, Energy consumption of sensor nodes, Operation states with different power consumption, Microcontroller energy consumption, Memory, Radio transceivers, Network Topologies, Single Hop Star, Multi Hop Mesh and Grid, Two Tier Hierarchical Cluster. Optimization Goals and Figures of Merit, Gateway Concepts.

Networking Sensors, Physical layer, Trans receiver design considerations, Data Link layer, MAC Layer, Fundamentals of MAC Protocols, Performance Requirements, Classification of MAC protocols, Schedule Based Protocols, Random Access Based Protocols, Sensor MAC, Periodic Listen and Sleep Operations, Schedule Selection, Synchronisation and Coordination Low duty cycle protocol and wakeup concept, Adaptive Listening Routing Protocols, Routing Challenges and Design Issues in Wireless Sensor Networks, Data centric routing, Energy Efficient routing, geographic routing.

NODE AND NETWORK MANAGEMENT, Power Management, Local Power Management Aspects, Processor Subsystem, Communication Subsystem, Bus Frequency and RAM Timing, Active Memory, Power Subsystem, Dynamic Power Management, Dynamic Operation Modes, Dynamic Scaling, Task Scheduling, Time Synchronization, Clocks and the Synchronization Problem, Time Synchronization in Wireless Sensor Networks, Basics of Time Synchronization, Time Synchronization Protocols, Lightweight Tree Based Synchronization, Timing sync Protocol for Sensor Networks, Flooding Time Synchronization Protocol, Reference Broadcast Synchronization, Time Diffusion Synchronization Protocol.

Reference Books

- 1 Fundamentals of Wireless sensor networks-Theory and Practice, W. Dargie, C. Poellabauer, 2010, John Wiley & Sons.
- 2 Protocols And Architectures for Wireless Sensor Networks, Holger Karl & Andreas Willig, 2005, John Wiley.
- 3 Wireless Sensor Network Technology- Protocols and Applications, K. Sohraby, D. Minoli and T. Znati, 2007, John Wiley & Sons.
- 4 Networking Wireless Sensors, B. Krishnamachari, 2005, Cambridge University Press.

23CPS3507 - EDGE COMPUTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CPS3507	EDGE COMPUTING	EC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Outline the fundamental concepts and advantages of Fog and Edge Computing (FEC), infer the opportunities and applications	2	PO1, PO5, PSO2
CO2	Apply network slicing strategies with effective management techniques to optimize resource allocation. Build network virtualization for efficient edge computing, while exploring optimization techniques for fog computing to ensure efficient data processing	3	PO2, PO5, PSO2
CO3	Implement and analyze middleware solutions for Fog and Edge Computing, addressing security management	4	PO1, PO5, PSO2
CO4	Analyze the applicability and needs for Edge/Fog Computing in various real-time projects such as health monitoring, smart city management, and smart transportation	4	PO1, PO3, PO5, PSO2

Syllabus

Introduction: New Computing Paradigms, Fog and Edge Computing Completing the Cloud, Advantages of FEC, Hierarchy of Fog and Edge Computing, Business Models, Opportunities and Challenges, Addressing the Challenges in Federating Edge Resources

Integrating IoT + Fog + Cloud Infrastructures, System Modeling and Research Challenges, Network Slicing Management in Edge and Fog, Optimization in Fog Computing, Formal Modeling Framework for Fog Computing

Middleware: Middleware for Fog and Edge Computing: Design Issues, State-of-the-Art Middleware Infrastructures, A Lightweight Container Middleware for Edge Cloud Architectures, Security and Data Management: Security Management for Edge Cloud Architectures

Applications and Issues: Exploiting Fog Computing in Health Monitoring, Smart Surveillance Video Stream Processing at the Edge for Real-Time Human Objects Tracking, Fog Computing Model for Evolving Smart Transportation Applications

Reference Books

23CSB3101A - CRYPT ANALYSIS & CYBER DEFENSE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSB3101A	CRYPT ANALYSIS & CYBER DEFENSE	CACD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Classical Encryption Techniques and Symmetric Encryption algorithms to convert a given Plaintext to Cipher text.	3	PO1, PO2, PSO2
CO2	Apply RC4 algorithm, Block Cipher Modes of Operation and Multiple Encryption for given plaintext.	3	PO1, PO2, PSO2
CO3	Apply Public key Crypto Systems to ensure Secure communication of data.	3	PO1, PO2, PSO2
CO4	Apply Hash, MAC algorithms and Digital Signatures to achieve Message Authentication and Integrity..	3	PO1, PO2, PSO2
CO5	Analyze the principles of Incident Response and Risk Management Processes.	4	PO1, PO3, PSO2
CO6	Implement security goals like Confidentiality, Integrity, Authentication algorithms.	3	PO1, PO5, PSO2
CO7	Analyze social engineering, Ethical Hacking & Incident Responses using various tools..	4	PO1, PO5, PSO2

Syllabus

Introduction to Security: Security Concepts, Security Attacks, A Security Model, Security , Services and Mechanisms, Antivirus bypassing, Password Attacks and Web browser exploitation. Block Ciphers: DES, DES Example, Strength of DES, Differential and Linear Cryptanalysis., AES: Finite Field Arithmetic, AES Structure, AES Transformation Functions, AES Example. Multiple Encryption and Triple DES.

Modes of Operation. Pseudorandom Number Generation: Principles and Pseudorandom Number, Generators, Pseudorandom Number Generation using a Block Cipher, Stream Ciphers. Stream Ciphers: RC4.

Public-key Cryptography: RSA algorithm, Diffie-Hellman Key Exchange, ElGamal Cryptosystem, Elliptic Curve Arithmetic, Elliptic Curve Cryptography.

Cryptographic. Hash Functions: Applications of Cryptographic Hash functions, Two Simple Hash Functions, Requirements and Security, SHA 512, MD5..

Cryptographic protocols: challenge-response authentication, zero-knowledge protocols, Performing Incident Response: Introduction to Incident Response Process, Cyber Incident Response Team, Communication Plan and Stakeholder Management, Incident Response Plan, Cyber Kill Chain Attack Framework, Incident Response, Disaster Recovery, and Retention Policy Risk Management: Introduction to Risk Management Processes, Risk Types, Risk Assessments, Risk Management Strategies, Risk Avoidance and Risk Transference, Risk Acceptance and Risk Appetite, Risk Awareness.

Reference Books

- 1 Cryptography and Network Security Principles and Practice, William Stallings, 5th Edition, 2010, Pearson.
- 2 Applied Cryptography: Protocols, Algorithms, and Source Code in C, Bruce Schneier, Second Edition, 2015, John Wiley & Sons.
- 3 Cyber Security Incident Management Guide, Gerard Johansen, Third Edition, 2017, Packt Publishing Ltd.
- 4 Applied Cryptography for Cyber Security and Defense: Information Encryption and Cyphering, Hamid R. Nemati and Li Yang, Second Edition, 2011, IGI Global.

- 5 Cryptography and Network Security , Forouzon B, Indian Edition, 2010, TMH .
- 6 Digital Forensics & Incident Response, Gerard Johnson, Second Edition, 2017, Packt Publishing Ltd..

23CSB3202A - NETWORK AND INFRASTRUCTURE SECURITY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSB3202A	NETWORK AND INFRASTRUCTURE SECURITY	NIS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand security concepts, Infrastructure security techniques and securing enterprise networks. Understand router and switching security mechanism.	2	PO3, PO5, PSO2
CO2	Understand hardware procedures for digital certificate and techniques of user authentication	2	PO3, PO5, PSO2
CO3	Apply the standardization schemes to maintain security in Web application and secured payment system. Identify security vulnerability in the system	3	PO3, PSO2
CO4	Apply security concepts in Email and Internet Protocol	3	PO3, PSO2
CO5	Apply security concepts in wireless networking environment	3	PO5, PSO2

Syllabus

Network Hardware, Software and Services, Hardware Protection, Intruders and Virus. Network Management Security, Device security, Virtual Private Networks (VPNs), Data Center and Enterprise Networks Security, Securing a Wireless LAN, LAN Switch Security, Router and switching mechanisms for Security, Queuing and Scheduling Algorithms

Key distribution - Symmetric encryption, Key distribution - Asymmetric encryption, Public-Key Infrastructure, distribution of public keys, X.509 Certificates, Remote User Authentication using Symmetric Encryption, Remote User Authentication Using Asymmetric Encryption, Kerberos

Web Security and issues, Secure Sockets Layer Concepts, Transport Layer Security, HTTPS, Secure Shell (SSH), Secure electronic transaction (SET), SET Payment processing Security vulnerabilities Scanning techniques, Vulnerability assessment, Penetration testing

Pretty Good Privacy, S/MIME Domain Keys Identified Mail IP Security Overview, IP Security Policy Encapsulating Security Payload, Combining Security Associations Firewalls and Gateways, Intrusion detection system

Wireless Network security: Wireless security, Mobile device security, IEEE 802.11 Wireless LAN overview, IEEE 802.11 Wireless LAN overview

Reference Books

- 1 Cryptography and Network Security Principles and Practice, William Stallings, 7th Edition, Pearson Education, 2017.
- 2 Cryptography And Network Security, Behrouz A. Forouzan, Debdeep Mukhopadhyaya, 4th Edition, TataMcGraw Hill Education Private Limited, 2015.
- 3 Network Security Essentials, William Stallings, 7th Edition, Pearson Education, 2017.
- 4 Network Security , Charlie Kaufman, Radia Perlman, 2nd Edition, Prentice Hall.

23CSB3202E - NETWORK AND INFRASTRUCTURE SECURITY (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSB3202E	NETWORK AND INFRASTRUCTURE SECURITY	NIS	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand security concepts, Infrastructure security techniques and securing enterprise networks. Understand router and switching security mechanism.	2	PO3, PO5, PSO2
CO2	Understand hardware procedures for digital certificate and techniques of user authentication	2	PO3, PO5, PSO2
CO3	Apply the standardization schemes to maintain security in Web application and secured payment system. Identify security vulnerability in the system.	3	PO3, PSO2
CO4	Apply security concepts in Email and Internet Protocol.	3	PO3, PSO2
CO5	Apply security concepts in wireless networking environment.	3	PO5, PSO2

Syllabus

Network Hardware, Software and Services, Hardware Protection, Intruders and Virus. Network Management Security, Device security, Virtual Private Networks (VPNs), Data Center and Enterprise Networks Security, Securing a Wireless LAN, LAN Switch Security, Router and switching mechanisms for Security, Queuing and Scheduling Algorithms

Network Hardware, Software and Services, Hardware Protection, Intruders and Virus. Network Management Security, Device security, Virtual Private Networks (VPNs), Data Center and Enterprise Networks Security, Securing a Wireless LAN, LAN Switch Security, Router and switching mechanisms for Security, Queuing and Scheduling Algorithms

Web Security and issues, Secure Sockets Layer Concepts, Transport Layer Security, HTTPS, Secure Shell (SSH), Secure electronic transaction (SET), SET Payment processing Security vulnerabilities Scanning techniques, Vulnerability assessment Penetration testing.

Pretty Good Privacy, S/MIME Domain Keys Identified Mail IP Security Overview, IP Security Policy Encapsulating Security Payload, Combining Security Associations Firewalls and Gateways, Intrusion detection system.

Wireless Network security: Wireless security, Mobile device security, IEEE 802.11 Wireless LAN overview, IEEE 802.11 Wireless LAN overview.

23CSB3304A - DIGITAL FORENSICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSB3304A	DIGITAL FORENSICS	DF	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyse the digital forensics environment, including the concepts of forensic soundness and fundamental principles.	3	PO1, PSO2
CO2	Apply the principles of attack attribution to identify and trace the sources of cyber attacks, utilizing techniques such as IP address analysis, malware analysis, and behavioral analysis.	3	PO1, PSO2
CO3	Analyze the fundamental concepts of digital evidence and its significance in forensic investigations.	4	PO1, PO2, PSO2
CO4	Evaluate the value and admissibility of digital evidence and applying case study methodologies to analyze and link evidence to users.	5	PO1, PSO2
CO5	Evaluate and utilize a variety of network security monitoring tools	5	PO1, PSO2
CO6	Evaluate the effectiveness of Defence-in-Depth strategies in safeguarding assets against emerging threats.	5	PO5, PSO2
CO7	Implement and Evaluating acquisition methods for digital evidence related to system security	5	PO5, PSO2

Syllabus

Digital Forensics and Incident Analysis: History of Forensic Science, Locard's exchange principle, Crime Reconstruction, Investigations, Evidence Dynamics, Digital Forensics and Its Environment: Forensic Soundness and Fundamental Principles, Digital Forensics, The Digital Forensics Process, Types of Evidence, Evidence Collection Order, Chain of Custody. Data Integrity and Preservation, Attack Attribution, The MITRE ATT&CK Framework, The Cyber Kill Chain, The Diamond Model of Intrusion Analysis, Incident Response, NIST Incident Response Life Cycle.

OS and File Systems Forensics: Describing computers and the nature of digital information, operating systems, describing filesystems that contain evidence, locating evidence in filesystems, explaining password security, encryption, and hidden files, Case studies: Linking the evidence to the user.

Digital Evidence: Defining digital evidence and its characteristics, the technical complexities of digital evidence, Determining the value and admissibility of digital evidence, Case study: linking the evidence to the user.

Network Monitoring and Tools: Introduction to Network Monitoring, Network Security Topology, Network Monitoring Methods, Network Taps, Traffic Mirroring and SPAN, Network Security Monitoring Tools, Network Protocol Analyzers, NetFlow, SIEM and SOAR. IP Vulnerabilities, ICMP Attacks, Amplification and Reflection Attacks, Address Spoofing Attacks, TCP Attacks, UDP Attacks, Defence-in-Depth, Assets, Vulnerabilities, Threats, The Security Onion, and The Security Artichoke. Examining Browsers, E-mails, Messaging Systems.

Mobile Phones: Locating evidence from Internet browsing, Messaging systems, E-mail analysis and the processing of large e-mail databases, Ontologies for Mobile and Embedded Forensics, The growing challenge of evidence recovery from mobile phones and handheld devices, Case study: Mobile phone evidence in a bomb hoax

Reference Books

CO6	Implement and Evaluating acquisition methods for digital evidence related to system security	5	PO5, PSO2

Syllabus

Digital Forensics and Incident Analysis: History of Forensic Science, Locard's exchange principle, Crime Reconstruction, Investigations, Evidence Dynamics, Digital Forensics and Its Environment: Forensic Soundness and Fundamental Principles, Digital Forensics, The Digital Forensics Process, Types of Evidence, Evidence Collection Order, Chain of Custody, Data Integrity and Preservation, Attack Attribution, The MITRE ATT&CK Framework, The Cyber Kill Chain, The Diamond Model of Intrusion Analysis, Incident Response, NIST Incident Response Life Cycle.

OS and File Systems Forensics: Describing computers and the nature of digital information, operating systems, describing filesystems that contain evidence, locating evidence in filesystems, explaining password security, encryption, and hidden files, Case studies: Linking the evidence to the user. Digital Evidence: Defining digital evidence and its characteristics, the technical complexities of digital evidence

Determining the value and admissibility of digital evidence, Case study: linking the evidence to the user. Digital evidence and its characteristics. Network Monitoring and Tools: Introduction to Network Monitoring, Network Security Topology, Network Monitoring Methods, Network Taps, Traffic Mirroring and SPAN, Network Security Monitoring Tools, Network Protocol Analyzers, NetFlow, SIEM and SOAR. IP Vulnerabilities, ICMP Attacks, Amplification and Reflection Address Spoofing Attacks, TCP Attacks, UDP Attacks, Defence-in-Depth, Assets, Vulnerabilities, Threats, The Security Onion, and The Security Artichoke. Examining Browsers, Ontologies for Mobile and Embedded Forensics, The rowing challenge of evidence recovery from mobile phones and handheld devices, Case study: Mobile phone evidence in a bomb hoaxE-mails, Messaging Systems, and Mobile Phones: Locating evidence from Internet browsing, Messaging systems, E-mail analysis and the processing of large e-mail databases,

23CSB3405M - DATABASE SYSTEM AND SECURITY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSB3405M	DATABASE SYSTEM AND SECURITY	DSS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Database Users, Roles related to User Administration and Java concepts.	2	PO2, PSO1
CO2	Apply Data Encryption and Database Vaults.	3	PO5, PSO1
CO3	Apply secret password Encryption & Decryption.	3	PO3, PSO1
CO4	Apply Data Encryption for the Data in Transit.	3	PO5, PSO1

Syllabus

Oracle users and Schema: Oracle users and Schema: Oracle database security New features. Db users and schemas, Working as the SYS User, System Privileges, Roles, The DBA Role, The Create-Session Role, Password-Protected Roles, Security Administrator User, Security Administration Role Verification, Security Administrator Role Acquisition, System Privileges Granted to the Security Administrator Role, Working as the Security Administrator, Acquire secadm_role from a SQL*Plus Local Connection, Toggle Between Roles, Create an Application Security User and roles, create an Application user ,Create HR View role, Oracle Java Database Connectivity, Java Packages, Environment, Java Stored Transparent Data Encryption, Encryption Data stored in database, protecting data, Viewing Data, TDE Setup- Oracle 10g, Oracle wallet, TDEs Key Management, Creating Encrypted columns in a table, Salt viewing encrypted columns, Encrypting an existing column, Table space Encryption, Oracle by Configuration, Exporting, Importing Encrypted Data. Oracle database vaults- Installing Oracle Database Vault, Realm Protection Patterns, creating first realm, Accessing realm Protection objects, Realm Components, Realm objects, Realm Authorization, Managing Role Provisioning with database, vault realm authorization, Realm and DBV Administrator, Realm authorization and objects owner Account, realm authorization controlled with DBV rule set, command rules, Components, Commands supported in Command rules, DBV connect command rule, Rule Sets, Factors.

Secret Password Encryption- Generating the Password and Artifacts, Calculating the Size of the Password, Initializing Static Class Members, Negotiated Algorithm, Encrypting with the Public RSA Key, Returning Secret Password Key Artifacts to the Client, Encrypting Data with Our Secret Password. Oracle Structures for Secret Password Encryption Package to Get Secret Password Artifacts and Encrypted Data, Application Security Package Specification, Application Security Package Body- Functions, Application Security Package Body: Procedures, Java Methods for Secret Password Decryption.

Data Encryption in Transit Granting More System Privileges to the Application Security User, Permitting Users to Execute Packages in Other Schemas, Application Security User Activities, Creating a Table for Error Logging, Creating a Table for Managing Our Error Log Table, Creating an Error Log Management Procedure, Creating a Trigger to Maintain the Error Log Table, Testing the Trigger, Updating the Application Security Package, Methods for Using and Testing Encryption in Transit, Loading Updated Oracle Java Secure Class into Oracle, Security Structures for the HR User, Logging the Error Message, Procedure Variables and Data Decryption, Integrity Constraint on Employees Table, Avoiding SQL Injection, Demonstrating Failure to SQL Inject in Stored Procedure, Executing the HR Package Specification and Body, Demonstrations and Tests of Encrypted Data Exchange, Sending Encrypted Data to Oracle Database for Insert/Update, Testing Encryption Failure with New Client Keys, Testing Failure with New Oracle Connection, Running Basic Key Exchange Without Data Encryption, Packaging Template to Implement Encryption.

Reference Books

- 1 Expert Oracle and Java Security: Programming secure Oracle Database Applications with Java, David Coffin, ., A.Press, L.P,2011.

- 3 Database Security and Auditing, Hassan A. Afyouni, -, Cengage Learning, 2005.
- 4 Implementing Database Security and Auditing: Includes Examples for Oracle, SQL Server, Db2 Udb, Sybase, Ben-Natan, R. B., -, Digital Press 2005.

23CSB3406M - PROGRAMMING FOR SMART CONTRACTS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSB3406M	PROGRAMMING FOR SMART CONTRACTS	PSC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Ethereum blockchain and using wallet for interacting with network	3	PO1, PO3
CO2	Compare and Contrast different methods of contract deployment and interaction.	4	PO2, PSO2
CO3	Evaluating advanced smart contracts with various test setups and try-catch	5	PO4, PSO2
CO4	Evaluating interactive front end for smart contracts and use Contracts design patterns.	5	PO3, PO4

Syllabus

Ethereum Ethereum basics Wallet Technology Nondeterministic Wallets Deterministic Wallets Hierarchical Deterministic Wallets Ethereum Addresses accounts Ethers Ethereum networks Consensus Protocols Ethers Proof of Work Algorithm Ethash Ethers Proof of Stake Algorithm Casper Delegated Proof of Stake DPoS

Ethers Cryptographic Hash Function Keccak256 mining on Ethereum Ethereum Virtual Machine EVM Smart contract Ethereum Name Service ENS managing contracts with wallet Ethereum wallets and transactions deploy and interact with contracts Ethereum app architecture Solidity Programming Language Contract structure Data Types Predefined Global Variables and function declarations Functions function modifiers Overview of Arrays overview of mapping and structs Pseudo random generator Gas and transactions Mnemonic phrases compiling solidity the Compile script contract deployment The Structure of a Transaction testing with remix redeploying contracts

Advanced Smart contracts Sending ether from contracts resetting contracts state trycatch assertions testing function modifiers Contract Constructor and selfdestruct Adding a Constructor and selfdestruct Contract Inheritance Error Handling assert require revert Events Calling Other Contracts send call callcode delegatecall Gas Considerations Avoid Dynamically Sized Arrays Avoid Calls to Other Contracts The lottery contract Lottery design Smart Contract Security

Building interactive front end CreateReactapp Web3 setup deploying contracts local contracts instances rendering contract data Form setup Contracts Design Patterns Contract selfdestruction pattern Factory contract pattern Name Registry pattern Mapping iterator pattern Setting up private blockchain network Boot node toolpeer discovery setting up a PoA Clique Network Clique based private network testing ERC20 token specifications ERC20 token implementation

Reference Books

- 2 Mastering Blockchain: Unlocking the Power of Cryptocurrencies, Smart Contracts, and Decentralized Applications, by Lorne Lantz (Author), Daniel Cawry (Author), 2020, Paperback.
- 3 Introducing Ethereum and Solidity: Foundations of Cryptocurrency and Blockchain Programming for Beginners, Chris Dannen, 2017, Apress.
- 4 Mastering Ethereum: Building Smart Contracts and DApps, Andreas M. Antonopoulos and Gavin Wood, 2019, O'Reilly.

23CSB3407M - CLOUD SECURITY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSB3407M	CLOUD SECURITY	CS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Summarize the principles of cryptographic approach to virtualization.	2	PO3, PO5, PSO1
CO2	Illustrate security system issues and vulnerabilities of virtual systems.	2	PO5, PO8, PSO1
CO3	Apply the virtual system attack countermeasures to provide security enhancements.	3	PO5, PO8, PSO1
CO4	Identify data security storage and apply the concepts to avoid legal Compliance issues.	3	PO2, PO3, PSO1

Syllabus

Security Concepts- Confidentiality, privacy, integrity, authentication, non-repudiation, availability, access control, defense in depth, least privilege, the importance of security in the cloud, Importance in PaaS, IaaS and SaaS

Multi-tenancy Issues- Isolation of users/VMs from each other. Virtualization System Security Issues: e.g. ESX and ESXi Security, ESX file system security, storage considerations, backup, and recovery; Virtualization System Vulnerabilities: Management console vulnerabilities, management server vulnerabilities, administrative VM vulnerabilities, guest VM vulnerabilities, hypervisor vulnerabilities, hypervisor escape vulnerabilities, configuration issues, and malware (botnets, etc).

Virtualization System-Specific Attacks- Guest hopping, attacks on the VM (delete the VM, attack on the control of the VM, code or file injection into the virtualized file structure), VM migration attack, hyperjacking. Technologies for virtualization-Based Security Enhancement: IBM security virtual server protection, virtualization-based sandboxing

Storage Security- HIDPS, log management, Data Loss Prevention. Location of the Perimeter, Legal and Compliance Issues: Responsibility, ownership of data, right to penetration test. Local laws, examination of modern Security Standards (eg PCIDSS), Standards to deal with cloud services and virtualization, compliance for the cloud provider vs. compliance for the customer.

Reference Books

- 2 Cloud Security, Ronald L. Krutz, Russell Dean Vines, 2010, -.
- 3 Cloud Security Attacks, Techniques, Tools, and Challenges, Preeti Mishra, Emmanuel S Pilli, R C Joshi, 2021, CRC Press.
- 4 Cloud Security: Concepts, Applications and Perspectives (Cyber Ecosystem and Security), Brij B. Gupta, 2021, CRC Press.

23CSB3508 - SECURE SOFTWARE ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSB3508	SECURE SOFTWARE ENGINEERING	SSE	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand about threats and its properties that target software and identify the resources that addresses the attacks.	2	PO3, PSO1
CO2	Understand the secure requirement model to initialise the software development process and risk assessment.	2	PO3, PSO1
CO3	Evaluate software testing methods to analyse the software code to improve the quality and describe the assembly changes for system design.	3	PO9, PSO1
CO4	Analyze the governance security policy to ensure enterprise security in project management	4	PO9, PSO1

Syllabus

Security is a Software Issue - The Problem, Software Assurance and Software Security, Threats to software security, Sources of software security, what makes software secure - Defining properties of secure software How to assert and specify desired security properties, secure software specifications and requirements, Requirements Engineering for secure software - Misuse and Abuse cases

Square Process Model, Requirements Elicitation and Prioritization Design, Secure software architecture and design - Architectural Risk Analysis, Security Principles, Guidelines and Attack Patterns.

Secure Coding and Testing - Code Analysis, Practices, Testing and Consideration through the SDLC, Security and Complexity - Security failures and analysis, System Complexity.

Governance and Security, Governing for Enterprise Security, Defining an effective Enterprise Security program, Security Governance Activities, Enterprise Software Security Framework, Security and project management.

Reference Books

- 1 Software Security Engineering , Julia H Allen, Sean Barnum, Robert J Ellison, Gary McGraw, Nancy R Mead , 2008, Addison Wesley.
- 2 Software Security - Building Security In, Gray McGraw, 2017, Addison Wesley.
- 3 Secure Coding in C and C++, Robert C.Seacord, 2013, Addison Wesley.
- 4 Enterprise Software Security, Kenneth R. Van Wyk, Mark G. Graff, Dan S. Peters, Diana L Burely, 2014, Addison Wesley.

23CSB3509 - WEB SECURITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSB3509	WEB SECURITY	WS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and discuss about Web Security Concepts.	2	PO3, PSO1
CO2	Identify different techniques involved in protecting privacy and principles of Web Security.	3	PO9, PSO1
CO3	Determine security for content providers through privacy policies and security legislations.	3	PO7, PSO1
CO4	Deploy SSL server Certificates, client side digital certificates and Microsoft's Authenticode.	4	PO4, PSO1

Syllabus

Introduction web technology, Web Security landscape, The Architecture of World Wide Web, Cryptography basics, Cryptography and the web, Understanding SSL and TLS, Digital Identification I- Passwords, Biometrics and Digital Signatures Digital Identification II: Digital Certificates, CA's and PKI

The Webs War on Your Privacy, Privacy-Protecting Techniques, Web Server Security- Physical Security for Servers, Host Security for Servers, Securing Web Applications Deploying SSL Server Certificates, Securing Your Web Service, Computer Crime

Security for Content Providers- Controlling Access to Your Web Content, Client-Side Digital Certificates, Code Signing and Microsofts Authenticode Security for Content Providers: Pornography, Filtering Software, and Censorship

Privacy Policies, Legislation, and P3P, Privacy Policies, Legislation, and P3P, Digital Payments, Intellectual Property and Actionable Content

Reference Books

- 1 Web Security, Privacy & Commerce, Simson Garfinkel, Gene Spafford, 2nd Edition, O'Reilly Media.
- 2 Web Security: A WhiteHat Perspective , Routledge, 1st Edition, Auerbach Publications.
- 3 Web Application Security , Andrew Hoffman, -, O'Reilly Media.
- 4 Computer Security and Cryptography, Alan G Konheim, -, Wiley.
- 5 Web Security, Lincoln D. Stein, -, Addison-Wesley.

23CSB3510 - SECURITY GOVERNANCE & MANAGEMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSB3510	SECURITY GOVERNANCE & MANAGEMENT	SGM	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	The students understand the fundamental principles of security governance and management, including their necessity and implementation strategies. They will also gain a thorough grasp of access management techniques like authentication, authorization, and access control.	2	PO1, PO4, PO5, PSO1
CO2	The student will be able to apply knowledge of security frameworks (COBIT, CMMI, ISO) and risk management principles to define strategic security metrics aligned with governance objectives and information security outcomes. This outcome focuses on applying the listed topics (frameworks, risk management) to achieve a practical goal: defining security metrics that meet both governance and security goals.	3	PO3, PO4, PO5, PSO1
CO3	By Apply current security & risk landscapes, students will be able to apply knowledge to implement comprehensive security strategy, including identifying gaps, defining success metrics, and adapting to challenges.	3	PO3, PO4, PO5, PSO1
CO4	Applying Incident Management and Response Metrics to various organizations	3	PO1, PO4, PO5, PSO1

Syllabus

Governance Overview How Do We Do It What Do We Why Governance Benefits of Good Governance A Management Problem Legal and Regulatory Requirements Security Governance and Regulation Roles and Responsibilities The Board of Directors Executive Management Security Steering Committee The CISO CIA Model User identity and Access Management Authentication Account Authorization Validation Access Control

Strategic Metrics Governance Objectives Information Security Outcomes Defining Outcomes Security Governance Objectives Security Architecture CobiT Capability Maturity Model ISO IEC 27001 27002 63 Other Approaches Risk Management Objectives Risk Management Responsibilities Managing Risk Appropriately Determining Risk Management Objectives

Current State Current State of Security Current State of Risk Management Gap Analysis Unmitigated Risk Developing a Security Strategy Failures of Strategy Attributes of a Good Security Strategy Strategy Resources Strategy Constraints Sample Strategy Development The Process Implementing Strategy Action Plan Intermediate Goals Action Plan Metrics Reengineering Inadequate Performance Elements of Strategy.

Security Program Development Metrics: Information Security Program Development Metrics ,Program Development Operational Metrics ,Information Security Management Metrics: Management Metrics ,Security Management Decision Support Metrics ,CISO Decisions , Incident Management and Response Metrics: Incident Management Decision Support Metrics.

23CSC3101A - FUNDAMENTALS OF CLOUD-BASED SCIENTIFIC COMPUTING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3101A	FUNDAMENTALS OF CLOUD-BASED SCIENTIFIC COMPUTING	FCS	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles of Cloud Computing, Cloud Economics, DevOps & cloud platforms.	2	PO3, PO4, PSO2
CO2	Apply the appropriate Cloud Services to various scenarios.	3	PO3, PO4, PSO2
CO3	Deploy, manage and operate applications on scalable, highly available and fault-tolerant Cloud Platforms.	6	PO3, PO4, PSO2
CO4	Develop skills for implementing cloud solutions for various scenarios.	3	PO3, PO4, PSO2
CO5	Develop skills in containerization, orchestration, and reproducible research practices.	3	PO3, PO4, PSO2
CO6	Explore different cloud service models and deployment models.	3	PO3, PO4, PSO2
CO7	Develop Practical Applications Using Cloud Computing:	3	PO3, PO4, PSO2

Syllabus

Fundamentals of Cloud Computing, Architecture Layers of Cloud Computing, Scientific Service on the Cloud, Scientific Programming Paradigms, Delivering Scientific Computing Services on the Cloud

Cloud storage Landscape Storage as a service , Using cloud storage services , Distributed Databases: CosmosDB, using Amazon cloud storage services, using Azure cloud storage services, , using google cloud storage services, using openstack cloud storage services,

Computing in the cloud, Computing as a service , Using and managing virtual machines , Using and managing containers , Scaling deployments, Serverless and Function as a Service, advanced computing services

Stream data to the cloud, Scientific streaming examples, basic design challenges of streaming systems, amazon kinesis and fire hose, streaming data with azure, google dataflow, kinesis, spark and array of things

Containerization and Orchestration, Security and Compliance, Cost Management and Optimization, Case studies of cloud-based scientific computing projects in various domains, Best practices for designing, implementing, and managing cloud-based scientific computing workflows

Reference Books

- 1 Cloud Computing For Science and Engineering, Ian Foster, Dennis B. Gannon, 2017, MIT Press.
- 2 Cloud Computing with e-Science Applications, Olivier Terzo, Lorenzo Mossucca, 2018, CRC Press.
- 3 Cloud Computing for Scientific Research, Benjamin Disraeli, 2020, Kindle.
- 4 Fundamentals of Cloud Computing, A. Kannammal, 2020, Cengage.

23CSC3101E - FUNDAMENTALS OF CLOUD-BASED SCIENTIFIC COMPUTING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3101E	FUNDAMENTALS OF CLOUD-BASED SCIENTIFIC COMPUTING	FCS	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles of Cloud Computing, Cloud Economics, DevOps & cloud platforms.	2	PO3, PO4, PSO2
CO2	Learn to deploy, manage, and scale scientific applications on the cloud.	3	PO3, PO4, PSO2
CO3	Acquire skills in data management, analysis, and visualization using cloud-based tools.	4	PO3, PO4, PSO2
CO4	Develop skills for implementing cloud solutions for various scenarios.	3	PO3, PO4, PSO2
CO5	Analyze consequences and benefits of migration, data intensive, and applications of cloud	4	PO3, PO4, PSO2
CO6	Apply hands-On exposure of Cloud infrastructure,virtualization, Load balancing and authentication, and security services	3	PO3, PO4, PSO2
CO7	Analyze the Infrastructure related concepts as best practices	4	PO3, PO4, PSO2

Syllabus

Fundamentals of Cloud Computing,Architecture Layers of Cloud Computing,Scientific Service on the Cloud,Scientific Programming Paradigms,Delivering Scientific Computing Services on the Cloud

Cloud storage LandscapeStorage as a service ,Using cloud storage services ,Distributed Databases: CosmosDB,using Amazon cloud storage services,using Azurecloud storage services,,using googlecloud storage services,using openstack cloud storage services,

Computing in the cloud, Computing as a service , Using and managing virtual machines , Using and managing containers , Scaling deployments, Serverless and Function as a Service,advanced computing services

Streamind data to the cloud, Scientific streaming examples,basic design challenges of streaming systems,amazon knesis and fire house,straming data with azure,google dataflow,knesis, spark and array of things,,Cloud-Based Scientific Applications,Common scientific applications and workloads in the cloud.,Case studies of cloud-based scientific research.Deploying a scientific application on a cloud platform.Future trends in cloud-based scientific computing.

Case Studies of Cloud-Based Scientific Research,Cloud-Based Collaborative Research Platforms,Future Trends in Cloud-Based Scientific Computing,Quantum Computing in the Cloud,Edge Computing and IoT Integration

23CSC3202A - DEVELOPMENT OF SCIENTIFIC APPLICATIONS USING CLOUD-BASED TECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3202A	DEVELOPMENT OF SCIENTIFIC APPLICATIONS USING CLOUD-BASED TECHNOLOGY	DSA	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Explain the core concepts and architecture of cloud computing, including deployment and service models	2	PO1, PO5, PSO2
CO2	Proficiently use major cloud platforms and tools for managing scientific data and performing analytics.	3	PO1, PO3, PO5, PSO2
CO3	Develop scalable scientific applications using parallel and distributed computing principles.	3	PO1, PO2, PO5, PSO2
CO4	Effectively deploy, monitor, and manage scientific applications in the cloud, ensuring performance optimization and resource management.	4	PO1, PO2, PSO2
CO5	Application of Tools handle the data , and analysis of futute trends and research scopes	4	PO2, PO3

Syllabus

Introduction to Cloud Computing, Cloud Computing Basics: Overview of cloud computing concepts, including Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). Deployment Models: Description of different cloud deployment models such as public, private, hybrid, and multi-cloud. Cloud Architecture: Understanding cloud architecture, including virtualization, containerization, and orchestration. Benefits and Challenges: Discussion of the benefits and challenges of using cloud computing for scientific applications

Cloud Platforms and Tools for Scientific Computing Major Cloud Platforms: Overview of major cloud platforms such as AWS, Google Cloud, and Microsoft Azure. Data Management: Managing scientific data in the cloud, including storage, retrieval, and analytics. Security and Compliance: Understanding.

Development of Scientific Applications Designing Scientific Applications: Principles and best practices for designing scalable and efficient scientific applications in the cloud. Parallel and Distributed Computing: Introduction to parallel and distributed computing in the cloud, including map-reduce, job scheduling, and scaling.

Deployment, Management, and Future Trends Deployment of Scientific Applications: Methods for deploying scientific applications to the cloud, including CI/CD pipelines and containerization. Monitoring and Management: Monitoring cloud-based scientific applications for performance, resource usage, and error detection. Case Studies: Real-world examples of scientific applications developed using cloud-based technology.

Cloud Tools for Scientific Computing: Introduction to cloud tools such as Jupyter Notebooks, Dask, and TensorFlow. Data Processing and Analytics: Techniques for processing and analyzing large datasets in scientific applications. Machine Learning and AI: Leveraging machine learning and AI tools in the cloud for scientific research. Future Trends in Cloud Computing: Discussion of emerging trends in cloud computing, such as serverless computing, edge computing, and quantum computing

Introduction to Cloud Computing, Cloud Computing Basics: Overview of cloud computing concepts, including Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). Deployment Models: Description of different cloud deployment models such as public, private, hybrid, and multi-cloud. Cloud Architecture: Understanding cloud architecture, including virtualization, containerization, and orchestration. Benefits and Challenges: Discussion of the benefits and challenges of using cloud computing for scientific applications.

Cloud Platforms and Tools for Scientific Computing Major Cloud Platforms: Overview of major cloud platforms such as AWS, Google Cloud, and Microsoft Azure. Data Management: Managing scientific data in the cloud, including storage, retrieval, and analytics. Security and Compliance: Understanding.

Development of Scientific Applications Designing Scientific Applications: Principles and best practices for designing scalable and efficient scientific applications in the cloud. Parallel and Distributed Computing: Introduction to parallel and distributed computing in the cloud, including map-reduce, job scheduling, and scaling.

Deployment, Management, and Future Trends Deployment of Scientific Applications: Methods for deploying scientific applications to the cloud, including CI/CD pipelines and containerization. Monitoring and Management: Monitoring cloud-based scientific applications for performance, resource usage, and error detection. Case Studies: Real-world examples of scientific applications developed using cloud-based technology.

23CSC3203A - DISTRIBUTED SCIENTIFIC COMPUTING IN THE CLOUD (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3203A	DISTRIBUTED SCIENTIFIC COMPUTING IN THE CLOUD	DSCC	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Describe the Distributed file system environment, Virtualization and basics of Cloud Computing	3	PO3, PSO1
CO2	Examine the Parallel and Distributed Computing architectures in HPC, and exploring different Cloud services like IaaS, PaaS and SaaS	4	PO4
CO3	Analyze Scientific Computing Workflow Management for High Performance Computing in the Cloud	4	PO5, PSO1
CO4	Interpret the Data and Network Security on cloud with effective Resource Management and Cost Optimization	4	PO3
CO5	Implementaion of Distributed Scientific Computing applications with AI tools and projects with Case studies	4	PO4, PSO1

Syllabus

Introduction to Distributed Systems and Cloud environment: About Distributed systems, File system, Characteristics and challenges, About Virtualization, Cloud service models (IaaS, PaaS, SaaS), Cloud deployment models (public, private, hybrid), Key cloud providers and their services

Concepts of parallelism and concurrency, HPC, Distributed computing architectures, Job scheduling and resource management, Distributed File Systems : Hadoop Distributed File System (HDFS), Google File System (GFS), Data storage and retrieval in distributed environments

Scientific Workflow Management : Workflow management systems (Pegasus, Taverna), Automating scientific workflows, High Performance Computing in the Cloud, HPC clusters and cloud integration, Performance optimization techniques, Practical applications and case studies

Resource Management and Cost Optimization, Cloud resource management tools (Kubernetes, Apache Mesos), Cost monitoring and management strategies, Case studies in budget management, Data Security and Privacy : Security challenges in distributed and cloud computing, Data encryption and access control, Compliance and ethical considerations

Emerging technologies and trends in Distributed Scientific Computing, Edge computing and IoT integration, About AI Tools and Future directions in distributed scientific computing

Reference Books

- 1 Distributed and Cloud Computing: From Parallel Processing to the Internet of Things, Kai Hwang, Jack Dongarra, and Geoffrey C. Fox, 1, 2011, Morgan Kaufmann Publishers.

23CSC3203E - DISTRIBUTED SCIENTIFIC COMPUTING IN THE CLOUD (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3203E	DISTRIBUTED SCIENTIFIC COMPUTING IN THE CLOUD	DSCC	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To understand the basics of distributed systems,virtualization and cloud computing	2	PO4
CO2	Describe Distributed Computing environments and exploring different Cloud services like IaaS,PaaS and SaaS	3	, PSO1
CO3	Describe and analyze different techniques for parallelizing and distributed high performance scientific workflows in the cloud.	4	PO3
CO4	Identify tools and libraries for cloud-based scientific computing with effective Resource utilization and Cost Optimization	4	PO4, PSO1
CO5	Design and implement a basic scientific application using AI tools on cloud platform.	4	PO3

Syllabus

Introduction to Distributed Systems,Cloud environment:,Virtualization,Types of Cloud and about different cloud service providers.

Concepts of parallelism and concurrency,Distributed File Systems :Hadoop Distributed File System (HDFS) , Google File System (GFS) and Cloud service models (IaaS, PaaS, SaaS)

About Scientific computing and Scientific Workflow Management Systems (Pegasus, Taverna),Automating scientific workflows, High Performance Computing in the Cloud

Resource Management and Cost Optimization, Cloud resource management tools (Kubernetes, Apache Mesos), Cost monitoring and management strategies, Case studies in budget management,

Emerging technologies and trends in Distributed Scientific Computing, About AI Tools and Future directions in distributed scientific computing

23CSC3203R - DISTRIBUTED SCIENTIFIC COMPUTING IN THE CLOUD (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3203R	DISTRIBUTED SCIENTIFIC COMPUTING IN THE CLOUD	DSCC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To understand basic concepts of distributed systems, file systems architecture, about computing intensive applications and basics of Cloud computing	2	PO3, PSO1
CO2	Describe the principles and mechanisms of virtualization, Types of Cloud and about different cloud service providers and their services	3	PO4
CO3	Apply distributed computing principles to scientific computing and workflows.	4	PO3, PO5, PSO1
CO4	Design and implement distributed scientific computing solutions in cloud environments.	4	PO4

Syllabus

Characteristics and challenges in distributed systems, Concepts of parallelism and concurrency, about computing intensive applications, HPC and basics of cloud with deployment models (public, private, hybrid),

Virtualization and containerization, Compute, storage, and networking in the cloud, Elasticity and scalability, About various cloud services and Case studies in cloud infrastructure for scientific computing

About scientific computing and their workflow management systems, Designing scientific workflows, Automating and scaling workflows in the cloud

Distributed systems: characteristics and challenges, Cloud computing: service models (IaaS, PaaS, SaaS), Virtual machines and containers: VMware, Docker, Kubernetes, Cloud architecture: compute, storage, networking, scalability, Distributed computing: MPI, MapReduce, Spark, workflow management (Pegasus, Nextflow)

Reference Books

23CSC3304A - CLOUD BASED HIGH PERFORMANCE COMPUTING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3304A	CLOUD BASED HIGH PERFORMANCE COMPUTING	CHC	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply fundamentals of Cloud Computing and HPC	3	PO2, PO3, PSO1
CO2	Analyze Cloud Infrastructure and Resource Management	4	PO2, PO3, PO4, PSO1
CO3	Analyze Programming Models for Cloud-based HPC	4	PO2, PO3, PO4, PSO1
CO4	Analyze HPC Applications on the Cloud	4	PO2, PO3, PO4, PSO1
CO5	Analyze Advanced Cloud-based HPC Technique, and future trends	4	PO2, PO3, PO4, PSO1
CO6	Analyze cloud infrastructure services, and parallel programming tasks	4	PO2, PO3, PO4
CO7	Analyze the storage, networking, serverless, database management services, openMP, MPI over a cloud	4	PO2, PO3, PO4

Syllabus

Introduction to Cloud Computing and HPC: deployment models, service models, benefits, challenges, parallel computing concepts, architectures, applications, major cloud providers.

Cloud Infrastructure and Resource Management: Cloud Infrastructure Components such as compute, storage, networking, Virtualization Technologies such as virtual machines, containers.

Programming Models for Cloud-based HPC: Parallel Programming Paradigms such as MPI, OpenMP, Cloud-specific Programming Models such as MapReduce, Spark, scaling, load balancing.

HPC Applications on the Cloud: Scientific simulations, machine learning workloads, big data analytics, Security Considerations for HPC in the Cloud.

Big Data Analytics on the Cloud such as distributed processing frameworks, Cloud-based HPC for Emerging Applications such as AI, IoT, genomics, serverless HPC, hardware advancements in cloud based HPC.

23CSC3405M - CLOUD-BASED GRID COMPUTING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3405M	CLOUD-BASED GRID COMPUTING	CGC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	analyze the evolution of distributed computing technologies, from basic network-based systems to advanced cloud computing and service-oriented architectures, and assess their impact on modern computing paradigms.	4	PO1, PO2, PO3
CO2	evaluate the Open Grid Services Architecture (OGSA), including its motivation, functionality requirements, and service models, and apply this knowledge to understand the implementation of data-intensive services in a grid computing environment.	5	
CO3	evaluate various cloud deployment models and computing categories, assess the pros and cons of cloud computing, and analyze virtualization\	5	PO1, PO3
CO4	analyze and apply security models, methods, and practices to ensure robust security across grid and cloud computing environments	4	PO2, PSO2

Syllabus

Introduction to Distributed Computing: Evolution of distributed computing technologies, network-based systems, service-oriented architectures, and advanced cloud computing.

Open Grid Services Architecture (OGSA): Motivation, functionality requirements, service models, and implementation of data-intensive services in a grid computing environment.

Cloud Computing Models and Virtualization: Cloud deployment models, computing categories, pros and cons of cloud computing, and an in-depth analysis of virtualization technologies.

Security in Grid and Cloud Computing: Security models, methods, practices, and ensuring robust security across grid and cloud computing environments.

23CSC3406M - CLOUD COMPUTING FOR SCIENTIFIC DISCOVERY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3406M	CLOUD COMPUTING FOR SCIENTIFIC DISCOVERY	CCFSD	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Harness cloud computing resources to accelerate scientific data analysis	3	PO5, PSO1
CO2	Implement cloud-based collaboration tools for interdisciplinary scientific projects	3	PO9
CO3	Optimize scientific workflows using cloud computing architectures	4	PO5, PSO1
CO4	Evaluate the impact of cloud computing on scientific innovation and discovery	5	PO6

Syllabus

Introduction to cloud computing for scientific data analysis - Cloud-based data storage solutions - Cloud-based data processing tools - Data visualization in the cloud - Hands-on exercises in utilizing cloud resources for data analysis

Cloud based collaboration platforms and tools - Real time communication and collaboration in the cloud - Data sharing and collaborative research environments - Virtual research environments in the cloud - Case studies of successful interdisciplinary projects using cloud technologies

Designing cloud native architectures for scientific workflows - Scalability and resilience in cloud architectures - Containerization for scientific applications - Orchestration tools for workflow optimization - Implementing serverless computing for scientific workflows

Ethical considerations in cloud-based scientific research - Data privacy and compliance in the cloud - Security challenges and best practices in cloud-enabled research - Case studies showcasing the impact of cloud computing on scientific innovation - Future trends in cloud-based scientific research and innovation

23CSC3507 - CLOUD-BASED SCALABLE COMPUTING AND BIG DATA ANALYTICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3507	CLOUD-BASED SCALABLE COMPUTING AND BIG DATA ANALYTICS	CSCBD	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of cloud computing models and architectures.	2	PO1, PSO1, PSO2
CO2	Outline scalable computing techniques for handling big data in cloud environments.	2	PO3, PSO1
CO3	Demonstrate distributed computing paradigms and their applications in big data analytics.	2	PO1, PO2, PSO2
CO4	Develop hands-on experience with popular big data analytics tools and platforms.	3	PO3, PSO2

Syllabus

Overview of cloud computing concepts and models - Cloud service models: IaaS, PaaS, SaaS-Cloud deployment models: public, private, hybrid- Cloud infrastructure and virtualization technologies

Scalability concepts and challenges- Horizontal vs. vertical scaling- Elasticity and auto-scaling-Distributed computing frameworks: Hadoop, Spark

Introduction to big data analytics-Characteristics of big data: volume, velocity, variety, veracity-Batch vs. real-time processing-Big data storage technologies: HDFS, NoSQL databases

MapReduce programming model-Spark RDDs and data processing operations-Stream processing with Apache Kafka and Spark Streaming-Distributed data processing with Apache Flink

Reference Books

23CSC3508 - PARALLEL COMPUTING FOR SCIENTISTS USING CLOUD PLATFORMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CSC3508	PARALLEL COMPUTING FOR SCIENTISTS USING CLOUD PLATFORMS	PCSCP	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles and architectures of parallel computing	2	PO2, PO4, PSO1
CO2	Develop parallel algorithms and applications using popular programming paradigms	2	PO3, PSO2
CO3	Utilize cloud computing platforms for deploying and scaling applications	3	PO2, PO4, PSO1
CO4	Apply parallel computing techniques to real-world scientific problems	3	PO3, PSO2

Syllabus

Foundations of Parallel Computing and Cloud Platforms Overview: This module introduces the basic concepts and architectures of parallel computing, including shared and distributed memory systems. Students will also learn about the role of cloud platforms in computing, exploring major services from providers like AWS, Azure, and Google Cloud. **Learning Outcomes:** Understand the key principles of parallel computing architectures and identify the core services and benefits of using cloud platforms for computational tasks.

Programming for Parallel Systems Overview: Focuses on the programming models and environments for developing parallel applications. Covers popular paradigms such as MPI, OpenMP, and CUDA, and introduces containerization technologies like Docker for creating consistent development environments. **Learning Outcomes:** Comprehend and apply parallel programming models to develop and deploy scalable applications, and understand how containerization supports the development of parallel applications on cloud platforms

Deploying and Scaling Applications on the Cloud Overview: Students learn to design and implement scalable applications using cloud infrastructure, including virtual machines, managed databases, and storage solutions. Practical examples include deploying web applications and handling large data sets in the cloud. **Learning Outcomes:** Gain a comprehensive understanding of cloud deployment models and services, and learn to implement and scale applications effectively using cloud resources

Performance Optimization and Real-World Applications Overview: This module covers techniques for benchmarking, profiling, and optimizing the performance of parallel applications. Students will also engage with case studies that illustrate the application of parallel computing in scientific research, such as simulations and data analytics. **Learning Outcomes:** Understand methods for assessing and enhancing the performance of parallel systems, and apply these techniques to optimize real-world scientific applications on the cloud.

Reference Books

- 1 Parallel Programming in C with MPI and OpenMP, Michael Quinn, 2023, Parallel Programming in C with MPI and OpenMP.
- 2 Patterns for Parallel Programming, Timothy G. Mattson, Beverly A. Sanders, and Berna L. Massingill, 2004, Addison-Wesley Professional.
- 3 Cloud Computing: Concepts, Technology & Architecture, Thomas Erl, 2013, Pearson Service Technology.
- 4 High Performance Parallelism Pearls Volume One: Multicore and Many-core Programming Approaches, James Reinders and Jim Jeffers, 2023, High Performance Parallelism Pearls Volume One.

23CTM3101A - BUILDING INFORMATION MODELLING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CTM3101A	BUILDING INFORMATION MODELLING	BIM	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts and principles of Building Information Modeling (BIM).	2	PO1, PO5, PO6, PSO1
CO2	Apply BIM software tools to create and manage 3D models of building components and systems.	3	PO1, PO5, PO6, PSO1
CO3	Analyze and interpret BIM data for effective decision-making and project management.	3	PO1, PO5, PO6, PSO1
CO4	Evaluate the integration of BIM with other technologies and methodologies in building design.	4	PO1, PO5, PO6, PSO1
CO5	Create and manage BIM-based documentation, including drawings, schedules, and cost estimates.	3	PO1, PO5, PO6, PSO1
CO6	Collaborate and coordinate with various stakeholders using BIM to enhance project outcomes.	2	PO1, PO5, PO6, PSO1
CO7	Assess the impact of BIM on the lifecycle of a building, from design through construction and maintenance.	3	PO1, PO5, PO6, PSO1

Syllabus

Basics of BIM: Fundamentals of Building Information Modeling, BIM, Project Delivery Methods & Trends BIM Adoption & Perceived ROI BIM for FM Concept BIM Proficiency Project Execution Planning

The Uses of BIM: BIM use classification system and structure, the purposes and objectives of BIM, elaborating on the BIM use characteristics, level of development, selection of BIM uses

Project BIM Execution Planning: Overview of the project execution planning procedure for BIM, identifying BIM goals and uses for a project, designing the BIM project execution process Developing information exchanges : Pulling the information through the project, information exchange worksheet.

Define supporting infrastructure for BIM implementation: Project information, project BIM goals / BIM uses, organizational roles and staffing BIM and facility data requirements, delivery strategy / contract. Implementing the BIM project execution planning procedure: Meeting Structure for Developing a BIM Project Execution Plan, Planning Meeting Schedule, Monitoring Progress against the BIM Execution Plan

Developing BIM Model using Revit Software and submission of project report

Reference Books

23CTM3101E - BUILDING INFORMATION MODELLING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CTM3101E	BUILDING INFORMATION MODELLING	BIM	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understand Building Information Modeling (BIM) software to create and manipulate 3D digital representations of construction projects	2	PO1, PO5, PO6, PSO1
CO2	Apply the impact of BIM on different stages of the project lifecycle, including design, construction, and facility management, to optimize project outcomes and decision-making	3	PO1, PO5, PO6, PSO1
CO3	Analyse Integrate data from various sources and disciplines into BIM models, ensuring comprehensive project analysis and informed decision-making in a complex and dynamic environment	4	PO1, PO5, PO6, PSO1
CO4	demonstrating comprehension and practical application. Building Information Modeling (BIM)	2	PO1, PO5, PO6, PSO1
CO5	Create and manage BIM-based documentation, including drawings, schedules, and cost estimates.	3	PO1, PO5, PO6, PSO1
CO6	Collaborate and coordinate with various stakeholders using BIM to enhance project outcomes.	3	PO1, PO5, PO6, PSO1
CO7	Assess the impact of BIM on the lifecycle of a building, from design through construction and maintenance.	3	PO1, PO5, PO6, PSO1

Syllabus

Introduction to Building Information Modeling (BIM): overview of BIM principles and concepts, History and evolution of BIM in the construction industry Benefits and advantages of implementing BIM in construction projects, BIM software and tools overview, Introduction to BIM project workflows and collaboration processes

BIM Modeling and Visualization: Fundamentals of BIM modeling techniques, Creating and managing 3D digital models using BIM software, Visualization and rendering techniques for BIM models Applying BIM for design exploration and iteration, Clash detection and coordination using BIM models

BIM Data Management and Integration: BIM data management strategies and best practices in BIM projects, Integrating data from various sources and disciplines into BIM models, Parametric modeling and family creation in BIM, Linking BIM models with external databases and spreadsheets, BIM interoperability and data exchange standards

BIM in Project Lifecycle Phases: BIM in the design phase: Conceptual design, detailed design, and design coordination, BIM in the construction phase: Construction sequencing, quantity takeoff, and scheduling, BIM in the facility management phase: Asset management, maintenance planning, and energy analysis Collaborative workflows and information exchange during project lifecycle phases, BIM for project coordination and communication with stakeholders

Advanced Topics in BIM: Advanced clash detection and resolution techniques, BIM for sustainable design and green building practices, BIM for facilities management and operations, BIM for infrastructure and civil engineering projects, Emerging trends and future developments in BIM

23CTM3202A - ADVANCED CONSTRUCTION TECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CTM3202A	ADVANCED CONSTRUCTION TECHNOLOGY	ACT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding of advanced concrete materials and technologies:	2	PO1, PO5, PSO1
CO2	Apply the ability to assess and enhance concrete performance:	2	PO1, PO5, PSO1
CO3	Apply the competence in quality control and quality assurance:	3	PO1, PO5, PSO1
CO4	Mention the application of sustainable and innovative practices:	3	PO1, PO5, PSO1
CO5	Understand the structural performance and durability enhancements achieved through advanced concrete mixes, additives, and curing techniques.	2	PO1, PO5, PSO1
CO6	Explore the principles and applications of advanced concrete materials and technologies.	2	PO1, PO5, PSO1

Syllabus

Introduction to Advanced Concrete Technology: Overview of advanced concrete materials and technologies, Evolution of concrete technology and industry trends, Sustainable practices in concrete technology, Role of advanced concrete in construction projects

Advanced Concrete Materials: High-performance concrete: properties, mix design, and applications, Self-compacting concrete: rheology, mix design, and advantages, Fiber-reinforced concrete: types, properties, and reinforcement mechanisms, Lightweight concrete: types, properties, and applications, Self-healing concrete: principles, mechanisms, and implementation

Concrete Mix Design and Optimization: Principles of concrete mix design: factors influencing proportions and performance, Optimization techniques for strength, workability, durability, and sustainability, Incorporation of supplementary cementitious materials (SCMs) and chemical admixtures, Statistical methods and computer-aided tools for mix design optimization, Case studies and practical exercises on mix design and optimization

"Testing and Performance Evaluation: Testing methods for concrete properties: compressive strength, workability, durability, Non-destructive evaluation techniques for assessing concrete performance Analysis and interpretation of test results for performance evaluation, Quality control measures for concrete production and placement, Evaluation of long-term performance and service life prediction.Sustainable Practices and Innovation in Concrete Technology: Use of recycled aggregates in concrete production, Carbon footprint reduction strategies in concrete technology, Eco-friendly admixtures and alternative binders for sustainability, Emerging trends and innovations in sustainable concrete technology, Integration of sustainable practices into design, construction, and maintenance processes"

ustainable Concrete Technologies Green concrete materials and their benefits Carbon footprint reduction strategies in concrete production Recycling and reuse of concrete waste in sustainable construction practices

Emerging Trends in Concrete Technology Nanotechnology applications in concrete 3D printing and robotic construction techniques Smart concrete technologies for monitoring and maintenance of structures

23CTM3203A - SUSTAINABLE CONSTRUCTION TECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CTM3203A	SUSTAINABLE CONSTRUCTION TECHNOLOGY	SCT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understand the construction basics methods of Common building construction methods for conventional systems.	2	PO1, PO5, PO7, PSO2
CO2	Applying the advance technology using in modern construction methods basics of construction Modular Construction Precast concrete.	3	PO1, PO5, PO7, PSO2
CO3	Applying the sustainable construction materials technologies and project management strategies.	3	PO1, PO5, PO7, PSO2
CO4	Applying the New Construction rating system for LEED certification in construction industry	3	PO1, PO5, PO7, PSO2
CO5	Applying the sustainable in alternative construction material in building construction industry	3	PO1, PO5, PO7, PSO2

Syllabus

Construction methods for Conventional Framed Structures: Types of foundations and construction methods; Basics of Formwork and Staging; Common building construction methods conventional walls and slabs; conventional framed structure with blockwork as infill walls.

Modular construction methods for repetitive works Modular construction methods for repetitive works; Precast concrete construction methods; Basics of Slip forming for tall structures; Basic construction methods for steel structures; Basics of construction methods for Bridges.

Construction materials and project management strategies Identification of cutting-edge sustainable construction materials, technologies, and project management strategies for use in the construction industry and evaluation of their potential to reduce the negative environmental impacts of construction activity.

LEED Certificate Process and Case studies. Examination Process of the current LEED certification (Leadership in Energy and Environmental Design) for the New Construction rating system, and case study analysis of highly successful recent "green construction projects" through student team assignments and presentations. Preparation for the LEED Green Associate professional licensing exam.

C&D waste management practice, case studies and student presentation,

23CTM3304A - CONSTRUCTION PLANNING & SCHEDULING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CTM3304A	CONSTRUCTION PLANNING & SCHEDULING	CPS	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Communicate effectively with project stakeholders, including owners, contractors, and suppliers, to ensure project goals are understood and met, and to resolve conflicts as they arise	2	PO1, PO5, PSO1
CO2	Apply project management principles and techniques to plan and execute construction projects, including project initiation, planning, execution, monitoring, and control	3	PO1, PO5, PSO1
CO3	Apply the construction project plans and schedules to identify potential risks and develop strategies to mitigate them	3	PO1, PO5, PSO1
CO4	Apply the project costs using a variety of methods, such as bottom-up estimating and parametric estimating, and develop cost-benefit analyses to evaluate project feasibility	3	PO1, PO5, PSO1
CO5	Apply the impact of project scope changes on construction schedules and budgets, and develop contingency plans to manage these changes	3	PO1, PO5, PSO1
CO6	Apply construction schedules using project management software, considering factors such as resource allocation, critical path analysis, and project duration Hybrid mode	3	PO1, PO5, PSO1
CO7	Apply the various construction project elements planning using different skilling methods.and techniques	3	PO1, PO5, PSO1

Syllabus

"Introduction to Construction Planning and Scheduling 1.Introduction to project management principles and their application in construction projects 2.Overview of construction planning and scheduling process 3.Types of construction schedules and their purpose 4.Project scope management and its impact on scheduling 5.Project budgeting and cost estimating techniques"

"Developing Construction Schedules 1.Work breakdown structure (WBS) and its importance in construction scheduling 2.Scheduling techniques, including Gantt charts, critical path method (CPM), and program evaluation and review technique (PERT) 3.Resource allocation and leveling 4.Schedule compression and fast-tracking 5.Schedule risk management and contingency planning"

"Managing Construction Schedules 1.Project execution and monitoring 2.Performance measurement and progress reporting 3.Schedule control techniques 4.Schedule impact analysis and change management 5.Schedule recovery and acceleration techniques"

"Advanced Topics in Construction Scheduling 1.Lean construction scheduling 2.Building information modeling (BIM) and its impact on scheduling 3.Schedule integration with other project management processes 4.Scheduling for large and complex construction projects 5.Schedule optimization techniques"

"Project Delivery Methods and Contractual Considerations 1.Overview of project delivery methods, including design-bid-build, design-build, and construction management at risk (CMAR) 2.Types of construction contracts and their implications for scheduling 3.Contractual mechanisms for managing schedule risk, including liquidated damages and time extensions 4.Schedule coordination and communication among project stakeholders 5.Ethics and professionalism in construction planning and scheduling."

23CTM3405M - CONSTRUCTION CONTRACTS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CTM3405M	CONSTRUCTION CONTRACTS	CC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Contract Law Fundamentals . Demonstrate a basic understanding of the principles of contract law as they apply to the construction industry.	1	PO1, PO5, PSO1
CO2	Analyzing Contract Documents	4	PO1, PO5, PSO1
CO3	Analyze various types of construction contract documents to identify key elements and clauses.	4	PO1, PO5, PSO1
CO4	Application of Contract Provisions	3	PO1, PO5, PSO1
CO5	Apply contract provisions to real-world construction scenarios to determine responsibilities and obligations of parties involved.	3	PO1, PO5, PSO1
CO6	Managing Contract Performance	6	PO1, PO5, PSO1
CO7	Ethical and Legal Considerations	2	PO1, PO5, PSO1

Syllabus

Overview of Contract Law

Types of Construction Contracts Different types of construction contracts: lump sum, cost-plus, time and materials, unit price.

Components of construction contracts: agreements, conditions, specifications, drawings. Standard forms of contracts (e.g., AIA, FIDIC).

Examination of important clauses: scope of work, payment terms, schedule, changes, termination.

Formation of Construction Contracts Elements of a valid contract: offer, acceptance, consideration, intention to create legal relations.

Interpretation of Contracts Principles of contract interpretation. Role of parol evidence and importance of clear drafting.

Managing Contract Performance Monitoring and controlling contract performance. Documentation and reporting requirements.

Breach of Contract Types of breaches and their consequences. Remedies for breach of contract: damages, specific performance, rescission.

Reference Books

- 1 Construction Contracts: Law and Management, John Murdoch, Will Hughes, 5th Edition (2015), Routledge.

23CTM3406M - CONSTRUCTION FORMULATION APPRAISAL (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CTM3406M	CONSTRUCTION FORMULATION APPRAISAL	CFA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Project Formulation . Demonstrate a comprehensive understanding of the project formulation process, including identification, conceptualization, and planning.	2	PO1, PO5, PSO1
CO2	Conducting Feasibility Studies	3	PO1, PO5, PSO1
CO3	Conduct feasibility studies to assess the viability of construction projects, including technical, financial, and environmental aspects.	3	PO1, PO5, PSO1
CO4	Financial Appraisal Techniques	3	PO1, PO5, PSO1
CO5	Apply financial appraisal techniques such as Net Present Value (NPV), Internal Rate of Return (IRR), and Cost-Benefit Analysis to evaluate construction projects.	3	PO1, PO5, PSO1
CO6	Risk Assessment and Management	4	PO1, PO5, PSO1
CO7	Sustainable Project Development	5	PO1, PO5, PSO1

Syllabus

Overview of Project Formulation

Project Identification and Screening Techniques for identifying potential projects.

Technical Feasibility Assessing technical aspects of construction projects.

Financial Feasibility Analyzing financial viability through cost estimation and budget forecasting.

Environmental and Social Feasibility Conducting environmental impact assessments (EIA).

Net Present Value (NPV) Analysis Understanding NPV and its application in project appraisal.

Internal Rate of Return (IRR) and Other Methods Understanding IRR and its significance.

Risk Analysis and Mitigation Quantitative and qualitative risk analysis.

23CTM3507 - QUALITY AND SAFETY IN CONSTRUCTION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CTM3507	QUALITY AND SAFETY IN CONSTRUCTION	QSC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the importance of safety and quality management in construction projects	2	PO1, PO5, PO6, PSO1
CO2	Apply statistical methods and data analysis to monitor safety and quality performance, identify trends, and implement corrective actions.	3	PO1, PO5, PO6, PSO1
CO3	Identify relevant safety regulations, codes, and standards, and apply them to construction projects.	3	PO1, PO5, PO6, PSO1
CO4	Develop and implement a safety management plan that addresses potential hazards and risks associated with construction projects.	3	PO1, PO5, PO6, PSO1

Syllabus

Quality Management: Introduction, Definitions and objectives, Factors influencing construction quality , Responsibilities and authority, Quality plan, Quality Management Guidelines, Quality circles. Quality Systems: Introduction , Quality system standard, ISO 9000 family of standards, Requirements, Preparing Quality System Documents, Quality related training, Implementing a Quality system, Third party Certification.

Quality Planning: Quality Policy, Objectives and methods in Construction industry , Consumers satisfaction, Ergonomics , Time of Completion , Statistical tolerance, Taguchis concept of quality, Codes and Standards, Documents, Contract and construction programming, Inspection procedures , Processes and products, Total QA or QC programmed and cost implication.

Quality Assurance And Quality Improvement Techniques: Objectives, Regularity agent, owner, design, contract and construction oriented objectives, methods, Techniques and needs of QAor QC, Different aspects of quality, Appraisals, Factors influencing construction quality, Critical, major failure aspects and failure mode analysis, Stability methods and tools, optimum design, Reliability testing, Reliability coefficient and reliability prediction , Life cycle costing, Value engineering and value analysis. Quality Improvement Tools and Techniques.

Safety Management Systems: Fundamental of safety management, construction safety, safety in scaffolding and working platform, welding and handling, excavation work, concreting and cementing work. Building construction, TAC and NBC rules, High rise building. Evolution of modern safety concept, Safety policy , Safety Organization. Safety survey, safety inspection, safety sampling, Safety Audit. Concept of an accident, Reportable and non reportable accidents, unsafe act and condition principles of accident prevention, Overall accident investigation process. Risk management

23CTM3508 - GREEN BUILDING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CTM3508	GREEN BUILDING	GB	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental principles of green building design and sustainability.	1	PO1, PO5, PO6, PSO1
CO2	Analyze the environmental impact of building materials and construction practices.	2	PO1, PO5, PO6, PSO1
CO3	Apply energy-efficient strategies and technologies in green building projects.	3	PO1, PO5, PO6, PSO1
CO4	Evaluate the performance of green buildings using relevant metrics and standards.	3	PO1, PO5, PO6, PSO1

Syllabus

Introduction to Green Buildings - Definition and significance of green buildings - History and evolution of sustainable architecture - Overview of global green building standards (LEED, BREEAM, etc.) - The triple bottom line: People, Planet, Profit

Sustainable Site Planning - Site selection and analysis - Sustainable site development strategies - Erosion and sediment control - Urban heat island effect and mitigation techniques

Energy Efficiency in Buildings - Passive design strategies (orientation, daylighting, natural ventilation) - Energy-efficient building systems (HVAC, lighting) - Renewable energy integration (solar, wind, geothermal) - Building energy modeling and simulation

Water Efficiency and Conservation - Water-efficient fixtures and appliances - Rainwater harvesting and greywater reuse - Landscape water management - Stormwater management systems

Materials and Resources - Sustainable material selection (recycled, locally sourced, low-emission) - Life cycle assessment of building materials - Construction waste management - Indoor environmental quality and healthy materials

23DCS3101A - 4G WIRELESS TECHNOLOGIES AND CELLULAR COMMUNICATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DCS3101A	4G WIRELESS TECHNOLOGIES AND CELLULAR COMMUNICATION	4GW	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply 4G architecture, including the Evolved Packet System (EPS) and LTE integration with existing 2G/3G networks, to analyze and evaluate EPS reference points, interfaces, and E-UTRAN components.	3	PO1, PO2
CO2	Implement multiuser modulations and the principles of Orthogonal Frequency Division Multiplexing (OFDM), to analyze and evaluate LTE transceiver operations, channel estimation techniques, and issues related to OFDM .	3	PO1, PO3
CO3	Extrapolate Multiple-Input Multiple-Output (MIMO) systems by analyzing and evaluating MIMO channel capacity, SVD and eigenmodes of MIMO channels, and the principles of MIMO spatial multiplexing (BLAST).	3	PO1, PO3
CO4	Demonstrate their understanding of Ultra-Wideband (UWB) technology by analyzing and evaluating its features, applications, and capacity, particularly in indoor environments.	4	PO1, PO3
CO5	Analyze and interpret the concepts and applications of multi-antenna operations and MIMO systems, as well as multicarrier and multi-access systems including OFDMA, MC-CDMA, MIMO-OFDM, and multiband OFDM UWB.	4	PO1, PO3
CO6	Analyze and differentiate between various multi-access systems, including OFDMA, MC-CDMA, MIMO-OFDM, and multiband OFDM UWB.	4	PO1, PO3
CO7	Analyze and evaluate the design and performance of MCCDMA, MIMO-OFDM, and multiband OFDM UWB systems.	4	PO1, PO3

Syllabus

4G architecture and Spread Spectrum Introduction To 4G: Architecture of an Evolved Packet System, LTE Integration with Existing 2G-3G Network, EPS Reference Points and Interfaces, E-UTRAN Interfaces, User Equipment, LTE UE Category, QoS in LTE, LTE Security, LTE Mobility, 4G Architecture and Call Process with 3GPP Standards, Radio Frequency Aspects, Orthogonal Frequency Division Multiplexing (OFDM), Single-Carrier Frequency Division Multiple Access (SC-FDMA),

Multi carrier Communication Systems Introduction to multiuser modulations, Principal of OFDM (Block Diagram), Cyclic Prefix, Introduction to long term evolution (LTE), Transceivers, Channel estimation, OFDM issues, Peak to Average Power ratio (PAPR), Carrier frequency Offset (CFO) and carrier timing offset, Synchronization, PAPR reduction techniques

MIMO Systems Introduction to MIMO, MIMO channel Capacity, SVD And Eigenmodes of MIMO channels, MIMO Spatial Multiplexing BLAST, MIMO Diversity, Alamouti, Orthogonal space time block code (OSTBC), maximum ratio transmission (MRT)

UWB Introduction to features of UWB technology, applications, UWB indoor channel, UWB Capacity, Pulsed UWB, Pulse shape, Modulation and Multiple access of Pulse UWB, Time Hopping, DSUWB, Challenges for Pulsed UWB systems, Multiband UWB, Modulation of Pulsed Multiband UWB

Multi-Antenna Operation And MIMO, Multicarrier and Multi-access Systems- OFDMA, MCCDMA, MIMO-OFDM, Multiband OFDM UWB.

Multi-access Systems- OFDMA, MCCDMA, MIMO-OFDM, Multiband OFDM UWB.

Pulsed UWB systems- Multiband UWB-Modulation of Pulsed Multiband UWB

23DCS3101E - 4G WIRELESS TECHNOLOGIES AND CELLULAR COMMUNICATION (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DCS3101E	4G WIRELESS TECHNOLOGIES AND CELLULAR COMMUNICATION	4GW	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply 4G architecture, including the Evolved Packet System (EPS) and LTE integration with existing 2G/3G networks, to analyze and evaluate EPS reference points, interfaces, and E-UTRAN components.	3	PO1, PO2
CO2	Implement multiuser modulations and the principles of Orthogonal Frequency Division Multiplexing (OFDM), to analyze and evaluate LTE transceiver operations, channel estimation techniques, and issues related to OFDM .	3	PO1, PO3
CO3	Extrapolate Multiple-Input Multiple-Output (MIMO) systems by analyzing and evaluating MIMO channel capacity, SVD and eigenmodes of MIMO channels, and the principles of MIMO spatial multiplexing (BLAST).	3	PO1, PO3
CO4	Demonstrate their understanding of Ultra-Wideband (UWB) technology by analyzing and evaluating its features, applications, and capacity, particularly in indoor environments.	4	PO1, PO3
CO5	Analyze and interpret the concepts and applications of multi-antenna operations and MIMO systems, as well as multicarrier and multi-access systems including OFDMA, MC-CDMA, MIMO-OFDM, and multiband OFDM UWB.	4	PO1, PO3
CO6	Analyze and differentiate between various multi-access systems, including OFDMA, MC-CDMA, MIMO-OFDM, and multiband OFDM UWB.	4	PO1, PO3
CO7	Analyze and evaluate the design and performance of MCCDMA, MIMO-OFDM, and multiband OFDM UWB systems.	4	PO1, PO3

Syllabus

4G architecture and Spread Spectrum Introduction To 4G: Architecture of an Evolved Packet System, LTE Integration with Existing 2G-3G Network, EPS Reference Points and Interfaces, E-UTRAN Interfaces, User Equipment, LTE UE Category, QoS in LTE, LTE Security, LTE Mobility, 4G Architecture and Call Process with 3GPP Standards, Radio Frequency Aspects, Orthogonal Frequency Division Multiplexing (OFDM), Single-Carrier Frequency Division Multiple Access (SC-FDMA),

Implement multiuser modulations and the principles of Orthogonal Frequency Division Multiplexing (OFDM), including its block diagram and cyclic prefix, to analyze and evaluate LTE transceiver operations, channel estimation techniques, and issues related to OFDM such as Peak to Average Power Ratio (PAPR), Carrier Frequency Offset (CFO)

Extrapolate Multiple-Input Multiple-Output (MIMO) systems by analyzing and evaluating MIMO channel capacity, Singular Value Decomposition (SVD) and eigenmodes of MIMO channels, and the principles of MIMO spatial multiplexing (BLAST).

Demonstrate their understanding of Ultra-Wideband (UWB) technology by analyzing and evaluating its features, applications, and capacity, particularly in indoor environments. They will assess the principles of pulsed UWB, including pulse shape, modulation, and multiple access techniques, as well as time hopping and DS-UWB.

Multi-Antenna Operation And MIMO, Multicarrier and Multi-access Systems- OFDMA, MCCDMA, MIMO-OFDM, Multiband OFDM UWB.

Multi-Antenna Operation And MIMO,

MIMO-OFDM, Multiband OFDM UWB.

23DCS3202A - MODERN SATELLITE COMMUNICATION SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DCS3202A	MODERN SATELLITE COMMUNICATION SYSTEMS	MSCS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Able to differentiate between types of satellite orbits (LEO, MEO, GEO) and their applications.	2	PO1
CO2	To identify the functions of major satellite subsystems and distinguish them from various types of payloads	3	PO2, PO3
CO3	To design satellite links considering factors like noise, signal strength, and impairments like rain attenuation	3	PO2, PO3
CO4	Interpret working of satellite communications in 5G ecosystem	3	PO1, PO3
CO5	Analyze and visualize space segments using simulation tool.	5	PO1, PO2, PO3

Syllabus

Basic Concepts of Satellite Communications Basic Concepts of Satellite Communications, Frequency Allocations for Satellite Services, Applications. Types of satellites orbits, LEO, MEO and GEO satellites, Satellite in the context of India. Orbital Mechanics: Look Angle determination, Satellite Subsystems.

Satellite Sub-Systems and Payloads Attitude and Orbit Control System, Telemetry, Tracking, Command and Monitoring, Power Systems, Communication Subsystems, Satellite Antennas and onboard computer and testing equipment and satellite payloads

Satellite Link Design Basic Transmission Theory, System Noise Temperature and G/T Ratio, Design of Down Links, Up Link Design, Design of Satellite Links for Specified C/N, System Design Examples-DOMSAT, INSAT, INTELSAT and INMARSAT. Satellite- based personal communication. Satellite RF impairments: Rain attenuation, Space weather effects on Satellite communications, Atmospheric drag.

Role of satellite communications in 5G ecosystem Satellites and previous cellular generations, requirements of satellites in 5G, recent advances in 5G satellite communications, Satellite use cases and scenarios for 5G, Selection methodology, Selected satellite use cases for eMBB, Scenarios for selected satellite use case 1: edge delivery and offload for multimedia content and MEC VNF software

Satellite orbit determination using MATLAB, satellite link budget analysis using software tools, satellite path loss

23DCS3303A - 5G WIRELESS TECHNOLOGIES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DCS3303A	5G WIRELESS TECHNOLOGIES	5GWT	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply their understanding of cellular network evolution to analyze the architecture, functionalities, and use cases of 5G mobile systems.	3	PO1, PO2
CO2	Apply their knowledge of radio interface design principles to analyze channel sounding, transport channel processing, and physical layer control signaling in 5G mobile systems.	3	PO1, PO2
CO3	Analyze and evaluate multi-antenna transmission techniques, beam management strategies, and millimeter wave characteristics relevant to 5G mobile systems.	4	PO1, PO2
CO4	Analyze 5G core components, protocols, and security mechanisms in the context of Quality-of-Service (QoS) management.	4	PO1, PO2
CO5	Analyze and assess the application of private wireless network architectures, using case studies to evaluate their effectiveness in real-world industrial settings.	4	PO1, PO2
CO6	Analyze the 3GPP standards 5G architecture and call process using 5G testbed.	4	PO2, PO3, PO5
CO7	Design and Analyze the QoS requirements with respective use-case scenario to enable information exchange between devices with hardware realization.	5	PO2, PO3, PO5

Syllabus

Introduction to 5G-NR: Evolution of Cellular system architecture from 2G to 5G, Frequency bands for new radio, RAN architectures, frame structure, 5G Core architecture, Pillars of 5G, 5G use cases - eMMB, mMTC, URLLC, Spectrum of 5G mobile systems, Carrier Aggregation, Bandwidth parts, Service Based Architecture, Network Slicing - Management and orchestration, Network Slice selection framework.

Radio-Interface Architecture: Overall System Architecture, Quality-of-Service Handling, Radio Protocol Architecture, User-Plane Protocols, Control-Plane Protocols. Channel Sounding: Downlink Channel Sounding, CSI-RS, Downlink Measurements and Reporting, Uplink Channel Sounding-SRS. Transport Channel Processing: Channel Coding, Rate Matching and Physical-Layer Hybrid-ARQ Functionality, Scrambling, Modulation, Layer Mapping, Uplink DFT Precoding, Multi-Antenna uplink and downlink Precoding, Resource Mapping, Downlink Reserved Resources, Reference Signals, Physical Layer Control Signaling: Downlink, Uplink, Initial Access: Cell Search and Random-Access concepts.

Multi-Antenna Transmission: Downlink Multi-Antenna Precoding, Type I CSI, Type II CSI, NR Uplink Multiantenna Precoding, Codebook-Based Transmission, Non-Codebook-Based Precoding. Beam Management: Initial Beam Establishment, Beam Adjustment, Downlink Transmitter-Side Beam Adjustment, Downlink Receiver-Side Beam Adjustment, Uplink Beam Adjustment, Beam Indication and TCI, Beam Recovery, Beam-Failure Detection, New-Candidate-Beam Identification, Device Recovery Request and Network Response. Millimeter wave characteristics, Millimeter wave link budget, Transceiver Architecture, Millimeter wave antennas- Path Loss, Antenna directivity and Antenna beam width.

5G Core - Components, Dual Connectivity architecture, 5G core Protocols - NGAP, HTTP, TLS, PFCP, GTP-U, SCTP, 5G NAS. QoS - Flow based QoS framework, Signaling of QoS, Reflective QoS, QoS parameters and characteristics. Security - Security requirements and security services of the 5G system, Network access security, Network domain security, User domain security, Lawful intercept.

Architectures for Private Wireless, Case Studies - Uncovering 5G potential for real-time control in manufacturing, Industrial-grade Private Wireless.

CO6	Design and Analyze the QoS requirements with respective use-case scenario to enable information exchange between devices with hardware realization.	5	PO2, PO3, PO5

Syllabus

Introduction to 5G-NR: Evolution of Cellular system architecture from 2G to 5G, Frequency bands for new radio, RAN architectures, frame structure, 5G Core architecture, Pillars of 5G, 5G use cases - eMMB, mMTC, URLLC, Spectrum of 5G mobile systems, Carrier Aggregation, Bandwidth parts, Service Based Architecture, Network Slicing - Management and orchestration, Network Slice selection framework.

Radio-Interface Architecture: Overall System Architecture, Quality-of-Service Handling, Radio Protocol Architecture, User-Plane Protocols, Control-Plane Protocols. Channel Sounding: Downlink Channel Sounding, CSI-RS, Downlink Measurements and Reporting, Uplink Channel Sounding-SRS. Transport Channel Processing: Channel Coding, Rate Matching and Physical-Layer Hybrid-ARQ Functionality, Scrambling, Modulation, Layer Mapping, Uplink DFT Precoding, Multi-Antenna uplink and downlink Precoding, Resource Mapping, Downlink Reserved Resources, Reference Signals, Physical Layer Control Signaling: Downlink, Uplink, Initial Access: Cell Search and Random-Access concepts.

Multi-Antenna Transmission: Downlink Multi-Antenna Precoding, Type I CSI, Type II CSI, NR Uplink Multiantenna Precoding, Codebook-Based Transmission, Non-Codebook-Based Precoding. Beam Management: Initial Beam Establishment, Beam Adjustment, Downlink Transmitter-Side Beam Adjustment, Downlink Receiver-Side Beam Adjustment, Uplink Beam Adjustment, Beam Indication and TCI, Beam Recovery, Beam-Failure Detection, New-Candidate-Beam Identification, Device Recovery Request and Network Response. Millimeter wave characteristics, Millimeter wave link budget, Transceiver Architecture, Millimeter wave antennas- Path Loss, Antenna directivity and Antenna beam width.

5G Core - Components, Dual Connectivity architecture, 5G core Protocols - NGAP, HTTP, TLS, PFCP, GTP-U, SCTP, 5G NAS. QoS - Flow based QoS framework, Signaling of QoS, Reflective QoS, QoS parameters and characteristics. Security - Security requirements and security services of the 5G system, Network access security, Network domain security, User domain security, Lawful intercept.

23DCS3404M - OPTICAL WIRELESS COMMUNICATIONS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DCS3404M	OPTICAL WIRELESS COMMUNICATIONS	PWC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret the behavior of wireless optical channel and its scattering parameters.	3	PO1, PO2
CO2	Apply various channel models for estimation of losses in optical wireless communication.	3	PO1, PO2
CO3	Analyze and interception of modulation techniques utilized in VLC.	4	PO1, PO2
CO4	Analyze the application of optical source detectors	4	PO1, PO2

Syllabus

Basic concept of Optical wireless communication, Optical Wireless channels, Light sources and spectra, Modulators, Characteristics of Atmospheric transmission and limitations, Effect of Rain, Fog, and Mist, Scintillation, Optical Path Length and Fermat's Principle, The Etendue or Lagrange Invariant, Edge Ray Principle.

Indoor Optical Wireless Communication, LOS Propagation Model, Non-LOS Propagation Model, Ceiling Bounce Model, Outdoor Channel, Channels: Atmospheric Channel Loss, Fog and Visibility, Beam Divergence, Optical and Window Loss, Pointing Loss, The Atmospheric Turbulence Models: Log-Normal Turbulence Model, Spatial Coherence in Weak Turbulence, The Gamma-Gamma Turbulence Model, The Negative Exponential Turbulence, Atmospheric Effects on optical wireless channel.

Bidirectional VLC, VLC System Description, VLC System Model, Channel Delay Spread, Holographic Diffuser, SNR Analysis, VCL system Implementations: On-Off Keying (OOK) with a Forward Error Correction, Bit Angle Modulation (BAM), Pulse Modulation Schemes, PWM with Discrete Multitone Modulation (DMT), Multilevel PWM-PPM, PWM with NRZOOK, Multiple-Input, Multiple-Output (MIMO) VLC, Orthogonal Frequency Division Multiplexing (OFDM), Channel Estimation, Equalisations, and Synchronisation

Optical Communications Basics, Optical Transmitters, Optical Receivers, Optical Amplifiers, Optical Processing Components and Modules, Principles of Coherent Optical Detection. Optical Hybrids, Coherent Optical Balanced Detectors, Direct Digital Synthesizer (DDS). Multi-rate DSP and Resampling, Automatic Gain Control (AGC)

Reference Books

- 1 Optical Wireless Communications: System and Channel Modelling with MATLAB, Rajbhandari, S., Ghassemlooy, Z., Popoola, W. , 2nd, CRC Press.
- 2 Advanced Optical and Wireless Communications Systems. Switzerland, Djordjevic, I. B. , 1st, Springer International Publishing .
- 3 Fibre Optical communication systems , Govind P Agarwal , 1st , Wiley .
- 4 Optical Fiber Communication , P Chakrabarti , 1st , McGraw Hill Education (India) Private Limited .

23DCS3505 - MACHINE LEARNING FOR WIRELESS COMMUNICATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DCS3505	MACHINE LEARNING FOR WIRELESS COMMUNICATION	MLWC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply machine learning techniques, such as deep reinforcement learning, to analyze and optimize network management tasks like base station operation.	3	PO1, PO2
CO2	Analyze and evaluate the application of machine learning techniques, including deep learning, to solve critical self-organizing network challenges such as traffic prediction, cognitive radio management, and unmanned aerial vehicle positioning.	4	PO1, PO2
CO3	Compare and contrast machine learning techniques, such as k-Nearest Neighbors and Reinforcement Learning, for Adaptive Modulation and Coding (AMC) in communication systems, evaluating their performance through analysis.	4	PO1, PO2
CO4	Compare and contrast neural network architectures, such as Multilayer Perceptrons, Functional Link Artificial Neural Networks, Radial Basis Functions, and Deep Learning, for channel equalization in communication systems, evaluating their performance through analysis.	4	PO1, PO2

Syllabus

Related Machine Learning Techniques for Autonomous Network Management, Data-Driven Base-Station Sleeping Operations by Deep Reinforcement Learning, Deep Q-Learning Preliminary and its Applications to BS Sleeping Control, Dynamic Frequency Reuse through a Multi-Agent Neural Network Approach

Self-Organizing Wireless Networks, Traffic Prediction and Machine Learning, Cognitive Radio and Machine Learning, Deep Learning, Positioning of Unmanned Aerial Vehicles, Traffic Prediction, Mobility Prediction.

Overview of ML-Assisted AMC, k-NN-Assisted AMC, Algorithm for k-NN-Assisted AMC, Performance Analysis of k-NN-Assisted AMC System, RL-Assisted AMC.

Overview of Neural Network-Based Channel Equalization, Multilayer Perceptron-Based Equalizers, Functional Link Artificial Neural Network-Based Equalizers, Radial Basis Function-Based Equalizers, Deep-Learning-Based Equalizers

Reference Books

23DEA3101A - FUNDAMENTALS OF DATA ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DEA3101A	FUNDAMENTALS OF DATA ENGINEERING	FDE	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the life cycle of Data Engineering	2	PO1, PO2
CO2	Apply good Data Architecture for organizing Data	3	PO1, PO2
CO3	Design low cost Data Storage Systems Identify the Data Sources	4	PO1, PO2
CO4	Design a computational model for Data Ingestion phase	4	PO1, PO2
CO5	Implementing Data Processing and Organizing using suitable tools and programming languages	5	PO1, PO2
CO6	Build & Evaluate common practical applications	5	PO1, PO2

Syllabus

Introduction to Data Engineering, Data Engineering Lifecycle, Evolution of the Data Engineer, Skills and Activities of Data Engineer, Generation: Source Systems.

Good Data Architecture, Principles of Good Data Architecture, Major Architecture Concepts, Examples and Types of Data Architecture, Examples and Types of Data Architecture.

Sources of Data, Source Systems, Data Storage Systems, Data Engineering Storage Abstractions, Big Ideas and Trends in Storage.

Data Ingestion, Key Engineering Considerations for the Ingestion Phase, Batch Ingestion Considerations, Ways to Ingest Data, Data Modeling, Transformations.

Develop Data models for data lakes for storing, organizing and analysing volumes of data.

Reference Books

23DEA3202A - DATA EXPLORATION AND PREPARATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DEA3202A	DATA EXPLORATION AND PREPARATION	DEP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Python/R programming for exploratory analysis, evaluate data lifecycle concepts, and apply practical data preprocessing techniques.	3	PO1, PSO2
CO2	Utilize data visualization principles and tools like Matplotlib, Seaborn, or ggplot2 to create both basic and advanced plots for insightful data representation.	3	PO2, PSO2
CO3	Analyze dimensionality reduction methods such as PCA and t-SNE to extract meaningful patterns from high-dimensional data.	4	PO3, PSO2
CO4	Explore advanced topics including text data preprocessing, handling imbalanced datasets, and managing streaming data to address complex data challenges effectively.	3	PO2, PSO1
CO5	Develop and deliver a final project presentation summarizing the findings, methodology, and insights gained from the analysis of a real-world dataset.	6	PO3, PSO1

Syllabus

Introduction to Data Exploration: Overview of data exploration and its importance, Understanding the data lifecycle, Exploratory data analysis (EDA) techniques, Introduction to Python/R for data exploration Data Cleaning and Preprocessing: Identifying and handling missing data, Dealing with duplicates and inconsistencies, Outlier detection and treatment techniques, Data normalization and standardization

Data Visualization: Principles of data visualization, Introduction to Matplotlib and Seaborn (Python) or ggplot2 (R), Creating basic plots: scatter plots, histograms, box plots, etc. ,Advanced visualization techniques: heatmaps, pair plots, faceting, etc.

Advanced Data Preparation: Feature engineering: creating new features from existing ones, Handling categorical variables: encoding techniques (one-hot encoding, label encoding, etc.), Dimensionality reduction techniques: PCA, t-SNE, Introduction to data pipelines

Data Integration and Transformation: Merging and joining datasets, Reshaping datasets: pivot tables, melting, stacking, unstacking, Time series data manipulation

Capstone Project and Advanced Topics: Applying data exploration and preparation techniques to real-world datasets, Final project presentation and peer review, Advanced topics: text data preprocessing, handling imbalanced datasets, handling streaming data

Reference Books

- 1 Python for Data Analysis: Data Wrangling with pandas, NumPy, and Jupyter , Wes McKinney, 2022, O'Reilly.
- 2 R for Data Science, Hadley Wickham, Mine cetinkaya-Rundel, Garrett Grolemond, 2023, O'Reilly.

23DEA3303A - BIG DATA TECHNOLOGIES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DEA3303A	BIG DATA TECHNOLOGIES	BDT	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate a comprehensive understanding of the concepts and characteristics of Big Data, including volume, velocity, variety, and veracity.	2	PO2
CO2	Explain and apply different Big Data storage solutions such as Hadoop Distributed File System (HDFS), NoSQL databases (e.g., MongoDB, Cassandra), and data warehousing techniques.	3	PO1, PO4
CO3	Design and implement data models for storing and managing large-scale datasets.	3	PO1, PO3, PO4, PO12
CO4	Utilize Big Data processing frameworks like Apache Hadoop and Apache Spark for processing and analyzing large datasets.	3	PO1, PO12
CO5	Develop and optimize MapReduce programs to perform distributed data processing tasks.	3	PO4, PO12
CO6	apply machine learning algorithms and statistical techniques using Big Data tools (e.g., Spark MLlib, Mahout) to analyze and derive insights from large datasets.	3	PO4
CO7	Perform data preprocessing, feature selection, and model evaluation in a Big Data context.	3	PO4

Syllabus

Introduction to Big Data Overview of Big Data: Characteristics and challenges The importance of Big Data in today's world Introduction to the Big Data ecosystem

Big Data Architecture and Infrastructure Big Data storage: HDFS, cloud storage solutions Big Data processing: Batch vs. real-time processing Introduction to distributed computing

Big Data Storage Technologies Hadoop Distributed File System (HDFS) NoSQL databases: MongoDB, Cassandra, HBase Data warehousing solutions: Apache Hive, Amazon Redshift

Big Data Processing Frameworks Apache Hadoop: Overview and architecture MapReduce programming model Apache Spark: Overview, architecture, and RDDs

Data Ingestion and ETL Processes Data ingestion tools: Apache Kafka, Apache Flume, Apache NiFi Designing ETL pipelines Data cleansing and transformation

23DEA3404M - DATA WAREHOUSING AND BUSINESS INTELLIGENCE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DEA3404M	DATA WAREHOUSING AND BUSINESS INTELLIGENCE	DWBI	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts of data warehousing	2	PO1, PSO1
CO2	Apply data modeling techniques to design a data warehouse	3	PO1, PO2, PSO1
CO3	Implement ETL processes to populate a data warehouse:	3	PO3
CO4	Analyze data trends and patterns to identify business opportunities	4	PO3, PO4, PSO2

Syllabus

Overview of data warehousing concepts and principles, Key components of a data warehouse, Role of data warehousing in business decision-making, Understand the fundamental concepts of data warehousing

Data modeling techniques for data warehouses (e.g., dimensional modeling) , Designing a data warehouse schema
Comparing data modeling techniques , Apply data modeling techniques to design a data warehouse

Extracting data from multiple sources ,Transforming data to meet the requirements of the data warehouse ,Loading data into the data warehouse, Performance tuning and optimization of ETL processes ,Implement ETL processes to populate a data warehouse

Introduction to business intelligence tools (e.g., Tableau, Power BI) , Creating reports, dashboards, and visualizations , Analyzing data trends and patterns , Use business intelligence tools to analyze data and generate insights

Reference Books

- 1 The Data Warehouse Toolkit: The Definitive Guide to Dimensional Modeling, Ralph Kimball and Margy Ross, Third Edition, Wiley.
- 2 Business Intelligence Guidebook: From Data Integration to Analytics, Rick Sherman , Second Edition, Morgan Kaufmann.
- 3 Data Warehouse Design: Modern Principles and Methodologies , Matteo Golfarelli, Stefano Rizzi, and Alberto Sacc? , First Edition, McGraw-Hill Education.
- 4 Business Intelligence Roadmap: The Complete Project Lifecycle for Decision-Support Applications , Larissa T. Moss and Shaku Atre , Second Edition, Addison-Wesley Professional.

23DEA3505R - MACHINE LEARNING ENGINEERING FOR BIG DATA (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DEA3505R	MACHINE LEARNING ENGINEERING FOR BIG DATA	MLEBD	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and articulate the fundamental concepts of Machine Learning and Big Data, and their underlying themes.	2	PO1, PO3, PO5, PSO2
CO2	Analyze and address key technical issues in developing ML systems through various real-world case studies.	2	PO1, PO3, PO4, PSO2
CO3	Apply machine learning techniques in big data analytics, including learning theory, association rule learning, clustering, and classification.	3	PO1, PO3, PO5, PSO2
CO4	Utilize open-source tools for data analytics to perform basic and advanced analysis of big data.	3	PO1, PO4, PO5, PSO2

Syllabus

Introduction to Machine Learning : Overview of Machine Learning ,Historical Context and Evolution, Applications of Machine Learning, Fundamentals of Big Data : Definition and Characteristics of Big Data ,Big Data Technologies (Hadoop, Spark) , Big Data Storage and Processing (Data Warehouses, NoSQL Databases).Intersection of Machine Learning and Big Data : Importance of Large Datasets ,Challenges in Machine Learning with Big Data ,Tools and Frameworks (Apache Mahout, MLLib in Spark).Key Concepts and Techniques : Data Collection and Integration, Data Cleaning and Preprocessing, Exploratory Data Analysis (EDA).

CASE STUDIES : Case Study 1 - Predictive Analytics in Healthcare, Dataset Overview ,Model Selection and Evaluation ,Noise Handling and Feature Extraction .Case Study 2 - Fraud Detection in Financial Services ,Data Challenges ,Implementation and Outcomes, Feature Selection and Learning Algorithms. Case Study 3- Customer Segmentation in Retail, Data Sources and Features ,Clustering Techniques, Technical Issues and Solutions.

Machine Learning Techniques in Big Data Analytics : Learning Theory and Association Rule Learning - Basics of Learning Theory, Association Rule Learning Techniques, Applications and Challenges. Clustering Analysis : Overview of Clustering Techniques, K-means, Hierarchical, and Density-based Clustering ,Application of Clustering in Big Data. Classification Techniques - Supervised Learning: Decision Trees, SVM and Neural Networks, Evaluation Metrics and Model Selection , Addressing Class Imbalance and Overfitting.

Data Analytics with Tools : Introduction to KNIME, Overview of KNIME, Basic Data Analysis with KNIME, Workflow Creation and Execution. Introduction to Apache Spark - Overview of Apache Spark, Basic Data Processing with Spark, Introduction to Spark MLLib. Practical Data Analytics with Tools - Hands-on Exercises with KNIME, Hands-on Exercises with Spark, Case Studies using Tools.

Reference Books

23DLA3101A - SYSTEM & NETWORK TRAFFIC SECURITY ANALYTICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DLA3101A	SYSTEM & NETWORK TRAFFIC SECURITY ANALYTICS	SNTSA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the key concepts of network design in complex network analysis and developing performance threshold	2	, PSO2
CO2	Apply situational analysis to develop secure solutions under a specified scenario and Evaluate a give scenario for tradeoff analysis for system performance, risk assessment, and costs and Examine network tracking mechanisms for capturing wireless traffic and Wi-Fi Security Protocol	3	PO1, PSO2
CO3	Examine the interconnection mechanism for network traffic management and IEEE 802.11 Network Components and Architectural Models	3	PO1, PSO2
CO4	Analyse the SNMP protocol for network management and Network Traffic Management	4	PO2, PO3, PSO2
CO5	Analyse various network management protocols to analyze the Network traffic, Managing Network Management Data and MIB	4	PO2, PO3, PSO2
CO6	Analyse various network management protocols to analyze the Network traffic, Managing Network Management Data, MIB, and Analyse security user based security model, access control RMON	4	PO3, PO5, PSO2
CO7	Analyse the evolution of network management protocols and pioneering technologies with our comprehensive overview covering SNMPv2, SNMPv3 architecture, AN-1 Remote Monitoring, and Broadband Network Management.	4	PO3, PO5, PSO2

Syllabus

Introduction to System and Network Traffic Security Analytics, Introduction to Network Service and Service based networks, Systems and services, User Requirements, Application Requirements, Network Requirements, Guidelines Requirements gathering and listing, Developing service metrics to measure performance, Characterizing behavior, developing performance threshold, Distinguish between service performance levels

Tradeoff analysis based on time, cost, risk tolerance, risk acceptance, return on investment, Problem analysis and situational analysis to address system security, Wi-Fi Network Management, Wi-Fi Security Protocols, Wi-Fi Protected Access (WPA), Wi-Fi Protected Access II (WPA2), Wi-Fi Protected Access III (WPA3), Wi-Fi Security Modes, Wi-Fi Connection Protocols, Taxonomy of Wi-Fi Attacks, Features of Wi-Fi Attacks, Wi-Fi Pentester Framework, Wi-Fi Network Tools

Overview of Wireless Networking, IEEE 802.11 Standards, IEEE 802.11 Network Components and Architectural Models, Firewalls & Proxy Server, Network Intrusion Detection & Prevention System, Network Management Architecture, Network Devices and Characteristics, Network Management Mechanisms, Architectural Considerations, Centralized, Distributed, and Hierarchical Management, Scaling Network Management Traffic, Managing Network Management Data, MIB

Performance Architecture, Performance Mechanisms, Prioritization, Network Traffic Management, Scheduling, and Queuing, Architectural Considerations, Evaluation of Performance Mechanisms, Security and Privacy Architecture, Security and Privacy Mechanisms, Architectural Considerations, Evaluation of Security Mechanisms, Network Design, Design Process, Vendor, Equipment, and Service-Provider Evaluations, Design Traceability, Design Metrics

SNMP and Network Management, Network Management Models, Abstract Syntax Notation One: ASN. 1, SNMP Management: SNMPv1, SNMPv2, SNMPv3, Internet Organizations and Standards, SNMP Model, Organization Model, Information Model, Communication Model, Functional Model, SNMPv2 System Architecture, SNMv2 Management Information Base and SNMPv2 Protocol, SNMPv3 Documentation Architecture, SNMPv3 User-Based Security Model and Access Control, SNMP Management, RMON SMI and MIB, An-1 Remote Monitoring, Broadband Network Management, RMON, ATM Technology, MPLS Network Technology, MPLS OAM Management

23DLA3202A - AUTOMATED NETWORK ANALYSIS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DLA3202A	AUTOMATED NETWORK ANALYSIS	ANA	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles and concepts of automated network analysis.	2	PO1, PO2
CO2	Analyze network performance metrics and diagnose network issues using automated methods	3	PO1, PO2
CO3	Demonstrate proficiency in using automated tools and techniques for network analysis and troubleshooting	3	PO1, PO2, PS02
CO4	Evaluate the security implications of automated network analysis tools and implement appropriate measures to safeguard network infrastructure	4	PO1, PO2, PO3, PS02
CO5	Design and implement automated network monitoring solutions for real-time performance management.	4	PO1, PO2, PO3, PS02

Syllabus

Introduction to Network Analysis Topics: Overview of Network Analysis Importance and applications Key concepts and terminology Network Architectures and Protocols OSI and TCP/IP models Common protocols (HTTP, FTP, DNS, etc.) Tools for Network Analysis Wireshark, tcpdump, and other packet analyzers Network performance monitoring tools Basic Scripting for Network Analysis Introduction to Python for network analysis Writing simple scripts to capture and analyze traffic

Traffic Monitoring and Performance Analysis Topics: Network Traffic Monitoring Techniques for monitoring traffic Real-time vs. historical analysis Performance Metrics Latency, bandwidth, throughput, packet loss Tools for measuring and analyzing performance (e.g., iPerf, NetFlow) Traffic Analysis Analyzing traffic patterns Identifying bottlenecks and performance issues Automating Traffic Analysis Using Python and other tools to automate monitoring and analysis Scheduling and reporting

Anomaly Detection and Network Security Topics: Introduction to Anomaly Detection Types of anomalies (volume, time-based, protocol anomalies) Techniques for anomaly detection Network Security Fundamentals Common threats and vulnerabilities Security tools and techniques Automated Threat Detection Using IDS/IPS systems (e.g., Snort, Suricata) Machine learning approaches to anomaly detection Implementing Security Measures Firewalls, VPNs, and other security technologies Automating security responses

Network Automation Tools and Techniques Topics: Overview of Network Automation Benefits and challenges Key tools and frameworks (e.g., Ansible, Puppet, Chef) Automating Network Configuration Scripting configurations Version control for network configs Automated Network Management Monitoring and managing network devices Automating responses to network events Case Studies and Real-world Applications Examples of network automation in enterprise environments Best practices and lessons learned

Advanced Topics in Automated Network Analysis Topics: Advanced Traffic Analysis Techniques Deep packet inspection Encrypted traffic analysis Big Data and Network Analysis Handling and analyzing large volumes of network data Using big data tools (e.g., Hadoop, Spark) for network analysis Emerging Trends in Network Automation Software-defined networking (SDN) Network function virtualization (NFV) Capstone Project Preparation Project planning and proposal Data collection and analysis methodologies

Reference Books

23DLA3203A - BLOCKCHAIN TECHNOLOGY FOR DIGITAL TRANSFORMATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DLA3203A	BLOCKCHAIN TECHNOLOGY FOR DIGITAL TRANSFORMATION	BTDT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Describes the history and basic concepts of Blockchain technology	2	PO1, PO2, PO4, PO6
CO2	Elaborate the need of consensus algorithms and its types	2	PO1, PO2, PO4, PO6
CO3	Create the smart contract to validate the transactions	3	PO1, PO2, PO4, PO6
CO4	Explore the various case studies in blockchain application	3	PO1, PO2, PO4, PO6
CO5	Evaluate the Blockchain enterprise application	3	PO1, PO2, PO4, PO6, PSO2

Syllabus

Introduction to Blockchain, History, Definition, Distributed Ledger, Blockchain Categories Public, Private, Consortium, Blockchain Network and Nodes, Peer to Peer Network, Mining Mechanism, Generic elements of Blockchain, Features of Blockchain, and Types of Blockchain.

Consensus mechanism: Key Feature of Consensus for Multi-Party Agreements, Understanding consensus with a real world analogy, Different Consensus Algorithms: Proof of Work (PoW), Proof of Stake (PoS), Byzantine Fault Tolerance (BFT), Practical Byzantine Fault Tolerance (PBFT), Proof of Authority (PoA) and Proof of Elapsed Time (PoET)

Ethereum and Smart Contracts, Components of Ethereum Ecosystem, Smart Contract Phases, Smart Contract Languages and verification challenges, using smart contracts to enforce legal contracts, comparing Bitcoin scripting vs. Ethereum Smart Contracts, writing smart contracts using Solidity and JavaScript. Privacy.

Blockchain in Digital Transformation: Blockchain in Supply Chain Management - Blockchain in Manufacturing - Blockchain in Automobiles - Blockchain in Healthcare - Blockchain in Cyber security - Blockchain in Financial Industry

Public versus private and permissioned versus permission less blockchains- Privacy and anonymity in Ethereum- Why are privacy and anonymity important?- The Ethereum Enterprise Alliance- Blockchain-as-a-Service- Initial Coin Offering (ICO): Project setup for ICO implementation- Token contracts- Token sale contracts-Contract security and Testing the code.

23DLA3304A - MULTI AGENT SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DLA3304A	MULTI AGENT SYSTEMS	MAS	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and apply notion of an agent, how agents are distinct from other software paradigms (eg objects) ,apply the characteristics of applications that lend themselves to an agent-oriented solution	2	PO1, PO5, PSO1
CO2	Analyze the key issues associated with constructing agents capable of intelligent autonomous action, and the main approaches taken to developing such agents	3	PO1, PO5, PSO1
CO3	Analyze the key issues in designing societies of agents that can effectively cooperate in order to solve problems, including an understanding of the key types of multi-agent interactions possible in such systems	3	PO2, PO5, PSO2
CO4	Examine the main application areas of agent-based solutions, and be able to develop a meaningful agent-based system using a contemporary agent development platform.	4	PO2, PO5, PSO1
CO5	Implement and analyze the algorithm of agents interaction and communication each other using JADE	4	PO2, PO5, PSO2
CO6	Analyzing agent behavior, Automated planning, evaluating agent interaction systems and agent-based systems.	4	PO1, PO5, PSO1
CO7	Analyzing problems of different agent-based systems	4	PO2, PO5, PSO2

Syllabus

Introduction: what is an agent agents and objects; agents and expert systems; agents and distributed systems typical application areas for agent systems. Trends in modern (distributed) computing. Origins of Multiagent design. Agent Design and Society Design. Approaches to Agent-Oriented Design. Agent properties. Environment properties. Agent types and architectures.

Intelligent Agents: the design of intelligent agents - reasoning agents, agents as reactive systems; hybrid agents; layered agents, a contemporary (Java-based) framework for programming agents. Learning from examples, discovery as learning, learning by analogy, explanation based learning, neural nets, genetic algorithms. Principles of Natural language processing, rule based systems architecture, Expert systems, knowledge acquisition concepts, AI application to robotics, and current trends in intelligent systems

Multi-Agent Systems: Classifying multi-agent interactions - cooperative versus non-cooperative; zero-sum and other interactions; what is cooperation how cooperation occurs - the Prisoners dilemma and Axelrods experiments; Interactions between self-interested agents: auctions & voting systems negotiation

Interactions between benevolent agents: cooperative distributed problem solving (CDPS), partial global planning; coherence and coordination; Interaction languages and protocols: speech acts, KQML/KIF, the FIPA framework. Applications of Agent-Oriented Design. Agent-Oriented Design, Electronic Negotiation Support, Flexible Dynamic Web services, Multi-robotic environments. Current trends in Software engineering. Agent-Oriented Software Engineering. Agent-Oriented Methodologies. The GAIA Methodology.

Multi-Agent Systems Classifying multi-agent interactions - cooperative versus non-cooperative zero-sum and other interactions what is cooperation how cooperation occurs the Prisoner's dilemma and Axelrod's experiments

23DLA3304E - MULTI AGENT SYSTEMS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DLA3304E	MULTI AGENT SYSTEMS	MAS	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and apply notion of an agent, how agents are distinct from other software paradigms (eg objects) and understand & apply the characteristics of applications that lend themselves to an agent-oriented solution	2	PO1, PO5, PSO1
CO2	Analyze the key issues associated with constructing agents capable of intelligent autonomous action, and the main approaches taken to developing such agents	3	PO2, PO5, PSO2
CO3	Analyze the key issues in designing societies of agents that can effectively cooperate in order to solve problems, including an understanding of the key types of multi-agent interactions possible in such systems	3	PO1, PO5, PSO1
CO4	Examine the main application areas of agent-based solutions, and be able to develop a meaningful agent-based system using a contemporary agent development platform.	4	PO1, PO5, PSO2
CO5	Implement and analyze the algorithm of agents interaction and communication each other using JADE	4	
CO6	Analyzing agent behavior, Automated planning, evaluating agent interaction systems and agent-based systems.	4	
CO7	Analyzing problems of different agent-based systems	4	

Syllabus

Introduction what is an agent agents and objects agents and expert systems agents and distributed systems; typical application areas for agent systems. Trends in modern (distributed) computing. Origins of Multiagent design. Agent Design and Society Design. Approaches to Agent-Oriented Design. Agent properties. Environment properties. Agent types and architectures

Intelligent Agents: the design of intelligent agents - reasoning agents, agents as reactive systems; hybrid agents; layered agents, a contemporary (Java-based) framework for programming agents. Learning from examples, discovery as learning, Learning by analogy, explanation based learning, neural nets, genetic algorithms. Principles of Natural language processing, rule based systems architecture, Expert systems, knowledge acquisition concepts, AI application to robotics, and current trends in intelligent systems.

Intelligent Agents: the design of intelligent agents - reasoning agents, agents as reactive systems; hybrid agents; layered agents, a contemporary (Java-based) framework for programming agents. Learning from examples, discovery as learning, Learning by analogy, explanation based learning, neural nets, genetic algorithms. Principles of Natural language processing, rule based systems architecture, Expert systems, knowledge acquisition concepts, AI application to robotics, and current trends in intelligent systems.

Interactions between benevolent agents: cooperative distributed problem solving (CDPS), partial global planning; coherence and coordination; Interaction languages and protocols: speech acts, KQML/KIF, the FIPA framework. Applications of Agent-Oriented Design. Agent-Oriented Design, Electronic Negotiation Support, Flexible Dynamic Web services, Multi-robotic environments. Current trends in Software engineering. Agent-Oriented Software Engineering. Agent-Oriented Methodologies. The GAIA Methodology

Multi-Agent Systems: Classifying multi-agent interactions cooperative versus non-cooperative; zero-sum and other interactions what is cooperation how cooperation occurs the Prisoners dilemma and Axelrod's experiments.

23DLA3405M - BLOCKCHAIN ANALYTICS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DLA3405M	BLOCKCHAIN ANALYTICS	BCA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of blockchain technology, including its architecture, mechanisms, and key features.	2	PO2, PSO1
CO2	Explore and analyze various applications of blockchain technology across different industries.	2	PO2, PO3, PO5, PSO1
CO3	Utilize appropriate tools and techniques to collect, analyze, and visualize blockchain data.	4	PO3, PSO2
CO4	Analyze blockchain analytics concepts and methodologies to solve real-world problems and case studies.	4	PO5, PO6

Syllabus

Introduction to blockchain technology, Components of a blockchain: blocks, transactions, nodes, Types of blockchains: public, private, consortium, Consensus mechanisms: Proof of Work, Proof of Stake, Use cases of blockchain technology

Data collection from blockchain networks, Data preprocessing techniques for blockchain data, Visualization techniques for blockchain data analysis, Network analysis of blockchain transactions, Security and privacy considerations in blockchain data analysis

Statistical analysis of blockchain data, Pattern recognition and anomaly detection in blockchain transactions, Predictive modeling using blockchain data, Case studies and real-world examples of blockchain analytics, Ethical considerations in interpreting blockchain analytics results

Regulatory compliance and forensic investigations using blockchain analytics, Supply chain management and traceability with blockchain analytics, Fraud detection and prevention in blockchain ecosystems, Cryptocurrency market analysis using blockchain analytics, Future trends and advancements in blockchain analytics

Reference Books

23DLA3406M - CRYPTOCURRENCY AND BLOCKCHAIN TECHNOLOGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DLA3406M	CRYPTOCURRENCY AND BLOCKCHAIN TECHNOLOGY	CBT	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Introduction to basics of blockchain technologies and cryptographic mechanisms	2	PO1, PSO1
CO2	Applying consensus and transactions done using bitcoin platforms	3	PO1, PO2
CO3	Applying smart contracts and proof of work using bitcoin, ethereum and ethereum virtual machine	3	PO2, PO3
CO4	Analyzing vulnerabilities and attacks and identification of bugs	4	PO3, PSO1

Syllabus

Introduction to Cryptocurrencies and Blockchain :History of money and digital currencies Basics of blockchain technology Bitcoin as the first cryptocurrency, Cryptographic Basics:Encryption and decryption Hash functions Digital Bitcoin: How Bitcoin works Mining and consensus mechanisms Wallets and transactions, Altcoins and Tokens: Introduction to altcoins Token standards ,ERC-20, ERC-721,Use cases for tokens

Blockchain Technology: Consensus algorithms (e.g., Proof of Work, Proof of Stake) Smart contracts and decentralized applications (DApps) Scalability and blockchain interoperability, Ethereum: Introduction to Ethereum Ethereum Virtual Machine (EVM) Solidity programming basics

Blockchain Security Common security vulnerabilities,51% attacks, smart contract bugs, Best practices for securing cryptocurrencies and wallets Regulatory and compliance issues, Blockchain Use Cases: Supply chain management Identity management Voting systems

Reference Books

23DLA3507 - DISTRIBUTED LEDGER ARCHITECTURE FOR AUTOMATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DLA3507	DISTRIBUTED LEDGER ARCHITECTURE FOR AUTOMATION	DLAA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of distributed ledger technology (DLT) and its applications in automation.	2	PO1, PO2, PSO1
CO2	Analyze different distributed ledger architectures and their suitability for various automation scenarios.	4	PO1, PO2, PSO1
CO3	Analyze the requirements and components necessary for distributed ledger solutions to address automation problems.	4	PO5, PSO2
CO4	Evaluate the security, scalability, and performance aspects of distributed ledger architectures in automation systems.	5	PO5, PO12, PSO2

Syllabus

Definition and Characteristics of Distributed Ledger Technology (DLT): Immutable Ledger, Decentralization, Consensus Mechanisms, Historical Overview and Evolution of DLT: Pre-Bitcoin Era, Emergence of Bitcoin and Blockchain, Evolution of DLT beyond Blockchain, Types of DLT: Blockchain, Directed Acyclic Graphs (DAGs), Hashgraph, Components of DLT: Nodes, Transactions, Consensus Mechanisms, Proof of Work (PoW), Proof of Stake (PoS), Practical Byzantine Fault Tolerance (PBFT)

Blockchain Architecture: Public vs. Private Blockchains, Examples: Bitcoin, Ethereum, Hyperledger, DAG Architecture: Tangle Structure, Properties: Scalability, Transaction Speed, Hashgraph Architecture: Gossip about Gossip, Virtual Voting, Comparison of Architectures: Scalability, Security, Consensus Mechanisms

Smart Contracts: Definition and Features, Programming Languages for Smart Contracts, Use Cases: Decentralized Applications (DApps), Supply Chain Management using DLT: Traceability and Transparency, Examples: IBM Food Trust, VeChain, Identity Management and Authentication: Self-Sovereign Identity, Decentralized Identity Platforms, Decentralized Finance (DeFi) Applications: Decentralized Exchanges (DEX), Yield Farming, Stable coins

Security Challenges in DLT: Consensus Attacks, 51% Attacks, Sybil Attacks, Scalability Issues and Solutions: Sharding, Layer 2 Solutions (Lightning Network, Raiden Network), Performance Metrics: Throughput, Latency, Transaction Finality, Case Studies and Real-World Examples: Ethereum DAO Hack, Cryptocurrency Exchange Hacks, Performance Comparisons (Bitcoin vs. Ethereum vs. Others)

Reference Books

- 1 Mastering Blockchain: Unlocking the Power of Cryptocurrencies, Smart Contracts, and Decentralized Applications, Imran Bashir, ISBN: 978-1787125445, Packt Publishing.
- 2 Blockchain Applications: A Hands-On Approach, Arshdeep Bahga and Vijay Madiseti, ISBN: 978-0996025555, VPT; 1st edition.
- 3 Bitcoin and Cryptocurrency Technologies: A Comprehensive Introduction, Arvind Narayanan, ISBN: 978-0691171692, Princeton University Press.
- 4 Blockchain Revolution: How the Technology Behind Bitcoin and Other Cryptocurrencies is Changing the World, Don Tapscott and Alex Tapscott, ISBN-13: 978-1101980132, Portfolio.

23DLA3508 - PERMISSIONED DISTRIBUTED LEDGER (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DLA3508	PERMISSIONED DISTRIBUTED LEDGER	PDL	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Course Outcome 1: Knowledge and Understanding Describe the foundational concepts and principles of permissioned distributed ledger technology (PDL). Explain the differences between permissioned and permissionless distributed ledgers. Identify the components of a permissioned ledger network and their functions.	1	PO1, PO2, PSO2
CO2	Course Outcome 2: Application and Analysis Analyze various permissioned ledger architectures, including consensus mechanisms and cryptographic protocols. Evaluate the potential applications of permissioned distributed ledgers across different industries. Critically assess the security, privacy, and scalability challenges associated with permissioned distributed ledgers.	2	PO1, PO2, PSO2
CO3	Course Outcome 3: Synthesis and Creation Develop hands-on skills in deploying and managing permissioned ledger networks using frameworks like Hyperledger Fabric, Corda, etc. Design and program smart contracts for specific business logic and use cases. Synthesize theoretical knowledge with practical implementation to solve real-world problems in permissioned distributed ledger technology.	3	PO1, PO2, PSO2
CO4	Course Outcome 4: Evaluation and Reflection Evaluate the effectiveness of different consensus mechanisms and cryptographic protocols in permissioned ledger networks. Reflect on the ethical and regulatory implications of using permissioned distributed ledgers in various industries. Assess the strengths and limitations of permissioned distributed ledger technology in comparison to other DLTs and traditional systems.	4	PO1, PO2, PSO2

Syllabus

Introduction to Distributed Ledger Technology Overview of distributed ledger technology (DLT) Characteristics and advantages of distributed ledgers Types of DLT: Permissioned vs. permissionless; Permissioned Ledger Architecture Components of a permissioned ledger network Overview of permissioned ledger frameworks (e.g., Hyperledger Fabric, Corda) Consensus mechanisms: Practical Byzantine Fault Tolerance (PBFT), Raft, etc.

Cryptography in Permissioned Ledgers Cryptographic primitives in permissioned ledger systems Digital signatures, hash functions, and cryptographic hashing Privacy-enhancing techniques: Zero-knowledge proofs, ring signatures, etc.; Smart Contracts and Business Logic Introduction to smart contracts Programming smart contracts: Solidity, Chaincode, etc. Use cases and examples of smart contract applications in permissioned ledgers

Security and Privacy Security challenges in permissioned ledger networks Access control and identity management Privacy considerations and confidentiality in permissioned ledgers; Scalability and Performance Scalability challenges in permissioned ledger networks Techniques for improving transaction throughput and latency Case studies of scalable permissioned ledger implementations

Real-world Applications Overview of permissioned ledger projects in finance, supply chain, healthcare, etc. Case studies of successful implementations Future trends and opportunities in permissioned distributed ledger technology; Hands-on Workshop Setting up a permissioned ledger network using a chosen framework Deploying smart contracts and interacting with the network Simulating real-world scenarios and conducting performance tests

Reference Books

- 1 Blockchains in 6G: A Standardized Approach To Permissioned Distributed Ledgers, Mischa Dohler, Carmen Lopez, and Wei Wang, 1st, River Publishers .
- 2 Blockchain Science: Distributed Ledger Technology, Roger Wattenhofer, 1st, CreateSpace Independent Publishing Platform .

- 3 Permissioned Blockchain Technologies for Academic Publishing, Javier Ignacio Jimenez, 1st, IntechOpen.
- 4 Permissioned Distributed Ledgers and the Governance of Money, Mischa Dohler, Juan M. Lopez, Kan Zhang, Tao Wang, 1st, ResearchGate.

23DSB3101A - DATA ANALYTICS AND VISUALIZATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3101A	DATA ANALYTICS AND VISUALIZATION	DAV	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic concepts of Data Science and its application.	3	PO1, PO2
CO2	Apply various statistical tools for testing hypothesis.	3	PO1, PO2
CO3	Apply Python concepts like Numpy and pandas to handle data.	3	PO1, PO2
CO4	Apply visualization techniques for graphical representation of data	3	PO1, PO2
CO5	Apply advanced Visualization techniques	3	PO1, PO2
CO6	Analyzing Data through Python Visualization Techniques	4	PO1, PO2
CO7	Analyzing data through visualization Tool Tableau	4	PO1, PO2

Syllabus

Introduction AI, Machine Learning and Data Science, What is data Science Extracting Meaningful patterns, Building representative models, Combination of Statistics, Machine Learning and Computing, Learning Algorithms, Associated fields, Data Science Classification, Data objects and Attribute Types, Measuring Data similarity and dissimilarity Data Collection and Data PreProcessing overview Data Cleaning Data Integration and Transformation Data Reduction Data Discretization

Descriptive Statistics Sampling Techniques Data Classification Measures of Central Tendency Measures of Variation Quartiles and Percentiles Moments Skewness and Kurtosis Exploratory Data Analytics Descriptive Statistics Mean, Mode, and Standard Deviation Box Plots Pivot Table Heat Map Correlation Statistics ANOVA

Data Wrangling with NumPy and Pandas Python list vs NumPy arrays Whats the Difference Creating a NumPy Array, Shape and Reshaping of NumPy Array, Indexing and Slicing of NumPy Array, Stacking and Concatenating NumPy Arrays, Broadcasting in NumPy Arrays, Time series, Sorting in NumPy Arrays, Pandas Series, Data Frame, indexing, sorting, loading data from CSV, Aggregation, concatenation.

Visualization and simple metrics Data Analytics Communication, Data Types for Plotting Data Types and Plotting, Simple Line Plots, Simple Scatter Plots, Visualizing Errors, Density and Contour Plots, Histograms, Binnings, and Density

Customizing Plot Legends, Customizing Colour bars, Multiple Subplots, Text and Annotation, Customizing Ticks

23DSB3202A - DATA WAREHOUSING AND MINING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3202A	DATA WAREHOUSING AND MINING	DWHM	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand data warehousing, mining, OLAP vs. OLTP, along with multidimensional modeling and analysis techniques.	2	PO1, PSO1
CO2	Interpret Knowledge Discovery in Databases (KDD), dives into data structure, equips you with statistical analysis methods, and introduces data cleaning and regression techniques for extracting insights from data.	3	PO1, PO2, PSO1
CO3	Apply Different Classification Algorithms to Segregate Input data into different class levels and find out Hidden relationship between transactional dataset using Association Rule Mining.	3	PO2
CO4	Analyse different Clustering Models using the predefined dataset.	4	PO5
CO5	Analyse complex data (time series, sequences, graphs), new methodologies, societal impacts, and applications.	4	PO5

Syllabus

Knowledge Discovery in Databases (KDD), dives into data structure, equips you with statistical analysis methods, and introduces data cleaning and regression techniques for extracting insights from data.

KDD, Data Objects and Attribute Types, Basic Statistical Descriptions of Data, Descriptive Data Summarization & Data Preprocessing (Introduction), Data Preprocessing Methods, Simple Regression Analysis, Multiple Regression Analysis "

Data Mining Techniques (Association Rules Outer detection Sequential Pattern, Prediction), Classification by Decision Tree Induction, Bayesian Classification, Back Propagation, Association Rule Mining, Rule-based Classification, Support Vector Machine (SVM), Understanding Accuracy of Classification

Supervised Vs Unsupervised learning, Clustering Methods, Partitioning Methods, Hierarchical Clustering, Density-Based Clustering Methods, Grid-Based Methods.

Data Mining Trends and Research Frontiers, Mining Complex Data Types, Mining Sequence Data: Time-Series, Symbolic Sequences, and Biological Sequences, Mining Graphs and Networks, Mining Other Kinds of Data, Other Methodologies of Data Mining, Data Mining Applications, Data Mining and Society, Data Mining Trends

Reference Books

23DSB3303A - BIG DATA ANALYTICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3303A	BIG DATA ANALYTICS	BDA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concepts of big data, Initial exploration of analysis of data and Data visualization.	2	PO3, PO5, PO6, PSO2
CO2	Apply Initial exploration of data and advanced data analytics by using R	3	PO3, PO5, PO6, PSO2
CO3	Apply advanced algorithms & Statistical modeling for big data using HDFS, HIVE, and PIG.	3	PO3, PO5, PO6, PSO1
CO4	Analyze advanced SQL functions for in-database analytics by MADlib, Greenplum along with common deliverables of analytics life cycle project	4	PO3, PO5, PO6, PSO1
CO5	Analyze query performance and optimize MongoDB queries using indexes, projections, and query planning.	4	PO3, PO5, PO6, PSO2
CO6	Build and Evaluate the Big Data Analytical problems using R, Hadoop, HIVE Programming concepts.	6	PO3, PO5, PO6, PSO2
CO7	Develop innovative solutions to big data challenges using advanced analytics techniques.	6	PO3, PO5, PO6, PSO2

Syllabus

Introduction to Big Data Analytics: Big Data Overview, State of the Practice of Analytics, Big Data Analytics in Industry Verticals. It also covers Overview of Data Analytics Lifecycle, Discovery, Data Preparation, Model Planning, Model Building, Communicating Results and Findings, Operationalizing. Initial Analysis of the Data: Initial Exploration and Analysis of the Data, Basic Data Visualization. Basic data analytics, reporting, and apply basic data visualization techniques to your data. Apply basic analytics methods such as distributions, statistical tests and summary operations, and differentiate between results that are statistically sound vs. statistically significant. Identify a model for your data and define the null and alternative hypothesis. Experimentation and demonstration of initial analysis of data using R

Initial hypotheses; and the data's structure and volume. Apply some of the more methods in Analytics solutions, algorithms and the technical foundations for the methods. The environment (use case) in which each technique can provide the most value. Use appropriate diagnostic methods to validate the models created Use R and in-database analytical functions to fit, score and evaluate models. Advanced Analytics and Statistical Modeling for Big Data

Technology & Tools: Tool to Perform Analytic on Unstructured data using Map Reduce Programming paradigm. Use Hadoop, HDFS, HIVE, PIG and other products in the Hadoop eco system for unstructured data analytics. Effectively use advanced SQL functions and Greenplum extensions for in-database analytics.

Use MADlib to solve analytics problems in-database. Endgame - Operationalizing an Analytics Project: Tasks needed to operationalize an analytics project. Four common deliverables of an analytics life cycle project meet the needs of key stakeholders. Use a framework for creating final presentations for sponsors and analysts. Evaluate data visualization and identify ways to improve it. Apply these concepts to a big data analytics problem in the final lab.

Lab/Practical Programs and Skill Exercises designed in that semester

23DSB3404M - BIG DATA OPTIMIZATION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3404M	BIG DATA OPTIMIZATION	BDO	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Optimization methods and analytics using R	2	PO1, PO2, PO3, PO4, PSO1, PSO2
CO2	Apply blind search and local search methods for solving optimization problems	3	PO1, PO2, PO3, PO4, PSO1, PSO2
CO3	Analyze and compare population-based search methods for solving real world problems	4	PO1, PO2, PO3, PO4, PSO1, PSO2
CO4	Examine the applications of genetic programming to solve problems like Travelling Salesman Problem and advanced Nature inspired optimization techniques.	4	PO1, PO2, PO3, PO4, PSO1, PSO2

Syllabus

Introduction: Motivation, Why R, Representation of a Solution , Evaluation Function , Constraints , Optimization Methods , Demonstrative Problems Foundation of r -R Basics: Introduction Basic Objects and Functions, data structures, about usage, understanding data structures, functions, list, arrays, control structures, data manipulations, date and string manipulations

Blind Search: Introduction, Full Blind Search, Grid Search, Monte Carlo Search , Local Search: Introduction , Hill Climbing, Simulated Annealing Tabu Search, Comparison of Local Search Methods,

Population Based Search: Introduction, Genetic and Evolutionary Algorithms, Differential Evolution ,Particle Swarm Optimization, Estimation of Distribution Algorithm ,Comparison of Population Based Methods, Bag Prices with Constraint

Genetic Programming Applications: Introduction, Travelling Salesman Problem , Time Series Forecasting , Wine Quality Classification Implementing R programming on various problems, Ant Colony Optimization, Blue Whale Optimization, Grey Wolf Optimization.

Reference Books

23DSB3406M - DIGITAL VIDEO PROCESSING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3406M	DIGITAL VIDEO PROCESSING	DVP	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand different computational models of early human vision.	2	PO1, PSO1
CO2	Apply various concepts of motion detection, estimation and video enhancement with its applications	3	PO2, PSO1
CO3	Apply the video segmentation and motion segmentation using different methods	3	PO3, PSO1
CO4	Analyse the signals using different algorithms such as Pel-Recursive methods, Bayesian Methods, etc	4	PO4, PSO1
CO5	Analyze various concepts of video signals for the analysis, segmentation and restoration	4	PO5, PSO1

Syllabus

:Video Sampling and Interpolation, Basic Linear Filtering with Application to Image Enhancement, Computational Models of Early Human Vision, Motion Analysis, GMM model with EM,

Motion Detection and Estimation, Optical Flow Methods, Motion Compensated Filtering, Video Enhancement and Restoration, Video Quality Assessment, Restoration, Super- resolution. Video Segmentation,

Motion segmentation, motion tracking in video, 2D and 3D Motion Tracking in digital video methods using point correspondences, optical flow and direct methods, Pel-Recursive methods, Bayesian Methods,

Video Stabilization and Mosaicing, Unified Framework for video indexing, Summarization, browsing and retrieval, video surveillance

Analyze various concepts of video signals for the analysis, segmentation and restoration

Reference Books

- 1 The Essential Guide to Video Processing , Al Bovik , 4,2009, Academic Press.
- 2 Digital Video Processing , Murat Tekalp , 2,2015, Prentice Hall.
- 3 Video Stabilization and Mosaicing , Steven smith , 2,2016, Tata McGrawhill.
- 4 Video processing elements , John Mathew , 1,2012, Pearson Edition.

23DSB3407M - DATA ANALYTICS ON CLOUD (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3407M	DATA ANALYTICS ON CLOUD	DAC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Outline R Programming environment and R Packages.	2	PO1, PSO2
CO2	Experiment with basic statements, control structures and functions in R	3	PO2, PO4, PSO2
CO3	Examine the working nature of different data structures and dataframe manipulation in R	4	PO2, PO4, PSO2
CO4	Discover data analysis pattern using Statistics and Data visualization	4	PO2, PO4, PSO2

Syllabus

Introduction to Data Analytics What are Data Analytics Why Data Analytics , Data basics: Quantitative data Nominal data, Ordinal data. What is R Why R Advantages of R over Other Programming Languages R Studio R command Prompt, R script file, comments Handling Packages in R Installing a R Package, Important commands to get started installed.

Vectors, Lists, Matrices, Arrays, Factors, Variables: Variable assignment, Data types of Variable, Finding Variable, Deleting Variables. R- Operators: Arithmetic Operators, Relational Operators, Logical Operator, Assignment Operators

Sequence vector, rep function, vector access, vector names, vector math, R List -Creating a List, Add/Delete Element to or from a List, Size of List, Merging Lists, Matrix Computations: Addition, subtraction, Multiplication and Division

Visualization visually Checking distributions for a single Variable Slice Percentages and Chart Legend, 3D Pie Chart

Reference Books

23DSB3408M - DIGITAL MEDIA ANALYTICS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3408M	DIGITAL MEDIA ANALYTICS	DMA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Data analytics and Inspect assumptions about new media as an egalitarian force	2	PO1, PO2, PSO1
CO2	Apply and implementation of analytics techniques	3	PO1, PO2, PO5, PSO1
CO3	Apply the Principles of Importing, Summarizing, and Visualizing Data using Tableau	3	PO1, PO2, PO3, PO5, PSO1
CO4	Exploring and analyzing different media analytics tools	4	PO2, PO3, PO5, PSO1

Syllabus

The process of data analytics uses statistical techniques and software tools to interpret complex data and derive actionable insights and WordPress is a content management system that simplifies the process of creating and managing websites.

Excel advanced functions include complex formulas and tools like VLOOKUP, INDEX-MATCH, and array functions. These functions enhance data analysis and automation capabilities in Excel.

Social media analytics involves analyzing data from social media platforms to understand user behavior and trends It helps businesses make data-driven decisions to improve engagement and marketing strategies.

Voyant Tools is a web-based application for text analysis, enabling users to visualize and explore textual data interactively. It provides various analytical tools to uncover patterns and insights in text.

- 5 Introduction to Search Engine Optimization, N.Milligan, 1st edition, 2017, Todd Kelsey.

23DSB3509 - ADVANCED DATABASES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3509	ADVANCED DATABASES	AD	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of query optimization and database recovery protocols.	3	PO1, PO2, PO5, PSO2
CO2	Apply emerging database technologies and distributed databases	3	PO1, PO2, PO5, PSO2
CO3	Analyze and Discriminate object oriented and relational database systems.	3	PO1, PO3, PO5, PSO2
CO4	Analyze multimedia databases for various aspects including data types, SQL operations, architecture, and handling of text, images, and video.	4	PO2, PO3, PO5, PSO2

Syllabus

Query optimization focuses heuristic techniques, selectivity and cost estimation and then relational database tuning, and advanced recovery protocols including NO-UNDO/REDO, deferred and immediate updates, shadow paging, and ARIES algorithm

Advanced database models include active, temporal, spatial, and deductive approaches, complemented by emerging technologies like mobile data management, GIS, and genomic databases

Distributed databases covers concepts including architecture, fragmentation, allocation techniques; transaction management, concurrency control, recovery; and explores strengths of object-oriented and object-relational DBMSs, adhering to standards like ODMG 3.0

Multimedia databases encompass managing diverse data types (text, image, video) using SQL for large objects, optimizing architecture for performance, and modeling effective querying techniques

Reference Books

- 1 Fundamentals of Database Systems, Ramez Elmasri, Shamkanth B. Navathe,, 5th Edition,2018, Pearson.
- 2 Database Systems, Thomas Connolly, Carolyn Begg , 6th Edition,2019, Pearson.
- 3 Multimedia Databases: An Object Relational Approach, Dunckley, Lynne, 1st Edition,2002, Pearson Education.

23DSB3510 - BUSINESS ANALYTICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3510	BUSINESS ANALYTICS	BA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Introduction to Business Analytics: What is Business Analytics and why is it important, Data Analytics Process, Types of Data:	3	PO3
CO2	Identify and analyze business problems, formulate appropriate solutions, and present findings to stakeholders.	3	PO4, PO7, PO11, PSO2
CO3	Formulate statistical and machine learning techniques to analyse the data, including exploratory data analysis, hypothesis testing, regression and classification	4	PO3, PSO2
CO4	Analyse the ethical and legal issues related to data analytics, including data privacy and security	4	PO4, PO8

Syllabus

Introduction to Business Analytics: What is Business Analytics and why is it important, Data Analytics Process, Types of Data: Structured and Unstructured Data, Data Analytics Challenges, Overview of business analytics and its Applications, Importance of data-driven decision making

Data Collection and Preparation: Types of Data Collection: Sampling, Surveys, and Experiments, Descriptive Statistics: Measures of Central Tendency and Dispersion, Data visualization Data Quality Issues and Remedies, principles and tools, Communicating insights through visualizations.

Time series analysis and forecasting, Machine Learning for Business Analytics: Supervised and unsupervised learning algorithms, Feature engineering and selection, Evaluation and validation of machine learning model Statistical Analysis: Descriptive statistics and summary measures, Hypothesis testing and statistical inference, Predictive Modeling: Regression analysis and linear models, Classification techniques (e.g., logistic regression, decision trees),

Ethical guidelines for data handling and analysis, Compliance with relevant regulations (e.g., GDPR, HIPAA) Big Data Analytics: Introduction to big data technologies (e.g., Hadoop, Spark), Processing and analyzing large-scale data sets, Distributed computing and parallel processing ,

Reference Books

- 1 Data Mining and Predictive Analytics, Daniel T. Larose, 2nd Edition, Willey Publications.
- 2 Statistical Methods for Survival Data Analysis , Elisa T. Lee, 4th Edition , Willey Series Publications.
- 3 . Introduction to Big Data and Business Analytics Available , Capistrano, E. , 2018, Pearsons Publications.
- 4 Business Analytics, Tanushri Banerjee, Arimdam Banerjee, 2nd Edition, Elsevier.

23DSB3511 - GRAPH & WEB ANALYTICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3511	GRAPH & WEB ANALYTICS	GWA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the impact of big data on graphs, Network Basics and Social Networks	2	PO1, PSO2
CO2	Apply Web Analytics:- Data sources, tools, Web traffic data.	3	PO1, PO2, PO4, PSO2
CO3	Analyzing Web Analytics Strategy- website traffic analysis, audience identification and segmentation analysis, Emerging Analytics	4	PO1, PO2, PO3, PO4, PSO2
CO4	Compare Email Testing Analysis, competitive Intelligence Analysis, and Social, Mobile, Video Analysis	4	PO2, PO3, PO4, PSO2

Syllabus

The module describes about the Basics of Graphs along with different types of Graphs. Basic introduction of Networks and Node_Level Analysis and Community Detection will also be covered under this module.

This module covers the Web Analytics along with the Introduction- State of the analytics union, state of the industry, Rethink imperative, tactical shift. It also includes Strategy for choosing the optimal analytics tool- vendor selection analysis, running an effective tool pilot, checking SLA's for web-analytics engagement, attributes of great metrics, strategically aligned tactics for impactful web metrics

This module describes the Web Traffic Data that covers the Practical solutions- Sources of traffic, outcomes, four measuring the search quality, search engine optimization analysis, example of google analysis, content coverage, indexing by search engines, paid search analysis, direct traffic and Testing, actionable testing ideas.

The module describes the Component of Web Analytics Strategy that covers Competitive Intelligence Analysis- Data Sources, website traffic analysis, search and keyword the performance of Videos.

Reference Books

- 1 Python for graph and Network Analysis, Mohammad Zuhair Al-Taie Seifedine Kadry, 1st Edition, 2017, Springer.
- 2 Web Analytics 2.0: The Art of Online Accountability and Science of Customer Centricity, Avinash Kaushik, 1st Edition, 2009, Wiley publisher.
- 3 Practical Web Analytics for User Experience: How Analytics can help you Understand your Users, Michael Beasley, 1st Edition, 2013, Morgan Kaufmann.
- 4 Fullstack GraphQL Applications with React, Node.js, and Neo4j, William Lyon, 1st Edition, 2022, Manning.

23DSB3512 - DATA GOVERNANCE ON CLOUD (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23DSB3512	DATA GOVERNANCE ON CLOUD	DGC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the importance of data governance in cloud computing.	2	PO1, PO4, PO5, PSO2
CO2	Demonstrate the fundamental principles and components of data governance.	3	PO1, PO3, PO5, PSO2
CO3	Apply various data governance frameworks and best practices.	3	PO1, PO3, PO5, PSO2
CO4	Apply hands-on experience in implementing data governance in cloud environments.	3	PO1, PO3, PO5, PSO2

Syllabus

Introduction to Data Governance: Definition and importance of data governance, Key principles and objectives, Data governance maturity model Cloud Computing Fundamentals: Overview of cloud computing models (IaaS, PaaS, SaaS), Benefits and challenges of cloud computing for data governance

Data Governance Policies and Procedures :Developing data governance policies, Establishing data governance procedures and workflows, Change management in data governance

Data Governance Frameworks: Overview of popular data governance frameworks (e.g., DAMA-DMBOK, DCAM), Comparisons and best practices Data Governance Components: Data governance council and committees, Data stewardship and ownership, Metadata management

Data Quality Management in the Cloud: Understanding data quality dimensions, Data profiling and assessment techniques, Data cleansing and remediation strategies Data Security and Privacy in the Cloud: Cloud security fundamentals, Encryption and key management, Privacy regulations and compliance (e.g., GDPR, CCPA)

Reference Books

- 1 Data Governance: How to Design, Deploy and Sustain an Effective Data Governance Program, John Ladley, 2012, The Morgan Kaufmann Series on Business Intelligence.
- 2 The Data Governance Imperative: A Business Strategy for Corporate Data, Steve Sarsfield, 2009, IT Governance Publishing.
- 3 Cloud Computing: Principles and Paradigms, Rajkumar Buyya, James Broberg, and Andrzej Goscinski, 2011, Wiley.
- 4 Data Quality: Concepts, Methodologies and Techniques, C. Batini, M. Scannapieco, and S. Bova, 2006, Springer.
- 5 Data Quality: Concepts, Methodologies and Techniques, Alex Berson and Larry Dubov, 2012, Springer.

23ECF3101A - AUTOMOBILE ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ECF3101A	AUTOMOBILE ENGINEERING	AE	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand various principles, components, classification of vehicles in an Automobiles	2	PO1, PO2
CO2	Understand working of Engine cooling system, Coolant properties and combustion chambers.	2	PO1, PO2
CO3	Understand various lubricating systems, its properties and Transmission systems of an Automobile.	2	PO1, PO2
CO4	Understand the concepts of Suspension system and Vehicle control in an Automobile	2	PO1, PO2
CO5	Understand the various advanced technologies used in the automotive sector like: ADAS, Autonomous cars, Remote parking, VPS etc.	2	PO1, PO2
CO6	Apply the knowledge of various concepts of Automobile engineering using simulation and analysis through suitable softwares	3	PO1, PO2
CO7	Apply the knowledge of automobile engineering concepts for the trouble shooting purpose.	3	PO1, PO2

Syllabus

Classification of Vehicles applications, Components of an automobile. Engine and cooling system Engine Classification.

types of combustion chambers and components of engine. Coolants and its properties, Air and water cooling systems.

Lubrication and transmission Systems, Lubricants, Properties, Splash, semi-pressure and full pressure Lubricating systems.

Clutches, Gear Box, Automatic transmission, propeller shaft, differential.

Suspension systems and vehicle control. springs, shock absorbers, wheel alignment, steering mechanisms, power steering, Brakes, Emission from automobiles.

Reference Books

- 1 Automobile Engineering, Kripal Singh, 1, Standard Publishers Distributors.
- 2 Automotive Mechanics, William H. Crouse and Donald L. Anglin, 1, McGraw-Hill Education.
- 3 A Textbook of Automobile Engineering, S K Gupta, 1, S Chand .
- 4 Automobile Mechanical and Electrical Systems, Tom Denton, 1, Routledge.

23ECF3101E - AUTOMOBILE ENGINEERING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ECF3101E	AUTOMOBILE ENGINEERING	AE	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand various principles, components, classification of vehicles in an Automobiles	2	PO1, PO2
CO2	Understand working of Engine cooling system, Coolant properties and combustion chambers.	2	PO1, PO2
CO3	Understand various lubricating systems, its properties and Transmission systems of an Automobile.	2	PO1, PO2

CO2	Understand working of Engine cooling system, Coolant properties and combustion chambers.	2	PO1, PO2
CO3	Understand various lubricating systems, its properties and Transmission systems of an Automobile.	2	PO1, PO2
CO4	Understand the concepts of Suspension system and Vehicle control in an Automobile.	2	PO1, PO2
CO5	Apply the knowledge of various concepts of Automobile engineering using simulation and analysis through suitable soft wares	3	PO1, PO2
CO6	Apply the knowledge of automobile engineering concepts for the trouble shooting purpose.	3	PO1, PO2

Syllabus

Classification of Vehicles, applications, Components of an automobile, Engine and cooling system.

Engine Classification, types of combustion chambers and components of engine. Coolants and its properties, Air- and water-cooling systems.

Lubrication and transmission Systems: Lubricants, Properties, Splash, semi-pressure and full pressure Lubricating systems.

Clutches, Gear Box, Automatic transmission, propeller shaft, differential. Suspension systems and vehicle control.

Springs, shock absorbers, wheel alignment, steering mechanisms, power steering, Brakes, Emission from automobiles.

23ECF3202A - AUTOTRONICS & SAFETY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ECF3202A	AUTOTRONICS & SAFETY	ATS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the electrical principles to estimate the performance of batteries for automotive applications	3	PO1
CO2	Apply the basics of electronics to develop circuits for electronic fuel injection and ignition systems	3	PO1
CO3	Develop circuit layouts for automotive lighting systems and accessories	3	PO1
CO4	Understand various comfort and safety features existing in automobiles and possible future developments	3	PO1
CO5	Modelling of various electronic components in 1D simulation tool	4	PO5

Syllabus

Module 1 Introduction to Automotive Batteries - Importance of batteries in vehicle operation Overview of battery construction and components, Historical development of automotive batteries Electrochemical Principles - Basics of electrochemistry, Chemical reactions in lead-acid batteries, Voltage, current, and capacity in battery cells Types of Automotive Batteries - Lead-acid batteries (flooded, AGM, gel), Lithium-ion batteries and hybrid vehicle batteries, Specialty batteries (start-stop systems, deep-cycle batteries) Battery Performance Factors - Temperature effects on battery performance, State of charge (SOC) and state of health (SOH), Battery aging and degradation mechanisms Charging Systems - Alternator operation and regulation, Voltage regulation and charging algorithms, Battery charging methods (float, bulk, absorption), Battery Testing and Diagnosis - Voltage testing and load testing, Conductance testing and impedance spectroscopy, Diagnostic tools and equipment for battery testing Battery Maintenance and Troubleshooting - Preventive maintenance procedures (cleaning, terminal inspection), Common battery problems and their causes, Troubleshooting charging system faults

Electronic Fuel injection- Overview of internal combustion engines, Evolution of fuel delivery and ignition systems, Advantages of electronic systems over carburetors and mechanical ignition systems, EFI System Components and Architecture, Throttle body, fuel injectors, fuel pump, fuel pressure regulator, Engine control unit (ECU) and its functions Ignition System - Distributor-based ignition systems, Distributorless ignition systems (DIS), Coil-on-plug (COP) ignition systems, Capacitive discharge ignition (CDI)

Wiring Diagram Interpretation - Understanding symbols and abbreviations, Reading wiring diagrams for different vehicle systems, Tracing circuits and identifying components Automotive Wiring System Components - Wiring harnesses and connectors, Relays, fuses, and circuit breakers, Switches and controls Lighting System Components - Headlights, taillights, and turn signals, Interior lighting and dashboard illumination, Auxiliary lighting (fog lights, driving lights, etc.), Lighting control modules and sensors Diagnosis and Repair Techniques - Using multimeters and other diagnostic tools, Troubleshooting common electrical problems, Repairing damaged wiring and connectors, Testing and replacing lighting system components Advanced Topics - CAN bus systems and networked electronics, LED lighting technology and retrofitting, Electrical modifications and aftermarket installations, Future trends in automotive wiring and lighting systems

Introduction to Automotive Safety - Importance of automotive safety, Historical overview of automotive safety advancements, Role of safety organizations and regulations Crash Dynamics - Kinematics of collisions, Impact forces and energy absorption, Factors affecting crash severity Vehicle Safety Systems - Passive safety systems (seatbelts, airbags, crumple zones), Active safety systems (ABS, ESC, collision avoidance systems), Emerging safety technologies (autonomous emergency braking, lane departure warning) Occupant Protection - Seatbelt design and effectiveness, Airbag types and deployment criteria, Child restraint systems and guidelines Pedestrian Safety - Vehicle design considerations for pedestrian protection, Impact of vehicle speed on pedestrian injury severity, Pedestrian detection systems and collision mitigation strategies Safety Regulations and Standards - Global vehicle safety standards (NHTSA, Euro NCAP, IIHS), Crash test procedures and rating systems, Compliance with safety regulations in vehicle design and production Emerging trends in vehicle safety technology, Challenges and opportunities in improving automotive safety

Modelling of various electronic components of automobiles - Batteries, alternator, capacitors, motor etc.

Reference Books

23ECF3203A - AUTONOMOUS VEHICLES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ECF3203A	AUTONOMOUS VEHICLES	AV	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the effectiveness of object detection and tracking algorithms in autonomous vehicle systems through real-world scenario assessments.	2	PO1, PO2
CO2	Evaluate the strengths and limitations of global and local localization methods for autonomous vehicles to discern their applicability in diverse environments	4	PO1, PO2, PO3
CO3	Apply advanced modeling techniques to simulate vehicle dynamics accurately, enhancing the fidelity of autonomous vehicle simulations.	3	PO1, PO3
CO4	Critically analyze the integration of autonomous vehicles in industrial sectors such as agriculture, mining, and logistics to identify opportunities for process optimization and productivity enhancement.	4	PO1, PO2
CO5	Develop a comprehensive understanding of the technical, economic, and societal implications of autonomous vehicle integration in various industries, fostering informed decision-making and strategic planning.	5	PO1, PO2

Syllabus

Overview of autonomous vehicle technology, Historical perspective and evolution, Key components and architecture of autonomous vehicles, Sensor technologies: LiDAR, RADAR, cameras, ultrasonic sensors, Sensor fusion techniques, Object detection, tracking.

Global and local localization methods, Simultaneous Localization and Mapping (SLAM) techniques, Mapping approaches: grid-based, feature-based, semantic mapping, PID control and its variants, Model Predictive Control (MPC), Reinforcement learning in control systems.

Vehicle modeling and simulation, Trajectory generation, Handling dynamics and stability control, Human factors in autonomous vehicle design, User interface design for autonomous vehicles, Ethical considerations and safety implications.

Transportation and mobility services, Industrial applications: agriculture, mining, logistics,

Future trends and emerging applications

Reference Books

23ECF3304A - HYBRID AND ELECTRIC VEHICLE DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ECF3304A	HYBRID AND ELECTRIC VEHICLE DESIGN	HEVD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Hybrid /EV Vehicles and study of vehicle dynamics	3	PO1, PO2, PSO1
CO2	Apply Architecture of Hybrid/EV Vehicles, components and Battery EV	3	PO1, PO2, PSO1
CO3	Apply and analyse Fuel Cell, DC/AC Drives and SRM	3	PO1, PO4, PSO1
CO4	Apply EV Controls, Controller, and control strategies	4	PO1, PO2, PSO2
CO5	Analyze and apply theoretical concepts to develop mathematical models and simulate	5	PO2, PO4, PSO2
CO6	Analyze EV Models and compare their performance	5	PO2, PO4, PSO2
CO7	Analyze EV design and study the parameters and their effectiveness	5	PO1, PO4, PSO2

Syllabus

History and Need for Hybrid/EV Vehicles: Evolution of automotive technology and the rise of hybrid and electric vehicles, Environmental and economic factors driving the adoption of hybrid and EV vehicles, Key milestones and major players in the hybrid/EV market. Developments in Hybrid and EV Vehicles: Technological advancements in batteries, electric motors, and power electronics, Current trends in hybrid and EV design and manufacturing, Future directions and innovations in the hybrid/EV industry. Basics of Vehicle Dynamics: Fundamental principles of vehicle motion, including kinematics and kinetics, Analysis of forces acting on a vehicle, such as traction, braking, and cornering, The role of suspension, steering, and drivetrain in vehicle dynamics.

Vehicle Dynamics: Principles of vehicle motion (acceleration, braking, cornering) and Influence of suspension, steering, and drivetrain on stability. Hybrid/EV Vehicle Architecture: Design of hybrid/EV powertrains (batteries, motors), Energy management systems and regenerative braking. Solar EV Vehicle: Solar energy conversion and storage in EVs, Design and optimization of solar panels for efficiency.

AC/DC/SRM Drives - Fundamentals of AC/DC Drives: Introduction to electric drives, basic principles of operation, and types of drives including AC and DC systems, Speed Control and Performance Characteristics: Methods of speed control for AC and DC drives, performance characteristics, and applications in industry, Solid-State Control of Motors: Power electronic devices and circuits used in AC/DC drives, including rectifiers, inverters, and pulse-width modulation (PWM) techniques.

Vehicle Control: Basics of vehicle control systems and dynamics, Implementation of control algorithms for stability and performance. Controller Design: Principles of designing controllers for automotive applications, Techniques for tuning and optimizing controller performance. Control Strategies: Overview of control strategies for vehicle dynamics and power management, Application of advanced control strategies like PID, adaptive, and predictive control.

Study EV Models: Examination of different EV models and their architectures. Analysis of battery, motor, and drivetrain configurations. Compare Parameters of Performance: Evaluation of key performance metrics such as range, efficiency, and acceleration. Comparative analysis of EV models based on real-world performance data.

23ECF3405M - SPECIAL PURPOSE VEHICLES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ECF3405M	SPECIAL PURPOSE VEHICLES	SPV	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Classify special purpose vehicles and its ergonomic considerations	3	PO1, PO2, PSO1
CO2	Enumerate design considerations of special purpose vehicles.	3	PO1, PO3, PSO1
CO3	Examine different features of various types of earth moving machinery such as Tippers, Scrapers and shovels, Loaders, Excavators, Dumpers, Bulldozers, Fork Lift and Road rollers, Tractors	3	PO1, PO3, PSO2
CO4	Assess design features of Mobile Cranes.	3	PO1, PO3, PSO2

Syllabus

Introduction: Classification of Special Purpose Vehicles, wheel type & track type, applications, Vehicles for differently challenged persons ; Principles and design considerations of special purpose vehicles: Study of working principles and design considerations of different systems involved such as power system, transmission, final drive, lubrication, electrical, braking, steering, pneumatic & hydraulic control circuits

Earth Moving Machines: Construction and working features of different types of earth moving machinery such as Tippers, Scrapers and shovels, Loaders, Excavators, Dumpers, Bulldozers, Fork Lift and Road rollers; Tractors: Classification of tractors-lay out of wheeled tractor- power transmission system & drive line - steering system - accessories of wheeled tractors- hydraulic control system- power take off unit

Mobile Cranes: Basic characteristics of truck cranes, stability and design features, control systems and safety devices; Special purpose vehicles: Features of Oil tankers- Articulated vehicles, working -features of Ambulance, fire extinguishing vehicle and Tipper-working of Hover craft

Ergonomic considerations: Human factors in special purpose vehicle design with reference to comfort, convenience and safety, effects of noise, vibration and thermal stresses on human performance. Economics of special purpose vehicle utilization.

23ECF3406M - VEHICLE DYNAMICS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ECF3406M	VEHICLE DYNAMICS	VD	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the evaluate the natural frequency of a single and multi-degree freedom systems	3	PO1
CO2	Apply the predict the stability of vehicle at different operating conditions	3	PO1
CO3	Apply the predict the behavior of tyres during braking, acceleration and cornering.	3	PO1
CO4	Analyse the directional stability of the vehicle during cornering	4	PO2

Syllabus

Vibration System and human comforts, One DOF, Two DOF, Free and Forced Vibration, Random Vibration, Magnification and Transmissibility, Vibration Absorber.

Multi DOF systems, Modal Analysis, Vehicle Vibration Models- Quarter Car and Half Car Model.

Load Distribution, Stability on Curved Track and on slope, Gyroscopic Effect, weight Transfer during Acceleration, Cornering and Braking, Overturning and Sliding. Cross wind stability and Equations of motions.

Behavior while Cornering, Slip angle, Cornering force, Cornering Properties, Camber Thrust, Camber Scrub and Camber Steer.

23ECF3507 - THERMAL MANAGEMENT OF ELECTRIC AND ELECTRONIC SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ECF3507	THERMAL MANAGEMENT OF ELECTRIC AND ELECTRONIC SYSTEMS	TMEES	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concepts of heat transfer to various electric and electronic systems requiring heat dissipation	3	PO1, PSO2
CO2	Apply different cooling techniques to microchannels, heat pipes and vapor chambers.	3	PO1, PSO2
CO3	Apply various thermal management techniques in the fields of automobiles and electronics.	3	PO1, PSO2
CO4	Analyze the battery thermal management system and design for the battery pack.	4	PO2, PSO2

Syllabus

Introduction to Thermal Management in Electronics -heat transfer modes, electronics packaging, contact and spreading resistances, heat sink design, thermal interface material (TIM).

Cooling Technologies- thermal interface and phase change materials, active, passive and novel air-cooling approaches, microchannels, jet impingement, immersion cooling, heat pipes and vapor chambers, thermoelectric, Hybrid Thermal Management system, Air cooled combine with Phase change material, Liquid cooled combine with phase change material, Heat pipe combine with phase change material.

Applications of thermal management: avionics, data centers, mobile, internet of things, high-performance computing, automotive, etc Lithium-ion battery configuration and operation.

Sources of heat in Lithium-ion battery, Lithium Ion- cell temperature ranges. Battery Thermal Management System (BTMS): Need of BTMS, Technologies of BTMS, Battery pack design, Lithium ion chemistries, challenges of the battery pack.

Reference Books

- 1 THERMAL MANAGEMENT OF MICROELECTRONIC EQUIPMENT HEAT TRANSFER THEORY, ANALYSIS METHODS, AND DESIGN PRACTICES. , L. T. Yeh, Ph.D., P.E. R. C.Chu, 2th edition 2002, ASME PRESS NEW YORK .

- 3 Heat Transfer, Holman, J. P, 3th edition 2017, McGraw-Hill Book Co.
- 4 Thermal Management of Electronics, Rajesh, C. Balaji , 1th edition 2019, Momentum Press.
- 5 Thermal Management of Electric Vehicle Battery Systems, Ibrahim Din?er, Halil S. Hamut, Nader Javani , 2th edition 2017, Wiley.

23ECF3508 - ALTERNATE ENERGY SOURCES FOR AUTOMOBILES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ECF3508	ALTERNATE ENERGY SOURCES FOR AUTOMOBILES	AESFA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic principles of IC engines and understand the technologies behind alternate energy sources for automobiles	3	PO1, PO2
CO2	Evaluate feasibility and scalability of Hydrogen & Solar energy for automobiles	3	PO1, PO2
CO3	Evaluate the performance of CNG, LPG, & other Biofuels fed IC engines	3	PO1, PO2, PO7
CO4	Analyse the environmental economic and social impacts of alternative energy adoption in the automotive sector through case studies	4	PO1, PO2, PO7

Syllabus

Importance of alternative energy in the automotive industry, Historical context and current trends, Types of electric vehicles (BEVs, PHEVs, HEVs),

Hydrogen Fuel Cell Vehicles (FCVs), Working of HFC, Advantages and challenges of FCVs, Hydrogen production, storage, and distribution, Solar-powered vehicles,

Types of biofuels (biodiesel, ethanol, biogas), Production processes and feedstocks Environmental and social implications, Overview of natural gas as a vehicle fuel CNG vs. LPG: characteristics and applications Infrastructure challenges and opportunities

Life cycle analysis of alternative energy vehicles, Carbon footprint comparison with conventional vehicles, Mitigating environmental impacts, Total cost of ownership for alternative energy vehicles, Market trends and consumer preferences

Reference Books

23EDS3101A - ADVANCED EMBEDDED SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EDS3101A	ADVANCED EMBEDDED SYSTEMS	AES	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Able to apply the concept of System on chip on multicore system	3	PO1, PO6, PSO1
CO2	Identify the architecture of network and design of on chip interconnection networks.	3	PO1, PSO1
CO3	Development of Software Tools and Debugging Techniques	3	PO1, PSO1
CO4	Apply the concept of multicore SoC in building real time applications for health monitoring	3	PO1, PSO1
CO5	Apply the concept of multicore SoC in building real time applications for health monitoring	3	PO5, PSO1
CO6	Analyse the programming of microcontroller and interface various peripheral devices to the microcontroller	4	PO5, PSO1
CO7	Analyse the simulation of microcontroller using simulation tools like Keil and Proteus	4	PO5, PSO1

Syllabus

Multi core SoC, Basics, Design Challenges, Design Space Exploration, Parallel Software Development Phase, GAT, Building Blocks, Memory Hierarchy, Memory Consistency

Interconnection Networks, Introduction, Network on chip Architecture, Hardware Design of on chip Network, Topology Design, Pipeline Design, Crossbar Design, 3D on chip interconnect, 3D NoC Vs 2D NoC, Routing Algorithms

Embedded Software Development Tools: Host and Target Machines, Linker/Locators for Embedded Software, Getting Embedded Software into the target Systems, Debugging Techniques, Testing on your Host Machine, Instruction Set Simulators, The Assert MACRO

Real Design of Embedded Multicore: SoC for Health Monitoring: Introduction, Application Specific DSP, Period Peak ECG Detection Algorithm, Multicore Hardware SoC Design, Real Time Monitoring Interface Design, System Hardware and Software Design Evaluation

Overview, Installation and understanding of Keil, and execution of various programs on LPC1768

ARM7 Architecture in detail (LPC2148/STM32), Hardware Requirements for LPC2148, wireless communication, wireless modules & their interfacing, Programming of Internal Peripherals in Embedded C

Reference Books

- 1 Advanced Multicore system on chip- Architecture, On-chip Network, design, Abderazek Ben Abdallah, 2017, Springer.
- 2 Computers as components- Principles of embedded computing system design, Wayne Wolf, 2008, Morgan Kaufmann.
- 3 Embedded systems: Architecture, Programming and design, Raj Kamal, 2009, McGraw-Hill Education.

23EDS3101E - ADVANCED EMBEDDED SYSTEMS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EDS3101E	ADVANCED EMBEDDED SYSTEMS	AES	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Able to apply the concepts of System on chip on multicore system	3	PO1
CO2	Identify the architecture of network and design of on chip interconnection networks.	3	PO1
CO3	Development of Software Tools and Debugging Techniques	3	PO1
CO4	Apply the concept of multicore SoC in building real time applications for health monitoring	3	PO1
CO5	Analyse the programming of microcontroller and interface various peripheral devices to the microcontroller	4	PO1
CO6	Analyse the simulation of microcontroller using simulation tools like Keil and Proteus	4	PO1

Syllabus

Multi core SoC: Basics, Design Challenges, Design Space Exploration, Parallel Software Development Phase, GAT, Building Blocks, Memory Hierarchy, Memory Consistency

Interconnection Networks: Introduction - Network on chip Architecture, Hardware Design of on chip Network, Topology Design, Pipeline Design, Crossbar Design, 3D on chip interconnect, 3D NoC Vs 2D NoC, Routing Algorithms

Embedded Software Development Tools: Host and Target Machines - Linker/Locators for Embedded Software, Getting Embedded Software into the target Systems, Debugging Techniques: Testing on your Host Machine, Instruction Set Simulators, The Assert MACRO

Real Design of Embedded Multicore: SoC for Health Monitoring: Introduction, Application Specific DSP, Period Peak ECG Detection Algorithm, Multicore Hardware SoC Design, Real Time Monitoring Interface Design, System Hardware and Software Design Evaluation

Overview of Embedded systems, Installation and understanding of Keil, and execution of various programs on LPC1768

ARM7 Architecture in detail (LPC2148/STM32), Hardware Requirements for LPC2148, wireless communication, wireless modules & their interfacing, Programming of Internal Peripherals in Embedded C

23EDS3202A - EMBEDDED SYSTEMS FOR IOT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EDS3202A	EMBEDDED SYSTEMS FOR IOT	ESIOT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To apply the concepts of system architecture in functioning of IoT devices	3	PO2
CO2	To apply the Communication models that are used for the development of the IoT based Systems	3	PO2
CO3	To apply different networking topologies and protocols used for the development of IoT based Networks	3	PO5
CO4	To apply IoT Application in different Case studies	3	PO2
CO5	Analyze the programming & interfacing of NODE MCU using the hardware/software tool.	4	PO2

Syllabus

Introduction to embedded systems, Role of embedded system in IoT, Overview of embedded system architecture, IoT- Introduction and Characteristics, Physical Design of IoT, Things, Architecture, Applications of IoT, IoT Functional Blocks, IoT communication Models, IoT Enabling Technologies-WSN, WSN architectures, cloud computing, big data analytics, embedded systems, IoT Levels and deployment

Internet communications and Communication Technologies -An overview, IP, TCP, UDP, HTTP, Prototyping Embedded Devices-Sensors, Actuators, Prototyping online components, IoT and M2M, IoT Technologies - Wired - Ethernet, Power line communication wireless Technologies - BLE, Zigbee, Wi-Fi, Wi-Fi direct, SPI, I2C

IIOT protocols and cloud COAP, MQTT, 6lowpan, AMPQ, Overview of cloud platforms, Thing speak, AWS, IoT Physical Devices and Endpoints, IoT Physical Servers and Cloud Offerings: Introduction to cloud storage models and communication APIs

Case Studies: Illustrating IoT design- Home automation- Smart Lighting, smart appliances, home intrusion detection, Smart Cities - smart parking, Environment monitoring- forest fire detection, Air pollution monitoring, river floods detection, weather monitoring, Health, and lifestyle.

Programming & interfacing of NODE MCU using the hardware/software tool.

23EDS3303A - EMBEDDED AND REAL-TIME SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EDS3303A	EMBEDDED AND REAL-TIME SYSTEMS	ERTS	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the different task-scheduling algorithms for real-time systems application	3	PO1, PO2, PO3, PSO1
CO2	Apply Multiprocessor scheduling and real-time communication, databases, and synchronization in Real-time System	3	PO1, PO2, PO3, PSO1
CO3	Analyse an RTOS and be able to interpret the feasibility of a task set to accomplish and Timers.	4	PO2, PO3, PO4, PSO1
CO4	Analyze to develop model-driven development approaches to construct an execution environment with case studies.	4	PO2, PO4, PO5, PSO2
CO5	Analyze the performance of real-time application and different task scheduling algorithms in real-time systems	4	PO3, PO4, PO5, PSO2
CO6	Analyze to develop a real-time application and different task-scheduling algorithms in real-time systems	4	PO3, PO4, PO5, PSO2
CO7	Analyse to design a real-time application and different task-scheduling algorithms in real-time systems using modern tool.	4	PO3, PO4, PO5, PSO2

Syllabus

Introduction to Real-Time Systems: A basic model of Real-Time systems, characteristics of Real-Time systems, types of Real-Time systems, applications of Real-Time systems, Case Study: Radar System. Real-Time task scheduling: basic concepts, clock-driven scheduling, table-driven scheduling, cyclic, schedulers, hybrid schedulers, event-driven scheduling, Earliest-Deadline-First (EDF) Scheduling, resource sharing among RT tasks, Priority inversion.

Multiprocessor Scheduling, Communication, and synchronization: Resource access control and synchronization in Real-time Operating system. The architecture of the Kernel, Task Operations, Structure, Synchronization, Communication, and Concurrency, Semaphores, Mutex. Mailboxes, Message Queues, Event Registers, Pipes, Signals, Device Drivers. Fault Tolerance Techniques Reliability, Evaluation Clock Synchronization.

Process Management, Interrupts and Timers: Exceptions, Interrupts, Interrupt service routines, Applications, Processing of Exceptions and Spurious Interrupts, Real Time Clocks, Programmable Timers, Timer Interrupt Service Routines (ISR), Soft Timers, Operations. Memory Management, RTOS, Basic Design of RTOS, and Security issues. Automobile: Airbag System, Adaptive cruise control, and ADAS.

Embedded Real-time operating systems: Real-time OS and system software: requirements, principles, and examples, Capabilities of commercial real time operating systems, Embedded Linux, RT Linux, Handheld operating system, QNX Neutrino, Micro OS-II, VxWorks, Windows CE, Tiny OS. RTOS Case Studies, Applications Audio player, Engine control unit, Air traffic controller system Distributed air defense system.

Real-Time Scheduling: DMA, Rate Monotonic Approach: Priority Assignment, RMA Principle, Rate Monotonic Analysis, Completion Time Test, Period Transformation. Video accelerator, Orchestra Robot, Multiprocessor and Distributed Systems, Basic Concepts of Android OS Design Example

CO6	Analyse to design a real-time application and different task-scheduling algorithms in real-time systems using modern tool.	4	PO3, PO4, PO5, PSO2

Syllabus

Real-Time Systems are defined by their strict timing constraints and predictable behaviors, with applications in domains like radar systems. Scheduling methods, such as clock-driven, table-driven, cyclic, and EDF, manage task priorities and resource sharing, addressing issues like priority inversion.

Multiprocessor Scheduling, Communication, and synchronization: Resource access control and synchronization in Real time Operating system. The architecture of the Kernel, Task Operations, Structure, Synchronization, Communication, and Concurrency, Semaphores, Mutex. Mailboxes, Message Queues, Event Registers, Pipes, Signals, Device Drivers. Fault Tolerance Techniques Reliability, Evaluation Clock Synchronization.

Process Management, Interrupts and Timers Exceptions, Interrupts, Interrupt service routines, Applications, Processing of Exceptions and Spurious Interrupts, Real Time Clocks, Programmable Timers, Timer Interrupt Service Routines (ISR), Soft Timers, Operations. Memory Management, RTOS, Basic Design of RTOS, and Security issues. Automobile Airbag System, Adaptive cruise control, and ADAS.

Embedded Real time operating systems Real-time OS and system software requirements, principles, and examples, Capabilities of commercial real-time operating systems, Embedded Linux, RT Linux, Handheld operating system, QNX Neutrino, Micro OS II, VxWorks, Windows CE, Tiny OS. RTOS Case Studies Applications Audio player, Engine control unit, Air traffic controller system Distributed air defense system.

23EDS3404M - CLOUD ARCHITECTURE IN IOT (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EDS3404M	CLOUD ARCHITECTURE IN IOT	CAIOT	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the evolution and cloud computing services , deployment models	2	PO2, PO5, PSO1
CO2	Apply different enabling technology and architecture, Services and deployment models	3	PO2, PO5, PO7, PSO1
CO3	Analyze and apply different cloud virtualization and storage	4	PO2, PO5, PO7, PSO1
CO4	Analyze the different case studies on healthcare, agriculture and Activity monitoring	4	PO2, PO4, PO7, PSO1

Syllabus

Overview of Computing Paradigm: Recent trends in Computing-Grid Computing, Cluster Computing, Distributed Computing, Utility computing, Cloud Computing. Evolution of cloud computing: Business driver for adopting cloud computing. Introduction to Cloud Computing: Cloud Computing (NIST Model), Introduction to Cloud Computing, History of Cloud Computing, and Cloud service providers. Properties, Characteristics & Disadvantages Pros and Cons of Cloud Computing, Benefits of Cloud Computing, Cloud computing vs. Cluster computing vs. Grid computing.

Cloud Computing Architecture: Cloud computing stack- Comparison with traditional computing architecture (client/server), Services provided at various levels, Role of Web services. Service Models (XaaS)-Infrastructure as a Service(IaaS),Platform as a Service(PaaS), Software as a Service(SaaS). Deployment Models- Public cloud, Private cloud, Hybrid cloud, Community cloud.

Resource Virtualization: Server, Storage, Network, Virtual Machine (resource) provisioning and manageability. Service Management in Cloud Computing: Service Level Agreements(SLAs)-Billing & Accounting, Comparing Scaling Hardware: Traditional vs. Cloud Economics of scaling, Managing Data, Looking at Data, Scalability & Cloud Services, Database & Data Stores in Cloud, Large Scale Data Processing.

Cloud Security: Infrastructure Security, Data security and Storage, Identity & Access Management, Access Control, Trust, Reputation, Authentication in cloud computing, Client access in cloud, Cloud contracting Model, Commercial and business considerations. Data capturing through IOT devices: Transmission of the data through different stages, and storage of the same in Clouds.

23EDS3505 - EDGE COMPUTING & DATA ANALYTICS IN IOT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EDS3505	EDGE COMPUTING & DATA ANALYTICS IN IOT	ECDAI	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the major components of fog and edge computing architectures and understand the need for new computing paradigms.	3	PO1, PO2, PO3, PSO1
CO2	Identify potential technical challenges of the transition process and suggest solutions.	3	PO1, PO2, PO3, PSO1
CO3	Analyze data collection, analytics, and decision-making capabilities into these Edge compute systems, Analyze data and application requirements and pertaining issues.	4	PO2, PO3, PO4, PSO1
CO4	Analyze and model infrastructures and analytics into Edge Computing to perform decision-making.	4	PO2, PO4, PSO1

Syllabus

Introduction to Edge Computing: Scenarios and Use Cases - Edge computing purpose and definition, Edge computing use cases, Middleware Infrastructures, Edge computing hardware architectures, Edge cloud architectures, Lightweight Edge Clouds, IoT Integration, and cloud-based IoT orchestration patterns/practices for Edge Computing systems. Fog architecture, Edge vs Fog Computing.

Methodologies: Key principles in designing integrated Edge Computing sensor networks Capabilities of Edge Computing nodes, sensors, transducers, and related technologies. Communication Models - Edge, Fog, and M2M. New computing paradigms, Data Protocols: MQTT, MQTT-SN, CoAP, AMQP, XMPP, SOAP, REST, WebSocket.

Data in the fog and Edge: Big Data Analytics, Data management, Data protection by design, GDPR restrictions. Optimization and modeling frameworks. The Business and IIoT challenge, C2F2T integration infrastructures.

Applications and techniques: Smart e-Health, smart surveillance, smart transportation, Predictive analysis for Fog applications deployment, Testing of Fog IoT apps, ML techniques for defending IoT systems.

23EGD3101A - MODELING ANALYSIS & DESIGN OF ROBOTIC SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EGD3101A	MODELING ANALYSIS & DESIGN OF ROBOTIC SYSTEMS	MADRS	A	4	0	4	4	7

Prerequisite

S#	Course Title	Acronym	Rule
1	ENGINEERING MECHANICS	EM	1

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret the anatomy of existing robotic systems and their performance specifications, end effectors, etc.	3	PO1, PO2, PSO1
CO2	Apply suitable sensors and actuators for a real-time robotic system	3	PO1, PO2, PSO1
CO3	Apply the Denavit Hartenberg procedure to solve forward and inverse kinematics of robots	3	PO1, PO2, PSO1
CO4	Apply appropriate robot control and arm configurations for specific applications	3	PO1, PO2, PSO1
CO5	Kinematic modeling and analysis of ABB IRB 1600 industrial robot with the help of ABB RobotStudio software	4	PO3, PSO1
CO6	Develop a robot system for a pick and place operation	4	PO3, PSO1
CO7	Analyze robotic deployment in dynamic environments, utilizing advanced techniques for effective solution design in unpredictable scenarios	4	PO1, PO2, PSO1

Syllabus

INTRODUCTION TO ROBOTICS Major components of a Robot, Robotic-like devices, Classification of Robots Classification by coordinate system and by control method. **ROBOT END EFFECTORS** Introduction, End effectors, interfacing, types of End effectors, grippers and tools, Considerations in the selection and design of remote cantered devices.

ROBOTIC SENSORY DEVICES NonOptical position sensors Potentiometers, Synchros, inductosyn, optical position sensors opto interrupters, Optical encoders absolute and incremental. **PROXIMITY SENSORS** Contact type, non contact type Reflected light, scanning laser sensors. **TOUCH and SLIP SENSORS** Touch sensors proximity Rod and Photo detector sensors, Slip sensors Forced oscillation slip sensor, interrupted type slip sensors, force and torque sensors.

TRANSFORMATIONS AND KINEMATICS Objectives, homogeneous coordinates, basic transformation operations, forward solution Denavit Hartenberg procedure, Simple problems involving planar manipulators, inverse or backward solution problems involved, techniques.

INTRODUCTION TO ROBOT CONTROL Introduction Need and types of control schemes for robots joint space control schemes with an example task space control schemes with an example. **ROBOT APPLICATIONS** Industrial Applications Material Transfer, material handling, Loading and unloading, processing, spot and continuous arc welding, spray painting, grinding, Assembly and Inspection and Non Industrial Applications.

The module provides a comprehensive understanding of RobotStudio and ABB IRB 1600 Robot operations, covering basic to advanced concepts. It includes configuring tools and targets, mastering RAPID programming, and exploring topics like conveyor integration and spray paint operations. Hands-on experience with the ABB IRB 1600 Robot ensures practical skill development.

The module revolves around crafting a pick-and-place robot system. It encompasses task analysis, design, programming, and sensor integration, leading to practical exercises aimed at constructing a functional system for industrial automation.

This module focuses on the challenges and applications of robotics in dynamic environments. It covers real-time path planning, obstacle avoidance, collision detection, and adaptive behavior techniques. Students analyze case studies and undertake projects to design and implement robotic solutions for specific dynamic environment scenarios, gaining advanced skills for deploying robots in unpredictable settings.

23EGD3202A - CREEP, FATIGUE AND FRACTURE MECHANICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EGD3202A	CREEP, FATIGUE AND FRACTURE MECHANICS	CFFM	A	5	0	0	0	5

Prerequisite

S#	Course Title	Acronym	Rule
1	ENGINEERING MECHANICS	EM	1

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Assess the failure of unflawed structural components	4	PO2, PO3
CO2	Assess the fatigue life of structural components under the specified load spectrum	4	PO2, PO3
CO3	Evaluate the fracture toughness and assess the life of flawed structural components	4	PO2, PO3
CO4	Assess the life of structural components under creep	4	PO2, PO3
CO5	Apply engineering methods to solve complex problems	4	PO2, PO3

Syllabus

Analysis of stresses and strains in three-dimensions: Principal stresses and strains. Stress / strain invariants, Octahedral stresses, Theories of failure, various yield criteria

Repeated Stresses and fatigue in metals: Fatigue tests, endurance limit, Fatigue under combined loadings. Fatigue design theory: Goodman, Gerber and Soderberg criteria. Factors influencing fatigue behavior of metals: Frequency, temperature, size, form, surface conditions, residual stress, etc. influence of stress concentration, notch sensitivity. Various mechanical and metallurgical methods used for improving fatigue strength of metals.

Fracture Mechanics: Basic modes of fracture; Griffith theory of brittle fracture and Orwan modifications; Linear Elastic Fracture Mechanics (LEFM): Stress field ahead of crack-tip; stress intensity factors; critical SIF; Fracture toughness testing and evaluation of KIC. Elasto-plastic fracture mechanics: Plane stress and plane strain plastic zone sizes; J-integral method; SERR computation and evaluation of structural integrity

Creep behavior of metals: Creep-stress-time-temperature relations; creep testing methods; Mechanics of creep; creep in tension, bending and torsion; strain-hardening effects on creep; creep buckling; members subjected to combined stresses and creep

Engineering methods for solving complex creep, fatigue and fracture problems

23EGD3203A - THEORY OF ELASTICITY AND PLASTICITY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EGD3203A	THEORY OF ELASTICITY AND PLASTICITY	TEP	A	5	0	0	0	5

Prerequisite

S#	Course Title	Acronym	Rule
1	ENGINEERING MECHANICS	EM	1

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze stresses and strains in planes in elastic or plastic region	4	PO2, PO3
CO2	Solve 2-D problems in rectangular Components	4	PO2, PO3
CO3	Analyze stresses and strains in 3-D problems	4	PO2, PO3
CO4	Analyze Beams and frames in plasticity applications	4	PO2, PO3
CO5	Analyze complex structural deformation problems adopting engineering methods	4	PO2, PO3

Syllabus

Elasticity: Components of stress and strain: plane stress and plane strain; Plasticity: Foundations of plasticity, the criteria of yielding, stress-strain relationship, stress resolving postulates, rule of plastic flow.

2-D Problems in rectangular co-ordinates: solution by polynomials; St.Venants principle; determination of displacements; Bending of a cantilever loaded at the end; Bending of a beam under uniform load.

Stress and strain analysis in 3-D problems: Principle stresses and their determination; Stress invariants; strains at a point. Principal axis of strain; Elementary problems.

Plastic analysis of beams and frames: Limit analysis of beams and frames; Minimum weight design, influence of axial force.

Engineering methods and solutions for complex problems

Syllabus

Elasticity: Components of stress and strain: plane stress and plane strain; Plasticity: Foundations of plasticity, the criteria of yielding, stress-strain relationship, stress resolving postulates, rule of plastic flow. In the context of elasticity, stress and strain are fundamental concepts describing how materials deform under various forces. Plane stress occurs in thin plates subjected to loads in their plane, resulting in negligible stresses perpendicular to the plane. Plane strain, on the other hand, applies to long bodies where deformation is assumed constant along one dimension. In both cases, the stress and strain tensors simplify, reducing the complexity of the problem. These simplifications are crucial for solving engineering problems efficiently.

2-D Problems in rectangular co-ordinates: solution by polynomials; St.Venants principle; determination of displacements; Bending of a cantilever loaded at the end; Bending of a beam under uniform load. Two-dimensional problems in elasticity often employ polynomial solutions to satisfy boundary conditions and equilibrium equations. St. Venant's principle states that the difference in effect between two different but statically equivalent loads becomes negligible at sufficiently large distances from the load. This principle simplifies complex problems by allowing engineers to approximate load distributions. Displacement determination in these problems involves solving differential equations derived from equilibrium and compatibility conditions. The bending of cantilevers and beams under various loads are classic examples of these solutions.

Stress and strain analysis in 3-D problems: Principle stresses and their determination; Stress invariants; strains at a point. Principal axis of strain; Elementary problems. In three-dimensional stress analysis, determining the principal stresses and their directions is crucial. Principal stresses are the normal stresses acting on planes where the shear stress is zero. Stress invariants, which are combinations of the stress components, remain constant regardless of the orientation of the coordinate system. These invariants are used to derive important relationships in elasticity and plasticity. Strains at a point, including the principal axes of strain, describe the deformation state and are essential for assessing material behavior under complex loading conditions.

Plastic analysis of beams and frames: Limit analysis of beams and frames; Minimum weight design, influence of axial force. Plastic analysis of beams and frames involves determining the load-carrying capacity beyond the elastic limit, leading to the concept of limit analysis. Limit analysis identifies the collapse load, which is the maximum load a structure can carry before failing plastically. This approach is essential for designing structures to withstand loads beyond the elastic range. Minimum weight design aims to reduce the weight of structures while maintaining their load-carrying capacity. The influence of axial force on the plastic behavior of beams and frames is also considered in these analyses, ensuring the overall stability and safety of structures.

Engineering methods for solving complex problems. Analytical methods involve using mathematical models and classical solutions to solve engineering problems. These methods often employ differential equations, linear algebra, and calculus to describe physical systems. For example, in structural analysis, the equations of equilibrium and compatibility are solved to determine stress and strain distributions. Analytical solutions provide precise answers but can become impractical for highly complex systems. They are particularly useful for understanding fundamental principles and validating numerical methods.

Syllabus

Elasticity: Components of stress and strain: plane stress and plane strain; Plasticity: Foundations of plasticity, the criteria of yielding, stress-strain relationship, stress resolving postulates, rule of plastic flow. In the context of elasticity, stress and strain are fundamental concepts describing how materials deform under various forces. Plane stress occurs in thin plates subjected to loads in their plane, resulting in negligible stresses perpendicular to the plane. Plane strain, on the other hand, applies to long bodies where deformation is assumed constant along one dimension. In both cases, the stress and strain tensors simplify, reducing the complexity of the problem. These simplifications are crucial for solving engineering problems efficiently.

2-D Problems in rectangular co-ordinates: solution by polynomials; St.Venants principle; determination of displacements; Bending of a cantilever loaded at the end; Bending of a beam under uniform load. Two-dimensional problems in elasticity often employ polynomial solutions to satisfy boundary conditions and equilibrium equations. St. Venant's principle states that the difference in effect between two different but statically equivalent loads becomes negligible at sufficiently large distances from the load. This principle simplifies complex problems by allowing engineers to approximate load distributions. Displacement determination in these problems involves solving differential equations derived from equilibrium and compatibility conditions. The bending of cantilevers and beams under various loads are classic examples of these solutions.

Stress and strain analysis in 3-D problems: Principle stresses and their determination; Stress invariants; strains at a point. Principal axis of strain; Elementary problems. In three-dimensional stress analysis, determining the principal stresses and their directions is crucial. Principal stresses are the normal stresses acting on planes where the shear stress is zero. Stress invariants, which are combinations of the stress components, remain constant regardless of the orientation of the coordinate system. These invariants are used to derive important relationships in elasticity and plasticity. Strains at a point, including the principal axes of strain, describe the deformation state and are essential for assessing material behavior under complex loading conditions.

Plastic analysis of beams and frames: Limit analysis of beams and frames; Minimum weight design, influence of axial force. Plastic analysis of beams and frames involves determining the load-carrying capacity beyond the elastic limit, leading to the concept of limit analysis. Limit analysis identifies the collapse load, which is the maximum load a structure can carry before failing plastically. This approach is essential for designing structures to withstand loads beyond the elastic range. Minimum weight design aims to reduce the weight of structures while maintaining their load-carrying capacity. The influence of axial force on the plastic behavior of beams and frames is also considered in these analyses, ensuring the overall stability and safety of structures.

CO#	CO Description	BTL	PO/PSO
CO1	Understand principles and frameworks of sustainable design and social innovation.	2	PO2, PO8, PSO2
CO2	Apply Dieter\'s engineering design process incorporating sustainable design and develop a solution concept	3	PO2, PO8, PSO2
CO3	identify the product architecture and configure the product components.	3	PO2, PO8, PSO2
CO4	Analyze and evaluate sustainable design methodologies for product development	4	PO6, PO8, PSO2
CO5	Apply sustainable materials and manufacturing practices in practical settings.	4	PO6, PO8, PSO2
CO6	Demonstrate creative thinking and problem-solving skills in social innovation and Design and execute a fully functional prototype	6	PO6, PO8, PSO2
CO7	Develop skills in prototyping, testing, and refining designs for sustainable products.	4	PO6, PO8, PSO2

Syllabus

Introduction to sustainable design and social innovation, Dieter\'s engineering design process, Sustainable design methodologies

Social innovation and design thinking, Problem identification and needs analysis, Concept generation and selection

Product Architecture & Systems Design, Product Configuration design, Detailed design and prototyping

Developing a manufacturing plan for the prototype

Analyse and refine the prototype for sustainability and innovation

23EGD3405M - ADVANCED VIBRATIONS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EGD3405M	ADVANCED VIBRATIONS	AV	M	3	0	0	0	3

Prerequisite

S#	Course Title	Acronym	Rule
1	ENGINEERING MECHANICS	EM	1

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic concepts of vibrations and the types of systems.	2	PO1, PSO1
CO2	Model vibrating systems and analyze their behavior under harmonic and transient excitations.	3	PO2, PSO1
CO3	Analyze vibrations of continuous systems and apply vibration control techniques.	4	PO1, PSO1
CO4	Apply vibration analysis techniques to real-world problems in engineering.	3	PO1, PSO1

Syllabus

Introduction to Vibrations: Single-degree-of-freedom systems, Multi-degree-of-freedom, systems, Free and forced vibrations. :Single degree of freedom system: Differential equation, complex exponential method of solution, energy method, power relations, phase relations, Nyquist diagram.

Modeling of Vibrating Systems: :Damping and modal analysis: Damping mechanisms, characterization and behavior of typical damping materials, structural response of multi-degree of freedom (MDOF) damped structures, proportional damping, modal testing, MDOF formulation using Finite Element Method (FEM), application of modal analysis in vibration reduction.

Continuous systems, Vibrations of plates and beams :Vibration of beams: Differential equation from Newton's law and Lagrange equation, boundary conditions, natural frequency and mode shapes, force excitation, dynamic stresses in beams.

Vibration Control and applications : Vibration measurement: Accelerometers, force gages, instrumented hammers, Fast Fourier transform analyzers and digital filters, applications in vibration measurement.

Reference Books

23EGD3406M - MECHANICS OF COMPOSITE MATERIALS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EGD3406M	MECHANICS OF COMPOSITE MATERIALS	MOCM	M	3	0	0	0	3

Prerequisite

S#	Course Title	Acronym	Rule
1	ENGINEERING MECHANICS	EM	1

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the various composite materials and their manufacturing process methods.	3	PO1, PSO1
CO2	Apply the micro-mechanics concept to study the structural behavior of composite Lamina	3	PO1, PO2, PSO1
CO3	Apply the macro-mechanics concept to study the structural behavior of composite Lamina	3	PO1, PO2, PSO1
CO4	Apply Failure theories to calculate stresses in composite materials	3	PO1, PO2, PSO1

Syllabus

Introduction to composite materials, Geometric definitions, Classification of composites, Types of fibers, Types of the matrix, Hybrid composite, Scale of analysis- micro and macro mechanics approaches, Degree of Anisotropy. Manufacturing methods of the composites, Autoclave molding, Filament winding, and Resin transfer molding.

Elastic behavior of composite lamina (Micro-mechanics), Micro-mechanics methods, Geometric aspects and elastic symmetry, Longitudinal elastic properties (Continuous fibers), Transverse elastic properties, In-plane shear properties (Continuous fibers), Longitudinal properties (short fibers)

Elastic behavior of composite lamina (Macro mechanics approach), Stress-Strain relations: General anisotropic material, Specially orthotropic material, Transversely isotropic material, Orthotropic material under plane stress, Isotropic material.

Standard sizes of the specimen for tensile and compressive, Fatigue tests, and Impact tests of uni-directional composites. Experimental methods for characterization and testing of composite materials. Failure of the composite materials: fiber failures, matrix failure, interface failure. Failure Theories: Tsai-Wu, Tsai-Hill, Puck criterion, Maximum stress, maximum strain.

Reference Books

23EGD3507 - ADVANCED STRENGTH OF MATERIALS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EGD3507	ADVANCED STRENGTH OF MATERIALS	ASM	R	3	0	0	0	3

Prerequisite

S#	Course Title	Acronym	Rule
1	ENGINEERING MECHANICS	EM	1

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze the behaviour of statically indeterminate beams for different loading conditions	4	PO1, PO2
CO2	Analyze the behaviour of curved beams and determine the shear centre for various cross sections of beams	4	PO1, PO2
CO3	Apply unit load method to find deflections in beams and structures	3	PO1, PO2
CO4	Analyze the various stresses in rotating members and thick cylinders	4	PO1, PO2

Syllabus

Statically Indeterminate Beams: Introduction to Statically indeterminate Beams, apply the Moment Area Method to analyze the fixed beams. Introduction to Continuous beams, apply Clapeyrons theorem of three moments to analyze continuous beams.

Curved Beams: Stresses in Beams of small and large initial curvature, Winkler-Bach theory, Stresses in Crane Hook and C-Clamp with Rectangular, Circular and Trapezoidal cross-sections. Shear Center: Importance of Shear Centre, Locate the shear center for different cross-sections.

Energy Methods: Introduction, Principles of virtual work, Apply Unit load Method to determine displacements and slope in Beams and to analyze simple structures and trusses.

Centrifugal Stresses: Introduction, Stresses in Rotating Ring, Disc of uniform thickness. Thick Cylinders: Stresses in Thick cylinders, Apply Lames theory to determine radial and circumferential stresses in thick cylinders. Stresses in Compound Cylinders.

Reference Books

23EGD3508 - HYBRID AND ELECTRIC VEHICLE DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EGD3508	HYBRID AND ELECTRIC VEHICLE DESIGN	HEVD	R	3	0	0	0	3

Prerequisite

S#	Course Title	Acronym	Rule
1	ENGINEERING MECHANICS	EM	1

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Hybrid /EV Vehicles and study of vehicle dynamics	3	PO1, PO2, PSO1
CO2	Apply Architecture of Hybrid/EV Vehicles, components and Battery EV	3	PO1, PO2, PO3, PSO1
CO3	Apply and analyse Fuel Cell, DC/AC Drives and SRM	3	PO1, PO3, PSO2
CO4	Apply EV Controls, Controller, and control strategies	4	PO1, PO2, PO4, PSO2

Syllabus

History and Need for Hybrid/EV Vehicles: Evolution of automotive technology and the rise of hybrid and electric vehicles, Environmental and economic factors driving the adoption of hybrid and EV vehicles, Key milestones and major players in the hybrid/EV market. Developments in Hybrid and EV Vehicles: Technological advancements in batteries, electric motors, and power electronics, Current trends in hybrid and EV design and manufacturing, Future directions and innovations in the hybrid/EV industry. Basics of Vehicle Dynamics: Fundamental principles of vehicle motion, including kinematics and kinetics, Analysis of forces acting on a vehicle, such as traction, braking, and cornering, The role of suspension, steering, and drivetrain in vehicle dynamics.

Vehicle Dynamics: Principles of vehicle motion (acceleration, braking, cornering) and Influence of suspension, steering, and drivetrain on stability. Hybrid/EV Vehicle Architecture: Design of hybrid/EV powertrains (batteries, motors), Energy management systems and regenerative braking. Solar EV Vehicle: Solar energy conversion and storage in EVs, Design and optimization of solar panels for efficiency.

AC/DC/SRM Drives - Fundamentals of AC/DC Drives: Introduction to electric drives, basic principles of operation, and types of drives including AC and DC systems, Speed Control and Performance Characteristics: Methods of speed control for AC and DC drives, performance characteristics, and applications in industry, Solid-State Control of Motors: Power electronic devices and circuits used in AC/DC drives, including rectifiers, inverters, and pulse-width modulation (PWM) techniques.

Vehicle Control: Basics of vehicle control systems and dynamics, Implementation of control algorithms for stability and performance. Controller Design: Principles of designing controllers for automotive applications, Techniques for tuning and optimizing controller performance. Control Strategies: Overview of control strategies for vehicle dynamics and power management, Application of advanced control strategies like PID, adaptive, and predictive control.

- 5 Solar Electric Vehicle Technology , Stefan E. Nahorski , 1994, CRC Press .

23EME3101A - POWER TRAIN DESIGN FOR ELECTRIC VEHICLE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EME3101A	POWER TRAIN DESIGN FOR ELECTRIC VEHICLE	PTDEV	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify and explain the functions of key powertrain components in electric vehicles, including electric motors, battery packs, power electronics and fuel sources for EV design.	3	PO1
CO2	Apply fundamental principles of powertrain design to create and optimize electric vehicle powertrains, balancing aspects such as energy density, torque characteristics, Modeling of dynamics for EV	3	PO1
CO3	Analyze new technologies or improvements in electric vehicle powertrain design, fostering creativity and forward-thinking in the field.	4	PO1
CO4	Analyze the principles, functionality, and efficiency of regenerative braking systems in electric vehicles, and evaluate their impact on overall vehicle performance and energy recovery.	4	PO1
CO5	Test and evaluate the performance, reliability, and efficiency of various powertrain components in electric vehicles, including electric motors, battery packs, and power electronics.	4	PO1

Syllabus

HISTORY, ECONOMIC & ENVIRONMENTAL IMPACT OF ELECTRIC VEHICLE: History of EV, Case studies on Economic and Environment aspects of EV, Classification of electric vehicle, Modern electric drive train, Power train components: BEV, HEV, PHEV and FCEV, including working of Fuel cell, Super capacitor, energy management, Hybrid sources.

ELECTRIC VEHICLE DYNAMICS: Laws of Motion, General description of vehicle movement, Tractive Effort, Vehicle resistance: Rolling Resistance, Aerodynamic Drag, Grading Resistance, Acceleration resistance, Dynamic equation, Tire Ground Adhesion and maximum tractive effort, Vehicle Power Plant and Transmission Characteristics.

MODELING VEHICLE ACCELERATION & ELECTRIC VEHICLE RANGE: Acceleration performance parameters, Modeling the acceleration of an electric scooter, Modeling the acceleration of a small car, Driving cycles, Range modeling of battery electric vehicles, Constant velocity range modeling, Range modeling of fuel cell vehicles, Range modeling of hybrid electric vehicles.

Fundamentals of Regenerative Braking Energy Consumption in Braking, Braking Power and Energy on Front and Rear Wheels, Brake System of EVs and HEVs, Series Brake, Optimal Feel, Series Brake, Optimal Energy Recovery, Parallel Brake, Antilock Brake System (ABS).

Testing of the Power train components of EV, Test the Range of vehicle for different Driving cycles.

23EME3202A - COMMUNICATION PROTOCOLS & TESTING OF ELECTRIC VEHICLE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EME3202A	COMMUNICATION PROTOCOLS & TESTING OF ELECTRIC VEHICLE	CPTEV	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand fundamental communication protocols used in Electric Vehicles and their roles in ensuring efficient and safe vehicle operation.	2	PO1, PO4, PSO1
CO2	Apply knowledge of communication protocols and fault diagnostics various components in Electric Vehicles	3	PO2, PO5, PSO2
CO3	Analyze the intricacies of integrating HV and LV components of vehicle	4	PO1, PO6, PSO2
CO4	Demonstrate system engineering and system validation	3	PO2, PO5, PSO1
CO5	Apply the various testing process of components/aggregates of electric vehicles.	3	PO2, PO4, PSO2

Syllabus

Introduction to serial communication protocols: SPI I2C CAN, LIN bus, MOST bus, Bluetooth, Flexi Ray, CAN message: Arbitration, message types, valid frame, error checking, CAN Transceiver features, CAN physical layer, CAN connectors, Bit Timing, Error Handling, CAN Interface with Sensor Modules

High Layer Protocols: IEC 61851, SAE J2601, Vehicle to Vehicle communication protocols, Fault Diagnosis On-Board diagnostics, Off-Board diagnostics. Common Sensors used in EV: Air Bag, ABS, Window Mirror, Cruise Control, Transmission control.

Components like HVDC Relays connections, Insulation Monitoring Devices, Fuses, BTMS, Driveline Cooling, Coolant tanks, Level Sensors, Vehicle Wiring, Terminals, Temperature Considerations for wiring, Cable selection, Instrument Panel, HVIL, 24V converters, derating of the components.

V cycle, reliability calculations, Design for manufacturing, servicing & data analytics, supply chain management, Passenger safety and convenience, Antitheft systems.

Vehicle level test, component level test, EMI/EMC test, Accelerated/Highly Accelerated Life Test (HALT/HASS), battery tests like abuse, altitude, (SoH), motor, oil/lubricant and cooling water level, ECU, Integrated Circuits (IC's), Printed Circuit Boards (PCB's), wiring harnesses

Reference Books

23EME3203A	AUTONOMOUS VEHICLES & AUTOMOTIVE ELECTRONICS	AVAE	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply basics of vehicular dynamics and control for autonomous vehicles. It involves using principles of motion, force, and feedback systems to design algorithms that ensure stability, maneuverability, and safety in self-driving cars under various driving conditions.	3	PO1, PO2, PSO1
CO2	Apply different types of sensors and actuators used in vehicles to control different vehicular parameters. Studying various sensors, such as LiDAR, radar, and GPS, alongside actuators like electric motors and hydraulic systems, allows for the precise control of vehicular parameters including speed, steering, braking, and navigation, essential for the safe and efficient operation of modern vehicles.	3	PO1, PO2, PSO1
CO3	Discover the concepts of Automotive Electronics to automotive systems and subsystems. It involves integrating electronic control units (ECUs), sensors, actuators, and communication protocols to optimize the performance, efficiency, safety, and comfort of automotive systems and subsystems, ensuring seamless operation and responsiveness in modern vehicles.	3	PO1, PO2, PSO1
CO4	Analyse the affect on reliability, safety, and smartness to autonomous vehicles through different wireless electronics and networking protocols. This enables autonomous vehicles to achieve reliability and safety through real-time communication, vehicle-to-vehicle (V2V), and vehicle-to-infrastructure (V2I) connectivity, enhancing smart features like predictive maintenance, traffic management, and autonomous decision-making capabilities on the road.	4	PO2, PO3, PSO1
CO5	Analyse different applications of vehicle-to-everything (V2X) communication, and control systems that are essential for self-driving technology. Applications such as traffic management and predictive maintenance will be analysed in detail.	4	PO5, PO12, PSO1

Syllabus

Introduction to Autonomous Vehicles: Technological overview concepts of Autonomous Vehicles (AVs); History of Autonomous Vehicles; Vehicle Electronics Architecture; Functional Block Diagram of typical Autonomous Vehicle System (AVS); Basic control system applied to Drive Assisted and Driverless Vehicles; Overview of the operation of Electronic Control Unit (ECUs).

Automotive Sensors and Actuators (ASA): Role of sensors and actuators in autonomous vehicles; Accelerometers, Wheel speed, Brake pressure, Seat occupancy, Engine speed, Steering wheel angle, Vehicle speed, Throttle position, Turbine speed, Temperature, Mass air flow (MAF) rate, Automotive Engine Control Actuators, Fuel Injection, Exhaust Gas Recirculation Actuator, Variable Valve Timing, VVP Mechanism Model, Electric Motor Actuators.

Automotive Electronics (AE): Fundamentals of Automotive Electronics (FAE)- Principles of automotive systems, Advanced driver-assistance systems (ADAS)- Evolution of ABS configurations, Basics of Theory of Operation, Integration of ADAS Technology into Vehicle Electronics, Auto pilot, Advanced parking system, ADAS in Toyota and Tesla.

Automotive Wireless (AW): Wireless Networking and Applications to Vehicle Autonomy; Integration of Wireless Networking and On-Board Vehicle Networks; Automotive GPRS Vehicle Tracking (AGPRS-VT)- Vehicle Tracking System; Principle of Vehicle Tracking system, GPS and GPRS tracking system. Controlled Area Network (CAN):Basic, Block diagram of the CAN bus architecture, Types of CAN Physical Layers, Frame Format of CAN protocol, Working principle of CAN communication.

Air-fuel ratio control methodologies for efficient fuel consumption.

23EME3304A - CHARGING STATIONS FOR ELECTRIC VEHICLES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EME3304A	CHARGING STATIONS FOR ELECTRIC VEHICLES	CSEV	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop control algorithms for various electric vehicle charging modes and various chargers	3	PO1
CO2	Analyze the design, operation, and integration of power electronic converters in electric vehicle charging systems	4	PO1
CO3	Analyze the optimization of diverse EV charging infrastructures through critical evaluation and innovative problem-solving for enhanced efficiency	4	PO1
CO4	Outline strategies for the effective installation and management of EV charging stations, incorporating regulatory compliance, site assessment, installation procedures	2	PO1
CO5	Apply the fundamental principles and theories of wireless power transfer, including inductive and resonant coupling, to solve practical problems in EV charging systems.	3	PO1
CO6	Analyze the converters and control algorithms of electric vehicle charging systems using software tools.	4	PO1
CO7	Develop and implement electric vehicle (EV) charging stations by integrating knowledge of electrical systems, charging technologies using software tools.	4	PO1

Syllabus

Charger Topologies Charging time and charging speed, Defining power levels- Normal charging, Semi-fast charging, Overview of power levels ,DC conductive charging, AC conductive charging, Low power Charger, Automotive standard charger, Charging Modes Constant-current charging, Constant-voltage charging, Pulse Charging, Reflex charging, Trickle Charge, Load management at charging station and peak load management

Power Electronics for EV Battery Charging Forward Flyback Converters, Half-Bridge DC DC Converter, Full-Bridge DC DC Converter, Power Factor Correction, Bidirectional Battery Chargers, Dual active bridge dc dc converter, Solar charging station.

Charging Infrastructure Charger - Existing National & International Charger Architecture Standards - SAE J1773, VDE-AR-E 2623-2-2, JEVS G105-1993 (CHAdeMO), CCS, Type-1 AC, Type-2 AC, Bharat DC-001, Bharat AC-001. Cords and Cables, Earthing, Fault Protection, Testing, Charging Safety, Protection against electric shock, Digital Communication between EV and Charging Station.

Installation Govt. of India guideline on Public Charging Stations, IEC Standards- 60068-2(1, 2, 14, 30), 61683, 60227, 60502, 60947 part I,II, III and 61215. Site assessment, EVSE Typical Site Plans, Design Guidelines and Site Drawings, Planning Considerations, Station Configuration, Selection and erection of electrical equipment - Isolation, switching and control.

Wireless Power Transfer (WPT) for Electric Vehicles (EVs): Basics of WPT Technology, Modelling the WPT System, WPT for EV Charging, Design Challenges and Optimization of Resonator Design, Future Directions and Trends

23EME3405M - INTRODUCTION TO BATTERY-MANAGEMENT SYSTEMS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EME3405M	INTRODUCTION TO BATTERY-MANAGEMENT SYSTEMS	IBMS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Select suitable battery for electric vehicle	2	PO1, PO7, PSO1
CO2	Analyse the key functions of Battery management systems	4	PO2, PO3
CO3	Analyse various mathematical models of battery	4	PO2, PO3, PSO2
CO4	Evaluate Algorithms for SOC estimation of battery	5	PO2

Syllabus

Battery specifications and L-ion chemistry Battery specifications, cell-module-pack formation and specification calculation, working principle of Li-ion cell, materials used for various components of Li-ion cell, different li-ion chemistries and there specification comparison

Functions of battery-management systems BMS architecture, BMS functionality: Sensing and High Voltage Control, Protection-isolation, overvoltage, overcurrent protection, Performance-Battery pack energy and power calculations using HPPC, Balancing- passive and active cell balancing, Interface, and Diagnostics

Battery Modelling Simple OCV model, Rint model, Thevenins model, Hysteresis effect and ESC model of battery cell. Charge, discharge tests to determine battery cell parameters.

SOC estimation Stoichiometry for SOC estimation, Look table method and Coulomb counting methods and their limitation for accurate state estimation. Linear and nonlinear Kalman filter based estimation techniques.

Reference Books

23EME3507 - AI AND IOT FOR ELECTRIC VEHICLE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EME3507	AI AND IOT FOR ELECTRIC VEHICLE	AIEV	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the IoT devices and tools	2	PO1, PO10, PSO2
CO2	Operate the cloud system Environment	3	PO1, PO2, PO10, PSO2
CO3	Applying ML Techniques for Electric Vehicles	3	PO2, PO5, PO10, PSO2
CO4	Applying AI techniques for EV Applications	3	PO2, PO5, PO10, PSO2

Syllabus

IoT Devices and Enabling Technologies: Sensor Devices- temperature, vibration, irradiance, wind speed, PIR, proximity, current, voltage Controllers, Actuators, Networking and Communication Protocols, Data analytics using AI and ML for smart cities, smart grid, smart building, electrical vehicles

Cloud Computing: Basics-Cloud systems, Cloud computing protocols, Role of Web services, Deployment Models- Public, Community, Hybrid, Private Clouds, Cloud Analytics over Thingspeak, Google Firebase, AWS-console, Functions. Database Services-Relational DBMS, RDS Services

AI and ML on Cloud: Data Pre-processing techniques in Machine Learning, Data-handling, importing libraries, Data pre-processing using python, Missing data, Categorical Data. Regression and Classification algorithms in ML. Cloud based Real- time Monitoring systems, M2M communications

Case Studies Applications: Electric Vehicle Battery state estimation, health monitoring, SOL determination, Power management, Charging optimization and Electric Drive applications, Online vehicle Assistance

Reference Books

- 1 Artificial Intelligent Techniques for Electric and Hybrid Electric Vehicles, Chitra A., P. Sanjeevikumar, 1st edition, 2020, (Apress).
- 2 Internet of Things An Application Based approach Using Arduino Platform and Firebase , SOURAV KUMAR BHOI, 1st edition, 2018, Independently published .

23EME3508 - EV SYSTEM AND WIRING DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EME3508	EV SYSTEM AND WIRING DESIGN	ESWS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply CATIA and AutoCAD tools for EV system wiring.	3	PO1
CO2	Understand the wiring routing and optimal weights of wiring.	2	PO3, PO4
CO3	Understand the electrical connections and safety consideration for EV	2	PO3, PO4
CO4	Apply the concept of BMS and thermal management of EV	3	PO1

Syllabus

Catia V5 and Electrical AutoCAD - 3D model of a wiring harness - 2D harness drawing using Electrical AutoCAD - different wires and cables, connectors, splices, and other components, wire colors, labels, installation, and maintenance

Wire routing and optimization: Routing methods and strategies, shortest path, most direct path, and optimal path methods, Electromagnetic compatibility, wire routing affects the electromagnetic compatibility (EMC), routing optimization, reduce weight and space

Electrical connections: and splices- Types of electrical connections, Crimping tools, and techniques, Soldering techniques, Wire splicing methods. Safety considerations: insulation, grounding, and protection against electrical shock and fire.

High-Voltage Wiring, special wiring and connectors, Battery Management System (BMS), Power Electronics circuit connections, Thermal Management, safe temperature range.

Reference Books

- 1 Introduction to CATIA V6, Kirstie Plantenburg, 2012, 1, SDC Publications.
- 2 AutoCAD Electrical Essential Training, Shaun Bryant, 2019, 2, linkedin .
- 3 Automotive Wiring and Electrical Systems, Tony Candela, 2009, 2, CarTech Inc.
- 4 Wireless Power Transfer for Electric Vehicles: Foundations and Design Approach, Alicia Trivino-Cabrera, Jose M. Gonzalez-Gonzalez, Jose A. Aguado, 2020, 1, Springer Cham.

23GDU3101A - PROGRAMMING FOR GAME DEVELOPMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GDU3101A	PROGRAMMING FOR GAME DEVELOPMENT	PGD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concepts of Game design and development.	2	PO1, PO3, PSO2
CO2	Apply the use of mathematical and geometrical concepts in Game Programming.	3	PO1, PO3, PSO2
CO3	Apply the Core architectures of Game Programming.	3	PO1, PO5, PSO2
CO4	Analyse advance concepts in game development and explain various platforms and frameworks for Game Programming	4	PO1, PO5, PSO2
CO5	Analyse Project Optimization , Research and Troubleshooting approaches	4	PO1, PO5, PSO2
CO6	Apply above approaches in Laboratory experiments related to Games using Course with Code in Unity	4	PO1, PO5, PSO2
CO7	Analyse above approaches in Skilling experiments related to Games using Course with Code in Unity	4	PO1, PO5, PSO2

Syllabus

Introduction to Game Development , Game Engines: Game Engine Concepts, Game Development Tools, Introducing Unity. Unity Development Environment: IDE Basics, Unity Concepts, Sprites. Simple Movement and Input: Simple Movement, Simple Rotation and Scaling, Easy Input Handling in Unity. 2D Physics Concepts: Rigid body Components

Unity Colliders, Physics Materials, Scripting Collision Events, Organizing Game Objects Parent-Child Objects, Sorting Layers, Tagging Game Objects, Collision Layers, Managing Game Objects: Prefabs, Creating and Destroying Objects

Activating and Deactivating Objects, Controlling Object Life spans with Invoke, Virtual world: Moving Cameras, Setting Boundaries, Building a Tile world Mini- Maps, Sound Effects: Sound Files, Adding Sounds to Game Objects, Scripting Sounds, Game Mechanics: Storytelling and Progression, Scrolling Game Mechanics.

Animation: Simple Unity Animation, Animator States, Scripting Animations, Animations and Colliders, Advanced Game Physics: Applying Forces, Unity Physics Joints, Unity2DEffectors, User Interfaces: Unity Buttons, Other UI Controls, UI Design Concepts, Project Publishing: Splash Screens, Credit Scenes and Icons, Publishing to PC, Mac and Linux Computers, Publishing to Smartphones, Publishing to Game Consoles, Entity component system.

Project Optimization approaches, Research and Troubleshooting

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concepts of Game design and development.	2	PO1, PO3, PSO2
CO2	Apply the use of mathematical and geometrical concepts in Game Programming.	3	PO1, PO3, PSO2
CO3	Apply the Core architectures of Game Programming.	3	PO1, PO5, PSO2
CO4	Analyse advance concepts in game development and explain various platforms and frameworks for Game Programming	3	PO1, PO5, PSO2
CO5	Analyse Project Optimization , Research and Troubleshooting approaches	3	PO1, PO5, PSO2
CO6	Apply above approaches in Laboratory experiments related to Games using Course with Code in Unity	3	PO1, PO5, PSO2
CO7	Analyse above approaches in Skilling experiments related to Games using Course with Code in Unity	3	PO1, PO5, PSO2

Syllabus

Introduction to Game Development , Game Engines: Game Engine Concepts, Game Development Tools, Introducing Unity. Unity Development Environment: IDE Basics, Unity Concepts, Sprites. Simple Movement and Input: Simple Movement, Simple Rotation and Scaling, Easy Input Handling in Unity. 2D Physics Concepts: Rigid body Components

Unity Colliders, Physics Materials, Scripting Collision Events, Organizing Game Objects Parent-Child Objects, Sorting Layers, Tagging Game Objects, Collision Layers, Managing Game Objects: Prefabs, Creating and Destroying Objects

Activating and Deactivating Objects, Controlling Object Life spans with Invoke, Virtual world: Moving Cameras, Setting Boundaries, Building a Tile world Mini- Maps, Sound Effects: Sound Files, Adding Sounds to Game Objects, Scripting Sounds, Game Mechanics: Storytelling and Progression, Scrolling Game Mechanics.

Animation: Simple Unity Animation, Animator States, Scripting Animations, Animations and Colliders, Advanced Game Physics: Applying Forces, Unity Physics Joints, Unity2DEffectors, User Interfaces: Unity Buttons, Other UI Controls, UI Design Concepts, Project Publishing: Splash Screens, Credit Scenes and Icons, Publishing to PC, Mac and Linux Computers, Publishing to Smartphones, Publishing to Game Consoles, Entity component system.

Project Optimization approaches, Research and Troubleshooting

23GDU3202A - UX DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GDU3202A	UX DESIGN	UD	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and discuss about User Experience Design Process	2	PO1, PO2, PO3, PSO2
CO2	Apply User interface and differentiate from User Experience and principles of User Interface	3	PO1, PO2, PO3, PSO2
CO3	Analysing and distinguishing about components of UI Design process with interactive Devices	4	PO1, PO2, PO3, PSO2
CO4	Determine graphic design techniques and psychology principles of User Experience	4	PO1, PO2, PO3, PSO2
CO5	Application of polished prototypes for accurate feedback from users and stakeholders, iterate on designs efficiently, and deliver exceptional user experiences.	3	PO1, PO2, PO3, PSO2

Syllabus

Introduction to UX: Introduction to UX, Elements of UX Design, Core Research, Heuristic Evaluation, who is the User, Persona, Customer Journey Map, Empathy, Business Model and Strategy, understanding various technology and devices enabling technology. Introduction To UI: Human Factors, of Interactive Software: Goals of System Engineering, Goals of UI Design, Motivations for Human Factors in Design, Accommodation of Human Diversity, Goals of our Profession.

Survey Components of UI & Effective UI Design Process: Menu Selection, Form Filling, Dialog Boxes-Introduction, Task Related Organization, Item Presentation Sequence, Response time and Display Rate, Fast Movement through menus, Menu Layout, Form Filling, Dialog Boxes, Interactive Devices, Specification methods, Interface Building tools, Evaluation and pretty critiquing tools, material.io

Importance of Colour theory and colour wheel while designing in XD /Figma, Introduction to Typography and its importance in visual design, Introduction to Iconography and its importance in visual design, Menu, selection, formfilling and Dialog boxes: Task related organization, Item presentation Sequence, logo and importance of brand guidelines for logo, Bitmap images and Vector Graphics, Different illustrator elements and their working procedure in adobe illustrator.

Designing UI Using Adobe XD Tool: Getting started with your Adobe XD project, what is UI VS UX Vs product Designer, Wireframing Low Fidelity, Type, colour & Icon Introduction, prototyping a website introduction, Symbols & Repeat Grids, Prototyping an app-Introduction, Colours, Drawing, Images, AssetPanel, Micro Interactions, Voice Interactions, User Testing

This course offers an in-depth exploration of advanced prototyping and interaction design techniques for creating high-fidelity interactive prototypes. Beginning with a review of fundamental prototyping concepts and tools, students will delve into advanced prototyping platforms such as Figma, Adobe XD, or Proto.io, focusing on their capabilities for simulating complex user interactions, animations, and transitions. The course will cover topics such as designing for various screen sizes and devices, microinteractions, state management, and responsive behavior. Through hands-on projects and case studies, students will apply these techniques to design and prototype interactive experiences for web and mobile applications, with an emphasis on usability, accessibility, and user delight. By the end of the course, students will have developed the skills and expertise to create polished prototypes that closely resemble the final product, enabling them to gather accurate feedback, iterate on designs effectively, and deliver exceptional user experiences.

23GDU3303A - AR & VR APPLICATION DEVELOPMENT (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GDU3303A	AR & VR APPLICATION DEVELOPMENT	AR&VR	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and Apply Basics of Augmented Reality and Interactions. Fundamentals of Augmented , Mixed Reality and its features.	3	PO1, PO2, PSO1
CO2	Apply Basics of Virtual Reality and Interactions. Fundamental Concept and Components of Virtual Reality	3	PO2, PO3, PSO2
CO3	Apply Graphics Pipelines, Creating a sample augmented reality apps in android	3	PO2, PO5, PSO2
CO4	Apply Applications of Virtual Reality in Digital Entertainment	3	PO2, PO5, PSO2
CO5	Apply Advanced AR and VR Components	3	PO1, PO5, PSO1
CO6	Develop applications through Lab experiments	3	PO1, PO5, PSO1
CO7	Develop applications through Skill experiments	3	PO1, PO5, PSO1

Syllabus

Introduction to Augmented Reality -Augmented Reality Interactions, Monitor Based Displays, Headmounted Displays, Ar Interaction, Ar Tracking , Augmented and Mixed Reality, Technology and features of augmented reality, Typical AR Experiences, Difference between AR, VR and MR, Challenges with AR, AR systems, Simultaneously Localize and Map Environment, Optical Tracking , AR Tracking and registration , Markers , Holography and Photography, AR System Evaluation.

Introduction to Virtual Reality- Historical development of VR Fundamental Concept and Components of Virtual Reality, Architecture of Virtual Reality, Primary Features and Present Development on Virtual Reality, Typical VR System, The three I's of virtual reality, commercial VR technology and the five classic components of a VR system, Computer graphics, Real time computer graphics, Flight Simulation, Virtual environment requirement ,VR Content, Factors in Virtual Reality, Benefits of virtual reality, Typical System Delays, VR Graphics Architecture.

The Graphics Pipeline VR Panorama, Stereo Movie, Stereo Panorama , Mono Panoramas ,Comparison Mono and Stereo Panoramas, Spatial Audio for VR, Motion Sickness, Spherical Harmonics ,Engines and Unity,VR Engines,Audio ,3D Audio, Physics ,User Interface, VR Engines Content Creation,Latency,Post-rendering Warp, Eye Tracking

VR Technology in Film & TV Production.VR Technology in Physical Exercises and Games.Demonstration of Digital Entertainment by VR. 3D user interfaces - Why 3D user interfaces. Major user tasks in VE. Interaction techniques for selection, Manipulation and navigation.3DUI evaluation.

Augmented Reality Projects and Optimization approaches, Research and Troubleshooting

23GDU3404M - COMPUTER GRAPHICS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GDU3404M	COMPUTER GRAPHICS	CG	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand techniques of computer graphics for the generation of objects.	2	PO1, PO2, PO3, PSO2
CO2	Apply two dimensional Transformations	3	PO1, PO2, PO3, PSO2
CO3	Apply virtual reality and three dimensional transformation.	3	PO1, PO2, PO3, PSO2
CO4	Analyze three dimensional graphics.	3	PO1, PO2, PO3, PSO2

Syllabus

Introduction and Line Generation: Video Display Devices- Raster Scan systems-random scan systems-Graphics monitors and workstations-Input devices-hard copy devices-Graphics software, Frame buffer and video controller. Output primitives: Points and Lines-Line Drawing Algorithms- Loading the Frame buffer- Line function- Circle- Generating

Two Dimensional Geometric Transformations: Basic Transformations- Matrix Representations-Homogeneous Coordinates-Composite Transformations-Other Transformations-Transformations between Coordinate Systems- Affine Transformations-Transformation Functions- Raster methods for Transformations. Two Dimensional Viewing: The viewing

Structure and Hierarchical Modeling: Concepts of Structures and Basic models-Editing - Hierarchical Modeling with Structures-GUI and Interactive Input Methods- Windows and Icons- Virtual Reality Environments. Three Dimensional: 3-D geometric primitives, 3-D Object representation, 3-D Transformation, 3-D viewing, projections, 3-D Clipping. Curves and Surfaces: Quadric surfaces, Spheres, Ellipsoid, Blobby objects,

Introductory concepts of Spline, Bspline and Bezier curves and surfaces. Hidden Lines and Surfaces: Back Face Detection algorithm, Depth buffer method, A buffer method, Scan line method, basic illumination models, Ambient light, Diffuse reflection, Specular reflection and Phong model, Combined approach, Warn model, Intensity Attenuation,

Reference Books

- 5 Principles of Interactive Computer Graphics, William M. Newman and Robert F.Sproull, 2,2012, McGrawHill .

23GDU3405M - 3D MODELLING & ANIMATION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GDU3405M	3D MODELLING & ANIMATION	3DMA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concepts of 3D Modelling.	2	PO1, PO2, PO3, PSO2
CO2	Apply key frames for animation with timelines and constraints using various tools	3	PO1, PO2, PO3, PSO2
CO3	Apply simulation effects to Animation objects	3	PO1, PO2, PO3, PSO2
CO4	Analyze different modelling animation techniques	4	PO1, PO2, PO3, PSO2

Syllabus

Definition of Modelling 3D concepts 3D object representations Polygon surfaces Curved Lines and surfaces Spline representations Bezier curves and surfaces Transformation and Viewing: 3D geometric and modelling transformations Translation, Rotation, Scaling, composite transformations 3D viewing viewing pipeline, viewing coordinates, Projections, Visible surface detection methods.

Keyframe Animation Creating Keyframes, Auto Keyframes, Move & Scale Keyframe on the timeline, Animating with constraints & simple controllers, animation Modifiers & complex controllers, function curves in the track view, motion mixer., ZBrush, Blender, Substance painter

Simulation & Effects Bind to Space Warp object, Gravity, wind, displace force object, deflectors, FFD space warp, wave, ripple, bomb, creating particle system through parray, understanding particle flow user interface, how to particle flow works, hair & fur modifier, cloth & garment maker modifiers.

Lighting & Camera Configuring & Aiming Cameras, camera motion blur, camera depth of field, camera tracking, using basic lights & lighting Techniques, working with advanced lighting, Light Tracing, Radiosity, video post, mental ray lighting mapping texture Vray light setup, Vray rendering settings, HDRI Illumination, Fine tuning shadows, Final render setting.

23GDU3506 - PRINCIPLES OF GAME DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GDU3506	PRINCIPLES OF GAME DESIGN	PRGD	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Video Games and Design Components	2	PO1, PO2, PO3, PSO2
CO2	Discuss Game Concepts and its world	2	PO1, PO2, PO3, PSO2
CO3	Illustrate Story telling Character and user interface Design	3	PO1, PO2, PO3, PSO2
CO4	Analyze the Game Play its mechanics and balancing	4	PO1, PO2, PO3, PSO2
CO5	implement Games using Course with Code in Unity	3	PO1, PO2, PO3, PSO2

Syllabus

Video Games and Design Components: Definition of game, Conventional Versus Video Games, How video games Entertainment, Design Components and Processes: The key components of video games, The structure of video games, Stages of video games, Game design team roles, Game design documents,

The anatomy of a game designer. Game Concepts and its world: Getting an Idea, From Idea to game design concept, the player role, choosing a genre, Defining your target audience ,progression considerations, types of game machines, Introduction to game world and its purpose.

Dimensions of Game world. Story telling Character & user interface Design: Story telling play, Goals of character design, The story telling engine, Linear and non linear stories, Emotional limits and Interactive stories, Player centric interface design, Inputs devices, The design process

Game Play and its mechanics: Making game fun, Challenges, What are core mechanics, balanced game, Action Games, The level of design process, What are adventure games, Online Games, Design issues of online games, Advantages and disadvantages, Design to appeal to particular group

23GDU3507 - BUSINESS OF GAMES & ENTREPRENEURSHIP (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GDU3507	BUSINESS OF GAMES & ENTREPRENEURSHIP	BGE	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the flow of money in the game industry & how to protect ideas to make the craft of making games an economically	2	PO1, PO2, PO3, PSO2
CO2	Apply the mechanism behind gaming production and teamwork with foundation in some of the project management	3	PO1, PO2, PO3, PSO2
CO3	Apply Work out some of the presentation skills to pitch the gaming ideas as it happens in the ecosystem with enablers	3	PO1, PO2, PO3, PSO2
CO4	Apply the skills required to be an entrepreneur and know the rules and regulations to start a company in a country like India	3	PO1, PO2, PO3, PSO2

Syllabus

Show the Money The Business of Videogames, Funding Models, Where are Games Sold, How do You Make Money. IP Intellectual Property, IP Copyright, IP- Patents and Trade Secrets and IP Protecting Yourself and your Game project.

Games are Made of People: Teamwork Fundamentals, It's About the People, Project Management Techniques, Complexity and Iteration, SCRUM, Project Management Tools. Leadership: Gaming project leaders and their Leadership Qualities, Leadership Style and Leadership Tasks.

Pitching Your Game and Yourself: The Art of the Demo, Public Speaking What Works, Effective Visuals. How to Demo Your Game, Getting a Job, Perfecting the Resume, Finding a Game Job, Interviewing for Game project specialist.

Entrepreneurship and Starting a Company: Your Friends Are Not A Company, Entrepreneurship, Launching a Business, Business Structures, Business Planning and DPR. Rules and Regulations with different stakeholders including Central and State government nodal agencies on startup ecosystem including company incorporation rules in India. Opportunities in Startup India ecosystem towards Funding and establishment support.

Reference Books

- 1 Long Term Game: How to build a Video Games Company, Joakim Achren, 3,2015, Course Technology .
- 2 Shifting Orbits: Decoding the Trajectory of the Indian Start up Ecosystem, Thillai Rajan A, Srivardhini K Jha, Joffi Thomas, Rohan Chinchwadkar, 2,2007, Kindle Edition.
- 3 Games, Simulations and Playful Learning in Business Education, O. Arikan, M. Davies, I. De Loo, C. Elliott, J. Evans, J. Guest, B.A. Kazmi, C. Kerridge, P. Koornhof, M. Kozlovskaya, 3,2013, OPEN ACCESS PEER-REVIEWED EDITED VOLUME.
- 4 Serious Games Integration in an Entrepreneurship, Margarida Romero & Mireia Usart , 3,2016, E-BOOK.

23GEG3101A - MOLECULAR GENETICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GEG3101A	MOLECULAR GENETICS	MG	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Comprehensive Understanding of Molecular Mechanisms: apply fundamental principles of molecular biology to understand and describe the mechanisms.	2	PO1, PO2, PO3, PSO1
CO2	Analysis of Genetic Variations and Mutations: investigate and analyze genetic variations and mutations by applying molecular techniques	3	PO1, PO2, PO3, PSO1
CO3	Proficiency in Molecular Techniques: gain proficiency in a variety of molecular biology techniques	3	PO1, PO2, PO3, PSO1
CO4	Exploration of Gene Expression Regulation	3	PO1, PO2, PO3, PSO1
CO5	Investigation of Genetic Disorders and Diseases	3	PO1, PO2, PO3, PSO1
CO6	Molecular genetics practicals involve a variety of techniques and experiments designed to understand the structure, function, and manipulation of genetic material.	4	PO1, PO2, PO3, PSO1
CO7	Application of Molecular Genetics in Biotechnology and Research for developemnt modern technolooges	3	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Molecular Genetics History and significance of molecular genetics Central dogma of molecular biology Structure and function of DNA and RNA

DNA Replication and Repair Mechanisms of DNA replication DNA repair pathways (mismatch repair, nucleotide excision repair, etc.) Telomeres and telomerase

Transcription and RNA Processing Transcriptional machinery and regulation RNA processing (splicing, capping, polyadenylation) Non-coding RNAs (miRNA, siRNA, lncRNA)

Translation and Protein Synthesis Ribosomes and translation machinery Genetic code and protein synthesis Post-translational modifications

Gene Regulation and Expression Control Transcriptional regulation (promoters, enhancers, repressors) Epigenetics and chromatin remodeling Regulatory RNA molecules (microRNAs, long non-coding RNAs)

Genetic Variation and Mutation Analysis Types of genetic variations (SNPs, indels, CNVs) Mutation detection methods (PCR, sequencing, microarrays) Functional consequences of mutations

Molecular Genetics Techniques Polymerase Chain Reaction (PCR) DNA sequencing methods (Sanger sequencing, NGS) Gene cloning and recombinant DNA technology CRISPR/Cas9 gene editing

Applications of Molecular Genetics Genetic engineering in biotechnology Genomic medicine and personalized genomics Molecular diagnostics and genetic testing Pharmacogenomics and gene therapy

23GEG3202A - MOLECULAR EXPRESSION TECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GEG3202A	MOLECULAR EXPRESSION TECHNOLOGY	MET	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand a comprehensive understanding of the principles underlying molecular expression technology.	2	PO1, PO2, PO3, PSO1
CO2	Apply various techniques such as gene cloning, PCR, and recombinant DNA technology to manipulate and express genes.	3	PO1, PO2, PO3, PSO1
CO3	Analyze experimental data related to molecular expression technology and draw appropriate conclusions.	4	PO1, PO2, PO3, PSO1
CO4	Take part effectively in compiling about molecular expression technology through written reports and oral presentations.	4	PO1, PO2, PO3, PSO1
CO5	Demonstrate awareness of ethical considerations in molecular expression technology research and applications.	2	PO1, PO2, PO3, PSO1
CO6	Make a relationship effectively with peers in laboratory and group projects related to molecular expression technology.	4	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Molecular Expression Technology: Definition of Molecular Expression Technology, Historical development and milestones, Importance in modern biotechnology and medicine, Principles of gene cloning, Types of vectors: plasmids, phages, artificial chromosomes, Techniques: restriction enzymes, DNA ligases, PCR, Prokaryotic vs. eukaryotic expression systems, Choice of host organisms: bacteria, yeast, insect cells, mammalian cells, Cell-free expression systems and their applications

Transcription and Translation: Mechanisms of transcription and translation, Regulation of gene expression, Role of promoters and regulatory elements, Protein Expression: Protein folding and assembly, Post-translational modifications, Strategies to improve protein yield and solubility, Protein Purification: Principles of protein purification, Chromatography techniques: affinity chromatography, size-exclusion chromatography, ion exchange chromatography, Protein quantification and analysis

Industrial Applications: Production of recombinant proteins, Biopharmaceuticals: insulin, vaccines, monoclonal antibodies, Enzyme production and industrial biotechnology, Research Applications: Protein engineering and design, Functional genomics and proteomics, Drug discovery and development using molecular expression

Challenges in Protein Expression: Factors affecting protein expression: codon usage, mRNA stability, post-translational modifications, Strategies to enhance protein expression and stability, Scale-up and Process Optimization, Scale-up considerations in bioreactors Process optimization: media formulation, feeding strategies, control of fermentation parameters

Recent Advances: High-throughput methods in protein expression, Synthetic biology approaches in molecular expression, CRISPR/Cas systems in genome editing and protein engineering, Future Directions and Emerging Technologies: Trends in molecular expression technology, Applications of artificial intelligence and machine learning in biotechnology

Ethical Issues in Biotechnology: Intellectual property and patents Bioethics in biotechnology research, Responsible conduct of research and professional ethics, Regulatory Aspects: FDA regulations for biopharmaceuticals, Biosafety and biosecurity in biotechnology, Global regulatory landscape and harmonization efforts

Reference Books

23GEG3203A - TRANSGENIC TECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GEG3203A	TRANSGENIC TECHNOLOGY	TT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Acquire the knowledge of vehicles for transgenic technology and transgenic plants	3	PO1
CO2	Apply the role of transgenic animals and silencing technology	3	PO1
CO3	Develop gene therapy for repair of defective genes	4	PO1
CO4	Develop knockouts strategies for strain improvement	4	PO9
CO5	Analyze various transgenic methods	4	PO9
CO6	Analyse gene editing methods for developemnt of transgenic products	4	PO9

Syllabus

Introduction to transgenic technology: definition, historical background, and key milestones. Plasmids, Phagemids, Cosmids, viruses, Gene constructs. Principle and applications. genomic and cDNA libraries. Transgenic technology in agriculture, medicine, and research.

Overview of gene transfer methods: microinjection, electroporation, viral vectors. Transgenic plants with beneficial traits, Transgenic plant as bioreactor, Diagnostics in agriculture, Comparison of different gene transfer techniques: advantages and limitations.

Gene transfer methods in animals, Embryonic Stem Cell Method, Pronucleus Method. Restriction enzymes and their role in molecular cloning. Transformation techniques in bacteria, yeast, and plants. Design and construction of expression vectors and plasmids.

SCID therapy, Gene Therapy for Cystic Fibrosis: Gene Therapy Approaches. Genetically modified crops: development, benefits, and controversies. Transgenic animals in agriculture: applications and ethical considerations. Transgenic models in medical research: disease modeling, drug testing, and personalized medicine.

Knockout Mice, Tissue-Specific Knockout Mice, Knock-in Mice. Ethics of Gene therapy. Gene therapy: principles, challenges, and future prospects. PCR (Polymerase Chain Reaction) and its applications in genetic engineering.

DNA, RNAi, Cloning enzymes, SCID, Gene editing methods, Knock out methods, Blot methods. Genetically modified crops: development, benefits, and controversies. Transgenic animals in agriculture: applications and ethical considerations. Global regulatory frameworks for GMOs: case studies and comparisons.

23GEG3304A - MOLECULAR MARKERS AND DIAGNOSTICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GEG3304A	MOLECULAR MARKERS AND DIAGNOSTICS	MMD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Molecular Markers	2	PO1, PO2, PO3, PSO1
CO2	Techniques for Molecular Marker Analysis: apply and optimize molecular techniques such as PCR, gel electrophoresis, and sequencing.	3	PO1, PO2, PO3, PSO1
CO3	Genetic Variation and Disease Markers: investigate genetic variations and identify disease-associated markers by applying genotyping and association studies	3	PO1, PO2, PO3, PSO1
CO4	Molecular Diagnostics and Personalized Medicine: explore and apply molecular diagnostic techniques (e.g., qPCR, microarrays) to detect biomarkers	3	PO1, PO2, PO3, PSO1
CO5	Bioinformatics Analysis of Molecular Markers: bioinformatics tools and software to analyze and interpret molecular marker data	3	PO1, PO2, PO3, PSO1
CO6	Molecular markers and diagnostics practicals involve techniques to identify specific sequences or variations in DNA that can be used for diagnosing diseases, identifying organisms, or studying genetic diversity.	4	PO1, PO2, PO3, PSO1
CO7	Applications of Molecular Markers in Research and Industry for developemnt of modern technologies.	3	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Molecular Markers Definition and types of molecular markers Principles behind molecular marker analysis Applications of molecular markers in genetics and biotechnology

Techniques for Molecular Marker Analysis Polymerase Chain Reaction (PCR) and its variants (qPCR, RT-PCR) DNA sequencing methods (Sanger sequencing, NGS) Microarray analysis for gene expression profiling Bioinformatics tools for molecular marker analysis

Genetic Variation and Disease Markers Genetic variation analysis using molecular markers (SNPs, microsatellites) Disease markers and biomarkers in diagnostics and prognosis Molecular markers for cancer diagnosis and treatment selection Molecular Diagnostics Principles of molecular diagnostics Diagnostic methods using molecular markers (PCR-based assays, sequencing, microarrays) Applications in infectious diseases, genetic disorders, and oncology

Bioinformatics Analysis of Molecular Data Introduction to bioinformatics tools and databases Analysis of genetic variation data, gene expression patterns, and protein biomarkers Interpretation of molecular data for diagnosis and research

Personalized Medicine and Molecular Markers Principles of personalized medicine Role of molecular markers in personalized medicine Pharmacogenomics and treatment selection based on genetic profiles

Reference Books

Syllabus

Introduction to Molecular Markers Types of molecular markers (DNA markers, SNP markers, gene expression markers, protein markers) Principles of molecular marker analysis Applications of molecular markers in genetics and medicine

Techniques for Molecular Marker Analysis Polymerase Chain Reaction (PCR) and its variants (qPCR, RT-PCR) DNA sequencing methods (Sanger sequencing, NGS) Microarray analysis for gene expression profiling Bioinformatics tools for molecular marker analysis Genetic Variation and Disease Markers Genetic variation analysis using molecular markers (SNPs, microsatellites) Disease markers and biomarkers in diagnostics and prognosis Molecular markers for cancer diagnosis and treatment selection

Molecular Diagnostics Principles of molecular diagnostics Diagnostic methods using molecular markers (PCR-based assays, sequencing, microarrays) Applications in infectious diseases, genetic disorders, and oncology Bioinformatics Analysis of Molecular Data Introduction to bioinformatics tools and databases Analysis of genetic variation data, gene expression patterns, and protein biomarkers Interpretation of molecular data for diagnosis and research

Personalized Medicine and Molecular Markers Principles of personalized medicine Role of molecular markers in personalized medicine Pharmacogenomics and treatment selection based on genetic profiles

23GEG3405M - GENOMICS AND PROTEOMICS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GEG3405M	GENOMICS AND PROTEOMICS	GP	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the genomic technologies including genome structure, organization, and function across different organisms	3	PO9
CO2	Apply the proteomic techniques to integrate genomic and proteomic data to elucidate biological processes	3	PO1
CO3	Apply the Integration of next-generation sequencing, microarray analysis, and mass spectrometry for genome-wide and proteome-wide analysis	3	PO1
CO4	Apply the Ethical and Societal Implications in exploring applications of genomics and proteomics in biomedical research,	3	PO1

Syllabus

Genomes and Genome Analysis-Organization and structure of genomes, Genome Mapping: Construction of genomic libraries, mapping strategies and techniques. Human Genome Project, Genomes of other organisms. Principles of gene expression; Global analysis of gene expression, Peptide nucleic acid technology.

Comparative genomics: protein evolution from exon shuffling, Protein structural genomics, Gene function by sequence comparison. Functional Genomics, Pharmacogenomics, Genomics in relation to molecular Diagnosis, Role of genomics in Drug discovery and development.

Microarrays-Whole genome analysis of mRNA and protein expression, microarray analysis, types of micro arrays and applications in cancer diagnosis. Protein Biochips, Protein arrays. Proteomics-Principles of separation of Bio-molecules, 2D-Gel Electrophoresis, MALDI-TOF, Protein-protein interaction networks: Topology, Network motifs, Protein Expression profiling and applications.

Protein Networks and mapping-Yeast two hybrid, Co-Precipitation, Phage Display, Phylogenetic Profile, Domain fusion, Gene Neighbourhood, Gene Cluster, Mirror Tree, Analysis of genome wide Protein-Protein Interactions in yeast. Genome wide yeast two hybrid analysis of other organisms, Protein fragment complementation assays.

Reference Books

23GEG3406M - DNA FORENSICS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GEG3406M	DNA FORENSICS	DNF	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the different types of crime in society, and various Acts and their relevant sections and have knowledge of working and function of Police Organization	2	PO1, PO2, PSO1
CO2	Apply the principles of analytical techniques to participate in the career needs of Forensic community.	3	PO2, PSO2
CO3	Apply the knowledge of skills in different division of Forensic Science	3	PO4, PO5, PSO2
CO4	Apply the principles of Instrumental Analysis in Biological detection of macromolecules	3	PO2, PO8, PSO1

Syllabus

History and development of forensic science
 Role of forensic science in criminal investigations and legal proceedings
 Ethics and professional standards in forensic science

Principles of crime scene management
 Evidence collection, preservation, and documentation
 Crime scene reconstruction techniques.
 Principles of toxicology
 Common poisons and their effects
 Toxicological analysis and interpretation
 Alcohol and drug-related deaths

DNA analysis and profiling
 Serology (blood, semen, saliva analysis)
 Forensic entomology (insect evidence), Bloodstain pattern analysis
 Serological techniques
 DNA profiling and its applications
 Legal and ethical issues in DNA analysis

Trace evidence analysis (fibers, hair, glass, paint)
 Toxicology (analysis of drugs, poisons, and alcohol)
 Firearm and toolmark analysis.
 Role of forensic medicine in disaster victim identification
 Emerging technologies in forensic medicine

23GEG3507 - MICROBIAL GENETICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GEG3507	MICROBIAL GENETICS	MBG	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the role of genetic materials in microbes	3	PO2, PO3, PSO2
CO2	Apply the role of Regulatory Mechanisms in Microbial Genetics	3	PO2, PO6, PSO2
CO3	Apply the role of Bacterial Genomics to understand sequencing and analysis	3	PO3, PO8, PSO2
CO4	Apply the role of Molecular Techniques in Microbial Genetics	3	PO6, PO8, PSO2

Syllabus

Introduction to microbial genetics and its significance, Overview of microbial cell structure and functions, Genetic materials in microbes: Chromosomes, plasmids, transposons, and episomes, Mechanisms of DNA replication in bacteria and archaea, RNA synthesis and processing: Transcription in prokaryotes, Protein synthesis: The process of translation and post-translational modifications, Types of mutations: Point mutations, insertions, deletions, and frameshift mutations, Mutagenic agents: Physical, chemical, and biological mutagens, DNA repair mechanisms: Mismatch repair, excision repair, and SOS response, Horizontal gene transfer: Conjugation, transformation, and transduction, Role of plasmids and bacteriophages in gene transfer, Applications of gene transfer in biotechnology

Operon model: Lac operon, trp operon, and arabinose operon, Positive and negative regulation of gene expression, Global regulatory mechanisms: Catabolite repression and quorum sensing, Two-component regulatory systems, Response regulators and sensor kinases, Adaptation to environmental stresses: Heat shock response, osmotic stress, and oxidative stress, Regulation of metabolic pathways through feedback inhibition, Allosteric regulation and covalent modification of enzymes, Role of riboswitches in metabolic regulation, Design and application of genetic circuits, Basics of synthetic biology: Engineering microbes for novel functions, Case studies of synthetic biology applications in medicine and industry

Methods of genome sequencing and analysis, Comparative genomics and evolutionary studies, Role of horizontal gene transfer in microbial evolution, Techniques in metagenomics: Sample collection, DNA extraction, and sequencing, Analysis of metagenomic data: Bioinformatics tools and software, Importance of microbiomes in health and environment, Genetic engineering techniques: Recombinant DNA technology, CRISPR-Cas9, and gene editing, Production of recombinant proteins and industrial enzymes, Microbial production of biofuels and bioplastics, Genetic determinants of microbial pathogenicity, Mechanisms of antibiotic resistance, Genetic basis of host-pathogen interactions

Isolation and purification of nucleic acids: DNA, RNA extraction methods, Polymerase Chain Reaction (PCR) and its variants: qPCR, RT-PCR, Gel electrophoresis: Agarose and polyacrylamide gel electrophoresis, Cloning vectors: Plasmids, bacteriophages, and cosmids, Techniques of gene cloning: Restriction digestion, ligation, and transformation, Expression of recombinant proteins in microbial systems, DNA sequencing methods: Sanger sequencing, next-generation sequencing, Proteomic techniques: SDS-PAGE, mass spectrometry, and protein-protein interaction studies, Functional genomics and proteomics in microbial research, Case studies on the use of microbial genetics in medicine: Vaccine development, gene therapy, Industrial applications: Production of antibiotics, vitamins, and amino acids, Environmental applications: Bioremediation and biodegradation

Reference Books

- 1 Molecular Genetics of Bacteria, Larry Snyder, Wendy Champness, 2014, ASM Press.
- 2 Microbial Genetics, Stanley R. Maloy, John E. Cronan, David Freifelder, 1994, Jones & Bartlett Learning.

- 3 Principles of Genetics, Peter Snustad, Michael J. Simmons, 2015, Wiley.
- 4 Brock Biology of Microorganisms, Michael T. Madigan, Kelly S. Bender, Daniel H. Buckley, W. Matthew Sattley, David A. Stahl, 2021, Pearson.

23GEG3508 - GENE AND ENVIRONMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GEG3508	GENE AND ENVIRONMENT	BI	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles of gene-environment interactions	2	PO1, PO2, PO3, PSO1
CO2	Analyze genetic variation and its implications	4	PO1, PO2, PO3, PSO1
CO3	Apply knowledge of gene-environment interactions to propose strategies for disease prevention, environmental conservation, and sustainable agriculture.	3	PO1, PO2, PO3, PSO1
CO4	Make a relationship effectively about gene-environment interactions to both scientific and non-scientific audiences.	4	PO1, PO2, PO3, PSO1

Syllabus

Overview of Gene and Environment Interactions: Definition of gene-environment interactions, Historical perspectives and key milestones, Importance in understanding human health and disease, Genetic Variation and Diversity: Types of genetic variation: SNPs, CNVs, mutations, Population genetics and genetic diversity, Methods for studying genetic variation: genotyping, sequencing

Environmental Factors and Gene Regulation: Epigenetics: mechanisms and inheritance, Environmental impacts on DNA methylation, histone modifications, and non-coding RNAs, Role of environmental exposures (e.g., diet, toxins, stress) in gene expression, Developmental Origins of Health and Disease (DOHaD), Critical periods of development and susceptibility, Fetal programming and maternal influences, Long-term health implications of early-life environmental exposures

Complex Traits and Polygenic Inheritance: Quantitative genetics: heritability and genetic architecture, Genome-wide association studies (GWAS) and identifying genetic risk factors, Gene-environment interactions in complex diseases (e.g., diabetes, cancer), Nutrigenomics and Personalized Medicine, Impact of nutrition on gene expression and metabolism, Pharmacogenomics: personalized drug response based on genetic variations, Ethical considerations in personalized medicine and genetic testing

Environmental Health and Epidemiology: Environmental factors influencing public health (e.g., pollution, climate change), Gene-environment interactions in environmental diseases (e.g., asthma, allergies), Environmental justice and disparities in exposure and health outcomes, Regulatory and Policy Responses: Environmental regulations and policy frameworks, Public health interventions and preventive strategies, Communicating scientific findings to policymakers and the public

23GET3101A - SOLAR PV AND MICRO ENERGY TECHNOLOGIES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GET3101A	SOLAR PV AND MICRO ENERGY TECHNOLOGIES	SPMET	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the manufacturing of Solar cells, their working and parameters influencing the performance of the solar cells.	2	PO3, PO6
CO2	Apply maximum power point tracking techniques to improve the performance of solar PV systems.	3	PO3, PO6
CO3	Apply the fuel cell chemistry to build fuel cell applications and compare different types of fuel cells.	3	PO3, PO6
CO4	Make use of heat transfer principles for energy extraction from various micro energy sources.	3	PO3, PO6
CO5	Demonstrate various ways of extracting energy from solar radiation and use for different applications.	3	PO3
CO6	Test the performance of solar and micro energy sources.	4	PO3, PO11
CO7	Build solar based and fuel cell-based power sources and do required troubleshooting if any technical problem encounters.	3	PO11, PO12

Syllabus

Solar PV energy conversion: Generic Photovoltaic Cell, Equivalent Circuits, Cells to Modules to Arrays, IV Curve, Impacts of Temperature and Insolation, Shading impacts on IV curves, MPPT, System sizing, System Performance.

Modelling of Solar PV system components: Mathematical models of PV cell, PV Array, Battery pack, grid connected and isolated modes of operation, MPPT techniques.

Fuel Cell energy conversion: PEM Fuel Cells, Solid Oxide Fuel Cells, Electrolyzers, Power Electronic Interfacing Circuits, Standalone and Grid Connected Fuel Cell Power Generation Systems, Hybrid Fuel Cell Based Energy System Case

Micro Energy Sources: Ocean Thermal energy conversion, Geo-thermal energy conversion, Tidal Energy conversion, Biomass energy, Biogas plants and Batteries.

Solar Thermal Energy Storage Systems: Flat Plate Collectors, Concentrating Collectors, Applications of solar thermal energy-solar pond, desalination, space heating and colling, solar water heating, solar cooking.

Reference Books

23GET3101E - SOLAR PV AND MICRO ENERGY TECHNOLOGIES (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GET3101E	SOLAR PV AND MICRO ENERGY TECHNOLOGIES	SPMET	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the manufacturing of Solar cells, their working and parameters influencing the performance of the solar cells.	2	PO1, PO11, PO12
CO2	Apply maximum power point tracking techniques to improve the performance of solar PV systems.	3	PO1, PO11, PO12
CO3	Apply the fuel cell chemistry to build fuel cell applications and compare different types of fuel cells.	3	PO1, PO11, PO12
CO4	Make use of heat transfer principles for energy extraction from various micro energy sources.	3	PO1, PO11, PO12
CO5	Demonstrate various ways of extracting energy from solar radiation and use for different applications.	3	PO1, PO11, PO12
CO6	Test the performance of solar and micro energy sources.	4	PO1, PO11, PO12
CO7	Build solar based and fuel cell-based power sources and do required troubleshooting if any technical problem encounters.	3	PO1, PO11, PO12

Syllabus

Solar PV energy conversion: Generic Photovoltaic Cell, Equivalent Circuits, Cells to Modules to Arrays, IV Curve, Impacts of Temperature and Insolation, Shading impacts on IV curves, MPPT, System sizing, System Performance.

Modelling of Solar PV system components: Mathematical models of PV cell, PV Array, Battery pack, grid connected and isolated modes of operation, MPPT techniques.

Fuel Cell energy conversion: PEM Fuel Cells, Solid Oxide Fuel Cells, Electrolyzers, Power Electronic Interfacing Circuits, Standalone and Grid Connected Fuel Cell Power Generation Systems, Hybrid Fuel Cell Based Energy System Case

Micro Energy Sources: Ocean Thermal energy conversion, Geo-thermal energy conversion, Tidal Energy conversion, Biomass energy, Biogas plants and Batteries.

Solar Thermal Energy Storage Systems: Flat Plate Collectors, Concentrating Collectors, Applications of solar thermal energy-solar pond, desalination, space heating and cooling, solar water heating, solar cooking.

23GET3202A - WIND AND ENERGY STORAGE TECHNOLOGIES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GET3202A	WIND AND ENERGY STORAGE TECHNOLOGIES	WEST	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret principles and control of Wind Energy Conversion	2	PO1, PO5
CO2	Model and Select Solar Wind energy conversion system components.	3	PO1, PO5
CO3	Interpret and Model Electro-chemical energy storage components.	3	PO1, PO5
CO4	Interpret and Model Mechanical energy storage components	3	PO1, PO5
CO5	Analyse the behavioral characteristics of wind and energy storage systems.	4	PO1, PO5

Syllabus

Wind Energy Conversion System: Components of WECS, Power obtained from the wind, Power Regulation, Schemes for Maximum Power Extraction, Wind Turbines & Generators: Fixed-speed Induction Generator (FSIG) based Wind Turbines, Doubly Fed Induction Generator (DFIG) based Wind Turbines, Fully Rated Converter-based (FRC) Wind Turbines.

Modelling of WECS components: Mathematical models for DFIG, PMSG, Stand alone and Grid Connected WECS system control.

Electro-chemical Energy Storage: Batteries - lead acid, lithium ion, flow, design considerations, life cycle and reliability study, Ultra-capacitors - operation, applications, Model for lead acid battery and ultra-capacitor.

Mechanical Energy Storage: Models for pumped hydro, compressed gas, flywheel storage, System cost and efficiency, Thermal storage- Materials, Design considerations, Solar thermal energy storage.

Modeling of Wind turbine generators in both stand alone and grid connected conditions, Simulation of Wind Energy Conversion system using MATLAB

Reference Books

23GET3203A - ENERGY ECONOMICS AND POLICY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GET3203A	ENERGY ECONOMICS AND POLICY	EEP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the energy economics and various policies related to energy generation and supply.	2	PO1, PO7
CO2	Apply energy regulations and energy policies to energy markets to promote energy efficiency and Energy equity	3	PO1, PO7
CO3	Analyze environmental externalities and impact of climate changes on energy security and energy supply.	4	PO1, PO7
CO4	Analyse policies and incentives for encourage renewable energy integration.	4	PO1, PO7
CO5	Analyse the Indian and other energy markets and their energy policies.	4	PO1, PO7

Syllabus

Introduction to Energy Economics and Policy Overview of energy markets, Historical development of energy policies, Role of government in energy policy. Energy Demand and Supply- Drivers of energy demand, Production and supply of energy, Price elasticity of demand and supply. Energy and Economic Development -Energy access and poverty reduction, Economic impacts of energy policies.

Energy Markets and Regulation: Market structures and pricing, Regulation of energy markets, Deregulation of energy markets. Energy Efficiency and Conservation- Demand-side management, Energy-efficient technologies, Policies to promote energy efficiency, Energy justice and equity.

Environmental Externalities and Climate Change: Market failures and environmental externalities, Policies to address climate change, Carbon pricing mechanisms. Energy Security and Geopolitics- Energy security and national security, Energy interdependence and trade, Political risk and energy supply.

Renewable Energy Policy: Overview of renewable energy technologies, Renewable energy policies and incentives, international cooperation and agreements. Energy Transition and Innovation- Transition to a low-carbon energy system, Innovation in energy technologies, Policies to support energy innovation.

India and other countries energy markets and their energy policies.

Reference Books

Energy Markets and Regulation: Market structures and pricing, Regulation of energy markets, Deregulation of energy markets. Energy Efficiency and Conservation- Demand-side management, Energy-efficient technologies, Policies to promote energy efficiency, Energy justice and equity.

Environmental Externalities and Climate Change: Market failures and environmental externalities, Policies to address climate change, Carbon pricing mechanisms. Energy Security and Geopolitics- Energy security and national security, Energy interdependence and trade, Political risk and energy supply.

Renewable Energy Policy: Overview of renewable energy technologies, Renewable energy policies and incentives, international cooperation and agreements. Energy Transition and Innovation- Transition to a low-carbon energy system, Innovation in energy technologies, Policies to support energy innovation.

23GET3304A - GRID INTEGRATION OF RENEWABLE ENERGY SOURCES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GET3304A	GRID INTEGRATION OF RENEWABLE ENERGY SOURCES	GIRES	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the control principles for PV - grid integration control	3	PO5
CO2	Apply the control principles for wind power integration con	3	PO4
CO3	Identify power quality challenges in grid integration of renewable energy	3	PO4
CO4	Identify challenges in grid integration of multiple renewable sources	3	PO5
CO5	Analyze Grid Integration of Other Renewable Energy Sources	4	PO5
CO6	Able to analyze the integration of micro grid	4	PO5
CO7	Able to Acquire skills in topics of integration of micro grid	4	PO5

Syllabus

PV Integration Technology: Introduction, Photovoltaic (PV) inverter topologies- configurations and control strategies, Grid codes and technical regulations of Solar PV integration. Case study.

Wind Power Integration Technology: Wind power and voltage control for synchronous and induction generators-based integration; active and reactive power control, Grid codes and technical regulations of Wind power integration. Case study

Power quality management: THD, voltage sag, voltage swell, frequency change and its effects, network voltage management- PV & Wind power, frequency management, effects on system stability, PLL, Modulation Techniques, Dimensioning of filters.

Challenges: Integrating multiple renewable energy sources; DC link integration; AC link integration; Integration of DC micro-grid to the main AC grid using a 3-phase inverter, HFAC link integration; islanding and interconnection.

Grid Integration of Other Renewable Energy Sources: Integration of hydroelectric power systems, Biomass and biogas power systems and their integration,

23GET3405M - ENERGY MANAGEMENT AND GREEN BUILDING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GET3405M	ENERGY MANAGEMENT AND GREEN BUILDING	EMGB	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply different types of energy audit for energy management in green buildings	3	PO1, PO7, PSO1
CO2	Interpret different types of energy conservation opportunities in electrical components used for various applications	3	PO1, PO7, PSO2
CO3	Apply different types of energy management strategies to improve energy efficiency in green buildings	3	PO1, PO7, PSO1
CO4	Apply different types of practices to get maximum life and improve energy efficiency green buildings	3	PO1, PO7, PSO1

Syllabus

Energy Audit: Need, types, methodology and approach, Instruments for energy audit, Energy Management Approach, Understanding Energy Costs, Bench marking, Energy performance, matching energy usage to requirements, maximizing system efficiency, Return of Investment

Energy conservation opportunities: Energy conservation in HVAC, Refrigeration and Air Conditioning, Pumping Systems, lighting control, lighting control, Energy Conservation Building Code, Energy Conservation opportunities in Transformers and cables, Transmission lines

Energy Management: Definition and Objective of Energy Management, General Principles, Energy Management Strategy, Energy Balance sheet and Management Information System (MIS), Energy Modeling and Optimization, Demand Side management (DSM), Peak Demand control- Methodologies

Green Building Practices: Energy efficiency-life cycle perspective, Environmental product declaration, Building information model, choice of heat insulation materials, high thermal mass materials, phase change materials, Green building certifications

Reference Books

23GET3406M - HYDROGEN FUEL CELL TECHNOLOGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GET3406M	HYDROGEN FUEL CELL TECHNOLOGY	HFCT	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply and Interpret different types and principles of fuel cell technologies for various fuel cell applications	3	PO1, PO7, PSO1
CO2	Interpret different types of Modelling and Selection of fuel cell components in fuel cell system	3	PO1, PO7, PSO1
CO3	Interpret and study different types of dynamics of hydrogen fuel cell storage and applications for storage of hydrogen storage	3	PO1, PO7, PSO1
CO4	Apply different case studies on Demonstration of Environmental and Economic Impacts of Hydrogen fuel cells	3	PO1, PO7, PSO1

Syllabus

Hydrogen Production and Fuel Cell Technology: Overview of hydrogen as a fuel Types of fuel cells History of fuel cell technology, Steam reforming of natural gas, Electrolysis of water Biomass gasification

Fuel Cell System & Components Principles and Performance: Basic principles of fuel cell operation Performance characteristics of fuel cells, Fuel cell stack design and components Balance-of-plant components, Thermal management and control

Hydrogen Storage and Fuel Cell Applications: Storage methods for hydrogen, Physical and chemical properties of hydrogen storage materials, Portable and backup power applications, Transportation and Stationary power applications

Environmental and Economic Impacts of Hydrogen: Hydrogen delivery and distribution infrastructure Public policy and regulation for hydrogen and fuel cells International collaboration and initiatives, Economic and social impacts of hydrogen technologies

Reference Books

- 1 Introduction to Hydrogen Technology, Roman Jaskulski, 2018, CRC Press.
- 2 Hydrogen and Fuel Cells: A Comprehensive Guide, Rebecca L. Wagner, David L. Jacobson, Wilson A. Smith, Michael M. , 2005, CRC Press.
- 3 Hydrogen and Fuel Cell Technologies: Advances and Challenges, Rong Lan, David E. James, Olaf Deutschmann, J. Y. Hwang, 2021, Wiley.
- 4 Fuel Cell Systems Explained, James Larminie, Andrew Dicks, 2018, Wiley.

23GET3507 - AI AND IOT FOR GREEN ENERGY INTEGRATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GET3507	AI AND IOT FOR GREEN ENERGY INTEGRATION	AIGEI	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the usage of basic cloud services	2	PO4
CO2	Apply Embedded Programming to upload sensor data to cloud	3	PO4
CO3	Analyze the data in cloud through AI/ML Services	4	PO2
CO4	Develop application for green energy technologies using cloudtools	4	PO2

Syllabus

IoT Devices and Enabling Technologies: Sensor Devices - temperature, vibration, irradiance, wind speed, PIR, proximity, current, voltage Controllers, Actuators, Networking and Communication Protocols, Data analytics using AI and ML for - smart cities, smart grid, smart building, electrical vehicles Cloud

Vehicles Cloud Computing: Basics-Cloud systems, Cloud computing protocols, Role of Web services, Deployment Models- Public, Community, Hybrid, Private Clouds, Cloud Analytics over Thing speak, Google Firebase AWS-console, Functions. Database Services-Relational DBMS, RDS Services

Vehicles Cloud Computing: Basics-Cloud systems, Cloud computing protocols, Role of Web services, Deployment Models - Public, Community, Hybrid, Private Clouds, Cloud Analytics over Thing speak, Google Firebase AWS-console, Functions.

Database Services-Relational DBMS, RDS Services. AI and ML on Cloud: Data Pre-processing techniques in Machine Learning, Data-handling, importing libraries, Data pre-processing using python, Missing data, Categorical Data. Regression and Classification algorithms in ML. Cloud based Real-time Monitoring systems, M2M communications, Case Studies AI for solar PV, Wind and Hybrid Power generation: AI and Machine learning algorithms PV MPP techniques, RMSE and MAPE analysis for short term irradiance, solar energy and load forecasting, temperature forecasting. Wind speed forecasting, Frequency control of induction generator, Intelligent Energy Management System of Hybrid Solar/Wind/Battery Power Sources, Islanding detection. case studies.

Reference Books

23GET3508 - POWER ELECTRONICS FOR RENEWABLE ENERGY SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GET3508	POWER ELECTRONICS FOR RENEWABLE ENERGY SYSTEMS	PERES	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze the MPPT techniques for solar PV systems.	4	PO1, PO2, PO4
CO2	Apply the Power electronic converters for wind energy and storage systems.	3	PO1, PO2, PO4
CO3	Apply Power Electronics Control Techniques in Renewable Energy Systems	3	PO1, PO2, PO4
CO4	Identify the Grid Integration and Control of Renewable Energy Systems.	3	PO1, PO2, PO4

Syllabus

Introduction to Power Electronics for Renewable Energy Systems: Overview of power electronics in renewable energy Systems, Components and configurations of power electronics, Challenges, and opportunities in power electronics for renewable energy systems. Solar Photovoltaic (PV) Systems and Power Electronics: Basics of solar PV systems, Design, and analysis of a solar PV system, MPPT techniques for solar PV systems.

Wind Energy Systems and Power Electronics: Basics of wind energy systems, Control and integration of wind turbines, Power conversion techniques for wind energy systems. Energy Storage Systems and Power Electronics: Basics of energy storage systems, Battery technologies and their characteristics, Power electronic converters for energy storage systems.

Power Electronic Converters for Renewable Energy Systems: DC-DC converters for renewable energy systems, DC-AC inverters for renewable energy systems, and AC-DC rectifiers for renewable energy systems. Control Techniques for Power Electronics in Renewable Energy Systems: Control strategies for DC-DC converters and inverters, Modulation techniques for power electronic converters, and Implementation of control strategies in microprocessors and microcontrollers.

Grid Integration and Control of Renewable Energy Systems: Grid integration and synchronization of renewable energy systems, Control techniques for grid integration of renewable energy systems. Emerging Trends in Power Electronics for Renewable Energy Systems, Recent developments, and trends in power electronics for renewable energy systems.

23GTE3101A - ADVANCED FOUNDATION ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3101A	ADVANCED FOUNDATION ENGINEERING	AFE	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyse and Design of foundation in problematic soils	4	PO1, PO2, PSO1
CO2	Analyse and Design of spread footings and factors affecting of spread footing.	4	PO1, PO2, PSO1
CO3	Analyze and Design of rectangular, trapezoidal, and strap footings	4	PO1, PO2, PSO1
CO4	Design and Analyze Mat foundations and machine foundations	4	PO1, PO2, PSO1
CO5	Apply and Preparing the soil site investigation report on expansive and collapsible soil sample	3	PO1, PO2, PSO1
CO6	Apply the index and engineering properties of soils from various laboratory tests and prepare the soil investigation report	3	PO1, PO2, PSO1
CO7	Demonstration of the advanced foundation engineering techniques	3	PO1, PO2, PSO1

Syllabus

Foundation on collapsible and expansive soils: Collapse potential and settlement, Computation of collapse settlement, Foundation design, Treatment methods for collapsible soils, Distribution of expansive soils, General characteristics of swelling soils, Clay mineralogy and mechanism of swelling, Definition of some parameters, Evaluation of the swelling potential of expansive soils by single Index Method, Classification of swelling soils by Indirect Measurement, Swelling pressure by direct measurement, Effect of initial moisture content and initial dry density on swelling pressure, Estimating the magnitude of swelling, Design of foundation in swelling soils, drilled pier foundations, Elimination of swelling.

Factors to consider in foundation design: Footing Depth and spacing, Displaced soil effects, Net versus gross soil pressure design soil pressures, erosion problems for structures adjacent to flowing water, Corrosion protection, Water table fluctuation, Foundations in Sand deposits, Foundations on Loess and other collapsible soils, Foundations on sanitary landfill sites, Frost depth and foundations on permafrost, Environmental considerations problems.

Spread footing and beams on elastic foundations: Rectangular combined footings, design of trapezoid shaped footings, design of strap (or cantilever) footings, footings for industrial equipment, Modulus of sub grade reaction, Classical solution of Beam on Elastic foundation, General Comments on the finite element procedure problems.

Design criteria for satisfactory action of a machine foundation, Theory of linear weightless spring, Methods of analysis of a block foundation, Soil spring constants, Determination of soil spring constants, Degrees of freedom of block foundation, vertical vibrations of a block foundations, Rocking vibrations of a block foundations, pure sliding of a block foundation, Indian Standard on design and construction of foundations for reciprocating machines.

Analysis and Design of shallow foundation with different types of soils and Deep foundations(Pile & Well) with different types of soils

Reference Books

23GTE3101E - ADVANCED FOUNDATION ENGINEERING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3101E	ADVANCED FOUNDATION ENGINEERING	AFE	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyse and Design of foundation in problematic soils	4	PO1, PO5, PO10, PSO1
CO2	Analyse and Design of spread footings and factors affecting of spread footing.	4	PO1, PO5, PO10, PSO1
CO3	Analyze and Design of rectangular, trapezoidal, and strap footings	4	PO1, PO5, PO10, PSO1
CO4	Design and Analyze Mat foundations and machine foundations	4	PO1, PO5, PO10, PSO1
CO5	Apply and Preparing the soil site investigation report on expansive and collapsible soil sample	3	PO1, PO5, PO10, PSO1
CO6	Apply the index and engineering properties of soils from various laboratory tests and prepare the soil investigation report	3	PO1, PO5, PO10, PSO1
CO7	Demonstrate and determine the properties of problematic soils using advanced foundation apparatus	3	PO1, PO5, PO10, PSO1

Syllabus

Foundation on collapsible and expansive soils: Collapse potential and settlement, Computation of collapse settlement, Foundation design, Treatment methods for collapsible soils, Distribution of expansive soils, General characteristics of swelling soils, Clay mineralogy and mechanism of swelling, Definition of some parameters, Evaluation of the swelling potential of expansive soils by single Index Method, Classification of swelling soils by Indirect Measurement, Swelling pressure by direct measurement, Effect of initial moisture content and initial dry density on swelling pressure, Estimating the magnitude of swelling, Design of foundation in swelling soils, drilled pier foundations, Elimination of swelling.

PILE FOUNDATIONS: Types of piles, Necessity, pile driving, Load carrying capacity of piles Static and dynamic formulae, Negative skin friction, Pile load tests, Load carrying capacity of group of piles.

Spread footing and beams on elastic foundations: Rectangular combined footings, design of trapezoid shaped footings, design of strap (or cantilever) footings, footings for industrial equipment, Modulus of sub grade reaction, Classical solution of Beam on Elastic foundation, General Comments on the finite element procedure problems.

Design criteria for satisfactory action of a machine foundation, Theory of linear weightless spring, Methods of analysis of a block foundation, Soil spring constants, Determination of soil spring constants, Degrees of freedom of block foundation, vertical vibrations of a block foundations, Rocking vibrations of a block foundations, pure sliding of a block foundation, Indian Standard on design and construction of foundations for reciprocating machines.

Analysis and Design of shallow foundation with different types of soils and Deep foundations(Pile & Well) with different types of soils

23GTE3202A - INTELLIGENT TRANSPORTATION SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3202A	INTELLIGENT TRANSPORTATION SYSTEMS	ITS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify intelligent transportation systems using machine learning, IoT, and big data analytics to enhance traffic management and safety.	2	PO1, PSO1
CO2	Demonstrate traffic flow and reduce congestion by utilizing real-time data and predictive analytics through advanced traffic modeling techniques.	3	PO1, PSO1
CO3	Employ V2X communication technologies to enable autonomous vehicles and improve vehicular communication networks for enhanced safety and mobility.	3	PO1, PSO1
CO4	Practice design ITS solutions that promote sustainability by reducing emissions and integrating public transportation with smart city initiatives.	3	PO1, PSO1
CO5	Demonstrate a prototype intelligent transportation system using simulation tools and real-world data	3	PO1, PSO1

Syllabus

Advanced System Design and Integration Objectives: Understand the architecture and components of intelligent transportation systems. Learn to integrate various ITS technologies and subsystems. **Topics:** Overview of ITS Architecture Components and Subsystems of ITS System Design Methodologies Integration of Advanced Technologies (AI, IoT, Big Data) Case Studies of Integrated ITS

Data-Driven Decision Making Objectives: Utilize real-time data for transportation optimization. Apply predictive analytics and advanced traffic modeling techniques. **Topics:** Real-Time Data Collection and Processing Traffic Flow Theories and Models Predictive Analytics for Traffic Management Optimization Techniques for Traffic Control Big Data Applications in Transportation

Vehicle-to-Everything (V2X) Communication Objectives: Understand V2X communication technologies and their applications. Explore the role of V2X in autonomous and connected vehicles. **Topics:** Introduction to V2X Communication V2V (Vehicle-to-Vehicle) and V2I (Vehicle-to-Infrastructure) Technologies V2P (Vehicle-to-Pedestrian) and V2N (Vehicle-to-Network) Communications Security and Privacy in V2X Networks Applications of V2X in Autonomous Vehicles

Sustainable Transportation Solutions Objectives: Design ITS solutions that promote environmental sustainability. Integrate ITS with public transportation and smart city initiatives. **Topics:** Environmental Impact of Transportation Systems Sustainable Traffic Management Strategies Integration of Public Transportation Systems ITS Solutions for Reducing Emissions Smart City and ITS Integration

Experimental Practice in ITS Implementation Objectives: Apply theoretical knowledge to practical ITS implementation. Design, implement, and test a prototype ITS. **Topics:** Introduction to ITS Simulation Tools Design and Implementation of ITS Prototypes Testing and Validation of ITS Solutions Data Collection and Analysis from Prototypes Presentation and Review of Experimental Results

23GTE3202E - INTELLIGENT TRANSPORTATION SYSTEMS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3202E	INTELLIGENT TRANSPORTATION SYSTEMS	ITS	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Describe the fundamental elements and working principles of ITS	2	PO1, PO2, PSO2
CO2	Discuss the advantages such as improved safety, reduced congestion, and enhanced mobility	2	PO1, PO2, PSO2
CO3	Provide examples of ITS applications, such as traffic management systems	2	PO1, PO2, PSO2
CO4	Design ITS solutions that promote sustainability by reducing emissions	2	PO1, PO2, PSO2
CO5	Design and simulate an intelligent traffic signal control system that optimizes traffic flow	6	PO1, PO2, PSO2

Syllabus

Overview of ITS Definition and scope Historical development and evolution Key Components and Technologies Sensors and data collection devices Communication technologies (e.g., V2X, IoT) Control systems and algorithms ITS Architectures and Frameworks National ITS architectures Standardization and interoperability

Traffic Monitoring and Control Traffic flow theory and models Real-time traffic monitoring systems Advanced Traffic Management Systems Signal control systems Dynamic message signs and variable speed limits Incident Detection and Management Automated incident detection technologies Strategies for incident response and management

Public Transportation Systems ITS Applications in Public Transport Automated fare collection and electronic payment systems Real-time passenger information systems Transit Management Systems Fleet management and vehicle tracking Scheduling and dispatch systems Case Studies Successful ITS implementations in public transportation

Vehicle Systems and Autonomous Vehicles In-Vehicle ITS Technologies Advanced driver-assistance systems Navigation and route guidance systems Connected Vehicles Vehicle-to-everything communication Cooperative driving and platooning Autonomous Vehicles Levels of automation and autonomous driving technologies Safety, ethical, and regulatory considerations

Evaluation, Challenges, and Future Trends Performance Evaluation of ITS Methods for assessing the effectiveness of ITS implementations Metrics and key performance indicators Challenges in ITS Deployment Technical challenges Societal challenges Future Trends and Innovations Emerging technologies Smart cities and the integration of ITS with urban infrastructure Sustainability and Environmental Impact ITS contributions to sustainable transportation Reducing emissions and energy consumption through ITS

23GTE3202R - INTELLIGENT TRANSPORTATION SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3202R	INTELLIGENT TRANSPORTATION SYSTEMS	ITS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Recognise Core Concepts and principles underlying Intelligent Transportation Systems (ITS)	2	PO1, PO2, PSO2
CO2	Demonstrate the ability to apply various ITS technologies	3	PO1, PO2, PSO2
CO3	Construct transportation data for improving decision-making processes in transportation planning and operations.	3	PO1, PO2, PSO2
CO4	Design and propose sustainable and efficient transportation solutions	3	PO1, PO2, PSO2

Syllabus

Introduction to Intelligent Transportation Systems Overview of ITS History and evolution of ITS Components of ITS: user services and system architecture Benefits and challenges of ITS implementation

ITS Technologies and Applications Traffic management systems Advanced traveler information systems (ATIS) Public transportation management systems Commercial vehicle operations Emergency management systems

Communication Technologies in ITS Vehicle-to-vehicle (V2V) communication Vehicle-to-infrastructure (V2I) communication Role of wireless communication in ITS Standards and protocols (DSRC, 5G, LTE)

Data Collection, Analysis, and Management ITS data sources and collection methods Data processing and analytics in transportation Big data applications in ITS Geographic Information Systems (GIS) for ITS

Future Trends and Innovations in ITS Autonomous and connected vehicles Smart cities and their relationship with ITS Cybersecurity and privacy issues in ITS Policy, regulation, and ethical considerations Case studies and current research trends in ITS

23GTE3203A - GROUND IMPROVEMENT TECHNIQUES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3203A	GROUND IMPROVEMENT TECHNIQUES	GIT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understanding of various soil properties, the types of soil-related problems encountered in construction	2	PO1, PO2, PSO2
CO2	Identify and describe various ground improvement techniques	2	PO1, PO2, PSO2
CO3	Design ground improvement solutions for specific geotechnical problems	3	PO1, PO2, PSO2
CO4	Illustrate the effectiveness of ground improvement techniques through site investigations	3	PO1, PO2, PSO2
CO5	Discuss the Quality Control and Quality Assurance based on real-world performance data.	2	PO1, PO2, PSO2

Syllabus

Introduction to Ground Improvement Overview of ground improvement techniques Need for ground improvement Classification of ground improvement methods Soil properties and behavior

Mechanical Methods Compaction techniques: dynamic, static, and vibratory compaction Deep compaction methods: vibroflotation, dynamic deep compaction, and blasting Preloading and consolidation methods Case studies and practical applications

Chemical and Biological Methods Soil stabilization with additives (lime, cement, fly ash) Chemical grouting and jet grouting Bio-remediation and microbial-induced calcite precipitation (MICP) Applications and effectiveness of chemical and biological methods

Physical and Hybrid Methods Ground freezing and thermal stabilization Use of geosynthetics (geotextiles, geogrids, geomembranes) Reinforced earth techniques (mechanically stabilized earth, soil nailing) Hybrid methods combining mechanical, chemical, and physical techniques

Evaluation and Monitoring of Ground Improvement Site investigation and soil testing methods Monitoring techniques for ground improvement (settlement plates, piezometers, inclinometers) Quality control and quality assurance in ground improvement projects Analysis of case studies and performance evaluation

Reference Books

- 1 Ground Improvement Techniques, Purushothama Raj, 2020, Laxmi Publications.
- 2 Principles and Practices of Ground Improvement, Jie Han, 2015, Wiley.
- 3 Ground Improvement, Klaus Kirsch, Alan Bell, 2014, CRC Press.
- 4 Ground Improvement Techniques, Patra Nihar Ranjan, 2013, Vikas Publishing House.

23GTE3203E - GROUND IMPROVEMENT TECHNIQUES (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3203E	GROUND IMPROVEMENT TECHNIQUES	GIT	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate an understanding of various ground improvement techniques	2	PO1, PSO2
CO2	Analyze site conditions and soil properties to select appropriate ground improvement techniques.	2	PO1, PSO2
CO3	Practical experience in implementing ground improvement techniques	2	PO1, PSO2
CO4	Evaluate the effectiveness of ground improvement projects through monitoring, testing, and data analysis	2	PO1, PSO2
CO5	Ensure the Quality Control and Quality Assurance based on real-world performance data.	2	PO1, PSO2

Syllabus

Introduction to Ground Improvement Overview of soil mechanics and geotechnical engineering principles Importance of ground improvement techniques in civil engineering projects Historical development and evolution of ground improvement methods Environmental and economic considerations in selecting ground improvement techniques

Soil Properties and Site Investigation Classification of soils and their engineering properties Methods of site investigation and soil testing Interpretation of soil data for ground improvement design Factors influencing the selection of ground improvement methods based on soil conditions

Ground Improvement Techniques Part 1 Compaction methods: standard Proctor compaction, modified Proctor compaction, and compaction control techniques Preloading and vertical drains: theory, design considerations, and application examples Vibro-compaction and dynamic compaction: principles, equipment, and case studies Soil stabilization techniques: chemical stabilization, cement stabilization, and lime stabilization

Ground Improvement Techniques Part 2 Soil mixing methods: deep soil mixing, jet grouting, and soil-cement mixing Grouting techniques: permeation grouting, compaction grouting, and pressure grouting Electrokinetic stabilization and vacuum consolidation: principles and applications Recent advancements and innovative ground improvement technologies

Design, Implementation, and Case Studies Design considerations for ground improvement projects: load analysis, settlement calculations, and safety factors Construction techniques and quality control measures for implementing ground improvement methods Case studies and real-world examples showcasing successful ground improvement projects Group projects or presentations on specific ground improvement techniques, including design proposals and feasibility assessments

Reference Books

- 1 Ground Improvement Techniques, P. Raj and V. V. R. Sai Kumar, 2017, CRC Press.
- 2 Ground Improvement, Manfred R. Hausmann, 2015, Wiley.

23GTE3203R - GROUND IMPROVEMENT TECHNIQUES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3203R	GROUND IMPROVEMENT TECHNIQUES	GIT	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Discuss the fundamental concepts and principles of ground improvement techniques.	2	PO1, PO2, PSO2
CO2	Describe the various ground improvement methods such as compaction, grouting, and soil stabilization.	2	PO1, PO2, PSO2
CO3	Interpret the procedures and applications of different ground improvement techniques in real-world engineering projects.	2	PO1, PO2, PSO2
CO4	Compare and contrast the effectiveness and suitability of different ground improvement methods based on soil conditions and project requirements.	2	PO1, PO2, PSO2

Syllabus

Introduction to Ground Improvement Overview of Ground Improvement Definition and importance Historical perspective Soil Behavior and Problems Common soil issues and their implications on construction Soil investigation and characterization Basic Principles of Ground Improvement Objectives and mechanisms

Mechanical Modification Techniques Compaction Methods Types: static, dynamic, impact, and vibro-compaction Field applications and equipment Preloading and Surcharging Concepts and applications Vertical drains and prefabricated vertical drains (PVDs) Deep Compaction Techniques Vibroflotation Dynamic compaction Blasting techniques

Hydraulic Modification Techniques Dewatering Methods Well points and deep wells Electro-osmosis Drainage and Pore Pressure Reduction Design and installation of drainage systems Groundwater Control Techniques Cutoff walls and grouting for groundwater control

Chemical and Biological Methods Soil Stabilization Lime, cement, and fly ash stabilization Chemical grouting and jet grouting Biological Methods Bio-stabilization and bio-cementation Use of microbial techniques in ground improvement Electrochemical Methods Electrokinetic stabilization

Reinforcement Techniques and Case Studies Soil Reinforcement Geosynthetics: geotextiles, geogrids, and geocells Soil nailing and anchored earth techniques Reinforced Earth Structures Design and application of retaining walls and embankments Case Studies and Applications Real-world examples of ground improvement projects Analysis of successes and challenges

Reference Books

23GTE3304A - PAVEMENT MATERIALS & DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3304A	PAVEMENT MATERIALS & DESIGN	PMD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Soil Classification and characteristics & properties and tests on bitumen	3	PO1, PO3, PSO1
CO2	Understand the characteristics of bituminous mixes & IRC and IS specifications and tests	3	PO1, PO3, PSO1
CO3	Understand the Types and component parts of pavements & Understand the Stresses and deflections in homogeneous masses	3	PO1, PO3, PSO1
CO4	understand the Pavement behaviour under transient traffic loads & Design the Pavements as per IRC	3	PO1, PO3, PSO1
CO5	Demonstrate proficiency in pavement material testing	3	PO1, PO3, PSO1
CO6	Evaluate the durability and performance of pavements	3	PO1, PO3, PSO1
CO7	Able to Design Various Pavement Mixes	3	PO1, PO3, PSO1

Syllabus

Soil - Classification, characteristics, compaction, evaluation of soil strength; stabilized pavement materials; Aggregates: requirements, properties and tests on road aggregates for flexible and rigid pavements. Bitumen: Origin, preparation, properties and tests, constitution of bituminous road binders; requirements; Criterion for selection of different binders. Bituminous Emulsions and Cutbacks: Preparation, characteristics, uses and tests.

Bituminous Mixes: Mechanical properties: Resilient modulus, dynamic modulus and fatigue characteristics of bituminous mixes. bituminous mix design methods and specifications. Weathering and Durability of Bituminous Materials and Mixes. Performance based Bitumen Specifications; Superpave mix design method: design example problems. Cement Concrete for Pavement Construction: Requirements, and design of mix for CC pavement, IRC and IS specifications and tests, joint filler and sealer materials.

Introduction: Types and component parts of pavements, Factors affecting design and performance of pavements. Highway and airport pavements. Stresses and Deflections in Flexible Pavements: Stresses and deflections in homogeneous masses. wheel load stresses, various factors in traffic wheel loads; ESWL of multiple wheels. Repeated loads and EWL factors; sustained loads. Design of flexible pavements as per IRC;

Stresses in Rigid Pavements: Types of stresses and causes, factors influencing the stresses; general considerations in rigid pavement analysis, EWL; wheel load stresses, warping stresses, frictional stresses, combined stresses. Rigid Pavement Design: Types of joints in cement concrete pavements and their functions, joint spacings; design of CC pavement for roads and runways as per IRC, design of joint details for longitudinal joints, contraction joints and expansion joints. IRC method of design by stress ratio method. Design of continuously reinforced concrete pavements; Maintenance, repair and rehabilitation of pavements including design of bituminous and concrete overlays as per IRC

Various Mx Designs, MORTH Specifications, BC, SDBC, GSB, WMM

Reference Books

- 1 Pavement Analysis and Design, Yang H. Huang, 2008, Pearson Prentice Hall.
- 2 Principles of Pavement Design, E. J. Yoder, M. W. Witczak, 2015, John Wiley & Sons.

23GTE3405M - URBAN TRANSPORTATION SYSTEMS PLANNING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3405M	URBAN TRANSPORTATION SYSTEMS PLANNING	UTSP	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand about the fundamentals of Intelligent Transportation Systems	2	PO1, PO3, PSO2
CO2	Understand about the use of telecommunication in transportation	2	PO1, PO3, PSO2
CO3	Understand about various ITS functional areas	2	PO1, PO3, PSO2
CO4	Understand about various services offered by ITS	2	PO1, PO3, PSO2

Syllabus

Transportation Planning: Introduction to transportation planning; systems approach to transportation planning; types of models; concept of travel demand and supply; socio-economic, land use, network, and transport system characteristics affecting transportation planning. Transportation Survey: Study area definition, zoning principles, cordon and screen lines, data collection through primary and secondary sources, sampling techniques.

Sequential modelling approach: four-stage sequential modelling approach; trip generation; trip distribution;

Sequential modelling approach: modal split; trip assignment. Advanced Modelling techniques, Traffic behavior modeling

ITS User Needs and Services, Travel and Traffic management, Public Transportation Management, Electronic Payment, Commercial Vehicle Operations, Emergency Management, Advanced Vehicle safety systems, Information Management, ITS Implementation, Automated Highway Systems, Vehicles in Platoons, Integration of Automated Highway Systems.

Reference Books

- 4 Traffic and Highway Engineering, Nicholas J. Garber and Lester A. Hoel, 2019, Cengage Learning.

23GTE3406M - GEOTECHNICAL EARTHQUAKE ENGINEERING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3406M	GEOTECHNICAL EARTHQUAKE ENGINEERING	BIE	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Knowledge and understanding about the seismic phenomenon, its occurrence, tectonic theories, seismic waves and their motion in different media and measurement of ground motions.	2	PO1, PO5, PSO1
CO2	understanding about seismic hazard through deterministic and probabilistic approaches. Ability of modifying the actual ground motion records and their time and frequency domain generation.	2	PO1, PO5, PSO1
CO3	Knowledge and understanding about the dynamic soil properties and their measurements using field and laboratory tests.	2	PO1, PO5, PSO1
CO4	Knowledge and understanding about the liquefaction phenomenon and its effects and the remedial measures to be taken for soil improvement.	2	PO1, PO5, PSO1

Syllabus

"Seismology and Earthquakes: Seismic Hazards, seismic waves, internal structure of earth, Continental drift and plate tectonics, faults, elastics rebound theory, geometric notations, location of earthquakes, size of earthquakes. Strong Ground Motion: Strong ground motion measurement, ground motion parameters, estimation of ground motion parameters. Seismic Hazard Analysis: Identification and Evaluation of Earthquake Sources, deterministic seismic hazard analysis, probabilistic seismic hazard analysis."

Artificial Ground Motion Generation: Modification of actual ground motion records, time domain generation, frequency domain generation

Dynamic Soil Properties Representation of stress conditions by Mohr circle, measurement of dynamic soil properties using field and laboratory tests, stress strain

"Local Site Effects: Effect of local site conditions on ground motion, design parameters, development of design parameters. Liquefaction: Liquefaction Flow liquefaction, cyclic mobility, evaluation of liquefaction hazards, liquefaction susceptibility, initiation of liquefaction, effects of liquefaction. Soil Improvement for Remediation of Seismic Hazards: Densification techniques, Reinforcement Techniques, Grouting and Mixing techniques, Drainage techniques"

Reference Books

23GTE3507 - TRAFFIC ENGINEERING AND MANAGEMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3507	TRAFFIC ENGINEERING AND MANAGEMENT	TEM	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understanding of traffic flow theory, including concepts such as traffic density, flow, and speed.	2	PO1, PO2, PSO1
CO2	Apply practical knowledge in traffic control devices, traffic signal systems, and intersection design.	3	PO1, PO2, PSO1
CO3	Employ various methods of traffic data collection, including manual counting, automated sensors, and video analysis.	3	PO1, PO2, PSO1
CO4	Discuss the broader context of transportation planning and policy.	2	PO1, PO2, PSO1

Syllabus

Introduction to Traffic Engineering Definition and scope of traffic engineering Historical development and importance
Basic concepts: traffic flow, density, speed, and volume Traffic engineering objectives and goals

Traffic Analysis and Data Collection Methods of traffic data collection (manual and automated) Traffic volume studies: turning movement counts, spot speed studies Traffic flow characteristics and analysis techniques Introduction to traffic simulation models

Traffic Control Devices and Systems Traffic signs: types, colors, and meanings Traffic signals: types, phasing, timing, and coordination Road markings: standards and applications Intelligent Transportation Systems (ITS) and their role in traffic management

Traffic Safety and Accident Analysis Factors affecting traffic safety Roadway design considerations for safety Accident data collection and analysis techniques Countermeasures for improving traffic safety: engineering, education, and enforcement

Traffic Management and Transportation Planning Principles of traffic management Traffic calming techniques Parking management strategies Introduction to transportation planning: demand forecasting, modal split analysis, and network optimization

Reference Books

- 1 Traffic Engineering, Roger P. Roess, Elena S. Prassas, William R. McShane, 2020, Pearson Education.
- 2 Transportation Engineering, C.J. Khisty, B.K. Lall, 2016, prentice hall.
- 3 Principles of Highway Engineering and Traffic Analysis, Fred L. Mannering, Scott S. Washburn, Walter P. Kilareski, 2018, wiley.

23GTE3508 - DESIGN OF EARTH RETAINING STRUCTURES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23GTE3508	DESIGN OF EARTH RETAINING STRUCTURES	DERS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the Earth pressure theories on Earth retaining structures for different field and soil conditions.	3	PO1, PO3, PO10, PSO1
CO2	Apply the earth pressures on Retaining walls at different field and soil conditions.	3	PO1, PO3, PO10, PSO1
CO3	Analyse the stability analysis of sheet piles and check for the stability of cofferdam..	4	PO1, PO3, PO10, PSO1
CO4	Analyze the stability of slopes various dams using different soils .	4	PO1, PO3, PO10, PSO1

Syllabus

Earth pressure, introduction, earth pressure as a stability problem, concept of strain dependence of developed stresses, active, at rest and passive condition, Apply plastic equilibrium, various theories related with E.P. Distillation, Rankine, Analyse the Coulomb and Hansen theoretical derivation and graphical construction with different geometric and boundary conditions.

Introduction about Retaining wall - types, material, method of construction, nature of forces acting. Comparison of different earth pressure theories and application in retaining wall, Stability analysis and design aspects, application of theory of elasticity, analysis of earth pressure distribution at different conditions.

Introduction about Sheet pile and cofferdam, Type, material, method of construction, distribution of earth pressure and related approximation, Apply and Distinction between Sheet Pile and Retaining wall, analysis, and design. of sheet pile wall and retaining wall

Introduction of Earth - structure - Definition, Features of an earth dam, stability analysis of slope, total - vs. - effective stress analysis, limit equilibrium method of slices based on circular failure surfaces, Apply based on general failure surfaces, introduction to analysis based on general failure surfaces. Stability of earth dams during different stages, Analysis During and at end of construction, steady seepage, sudden draw down, estimation of pore water pressure - use of stability charts.

23HDA3101A - INTELLIGENT SYSTEMS FOR DISEASE PREDICTION & DRUG DISCOVERY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3101A	INTELLIGENT SYSTEMS FOR DISEASE PREDICTION & DRUG DISCOVERY	ISDPDD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply foundational AI and ML concepts to design healthcare systems, develop disease prediction models, and perform data preparation and feature engineering.	3	PO1, PO5, PO12, PSO1
CO2	Analyze machine learning algorithms to develop models for disease prediction and drug discovery, and evaluate their performance using appropriate metrics.	4	PO1, PO5, PO12, PSO1
CO3	Analyze and evaluate the application of AI techniques across various stages of drug discovery, from high-throughput screening to clinical trials.	4	PO1, PO5, PO12, PSO1
CO4	Apply and interpret advanced healthcare data using time series, NLP, imaging, and sensor techniques, ensuring compliance with ethical and regulatory standards.	3	PO1, PO5, PO12, PSO1
CO5	Analyze the explainability, ethics, and interdisciplinary aspects of AI in healthcare, exploring emerging trends, research challenges, and applications in personalized medicine.	4	PO1, PO5, PO12, PSO1
CO6	Analyze case studies where AI and data science have successfully accelerated drug discovery and development.	5	PO1, PO5, PO12, PSO1
CO7	Develop frameworks for analyzing the outcomes and impacts of AI-driven drug discovery projects.	6	PO1, PO5, PO12, PSO1

Syllabus

Introduction to AI and ML in Healthcare, Types of AI Systems in Healthcare, Key Concepts in Disease Prediction, Key Concepts in Drug Discovery, Data Types in Healthcare, Data Cleaning Techniques, Data Normalization Techniques, Data Integration and Transformation, Feature Engineering and Dimensionality Reduction

Overview of ML Algorithms, Regression Techniques, Classification Techniques, Ensemble Methods, Neural Networks and Deep Learning, Evaluation Metrics for Disease Prediction, Predictive Analytics for Chronic Diseases, Predictive Analytics for Infectious Diseases, Genomic Data Analysis for Disease Prediction

Introduction to Drug Discovery Process, High-Throughput Screening (HTS), QSAR Modeling, Virtual Screening, De Novo Drug Design, Predictive Toxicology, AI for Target Identification, AI for Lead Optimization, AI in Clinical Trials

Time Series Analysis for Disease Prediction, Natural Language Processing (NLP) in Healthcare, Image Analysis for Disease Prediction, Sensor Data Analysis in Healthcare, Ethical Issues in AI for Healthcare, Regulatory Aspects

Transparency and Explainability, Emerging Trends in AI for Healthcare, Research Opportunities and Challenges, Ethical Considerations in AI for Healthcare, Interdisciplinary Collaboration in AI Research, AI and Personalized Medicine

Reference Books

- 1 Artificial Intelligence in Healthcare, Adam Bohr, Kaveh Memarzadeh, 2020, Academic Press.
- 2 Healthcare Data Analytics, Chandan K. Reddy, Charu C. Aggarwal, 2015, Chapman and Hall/CRC.
- 3 Machine Learning for Healthcare Technologies, David Clifton, 2016, IET.
- 4 Artificial Intelligence in Drug Discovery, Nathan Brown, 2020, Royal Society of Chemistry.
- 5 Machine Learning and AI for Healthcare, Arjun Panesar, 2021, Apress.
- 6 Deep Medicine: How Artificial Intelligence Can Make Healthcare Human Again, Eric Topol, 2019, Basic Books.

23HDA3101E - INTELLIGENT SYSTEMS FOR DISEASE PREDICTION & DRUG DISCOVERY (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3101E	INTELLIGENT SYSTEMS FOR DISEASE PREDICTION & DRUG DISCOVERY	ISDPDD	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply AI-powered healthcare systems to analyze data for disease prediction and personalized care, but ensure ethical considerations and clean data preparation	3	PO1, PO5, PO12, PSO1
CO2	Apply the various Supervised learning algorithms(Logistic Regression, Decision Trees, SVMs, Neural Networks) to build disease prediction models, optimize with key metrics, and unlock insights from real-world data.	3	PO1, PO5, PO12, PSO1
CO3	Analyze the traditional drug discovery process, evaluating the significance of computational methods, including AI, in drug discovery, and synthesizing their understanding to identify, validate drug targets, and apply virtual screening and molecular docking techniques effectively.	4	PO1, PO5, PO12, PSO1
CO4	Analyze QSAR modeling, utilize deep learning approaches in drug discovery, assess challenges and future directions, navigate regulatory considerations in healthcare AI, address bias and fairness issues, and analyze emerging trends in the field.	4	PO1, PO5, PO12, PSO1
CO5	Analyze the explainability, ethics, and interdisciplinary aspects of AI in healthcare, exploring emerging trends, research challenges, and applications in personalized medicine.	4	PO1, PO5, PO12, PSO1
CO6	Analyze case studies where AI and data science have successfully accelerated drug discovery and development.	5	PO1, PO5, PO12, PSO1
CO7	Develop frameworks for analyzing the outcomes and impacts of AI-driven drug discovery projects.	6	PO1, PO5, PO12, PSO1

Syllabus

Introduction to Intelligent Systems in Healthcare Overview of artificial intelligence and machine learning in healthcare
 Applications of intelligent systems in disease prediction and drug discovery Ethical considerations and challenges Data
 Preprocessing for Healthcare Data Data cleaning and normalization techniques

Machine Learning Algorithms for Disease Prediction Logistic regression Decision trees and ensemble methods Support
 vector machines Neural networks for healthcare data Predictive Modeling in Disease Diagnosis Supervised learning
 approaches Evaluation metrics for predictive models Case studies in disease prediction using real-world datasets

Introduction to Drug Discovery Traditional drug discovery process Role of computational methods in drug discovery Drug
 target identification and validation AI in Drug Discovery Virtual screening and molecular docking

QSAR (Quantitative Structure-Activity Relationship) modeling Deep learning approaches in drug discovery Challenges and
 Future Directions Regulatory considerations in using AI for healthcare Bias and fairness issues in healthcare AI Emerging
 trends and future directions in the field

Introduction to Healthcare Data Analysis, Disease Prediction Models, Data Preprocessing Techniques Model Construction
 and Evaluation, Supervised Learning for Disease Diagnosis, Analysis of Healthcare Datasets, Molecular Modeling and
 Simulation, Drug Target Identification and Evaluation Virtual Screening and Molecular Docking, QSAR Modeling, Deep
 Learning for Drug Discovery, Ethical and Regulatory Considerations

23HDA3202A - BIO MEDICAL INFORMATICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3202A	BIO MEDICAL INFORMATICS	BMI	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply proficiency in acquiring, storing, and managing biomedical data from various sources to enhance data integrity and ensure efficient data retrieval for research and clinical applications.	3	PO1, PO4
CO2	Identify computational analysis techniques and modeling approaches used in biomedical informatics to interpret complex biological data and develop predictive models that can inform healthcare decisions.	3	PO1, PO6
CO3	Make use of the principles of health information systems and interoperability standards to design and implement systems that facilitate seamless data exchange and integration across diverse healthcare platforms.	3	PO1, PO4
CO4	Apply critical thinking skills to explore ethical, legal, and social issues related to biomedical informatics, ensuring that data handling practices comply with regulations and respect patient privacy.	3	PO1, PO7
CO5	Assess the real-world problem using statistical tools to derive meaningful insights and support evidence-based decision-making in biomedical research and clinical practice.	5	PO1, PO2
CO6	Evaluate the large-scale data using computational and statistical methodologies to uncover patterns, trends, and correlations that can advance our understanding of complex biological systems and diseases.	5	PO1, PO2, PSO1

Syllabus

Introduction to biomedical data sources includes understanding diverse data origins such as clinical records, genomic sequencing, and imaging modalities, emphasizing techniques for acquisition, storage solutions ensuring data integrity, quality assurance protocols, and governance frameworks.

Exploration of computational analysis techniques and modeling approaches in biomedical informatics encompasses leveraging machine learning, deep learning, and statistical methods to extract meaningful insights from complex biological datasets, aiding in disease diagnosis, drug discovery, and personalized medicine.

Understanding health information systems principles and interoperability standards involves studying the architecture of electronic health records (EHRs), the integration of clinical data across platforms, and adherence to standards like HL7 and FHIR to facilitate seamless data exchange and healthcare delivery.

Examination of ethical, legal, and social issues pertinent to biomedical informatics delves into the responsible use of patient data, privacy concerns surrounding genomic information, implications of AI-driven diagnostics on healthcare equity, and regulatory frameworks shaping the field's ethical landscape.

Statistical methods for analysis encompass a wide range of techniques including hypothesis testing, regression models, survival analysis, and Bayesian inference applied to biomedical data, enabling rigorous evaluation of experimental results, epidemiological studies, and clinical trials.

23HDA3203A - GENETIC PROGRAMMING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3203A	GENETIC PROGRAMMING	GP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Acquire an understanding of the fundamental concepts and principles behind genetic programming.	2	PO1, PSO1
CO2	Implement Genetic Programming in order to achieve programme evolution.	3	PO1, PSO1
CO3	Utilise Genetic Programming to find solutions to challenges involving optimisation and machine learning.	3	PO1, PO2, PSO1
CO4	Examine the application of genetic programming to a number of different models.	4	PO1, PO2, PSO1
CO5	Assess the Relationship Between Population Dynamics and Data-Based Modelling	4	PO1, PO2, PSO1

Syllabus

The Evolution of Evolutionary Computation, The Basics of Genetic Algorithms, Genetic Operators, Problem Representation

GA Theory: Schemata and Building Blocks, Parallel Genetic Algorithms, The Interplay of Genetic Operators

Introduction: Chromosome Representation, Basic Steps of the GP-Based Problem Solving Process.

Typical Applications of Genetic Programming, GP Schema Theories

Parent Analysis, Genetic Diversity, In Single-Population GAs, In Multi-Population GAs, Time Series Analysis, Classification and Genetic Propagation

23HDA3204A - PYTHON FOR GENOMIC DATA SCIENCE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3204A	PYTHON FOR GENOMIC DATA SCIENCE	PFGDS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand genomic data and representation	2	PO2, PO3, PO5, PSO2
CO2	Demonstrate BioPython program techniques for genomic data analysis	3	PO3, PO5, PO11, PSO2
CO3	Apply statistic techniques for genomic data analysis	3	PO2, PO5, PO11, PSO2
CO4	Analyse clustering techniques in genomic data	4	PO2, PO5, PO11, PSO2
CO5	Apply machine learning algorithms in Python for genomics data analysis and prediction tasks.	3	PO2, PO5, PO11, PSO2

Syllabus

Introduction to genomics covers DNA and the central dogma. Transcriptional regulation and elements of gene regulation. High-throughput experimental methods in genomics. General idea behind high-throughput techniques and visualization and data repositories for genomics.

Genomic data analysis involves utilizing Biopython for tasks such as installing packages, handling computations, and working with various data structures. Creating plots using Biopython's base graphics. Encompasses combining multiple plots employing functions and utilizing control structures like for loops and conditional statements.

Introduction to Biopython for Genomic Data Analysis. Applying t-tests to compare mean differences in two samples correcting for multiple testing using moderated t-tests exploring relationships between variables through linear models and correlation analysis. Genomic data with Matplotlib and understanding sequence alignment algorithms.

Exploratory Data Analysis with Unsupervised and Supervised Clustering techniques. Apply Machine Learning Algorithms for Genomics Data Classification. DNA Sequence Classification using Machine Learning Algorithms. Apply Natural Language processing to DNA sequence as an unstructured text dataset.

Model production deployment using Web APIs IT application integration. Model retraining schedule and redeployment business intelligence and decisions making. Model selection and hyperparameters optimization. Model performance metrics analysis.

CO4	Analyse clustering techniques in genomic data	4	PO2, PO5, PO11, PSO2
CO5	Apply machine learning algorithms in Python for genomics data analysis and prediction tasks.	3	PO2, PO5, PO11, PSO2

Syllabus

Introduction to Genomic, DNA and central dogma, Transcriptional and post-transcriptional regulation, Elements of gene regulation, Transcriptional regulation, Shaping the genome: DNA mutation, High-throughput experimental methods in genomics, General idea behind high-throughput techniques, High-throughput sequencing, visualization and data repositories for genomics.

Genomic data analysis, Getting started with Biopython, Installing packages, Computations in Biopython, Data structures, Reading and writing data, Reading large files, Plotting in Biopython with base graphics, Combining multiple plots, Reading in and writing data out in Biopython, Plotting in Biopython Functions and control structures (for, if/else, etc.)

Collection of data points, Using t-test for difference of the means between two samples, Multiple testing correction, Moderated t-tests, Relationship between variables: Linear models and correlation, visualization of genomic data using Matplotlib, Sequence alignment algorithms.

Exploratory Data Analysis with Unsupervised Machine Learning, Supervised Clustering techniques, Dimensionality reduction techniques, Predictive Modelling with Supervised Machine Learning, Gradient boosting, Support Vector Machines (SVM), Neural networks and deep versions of it, Ensemble learning, Predicting continuous variables

Exploratory Data Analysis with Unsupervised and Supervised Clustering techniques, Dimensionality reduction techniques, Predictive Modelling with Supervised Machine Learning, Gradient boosting, Support Vector Machines (SVM), Neural networks and deep versions of it, Ensemble learning, Predicting continuous variables

23HDA3305A - COMPUTATIONAL NEUROSCIENCE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3305A	COMPUTATIONAL NEUROSCIENCE	CNSE	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts of computational neuroscience, including neural coding, synaptic plasticity, and neural network dynamics.	2	PO1, PO2, PO3, PSO1
CO2	Apply mathematical and computational models to analyze neural systems and brain function to investigate how neural systems process information and perform various functions.	3	PO1, PO2, PO3, PSO1
CO3	Develop and simulate models of neural activity using software tools and programming languages such as MATLAB or Python to extract meaningful insights from data and test hypotheses about neural function.	3	PO1, PO2, PO3, PSO1
CO4	Analyze experimental data from neuroscience studies to infer neural mechanisms and brain function to learn and critically assess the accuracy and validity of computational models in neuroscience.	4	PO1, PO2, PO3, PSO1
CO5	Evaluate the implications of computational neuroscience research for understanding brain disorders and developing treatments.	5	PO1, PO2, PO3, PSO1
CO6	Analyze innovative solutions and models that contribute to the advancement of computational neuroscience research to identify gaps in current knowledge, propose novel approaches to address these gaps.	4	PO1, PO2, PO3, PSO1
CO7	Evaluate the computational Neuroscience models in laboratory exercises and projects that involve implementing computational models, running simulations, and analyzing results.	5	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Computational Neuroscience, Definition and scope of computational neuroscience , Historical overview of the field , Interdisciplinary nature of computational neuroscience

Neurons and Neural Networks, Anatomy and physiology of neurons , Structure and function of neural networks , Types of neural networks (e.g., feedforward, recurrent)

Mathematical Foundations for Neuroscience, Linear algebra concepts for neural modeling , Differential equations and dynamical systems in neuroscience , Probability theory and statistics in neural data analysis

Computational Modeling of Neurons Hodgkin-Huxley model and its applications , Integrate-and-fire models for neural simulations , Cable theory for modeling spatial aspects of neurons

Network Dynamics Synchronization and oscillations in neural networks , Small-world and scale-free network architectures , Functional connectivity and network motifs

CO1	Understand the fundamental concepts of computational neuroscience, including neural coding, synaptic plasticity, and neural network dynamics.	2	PO1, PO2, PO3, PSO1
CO2	Apply mathematical and computational models to analyze neural systems and brain function to investigate how neural systems process information and perform various functions.	3	PO1, PO2, PO3, PSO1
CO3	Develop and simulate models of neural activity using software tools and programming languages such as MATLAB or Python to extract meaningful insights from data and test hypotheses about neural function.	3	PO1, PO2, PO3, PSO1
CO4	Analyze experimental data from neuroscience studies to infer neural mechanisms and brain function to learn and critically assess the accuracy and validity of computational models in neuroscience.	4	PO1, PO2, PO3, PSO1
CO5	Evaluate the implications of computational neuroscience research for understanding brain disorders and developing treatments.	5	PO1, PO2, PO3, PSO1
CO6	Evaluate the computational Neuroscience models in laboratory exercises and projects that involve implementing computational models, running simulations, and analyzing results.	5	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Computational Neuroscience, Overview of computational neuroscience, Basic principles of neural computation, Introduction to mathematical modeling of neurons

Neural Networks and Brain Function, Introduction to neural networks, Network dynamics and stability Models of learning and memory

Sensory and Motor Systems , Computational models of sensory processing, Motor control and movement planning Sensorimotor integration

Cognitive Neuroscience , Computational approaches to studying cognition, Models of attention, perception, and decision-making Neural correlates of consciousness

23HDA3406M - NGS SEQUENCING AND DATA ANALYSIS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3406M	NGS SEQUENCING AND DATA ANALYSIS	NGSDA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of sequence analysis to biological specimens, understanding the principles and techniques used to analyze DNA, RNA, or protein sequences.	3	PO2, PO4
CO2	Demonstrate Data Analysis with Preprocessing and Alignment: Utilize methods for the preprocessing of raw biological data, including quality control, filtering, and alignment techniques.	3	PO2, PO4
CO3	Illustrate Variant Calling and Annotation with NGS Data Sets/graphs: Perform variant calling using next-generation sequencing (NGS) data to identify genetic variants such as single nucleotide polymorphisms (SNPs)	3	PO2, PO4
CO4	Interpret Transcriptomics and Differential Gene Expression: Engage in transcriptomic studies to explore gene expression levels under different conditions.	3	PO2, PO5

Syllabus

"Introduction to Next-Generation Sequencing (NGS): Overview of NGS technologies and platforms, Key principles and applications of NGS in genomics and transcriptomics, Sequencing library preparation techniques, and Quality control measures. "

NGS Data Analysis: Preprocessing and Alignment: Pre-processing raw NGS data: quality filtering and trimming, Introduction to read alignment algorithms, Mapping NGS reads to a reference genome, Assessing alignment quality and statistics,

Variant Calling and Annotation: Principles of variant calling from NGS data, Identification of single nucleotide variants (SNVs) and small insertions/deletions (indels), Quality assessment and filtering of variants, Annotation of variants with functional information,

NGS Data Analysis: Transcriptomics and Differential Gene Expression: Overview of transcriptomics and RNA-Seq data analysis, Gene expression quantification and normalization, Differential gene expression analysis, Functional enrichment analysis and interpretation of result

23HDA3407M - INTRODUCTION TO GENOMIC TECHNOLOGIES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3407M	INTRODUCTION TO GENOMIC TECHNOLOGIES	IGT	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Classify Genomic Technologies, summarize the genomic data generations and describe Just enough molecular Biology	2	PO2, PO4, PSO1
CO2	Describe DNA sequence in terms of central dogma and discuss techniques of DNA measurement technologies such as chain reaction and sequencing	3	PO3, PSO2
CO3	Discover computing techniques related to Genomic technologies with respect to DNA, and relate computing and biology.	3	PO2, PSO1
CO4	Correlate Artificial Intelligence algorithms with genomic technologies and practice experimental design and implementation	4	PO1, PO3, PSO1

Syllabus

Introduction to Genomic Technologies: Overview of genomic data generation and applications, Just enough molecular biology, The genome,

Writing a DNA sequence, Central dogma, Transcription, Chain reaction and sequencing: Polymerase chain reaction (PCR), next generation sequencing, and applications of sequencing

foundations of computer science, algorithms, memory and data structures, efficiency, software engineering, and computational biology software.

Data science and Genomic Technologies: The central dogma of inference, analysis code, testing, prediction, variation, experimental design, confounding, power, sample size, correlation, causation, and degrees of freedom.

23HDA3509 - MOLECULAR MODELING AND DRUG DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3509	MOLECULAR MODELING AND DRUG DESIGN	MMDD	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the comprehensive knowledge of various drug discovery methods, including high-throughput screening, lead optimization, and pharmacophore modeling. Introduce the concepts and techniques of molecular modeling and simulation,	3	PO2, PO5
CO2	Interpret computer-based modeling techniques to predict and analyze protein functions and structures. Gain a deep understanding of the methods used to predict protein folding	3	PO2, PO4
CO3	Demonstrate biomolecular interactions, such as protein-protein, protein-ligand, and protein-DNA/RNA interactions in biological systems	3	PO3, PO5
CO4	Apply role of various modeling and drug design methods through detailed case studies. Analyze real-world examples of drug discovery projects to understand the practical applications of theoretical concepts, methodologies,	3	PO3, PO5

Syllabus

PRACTICAL INTRODUCTION TO MOLECULAR MODELING AND DRUG DESIGN: High-Throughput Screening: Techniques for testing large numbers of compounds. Virtual Screening: Computational methods for identifying potential drug candidates. Molecular Docking: Predicting how small molecules bind to targets. Drug Metabolism and Pharmacokinetics: Absorption, distribution, metabolism, and excretion of drugs. Medicinal Chemistry: Design and development of new therapeutic compounds. Pharmaceutical Formulation: Creating drug formulations for effective delivery. Drug Design Strategies: Structure-based and ligand-based drug design approaches. Regulatory Affairs in Drug Development: Understanding FDA and EMA regulations for drug approval. Ethics in Drug Development: Ethical considerations in drug testing and research.

PREDICTION AND STRUCTURAL ANALYSIS OF MACROMOLECULES : Protein Function Prediction: Techniques for predicting the biological function of proteins from their structure. Structural Alignment and Comparison: Methods for comparing protein structures to identify similarities and differences. Structural Bioinformatics: Using computational tools and databases for analyzing macromolecular structures. Structural Genomics: Large-scale efforts to determine 3D structures of proteins and their implications for drug discovery. Proteomics: Techniques for studying the complete set of proteins expressed in an organism. Molecular Modeling Tools: Introduction to software tools for structure prediction and analysis (e.g., MODELLER, Rosetta). Advanced Visualization Techniques: Tools for detailed visualization of protein structures and interactions.

BIOMOLECULAR INTERACTIONS AND DRUG DISCOVERY METHODS: Drug Interactions Prediction: Techniques for identifying and analyzing drug-drug interactions. Cheminformatics Tools: Software and databases for drug discovery (e.g., ChemDraw, PubChem). Molecular Dynamics Simulations for Drug Discovery: Using MD simulations to study drug-target interactions. Quantitative Structure-Activity Relationship (QSAR) Models: Building and interpreting QSAR models for drug efficacy and safety. Pharmacophore Modeling: Identifying essential features for drug-receptor interactions. ADMET Prediction Tools: Tools for predicting drug Absorption, Distribution, Metabolism, Excretion, and Toxicity properties. Biological Activity Prediction: Techniques for predicting the effectiveness of compounds in biological systems. Advanced Drug Target Prediction: Methods for discovering and validating new drug targets.

METHODS IN SMALL MOLECULE DRUG ANALYSIS: Quantitative Structure-Activity Relationship (QSAR) Analysis: Developing and applying QSAR models to correlate chemical structure with biological activity. Pharmacophore Modeling: Designing models to identify essential features for drug-receptor interactions. Molecular Docking: Techniques for simulating the binding of small molecules to target proteins. Computational Chemistry Techniques: Advanced methods for analyzing small molecule interactions. Chemical Library Design: Creating and managing libraries of compounds for drug discovery. Virtual Screening Approaches: Methods for efficiently screening large chemical libraries. Synthesis and Optimization of Drug Candidates: Strategies for synthesizing and improving potential drug molecules.

23HDA3510 - GENOMIC DATA SCIENCE & CLUSTERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3510	GENOMIC DATA SCIENCE & CLUSTERING	GDSC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand genomic data and representation	2	PO1, PO2, PO3, PSO1
CO2	Demonstrate R program techniques for genomic data analysis	3	PO2, PO3, PO4, PSO1
CO3	Analyse clustering techniques in genomic data	4	PO2, PO3, PO4, PSO1
CO4	Evaluate Data Analysis and Predictive Modelling with Supervised Machine Learning using R	5	PO1, PO3, PO4, PSO1

Syllabus

Genes, DNA and central dogma, Transcriptional and post-transcriptional regulation, Elements of gene regulation, Transcriptional regulation, Shaping the genome: DNA mutation, High-throughput experimental methods in genomics, The general idea behind high-throughput techniques, High-throughput sequencing, Visualization and data repositories for genomics.

Steps of (genomic) data analysis, Getting started with R, Installing packages, Computations in R, Data structures, Reading and writing data, Reading large files, Plotting in R with base graphics, Combining multiple plots, Reading in and writing data out in R, Plotting in R, Functions and control structures (for, if/else, etc.)

How to summarize collection of data points, Using t-test for difference of the means between two samples, Multiple testing correction, Moderated t-tests, Relationship between variables: Linear models and correlation

k-Means Clustering, The Lloyd Algorithm, Clustering Genes Implicated in the Diauxic Shift, Limitations of k-Means Clustering, Soft k-Means Clustering, Hierarchical Clustering, Epilogue: Clustering Tumor Samples. Exploratory Data Analysis with Unsupervised Machine Learning, Clustering techniques, Dimensionality reduction techniques, Predictive Modelling with Supervised Machine Learning, Gradient boosting, Support Vector Machines (SVM), Neural networks and deep versions of it, Ensemble learning,, Predicting continuous variables

23HDA3511 - EPI GENETIC CONTROL OF GENE EXPRESSION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HDA3511	EPI GENETIC CONTROL OF GENE EXPRESSION	ECBI	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Summarize the basic epigenetics of gene expressions in normal development with its molecular mechanisms.to regulate gene expressions	2	PO1, PO3, PSO1
CO2	Classify and discuss various mechanisms of chromatin positioning with in the nucleus, and learn dosage compensation of epigenetics.	2	PO2, PSO1
CO3	Demonstrate various epigenetic techniques such as genes and repeats, reprogramming, cloning, transgenerational inheritance.	3	PO2, PO4, PSO1
CO4	Devise real world problems pertained to Epigenetics and discuss the various Epigenetic solutions by design and implementation using a case study	4	PO1, PO3, PSO2

Syllabus

An introduction to epigenetic control of gene expression and its importance in normal development; Molecular mechanisms for regulating gene expression, local level DNA.

Chromatin positioning within the nucleus; Gene silencing and activation; The role of non-coding RNA; Higher order chromatin structures; Dosage compensation: X chromosome inactivation, alternate mechanisms for dosage compensation, erasure and resetting of the epigenome, mechanisms for reprogramming.

Imprinted genes and repeats; Human epigenetics, environmental influence on the epigenome, reprogramming of somatic cells back to stem cells, cloning, and potential transgenerational epigenetic inheritance;

Case study: cancer development and progression, discuss the potential therapeutic benefits that can come from using epigenetic biomarkers, and targeting epigenetic modifiers in cancer.

23HSS3101A - INTRODUCTION TO HARDWARE-SOFTWARE CO-DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3101A	INTRODUCTION TO HARDWARE-SOFTWARE CO-DESIGN	ITHSCD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Fundamentals of Hardware-Software Co-Design	3	PO1
CO2	Analyze and Apply Co-Design Techniques	3	PO1, PO2
CO3	Develop Co-Design Systems Using Modeling and Simulation Tools	3	PO2, PO3
CO4	Implement Co-Design Strategies in Embedded Systems	3	PO3, PSO1
CO5	Implement hardware-software co-design strategies in embedded systems, focusing on performance, power, and cost trade-offs.	3	PO3, PSO1
CO6	Develop and optimize co-design systems using various tools and technologies	3	PO3
CO7	Provides hands-on experience in hardware-software co-design methodologies	3	PO3

Syllabus

Hardware-software co-design is an interdisciplinary approach that integrates the design of hardware and software components to optimize overall system performance. It encompasses concepts, principles, and methodologies aimed at achieving efficient system design. The importance of co-design in modern systems lies in its ability to enhance performance, reduce power consumption, and lower costs. Historically, the evolution of co-design has been driven by the increasing complexity of embedded systems and the need for tighter integration. Case studies, such as in automotive control systems and consumer electronics, demonstrate the success of co-design in achieving superior functionality and efficiency.

Analyzing co-design techniques involves evaluating methods like the Y-chart approach, which systematically addresses the co-design process by mapping system functions to hardware and software components. Co-design models, such as hardware/software partitioning and specification models, help define system components and their interactions. Design representations, including UML and SystemC, provide frameworks for visualizing and simulating co-design systems. Key criteria for hardware-software partitioning include performance, cost, power consumption, and flexibility. Understanding these techniques and models allows for their application to real-world problems, optimizing system design by balancing the strengths and limitations of hardware and software components.

Using modeling and simulation tools is essential for designing, testing, and optimizing hardware-software systems. Hardware description languages (HDLs) like VHDL and Verilog are crucial for specifying and simulating hardware components. Software integration techniques ensure seamless interaction between hardware and software parts. Co-simulation and co-verification methodologies, where both hardware and software are simulated together, enable early detection of integration issues and performance bottlenecks. High-level synthesis transforms high-level algorithmic descriptions into hardware descriptions, bridging the gap between software design and hardware implementation, ultimately enhancing the efficiency and reliability of the co-design process.

Implementing hardware-software co-design strategies in embedded systems involves optimizing performance, power, and cost trade-offs. Embedded systems, which are dedicated computing systems within larger mechanical or electrical systems, require efficient co-design strategies. The role of a Real-Time Operating System (RTOS) in co-design is crucial, as it manages scheduling, task management, and real-time constraints to ensure timely and predictable system responses.

In-depth case studies across industries like automotive and telecommunications highlight the practical applications and benefits of hardware-software co-design. In the automotive industry, co-design enhances system performance in areas such as advanced driver assistance systems (ADAS) and infotainment systems. In telecommunications, it optimizes network performance and resource management. Emerging trends, including the Internet of Things (IoT) and the integration of artificial intelligence/machine learning (AI/ML) in co-design, are driving innovation by enabling smarter, more adaptive systems. Future research opportunities focus on improving design automation, energy efficiency, and security. Ethical and societal impacts include considerations of privacy, data security, and the equitable distribution of technology benefits.

23HSS3202A - FUNDAMENTALS OF COMPUTER SECURITY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3202A	FUNDAMENTALS OF COMPUTER SECURITY	FOCS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Infer common threats and attacks targeting computer systems and list various security functional requirements based on identified risks and vulnerabilities.	2	PO1, PSO1
CO2	Apply the principles of access control to design and implement security policies for protecting resources within a system	3	PO3
CO3	Analyze the interplay between intrusion detection, and intrusion prevention systems to understand the spectrum of cyber threats and defense mechanisms	4	PO4
CO4	Examine the vulnerabilities inherent in software systems and devise effective countermeasures.	4	PO5
CO5	Evaluate the effectiveness of IT security management frameworks and methodologies in mitigating organizational risks.	5	PO5

Syllabus

Computer Security Concepts, Threats, Attacks, and Assets, Security Functional Requirements, Fundamental Security Design Principles, Attack Surfaces and Attack Trees, Computer Security Strategy, Cryptographic Tools, Confidentiality with Symmetric Encryptions, Message Authentication and Hash Functions, Public key Encryption, Digital Signature and Key Management, User Authentication, Electronic User Authentication Principles, Password Based Authentication, Token Based Authentication, Biometric Authentication, Remote User Authentication, Security Issues for User Authentication.

Access Control, Access Control Principles, Subjects, Objects, and Access Rights, Discretionary Access Control, Example Unix File Access Control, Role Based Access Control, Attribute Based Access Control, Identity, Credential, and Access Management, Trust Frameworks. Database and Cloud Security The Need for Database Security, Database Management Systems, Relational Databases, SQL Injection Attacks, Database Access Control, Inference, Data Encryptions, Malicious Software, Types of Malicious Software, Advanced Persistent Threat, Viruses, Worms, Spam E-Mail, Trojans, System Corruption, Zombie, Bots, Keyloggers, Phishing, Spyware, Backdoors, Rootkits.

Denial of Service Attacks, Flooding Attacks, Distributed Dos Attacks, Application based Bandwidth Attacks, Reflector and Amplifier Attacks, Defend Against Dos Attacks, Intruders, Intrusion Detection, Analysis Approaches, Host based Intrusion Detection, Network-Based Intrusion Detection, Hybrid Intrusion Detection, Honeypots, Snort, Firewalls, and Intrusion Prevention Systems, The Need for Firewalls, Firewall Characteristics and Access Policy, Types of Firewalls, Intrusion Prevention Systems.

SOFTWARE SECURITY AND TRUSTED SYSTEMS, Buffer Overflow, Stack Overflows, Defending Against Buffer Overflows, Other forms of Overflow Attacks, software Security Issues, Handling Program Input, Writing Safe Program Code, Interacting with the Operating System and Other Programs, Operating System Security, System security planning, operating systems hardening, Application Security, Security Maintenance, Linux Unix Security, Windows Security, Virtualization Security, The Bell-LaPadula Model for Computer Security, Other Formal Model for Computer Security, Trusted Systems, Application of Multilevel Security, Trusted Computing and the Trusted Platform Module.

IT Security Management and Risk Management, Organizational Context and Security policy, Security Risk Assessment, Detailed Security Risk Analysis, IT Security Controls, Plans, and procedures, Implementation, Security Controls, IT Security Plan, Implementation of Controls, Monitoring Risks, Silver Star Mines, Physical and Infrastructure Security, Physical Security Threats, Prevention and Mitigation Measures, Recovery From Physical Security Breaches, Corporate Physical Security Policy

Computer Security Concepts, Threats, Attacks, and Assets, Security Functional Requirements, Fundamental Security Design Principles, Attack Surfaces and Attack Trees, Computer Security Strategy, Cryptographic Tools, Confidentiality with Symmetric Encryptions, Message Authentication and Hash Functions, Public key Encryption, Digital Signature and Key Management, User Authentication, Electronic User Authentication Principles, Password Based Authentication, Token Based Authentication, Biometric Authentication, Remote User Authentication, Security Issues for User Authentication.

Access Control, Access Control Principles, Subjects, Objects, and Access Rights, Discretionary Access Control, Example Unix File Access Control, Role Based Access Control, Attribute Based Access Control, Identity, Credential, and Access Management, Trust Frameworks. Database and Cloud Security The Need for Database Security, Database Management Systems, Relational Databases, SQL Injection Attacks, Database Access Control, Inference, Data Encryptions, Malicious Software, Types of Malicious Software, Advanced Persistent Threat, Viruses, Worms, Spam E-Mail, Trojans, System Corruption, Zombie, Bots, Keyloggers, Phishing, Spyware, Backdoors, Rootkits.

Denial of Service Attacks, Flooding Attacks, Distributed Dos Attacks, Application based Bandwidth Attacks, Reflector and Amplifier Attacks, Defend Against Dos Attacks, Intrusion Detection, Intruders, Intrusion Detection, Analysis Approaches, Host based Intrusion Detection, Network-Based Intrusion Detection, Hybrid Intrusion Detection, Honeypots, Snort, Firewalls, and Intrusion Prevention Systems, The Need for Firewalls, Firewall Characteristics and Access Policy, Types of Firewalls, Firewall Location and Configuration, Intrusion Prevention Systems, Example Unified Threat Management Products.

SOFTWARE SECURITY AND TRUSTED SYSTEMS, Buffer Overflow, Stack Overflows, Defending Against Buffer Overflows, Other forms of Overflow Attacks, software Security Issues, Handling Program Input, Writing Safe Program Code, Interacting with the Operating System and Other Programs, Operating System Security, System security planning, operating systems hardening, Application Security, Security Maintenance, Linux Unix Security, Windows Security, Virtualization Security, The Bell-LaPadula Model for Computer Security, Other Formal Model for Computer Security, Trusted Systems, Application of Multilevel Security, Trusted Computing and the Trusted Platform Module.

IT Security Management and Risk Management, Organizational Context and Security policy, Security Risk Assessment, Detailed Security Risk Analysis, IT Security Controls, Plans, and procedures, Implementation, Security Controls, IT Security Plan, Implementation of Controls, Monitoring Risks, Silver Star Mines, Physical and Infrastructure Security, Physical Security Threats, Prevention and Mitigation Measures, Recovery From Physical Security Breaches, Corporate Physical Security Policy

23HSS3202R - FUNDAMENTALS OF COMPUTER SECURITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3202R	FUNDAMENTALS OF COMPUTER SECURITY	FOCS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Infer common threats and attacks targeting computer systems and list various security functional requirements based on identified risks and vulnerabilities	2	PO1, PSO1
CO2	Apply the principles of access control to design and implement security policies for protecting resources within a system	3	PO3
CO3	Analyze the interplay between intrusion detection, and intrusion prevention systems to understand the spectrum of cyber threats and defense mechanisms	4	PO4
CO4	Examine the vulnerabilities inherent in software systems and devise effective countermeasures.	4	PO5

Syllabus

Computer Security Concepts, Threats, Attacks, and Assets, Security Functional Requirements, Fundamental Security Design Principles, Attack Surfaces and Attack Trees, Computer Security Strategy, Cryptographic Tools, Confidentiality with Symmetric Encryptions, Message Authentication and Hash Functions, Public key Encryption, Digital Signature and Key Management, User Authentication, Electronic User Authentication Principles, Password Based Authentication, Token Based Authentication, Biometric Authentication, Remote User Authentication, Security Issues for User Authentication.

Access Control, Access Control Principles, Subjects, Objects, and Access Rights, Discretionary Access Control, Example Unix File Access Control, Role Based Access Control, Attribute Based Access Control, Identity, Credential, and Access Management, Trust Frameworks. Database and Cloud Security The Need for Database Security, Database Management Systems, Relational Databases, SQL Injection Attacks, Database Access Control, Inference, Data Encryptions, Malicious Software, Types of Malicious Software, Advanced Persistent Threat, Viruses, Worms, Spam E-Mail, Trojans, System Corruption, Zombie, Bots, Keyloggers, Phishing, Spyware, Backdoors, Rootkits.

Denial of Service Attacks, Flooding Attacks, Distributed Dos Attacks, Application based Bandwidth Attacks, Reflector and Amplifier Attacks, Defend Against Dos Attacks, Intruders, Intrusion Detection, Analysis Approaches, Host based Intrusion Detection, Network-Based Intrusion Detection, Hybrid Intrusion Detection, Honeypots, Snort, Firewalls, and Intrusion Prevention Systems, The Need for Firewalls, Firewall Characteristics and Access Policy, Types of Firewalls, Intrusion Prevention Systems.

SOFTWARE SECURITY AND TRUSTED SYSTEMS, Buffer Overflow, Stack Overflows, Defending Against Buffer Overflows, Other forms of Overflow Attacks, software Security Issues, Handling Program Input, Writing Safe Program Code, Interacting with the Operating System and Other Programs, Operating System Security, System security planning, operating systems hardening, Application Security, Security Maintenance, Linux Unix Security, Windows Security, Virtualization Security, The Bell-LaPadula Model for Computer Security, Other Formal Model for Computer Security, Trusted Systems, Application of Multilevel Security, Trusted Computing and the Trusted Platform Module.

23HSS3303A - HARDWARE SECURITY MECHANISMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3303A	HARDWARE SECURITY MECHANISMS	HSM	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	the fundamental concepts, techniques, and methodologies of securing hardware systems against a wide range of threats and vulnerabilities	2	PO1, PO5, PO9, PSO2
CO2	Understand the fundamentals of hardware security and its importance in modern computing systems.	3	PO1, PO5, PO9, PSO2
CO3	Learn about various hardware security threats and vulnerabilities.	3	PO1, PO5, PO9, PSO2
CO4	Explore cryptographic techniques and protocols used in hardware security.	3	PO1, PO5, PO9, PSO2
CO5	Develop skills for designing and implementing secure hardware systems.	3	PO1, PO5, PO9, PSO2
CO6	Gain insights into hardware-based authentication and access control mechanisms.	3	PO1, PO5, PO9, PSO2
CO7	Explore emerging trends and challenges in hardware security.	4	PO1, PO5, PO9, PSO2

Syllabus

CO 1: Introduction to Hardware Security, Threat Modeling and Risk Assessment Overview of hardware security concepts and terminology, Importance of hardware security in modern computing systems, Threat model and security goals for hardware systems, Common threats and vulnerabilities in hardware systems, Techniques for threat modeling and risk assessment, Case studies of real-world hardware security breaches,

CO 2: Cryptographic Hardware Security, Secure Boot and Firmware Security Introduction to cryptographic primitives and algorithms, Hardware implementations of symmetric and asymmetric cryptography, Side-channel attacks and countermeasures in cryptographic hardware, Principles of secure boot and trusted boot process, Firmware security mechanisms and best practices, Case studies of firmware-based attacks and mitigation strategies

CO 3: Hardware-based Authentication, Tamper Resistance and Physical Security Types of hardware-based authentication mechanisms, Secure elements and trusted platform modules (TPMs), Biometric authentication in hardware systems, Techniques for tamper detection and response, Design considerations for physically secure hardware, Side-channel attacks and countermeasures in tamper-resistant hardware

CO 4: Hardware-based Access Control Role-based access control (RBAC) in hardware systems, Hardware-enforced security policies and access control mechanisms, Case studies of access control mechanisms in hardware devices

CO 5: Hardware Security Evaluation and Testing Methods for evaluating and testing hardware security, Common criteria and standards for hardware security evaluation, Case studies of hardware security certification and compliance

Reference Books

23HSS3404M - SOFTWARE SECURITY PRINCIPLES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3404M	SOFTWARE SECURITY PRINCIPLES	SSP	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Compare and contrast different software security models and their problems for various applications.	2	PO1, PSO1
CO2	Develop software security metrics to assess the effectiveness of security measures to identify threats	3	PO3
CO3	Inspect factors influencing software security estimation accuracy	4	PO4
CO4	Analyze the integration of security practices within the software development lifecycle	4	PO5

Syllabus

Software and Security Concepts, Security Overview, Software Perspective, Security Components, Security Characteristics, Security Types, Security Myths, Security Planning, Software Security Assurance, Software Security Models, Measurement and Metrics, Software Security Problems, Major Causes to Software Security, Sustainable Factors for Software Security, Risk Management Framework, Protracted Cigital Risk Management Framework, Security Engineering an Inclusive Approach.

Threats to Security, Threats, Security Threats, Security Threats Classification, Threat Impact Analysis, Protection and Mitigation Strategies, Software Security Metrics, Defining Good Security Metrics, Security Metrics Collection, Security Metrics Development Process, Security Metrics Development Framework, Software Security Metrics, Software Security Metrics.

Software Security Estimation, Security Risk Estimation, Vulnerability Assessment Framework, Security Profiling, Operation Ability, Security Measurement Process, Secure Software Architecture, Security Architecture Models, Security Architecture Process, Software Security Best Practices, Software Security Assurance, Information Security Assurance Framework

Secure Software Development Process, Secure Development, Microsoft Secure Development Life Cycle, OWASP Software Development Framework, Software Security Testing, Security Testing, Software Security Testing Process, An Integrated Approach, Security Test Strategy and Plan, Designing Security Test Cases, Executing Security Test Cases, Capturing Security Test Results, Test Metrics, Qualitative Assessment.

Reference Books

6. Computer Security Principles and Practice, William Stallings, 2015, Pearson.

23HSS3405M - SECURE CO-DESIGN METHODOLOGIES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3405M	SECURE CO-DESIGN METHODOLOGIES	SCDM	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand security considerations into the design process to develop resilient systems from inception and mitigate weaknesses within systems to fortify against potential security breaches and threats	2	PO5, PSO1
CO2	Analyze risk mitigation strategies and emphasize the importance of collaboration in integrating security measures into co-design processes.	3	PO5, PSO1
CO3	Apply security controls and technologies effectively within the design process to enhance system and product security	4	PO5, PSO1
CO4	Apply security principles and make strategic decisions to enhance overall security measures effectively	4	PO5, PSO1

Syllabus

Introduction to Secure Co-design: Overview of secure co-design methodologies-Importance of integrating security into the design process- Security Threats and Vulnerabilities- Common security threats in system design-Analysis of security vulnerabilities-Case studies on security breaches

Risk Assessment and Management: Principles of risk assessment-Risk identification, analysis, and prioritization-Risk mitigation strategies- Stakeholder Collaboration- Importance of collaboration in secure co-design-Techniques for effective stakeholder engagement-Role of different stakeholders in the design process

Security-by-Design Principles: Principles of security-by-design-Designing with secure defaults-Minimizing attack surfaces- Security Controls and Technologies: Overview of security controls and technologies-Selection and implementation of security controls-Integration of security technologies into the design process

Iterative Design Process: Principles of iterative design-Conducting design iterations for security improvement-Continuous evaluation and refinement- Communication and Documentation: Effective communication of security concepts and decisions-Documentation of security requirements and design decisions-Presentation skills for communicating with stakeholders

23HSS3406M - HARDWARE TROJAN DETECTION AND PREVENTION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3406M	HARDWARE TROJAN DETECTION AND PREVENTION	HTDAP	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Recognize and classify different types of Hardware Trojans based on their design characteristics and insertion methods within integrated circuits.	2	PO1, PO2, PO5, PSO1, PSO2
CO2	Demonstrate proficiency in applying various Hardware Trojan detection techniques, including functional testing, side-channel analysis, and physical inspection, to identify potential security threats within integrated circuits.	3	PO1, PO3, PO5, PSO1, PSO2
CO3	Design and implement prevention strategies and countermeasures to mitigate the risk of Hardware Trojan attacks in integrated circuits, considering both design-level and fabrication-level approaches.	3	PO1, PO3, PO5, PSO1, PSO2
CO4	Critically analyze case studies of real-world Hardware Trojan attacks, evaluating the effectiveness of detection and prevention methods employed and proposing appropriate solutions to enhance hardware security.	4	PO2, PO5, PSO1, PSO2

Syllabus

Introduction to Hardware Trojans, Taxonomy and classification of Hardware Trojans, Anatomy of Hardware Trojans, Detection Challenges and Limitations, Ethical and Societal Implications

Functional Testing for Hardware Trojan Detection, Side-Channel Analysis Methods, Physical Inspection Techniques, Hardware Trojan Detection Tools, Case Studies and Application

Design-Level Prevention Strategies, Fabrication-Level Prevention Techniques, Post-Fabrication Verification Methods, Secure Development Practices, Case Studies and Best Practices

Emerging Trends in Hardware Trojan Research, Industry Perspectives on Hardware Trojan Security, Research Projects and Presentations, Practical Applications and Hands-On Exercises, Course Reflection and Future Directions

Reference Books

- 4 Principles of Hardware Security, Wayne Burleson, Mohammad Tehranipoor, First Edition, Springer.
- 5 Security Metrics: Replacing Fear, Uncertainty, and Doubt, Andrew Jaquith, First Edition, Addison-Wesley Professional.
- 6 Cryptographic Engineering, Niels Ferguson, Bruce Schneier, Tadayoshi Kohno, First Edition, Wiley.
- 7 Hardware Security: A Hands-On Learning Approach, Swarup Bhunia, Mark M. Tehranipoor, First Edition, Springer.

23HSS3507 - SIDE-CHANNEL ATTACKS AND COUNTERMEASURES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3507	SIDE-CHANNEL ATTACKS AND COUNTERMEASURES	SCACM	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Knowledge and Understanding Students will demonstrate a thorough understanding of side channel attacks and their significance in cryptographic system security. They will be able to explain the principles underlying different types of side channel attacks, including timing attacks, power analysis, electromagnetic radiation analysis, and acoustic cryptanalysis.	1	PO1, PO2, PSO2
CO2	Application and Analysis Students will be able to analyze real-world cryptographic implementations to identify potential side-channel vulnerabilities. They will apply their knowledge to assess the threat posed by side-channel attacks and evaluate the effectiveness of various countermeasures in mitigating these vulnerabilities.	2	PO1, PO2, PSO2
CO3	Synthesis and Creation Students will develop practical skills in conducting side-channel analysis using open-source tools and software. They will design and implement countermeasures to mitigate side-channel vulnerabilities in cryptographic systems, considering both hardware and software aspects.	3	PO1, PO2, PSO2
CO4	Evaluation and Reflection Students will critically evaluate the strengths and limitations of different side-channel attack techniques and countermeasures. They will reflect on the ethical implications of side-channel research and the responsibility of cybersecurity professionals to protect sensitive information against such attacks.	4	PO1, PO2, PSO2

Syllabus

Introduction to Side-Channel Attacks Overview of side-channel attacks and their significance Historical examples and real-world implications Classification of side-channel attacks; **Timing Attacks** Understanding timing leakage in cryptographic systems Techniques for exploiting timing vulnerabilities Mitigation strategies and best practices

Power Analysis Attacks Principles of power analysis and its relevance to cryptographic implementations Simple power analysis (SPA) and differential power analysis (DPA) Countermeasures against power analysis attacks; **Electromagnetic Radiation Analysis (EMA)** Introduction to electromagnetic radiation analysis Differential electromagnetic analysis (DEMA) and other EMA techniques Shielding and other countermeasures

Acoustic Cryptanalysis Overview of acoustic side-channel attacks Techniques for analyzing acoustic emissions from computing devices Countermeasures to mitigate acoustic cryptanalysis; **Combined Attacks and Advanced Techniques** Combined side-channel attacks: exploiting multiple leakage channels Advanced side-channel analysis techniques Research trends and emerging threats

Countermeasures and Implementations Hardware and software countermeasures to mitigate side-channel vulnerabilities Implementing countermeasures in cryptographic systems Practical demonstrations and case studies; **Hands-on Workshop** Conducting side-channel analysis using open-source tools (e.g., ChipWhisperer) Implementing and testing countermeasures in cryptographic software and hardware Presenting findings and discussing practical

Reference Books

- 1 Side-Channel Attacks and Countermeasures, Luca Giancane, 1st, LAP Lambert Academic Publishing.
- 2 Side-Channel Analysis of Embedded Systems, Jean-Luc Danger, Olivier Thomas, 1st, Springer.
- 3 Timing Side-Channel Attacks and Countermeasures in CPU, J. Zhang, 1st, ACM.
- 4 Survey of CPU Cache-Based Side-Channel Attacks, C. Su, 1st, Hindawi.

23HSS3508 - FORMAL METHODS FOR HARDWARE-SOFTWARE SECURITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3508	FORMAL METHODS FOR HARDWARE-SOFTWARE SECURITY	FMHSS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Course Outcome 1: Knowledge and Understanding Students will demonstrate a solid understanding of the theoretical foundations of formal methods for security analysis. They will be able to explain key concepts such as formal specification languages, model checking algorithms, theorem proving techniques, and static and dynamic analysis methods.	1	PO1, PO2, PSO2
CO2	Course Outcome 2: Application and Analysis Students will apply formal modeling techniques to specify security properties of hardware and software systems. They will analyze and evaluate security vulnerabilities using formal verification tools and methodologies, such as model checking, theorem proving, static analysis, and dynamic analysis.	2	PO1, PO2, PSO2
CO3	Course Outcome 3: Synthesis and Creation Students will synthesize theoretical knowledge with practical skills to develop formal models and verification procedures for hardware-software security. They will design and implement formal verification strategies to address real-world security challenges in hardware-software systems.	3	PO1, PO2, PSO2
CO4	Course Outcome 4: Evaluation and Reflection Students will critically evaluate the effectiveness and limitations of formal methods in addressing security challenges. They will reflect on the ethical implications of security analysis and the responsibility of cybersecurity professionals to ensure the security and integrity of hardware-software systems.	4	PO1, PO2, PSO2

Syllabus

Introduction to Formal Methods for Security Overview of formal methods and their role in security analysis Theoretical foundations: logic, automata theory, and formal verification Applications of formal methods in hardware-software security; Formal Specification of Security Properties Formal specification languages (e.g., temporal logics, process algebras) Specifying security requirements and properties using formal methods Case studies of formal specifications in security protocols and access control models

Model Checking Principles of model checking for verifying hardware and software systems Temporal logic model checking algorithms (e.g., CTL, LTL) Practical applications of model checking in security analysis; Theorem Proving Introduction to theorem proving techniques and theorem provers Deductive verification of security properties using theorem proving Case studies of theorem proving in security protocol analysis

Static Analysis Principles of static analysis for detecting security vulnerabilities Abstract interpretation and data flow analysis techniques Tools and methodologies for applying static analysis to hardware-software security; Dynamic Analysis Techniques for dynamic analysis of software and hardware systems Runtime verification and monitoring for security properties Case studies of dynamic analysis in security testing and intrusion detection

Formal Methods for Cryptographic Protocols Formal modeling and verification of cryptographic protocols Analyzing security properties (e.g., secrecy, authentication) using formal methods Case studies of formal analysis in cryptographic protocol design; Applications and Case Studies Application of formal methods to real-world security problems in hardware-software systems Case studies of successful applications of formal methods in industry and academia Future trends and emerging challenges in formal methods for security

Reference Books

- 1 Formal Methods for Software Engineering: Languages, Systems, and Applications, Marcus V. G. A. Alves, Augusto Sampaio, Adenilso da Silva Sim?o, 1st, Springer.

- 2 Formal Methods for Safety and Security, Manfred Broy, Wolfgang Damm, 1st, Springer.
- 3 6th International School on Formal Methods for the Design of Computer, Communication and Software Systems, Marco Bernardo, Alessandro Cimatti, Einar Broch Johnsen, 1st, Springer.
- 4 Formal Methods: Specification, Verification, and Synthesis, Edward A. Lee, Sanjit A. Seshia, 1st, University of California, Berkeley.

23HSS3509 - TRUSTED PLATFORM MODULES AND SECURE ELEMENTS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3509	TRUSTED PLATFORM MODULES AND SECURE ELEMENTS	TPMASE	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Trusted Platform Modules (TPMs) and Secure Elements, including their purpose, architecture, and functionalities in enhancing hardware security.	2	PO1, PO5, PSO1, PSO2
CO2	Analyze and evaluate the security features and mechanisms provided by TPMs and Secure Elements, including secure boot, cryptographic operations, and secure storage, to ensure the integrity and confidentiality of sensitive data.	4	PO1, PO2, PSO1, PSO2
CO3	Develop practical skills in implementing TPM and Secure Element-based applications, including authentication protocols, key management systems, and secure communication channels, to protect against various security threats such as malware and unauthorized access.	3	PO3, PSO1, PSO2
CO4	Evaluate integration and deployment strategies of TPMs and Secure Elements within different computing environments, including embedded systems, IoT devices, and cloud computing platforms, considering factors such as interoperability, scalability, and regulatory compliance.	5	PO3, PSO1, PSO2

Syllabus

Introduction to Trusted Platform Modules (TPMs) and Secure Elements: Overview of Hardware Security, Introduction to TPMs, Secure Elements, Comparison between TPMs and Secure Elements

Security Features and Mechanisms: Secure Boot, Cryptographic Operations, Secure Storage, Remote Attestation

Implementation of TPM and Secure Element Applications: Authentication Protocols such as TPM-based secure login, single sign-on (SSO), and two-factor authentication (2FA), Key Management Systems, Secure Communication Channels, Malware Protection

Integration and Deployment Strategies for TPM: Embedded Systems Integration, Cloud Computing Platforms, Interoperability and Scalability, Regulatory Compliance such as GDPR, HIPAA, and industry-specific compliance mandates.

Reference Books

- 1 Trusted Computing Platforms: TPM2.0 in Context, Steven Sprague, First Edition, Apress.
- 2 Trusted Computing - Challenges and Applications, Ahmad-Reza Sadeghi, Christian St?ble, Christian Wachsmann, First Edition, Springer.
- 3 Trusted Computing Platforms: Design and Applications, Andrei Samsonov, First Edition, Wiley.
- 4 A Practical Guide to TPM 2.0: Using the Trusted Platform Module in the New Age of Security, David Challener, Kent Yoder, Second Edition, Apress.
- 5 Secure and Privacy-Preserving Data Communication in Internet of Things, Frank Zhigang Wang, First Edition, Springer.
- 6 Internet of Things Security: Fundamentals, Techniques, and Applications, Jun Shao, First Edition, Wiley.
- 7 Secure and Trustworthy Cyberspace: TPMS, Secure Elements, and Hardware Security, Patrick Traynor, Hayawardh Vijayakumar, Hadi Abdullah, Elham Shaabani, First Edition, CRC Press.

23HSS3510 - SECURE COMMUNICATION PROTOCOLS AND APIS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3510	SECURE COMMUNICATION PROTOCOLS AND APIS	SCPA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	This course explores the principles and practices of secure communication protocols and APIs. Students will learn about encryption techniques, authentication methods, secure transmission protocols, and best practices for implementing secure APIs.	2	PO1, PO5, PO9, PSO2
CO2	Understand the fundamentals of secure communication protocols. Learn about encryption algorithms and their applications.	3	PO1, PO5, PO9, PSO2
CO3	Explore authentication mechanisms for ensuring secure access to resources.	3	PO1, PO5, PO9, PSO2
CO4	Gain practical knowledge of secure transmission protocols. Develop skills for designing and implementing secure APIs.	3	PO1, PO5, PO9, PSO2

Syllabus

CO 1: Introduction to Secure Communication, Encryption Algorithms Overview of security threats in communication, Principles of encryption and cryptography, Symmetric vs. asymmetric encryption, Introduction to encryption algorithms (e.g., AES, RSA), Encryption modes and padding schemes, Key management and distribution

CO 2: Authentication Methods, Secure Transmission Protocols Password-based authentication, Multi-factor authentication (MFA), Token-based authentication (JWT, OAuth), Secure Socket Layer (SSL) / Transport Layer Security (TLS), HTTPS and its significance, Perfect Forward Secrecy (PFS)

CO 3: Public Key Infrastructure (PKI), API Security Fundamentals Understanding PKI, Certificate Authorities (CAs) and certificate chains, SSL/TLS certificate management, Overview of API security challenges, Authentication and authorization in APIs, API security best practices

CO 4: API Authentication and Authorization, API Security Threats and Mitigation API keys and tokens, OAuth 2.0 framework, Role-based access control (RBAC) for APIs, Common API security vulnerabilities (e.g., injection attacks, broken authentication), Techniques for securing APIs against threats, API security testing and monitoring

23HSS3511 - HARDWARE-SOFTWARE CO-DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3511	HARDWARE-SOFTWARE CO-DESIGN	HSCCS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	This course explores case studies of successful hardware-software co-design projects across various domains, including consumer electronics, automotive, aerospace, and more	2	PO1, PO5, PO9, PSO2
CO2	Examine real-world examples of hardware-software co-design projects. Understand the principles and methodologies of hardware-software co-design.	3	PO1, PO5, PO9, PSO2
CO3	Analyze the interaction between hardware and software components in integrated systems.	3	PO1, PO5, PO9, PSO2
CO4	Evaluate the impact of co-design on system performance, power consumption, and user experience. Gain insights into best practices and lessons learned from successful co-design projects.	3	PO1, PO5, PO9, PSO2

Syllabus

CO 1: Introduction to Hardware-Software Co-Design, Microsoft Xbox Kinect Overview of hardware-software co-design principles and methodologies, Importance of synergy between hardware and software in integrated systems, Challenges and considerations in co-designing hardware and software components, Objective, approach, and outcome of Kinect's hardware-software co-design, Analysis of depth-sensing hardware and real-time motion-tracking software ,Impact on gaming experience and user interaction in console gaming,

CO 2: Apple iPhone, Tesla Autopilot Co-design strategies employed by Apple in developing the iPhone, Integration of custom-designed processors with iOS software stack, Evaluation of performance, power efficiency, and user experience enhancements, Hardware-software co-design for autonomous driving in Tesla vehicles, Analysis of sensor processing hardware and neural network algorithms, Impact on safety, reliability, and advancement of autonomous driving technology

CO 3: Google TensorFlow Processing Units (TPUs), DJI Drones Co-design of custom ASICs and TensorFlow software framework for AI acceleration, Evaluation of TPUs' performance, scalability, and efficiency in data center applications, Contribution to advancements in machine learning and artificial intelligence, Hardware-software co-design principles applied in DJI drone development, Integration of flight controllers, sensors, and intelligent software features, Analysis of performance, stability, and user experience enhancements in drone technology

CO 4: Aerospace Embedded Systems, Automotive Embedded Systems Case studies of hardware-software co-design in aerospace applications, Integration of avionics systems, flight control algorithms, and safety-critical software, Impact on aircraft performance, reliability, and safety standards, Co-design strategies for automotive electronic systems and software, Integration of ECUs, sensors, and control algorithms in modern vehicles, Evaluation of performance, efficiency, and safety improvements in automotive technology

23HSS3512 - FUTURE TRENDS IN HARDWARE-SOFTWARE CO-DESIGN FOR SECURITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23HSS3512	FUTURE TRENDS IN HARDWARE-SOFTWARE CO-DESIGN FOR SECURITY	FTHSCS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Comprehend the latest trends and advancements in hardware-software co-design with a focus on security implications.	2	PO3, PO5, PSO2
CO2	Evaluate various hardware-software co-design techniques and their impact on system security.	2	PO3, PO5, PSO2
CO3	Apply co-design methodologies to develop robust and secure hardware-software systems.	3	PO5, PSO2
CO4	Identify and analyze potential security vulnerabilities in integrated hardware-software systems. Formulate innovative solutions and strategies to address security challenges in hardware-software co-design.	3	PO5, PSO2

Syllabus

Introduction to Hardware-Software Co-Design and Security Basics, Overview of Hardware-Software Co-Design, Definition and significance, Historical perspective and evolution, Key components and processes. Security Fundamentals, Basic concepts of security (Confidentiality, Integrity, Availability), Common security threats and vulnerabilities, Introduction to cryptographic principles. Hardware Security Basics, Hardware Trojans, Side-channel attacks, Secure hardware design principles. Software Security Basics, Software vulnerabilities, Secure coding practices, Security testing and assessment

Techniques and Tools for Co-Design, Co-Design Methodologies, Hardware-software partitioning, Co-simulation and co-verification techniques, Design space exploration. Hardware Description Languages and Tools, Introduction to VHDL and Verilog, High-level synthesis tools, FPGA and ASIC design flows. Software Development for Embedded Systems, Embedded operating systems and real-time operating systems (RTOS), Cross-compilation and debugging tools, Middleware and libraries for embedded systems. Integrated Development Environments (IDEs), Popular IDEs, Debugging and profiling tools, Performance analysis.

Security Integration in Co-Design, Security-aware Design Techniques, Secure boot and trusted execution environments (TEE), Hardware-based security modules (TPM, HSM), Root of trust concepts. Secure Communication Protocols, Encryption and key management, Secure communication protocols (e.g., TLS, IPsec), Wireless security protocols. Authentication and Access Control, Authentication mechanisms, Access control models (DAC, MAC, RBAC), Role of hardware in enforcing security policies. Case Studies in Secure Co-Design, Analysis of real-world systems, Lessons learned from security breaches, Best practices for secure co-design.

Future Trends and Research Directions, AI and Machine Learning in Security, Application of AI/ML in detecting and mitigating security threats, Hardware accelerators for AI/ML security applications, Case studies and current research. Quantum Computing and Post-Quantum Security, Basics of quantum computing, Quantum-resistant cryptographic algorithms, Potential impact on hardware-software co-design. IoT and Edge Computing Security, Security challenges in IoT and edge devices, Lightweight cryptography for resource-constrained devices, Secure edge-to-cloud communication. Future Directions and Emerging Technologies, Trends in 5G and beyond, Autonomous systems and security implications and Emerging standards and regulations.

23IBT3101A - PHARMACEUTICAL BIOTECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3101A	PHARMACEUTICAL BIOTECHNOLOGY	PBT	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the methods of Gene transfer, Production of Secondary Metabolites, Drug Interactions, and Surgical supplies	3	PO2, PO3, PSO2
CO2	Apply the concept of Pharmaceutical dosage and products in treating diseases	3	PO2, PO3, PSO2
CO3	Apply the role of various types of Drug Delivery Application in Pharmaceutical Biotechnology	3	PO2, PO3, PSO2
CO4	Apply the role of Biologicals (Immunizing agents and allergenic extracts)	3	PO3, PO8, PSO2
CO5	Apply the concept of Production & analysis in Biopharmaceuticals	3	PO3, PO8, PSO2
CO6	Apply the principles of pharmaceutical biotechnology for development of drug dosage forms	3	PO8, PO9
CO7	Apply the skilling concepts of pharmaceutical biotechnology for development of drug dosage forms	3	PO8, PO9

Syllabus

Fundamentals of pharmaceutical practice-Pharmaceutical biotechnology: An introduction; Origin & definition; Scope & Importance of Biotechnology; their applications; Microbes in Pharmaceutical industry; Methods of Gene transfer; Biotechnology; Production of Secondary Metabolites ; Drug Interactions;Surgical supplies

Drug metabolism and pharmacokinetics- ADME-properties-Mechanism of Drug Absorption; Distribution of drugs; Drugmetabolism(Biotransformation of drugs);Excretion of drugs; Pharmacokinetics; Basic considerations; Controlled Release Medication; Design of Controlled drugdelivery systems; Drug release patterns; Oral parental; Trans-dermal ; Ophthalmic ; Intra-vaginal and Intrauterine Drug Delivery systems

Pharmaceutical dosage & blood, plasma products-Materials & Formulations; Manufacture of Tablets; Capsules; Sustained Release dosage forms; Parental solutions; Oral liquids; Emulsions;Ointments; Suppositories, Aerosols; Topical applications; Collection; Processing and storage of whole human blood; Concentrated human RBC Control of Bloodproducts; Transfusion products

Pharmaceutical products-Fundamentals of Therapeutic categories such as Analgesics, Anesthetics, Antipyretic; Anti-inflammatorydrugs; Antacids; Alkaloids; Glycosides; Hormone & Hormone antagonists; Antineoplastics and Immuno active drugs; Biologicals (Immunizing agents andallergenic extracts)

Drug manufacturing processes- Good manufacturing practices; Manufacturing facilities; Sources of Biopharmaceuticals; Production & analysis of Biopharmaceuticals

Experiment 1: Introductory Session to Pharmaceutical Biotechnology Laboratories Experiment 2: Preparation of various Polymeric Solution Experiment 3: Viscosity measurement of polymer solution Experiment 4: Development of Physical Hydrogels Experiment 5: Preparation of Chemical Hydrogels Experiment 6: Formulation of Chitosan and Gelatin-Based Hydrogels Loaded with Drug Experiment 7: Swelling Study of Hydrogels Experiment 8: Demonstration of Dissolution Apparatus Experiment 9: In vitro Hemocompatibility Testing of Physical Hydrogels Experiment 10: In vitro Hemocompatibility Testing of Chemical Hydrogels Experiment 11: Mucoadhesive analysis in Chemical Hydrogels Experiment 12: Franz diffusion cell apparatus Setup Experiment 13: In silico analysis for identifying drug interactions and their phenotypic effects Experiment 14: Iontophoresis Instrument Setup Experiment 15: Demonstration of X-Ray diffraction analysis (XRD) Experiment 16: Evaluating Antimicrobial Activity of Physical Hydrogels against Gram-Positive Bacteria Experiment 17: Evaluating Antimicrobial Activity of Physical Hydrogels against Gram-Negative Bacteria Experiment 18: Evaluating Antimicrobial Activity of Chemical Hydrogels

1) Development of Oleogels for Drug Delivery Applications 2) Phase contrast microscopy study of Oleogels 3) Development of Bigels for Drug Delivery Applications 4) Phase contrast microscopy study of Bigels 5) Role of various Surfactants for Pharmaceutical and Medicinal Aspects 6) Preparation of Emulsion Hydrogels for Drug Delivery Applications 7) Phase contrast microscopy study of Emulsion Hydrogels 8) Release study of Drug from Emulsion Hydrogels from drug dissolution apparatus 9) Release study of Drug from Oleogels from drug dissolution apparatus 10) Preparation of curcumin-piperine nanoparticles by thin film hydration method 11) Preparation of curcumin-piperine nanoparticles by solid dispersion method 12) Preparation of curcumin-piperine nanoparticles by emulsion polymerization method 13) Development of Cerium Oxide Nanoparticles 14) FTIR Analysis of Development of Cerium Oxide Nanoparticles 15) Demonstration of CO2 Incubator 16) Drug Release Kinetics 17) Explanation towards Imagej (Computer Program) 18) Explanation towards Origin (Computer Program)

Reference Books

23IBT3202A - PHARMACOVIGILANCE AND SAFETY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3202A	PHARMACOVIGILANCE AND SAFETY	PCS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental principles and concepts of pharmacovigilance, including the importance of adverse event reporting and signal detection.	2	PO1, PO2, PO3, PSO1
CO2	Evaluate the regulatory requirements and guidelines governing pharmacovigilance activities, including pharmacovigilance obligations for pharmaceutical companies and regulatory authorities.	3	PO1, PO2, PO3, PSO1
CO3	Apply various methods and tools for adverse event detection, assessment, and risk management, including causality assessment and risk minimization strategies.	3	PO1, PO2, PO3, PSO1
CO4	Analyze case studies and real-world scenarios to identify potential drug safety issues, assess risk-benefit profiles, and propose appropriate pharmacovigilance interventions.	3	PO1, PO2, PO3, PSO1
CO5	Communicate effectively about pharmacovigilance concepts, practices, and regulatory requirements.	3	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Pharmacovigilance-scope of pharmacovigilance-Historical background and evolution-Pharmacovigilance regulations and guidelines

Pharmacovigilance Systems and Infrastructure-Components of pharmacovigilance systems-Pharmacovigilance databases and information management

Risk Assessment and Risk Management-Risk identification, evaluation, and characterization-Risk minimization strategies-Pharmacovigilance in risk communication

Pharmacovigilance in Clinical Trials-Safety monitoring during clinical development-Investigator reporting requirements-Post-marketing surveillance studies

Introduction to Effective Communication in Pharmacovigilance-Communicating Pharmacovigilance Concepts-Practices in Pharmacovigilance Communication-Communicating Risk and Benefit Information

Reference Books

- 1 Pharmacovigilance: Principles and Practice, Patrick Waller and June Raine, 2017, Wiley.
- 2 Introduction to Pharmacovigilance , Patrick Waller, 2017, John Wiley & Sons Ltd.
- 3 Practical Pharmacovigilance Analysis Strategies, Paul Beninger, 2019, wiley.
- 4 Textbook of Pharmacovigilance: Ensuring the Safe Use of Medicines , S. K. Gupta, 2018, Jaypee Brothers Medical Publishers.

23IBT3202E - PHARMACOVIGILANCE AND SAFETY (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3202E	PHARMACOVIGILANCE AND SAFETY	PCS	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Evaluation of completed ADR report forms for accuracy and completeness.	3	PO1, PO2, PO3, PSO1
CO2	Assessment of students' ability to assess ADR severity and causality using standardized criteria.	3	PO1, PO2, PO3, PSO1
CO3	Evaluation of students' data analysis skills and ability to identify potential signals of adverse drug reactions in the data set	3	PO1, PO2, PO3, PSO1
CO4	To gain knowledge on adverse drug reactions and their management.	3	PO1, PO2, PO3, PSO1
CO5	To become proficient in the use of pharmacovigilance databases and tools.	3	PO1, PO2, PO3, PSO1

Syllabus

Brief overview of adverse drug reaction reporting systems, including regulatory requirements and reporting guidelines- Introduction to ADR report forms and documentation requirements.

Group activity Students work in teams to analyze the case scenarios and complete ADR report forms for the identified adverse drug reactions.

Group discussion Students assess the severity and causality of reported ADRs using standardized assessment tools or criteria.

Types of adverse drug reactions-mechanisms behind various ADRs.-Detecting and reporting ADRs.-Strategies for managing and preventing ADRs.-regulatory requirements and guidelines for ADR management.

Introduction to Pharmacovigilance Databases-VigiBase-EudraVigilance-FAERS and Other National Databases-Data Mining and Signal Detection-Case Management and Documentation

Reference Books

23IBT3203A - BIOPROCESS ECONOMICS AND PLANT DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3203A	BIOPROCESS ECONOMICS AND PLANT DESIGN	BEPD	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the Depreciation Methods for Analysis of Economic Performance	3	PO1, PO2, PO3, PSO1
CO2	Apply the Economics Principles in the Estimation of Manufacturing Cost of Bioprocess	3	PO1, PO2, PO3, PSO1
CO3	Apply the Mass and Energy Balance Equations for Bioprocess Equipment Design	3	PO1, PO2, PO3, PSO1
CO4	Summarize the Sterilization Techniques and Apply the Aeration and Agitation Principles for Design of Bioreactor System	3	PO1, PO2, PO3, PSO1
CO5	Optimization techniques	3	PO1, PO2, PO3, PSO1

Syllabus

Economic evaluation: Capital cost of a project. Interest calculations, nominal and effective interest rates. Basic concepts in tax and depreciation. Measures of economic performance, rate of return, payout time. Cash flow diagrams; Cost accounting-balance sheet and profit loss account. Break even and minimum cost analysis.

Introduction to bioprocess economics including elements of total production cost, total capital investment outline, equipment sizing, capital cost estimates for large-scale equipment and utilities, manufacturing cost estimates encompassing operating costs such as raw materials, utilities, fixed costs, and overhead costs, with case studies covering antibiotics, recombinant products, and single-cell protein.

Introduction to different types of valves, pumps, steam traps, spargers and impellers used in fermentation industries. Schematic representation of unit operations, design information and flow diagrams, material and energy balances, formulation of the design problem, the Hierarchy of chemical process design and integration, optimization, Health and safety Hazards, Environment protection, plant location and lay out. equipment classification, materials of construction-Mechanical properties-strength, elasticity, ductility, resilience, toughness, hardness, creep, fatigue. Metals-ferrous metals, types of iron & steels, nonferrous 33metals and Non-metals. Corrosion: Forms of corrosion and their presentation. Choice of materials.

Design conventions. Basic considerations in equipment design: General design procedure: Basic Design Problems: Design examples on continuous fermentation, aeration and agitation. Design calculation of filter for air sterilization. Design of batch and continuous sterilizers. Design calculations for immobilized enzyme kinetics. Practical considerations in designing of Bioreactor/Fermenter construction. Design exercise on trickle flow fermenter. Problems associated with design equations

General procedure for determining optimum conditions through analytical and graphical methods, comparison of graphical and analytical techniques, linear programming graphical solution including the simplex algorithm, Big-M method, and dynamic programming

23IBT3203E - BIOPROCESS ECONOMICS AND PLANT DESIGN (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3203E	BIOPROCESS ECONOMICS AND PLANT DESIGN	BEPD	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Modes of operations of Bioreactor	3	PO1, PO2, PO3, PSO1
CO2	oxygen transfer in bioreactor	3	PO1, PO2, PO3, PSO1
CO3	scale up	3	PO1, PO2, PO3, PSO1
CO4	To integrate economic and engineering principles for bioprocess optimization.	3	PO1, PO2, PO3, PSO1
CO5	To develop skills in using software tools for economic and plant design analysis.	3	PO1, PO2, PO3, PSO1

Syllabus

Batch operation (enzymatic and microbial), Continuous stirred tank , Continuous stirred tank with recycle- Fed batch and two-stage operation

Oxygen transfer to cells , mass transfer coefficients ,determination of oxygen transfer coefficients ,Factors affecting mass transfer coefficient.

Reactor scale up , Scale up criteria ,Scale down

Plant Layout and Optimization-Principles of plant layout design-Facility layout planning and optimization-Case studies of bioprocess plant layouts-Software tools for layout design

Software tools for process simulation and optimization (e.g., Aspen Plus, SuperPro Designer)

23IBT3203R - BIOPROCESS ECONOMICS AND PLANT DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3203R	BIOPROCESS ECONOMICS AND PLANT DESIGN	BEPD	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the Depreciation Methods for Analysis of Economic Performance	3	PO1, PO2, PO3, PSO1
CO2	Apply the Economics Principles in the Estimation of Manufacturing Cost of Bioprocess	3	PO1, PO2, PO3, PSO1
CO3	Apply the Mass and Energy Balance Equations for Bioprocess Equipment Design	3	PO1, PO2, PO3, PSO1
CO4	Summarize the Sterilization Techniques and Apply the Aeration and Agitation Principles for Design of Bioreactor System	3	PO1, PO2, PO3, PSO1

Syllabus

Economic evaluation: Capital cost of a project. Interest calculations, nominal and effective interest rates. Basic concepts in tax and depreciation. Measures of economic performance, rate of return, payout time. Cash flow diagrams; Cost accounting-balance sheet and profit loss account. Break even and minimum cost analysis.

Introduction to bioprocess economics covering elements of total production cost, total capital investment outline, equipment sizing, capital cost estimates for large-scale equipment and utilities, manufacturing cost estimates encompassing operating costs like raw materials, utilities, fixed costs, and overhead costs, along with case studies on antibiotics, recombinant products, and single-cell protein

Introduction to process design: Introduction to different types of valves, pumps, steam traps, spargers and impellers used in fermentation industries. Schematic representation of unit operations, design information and flow diagrams, material and energy balances, formulation of the design problem, the Hierarchy of chemical process design and integration, optimization, Health and safety Hazards, Environment protection, plant location and lay out. equipment classification, materials of construction-Mechanical properties-strength, elasticity, ductility, resilience, toughness, hardness, creep, fatigue. Metals-ferrous metals, types of iron & steels, nonferrous metals and Non-metals. Corrosion: Forms of corrosion and their presentation. Choice of materials.

Basic Design Problems: Design examples on continuous fermentation, aeration and agitation. Design calculation of filter for air sterilization. Design of batch and continuous sterilizers. Design calculations for immobilized enzyme kinetics. Practical considerations in designing of Bioreactor/Fermenter construction. Design exercise on trickle flow fermenter. Problems associated with design equations

23IBT3304A - ENZYME ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3304A	ENZYME ENGINEERING	EE	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamental principles of protein structure, function, and kinetics to enzyme engineering.	3	PO1
CO2	Analyze the relationship between enzyme structure and function in the context of engineering enzymes for desired activities.	4	PO1, PO2
CO3	Design and utilize various protein engineering techniques for enzyme modification.	6	PO1, PO2
CO4	Evaluate the effectiveness of enzyme engineering strategies through computational and experimental methods.	5	PO1, PO2
CO5	Apply engineered enzymes for specific industrial, environmental, or bioremediation applications.	3	PO1
CO6	Effectively communicate the principles and applications of enzyme engineering in written and oral formats	5	PO2
CO7	Demonstrate an understanding of the ethical considerations and potential risks associated with enzyme engineering.	4	PO5

Syllabus

Introduction to enzymes: Structure, function, and kinetics Applications of enzymes in industry, environment, and biomedicine Fundamentals of protein structure: Primary, secondary, tertiary, and quaternary structure Protein-ligand interactions and enzyme catalysis

Protein folding and stability Site-directed mutagenesis and its impact on enzyme activity Understanding the effects of mutations on protein structure and function Computational tools for analyzing protein structure and function

Rational design and directed evolution approaches in enzyme engineering Site-directed mutagenesis techniques (PCR, gene cloning) Random mutagenesis and selection methods Enzyme immobilization techniques and their applications

Protein sequence and structure databases (e. g., UniProt, PDB) In silico protein engineering tools (docking simulations, protein stability prediction) Utilizing computational tools to design and analyze engineered enzymes (optional)

Enzyme activity assays and kinetic analysis Techniques for measuring protein expression and purification Computational and experimental methods for evaluating enzyme stability and function Case studies of successful enzyme engineering projects

Engineered enzymes for industrial biocatalysis (e. g., biofuels, biopolymers) Applications in environmental remediation and biodegradation Engineered enzymes in biomedicine and drug development Societal and ethical considerations of enzyme engineering applications

Emerging trends in enzyme engineering Directed evolution for highly specific and efficient enzymes Protein engineering for novel biocatalytic functions Ethical considerations and potential risks of releasing engineered enzymes

23IBT3405M - BIOPROCESS VALIDATION AND CGMP (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3405M	BIOPROCESS VALIDATION AND CGMP	BVcGMP	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the regulatory landscape governing bioprocess validation and cGMP compliance.	3	PO1, PO2, PO3, PSO1
CO2	Develop proficiency in validation methodologies and quality assurance techniques	3	PO1, PO2, PO3, PSO1
CO3	Apply validation principles to design, execute, and evaluate validation protocols effectively.	3	PO1, PO2, PO3, PSO1
CO4	Gain competence in technology transfer processes within biopharmaceutical manufacturing.	3	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Bioprocess Validation and cGMP-Overview of bioprocess validation-Introduction to cGMP regulations

Regulatory Requirements-FDA regulations for bioprocess validation-EMA guidelines for cGMP compliance-ICH guidelines for pharmaceutical quality systems

Validation Methodologies-Process validation-Analytical method validation-Equipment qualification

Quality Assurance Techniques-Risk management-Deviation handling-CAPA (Corrective and Preventive Action) processes

Reference Books

23IBT3406M - FOOD TECHNOLOGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3406M	FOOD TECHNOLOGY	FT	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Describe the concept of food associated microbes and their classification	3	PO5
CO2	Outline the methods of food processing	3	PO8
CO3	Illustrate various strategies involved in preservation and storage	3	PO11
CO4	Implementation of microorganisms in various food industries	3	, PSO2

Syllabus

Introduction to food microbiology, covering historical developments, types of microorganisms in food, their sources, behavior, and factors affect

Exploration of biotechnology's role in the food industry, including nutritive value enhancement, bioprocessing of various food types, and flavor and production improvement.

Focus on food preservation techniques, such as irradiation, its principles, legal status, and effects on food constituents, along with sto considerations.

Emphasis on food safety and quality control measures, including preventing foodborne illness, quality assurance in processing, and the util food production, alongside characteristics of thermophilic and radiation-resistant microbes.

Reference Books

- 1 Food Microbiology: Fundamentals and Frontiers, Michael P. Doyle, Robert L. Buchanan, and David A. Golden , 2013, Springer.
- 2 Modern Food Microbiology, James M. Jay, Martin J. Loessner, and David A. Golden, 2005, Springer.
- 3 Food Processing Technology: Principles and Practice, P.J. Fellows, 2017 , Woodhead Publishing (an imprint of Elsevier).
- 4 Food Microbiology: Fundamentals and Frontiers, Michael P. Doyle and Robert L. Buchanan, 2013, ASM Press.

23IBT3507 - MICROBIAL TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3507	MICROBIAL TECHNOLOGY	MBT	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of microbial technology in production of bioproducts	3	PO1
CO2	Apply the concept of medium screen out and strain development	3	PO1, PO7
CO3	Develop various strategies to produce Primary and secondary Metabolites	3	PO2, PO3, PO7
CO4	Design various strategies for the production of enzymes, recombinant proteins, and other special bioproducts.	3	PO2, PO3, PO7

Syllabus

Introduction to basics of biotechnology A historical overview on scope and development of biotechnology and their products; Biotechnology as an interdisciplinary enterprise; A brief survey of organisms, processes, products and market economics relating to modern industrial biotechnology; Concepts of tools and techniques used in biotechnology; Out line and integrated bioprocesses and various unit operations (upstream and downstream) involved in the bioprocesses. Generalized process flow sheets.

Media, Screening and Strain improvement Medium requirements for fermentation process carbon, nitrogen, minerals, vitamins and other nutrients examples of simple and complex media; Industrial substrates. Primary and Secondary screening. Strain improvement by Physical, Chemical and Molecular techniques.

Production of Primary Metabolites A brief outline of processes for the production of some commercially important Organic acids (Citric acid, Lactic acid , Acetic acid, Gluconic acid), Amino acids (Glutamic Acid, Lysine, Aspartic Acid and Phenylalanine), and Alcohols (Ethanol, 2,3 butanediol). Secondary Metabolites Study of production processes and flow sheets for various classes of low molecular weight secondary metabolites, Antibiotics beta lactams (Penicillin), aminoglycosides (Streptomycin), Macrolids (Erythromycin), Quinines and aromatics. Vitamin B12 and steroids, Dual or multiple fermentation.

Enzymes, Recombinant Proteins, Special bioproducts Enzymes Protease, Concept of SSF, Advantages and disadvantages, Production of Recombinant Proteins Insulin and Special Bioproducts Biopesticides, Biofertilizers Natural Biopreservatives (Nisin), Biopolymers (Xanthan Gum), Single cell protein, High Fructose Corn Syrup, Process of bioleaching.

Reference Books

23IBT3508 - METABOLIC ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IBT3508	METABOLIC ENGINEERING	MBE	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles of metabolic engineering and its applications in biotechnology.	3	PO10
CO2	Apply metabolic pathway analysis techniques to optimize cellular metabolism for desired product formation.	3	PO6
CO3	Utilize synthetic biology tools and genetic engineering techniques to design and construct engineered metabolic pathways.	3	PO3
CO4	Evaluate and integrate omics data with computational modeling approaches to predict and improve metabolic pathway performance.	3	, PSO2

Syllabus

Introduction to metabolic engineering principles and historical developments Overview of metabolic pathway analysis and optimization techniques Exploration of tools and techniques used in metabolic engineering, including genome editing and synthetic biology

In-depth study of metabolic flux analysis and constraint-based modeling approaches Application of metabolic control analysis in understanding and manipulating cellular metabolism Hands-on exercises on analyzing and optimizing metabolic pathways using computational tools

Introduction to synthetic biology concepts and their relevance to metabolic engineering Techniques for genetic manipulation of microorganisms and construction of synthetic metabolic pathways Case studies illustrating the application of genetic engineering in pathway optimization

Integration of omics data with metabolic engineering approaches Systems biology techniques for predicting and optimizing cellular behavior Exploration of industrial applications of metabolic engineering, including case studies on commercialization and regulatory considerations

Reference Books

23ILA3101A - INTRODUCTION TO INDUSTRIAL INTERNET OF THINGS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3101A	INTRODUCTION TO INDUSTRIAL INTERNET OF THINGS	IIIoT	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Industry 4.0 Globalization	3	PO1, PO10, PO12, PSO2
CO2	Apply the Model and architecture of IIOT	3	PO1, PO10, PO12, PSO2
CO3	Apply the IIOT sensing techniques	3	PO1, PO10, PO12, PSO2
CO4	Apply the IIOT Computing techniques	3	PO3, PO10, PO12, PSO2
CO5	Analyse the Various Applications of IIOT	4	PO1, PO10, PO12, PSO2
CO6	Apply IIOT Systems Programming IO interfacing with various applications.	3	PO1, PO10, PO12, PSO2
CO7	Apply IIOT Systems Programming IO interfacing with various applications.	3	PO1, PO10, PO12, PSO2

Syllabus

Industry 4.0- Globalization: The Fourth Revolution, LEAN Production Systems , Sensing & actuation, Communication, Networking types.

Basics of Industrial IIOT: Industrial Processes Industrial Sensing & Actuation, Industrial IIOT: Business Model and Reference Architecture, Industrial IIOT- Layers

IIOT Sensing- sensors categories, IIOT Processing- signal conditioning circuits, IIOT Networking.

Industrial IIOT Computing: Big Data Analytics and Software Defined Networks, Data Center Networks, Industrial IIOT: Security and Fog Computing - Fog Computing in IIOT, Security in IIOT

Industrial IIOT Application Domains: Healthcare, Power Systems, Oil, chemical and pharmaceutical industry, Applications of UAVs in Industries, Real case studies.

Reference Books

- 1 Sensors and Transducers, D. Patranabis , 2004, PHI.
- 2 The Internet of Things: Enabling Technologies, Platforms, and Use Cases, Pethuru Raj and Anupama C. Raman, 2017, CRC Press.

23ILA3101R - INTRODUCTION TO INDUSTRIAL INTERNET OF THINGS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3101R	INTRODUCTION TO INDUSTRIAL INTERNET OF THINGS	IIoT	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Industry 4.0 Globalization	3	PO1, PO10, PO12, PSO2
CO2	Apply the Model and architecture of IIOT	3	PO1, PO10, PO12, PSO2
CO3	Apply the IIOT Computing techniques	3	PO1, PO10, PO12, PSO2
CO4	Analyse the Various Applications of IIOT	4	PO3, PO10, PO12, PSO2
CO5	apply the principals of IIOT components and exercise the behaviors of IIOT stages	3	PO1, PO10, PO12, PSO2
CO6	Apply the skill of using tools to realize IIOT applications	3	PO1, PO10, PO12, PSO2

Syllabus

Industry 4.0- Globalization: The Fourth Revolution, LEAN Production Systems , Sensing & actuation, Communication, Networking types.

Basics of Industrial IIOT: Industrial Processes Industrial Sensing & Actuation, IIOT Processing, Industrial IIOT: Business Model and Reference Architecture, Industrial IIOT- Layers

Industrial IIOT Computing: Big Data Analytics and Software Defined Networks, Data Center Networks, Industrial IIOT: Security and Fog Computing - Fog Computing in IIOT, Security in IIOT

Industrial IIOT Application Domains: Healthcare, Power Systems, Oil, chemical and pharmaceutical industry, Applications of UAVs in Industries, Real case studies.

exercise the behavior of various sensors and actuators with communication capabilities to design IIOT applications

Embedded integrated development environments- arduino,wokwi, simulation and hardware skill activities to demonstrate the iiot features using esp32/raspberry PI PICO W boards

Reference Books

23ILA3202A - INDUSTRIAL AUTOMATION AND ROBOTICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3202A	INDUSTRIAL AUTOMATION AND ROBOTICS	IAR	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the principles of automation	3	PO1, PSO1
CO2	Apply control system principles for automation	3	PO1, PSO1
CO3	Analyze characteristics of Industrial Robots	4	PO2, PSO1
CO4	Analyze the robotic end effectors and Sensors	4	PO2, PSO1
CO5	Analyze PLC programming for Robotic Drive	4	PO2, PSO1

Syllabus

Definition of industrial automation, Mechanization vs automation, advantages of automation, goals of automation, reasons for automation, social issues of automation, types of automation, current emphasis in automation, Controllers Employed in Automated Systems, Case Studies.

Introduction & Automatic Process Control, Building Blocks of Automation Systems: LAN, Analog & Digital I/O Modules Distributed Control System: Functional Requirements, Configurations & some popular Distributed Control Systems. Industrial automation and Case studies

Specifications and Characteristics, Criteria for selection. Dynamic properties of robots-stability, control resolution, spatial resolution, accuracy, repeatability, compliance, work cell control, Interlocks Robotic Control Systems-Robot Motions, Drives, Actuators, Robot controllers, Power transmission systems.

Transducers and sensors: sensors in robotics and their classification, vision sensors, touch (tactile) sensors, proximity and range sensors, force and torque sensing. End Effectors-Types, grippers, various process tools as end effectors, Robot-End effectors interface, Active and passive compliance, Gripper selection and design.

Robot Programming: Level of robot programming, Language based programming, task level programming, Robot programming synthesis, Industrial Applications and Case Studies

Reference Books

23ILA3203A - EDGE COMPUTING FOR INDUSTRY 4.0 (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3203A	EDGE COMPUTING FOR INDUSTRY 4.0	ECI	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Industry 4.0 Globalization	2	PO1, PO10, PO12, PSO2
CO2	Describe the Edge/Fog Computing and infer the opportunities and challenges	2	PO1, PO10, PO12, PSO2
CO3	Examine the Architecture of Edge Computing and explore the issues that are being addressed by the industry	3	PO1, PO10, PO12, PSO2
CO4	Interpret the Middleware needed for Edge Computing and its Security Requirements	3	PO1, PO10, PO12, PSO2
CO5	Assess the need for Edge/Fog Computing in various real-time projects	3	PO2, PO10, PO12, PSO2

Syllabus

Globalization impact on industry, Industry 4.0- Globalization: The Fourth Revolution, LEAN Production Systems

CYBERSECURITY IN INDUSTRY 4.0 Basics of Industrial IoT, Cloud computing features and its limitations to support low latency use cases, Edge Computing to support IoT applications case study.

Internet of Things (IoT) and New Computing Paradigms: Introduction, New Computing Paradigms, Fog and Edge Computing Completing the Cloud, Advantages of FEC, Hierarchy of Fog and Edge Computing, Opportunities and Challenges. Addressing the Challenges in Federating Edge Resources

Edge Architecture: Integrating IoT + Fog + Cloud Infrastructures, System Modeling, and Research Challenges, Network Slicing Management in Edge and Fog, Optimization in Fog Computing, Formal Modeling Framework for Fog Computing, Middlewares: Middleware for Fog and Edge Computing: Design Issues, State-of-the-Art Middleware Infrastructures, A Lightweight Container Middleware for Edge Cloud Architectures

Security and Data Management: Security Management for Edge Cloud Architectures, Applications, and Issues: Exploiting Fog Computing in Health Monitoring, Smart Surveillance Video Stream Processing at the Edge for Real-Time Human Objects Tracking, Fog Computing Model for Evolving Smart Transportation Applications

Reference Books

- 1 Industry 4.0: The Industrial Internet of Things Industry 4.0: The Industrial Internet of Things, Alasdair Gilchrist , 2016, Apress.
- 2 Fog and Edge Computing: Principles and Paradigms, Rajkumar Buyya (Editor), Satish Narayana Sri rama(Editor), 2019, Wiley Publications.
- 3 IoT and Edge Computing for Architects: Implementing edge and IoT systems from sensors to clouds with communication systems, analytics, and security, Perry Lea, 2020, Paperback.
- 4 Edge Computing: A Primer, Jie CaoQuan ZhangWeisong Sh, 2018, Springer.

23ILA3203E - EDGE COMPUTING FOR INDUSTRY 4.0 (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3203E	EDGE COMPUTING FOR INDUSTRY 4.0	ECI	E	5	0	0	0	5

23ILA3304A - INDUSTRIAL DRIVES AND CONTROL (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3304A	INDUSTRIAL DRIVES AND CONTROL	ID&C	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Select and size electric drive for industrial automation application	3	PO1, PO5, PSO1
CO2	Analyze dc drives for industrial automation	4	PO2, PO5, PSO1
CO3	Analyze ac drives for industrial automation	4	PO2, PO5, PSO1
CO4	Analyze BLDC and SRM drives for industrial automation	4	PO2, PO5, PSO1
CO5	Analyze PLC control for industrial automation	4	PO2, PO5, PSO1
CO6	Test and Analyze electrical motor drives for industrial automation	4	PO2, PO5, PSO1
CO7	Test the dynamics of industrial drives using MATLAB	3	PO1, PO5, PSO1

Syllabus

Electric drive components, power converters and motors, load torque components, types of industrial loads, intermittent loads, stability, choice of drive, selection and sizing of drive case study.

Mathematical models- DC Motor, DC-DC Converter, Speed Sensing, Current sensing, Analysis of current loop, Analysis of speed loop, digital control implementation of dc drive

Induction motor torque expression, effect of harmonics in input voltage, v/f control, analog SPWM implementation, static rotor resistance control, Park's Transformation, Clarke's Transformation, three phase induction motor model in rotating frame of reference, Space vector modulation, Direct torque control.

Dynamics of SRM, BLDC Motors, Torque Expressions, Mathematical models, closed loop control, applications

PLC based control- PID control of dc drive, Bi-directional control of dc motor, induction motor starting, VFD control, temperature and vibration control.

Reference Books

- 1 Automation, Production Systems & Computer Integrated Manufacturing, Mikell P. Groover, 3rd, PHI.
- 2 Modern Power Electronics & AC Drives, B K BOSE, 1ST, PEARSON.
- 3 Industrial Automation and Robotics, A.K Gupta, S.K. Arora,, 3RD, Laxmi Publication (P) Ltd..
- 4 Fundamentals of Electrical Drives, DUBEY GOPAL K, 3rd, Alpha science Int Ltd.

23ILA3304E - INDUSTRIAL DRIVES AND CONTROL (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3304E	INDUSTRIAL DRIVES AND CONTROL	ID&C	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Select and size electric drive for industrial automation application	3	PO1, PO5, PSO1
CO2	Analyze dc drives for industrial automation	4	PO2, PO5, PSO1
CO3	Analyze ac drives for industrial automation	4	PO2, PO5, PSO1
CO4	Analyze BLDC and SRM drives for industrial automation	4	PO2, PO5, PSO1
CO5	Analyze PLC control for industrial automation	4	PO2, PO5, PSO1
CO6	Test and Analyze electrical motor drives for industrial automation	4	PO2, PO5, PSO1
CO7	Test the dynamics of industrial drives using MATLAB	3	PO1, PO5, PSO1

Syllabus

Electric drive components, power converters and motors, load torque components, types of industrial loads, intermittent loads, stability, choice of drive, selection and sizing of drive case study

Mathematical models- DC Motor, DC-DC Converter, Speed Sensing, Current sensing, Analysis of current loop, Analysis of speed loop, digital control implementation of dc drive

Induction motor torque expression, effect of harmonics in input voltage, v/f control, analog SPWM implementation, static rotor resistance control, Park's Transformation, Clarke's Transformation, three phase induction motor model in rotating frame of reference, Space vector modulation, Direct torque control.

Dynamics of SRM, BLDC Motors, Torque Expressions, Mathematical models, closed loop control, applications

PLC based control- PID control of dc drive, Bi-directional control of dc motor, induction motor starting, VFD control, temperature and vibration control.

Reference Books

23ILA3405M - INDUSTRIAL COMMUNICATION PROTOCOLS AND CYBER SECURITY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3405M	INDUSTRIAL COMMUNICATION PROTOCOLS AND CYBER SECURITY	ICPCS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Industrial data communication Technologies, it encompass a variety of methods and protocols used to enable communication and data exchange between industrial devices, systems, and components. These technologies are crucial for the operation, control, and monitoring of industrial processes, machinery, and automation systems.	2	PO1, PO5, PSO1
CO2	Understanding various industrial protocols and standards is essential for professionals in fields such as industrial automation, control systems engineering, and industrial networking.	2	PO2, PO4, PSO2
CO3	Understanding the concepts of information security and hacking tools is crucial for professionals working in cybersecurity, IT security, and related fields.	2	PO2, PO6, PSO2
CO4	Apply knowledge on concept of Cybercrimes and Malwares-Understanding cybercrimes and malwares is crucial for cybersecurity professionals and those involved in IT security.	3	PO2, PO6, PSO2

Syllabus

INDUSTRIAL DATA COMMUNICATION Dedicated and shared communication channels, switching techniques, communication channels, layered architecture and protocols, communication technologies, standards for information exchange.

PROTOCOLS and STANDARDS Modbus Protocol Overview. PROFIBUS-FMS, DP, PA and technology overview, DNP3 IP based Real Time data Transmission, Introduction to Industrial Network Technology CAN and CiA, Technical Overview, CAN Kingdom, CAN open.

INFORMATION SECURITY, HACKING TOOLS Introduction, Encryption and Decryption Authentication, Digital signature, Message digest, cyber security standards. Identifying a target-Vulnerability, Attack tools, Attack methods, Smartphone Security, Smartphone Security Guidelines, Communicating Securely through Voice and Messages with a Smartphone, Secure Voice Communication, Sending Messages Securely.

CYBER CRIMES and MALWARES Introduction to Cyber Crime, Classification of Cyber Crimes, Reasons for Commission of Cyber Crimes, Malware Types, Cyber Security Initiatives in India, Counter Cyber Security initiatives in India -Wireless Security, Major Issues With WLAN, Secure WLAN, Wi-Fi at Home.

Reference Books

- 1 Industrial Communication Systems, Hubert Kirmann, Knut Schwalenberg, and Christine Rossbach, 2016, Wiley.
- 2 Industrial Communication Technology Handbook, Richard Zurawski, 2014, CRC Press.
- 3 Industrial Cybersecurity: Efficiently Secure Critical Infrastructure Systems, Pascal Ackerman and Joel Langill, 2016, CRC Press.
- 4 Cyber Security and Industrial Communication Protocols, Rajveer Singh and Krishna Chand Gupta, 2018, Notion Press.

23ILA3406M - DIGITAL MANUFACTURING AND DESIGN (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3406M	DIGITAL MANUFACTURING AND DESIGN	DMD	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Digital thread principles to manufacturing processes	3	PO1, PSO1
CO2	Apply data analytics for digitalization of manufacturing process	3	PO1, PSO1
CO3	Analyze cybersecurity for Digitalization of manufacturing processes	4	PO2, PSO1
CO4	Analyze model based manufacturing systems for digital manufacturing	4	PO2, PSO1

Syllabus

Digital Thread: Transition to Digital Manufacturing, Manufacturing Supply Chains, Digital Manufacturing Security, Data Storage, Data Singularity, Data Security and Disaster Recovery, Interoperability and Data Formats, Technical Data Packages

Manufacturing Process Analysis & Collaborative Enterprise: Data Collection, Data Analytics-computational techniques and platforms, intelligent machining-controllers, software, Challenges and Opportunities in Advanced Manufacturing Adoption, Examples of Emerging Data Collection Technologies

Cyber security in manufacturing: Digital Manufacturing Security, Information Security Framework, Application of Information Security in Digital Manufacturing, Securing End to End Process via Security Development Life Cycle, Network Security and Authentication, Shipping, RFID tags, Mobile Device Security and Wireless Communication, Intellectual Property Protection from Threats

Model Based Systems Engineering-Introduction to Systems Engineering, Business Impacts of Systems Engineering, Model-Based Systems Engineering Methodologies, Systems Modeling Language (SysML), Model-Based Systems Engineering (MBSE) Application Strategies, The Model-Based Enterprise-Design Activities, Manufacturing Planning Activities, Quality Requirements and Quality Planning Activities

Reference Books

- 1 Digital Manufacturing and Assembly Systems in Industry 4.0 (Science, Technology, and Management), Kaushik Kumar, Divya Zindani, J. Paulo Davim, 2019, CRC press..
- 2 Automation, Production Systems & Computer Integrated Manufacturing, Mikell P. Groover, 2012, PHI Learning.
- 3 Digital Manufacturing: Design, Technology, and Innovation, Luciano Batista, J. Paulo Davim, 2015, CRC Press.
- 4 Additive Manufacturing Technologies: 3D Printing, Rapid Prototyping, and Direct Digital Manufacturing, Ian Gibson, David W. Rosen, Brent Stucker, 2018, Springer.

23ILA3507 - SMART SENSORS AND SENSOR NETWORKING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3507	SMART SENSORS AND SENSOR NETWORKING	SSSN	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basics of smart sensors and micromachining	2	PO1, PO3
CO2	Apply the sensor communication protocols	3	PO3, PO4
CO3	Apply the packaging, testing and reliability of smart sensors	3	PO1, PO2
CO4	Apply Power sources for WSN-Power generation-conversion	3	PO3, PO4
CO6	Demonstrate various experiments related to basics of smart sensors and sensor networking	3	PO1

Syllabus

Basics of smart sensors and micromachining: Introduction, Mechanical-Electronic transitions in sensing, nature of sensors, overview of smart sensing and control systems, integration of micromachining and microelectronics, introduction to micromachining, bulk micromachining, wafer bonding, surface micromachining, other micromachining techniques for Sensor Design

Sensor Communication and MEMS-Wireless zone sensing, surface acoustical wave devices, intelligent transportation system, RF-ID, Micro optics, micro-grippers, micro-probes, micro- mirrors, FEDs, communications for smart sensors-sources and standards, automotive protocols, industrial networks, office and building automation, home automation, protocols in silicon, other aspects of network communications.

Packaging, Testing and Reliability of Smart Sensors-Introduction, Semiconductor packaging applied to sensors, reliability implications, testing smart sensors. Unit Standards for Smart Sensors-Introduction, setting the standards for smart sensors and systems, IEEE 1451.1, IEEE 1451.2, IEEE P1451.3, IEEE 1451.4, extending the systems to network.

Introduction to Wireless Sensor Networks-Motivations, Applications, Performance metrics, energy harvesting wireless sensors, Power sources for WSN-Power generation-conversion

Reference Books

- 1 Understanding Smart Sensors, Randy Frank, 2013, Artech House Publications.
- 2 MEMS and Microsystems: Design and Manufacture, Tai-Ran Hsu, 2002, Pearson International Edition.
- 3 Micro and Smart Systems: Technology and modeling, G. K. Ananthasuresh, K. J. Vinoy, S. Gopalakrishnan, K. N. Bhat, V. K. Aatre, 2010, Willey Publications .
- 4 Microgrids: Architectures and Control, Nikos Hatziaargyriou (Ed.), 2014, Wiley-IEEE Press.
- 5 Control and Optimization Methods for Electric Smart Grids, Aranya Chakraborty, 2011, Springer.

23ILA3508 - PLC PROGRAMMING & CONTROL (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ILA3508	PLC PROGRAMMING & CONTROL	PLCPC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the Programming Logic architecture	3	PO1, PSO1
CO2	Apply PLC Programming features	3	PO1, PSO1
CO3	Apply knowledge PLC Programming for various automation cases	3	PO1, PSO1
CO4	Apply PLC programming for industrial control applications	3	PO1, PSO1

Syllabus

Introduction to PLC: Review of Sensors, actuators and controllers. PLC Overview - PLC Selection - Number Systems and Codes - IO Devices & Motor Controls - NONC & RLO Concept - Creating Relay Logic Diagrams. TIA Portal, PLC Industry hardware specifications -Siemens, ABB, Mitsubishi PLC.

PLC Programming features - Programming Logic Gate Functions - Ladder Logic -Relay type instructions - PLC Timer Instructions - PLC Counter Instructions - Math Instructions-Data manipulation and math instructions.

Programming Cases: Compare, Jump & MCR Instructions - Subroutine Functions - Logic & Bit Shift Instructions - Data Handling Instructions Communication architectures - PID modules - functions-PWM modules.

PLC Based control systems- Temperature controller, Water-level control, conveyer control, elevator control, bottle filling system, traffic light controller, Motor control.

Reference Books

- 1 Programmable Logic Controllers , F.D. Petruzella, , 2018, Tata Mc-Graw Hill .
- 2 Process/Industrial Instrument and Controls Handbook , McMillan, G.K, 2019, McGraw- Hill.

23IMP3101A - NATURAL LANGUAGE PROCESSING & APPLICATIONS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IMP3101A	NATURAL LANGUAGE PROCESSING & APPLICATIONS	NLPA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamental concepts in NLP and review different NLP applications.	3	PO1, PSO2
CO2	Illustrate and Apply the basic structure of NLP Pipelines for text-based applications.	3	PO2, PSO2
CO3	Apply and Analyze the performance of algorithms for semantics in NLP and prioritize them for the existing applications.	4	PO1, PSO2
CO4	Apply machine learning models for finding solutions for problems in NLP and judge their performance.	3	PO2, PSO2
CO5	Apply the concept of attention in language modelling and analyze the performance of LLMs.	4	PO1, PO2, PSO2
CO6	Evaluate and Analyze the operations applied in NLP pipelines through Python code development using NLTK, SpaCY, and Tensorflow Frameworks.	5	PO1, PO2, PO3, PSO2
CO7	Create a small scale LLM for NLP Applications from scratch and Evaluate the created model against pre-trained models from Hugging Face Repository.	6	PO1, PO2, PO3, PSO2

Syllabus

NLP: Overview and Motivation. Human Language from Computers Viewpoint and language building blocks. Words, text, and document models. A Chatbot NLP pipeline. Word tokenization, Building vocabulary with tokenizer and sentiment. Challenges in NLP. Approaches in NLP using NLTK and TensorFlow frameworks.

NLP Pipeline: Data Acquisition, Text Extraction and Cleanup, Pre-Processing, Feature Engineering, Modeling

Finding meaning in word counts (semantic analysis): From word counts to topic scores, Latent semantic analysis, Singular value decomposition, Principal component analysis, Word2Vec, GloVe, Distance and similarity, Steering with feedback, Topic vector power.

Deeper learning (neural networks): Semantic queries and analogies, Word vectors, Learning meaning, Convolutional neural nets, RNNs, LSTMs, and Language Models for Text processing. Sequence-to-sequence models and attention in transformer-based Large Language models. Text Classification, summarization, Application pipeline building.

Natural Language Processing with Attention Models: BERT Transformer and CHATGPT-3: Architecture, Datasets, and Performance. Translate complete English sentences into German using an encoder-decoder attention model, Build a Transformer model to summarize text, Use T5 and BERT models to perform question-answering, and Build a chatbot using a Reformer model.

Reference Books

- 1 Practical Natural Language Processing , Sowmya Vajjala, Bodhisattwa Majumder, Anuj Gupta, Harshit Surana , 2020, O'Reilly Media, Inc. ISBN: 9781492054054 .

23IMP3101E - NATURAL LANGUAGE PROCESSING & APPLICATIONS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IMP3101E	NATURAL LANGUAGE PROCESSING & APPLICATIONS	NLPA	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamental concepts in NLP and review different NLP applications.	3	PO1, PSO1
CO2	Illustrate and Apply the basic structure of NLP Pipelines for text-based applications.	3	PO1, PSO1
CO3	Apply and Analyze the performance of algorithms for semantics in NLP and prioritize them for the existing applications.	3	PO1, PO2, PSO1
CO4	Apply machine learning models for finding solutions for problems in NLP and judge their performance.	4	PO1, PO2, PSO1
CO5	Apply the concept of attention in language modelling and analyze the performance of LLMs.	4	PO1, PO2, PO3, PSO1
CO6	Evaluate and Analyze the operations applied in NLP pipelines through Python code development using NLTK, SpaCY, and Tensorflow Frameworks.	5	PO1, PO2, PO3, PSO1
CO7	Design and validate NLP applications for text summarization, classification and generation through Python code	5	PO2, PO3, PSO1

Syllabus

NLP: Overview and Motivation. Human Language from Computers Viewpoint and language building blocks. Words, text, and document models. A Chatbot NLP pipeline. Word tokenization, Building vocabulary with tokenizer and sentiment. Challenges in NLP. Approaches in NLP using NLTK and TensorFlow frameworks.

NLP Pipeline: Data Acquisition, Text Extraction and Cleanup, Pre-Processing, Feature Engineering, and Modeling. Evaluation, Post-Modeling Phases. TF-IDF vectors, Bag of words

Finding meaning in word counts (semantic analysis): From word counts to topic scores, Latent semantic analysis, Singular value decomposition, Principal component analysis, Word2Vec, GloVe, Distance and similarity, Steering with feedback, Topic vector power.

Deeper learning (neural networks): Semantic queries and analogies, Word vectors, Learning meaning, Convolutional neural nets, RNNs, LSTMs, and Language Models for Text processing. Sequence-to-sequence models and attention in transformer-based Large Language models. Text Classification, summarization, Application pipeline building.

Natural Language Processing with Attention Models: BERT Transformer and CHATGPT-3: Architecture, Datasets, and Performance. Translate complete English sentences into German using an encoder-decoder attention model, Build a Transformer model to summarize text, Use T5 and BERT models to perform question-answering, and Build a chatbot using a Reformer model.

23IMP3202A	DATA ENGINEERING	DE	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply big data use cases from selected business domains.	3	PO1, PO2
CO2	Construct NoSQL big data management	3	PO1, PO2
CO3	Install, configure, and run Hadoop and HDFS	4	PO1, PO2
CO4	Perform map-reduce analytics using Hadoop	4	PO1, PO2
CO5	Implement the lab experiments for big data application	5	PO1, PO2

Syllabus

A distributed system comprises independent computers working together, offering better scalability, reliability, performance, and cost efficiency than centralized systems. It distributes tasks across nodes to reduce failure risk and boost speed. However, it faces challenges with data consistency, communication delays, and security. Big Data involves vast volumes of rapidly generated data that traditional systems can't handle. Technologies like Hadoop, Spark, and NoSQL databases manage and analyze this data effectively. Growth in the internet, social media, IoT, and mobile devices drives Big Data, with cloud platforms providing scalable solutions for better decision-making and strategic benefits.

Big Data engineering has evolved with NoSQL databases, which address SQL databases' limitations in scalability, flexibility, and handling unstructured data. NoSQL databases, including key-value, document-based, and graph models, offer schema-less flexibility and manage complex relationships efficiently. They use distribution models like master-slave and peer-peer replication for high availability and fault tolerance, and employ sharding and replication to boost performance. While often relaxing consistency requirements, they use version stamps to manage data. The Hadoop ecosystem, with tools like HDFS, MapReduce, Hive, Pig, and HBase, supports distributed storage and processing for effective Big Data management and insights.

Hadoop is a powerful framework designed for distributed storage and processing of large datasets using the MapReduce programming model. It efficiently partitions data for parallel processing, utilizing a distributed file system (HDFS) to ensure reliability and scalability. Hadoop supports various data formats and interfaces, including Java, for seamless integration and management of data workflows. Apache Spark, with its Resilient Distributed Datasets (RDDs), enhances data processing speed by leveraging in-memory computation. Together, Hadoop and Spark form the backbone of Big Data analytics, enabling organizations to derive valuable insights and solutions from massive datasets across diverse applications and industries.

MapReduce workflows involve splitting data into smaller chunks for parallel processing in the "map" phase, followed by aggregation in the "reduce" phase. MR-Unit allows for unit testing MapReduce logic with local test data. A MapReduce job run includes input splitting, mapping, shuffling, sorting, and reducing. Classic MapReduce and YARN handle job execution and resource management, with YARN providing enhanced scalability. Failures are managed through built-in recovery mechanisms. Job scheduling prioritizes tasks, while shuffle and sort organize intermediate data. MapReduce supports various input and output formats for flexible data processing.

Setting up a Hadoop environment starts with installing VMware to create virtual machines for Hadoop components like HDFS and YARN. Basic Linux commands are crucial for managing Hadoop files. Running a simple word count MapReduce program introduces the parallel processing paradigm, while more complex tasks like finding maximum temperatures or processing patent records showcase MapReduce's efficiency in data analytics. Features like Partitioner for workload optimization and tasks such as calculating averages or matrix multiplication highlight Hadoop's versatility in distributed computing.

A distributed system comprises independent computers working together, offering better scalability, reliability, performance, and cost efficiency than centralized systems. It distributes tasks across nodes to reduce failure risk and boost speed. However, it faces challenges with data consistency, communication delays, and security. Big Data involves vast volumes of rapidly generated data that traditional systems can't handle. Technologies like Hadoop, Spark, and NoSQL databases manage and analyze this data effectively. Growth in the internet, social media, IoT, and mobile devices drives Big Data, with cloud platforms providing scalable solutions for better decision-making and strategic benefits.

Big Data engineering has advanced with NoSQL databases, overcoming SQL databases' limitations in scalability, flexibility, and handling unstructured data. NoSQL databases, such as key-value and document-based models, offer schema-less flexibility and are suited for diverse data types. Graph databases manage complex relationships efficiently. NoSQL distribution models like master-slave and peer-peer replication ensure high availability and fault tolerance, while sharding and replication enhance performance. They often relax consistency requirements for higher availability and use version stamps to manage consistency. The Hadoop ecosystem supports distributed storage and processing, with tools like HDFS, MapReduce, Hive, Pig, and HBase, enabling effective Big Data management and insights.

Hadoop is a powerful framework designed for distributed storage and processing of large datasets using the MapReduce programming model. It efficiently partitions data for parallel processing, utilizing a distributed file system (HDFS) to ensure reliability and scalability. Hadoop supports various data formats and interfaces, including Java, for seamless integration and management of data workflows. Apache Spark, with its Resilient Distributed Datasets (RDDs), enhances data processing speed by leveraging in-memory computation. Together, Hadoop and Spark form the backbone of Big Data analytics, enabling organizations to derive valuable insights and solutions from massive datasets across diverse applications and industries.

MapReduce workflows involve splitting data into smaller chunks for parallel processing in the "map" phase, followed by aggregation in the "reduce" phase. MR-Unit allows for unit testing MapReduce logic with local test data. A MapReduce job run includes input splitting, mapping, shuffling, sorting, and reducing. Classic MapReduce and YARN handle job execution and resource management, with YARN providing enhanced scalability. Failures are managed through built-in recovery mechanisms. Job scheduling prioritizes tasks, while shuffle and sort organize intermediate data. MapReduce supports various input and output formats for flexible data processing.

Setting up a Hadoop environment typically begins with installing VMware to create virtual machines for hosting Hadoop components like HDFS and YARN. Basic Linux commands such as file creation, modification, copying, and deletion are essential for managing files within the Hadoop file system (hdfs). Running a simple word count MapReduce program helps grasp the foundational MapReduce paradigm, where data is processed in parallel across a cluster. More complex tasks, like finding maximum temperatures by year or processing patent records, illustrate MapReduce's capability to handle diverse data analytics tasks efficiently. Implementing features like Partitioner usage for workload optimization and calculating averages or performing matrix multiplication demonstrates the versatility and power of Hadoop in distributed computing environments.

23IMP3303A - BIO MEDICAL SIGNAL AND IMAGE ANALYSIS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IMP3303A	BIO MEDICAL SIGNAL AND IMAGE ANALYSIS	AMSIA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Basic concepts related to Biomedical signals and images	2	PO1, PO2, PO6, PSO2
CO2	Understand the Bio medical signal processing methods to eliminate the artefacts arise in biomedical signals	2	PO1, PO2, PO6, PSO2
CO3	Understand the Biomedical imaging and enhancement techniques	2	PO1, PO2, PO6, PSO2
CO4	Apply signal processing approaches for biomedical signals and images	3	PO1, PO2, PO6, PSO2
CO5	Evaluate biomedical signal and image processing techniques	5	PO1, PO2, PO6, PSO2
CO6	evaluate advanced signal processing approaches through matlab	5	PO1, PO2, PO6, PSO2
CO7	Analyze biomedical signals using recurrent deep learning networks and time-frequency analysis.	4	PO1, PO2, PO6, PSO2

Syllabus

An introductory exploration of biomedical signals, delving into their characteristics and various examples such as temperature, blood pressure (BP), electromyography (EMG), electrocardiography (ECG), and electroencephalography (EEG) is presented. This encompasses the rhythmic excitation of the heart and the intricate nature of heart activity. The discussion covers the objectives and difficulties associated with analyzing biomedical signals. The acquisition techniques for biomedical images such as X-ray, computerized tomography (CT), magnetic resonance imaging (MRI), and ultrasound are addressed, along with the challenges involved in image analysis

Digital filtering techniques in biomedical signal processing address noise models, pre-processing, high-frequency noise elimination, baseline wander removal, powerline interference elimination, medical signal detection, and waveform complexity measures.

Image model, sampling and quantization, image geometry, spatial domain, and Frequency domain enhancement techniques.

Advanced Applications Wavelet decomposition of physiological signals for analysis Wavelets approach for Biomedical signal and image artifact reduction techniques

Biomedical signals using recurrent deep learning networks and time-frequency analysis.

Experiments: Nature of Biomedical Signals and images Time and frequency domain analysis techniques wavelet decomposition ecg sampling and quantization wave form representation of signals

Skilling: practicing of ECG EEG EMG Signal Visualization and visualization annotation frequency, and time-frequency domains Artifact Removal and Preprocessing Feature Extraction

23IMP3404M	DATA VISUALIZATION	DV	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Data science, data collection, and data preprocessing	2	PO1, PSO1
CO2	Applying descriptive statistical sampling techniques to explore various real world data sets	3	PO1, PO2, PO7, PSO1
CO3	Build data wrangling models with data science libraries like NumPy and Pandas	3	PO1, PO2, PO7, PSO1
CO4	Applying various data visualization tools to explore the data	4	PO2, PO7, PSO1

Syllabus

Data, Data Analytics, Data Mining, and Knowledge Discovery Data and Relations, The Iris Data Set, Data Scales, Set and Matrix Representations Relations, Data Visualization Using Excel: Types of Data, Meaning, Chart Elements and Chart Types, Data Labels, Using Pictures in Column Charts, Creating Combination charts, Creating Combo charts with second axis, Discriminating Series & Categorical Axis, Other charts: Band chart, Gantt chart, Waterfall chart; Pivot charts, Pivot charts with pivot table, Pivot chart without pivot table

Dissimilarity Measures, Similarity Measures, Sequence Relations, Sampling, and Quantization Data Preprocessing, Error Types, Error Handling, Filtering, Data Transformation, Data Integration.

Visualizing amounts, Visualizing distributions: Histograms and density plots, Visualizing proportions, Visualizing associations among two or more quantitative variables, Visualizing trends, Visualizing geospatial data

Handling overlapping points, Titles, captions, and tables, Redundant coding, Principal Component Analysis, Multidimensional Scaling, Sammon Mapping, Auto-encoder, Histograms, Spectral Analysis

23IMP3506 - INTRODUCTION TO QUANTUM COMPUTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IMP3506	INTRODUCTION TO QUANTUM COMPUTING	MMP	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Quantum computing leverages principles like superposition and entanglement, allowing qubits to process information more efficiently than classical bits. This technology holds transformative potential in areas like cryptography, optimization, and simulation.	2	PO2
CO2	Demonstrating qubits involves showing how their quantum properties, such as superposition and entanglement, exponentially boost computational power. This enables quantum algorithms to surpass classical ones in tasks like cryptography, optimization, and simulation.	2	PO3, PO4
CO3	Quantum phase estimation, Fourier transform, and eigenvalue estimation utilize quantum mechanics to efficiently handle tasks like cryptography, simulation, and machine learning, offering advantages over classical approaches.	3	PO3, PO5
CO4	Hidden subgroup algorithms like Grover's use quantum parallelism and interference to efficiently search unsorted databases and find hidden patterns. They offer exponential speedup over classical algorithms, impacting cryptography and optimization.	4	PO3, PO12

Syllabus

23IOT3101A - INDUSTRIAL INTERNET OF THINGS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IOT3101A	INDUSTRIAL INTERNET OF THINGS	IIOT	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the Industry 4.0 concepts and develop innovative solutions for emerging industrial challenges.	3	PO2, PO3, PO5, PSO1
CO2	Analyze the proficiency of key protocols including HART, BACnet, AMQP, OPC-UA.	4	PO2, PO3, PO5, PSO1
CO3	Implementing process control systems, incorporating data acquisition (DAQ) and PLC programming, within industrial applications.	3	PO2, PO3, PO5, PSO1
CO4	Understand the principles and importance of SCADA and PLCs in industrial process control with a case study on predictive maintenance.	4	PO2, PO3, PO5, PSO1
CO5	Analyse and Propose improvements and optimizations for health monitoring, IoT smart city, smart irrigation, and robot surveillance systems.	4	PO2, PO3, PO5, PSO1
CO6	Evaluate and interpret data from Industrial IoT sensors and devices to optimize process efficiency and maintenance strategies.	5	PO2, PO3, PO5, PSO2
CO7	Implement Emerging Trends and Technologies in IIoT	3	PO2, PO3, PO5, PSO2

Syllabus

This module is designed to provide you with a comprehensive understanding of the key concepts, technologies, and applications driving Industry 4.0.

This module empowers to proficiently apply and compare various IIoT protocols including MQTT, CoAP, OPC-UA, AMQP, HTTP/HTTPS, DDS, Modbus (RTU/TCP/IP), DNP3, and Zigbee for effective industrial communication and data exchange.

This course provides a comprehensive exploration of data acquisition systems and their pivotal role in modern industrial processes.

This module provides an in-depth exploration of SCADA (Supervisory Control and Data Acquisition) systems, focusing on their architecture, software components, and functionalities essential for industrial automation and process control.

This module offers an in-depth examination of real-world case studies showcasing the application of IIoT technologies across various industrial sectors.

23IOT3101R - INDUSTRIAL INTERNET OF THINGS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IOT3101R	INDUSTRIAL INTERNET OF THINGS	IIOT	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the Industry 4.0 concepts and develop innovative solutions for emerging industrial challenges.	3	PO2, PO3, PO5, PSO1
CO2	Analyze the proficiency of key protocols including HART, BACnet, AMQP, OPC-UA.	4	PO2, PO3, PO5, PSO1
CO3	Implementing process control systems, incorporating data acquisition (DAQ) and PLC programming, within industrial applications.	3	PO2, PO3, PO5, PSO1
CO4	Analyze the principles of SCADA and PLCs in industrial process control with a case study on predictive maintenance.	4	PO2, PO3, PO5, PSO1
CO5	Evaluate and interpret data from Industrial IoT sensors and devices to optimize process efficiency and maintenance strategies.	5	PO2, PO3, PO5, PSO1
CO6	Evaluate IIoT applications utilizing key technologies to enhance industrial automation and connectivity	4	PO2, PO3, PO5, PSO1

Syllabus

This module is designed to provide you with a comprehensive understanding of the key concepts, technologies, and applications driving Industry 4.0.

This module empowers to proficiently apply and compare various IIoT protocols including MQTT, CoAP, OPC-UA, AMQP, HTTP/HTTPS, DDS, Modbus (RTU/TCP/IP), DNP3, and Zigbee for effective industrial communication and data exchange.

This course provides a comprehensive exploration of data acquisition systems and their pivotal role in modern industrial processes.

This module provides an in-depth exploration of SCADA (Supervisory Control and Data Acquisition) systems, focusing on their architecture, software components, and functionalities essential for industrial automation and process control.

This module offers an in-depth examination of real-world case studies showcasing the application of IIoT technologies across various industrial sectors.

23IOT3202A - EDGE COMPUTING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IOT3202A	EDGE COMPUTING	EC	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Outline the fundamental concepts and advantages of Fog and Edge Computing (FEC), infer the opportunities and applications.	2	PO1, PO5, PSO2
CO2	Apply network slicing strategies with effective management techniques to optimize resource allocation. Build network virtualization for efficient edge computing, while exploring optimization techniques for fog computing to ensure efficient data processing.	3	PO2, PO5, PSO2
CO3	Implement and analyze middleware solutions for Fog and Edge Computing, addressing security management	4	PO1, PO3, PO5, PSO2
CO4	Analyze the applicability and needs for Edge/Fog Computing in various real-time projects such as health monitoring, smart city management, and smart transportation	4	PO1, PO3, PO5, PSO2
CO5	focuses on evaluating performance metrics and deployment strategies, as well as understanding emerging trends	4	PO1, PO3, PO5, PSO2

Syllabus

Internet of Things (IoT) and New Computing Paradigms: Introduction, New Computing Paradigms, Fog and Edge Computing Completing the Cloud, Advantages of FEC, Hierarchy of Fog and Edge Computing, Business Model, Opportunities and Challenges. Addressing the Challenges in Federating Edge Resources

Architecture: Integrating IoT + Fog + Cloud Infrastructures, Network Slicing, and its Management in 5 G, Network Virtualization techniques in Edge computing, Optimization in Fog Computing.

Middleware for Fog and Edge Computing: A Lightweight Container Middleware for Edge Cloud Architectures. Security Management, Security Management for Edge Cloud Architectures, Blockchain and its Applications for security in Edge Cloud Architectures.

Applications, and Issues: Exploiting Fog Computing in Health Monitoring, Fog Computing Model for Smart city management. Fog Computing Model for Evolving Smart Transportation Applications.

Performance, Deployment, and Emerging Trends: Key Performance Indicators (KPIs) in Edge/Fog Computing, Benchmarking and Performance Evaluation Techniques. Strategies for scaling Edge/Fog Infrastructure, Resource Allocation and Management, Machine Learning and AI Integration with Edge Computing, Energy-efficient Edge Computing Solutions.

23IOT3203A - PRECISION AGRICULTURE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IOT3203A	PRECISION AGRICULTURE	PA	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the Principles and Concepts of Precision Agriculture	2	PO1, PO3, PSO1
CO2	Elucidate the Various Technologies and Tools in Precision Agriculture	2	PO1, PO4, PO5, PSO1
CO3	Apply the strategies of Data Collection, Management, and Analysis for Decision-Making in Agriculture	3	PO1, PO3, PO4, PO5, PSO1
CO4	Demonstrate the Application of Precision Agriculture in Crop Management,	3	PO2, PO3, PO4, PO5, PSO1
CO5	Analyzing the resource Optimization, and Livestock Farming	4	PO2, PO3, PO4, PO5, PSO1

Syllabus

Introduction to Precision Agriculture Definition and scope-Historical Perspective-Benefits and challenges-Economic benefits-Environmental benefits-Farm management improvement-Recordkeeping improvement Importance of Precision Agriculture and mapping in farming for decision making- What is Precision Agriculture Decision making process-Value of maps in making decision Geographical concepts of PA Coordinate Systems-Scales- Projection-Resolution

Tools and Technologies of Precision Agriculture-Global Positioning System (GPS) and Geographic Information Systems (GIS)- GPS Basics (Space Segment, Receiver Segment, Control Segment)-Error and correction-Function and usage of GPS- Introduction to GIS-Basics of GIS- IDI devices usage in Precision Agriculture-Yield monitor -VR Application (fertilizers, seed, chemicals) Remote sensing-Aerial and satellite imagery-Above ground (non-contact) sensors Function of GIS-Use of GIS for decisions- Remote sensing techniques (satellite imagery, drones)-Sensor technology (soil sensors, weather stations)- Automation and robotics

Processes of Precision Agriculture Data Management and Analysis-Data collection methods-Data collection-Methods of data collection (traditional and new)-Data Collection by Grid Sampling-Collecting Data by Yield Monitor-Remote Sensing- Using of sensors for data collection Data storage and management systems analytics and decision support tools Data analysis- Concepts of data analysis-Resolution-Surface analysis Analysis application-a. Interpretive products (map, charts, application map etc

Precision Agricultural technology integration into a farm & business management of technology Goals based on end results of Precision Agriculture- Recordkeeping-Spatial Analysis-Variable Rate Application of negative environmental impact/technology cost optimization Economic of precision agriculture & determining equipment and software-Review of Cost/Benefit of Precision Agriculture-System vs. parcels- Making a selection

Precision Crop Management-Variable rate technology (VRT) Precision planting and seeding-Precision irrigation and fertilization-Crop health monitoring and diagnostics Precision Livestock Farming Monitoring animal health and behavior-Automated feeding and milking systems-Environmental control systems in animal housing Environmental and Socio-Economic Implications Environmental sustainability-Resource efficiency and conservation-Economic benefits and challenges-Socio-economic impacts on farmers and rural communities

23IOT3204A - SMART FARMING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IOT3204A	SMART FARMING	SF	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles and components of smart farming systems	2	PO2
CO2	Apply with key technologies used in smart agriculture, including IoT, AI, and robotics	3	PO1
CO3	Apply knowledge on how to collect, manage, and analyze agricultural data for decision-making	3	PO3, PSO1
CO4	Explore applications of smart farming in crop management, livestock monitoring, and resource optimization	3	PO4, PSO1
CO5	Apply knowledge on the potential benefits, challenges, and ethical considerations of smart farming	3	PO4

Syllabus

Introduction to Smart Farming Definition and scope of smart farming Evolution of agricultural technology Benefits and challenges of smart farming Key Technologies in Smart Farming Internet of Things (IoT) devices and sensors Unmanned Aerial Vehicles (UAVs) and drones Artificial Intelligence (AI) and machine learning Robotics and automation

Data Collection and Management Sensor networks and data acquisition Data storage and cloud computing for crop monitoring Variable rate technology (VRT) for inputs optimization Livestock Monitoring and Management Wearable sensors for animal health monitoring Automated feeding and milking systems Environmental monitoring in animal housing

Farm Management Systems Integrated farm management software-Decision support systems for planning and optimization Supply chain management and traceability Data Analytics and Decision Support Predictive analytics for yield forecasting-Disease detection and pest management-Optimization algorithms for resource allocation

Emerging Trends in Smart Farming Blockchain technology for transparency and traceability-Vertical farming and urban agriculture Sustainable agriculture practices and regenerative farming Case Studies and Applications Real-world examples of smart farming implementation-Success stories and lessons learned from smart farms

Data standards and interoperability Precision Agriculture GPS/GIS applications in precision agriculture Remote sensing techniques , Monitoring crop health (NDVI - Normalized Difference Vegetation Index), assessing soil moisture, detecting pests or diseases early, and evaluating overall field conditions

23IOT3305A - DEEP LEARNING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IOT3305A	DEEP LEARNING	DL	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply optimization algorithms to solve neural networks, enhancing model performance through weight adjustment. Develop the ability to select and implement appropriate optimization techniques for various neural network architectures and problems.	3	PO1, PO2, PSO1
CO2	Apply CNN models and their variants to real-time data, including LeNet, AlexNet, ZF-Net, and VGGNet. Gain proficiency in implementing and optimizing these models for various real-time data scenarios.	3	PO1, PO2, PSO1
CO3	Apply RNN, Long Short Term Memory (LSTM), and autoencoders to relevant data tasks. Acquire the ability to design, train, and optimize these models for various sequential and feature extraction problems.	3	PO2, PO3, PSO1
CO4	Demonstrate variational autoencoders and generative neural models for data generation tasks. Develop expertise in building, training, and evaluating these models to create realistic synthetic data.	3	PO2, PO3, PSO1
CO5	Apply advanced deep learning models to complex data problems. Gain proficiency in implementing and optimizing cutting-edge neural network architectures for improved performance and accuracy.	3	PO2, PO3, PSO2
CO6	Apply and implement deep learning models on various datasets. Acquire the skills to adapt and optimize these models for diverse data types and applications.	3	PO2, PO3, PSO2
CO7	Develop, implement, and evaluate deep learning models on case studies using Keras and PyTorch. Gain expertise in applying these frameworks to real-world problems, ensuring effective and efficient model performance.	5	PO2, PO3, PSO2

Syllabus

Introduction to Deep learning, History of Deep Learning, McCulloch Pitts Neuron, Thresholding Logic, Perceptron's, Perceptron Learning Algorithm and Convergence, Multilayer Perceptron's (MLPs), Representation Power of MLPs, Sigmoid Neurons,

Bias Variance Tradeoff, L2 regularization, Early stopping, . Batch Normalization, Dataset augmentation, Parameter sharing and tying, Injecting noise at input, Dropout, Greedy Layer wise Pre-training

Better activation functions, better weight initialization methods, Learning Vectorial Representations of Words Convolutional Neural Networks, LeNet, AlexNet, ZF-Net, VGGNet, GoogLeNet, ResNet Object Detection RCNN, Fast RCNN, Faster RCNN, YOLO. Visualizing Convolutional Neural Networks, Guided Backpropagation,

Deep Dream, Deep Art, Recurrent Neural Networks, Backpropagation Through Time (BPTT), Vanishing and Exploding Gradients, Loss Functions in RNNs, Sequence Prediction, Gated Recurrent Units (GRUs), Long Short Term Memory (LSTM) Cells, Solving the vanishing gradient problem with LSTMs, Encoder Decoder Models: Regularization in autoencoders, Denoising autoencoders, Sparse autoencoders, Contractive autoencoders.

Attention Mechanism, Attention over images, Deep Belief networks, Markov Networks. Restricted Boltzmann Machines, Unsupervised Learning, Motivation for Sampling, Markov Chains, Gibbs Sampling for training RBMs, Contrastive Divergence for training RBMs, Variational autoencoders, Autoregressive Models: NADE, MADE, PixelRNN, Generative Adversarial Networks (GANs) Cycle GAN, Super resolution and Conditional GAN models, Deep Reinforcement learning

23IOT3305R - DEEP LEARNING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IOT3305R	DEEP LEARNING	DL	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and apply optimization algorithms to solve neural networks, enhancing model performance through weight adjustment. Develop the ability to select and implement appropriate optimization techniques for various neural network architectures and problems	3	PO1, PO2, PSO1
CO2	Apply CNN models and their variants to real-time data, including LeNet, AlexNet, ZF-Net, and VGGNet. Gain proficiency in implementing and optimizing these models for various real-time data scenarios.	3	PO1, PO2, PSO1
CO3	Apply RNN, Long Short Term Memory (LSTM), and autoencoders to relevant data tasks. Acquire the ability to design, train, and optimize these models for various sequential and feature extraction problems.	3	PO1, PO2, PSO1
CO4	Apply variational autoencoders and generative neural models for data generation tasks. Develop skills in constructing, training, and optimizing these models to create high-quality synthetic data.	3	PO2, PO3, PSO2
CO5	Apply and implement basic Neural Networks, various types of auto encoders, batch normalization, convolutional neural networks	3	PO2, PO3, PSO2
CO6	Construct , Design and develop basic and advanced neural networks, various types of autoencoders, batch normalization, and convolutional neural networks. Gain proficiency in constructing, training, and optimizing these models for diverse applications. Develop the ability to enhance model performance using advanced techniques.	5	PO2, PO3, PSO2

Syllabus

Introduction to Deep learning, History of Deep Learning, McCulloch Pitts Neuron, Thresholding Logic, Perceptron\\ , Introduction to Deep learning, History of Deep Learning, McCulloch Pitts Neuron, Thresholding Logic, Perceptron\\ Bias Variance Tradeoff, L2 regularization, Early stopping, . Batch Normalization, Dataset augmentation, Parameter sharing and tying, Injecting noise at input, Dropout,

Greedy Layer wise Pre-training, etter activation functions, better weight initialization methods, Learning Vectorial Representations of Words Convolutional Neural Networks, LeNet, AlexNet, ZF-Net, VGGNet, GoogLeNet, ResNet Object Detection RCNN, Fast RCNN, Faster RCNN, YOLO. Visualizing Convolutional Neural Networks, Guided Backpropagation,

Deep Dream, Deep Art, Recurrent Neural Networks, Backpropagation Through Time (BPTT), Vanishing and Exploding Gradients, Loss Functions in RNNs, Sequence Prediction, Gated Recurrent Units (GRUs), Long Short TermMemory (LSTM) Cells, Solving the vanishing gradient problem with LSTMs , Encoder Decoder Models:Regularization in autoencoders, Denoising autoencoders, Sparse autoencoders, Contractive autoencoders.

Attention Mechanism, Attention over images, Deep Belief networks, Markov Networks. Restricted Boltzmann Machines, Unsupervised Learning, Motivation for Sampling, Markov Chains, Gibbs Sampling for training RBMs, Contrastive Divergence for training RBMs, Variational autoencoders, Autoregressive Models:NADE, MADE, PixelRNN , Generative Adversarial Networks (GANs) Cycle GAN ,Super resolution and Conditional GAN models, Deep Reinforcement learning

23IOT3406M - DATA VISUALIZATION TECHNIQUES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IOT3406M	DATA VISUALIZATION TECHNIQUES	DVT	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the modelling of various types of data and comprehend the fundamentals of data visualization.	2	PO5, PSO2
CO2	Apply the methods and tools for non-spatial data visualization and utilize these methods and tools in practical scenarios.	3	PO5, PSO2
CO3	Apply the methods for scientific/spatial data visualization and web data visualization, and implement these methods in real-world applications.	3	PO5, PSO2
CO4	Analyze dashboards and their categories, apply visual analytics techniques to dashboards, and evaluate and assess dashboards and their categories to enhance their effectiveness through visual analytics.	4	PO5, PSO2

Syllabus

Visualization Fundamentals, Design principles, The Process of Visualization, Data Abstraction, Visual Encodings, Use of Color, Perceptual Issues, Designing Views, Interacting with Visualizations, Filtering and Aggregation Design Studies Information / Non-Spatial Data Visualization, Tabular Data, Tree Data, Graph Data, Text Data, Flow Data, Time-Series Data, Topological Visualization, Uncertainty, Visual Analytics.

Scientific / Spatial Data Visualization, Scalar Volumes, Iso-surfacing, Volume Rendering, Transfer Function Design, Vector Fields, Maps, Spatial Uncertainty Web data visualization: web structure data, web usage data ,web content data multimedia data visualization Information dashboard

categorizing dashboards,typical dashboard data, dashboard design issues and best practices, visual perception,limits of short term memory visually encoding data, Gestalt principles, principles of visual perception for dashboard design

Characteristics of dashboards, key goals in visual design process, dashboard display media, designing dashboards for usability, meaningful organization, maintaining consistency aesthetics of dashboards, testing for usability

Reference Books

23IOT3407M - APPLIED MACHINE LEARNING FOR AGRICULTURE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IOT3407M	APPLIED MACHINE LEARNING FOR AGRICULTURE	AMLA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the principles of machine learning and its applications in agriculture	2	PO1, PO3, PSO1
CO2	Apply the Data Preprocessing and Analysis for Agricultural Machine Learning	3	PO1, PO4, PO5, PSO1
CO3	Exercising the Machine Learning Algorithms for Agriculture	3	PO2, PO3, PO4, PO5, PSO1
CO4	Deployment the Machine Learning Models for Agricultural Tasks	3	PO3, PO4, PO5, PSO1

Syllabus

Introduction to Machine Learning in Agriculture Definition and scope of machine learning-Applications of machine learning in agriculture Benefits and challenges of applying machine learning in agriculture Data Collection and Preprocessing Sources of agricultural data (satellite imagery, sensor data, weather data, etc.)-Data cleaning and preprocessing techniques-Feature engineering for agricultural datasets

Supervised Learning Techniques Regression for yield prediction-Classification for crop disease detection-Ensemble methods and model selection Unsupervised Learning Techniques Clustering for crop segmentation-Dimensionality reduction for data visualization Anomaly detection for pest or disease outbreak detection

Deep Learning for Agriculture Convolutional Neural Networks (CNNs) for image-based tasks (crop recognition, disease detection)-Recurrent Neural Networks (RNNs) for time-series data (weather forecasting, yield prediction)-Transfer learning and pre-trained models Model Evaluation and Validation Performance metrics for regression and classification tasks-Cross-validation techniques-Overfitting and regularization

Practical Applications of Machine Learning in Agriculture Crop yield prediction-Disease and pest detection-Weed identification and management

Reference Books

23IOT3508 - BIG DATA ANALYTICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IOT3508	BIG DATA ANALYTICS	BDA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the data transmit emanated from different embedded and IOT devices	2	PO2, PO4, PO5, PSO2
CO2	Analyze the use of HADOOP and MAP reduce tools in the process of undertaking Analytics	4	PO3, PO4, PO5, PSO2
CO3	Analyze and develop data Modeling, Structuring and Analytics using R Programming Language	4	PO3, PO4, PO5, PSO2
CO4	Analyze and conduct various kinds of analytics on the big data especially using text and build big data and analytics applications	4	PO3, PO4, PO5, PSO2

Syllabus

Big data encompasses vast volumes of structured and unstructured data generated from various sources such as web data, transactional records, and multimedia content, with embedded systems and IoT devices capturing video, audio, and spectral data. Analysts utilize data repositories to aggregate, store, and retrieve data efficiently, leveraging advanced analytics and modern architectures like distributed computing and cloud storage.

Big Data Analytics involves understanding vast amounts of data generated from various sources, leveraging advanced statistical methods and AI to extract insights, and applying these techniques across different industry verticals. The data analytics lifecycle includes stages like discovery, data preparation, modeling, evaluation, and deployment, ensuring comprehensive and effective analysis. Modern practices in analytics utilize cutting-edge tools and architectures to handle and process big data efficiently, driving innovations and informed decision-making across industries.

Initial analysis of data using R involves understanding its graphical user interface and mastering data import and export functionalities. It includes recognizing attributes and data types, performing descriptive statistics, and conducting exploratory data analysis (EDA). EDA involves visualizing data before formal analysis, handling dirty data, visualizing single and multiple variables, and distinguishing between data exploration and presentation, ensuring a thorough understanding and accurate interpretation of the dataset.

Statistical evaluation methods in data analytics include hypothesis testing, difference of means, ranking tests, sampling, and ANOVA to assess and validate data patterns. The introduction of HADOOP and MapReduce provides powerful tools for processing and analyzing large datasets efficiently. Text analysis involves steps like collecting raw text, representing it through techniques like TFIDF, categorizing documents by topics, and determining sentiments to gain valuable insights. Example applications demonstrate the practical use of these techniques in real-world scenarios.

23MBT3101A - STEM CELL TECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MBT3101A	STEM CELL TECHNOLOGY	SCT	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the strategies for isolation and maintenance of embryonic stem cells	3	PO4
CO2	Apply the aspects of stem cell niche to understand regulation of stemness	3	PO3
CO3	Apply different cues and strategies for stem cell differentiation and characterization	3	PO6
CO4	Apply the aspects of stem cell biology in therapy and organ development	3	
CO5	Apply the principles of stem cell technology for upskilling on the practical front	3	
CO6	Apply the cell culture techniques to maintain the cells in aseptic conditions and analyze their metabolic activity	4	
CO7	Apply the principles of cell culture in analyzing the mechanism of Tissue healing	4	PO6

Syllabus

Human embryonic development Stem cells classification Stem cell properties Embryonic stem cells (ESCs) Embryo preparation IVF SCNT Inner cell mass isolation ESC maintenance role of feeder layer Feeder free culture media requirement Molecular basis of pluripotency transcription factors signaling pathways Cell surface markers Human vs mouse stem cells

Adult stem cells Adult mammalian stem cell niche basic design Epidermal stem cell niche Stem cell niche in wound regeneration Intestinal stem cell niche Hematopoietic stem cell niche iPSCs small molecules in iPSC generation

Epigenetic factors in stem cell biology Characterization of stem cells Stem cell differentiation differentiation methods Factors affecting differentiation Biophysical Biochemical and Mechanobiological

Tissue engineering and Stem cell therapy heart diseases diabetes burns and skin ulcers muscular dystrophy orthopedic applications neurodegenerative diseases Stem cells and Biopharming Genetic manipulation of Stem cell Ethics of human cell research immortal cells and moral selves Ethical considerations stem cell-based therapies FDA products and preclinical regulatory considerations

Cell based therapies using Tissue engineering triad, High-throughput screening using stem cell-derived cells Identifying drug targets and testing drug efficacy Case studies: pharmaceutical applications and industry impact

23MBT3202A - VIROLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MBT3202A	VIROLOGY	VR	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Viral Structure and Function	2	PO1, PO2, PO4, PSO1
CO2	Analyzing Viral Pathogenesis and Host Interactions: investigate and analyze the mechanisms of viral pathogenesis, including viral entry, immune evasion	3	PO1, PO2, PO4, PSO1
CO3	Exploring Antiviral Strategies and Therapeutics: explore and apply various antiviral strategies, including the development and testing of antiviral drugs	3	PO1, PO2, PO4, PSO1
CO4	Investigating Emerging Viral Diseases and Public Health Impact: investigate emerging viral diseases by analyzing epidemiological data, transmission dynamics	3	PO1, PO2, PO4, PSO1
CO5	Applying Virological Principles in Research and Healthcare: apply fundamental virological principles in the design and execution of research studies and healthcare applications	3	PO1, PO2, PO4, PSO1

Syllabus

Introduction to Virology History of virology Classification and nomenclature of viruses Viral structure and composition

Viral Replication Viral entry mechanisms Genome replication and transcription Viral protein synthesis and assembly

Viral Pathogenesis Mechanisms of viral pathogenesis Host immune responses to viral infections Viral evasion of host immunity

Viral Diseases Common viral diseases (e.g., influenza, HIV/AIDS, hepatitis) Emerging viral diseases and pandemics Zoonotic viruses and cross-species transmission

Antiviral Strategies Antiviral drugs and mechanisms of action Vaccine development and immunization strategies Immune-based therapies for viral infections Epidemiology and Public Health Epidemiological principles in viral diseases Global viral surveillance and monitoring Outbreak investigation and control measures

23MBT3203A - NANOBIO TECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MBT3203A	NANOBIO TECHNOLOGY	NBT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Nanobiotechnology Fundamentals	2	PO1, PO2, PO3, PSO1
CO2	Exploring Nanomaterials in Biomedical Applications: investigate and apply nanomaterials in biomedical applications such as targeted drug delivery, medical imaging, and tissue engineering	3	PO1, PO2, PO3, PSO1
CO3	Applying Nanobiotechnology in Biotechnology and Environmental Science: apply nanobiotechnology methods to address challenges in biotechnology and environmental science	3	PO1, PO2, PO3, PSO1
CO4	Investigating Nanosensors and Nanodevices: explore the design, fabrication, and application of nanosensors and nanodevices for detecting biological and chemical substances.	3	PO1, PO2, PO4, PSO1
CO5	Applying Nanobiotechnology in Biotechnology and Environmental Science in aspect of negative and positive effect	3	PO1, PO2, PO3, PSO1

Syllabus

Introduction to Nanobiotechnology Definition and scope of nanobiotechnology Historical perspective and key milestones Ethical and safety considerations in nanobiotechnology

Nanomaterials in Biomedical Applications Types of nanomaterials (nanoparticles, nanotubes, nanowires) Synthesis methods and characterization techniques Applications in drug delivery, imaging, tissue engineering, and regenerative medicine

Nanobiotechnology Techniques Nanoparticle synthesis and surface functionalization Bioconjugation methods for biomolecule-nanomaterial interactions Nanoparticle tracking, imaging, and analysis techniques

Nanosensors and Nanodevices Principles of biosensors and nanobiosensors Design, fabrication, and characterization of nanosensors Applications in biological sensing, diagnostics, and environmental monitoring

Biomedical Applications of Nanobiotechnology Nanomedicine and targeted drug delivery systems Nanomaterials for medical imaging (MRI, CT, fluorescence imaging) Nanotechnology in cancer therapy, tissue regeneration, and neuroengineering Nanobiotechnology in Biotechnology and Environmental Science Nanoparticles in biofuel production and bioremediation Agricultural nanotechnology and crop enhancement Nanotoxicology studies and environmental impact assessment

Ethical and safety considerations in nanobiotechnology

Nanomaterials in Biomedical Applications Types of nanomaterials (nanoparticles, nanotubes, nanowires) Synthesis methods and characterization techniques Applications in drug delivery, imaging, tissue engineering, and regenerative medicine

Nanobiotechnology Techniques Nanoparticle synthesis and surface functionalization Bioconjugation methods for biomolecule-nanomaterial interactions Nanoparticle tracking, imaging, and analysis techniques

Nanosensors and Nanodevices Principles of biosensors and nanobiosensors Design, fabrication, and characterization of nanosensors Applications in biological sensing, diagnostics, and environmental monitoring

Biomedical Applications of Nanobiotechnology Nanomedicine and targeted drug delivery systems Nanomaterials for medical imaging (MRI, CT, fluorescence imaging) Nanotechnology in cancer therapy, tissue regeneration, and neuroengineering Nanobiotechnology in Biotechnology and Environmental Science Nanoparticles in biofuel production and bioremediation Agricultural nanotechnology and crop enhancement Nanotoxicology studies and environmental impact assessment

23MBT3304A - HEALTHCARE BIOTECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MBT3304A	HEALTHCARE BIOTECHNOLOGY	HBT	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of simple proteins and therapeutic agents	3	PO2, PO3
CO2	Apply the knowledge of Healthcare Biotechnology to understand Human diseases	3	PO2, PO3
CO3	Apply the concepts of various vaccines used for diseases	3	PO2, PO3
CO4	Apply the applications of genetic engineering in healthcare	3	PO3, PO8
CO5	Apply the role of Recombinant Proteins in therapeutic and diagnostic applications	3	PO3, PO8
CO6	Apply the Role Biotechnology in Healthcare Experiments	3	PO8, PO9
CO7	Apply the Role of various skilling in Healthcare Biotechnology Experiments	3	PO8, PO9

Syllabus

Proteins as therapeutic agents - Choice of expression systems and optimizing gene expression - Applications, delivery and targeting of therapeutic proteins - Engineering human interferons and human growth hormones - Regulatory aspects of therapeutic proteins - Enzymes as therapeutic agents - Use of genetically engineered DNase I and alginate lyase for treatment of Cystic Fibrosis Monoclonal antibodies as therapeutic agents

Production of monoclonal antibodies - Human monoclonal antibodies, its scope and limitations - Hybrid human - Mouse antibodies - Production of antibodies in E. coli - Approaches for producing HIV therapeutic agents, Human diseases: Viral and bacterial diseases - Diseases caused by protozoan and parasitic worms (helminths) - Emerging infectious diseases

Active and passive immunity, Autoimmunity, Rational of immunization, Diseases controllable by vaccination, Vaccines, designing vaccines adjuvants, Whole organisms vaccines: Attenuated viruses and bacteria Inactivation of pathogenic organisms by heat and chemical treatment Vaccines

Bacterial polysaccharides, proteins and toxins as vaccines - Recombinant vaccines- subunit, attenuated and vector vaccines - Multivalent vaccine development against AIDS - Commercial and regulatory aspects of vaccine production and its distribution Application of genetic engineering in health care

Production of Recombinant Proteins having therapeutic and diagnostic applications, recombinant vaccine

Enzyme Activity Assay, Polymerase Chain Reaction (PCR), ELISA (Enzyme-Linked Immunosorbent Assay), Gel Electrophoresis, Cell Culture, Western Blotting, DNA Extraction from Plant Tissue, Enzyme-Linked Immunospot Assay (ELISPOT), Protein Purification, RNA Extraction from Mammalian Cells, Franz diffusion cell apparatus Setup, In silico analysis for identifying drug interactions and their phenotypic effects, Ionophoresis Instrument Setup, Demonstration of X-Ray diffraction analysis (XRD), Evaluating Antimicrobial Activity of Physical Hydrogels against Gram-Positive Bacteria, Evaluating Antimicrobial Activity of Physical Hydrogels against Gram-Negative Bacteria, Evaluating Antimicrobial Activity of Chemical Hydrogels, Insilico-Drug Interaction, Ionophoresis Instrument Setup, Franz diffusion cell apparatus Setup

PCR Technique, Molecular Cloning, Gene Expression Analysis, Protein Expression and Purification, Cell Culture Techniques, Immunological Techniques, Next-Generation Sequencing (NGS), CRISPR/Cas9 Genome Editing, Drug Discovery and Development, Bioinformatics Analysis, Pharmacogenomics, Bioprocess Engineering, Biostatistics, Regulatory Affairs in Biotechnology, Quality Control and Assurance, Biosafety and Bioethics, Stem Cell Technology, Point-of-Care Diagnostics

23MBT3405M - CANCER BIOLOGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MBT3405M	CANCER BIOLOGY	CB	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge about cancer disease complex group of diseases characterized by abnormal cell growth that can invade nearby tissues and spread to other parts of the body.	3	PO1, PO2
CO2	Apply carcinogenesis that refers to the process by which normal cells are transformed into cancer cells and involves a complex interplay of genetic mutations, epigenetic changes, and environmental factors.	3	PO1, PO2
CO3	Apply of molecular biology of cancer encompasses the study of genetic and molecular alterations that drive the development and progression of cancer like genetic mutations and epigenetic changes.	2	PO1, PO2
CO4	Analyze the principles involved in Cancer metastasis and Cancer immunology that Understanding cancer metastasis and cancer immunology involves delving into complex biological processes and interactions that influence cancer progression and treatment responses.	3	PO1, PO2

Syllabus

Cancer Biology: Phenotypic characteristics of cancer cells. Basic feature of normal cell & tissues. Characteristic features of tumour cells. Control of growth in normal cells, Factors influencing the development of cancers, Nomenclature of tumour cells, Effect of cell receptors, Different phases of cell cycle. Cell cycle regulation, Different types of cancer, Role of Diet in cancer. Cell cycle regulation, Different types of cancer, Role of Diet in cancer.

CARCINOGENESIS: Chemical carcinogenesis, History, Metabolism & Targets. Physical carcinogenesis, History, Metabolism & Targets. Viral carcinogenesis, History, Retroviruses, SV40, Adenovirus, Papilloma viruses.

MOLECULAR BIOLOGY OF CANCER: Tumour suppressor genes, Role and regulatory mechanism of tumor suppressor genes- Retinoblastoma (Rb), Oncogenes- factors, EGF family, Receptor activation, Heterodimerization, Tyrosine phosphorylation, VEGF family, gene silencing and switching off the signal pathways in cancer.

CANCER METASTASIS: Cancer Metastasis. The spread of cancer, Pathogenesis of the process, Loss of cell cell cohesion, Mechanism of tumour invasion, Dissemination of tumour cells in blood stream, Patterns of metastatic spread. Role of inflammation in cancer.

Reference Books

- 2 Cancer Biology, Roger.G.B, 2000, Prentice Hall.
- 3 Introduction to Molecular and Cellular Biology of Cancer, Margaret A Knowles and Peter.J.Shelly, 1997, Elsevier publications.
- 4 Oxford Textbook of Cancer Biology, Francesco Pezzella (ed.), Mahvash Tavassoli (ed.), David J. Kerr (ed.), 2019, Oxford.

23MBT3406M - NEUROBIOLOGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MBT3406M	NEUROBIOLOGY	NB	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the cells and organization of nervous system	2	PO1
CO2	Understand the physiology of the nerve impulse transmission	2	PO1
CO3	Articulate the Sensory and motor system and the underlying neurodegenerative disorders	3	PO1
CO4	Articulate the inter-connectivity between neuroscience and computational engineering	3	PO1

Syllabus

Survey of Human Neuroanatomy- Central and peripheral nervous systems; Blood Brain barrier; Meninges and Cerebrospinal fluid; Development of the nervous system; Neuronal differentiation; Characterization of neuronal cells; Structure and function of neurons; types of neurons; Synapses; Glial cells; myelination; nodes of Ranvier; Repair and Regeneration in the Nervous System

Resting and action potentials; Mechanism of action potential conduction; Voltage dependent channels; Chemical and electrical synaptic transmission; neurotransmitters and their release; synaptic plasticity; characteristics of neurites; hormones and their effect on neuronal function

Properties of sensory systems, coding and control of sensory information, Sensory organs, somatosensory, vision, auditory and chemical senses, motor systems, muscle and its control, reflexes and pattern generation, Stroke, Epilepsy, Schizophrenia, Alzheimers, and Parkinsons disease

Diagnostic tools: X-Ray, CT, PET-CT, MRI; Neuroscience Database (Allen Atlas Database); Biophysical models (Hodgkin-Huxley) of neurons and circuits with emphasis on application of commonly available modeling tools (NEURON)

Reference Books

23MBT3507 - BIOELECTRONICS & BIOSENSORS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MBT3507	BIOELECTRONICS & BIOSENSORS	BB	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Bioelectronics Principles	2	PO1, PO2, PO3, PSO1
CO2	Designing and Fabricating Biosensors: design and fabricate various types of biosensors, applying various techniques	3	PO1, PO2, PO3, PSO1
CO3	Analyzing Signal Transduction Mechanisms: investigate and analyze the mechanisms of signal transduction in biosensors	3	PO1, PO2, PO3, PSO1
CO4	Applying Bioelectronics & Biosensors in Healthcare and Biotechnology: apply bioelectronics and biosensor technologies in practical scenarios within healthcare and biotechnology	3	PO1, PO2, PO4, PSO1

Syllabus

Introduction to Bioelectronics Definition and scope of bioelectronics Interface between biology and electronics
Electrical properties of biological materials

Principles of Biosensors Types of biosensors (enzymatic, immunological, optical, electrochemical) Sensing mechanisms and transduction pathways Biomolecule immobilization techniques

Biosensor Design and Fabrication Sensor materials selection (nanomaterials, polymers, metals) Transducer integration (electrodes, optical components) Signal amplification and detection methods

Signal Transduction Mechanisms Enzymatic biosensors and substrate specificity Immunological biosensors and antigen-antibody interactions Optical biosensors and signal modulation Applications of Bioelectronics & Biosensors Healthcare applications (clinical diagnostics, disease monitoring) Environmental monitoring (pollutant detection, water quality) Biotechnological applications (bioprocess monitoring, food safety)

Bioelectronics in Neural Interfaces Neural recording and stimulation technologies Brain-machine interfaces and neuroprosthetics Ethical considerations in neural bioelectronics

Reference Books

- 1 Bioelectronics: From Theory to Applications, Prof. Dr. Itamar Willner, Dr. Eugenii Katz, 2005, Wiley.

23MBT3508 - TISSUE ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MBT3508	TISSUE ENGINEERING	NBT	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of Tissue engineering Traid in Therapies	3	PO3
CO2	Apply the knowledge of Tissue culture basics in maintaining cells	3	PO2, PO10
CO3	Apply the principles of 3D Tissue organization and angiogenesis	3	PO10
CO4	Apply the role TE components in Cell based Therapies with case studies	3	PO12

Syllabus

Tissue Engineering and Cell-Based Therapies, Biomaterials. Metals, ceramics, polymers (synthetic and natural). Biodegradable materials, native matrix, Cell structure and function Cell signaling and communication Stem cells and differentiation

Primary cell culture and cell lines 2D vs. 3D cell culture Co-culture techniques, Tissue culture basics: Primary cells vs. cell lines, sterile techniques, plastics, enzymes, reactors and cryopreservation. Principals of self-assembly, ECM.

3D organization and angiogenesis. Natural Scaffold Materials, Synthetic Biomaterial Scaffolds, Scaffold Fabrication & Tailoring, Cell migration. Tissue Morphogenesis, Stem Cells and Lineages, Cell Isolation and Culture, Cell-Cell Communication, Graft Rejection/Material Biocompatibility, Cell Migration, Engineered Disease Models

Stem Cell Therapies with case studies. Liver tissue engineering. Bio artificial liver (BAL) assist device, shear forces, oxygen transport, and plasma effects. Cardiovascular tissue engineering. Introduction, blood vessels structure, vascular grafts. Skin tissue engineering. Introduction, scar vs. regeneration, split skin graft and case studies

23RAN3101A - ROBOT MOTION PLANNING, DYNAMICS AND CONTROL (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RAN3101A	ROBOT MOTION PLANNING, DYNAMICS AND CONTROL	RMPDC	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic principles of robot trajectory planning	2	PO1, PSO1
CO2	Apply motion planning principles to a robot in the presence of obstacles	3	PO2, PSO1
CO3	Analyse motion planning and control	4	PO3, PSO1
CO4	Perform basic motion, force, and hybrid motion-force control to mobile robotics	3	PO2, PSO1
CO5	Apply optimization techniques for joint space trajectory	3	PO2, PSO1
CO6	Perform lab experiments using python/Robot simulator CoppeliaSim and python for motion planning.	4	PO5
CO7	Develop a mobile robot path planning using python/Robot simulator CoppeliaSim	4	PO5

Syllabus

Robot trajectory Control: key concepts of robot motion generation: planning a motion for a robot in the presence of obstacles, and real-time feedback control to track the planned motion, Trajectory generation, Path planning algorithms

Motion Planning: foundational material like C-space obstacles, graphs and trees, and graph search, as well as classical and modern motion planning techniques, such as grid-based motion planning, randomized sampling-based planners, and virtual potential fields.

Robot Control: PID control, motion control, force control, and hybrid motion-force control, adaptive control

Mobile Robotics: Localization and mapping, SLAM, Path planning, Control of mobile robots

Joint Space Optimization: Optimizing joint trajectories to achieve desired end-effector motions while considering joint limits, velocity, and torque constraints.

Reference Books

23RAN3102A - AUTONOMOUS MOBILE ROBOT SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RAN3102A	AUTONOMOUS MOBILE ROBOT SYSTEMS	AMRS	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic mechanical and electrical systems concerning robots locomotion and manipulation.	3	PO1, PO2, PSO1
CO2	Apply the mathematical models and computational and motion control methods to mobile robotic systems.	3	PO1, PO2, PSO1
CO3	Apply the sensor systems related to state measurements, navigation, and probabilistic map based localization	3	PO1, PO2, PSO1
CO4	Analyze the A-star, Dijkstra algorithm for planning the required path for various terrains with different combinations of robot	4	PO2, PO3, PSO1
CO5	Analyze the path planning for the multiple robots with various path planning techniques	4	PO5, PSO1
CO6	Analyze different aspects of stability for a given robot model and apply the mathematical model for the desired movements	4	PO3, PO5, PSO1
CO7	Design a robot with an efficient mapping and path planning algorithm for the precise locomotion	4	PO2, PO5, PSO1

Syllabus

Introduction to mobile robots and mobile manipulators. Principle of locomotion and types of locomotion. Types of mobile robots: ground robots (wheeled and legged robots), aerial robots, underwater robots, and water surface robots. Robot locomotion: Types of locomotion, hopping robots, legged robots, wheeled robots, stability, maneuverability, controllability; mobile robots.

Mobile robot kinematics and dynamics: Kinematics of wheeled mobile robot, degree of freedom, generalized wheel model, different wheel configurations, holonomic and non-holonomic robots. Forward and inverse kinematics, holonomic and nonholonomic constraints, kinematic models of simple car and legged robots, dynamics simulation of mobile robots; Dynamics of mobile robot: Lagrange-Euler and Newton-Euler methods. Computer based dynamic (numerical) simulation of different wheeled mobile robots.

Perception: Proprioceptive/Exteroceptive and passive/active sensors, performance measures of sensors, sensors for mobile robots magnetic and optical position sensor, gyroscope, accelerometer, magnetic compass, inclinometer, tactile and proximity sensors, ultrasound rangefinder, laser scanner, infrared rangefinder, visual and motion sensing systems. Doppler effect-based sensors, vision based sensors, uncertainty in sensing, filtering.

Path planning and navigation: Robot navigation: Localization, Error propagation model, Probabilistic map based localisation, Autonomous map building, Simultaneous localization and mapping (SLAM). path planning algorithms based on A-star, Dijkstra, Voronoi diagrams, probabilistic roadmaps (PRM), rapidly exploring random trees (RRT), Markov Decision Processes (MDP), stochastic dynamic programming (SDP).

Centralization vs. decentralization, robot swarms, multi-robot path planning, reinforcement learning for autonomous decision-making, Graph-Based Methods, Optimization-Based Methods, Swarm Intelligence, Communication and Coordination

CO5	Analyze the path planning for the multiple robots with various path planning techniques	4	PO5, PSO1
CO6	Analyze different aspects of stability for a given robot model and apply the mathematical model for the desired movements	4	PO3, PO5, PSO1
CO7	Develop a proper mapping and path planning algorithm for the locomotion of a given robot and analyze the performance with obstacle avoidance	4	PO2, PO5, PSO1

Syllabus

Introduction to mobile robots and mobile manipulators. Principle of locomotion and types of locomotion. Types of mobile robots: ground robots (wheeled and legged robots), aerial robots, underwater robots, and water surface robots. Robot locomotion: Types of locomotion, hopping robots, legged robots, wheeled robots, stability, maneuverability, controllability; mobile robots.

Mobile robot kinematics and dynamics: Kinematics of wheeled mobile robot, degree of freedom, generalized wheel model, different wheel configurations, holonomic and non-holonomic robots. Forward and inverse kinematics, holonomic and nonholonomic constraints, kinematic models of simple car and legged robots, dynamics simulation of mobile robots; Dynamics of mobile robot: Lagrange-Euler and Newton-Euler methods. Computer based dynamic (numerical) simulation of different wheeled mobile robots.

Perception: Proprioceptive/Exteroceptive and passive/active sensors, performance measures of sensors, sensors for mobile robots magnetic and optical position sensor, gyroscope, accelerometer, magnetic compass, inclinometer, tactile and proximity sensors, ultrasound rangefinder, laser scanner, infrared rangefinder, visual and motion sensing systems. Doppler effect-based sensors, vision based sensors, uncertainty in sensing, filtering

Path planning and navigation: Robot navigation: Localization, Error propagation model, Probabilistic map based localisation, Autonomous map building, Simultaneous localization and mapping (SLAM). path planning algorithms based on A-star, Dijkstra, Voronoi diagrams, probabilistic roadmaps (PRM), rapidly exploring random trees (RRT), Markov Decision Processes (MDP), stochastic dynamic programming (SDP).

Centralization vs. decentralization, robot swarms, multi-robot path planning, reinforcement learning for autonomous decision-making, Graph-Based Methods, Optimization-Based Methods, Swarm Intelligence, Communication and Coordination

23RAN3102R - AUTONOMOUS MOBILE ROBOT SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RAN3102R	AUTONOMOUS MOBILE ROBOT SYSTEMS	AMRS	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic mechanical and electrical systems concerning robots locomotion and manipulation	3	PO1, PO2, PSO1
CO2	Apply the mathematical models and computational and motion control methods to mobile robotic systems	3	PO1, PO2, PSO1
CO3	Apply the sensor systems related to state measurements, navigation and probabilistic map based localization	3	PO1, PO2, PSO1
CO4	Analyze the A-star, Dijkstra algorithm for planning the required path with the static and dynamic obstacle avoidance.	4	PO2, PO3, PSO1
CO5	Analyze the path planning for the multiple robots using various optimized path planning techniques	4	PO5, PSO1
CO6	Analyze different aspects of stability for a given robot model and apply the mathematical model for the desired movements	4	PO3, PO5, PSO1

Syllabus

Introduction to mobile robots and mobile manipulators. Principle of locomotion and types of locomotion. Types of mobile robots: ground robots, aerial robots, underwater robots, and water surface robots. Robot locomotion: Types of locomotion, hopping robots, legged robots, wheeled robots, stability, manoeuvrability, controllability; mobile robots.

Mobile robot kinematics and dynamics: Kinematics of wheeled mobile robot, degree of freedom, generalized wheel model, different wheel configurations, holonomic and non-holonomic robots. Forward and inverse kinematics, holonomic and nonholonomic constraints, kinematic models of simple car and legged robots, dynamics simulation of mobile robots; Dynamics of mobile robot: Lagrange-Euler and Newton-Euler methods. Computer based dynamic simulation of different wheeled mobile robots.

Perception: Proprioceptive/Exteroceptive and passive/active sensors, performance measures of sensors, sensors for mobile robots magnetic and optical position sensor, gyroscope, accelerometer, magnetic compass, inclinometer, tactile and proximity sensors, ultrasound rangefinder, laser scanner, infrared rangefinder, visual and motion sensing systems. Doppler effect-based sensors, vision-based sensors, uncertainty in sensing, filtering.

Path planning and navigation: Robot navigation: Localization, Error propagation model, Probabilistic map based localization, Autonomous map building, Simultaneous localization and mapping (SLAM). path planning algorithms based on A-star, Dijkstra, Voronoi diagrams, probabilistic roadmaps (PRM), rapidly exploring random trees (RRT), Markov Decision Processes (MDP), stochastic dynamic programming (SDP).

23RAN3202A - AUTONOMOUS VEHICLES & AUTOMOTIVE ELECTRONICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RAN3202A	AUTONOMOUS VEHICLES & AUTOMOTIVE ELECTRONICS	AVAE	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply vehicular dynamics and control principles, including motion, force, and feedback, to design algorithms for autonomous vehicles. This ensures stability, maneuverability, and safety across diverse driving conditions.	3	PO1, PO2, PSO1
CO2	LiDAR, radar, and GPS sensors, along with electric motors and hydraulic actuators, enable precise control of speed, steering, braking, and navigation. This integration is crucial for ensuring the safety and efficiency of modern vehicles.	3	PO1, PO2, PSO1
CO3	Automotive Electronics integrates ECUs, sensors, actuators, and communication protocols to improve performance, efficiency, safety, and comfort. This ensures seamless operation and responsiveness in modern vehicles.	3	PO1, PO2, PSO1
CO4	Wireless electronics and networking enhance autonomous vehicle reliability, safety, and intelligence through real-time V2V and V2I communication. This enables predictive maintenance, traffic management, and autonomous decision-making.	4	PO2, PO3, PSO1
CO5	Use PID, MPC, and adaptive control strategies to improve vehicle dynamics, stability, and performance. This ensures precise handling and safety.	4	PO5, PO12, PSO1

Syllabus

Introduction to Autonomous Vehicles: Technological overview concepts of Autonomous Vehicles (AVs); History of Autonomous Vehicles; Vehicle Electronics Architecture; Functional Block Diagram of typical Autonomous Vehicle System (AVS); Basic control system applied to Drive Assisted and Driverless Vehicles; Overview of the operation of Electronic Control Unit (ECUs).

Automotive Sensors and Actuators (ASA): Role of sensors and actuators in autonomous vehicles; Accelerometers, Wheel speed, Brake pressure, Seat occupancy, Engine speed, Steering wheel angle, Vehicle speed, Throttle position, Turbine speed, Temperature, Mass air flow (MAF) rate, Automotive Engine Control Actuators, Fuel Injection, Exhaust Gas Recirculation Actuator, Variable Valve Timing, VVP Mechanism Model, Electric Motor Actuators.

Automotive Electronics (AE): Fundamentals of Automotive Electronics (FAE)- Principles of automotive systems, Advanced driver-assistance systems (ADAS)- Evolution of ABS configurations, Basics of Theory of Operation, Integration of ADAS Technology into Vehicle Electronics, Auto pilot, Advanced parking system, ADAS in Toyota and Tesla.

Automotive Wireless (AW): Wireless Networking and Applications to Vehicle Autonomy; Integration of Wireless Networking and On-Board Vehicle Networks; Automotive GPRS Vehicle Tracking (AGPRS-VT)- Vehicle Tracking System; Principle of Vehicle Tracking system, GPS and GPRS tracking system. Controlled Area Network (CAN): Basic, Block diagram of the CAN bus architecture, Types of CAN Physical Layers, Frame Format of CAN protocol, Working principle of CAN communication.

Air-fuel ratio control methodologies for efficient fuel consumption.

23RAN3203A - ROBOT MANIPULATION AND WHEELED MOBILE ROBOTS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RAN3203A	ROBOT MANIPULATION AND WHEELED MOBILE ROBOTS	RMWR	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the various contacts elements required for robots manipulator	2	PO1, PO2, PSO1
CO2	Analyze the concept of forces friction to find out the performance of the manipulator	4	PO1, PO2, PSO1
CO3	Apply the basic concepts used to check the performance of mobile robots	3	PO1, PO3, PSO1
CO4	Apply the concept of feedback control and odometry for Mobile robots	3	PO1, PO2, PSO1
CO5	Analyze the principles underlying advanced control techniques for wheeled mobile robots	4	PO1, PO2, PSO1

Syllabus

Grasping Contact Kinematics First-Order analysis of a Single contact, contact types Rolling, Sliding, and Breaking free, Multiple contacts, Collection of Bodies, Other types of contacts.

Manipulation Planar Graphical Methods, Form Closure. Contact Forces and Friction Friction, planar graphical methods, force closure, Duality of force and motion freedoms, manipulation

Wheeled mobile robots come in various types, including differential drive, tricycle, car-like, omnidirectional, and Ackermann steering robots. Unique capabilities of omnidirectional robots, modeling and simulation, motion planning algorithms, feedback control systems, and handling nonholonomic constraints.

Modeling, controllability, motion planning, and feedback control of odometry for wheeled mobile robots, as well as mobile manipulation involving robotic arms integrated with mobile platforms for complex task execution.

Advanced control techniques tailored for wheeled mobile robots, including Model Predictive Control (MPC), adaptive control methods, and reinforcement learning for autonomous navigation. Participants will engage in theoretical discussions and practical exercises aimed at mastering these methodologies, empowering them to optimize robot trajectories, handle uncertainties, and enable autonomous decision-making in diverse operational environments.

23RAN3304A - ADVANCED ROBOTICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RAN3304A	ADVANCED ROBOTICS	AR	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the control techniques for path planning. in flat, rough, hill, slope, sand and gravel terrains	3	PO1, PO2, PSO1
CO2	Apply the basics of DH parameters for developing the models of Advanced Robotic Manipulator	3	PO1, PO2, PSO1
CO3	Apply the functional and critical operational Robotics methods for preparing advanced level of Robotics.	3	PO1, PO2, PSO1
CO4	Analyze the concepts of Advanced Robotics Systems and Real-time environment for various applications.	4	PO2, PO3, PSO1
CO5	Analyze the fetch and frieght robots with various co-ordinate frames and joint angles in an constrained environments	4	PO3, PSO1
CO6	Analyze the kinematics and dynamics requirements using VREP robotic simulation tool	4	PO3, PO5, PSO1
CO7	Analyze the construction and various parameters of a robot using the Studica Robotic System kit	4	PO2, PO5, PSO1

Syllabus

Introduction to Robotic Systems: Introduction to Robotic Operating System (ROS), Degrees of Freedom (DoF), Six Degrees of Freedom (6DOF), Mobility formula, Three Laws of Robotics; Asimovs Laws (AL), Robotics Foundation: Dynamic Stabilization (DS), Advanced Robotics Sensors (ARS), Power Sources (PS), Force Control(FC), Ring LASER, Application of Gyro Sensor (GS), Inertial Navigation (IN), Terrain a Mapping (TaM), Direct and inverse kinematics problems, Motions and dimensions; Robotics Components.

Advanced Robotic Manipulator & Actuator (ARM & ARS): Industrial Robot Manipulator: Manipulator Structures, Kinematics of Serial and Parallel Manipulators, Velocity Analysis and Statics of Manipulators, Dynamic of Manipulators, Trajectory Planning and Generation (P&G), position and Force control of Manipulators, Modelling and Control of Flexible Manipulators, Joint Actuating System; Grippers, AR in Path Planning Algorithm, Hill-Climbing, Design Consideration Macrobiotics.

Varieties of Robots & Advanced Robotics Heterogeneity (ARH): Design Studies (Modelling and analysis) on Boston Dynamics Products: Cheetah, Atlas, Spot Mini, Legged Robots, Wheeled Robots, Tele robots, Service Robots; Design considerations on Large Robots, Miniature Robot (Swarm robotics), Auto-bots, bipeds, KUKA Collaborative Robot Series, autonomous Underwater Vehicle, Unmanned Aerial Vehicle; Reactor Pressure Vessel (RPV) Measuring Robots.

Case Studies (Applications of Advanced Robotic Systems): Robot Assembling: Assembly of robots using Lego, Vex and Tetrix Kits Five minute bot, Wall following robot; Coordinated Multi-Robot Exploration; Mapping and Localization in Non Static Environments. Programming: Programming of robots using NXT software, Robot C and python programming advanced path planning robots. Case Study of Multiple Robots, medical robots: image guided surgical robots, radiotherapy, painting robots and cancer treatment, Industrial, Home, Defence Applications.

Collaborative and Adversarial Learning: A Case Study in Robotic Soccer, Fetch and Freight Robots, service robots, Multi-Agent Reinforcement Learning (MARL), Human-Robot Collaboration, Adversarial Learning Algorithms, Adversarial Reinforcement Learning

Introduction to Robotic Systems: Introduction to Robotic Operating System (ROS), Degrees of Freedom (DoF), Six Degrees of Freedom (6DOF), Mobility formula, Three Laws of Robotics; Asimov Laws (AL), Robotics Foundation: Dynamic Stabilization (DS), Advanced Robotics Sensors (ARS), Power Sources (PS), Force Control(FC), Ring LASER, Application of Gyro Sensor (GS), Inertial Navigation (IN), Terrain a Mapping (TaM), Direct and inverse kinematics problems, Motions and dimensions; Robotics Components.

Advanced Robotic Manipulator & Actuator (ARM & ARS): Industrial Robot Manipulator: Manipulator Structures, Kinematics of Serial and Parallel Manipulators, Velocity Analysis and Statics of Manipulators, Dynamic of Manipulators, Trajectory Planning and Generation (P&G), position and Force control of Manipulators, Modelling and Control of Flexible Manipulators, Joint Actuating System; Grippers, AR in Path Planning Algorithm, Hill-Climbing, Design Consideration Macrobotics.

Varieties of Robots & Advanced Robotics Heterogeneity (ARH): Design Studies (Modelling and analysis) on Boston Dynamics Products: Cheetah, Atlas, Spot Mini, Legged Robots, Wheeled Robots, Tele robots, Service Robots; Design considerations on Large Robots, Miniature Robot (Swarm robotics), Auto-bots, bipeds, KUKA Collaborative Robot Series, autonomous Underwater Vehicle, Unmanned Aerial Vehicle; Reactor Pressure Vessel (RPV) Measuring Robots.

Case Studies (Applications of Advanced Robotic Systems): Robot Assembling: Assembly of robots using Lego, Vex and Tetrix Kits Five minute bot, Wall following robot; Coordinated Multi-Robot Exploration; Mapping and Localization in Non Static Environments. Programming: Programming of robots using NXT software, Robot C and python programming advanced path planning robots. Case Study of Multiple Robots, medical robots: image guided surgical robots, radiotherapy, painting robots and cancer treatment, Industrial, Home, Defence Applications.

23RAN3405M - ARTIFICIAL INTELLIGENCE FOR ROBOTICS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RAN3405M	ARTIFICIAL INTELLIGENCE FOR ROBOTICS	AIR	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Fundamentals of Artificial Intelligence, Applications and need of AI in robotics	2	PO1, PO2, PSO1
CO2	Applying various AI search techniques to solve real world problems	3	PO1, PO2, PSO1
CO3	Apply principles of AI in solutions that require process, planning and Reasoning	3	PO1, PO2, PSO1
CO4	Apply various forms of learning and knowledge representation techniques for communication, perceiving and acting for robots.	3	PO1, PO2, PSO1

Syllabus

Introduction to Artificial intelligence, History, features of Artificial intelligence, Need for Artificial intelligence in Robotics, Thinking and acting humanly, Intelligent agents, structure of agents.

Problem Solving Solving problems by searching Informed search and exploration, Constraint satisfaction problem Adversarial search, Knowledge and reasoning Knowledge representation First order logic and semantic nets and frames

Planning Planning with forward and backward State space search Partial order planning Planning graphs Planning with propositional logic Planning and acting in real world. Reasoning Uncertainty Probabilistic reasoning Filtering and prediction Hidden Markov models Kalman Filters Dynamic Bayesian Networks, Speech Recognition, Making Decisions.

Learning Forms of learning Knowledge in Learning Statistical learning methods reinforcement learning, communication, perceiving and acting, Probabilistic language processing, perception.

Reference Books

23RAN3406M - HUMAN MACHINE INTERFACE & BRAIN MACHINE INTERFACE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RAN3406M	HUMAN MACHINE INTERFACE & BRAIN MACHINE INTERFACE	HMIBMI	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Normans model to HMI	3	PO1, PO2
CO2	Apply different GOMS models, Fitts Laws for improving the Human Machine Interaction	3	PO1, PO4
CO3	Apply the concepts of Brainwaves for Brain Machine Interface	3	PO1, PO2
CO4	Analyze different methodologies for HMI/BMI Applications	4	PO1, PO3
CO5	Analysis of EEG Signal with BCI application	4	PO6, PO7, PSO1

Syllabus

Introduction, history and relation to Ergonomics and Human Factors Problema and challenges, Recurrent HMI themes, Concept of usability- definition and elaboration, Human Machine Interface and software engineering, GUI design and aesthetics, Prototyping techniques, Guidelines in HMI- Norman\'s model of interaction

Fitts laws, Hick-Hyman laws, Norman\'s 7 Principles. Design rules authority vs Generality Principles, Introduction to different types of models, GOMS family of models, KLM and CMN-GOMS, Guidelines in HMI- Norman\'s model of inetraction, Heuristic evaluation, contextual inquiry, cognitive walkthrough

Alpha, Beta, Theta, Gamma wave, Brain-Control interface, ARMA model, Introduction to Brain Control Interface Fundamentals of BCI Brain signal acquisition, Experiment design and data analysis (with explanation of one-way ANOVA), ARMA model

Hierarchical Task Analysis, Dialog Design, Use of FSM, Task modelling and analysis through Hierarchical Task Analysis (HTA), Dialog Design, Applications of HMI/BMIs- rovar, robotic camera, environmental control

Case studies of BCIs based on multi-neuronal activity, electrocorticography (ECoG), and electroencephalography (EEG) as well as BCI applications, pervasive computing, CSCW, virtual reality, tangible user interface, multimedia

Reference Books

- 1 Human-Machine Interface: Concepts and Design Principles , Sridharan Devarajan and S. Srinivasan , 2nd , Tata McGraw-Hill Education.
- 2 Brain-Computer Interfaces: Principles and Practice , Rajesh P. N. Rao , 1st , Oxford University Press.
- 3 Brain Computer Interfaces: Principles and practice, Jonathan Wolpaw,Elizabeth Winter Wolpaw, 1st, Oxford University Press, USA.

23RAN3507 - COMPUTER VISION & APPLICATIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RAN3507	COMPUTER VISION & APPLICATIONS	CVA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply fundamentals of image processing algorithms and thereby facilitating better interpretation and analysis of visual data.	3	PO1, PSO1
CO2	Apply deep network methods and techniques for image classification to discern complex patterns and variations in the image data.	3	PO2, PSO1
CO3	Apply autoencoders for image segmentation and measure performance metrics of various algorithms.	3	PO1, PSO1
CO4	Develop an appreciation for various issues in the design of computer vision and object recognition systems with analysis.	4	PO2, PO4, PSO1

Syllabus

Image Fundamentals: Introduction to Image Formation, Capture, and Representation; Image Enhancement: Linear Filtering, Features: Edge, Blobs, Corner Detection. Space and Scale Selection, HoG, LBP, Image/Deconvolution Methods; Image segmentation: thresholding and region-based segmentation, gray and color images.

CNN-based Image Classification: Building an image dataset from scratch: Horses Vs Humans, Rock Scissors paper, MS COCO, open Images, and Flowers dataset. Build a CNN model for image classification: LeNet-5, VGG, and ResNet. Training, testing, and Inferencing. Performance measurement. Visualization and Understanding CNNs: Visualization of Kernels, layer features, and calculating computational complexity of models.

Autoencoders for Image Segmentation and Generation: U-Net, Seg Net, and Mask R-CNN Model architecture, Image annotations, and ground truth modeling. Training and testing the U-Net model. Performance evaluation metrics: Pixel Accuracy, mIoU, and Dice scores. Deep Generative Models: Generative adversarial networks(GANs), Variational Autoencoders (VAEs), architecture, Training, and testing.

Applications: Siamese Network face recognition, Yolo object detection model, Image captioning models, Image super-resolution, Visual QA, Visual Dialog. Attention-based CNN models: Visual transformers. Realize using TensorFlow or PyTorch.

23RFM3101A - MICROWAVE ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RFM3101A	MICROWAVE ENGINEERING	ME	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the high frequency parameter analysis for Microwave Components to study the behavior of Microwave passive components.	3	PO1, PSO1
CO2	Apply the concept of Microwave Active components and Microwave tubes.	3	PO1, PSO1
CO3	Analyze the solid state device concept and microwave oscillators.	4	PO2, PSO1
CO4	Analyze the measurement techniques for Microwave solid state devices.	4	PO2, PSO1
CO5	Analyze the advanced microwave equipment and its S Parameters.	4	PO2, PSO1
CO6	Analyze and design the applications of microwave active and passive components using hardware.	4	PO2, PO3, PO5, PSO1
CO7	Analyze and design the applications of microwave active and passive components using EM tools.	5	PO2, PO3, PO5, PSO1

Syllabus

Passive microwave devices: Scattering matrix, Passive microwave devices: Microwave hybrid circuits, Terminations, Attenuators, Directional couplers: Two-hole directional couplers, S- Matrix of a directional coupler, Hybrid couplers, Isolators.

Microwave tubes: Microwave tubes: Limitations of conventional active devices at microwave frequency, two cavity Klystron, Reflex Klystron, Magnetron, Traveling wave tube, Backward wave oscillators.

Solid state amplifiers and oscillators: Transferred electron devices, Gunn-effect diodes and modes of operation. Avalanche transit time devices, IMPATT diode, TRAPPAT diode, Pin diode.

Microwave Measurements: Microwave power measurement, Insertion loss and attenuation measurement, Return loss measurement by a reflectometer, VSWR measurement, Frequency measurement, measurement of cavity Q, EM radiation & measurement.

Advanced Microwave Equipment: Spectrum analyzer, Network analyzer, Tunable detector, Slotted line carriage.

23RFM3202A - ADVANCED ANTENNA DESIGN FOR WIRELESS AND 5G APPLICATIONS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RFM3202A	ADVANCED ANTENNA DESIGN FOR WIRELESS AND 5G APPLICATIONS	AADWA	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and Intreprete Antenna design for wireless and 5G Applications	3	PO1, PSO1, PSO2
CO2	Understand and intreprete the basic Concepts for 5G FR1 Single Band and Multi-Band Mobile Antenna Design	3	PO1, PSO1, PSO2
CO3	Apply the concept of the different MIMO-Based 5G FR1 Band Mobile Antennas for 5G and Wireless Apllication	3	PO1, PSO1, PSO2
CO4	Analyze the different Antenna-in-Package for 5G and Mobile Antennas	4	PO2, PSO1, PSO2
CO5	Design of different patch antennas using EM tools and verify the characteristics	5	PO3, PO5, PSO1, PSO2

Syllabus

Frequency Characteristics and Channel Models, 5G Network Architecture, Evolution of Mobile Devices, Antenna Materials for 5G smart phone.

Smartphone Components and Their Effects, Antenna Element Design and Topologies, Slot Antenna Design, Monopole Antenna Design, Loop Antenna, Inverted-F Antenna, Planar Antenna Design Topologies, Hybrid Antenna Design Topologies.

Motivation and Requirements, Channel Capacity, Envelope Correlation Coefficient, Diversity Gain, Mean Effective Gain, Total Active Reflection Coefficient, Channel Capacity Loss, Antenna Isolation Techniques, Spatial and Polarization Diversity.

Miniaturized Antenna-in-Package Technology, Background and Challenges, Planar Folded Slot Antenna with Electrically Small and Low Profile, Low-Loss Interconnect Technology, Flip-Chip-Based Packaging of mmWave AiP, Multi-Modal AiP Technology, Block Cell Antennas, Modular, Controllable Block Cell Arrays.

Channels in 5G NR Physical Layer Data Channels in 5G NR Downlink Physical Channel and Uplink Physical Channels - Propagation Channel models for 5G ,Device-to-Device (D2D) Communication - 5G for Massive Machine Type Communication and Massive IoT- V2X Communication - Full Duplex and Green Communication -mmWave Communications Massive MIMO and Beamforming Techniques

23RFM3303A - MODERN RADAR SYSTEMS & NAVIGATIONAL AIDS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RFM3303A	MODERN RADAR SYSTEMS & NAVIGATIONAL AIDS	MRSNA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret the principles of operation and design of radar systems	3	PO1, PO3, PSO1
CO2	Apply the target-based concept to various types of Radars for Air Traffic Control applications.	3	PO1, PO3, PSO1
CO3	Analyse the principles of various Radar tracking systems used in different applications	4	PO1, PO3, PSO1
CO4	Analyse the concepts related to different tracking systems and sensors for navigation.	4	PO1, PO5, PSO1
CO5	Analyse the principles of various Radars systems used in different applications	4	, PSO2
CO6	Apply and analyse the various automotive concepts to design the Modern RADAR system	4	
CO7	Apply the various adaptive techniques and automotive concepts to design the Modern RADAR system.	4	

Syllabus

Basics of Radar system, Transmitters and Receivers: Basic Radar, Block Diagram of Pulse Radar, Radar equation Detection of signals in noise, Receiver noise and signal to noise ratio, integration of Radar pulses, PRF and Range Ambiguities, Doppler Effect, FM CW Radar, Altimeter, Radome. Duplexers and Receiver Protectors, Radar Displays.

MTI Radar: Introduction, Delay line cancellers, Clutter Attenuation, MTI improvement factor, N-pulse delay line canceller, non-recursive and Recursive filters.

Tracking: Sequential Lobing Radar, Conical Scan and Mono-pulse acquisition and tracking, Radars for Air Traffic Control applications.

Introduction to Navigational Aids and Various Systems: Introduction, Four Methods of Navigation Radio Ranges: LF/MF Four course Radio Range, VHF Omni Directional Range, and VOR receiving Equipment. LORAN, DECCA navigation systems. Instrument Landing System, Ground controlled Approach System, Microwave landing system, TACAN Doppler navigation-Doppler Effect, New configuration, Doppler frequency equations, and Track stabilization.

Radar Applications: SAR, LIDAR, OTH radar, Remote sensing radar, Airport surveillance radar, Weather / Meteorological radar, Ground penetration radar, Through-wall radar, Automobile radar.

Reference Books

23RFM3404M - RF AND MILLIMETER-WAVE CIRCUIT DESIGN (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RFM3404M	RF AND MILLIMETER-WAVE CIRCUIT DESIGN	RFMECD	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concept of Amplifier to different RF & mm-Wave transceivers	3	PO1, PSO2
CO2	Interpret the concept of Mixers design for RF & mm-Wave.	3	PO1, PO2, PSO2
CO3	Analyse the concept of Oscillators to design for RF Oscillators for mm-Wave.	4	PO2, PSO2
CO4	Analyse the concepts of RF and Millimetre-Wave circuits for various synthesizers.	4	PO2, PO3, PSO2
CO5	Analyse the concepts of RF and Millimetre-Wave circuits for various synthesizers.	4	PO2, PO3, PSO2

Syllabus

Introduction to RF and Millimeter-Wave Circuit Design: Wireless Systems history of wireless technologies, wireless system design, and RF system specifications. Concepts of transceivers path loss, interference signals, receiver sensitivity, and transmitter output power. the design specifications of low noise amplifiers (LNAs) and power amplifiers (PAs).

Design of Mixers: The working principle of RF mixers and their basic concepts, mixer types: down converters, up converters, harmonic mixers, SSB and DSB mixers, one-diode mixers and two diode mixers. Difference between active and passive mixers, advantages and drawbacks of balanced and unbalanced mixers, mixer's noise performance, design specifications of up and down-conversion mixers.

Design of Oscillators: Working principles of frequency oscillators and their basic concepts, condition to sustain an oscillation, different topologies of oscillators, tuning of the oscillators, impact of noise in the oscillator's signal, influence of output buffering and breakdown voltage on oscillators, design specifications of a Voltage Controlled Oscillator (VCO).

Design of Synthesizers: Working principles of frequency synthesizers and their basic concepts, importance of using synthesizers in modern wireless communications, the Phase-Locked Loop (PLL) types I and II, the advantages and drawbacks of using All-Digital PLL, and

RF phase locked loop: Impact of the PLL frequency synthesizer on the signal's noise performance. the architecture and usage of Fractional-N PLL frequency synthesizers, design specifications of a frequency divider and a phase detector.

23RFM3505 - SATELLITE DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23RFM3505	SATELLITE DESIGN	SD	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	UNDERSTAND AND ANALYSE THE KEPLER'S LAW AND CONCEPTS OF SATELLITE DESIGN	3	PO1, PSO2
CO2	Analyse the subsystems and payload requirements of a satellite	3	PO1, PSO2
CO3	Understand and Analyse Structural requirements and specifications of a satellite	3	PO1, PSO2
CO4	Apply the concepts for mission planning and designing of cubesats	4	PO2, PSO2

Syllabus

Introduction and Fundamentals: Overview of satellite design and its historical background, Types of satellites and their applications, Satellite design process, Kepler's laws and orbital parameters, Basic orbital maneuvers, Orbital perturbations and their effects

Subsystems and Payload Design: Power subsystem, Communications subsystem, Attitude control subsystem, Thermal control subsystem, Payload subsystem, Types of payloads and their applications, Payload requirements and specifications, Payload design considerations, Payload performance analysis and testing

Structural Design: Launch, and Ground Segment, Structural requirements and specifications, Materials and manufacturing processes, Finite element analysis and simulation, Vibration and shock testing, Launch vehicle selection and integration, Launch and deployment procedures, Post-deployment operations and testing, Ground station design and operation, Telemetry, tracking, and command systems, Data processing and storage

Mission Planning, Space Environment, and Advanced Topics: Mission requirements and planning, Orbit maintenance and maneuver planning, Emergency procedures and contingency planning, End-of-life considerations and disposal, Space environment and its effects on spacecraft, Radiation effects and mitigation, Micrometeoroid and debris impact, Spacecraft reliability and failure modes, CubeSat and SmallSat design considerations, Emerging technologies and future trends in satellite design, Case studies of successful and failed satellite missions

23SCI3101A - SPATIAL DATA VISUALIZATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SCI3101A	SPATIAL DATA VISUALIZATION	SDV	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the spatial data, perform geospatial analysis, and create visually appealing maps.	2	PO1, PO2, PO3, PSO2
CO2	Understand the principles of cartography, color theory, and design aesthetics to effectively communicate spatial information.	3	PO1, PO2, PO3, PSO2
CO3	Will learn to integrate spatial data with interactive elements like tooltips, pop-ups, and user interactions	3	PO1, PO2, PO3, PSO2
CO4	Apply these techniques to solve real-world problems and make informed decisions based on spatial data.	3	PO1, PO2, PO3, PSO2
CO5	Analysing audience needs, and selecting appropriate visualization techniques to convey insights clearly and persuasively.	3	PO1, PO2, PO3, PSO2
CO6	Students will understand the principles of effective design for spatial data visualization, including color theory, symbology, map layout, and typography. They will learn how to apply design principles to create clear, intuitive, and aesthetically pleasing spatial visualizations that facilitate understanding and interpretation.	3	PO1, PO2, PO3, PSO2
CO7	Students will apply their knowledge and skills to real-world spatial data sets and case studies across various domains, including urban planning, environmental science, public health, and disaster management. They will analyze and visualize spatial data to address practical problems and make informed decisions.	3	PO1, PO2, PO3, PSO2

Syllabus

Explore manipulating spatial data, geospatial analysis, and creating visually engaging maps. Learn to use GIS software like ArcGIS and QGIS to import, clean, and manage datasets. Apply techniques such as spatial queries, proximity analysis, and raster analysis to solve real-world problems. Focus on cartographic principles and design aesthetics to create effective maps. By the end, students will be proficient in spatial data manipulation, geospatial analysis, and map design.

Dive into cartography, color theory, and design aesthetics for effective map communication. Learn fundamental principles like scale, symbolization, and generalization. Explore color theory and its application in map design. Create visually compelling maps with a focus on layout, typography, and visual hierarchy. Tailor map designs to audience needs and preferences.

Gain training in integrating spatial data with interactive elements to create dynamic maps. Learn to use web-based mapping libraries like Leaflet.js, Mapbox, and Google Maps API. Incorporate interactive elements to enhance user experience. Design responsive interactive map interfaces for various devices. By the end, students will create engaging interactive maps.

Apply spatial data visualization techniques to real-world problems. Study case examples from urban planning, environmental management, and public health. Identify spatial problems, collect and preprocess data, and apply geospatial analysis. Focus on interpreting analysis results and communicating findings. Explore ethical considerations and best practices for using spatial data responsibly.

Analyze audience needs and select effective visualization techniques. Understand audience analysis fundamentals, including demographics and communication preferences. Learn visualization techniques across mediums like static maps, interactive dashboards, and storytelling platforms. Test and iterate on visualizations based on feedback to enhance understanding and engagement.

Focus on effective design principles for spatial data visualization. Emphasize clear communication, visual hierarchy, and aesthetic appeal. Apply design principles to create visually compelling and informative spatial visualizations that facilitate understanding.

23SCI3101E - SPATIAL DATA VISUALIZATION (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SCI3101E	SPATIAL DATA VISUALIZATION	SDV	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding spatial data visualization to proficiently use industry-standard GIS software. Students will select appropriate data visualization techniques, manipulate spatial datasets, and design clear, visually appealing maps and interactive visualizations to communicate complex spatial information to diverse audiences..	2	PO1, PO2, PO3, PSO1
CO2	Apply skills to leverage tools and techniques for spatial data visualization. Participants will interpret spatial data, select suitable visualization methods, and use relevant software to create compelling maps and interactive visualizations that effectively communicate spatial insights to stakeholders.	3	PO1, PO2, PO3, PSO1
CO3	Will learn to integrate spatial data with interactive elements like tooltips, pop-ups, and user interactions	3	PO1, PO2, PO3, PSO1
CO4	Apply these techniques to solve real-world problems and make informed decisions based on spatial data.	3	PO1, PO2, PO3, PSO1
CO5	Analysing audience needs, and selecting appropriate visualization techniques to convey insights clearly and persuasively.	3	PO1, PO2, PO3, PSO1
CO6	Apply the Interactive and Web-based Visualization practically	3	PO1, PO2, PO3, PSO1
CO7	Applying acquired skills and knowledge to real-world spatial data visualization challenges, fostering practical experience and skill development.	3	PO1, PO2, PO3, PSO1

Syllabus

This practical module equips participants with tools and techniques for effective spatial data visualization. Participants will learn to interpret spatial data, choose suitable visualization methods, and use relevant software to create visually compelling maps and interactive visualizations. By the end of this module, they will be able to communicate spatial patterns and insights to stakeholders across various fields.

In this skill module, students will master industry-standard GIS software for creating informative and visually appealing spatial visualizations. They will learn to select appropriate data visualization techniques, manipulate spatial datasets, and design clear maps and interactive visualizations to communicate complex spatial information to diverse audiences.

This module provides training in integrating spatial data with interactive elements to create engaging maps and visualizations. Students will start with web-based mapping libraries like Leaflet.js, Mapbox, and Google Maps API. They will learn to incorporate interactive elements such as tooltips, pop-ups, and legends, and ensure responsive design for different devices. By the end, students will be skilled in creating interactive maps that effectively communicate spatial information.

This module takes a practical approach to applying spatial data visualization techniques to solve real-world problems. Students will explore case studies in urban planning, environmental management, and public health. They will learn to identify spatial problems, collect and preprocess data, apply geospatial analysis techniques, and communicate findings to stakeholders. Ethical considerations and best practices for using spatial data responsibly will also be covered.

Module 6 Focus on effective design principles for spatial data visualization. Emphasize clear communication, visual hierarchy, and aesthetic appeal. Apply design principles to create visually compelling and informative spatial visualizations that facilitate understanding.

- 5 Create static and interactive maps using Folium. Conduct spatial analysis and visualize results with Matplotlib., Jeffrey Shaffer, 1, Wiley.

23SCI3101R - SPATIAL DATA VISUALIZATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SCI3101R	SPATIAL DATA VISUALIZATION	SDV	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand spatial data, perform geospatial analysis, and create visually appealing maps.	2	PO1, PSO1
CO2	Understanding principles of cartography, color theory, and design aesthetics to effectively communicate spatial information.	3	PO2, PSO1
CO3	Analyze to integrate spatial data with interactive elements like tooltips, pop-ups, and user interactions	3	PO3, PSO1
CO4	Apply these techniques to solve real-world problems and make informed decisions based on spatial data.	3	PO4, PSO1
CO5	Students will understand the principles of effective design for spatial data visualization, including color theory, symbology, map layout, and typography. They will learn how to apply design principles to create clear, intuitive, and aesthetically pleasing spatial visualizations that facilitate understanding and interpretation.	3	PO5, PSO1
CO6	Students will apply their knowledge and skills to real-world spatial data sets and case studies across various domains, including urban planning, environmental science, public health, and disaster management. They will analyze and visualize spatial data to address practical problems and make informed decisions.	3	PO6, PSO1

Syllabus

This course offers an in-depth exploration of manipulating spatial data, conducting geospatial analysis, and creating visually engaging maps. Students will start with an introduction to Geographic Information Systems (GIS) and spatial data types, learning to import, clean, and manage spatial datasets using software like ArcGIS and QGIS. They will explore geospatial analysis techniques such as spatial queries, proximity analysis, and raster analysis. Through hands-on exercises, students will solve real-world problems in fields like urban planning, environmental science, and public health. The course emphasizes cartographic principles and design aesthetics to create effective maps. By the end, students will have valuable skills in spatial data manipulation, geospatial analysis, and map design, preparing them for careers in geography, urban planning, and related fields.

This module delves into the principles of cartography, colour theory, and design aesthetics for effective map and visualization communication. Starting with the history and evolution of cartography, students will learn fundamental principles like scale, symbolization, and generalization. The module covers colour theory in map design, including colour schemes, perception, and data classification. Through projects, students will create visually compelling maps adhering to design aesthetics, focusing on layout, typography, and visual hierarchy. By understanding target audience needs, students will tailor their map designs accordingly.

This module focuses on integrating spatial data with interactive elements to create dynamic maps and visualizations. Students will learn to use web-based mapping libraries like Leaflet.js, Mapbox, and Google Maps API. They will incorporate interactive elements such as tooltips, pop-ups, and legends to enhance user experience. Projects will teach students to design interactive map interfaces with features like pan, zoom, and filter, ensuring responsive design for different devices. By the end, students will create compelling interactive maps that effectively communicate spatial information.

This module applies spatial data visualization techniques to real-world problems for data-driven decision-making. Students will explore case studies in domains like urban planning, environmental management, and public health. They will learn to identify spatial problems, collect and preprocess data, and apply geospatial analysis techniques. Emphasis will be on interpreting analysis results and communicating findings to stakeholders. The module also covers ethical considerations and best practices for using spatial data responsibly. By the end, students will be equipped to solve real-world problems and make informed decisions using spatial data visualization.

23SCI3202A - SPATIAL COMPUTING FOR MULTIPLAYER GAMES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SCI3202A	SPATIAL COMPUTING FOR MULTIPLAYER GAMES	SCMG	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Spatial Concepts in Multiplayer Game	2	PO1, PO2, PO10, PSO1
CO2	Implementing Multiplayer Networking Systems	3	PO1, PO2, PO10, PSO1
CO3	Apply and Create interactive environments in multiplayer games	3	PO1, PO2, PO10, PSO1
CO4	Apply the performance and scalability of multiplayer games through efficient spatial computing	3	PO1, PO2, PO10, PSO1
CO5	analyzing spatial data generated by multiplayer games	4	PO1, PO2, PO10, PSO1

Syllabus

Overview of spatial computing concepts Importance in multiplayer games Examples from popular games, Introduction to arrays, grids, and trees Spatial indexing techniques: grid-based and quad-trees Implementation focus,, Basics in 2D and 3D environments Algorithms: bounding boxes, spheres Practical implementation

Design and implement client-server and peer-to-peer networking architectures for multiplayer games. Understand synchronization techniques for maintaining game state consistency across multiple clients and servers. Implement latency compensation strategies to ensure smooth gameplay experiences. Develop scalable and efficient networking solutions for various game genres and platforms, Basics of client-server architecture Design considerations for client-server networking in games Implementing a basic client-server networking system

create immersive and interactive environments in multiplayer games. It covers topics such as implementing environmental effects like weather and lighting, creating mechanics for object manipulation, generating dynamic terrains, and designing player interaction systems. Through hands-on projects and practical exercises, students will learn how to develop multiplayer game environments that respond dynamically to player actions, enhancing the overall gameplay experience.

optimizing the performance and scalability of multiplayer games by leveraging efficient spatial computing techniques. Students will learn how to implement spatial data structures and algorithms to enhance game performance, manage server-client interactions, and scale multiplayer systems. Through practical exercises and projects, students will develop skills in analyzing and optimizing code for performance, managing network bandwidth, and implementing strategies to support large numbers of concurrent players while maintaining smooth and responsive gameplay experiences.

to derive insights from spatial data, such as heatmaps, spatial clustering, and predictive modeling. They will gain skills in analyzing player behavior, optimizing game balance, and predicting future player actions. Additionally, students will explore the application of spatial analytics in enhancing gameplay experiences and improving overall game design.

23SCI3404M - SPATIAL AND SOCIAL IMPLICATIONS OF IMMERSIVE TECHNOLOGIES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SCI3404M	SPATIAL AND SOCIAL IMPLICATIONS OF IMMERSIVE TECHNOLOGIES	SSIIT	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying Immersive Concepts in different Fields	3	PO2, PO4, PS01
CO2	Understanding the Spatial Implications of Immersive Technology	2	PO2, PO4, PS02
CO3	Applying Social Implications in Application	3	PO2, PO4, PS02
CO4	Applying the Principles of Spatial Design in Creating Immersive Experiences	3	PO2, PO4, PS01

Syllabus

Understanding Immersive Technologies, Role of Immersive Technologies in Society, Basic Principles of Immersive Technologies, Evolution of Immersive Technologies

Understanding Spatial Computing, Role of Virtual Reality (VR), Augmented Reality (AR), and Mixed Reality (MR) in Spatial Design, Case Studies of Spatial Applications of Immersive Technologies, Hands-on: Exploring Spatial Applications of VR, AR, and MR

Understanding the Impact of Immersive Technologies on Society, Role of Immersive Technologies in Social Interactions, Case Studies of Social Applications of Immersive Technologies, Hands-on: Exploring Social Applications of VR, AR, and MR

Principles of Designing Immersive Experiences, User Experience and User Interface Design for Immersive Technologies, Case Studies of Effective Immersive Experiences, Hands-on Designing an Immersive Experience

Reference Books

23SCI3405M - SPATIAL AUDIO DESIGN FOR GAMES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SCI3405M	SPATIAL AUDIO DESIGN FOR GAMES	SADG	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Introduction to Spatial Audio	3	PO1, PSO1
CO2	Sound Design and Spatial Audio Techniques	3	PO2, PSO1
CO3	Setting the Atmosphere with Sound	3	PO3, PSO1
CO4	Enhancing Immersion with Sound	3	PO4, PSO1

Syllabus

Fundamentals of Sound: Properties of sound waves Perception of sound by humans, Basic principles of acoustics Stereo Sound: Principles of stereo recording and reproduction, Stereo imaging and localization Multichannel Audio: Introduction to surround sound systems Formats like 5.1, 7.1, etc., Surround sound mixing techniques Binaural Audio: Understanding binaural recording and playback Head-related transfer functions (HRTFs), Virtual auditory space Ambisonics: Theory and principles of ambisonic recording Ambisonic microphone techniques, Ambisonic decoding and spatial rendering 3D Audio Rendering: Spatial audio reproduction techniques Wavefield synthesis, Object-based audio Applications of Spatial Audio: Virtual reality (VR) and augmented reality (AR) Gaming and immersive experiences Live performances and installations, Spatial Audio Production Tools: Overview of software and hardware tools Digital audio workstations (DAWs) Spatial audio plugins and processors, Case Studies and Projects: Analyzing spatial audio in existing media Hands-on projects involving spatial audio recording and mixing Presentation of student projects.

This course explores the principles and techniques of sound design within the context of spatial audio, focusing on creating immersive and interactive auditory experiences. Students will learn the fundamentals of sound design, spatial audio principles, and how to apply them in various mediums such as film, gaming, virtual reality, and live performances.

This course delves into the art and science of using sound to create immersive atmospheres in various contexts, including film, theater, gaming, and virtual environments. Students will explore techniques for designing and implementing soundscapes that enhance storytelling, evoke emotions, and engage audiences on a deeper sensory level.

This course focuses on the theory and practice of using sound to deepen immersion in various media forms, including film, gaming, virtual reality, and live experiences. Students will explore advanced techniques for designing and implementing soundscapes that engage audiences on a visceral level, enhancing storytelling and creating unforgettable immersive experiences. Sound as a Tool for Enhancing Immersion, Integration of 3D Audio Technology in Game Design, Practical Exercises in Creating Immersive Audio for Games.

Reference Books

- 1 Principles of Game Audio and Sound Design, Jean-Luc Sinclair, 6, Focal Press.
- 2 Game Audio Implementation: A Practical Guide Using the Unreal Engine, Richard Stevens and Dave Raybould, 1, CRC Press.

- 4 Spatial Audio Processing: MPEG Surround and Other Applications, J?rgen Herre and Christof Faller, 1, John Wiley and Sons.

23SCI3506 - SPATIAL USER INTERFACE DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SCI3506	SPATIAL USER INTERFACE DESIGN	SUID	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Introduction to Spatial User Interface Design	3	PO1, PSO1
CO2	Designing Spatial User Interfaces	3	PO2, PSO1
CO3	Advanced Concepts in Spatial User Interface Design	3	PO3, PSO1
CO4	Future of Spatial User Interface Design	3	PO4, PSO1

Syllabus

Understanding Spatial User Interface Design, Role of Spatial Design in User Experience, Basic Principles of Spatial Design, Evolution of Spatial User Interfaces and This course provides an introduction to the theory and practice of designing spatial user interfaces (SUIs) for virtual and augmented reality environments. Students will learn fundamental principles of spatial design, interaction techniques, and user experience considerations to create intuitive and immersive interfaces for a variety of applications.

Techniques for Designing Spatial User Interfaces, Realistic vs Abstract Design Styles, Case Studies of Effective Spatial User Interface Design, Hands-on: Designing a Basic Spatial User Interface. This course provides an in-depth exploration of the principles, techniques, and best practices involved in designing effective spatial user interfaces (SUIs) for virtual and augmented reality environments. Students will learn how to conceptualize, prototype, and evaluate spatial interfaces that enhance user experience and interaction in immersive settings.

Immersive Spatial Interfaces Role of Virtual and Augmented, Reality in Spatial Design, Designing for Different Senses (Visual, Auditory, Haptic), Hands-on: Designing an Immersive Spatial User Interface. This course delves into advanced theories, techniques, and emerging trends in spatial user interface (SUI) design for virtual and augmented reality environments. Students will explore cutting-edge concepts such as spatial computing, multimodal interaction, and adaptive interfaces, and gain hands-on experience in designing innovative spatial interfaces for immersive experiences.

Emerging Trends in Spatial User Interface Design, Role of AI and Machine Learning in Spatial Design, Ethical Considerations in Spatial Design, Hands-on: Designing a Spatial User Interface for an Emerging Technology. This course offers an interdisciplinary exploration of speculative and emerging trends in spatial user interface (SUI) design, focusing on envisioning and shaping the future of human-computer interaction in virtual and augmented reality environments. Students will engage in critical discussions, hands-on experiments, and speculative design projects to explore innovative concepts and possibilities in spatial UI design.

23SDM3101A - SENTIMENT ANALYSIS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDM3101A	SENTIMENT ANALYSIS	SA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the sentiment analysis techniques for classifying opinions and emotions from text data	3	PO4, PO5, PSO1
CO2	Choose the methods for identifying subjective sentences, classifying sentiment and extracting aspects of that sentiment within text data.	3	PO4, PO5, PSO1
CO3	Analyze the sentiment lexicons, compare sentiment within text data, and techniques for summarizing opinions on specific aspects.	4	PO2, PO4, PO5, PSO1
CO4	Analyze the concept of debate analysis, intention mining, and fake-opinion detection.	4	PO2, PO4, PO5, PSO1
CO5	Outline the concepts of language constructs, express opinions, sentiments and emotions, intention mining, fake opinion detection	5	PO4, PO5, PSO1
CO6	Examine sentiment analysis techniques in Python using NLTK, TextBlob, and VADER, exploring feature importance with Random Forest, installation and lexicon setup,	4	PO4, PO5, PSO2
CO7	Experiment applications with Python for sentiment analysis: analyzing stock market influence, finding job opportunities on Twitter, and mapping emotional trends on the platform.	4	PO4, PO5, PSO2

Syllabus

Introduction Sentiment analysis: applications, Sentiment analysis research, Sentiment analysis as mini-NLP, The Problem of Sentiment Analysis, Definition of opinion, Definition of opinion summary, different types of opinions, Document Sentiment Classification, Supervised sentiment classification, Unsupervised sentiment classification, Sentiment rating prediction

Sentence Subjectivity and Sentiment Classification :Sentence Subjectivity and Sentiment Classification, Subjectivity, Sentence Subjectivity,Classification, Sentence Sentiment Classification, Aspect Sentiment Classification, Rules of Sentiment composition, Negation and Sentiment, Aspect and Entity Extraction, Frequency based aspect extraction, Exploring syntactic relations, Using supervised learning

Sentiment Lexicon Generation, Dictionary based approach, Corpus based approach, Sentiment word embedding, Analysis of Comparative Opinions, Problem definition, Identifying comparative sentences, Identifying the preferred entity set, Special types of comparison, Opinion Summarization and Search, Aspect based opinion summarization, enhancements to aspect based summaries, Traditional summarization

Analysis of Debates and Comments, Recognizing stances in debates, Modeling debates/Discussions, Modeling comments, Mining Intents, Problem of intent mining, Intent classification, Fine grained mining of intent, Detecting Fake or Deceptive Opinions, Different types of Spam, Supervised fake review detection, Automated discovery of abnormal patterns, Model based behavioral analysis, Group spam detection, Quality of Reviews, Quality prediction as a regression problem

Implement the concepts of language constructs, express opinions, sentiments and emotions, intention mining, fake opinion detection

23SDM3202A - OPINION MINING & RECOMMENDER SYSTEMS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDM3202A	OPINION MINING & RECOMMENDER SYSTEMS	OMRS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Utilize the feature extraction tools for different opinion mining levels and their uses in real world applications	3	PO1, PO2, PO5, PSO1
CO2	Apply evaluation metrics and opinion mining techniques by using VADER and NLTK tools in opinion mining	3	PO2, PO5, PSO1
CO3	Make use of data mining methods for recommender systems, classifiers, optimization of recommender systems	3	PO2, PSO1
CO4	Examine the optimization methods for different recommender systems.	4	PO3, PO5, PSO1
CO5	To evaluate the optimization and compare the contextual information model and reinforcement learning.	5	PO3, PO5, PSO1

Syllabus

Opinion Mining, Introduction, Aspect Based Mining Opinion Mining , History- Opinion Mining Terminologies ,General Opinion Mining Tasks, Document Level Opinion Mining, Feature based Opinion Mining and Sentence Level Opinion Mining, Phrase Level Opinion Mining , Aspect based Opinion Mining, Language Models, N Gram Models, Feature Extraction and Opinion Visualisation, Probabilistic Graphical Models, PLSI Model Multinomial LDA, Parameter Estimation -Smoothing Model Selection

Evaluation Metrics , Opinion Digger A Hybrid Method for Mining Reviews Temporal Opinion Mining, Temporality Process, Aspect Extraction- Finding Frequent Noun phrases, Mining Opinion Patterns , Filtering Out Non-Aspects, Grouping Candidate Aspects, Opinion Mining Techniques Knowledge based Approaches, SentiWordNet, SentiWordNet in our Supervised Approaches, Naive Bayes , Unsupervised Approaches, Supervised versus Unsupervised, Parameter Estimation Smoothing , Model Selection Test Set Likelihood, LDA Models for Aspect based Opinion Mining , LDA , SLDA, DLDA, PLDA , SPLDA DPLDA, Inference and Estimation.

Introduction and basic taxonomy of recommender systems (RSs). Traditional and non-personalized RSs. Overview of data mining methods for recommender systems (similarity measures, classification, Bayes classifiers, ensembles of classifiers, clustering, SVMs, dimensionality reduction). Overview of convex and linear optimization principles. Content-based recommender systems The long-tail principle. Domain-specific challenges in recommender systems. Content-based recommender systems. Advantages and drawbacks. Basic components of content-based RSs. Feature selection. Item representation Methods for learning user profiles. Collaborative Filtering (CF)-based RSs: Mathematical foundations Mathematical optimization in CF RSs.

Optimization objective. Baseline predictor through least squares. Regularization and overfitting. Temporal models. Step-by-step solution of the RS problem. Collaborative Filtering (CF)-based RSs: systematic approach Nearest-neighbor collaborative filtering (CF). User-based and item-based CF, comparison. Components of neighborhood methods (rating normalization, similarity weight computation, neighborhood selection). Hybrid recommender systems.

Advanced CF methods Matrix factorization models and dimensionality reduction. Matrix Decomposition. Latent factor models. Solution via alternative projections method. Examples. The Netflix data challenge. Constraint-based RSs. Introduction to tensors and their applications. Performance evaluation of RSs Experimental settings. Working with RSs data sets. Examples. The cold-start problem. Evaluation metrics. Rating prediction and accuracy.

23SDM3203A - META SOCIAL MEDIA ANALYTICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDM3203A	META SOCIAL MEDIA ANALYTICS	MSMA	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understanding of the landscape of Meta-owned social media platforms, the importance of analytics for businesses and marketers, and considerations regarding data collection and privacy.	1	PO1, PO2
CO2	apply data cleaning methods to ensure data quality.	2	PO1, PO2
CO3	exploratory data analysis (EDA) specific to social media data from Meta platforms.	3	PO1, PO2
CO4	sentiment analysis principles, sentiment lexicons, and text preprocessing methods.	5	PO1, PO2
CO5	analyze the structure and dynamics of social media networks.	6	PO1, PO2

Syllabus

Introduction to Meta Social Media Analytics Overview of Meta-owned social media platforms Importance of analytics for businesses and marketers Introduction to data collection and privacy considerations

Data Collection and Preprocessing Understanding APIs for data access Web scraping techniques Data cleaning techniques and handling missing data

Exploratory Data Analysis (EDA) Descriptive statistics for social media data Visualization techniques for insights Trend analysis and seasonality

Sentiment Analysis and Text Mining Introduction to sentiment analysis Sentiment lexicons and dictionaries Text preprocessing for social media text data

Network Analysis and Community Detection Basics of social network analysis Network metrics and visualization Community detection in social networks

CO1	understanding of the landscape of Meta-owned social media platforms, the importance of analytics for businesses and marketers, and considerations regarding data collection and privacy.	1	PO1, PO2
CO2	apply data cleaning methods to ensure data quality.	2	PO1, PO2
CO3	exploratory data analysis (EDA) specific to social media data from Meta platforms.	4	PO1, PO2
CO4	sentiment analysis principles, sentiment lexicons, and text preprocessing methods.	6	PO1, PO2
CO5	analyze the structure and dynamics of social media networks.	6	PO1, PO2

Syllabus

Introduction to Meta Social Media Analytics Overview of Meta-owned social media platforms Importance of analytics for businesses and marketers Introduction to data collection and privacy considerations

Data Collection and Preprocessing Understanding APIs for data access Web scraping techniques Data cleaning techniques and handling missing data

Exploratory Data Analysis (EDA) Descriptive statistics for social media data Visualization techniques for insights Trend analysis and seasonality

Sentiment Analysis and Text Mining Introduction to sentiment analysis Sentiment lexicons and dictionaries Text preprocessing for social media text data

Network Analysis and Community Detection Basics of social network analysis Network metrics and visualization Community detection in social networks

23SDM3304A - SOCIAL MEDIA MARKETING ANALYTICS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDM3304A	SOCIAL MEDIA MARKETING ANALYTICS	SMMA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To build the awareness about, what social media is, the different platforms it uses, and how it fits into your marketing plan. Create content and goals for social media marketing.	2	PO1, PO3
CO2	Builds the knowledge about Creation and maintain a successful blog. Prepare Facebook and Instagram ads and have a solid grasp of social media page branding.	2	PO1, PO3
CO3	Develop the construction of a video marketing strategy and become familiar with YouTube advertising.	3	PO1, PO3
CO4	Analyze the branding of Twitter Profiles and Ads	4	PO1, PO3
CO5	Discover the use of technologies and consumer-generated content are influencing the direction of social media marketing.	4	PO1, PO3
CO6	Examine the issues in Social Media Marketing Analysis	4	PO1, PO3
CO7	Text Mining and Sentiment Analytics, Text Mining and Product Innovation Management	4	PO1

Syllabus

Social marketing uses marketing tools for social good. It aims to change behaviors for a better future, like promoting healthy habits or environmental awareness. These campaigns target specific audiences and use a marketing mix (product, price, place, promotion) with a social twist. India has seen success with social marketing in areas like polio eradication and girl's education. Challenges include grabbing attention and limited resources, but digital tools and collaboration offer exciting opportunities for even greater social impact.

Successful social marketing requires a well-defined plan. This includes understanding your target audience (segmentation) and what motivates them (research). Then you can craft a strategy with clear goals and messages delivered through the right channels. Remember, social marketing is about positive change, so act ethically and responsibly throughout the process.

Research is key to social marketing success. You need to understand the social climate, your target audience, and how your campaign performs. There are many tools available, from surveys to social listening. In India, consider the cultural context. Analyzing your audience's behaviors and beliefs is crucial to crafting messages that resonate. Finally, track your progress and measure the impact of your campaign to see if it's achieving its goals.

Social marketers have a toolbox of resources at their disposal. These include research surveys, scheduling platforms, and data analysis software. They also use a social marketing mix, focusing on the desired behavior change and how to promote it. Crafting clear messages and choosing the right channels to reach your target audience is essential. Social marketing can even go beyond campaigns to influence policy changes through advocacy.

Social marketing isn't limited to one area. It tackles various challenges like health (vaccination awareness), environment (recycling campaigns), and education (promoting early childhood learning). It can even address social issues like gender equality or domestic violence. By adapting its approach to each situation, social marketing can create positive change in many aspects of our lives.

Social media like Facebook and LinkedIn are goldmines for marketers. Facebook lets you reach a massive audience and build brand awareness, while LinkedIn is ideal for connecting with professionals in your field. To make the most of these platforms, consider creating compelling digital ads with strong visuals and targeted messaging. By mastering these social media tools, you can take your marketing efforts to the next level.

Text mining is like a detective for data! It analyzes mountains of text, like emails or social media posts, to find hidden insights. This can be useful in two ways. Sentiment analysis uses text mining to understand public opinion, like gauging customer satisfaction through reviews. Product innovation can also benefit from text mining, which can uncover customer needs and ideas for new products by analyzing things like warranty claims and social media conversations. In short, text mining helps businesses make smarter decisions based on what people are saying.

23SDM3405M - DIGITAL MEDIA ANALYTICS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDM3405M	DIGITAL MEDIA ANALYTICS	DMA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Data analytics and Inspect assumptions about new media as an egalitarian force	2	PO1, PO2, PSO1
CO2	Apply and implementation of analytics techniques	3	PO1, PO2, PO5, PSO1
CO3	Apply the Principles of Importing, Summarizing, and Visualizing Data using Tableau	3	PO2, PO3, PO5, PSO1
CO4	Exploring and analyzing different media analytics tools	4	PO2, PO3, PO5, PSO1

Syllabus

The process of data analytics uses statistical techniques and software tools to interpret complex data and derive actionable insights and WordPress is a content management system that simplifies the process of creating and managing websites.

Excel advanced functions include complex formulas and tools like VLOOKUP, INDEX-MATCH, and array functions. These functions enhance data analysis and automation capabilities in Excel.

Social media analytics involves analyzing data from social media platforms to understand user behavior and trends. It helps businesses make data-driven decisions to improve engagement and marketing strategies.

Voyant Tools is a web-based application for text analysis, enabling users to visualize and explore textual data interactively. It provides various analytical tools to uncover patterns and insights in text.

23SDM3406M - ETHICAL SOCIAL MEDIA (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDM3406M	ETHICAL SOCIAL MEDIA	ESM	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the theoretical underpinnings of ethical social media.	2	PO1, PO2, PO3, PSO1
CO2	Explore advanced topics in social network analysis, sentiment analysis, and topic modeling.	3	PO2, PO3, PO4, PSO1
CO3	Apply Ethical social media techniques to real-world problems and research questions.	3	PO1, PO3, PO4, PSO2
CO4	Analyze ethical considerations and challenges in Ethical social media mining research.	4	PO1, PO3, PO4, PSO2

Syllabus

Introduction to Social Media Mining-Overview of social media platforms and their data such as Facebook, Twitter, Instagram, LinkedIn, and others, Exploration of different types of data available on different platforms, Handling multimedia data (image and video preprocessing), Data mining concepts and techniques and applications, Ethical considerations in social media mining research.

Data Collection from Ethical Social Media-Overview of social media platforms and data sources, Ethical Frameworks and Guidelines, Legal Aspects of Social Media Data Collection, Methods for collecting data from different social media platforms API usage, web scraping, and ethical considerations Data storage and management for social media datasets

Data Mining Techniques and Visual Analysis in Ethical Social Media-Classification algorithms, clustering techniques, and regression algorithms for social media data, Visualization techniques for social media data Graphical representations of networks, trends, and sentiment Tools and libraries for social media data visualization, Applications of Ethical Social Media Mining

Network Analysis in Ethical Social Media-Basics of network analysis and graph theory Social network analysis (SNA) for studying user interactions Identifying communities, Social Media Network Structures, influencers, and trends in social networks, Analytical Techniques in Network Analysis Applications of Network Analysis in Social Media, Future Trends and Challenges.

23SDM3507 - INTELLIGENT SOCIAL MEDIA MONITORING SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDM3507	INTELLIGENT SOCIAL MEDIA MONITORING SYSTEMS	ISMMS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Illustrate The principles and concepts of intelligent social media monitoring systems	2	PO1, PO3, PO4, PSO1
CO2	Apply data collection and preprocessing techniques for social media data	3	PO1, PO2, PO3, PSO1
CO3	Apply the sentiment analysis techniques to gauge public opinion and sentiment on social media platforms	3	PO2, PO3, PO4, PSO1
CO4	Apply the user profiles and perform user behavior analysis: Develop algorithms to detect and respond to significant events and anomalies on social media platforms.	3	PO1, PO2, PO3, PSO1

Syllabus

The importance of social media monitoring for businesses, organizations. The key components and functionalities of intelligent social media monitoring systems and individuals. The principles and concepts of intelligent social media monitoring systems.

The knowledge of various data collection methods for social media platforms. The relevant features from social media data for further analysis. The data collection and preprocessing techniques for social media data

To conduct a comprehensive analysis of competitors, including their products or services, target markets, pricing strategies, distribution channels, marketing tactics, and overall business strategies.

The social media monitoring for businesses and user profiles and perform user behavior analysis: The Develop algorithms to detect and respond to significant events and anomalies on social media platforms.

23SDM3508 - SEARCH ENGINE OPTIMIZATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDM3508	SEARCH ENGINE OPTIMIZATION	SEO	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify the fundamentals of search engine optimization (SEO), from how search engines work to career opportunities in the field.	3	PO1, PO2, PSO1
CO2	Apply the evolution of search engine algorithms, SEO best practices, and the impact of game-changing updates like Panda and Penguin.	3	PO2, PO4, PSO1
CO3	Examine the latest SEO strategies, including Core Web Vitals, EAT, YMYL, featured snippets, BERT, and branding, to build a winning keyword strategy.	4	PO1, PO4, PSO1
CO4	Analyze detailed profile of your ideal customer to laser-focus your marketing efforts.	4	PO2, PO4, PSO1

Syllabus

Introduction to Google SEO, Introduction to Search Engine Algorithms, SEO as a Career, How Search Engines Work, Evolution of SEO

Algorithm Updates: History, Part 1, Algorithm Updates: Important Algorithms, Part 2, SEO Best Practices and Ranking Factors, Panda: The Game Changer for Content, Cleaning Up Links with Penguin

Core Web Vitals, EAT & YMYL, Featured Snippets and Rich Snippets, BERT, Evolution of Keyword Optimization, Strengthening Your Keyword Strategy, How Does Branding Influence Website Rank?

Persona Development, Marketing to Your Persona, Getting to Know Your Audience, Creating Your Ideal Buyers Persona

23SGT3101A - DISTRIBUTED ENERGY RESOURCES AND SMART GRIDS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SGT3101A	DISTRIBUTED ENERGY RESOURCES AND SMART GRIDS	DERSG	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the impact of DERs and smart grids on traditional centralized energy systems and how they contribute to decentralization, reduce transmission losses, and support local energy production.	3	PO1, PO6, PSO1
CO2	Analyze the distributed energy resource system considering factors like load demand, renewable energy sources, and grid interconnection requirements.	4	PO2, PO5, PSO2
CO3	Analyze the energy management and grid operations using smart grid technologies involves a comprehensive analysis of how these technologies optimize energy efficiency, reliability, and sustainability.	4	PO2, PO6, PSO2
CO4	Analyze the data communication Protocols in smart grid technologies to enable efficient and secure exchange of real-time data between devices, ensuring optimized grid operations and integration of renewable energy sources.	4	PO1, PO5, PSO2
CO5	Analyze the Smart Grid Monitoring and AMI Infrastructure, how these technologies enhance grid management, energy efficiency, and consumer engagement.	4	PO4, PO6, PSO2
CO6	Analyze and Testing of the distributed energy resources, it involves understanding their integration, performance, and impact on the electrical grid.	4	PO1, PO4, PSO2
CO7	Simulation or Modelling tool to analyze the behavior and performance of a distributed energy resource system, and tools used effectively by enabling accurate prediction, optimization, and decision-making in renewable energy integration and grid management.	4	PO2, PO5, PSO1

Syllabus

Distributed Energy Resources: Introduction, combined heat and power (CHP) systems, solar photovoltaic (PV) systems, Wind energy conversion systems (WECS), small-scale hydroelectric power generation, batteries, ultra-capacitors, flywheels.

Integration of Distributed Generation to Grid: Introduction, concepts of micro grid, typical micro-grid configurations, AC and DC micro grids, interconnection of micro-grids, protection and control issues in micro-grids, technical and economic advantages of micro-grid, challenges and disadvantages of micro-grid.

Introduction to Smart Grid: Introduction to smart grid, architecture of smart grid, smart grid standards and policies, smart grid components, smart grid technologies, the fundamental components of smart grid designs, and smart-grid activities in India.

Data communication: Introduction, dedicated and shared communication channels, switching techniques, communication channels- layered architecture and protocols.

Smart Grid Monitoring: Load dispatch centers, wide-area monitoring system (WAMS), PMU; Smart sensors/telemetry, advanced metering infrastructure (AMI); smart metering; demand side management and demand response programs, demand pricing and time of use, real time pricing, peak time pricing, smart grid system monitoring and self-healing.

Reference Books

23SGT3202A	DISTRIBUTION SYSTEM PRACTICES	DSP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the power system stability	2	PO1, PO2
CO2	Apply the small signal stability to power systems	3	PO1, PO2
CO3	Analyze Excitation control and Voltage Stability	4	PO1, PO2
CO4	Analyze power system security control	4	PO1, PO2
CO5	Test the small signal stability and power system security using MATLAB	4	PO1, PO2

Syllabus

Power Distribution Network: Types of distribution system, AT&C Loss, calculation of aggregate technical and commercial loss, measures to reduce technical and commercial losses, power distribution from distribution substation to end consumers, categories of consumers, functions of power distribution companies

Substation Erection and Commissioning: Various types of distribution substations, technical specifications of distribution substation equipment, procedure for erection and commissioning of distribution substation, different mounting structures for the transformer, installation procedure of Switchgear, power factors correction panels and control panels, substation automation System (SAS) in power distribution network, importance of capacitor bank.

Distribution System Protection: Various distribution system protections, surge voltages along with various surge protection devices, importance of lightening arrestor (LA) in distribution network, earthing of distribution system, different grounding systems.

Testing of the Equipment in Power Distribution: Testing of distribution transformer and associated components, routine test on the equipment, importance of insulation resistance testing, polarisation index and absorption index, importance of magnetic balance test of transformer, test the earthing resistance in distribution system, various tests on current transformer, capacitive voltage transformer, lightning arrestor, circuit breaker, energy meter etc. to ensure their healthiness.

Introduction to Small Signal Stability, Power System Modeling in MATLAB, Eigenvalue Analysis and Stability Assessment, Control System Design for Stability Enhancement, Power Flow Analysis Using MATLAB, Case Studies and Practical Applications

23SGT3203A - MICROGRID DYNAMICS AND CONTROL (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SGT3203A	MICROGRID DYNAMICS AND CONTROL	MDC	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To understand of AC and DC microgrids	2	PO1
CO2	To apply the dynamic modelling of microgrids	3	PO2
CO3	To apply the different hierarchical control schemes for microgrid system and communication implementation of hierarchical control	3	PO3
CO4	To apply the stability in microgrids and alternate options for stability improvement in microgrids	3	PO4
CO6	Ability to analyze the dynamics control on microgrid	4	

Syllabus

Introduction to the concept of microgrid, the overview of the structure and architecture of microgrid with brief control, operational aspects. Till date pilot microgrid projects and their outcomes. Dynamic modelling of individual components in AC and DC microgrids, state space modal analysis and influence of system parameters on the microgrid dynamics, brief concept on the design of microgrid stabilizers to improve stability

Hierarchical control scheme for microgrids: Control Objectives in AC Microgrids, bottleneck with only local control, need of secondary and tertiary control, implementation of hierarchical control with centralized and distributed control schemes for AC and DC microgrids. Advantages and disadvantages of centralized and distributed control schemes.

Multi-microgrid coordination and control: AC-AC, AC-DC and DC-DC microgrid clustering, coordinated control schemes in multi-microgrids, frequency, voltage regulations and volt-VAR support.

Control of Smart Power Grid System: Load Frequency Control (LFC) in Micro Grid System-Voltage Control in Micro Grid System - Reactive Power Control in Smart Grid. Case Studies and Test beds for the Smart Grids.

modeling and simulating microgrid systems, analyzing dynamic behavior under various load conditions, and implementing control strategies for stability and efficiency. Labs will also include real-time monitoring and control of microgrid components using industry-standard software and hardware tools.

Reference Books

23SGT3304A - ENERGY MANAGEMENT SYSTEMS AND SCADA (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SGT3304A	ENERGY MANAGEMENT SYSTEMS AND SCADA	EMS&SCADA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Data acquisition systems, Evolution of SCADA, Communication technologies, Monitoring and supervisory functions, SCADA System Components, SCADA Architecture, advantages and disadvantages of each system, single unified standard architecture, IEC 61850, SCADA Communication.	2	PO1, PO5
CO2	Understand the Utility applications, Energy management applications in Transmission sector and Energy management applications in Distribution sector, operations, monitoring, analysis and improvement.	2	PO1, PO5
CO3	Apply the knowledge of Smart substations, Substation Automation, Feeder Automation, SCADA , Remote Terminal Unit, Protocols, Phasor Measurement Unit, Smart integration of energy resources, Renewable energy sources, intermittent power sources, Energy Storage. on transmission system.	3	PO1, PO5
CO4	Apply the knowledge of Volt / VAR control, Fault Detection, Isolation and Service Restoration, Network Reconfiguration, Outage management System, CIS & GIS, Load Management Systems, Load analysis and forecasting, remote automatic meter reading. on distribution system.	3	PO1, PO5
CO5	Analyze the characteristics of SCADA components, Communication technologies, SCADA Architecture, Smart substations, Remote Terminal Unit using Software Tools.	4	PO1, PO5
CO6	Analyze the operational characteristics of Energy Management System, Phasor Measurement Unit, Smart integration of energy resources, Renewable energy sources, intermittent power sources, Energy Storage. and SCADA components	4	PO1, PO5
CO7	Analyze the controls characteristics of SCADA system, Phasor Measurement Unit, Smart integration of energy resources, Renewable energy sources, intermittent power sources, Energy Storage. using Software Tools.	4	PO1, PO5

Syllabus

Data acquisition systems, Evolution of SCADA, Communication technologies, Monitoring and supervisory functions, SCADA System Components. SCADA Architecture: Various SCADA architectures, advantages and disadvantages of each system - single unified standard architecture -IEC 61850. SCADA Communication.

Utility applications, Energy management applications in Transmission sector and Energy management applications in Distribution sector, operations, monitoring, analysis and improvement.

Introduction, Smart substations, Substation Automation , Feeder Automation, SCADA , Remote Terminal Unit, Protocols, Phasor Measurement Unit, Smart integration of energy resources, Renewable, intermittent power sources, Energy Storage.

Introduction, Volt / VAR control , Fault Detection, Isolation and Service Restoration, Network Reconfiguration, Outage management System, CIS & GIS, Load Management Systems, functions of load management systems: Load analysis and forecasting, remote automatic meter reading.

Modelling and simulation of EMS compoenets using MATLAB. Modelling and simulation of SCADA compoenets using MATLAB.

Reference Books

23SGT3304E - ENERGY MANAGEMENT SYSTEMS AND SCADA (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SGT3304E	ENERGY MANAGEMENT SYSTEMS AND SCADA	EMS&SCADA	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Data acquisition systems, Evolution of SCADA, Communication technologies, Monitoring and supervisory functions, SCADA System Components, SCADA Architecture, advantages and disadvantages of each system, single unified standard architecture, IEC 61850, SCADA Communication.	2	PO5
CO2	Understand the Utility applications, Energy management applications in Transmission sector and Energy management applications in Distribution sector, operations, monitoring, analysis and improvement.	2	PO5
CO3	Apply the knowledge of Smart substations, Substation Automation, Feeder Automation, SCADA, Remote Terminal Unit, Protocols, Phasor Measurement Unit, Smart integration of energy resources, Renewable energy sources, intermittent power sources, Energy Storage. on transmission system.	3	PO5
CO4	Apply the knowledge of Volt / VAR control, Fault Detection, Isolation and Service Restoration, Network Reconfiguration, Outage management System, CIS & GIS, Load Management Systems, Load analysis and forecasting, remote automatic meter reading. on distribution system.	3	PO5
CO5	Analyze the characteristics of SCADA components, Communication technologies, SCADA Architecture, Smart substations, Remote Terminal Unit using Software Tools.	4	PO5
CO6	Analyze the operational characteristics of Energy Management System, Phasor Measurement Unit, Smart integration of energy resources, Renewable energy sources, intermittent power sources, Energy Storage. and SCADA components	4	PO5
CO7	Analyze the controls characteristics of SCADA system, Phasor Measurement Unit, Smart integration of energy resources, Renewable energy sources, intermittent power sources, Energy Storage. using Software Tools.	4	PO5

Syllabus

Introduction to SCADA: Data acquisition systems, Evolution of SCADA, Communication technologies, Monitoring and supervisory functions, SCADA System Components. SCADA Architecture: Various SCADA architectures, advantages and disadvantages of each system - single unified standard architecture -IEC 61850. SCADA Communication.

SCADA Applications: Utility applications, Transmission and Distribution sector -operations, monitoring, analysis and improvement.

Energy Management Systems (EMS): Introduction, Smart substations, Substation Automation, Feeder Automation, SCADA, Remote Terminal Unit, Protocols, Phasor Measurement Unit, Smart integration of energy resources, Renewable, intermittent power sources, Energy Storage.

Distribution Management System (DMS): Introduction, Volt / VAR control, Fault Detection, Isolation and Service Restoration, Network Reconfiguration, Outage management System, CIS & GIS, Load Management Systems, functions of load management systems: Load analysis and forecasting, remote automatic meter reading.

Modelling and simulation of EMS compoenets using MATLAB. Modelling and simulation of SCADA compoenets using MATLAB.

23SGT3405M - SMART GRID COMMUNICATION AND CYBERSECURITY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SGT3405M	SMART GRID COMMUNICATION AND CYBERSECURITY	SGCCS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic concepts and components of smart grids with an emphasis on the crucial role of communication technologies.	3	PO1, PO6, PSO1
CO2	Analyze the various security measures and potential threats associated with communication technologies in smart grids.	4	PO2, PO5, PSO2
CO3	Analyze the the specific communication protocols and their roles in enhancing substation operations.	4	PO1, PO4, PSO2
CO4	Analyze the various hacking techniques and potential threats targeting smart grid infrastructures.	4	PO2, PO5, PSO2

Syllabus

Communication Technologies for the Smart Grid: Different types of Communication technologies for the smart grid. Standards for information exchange, DNP3.

Information Security for the Smart Grid and Measurement Technology: Introduction, Encryption and Decryption Authentication, Digital signature, Message digest, cyber security standards. Communication and Measurement, Monitoring, Advanced metering infrastructure.

Interoperability and Standards: Introduction-Benefits and Challenges Of Interoperability, Model For Smart Grid Network Interoperability, Approach to Smart Grid Interoperability Standards, NIST Standards.

Hacking and Cyber-security: Identifying a target Vulnerability, Attack tools-Attack methods-Cyber security architecture, SGCG reference architecture, ISA62443: zones and conduits and Smart Grids.

Reference Books

- 1 Smart Grid Communication and Cybersecurity: Concepts, Architecture, and Challenges , Dr. Brijesh Kumar Singh and Dr. Sanjay Kumar Singh, 2013, Springer.

- 3 Smart Grid: Fundamentals of Design and Analysis , James Momoh, 2012, IEEE Computer Society Press.
- 4 The Smart Grid: Enabling Energy Efficiency and Demand Response , Clark W. Gellings, 2018, CRC Press .

23SGT3406M - SMART METERS AND SMART CITIES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SGT3406M	SMART METERS AND SMART CITIES	SMSC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the historical development and transformation of traditional power grids into smart grids.	2	PO1, PO5, PSO1
CO2	Apply the key standards and initiatives relevant to smart city development and effectively apply them to enhance urban infrastructure and services.	3	PO2, PO4, PSO2
CO3	Analyze the principles of Energy Management Systems (EMS), Demand Side Management (DSM) and their roles in optimizing smart grid operations and energy efficiency.	4	PO1, PO6, PSO2
CO4	Analyze the functionalities of smart meters and assess their benefits in enhancing energy management and efficiency within smart city infrastructures.	4	PO2, PO4, PSO2

Syllabus

Smart Grid and Distribution System Architecture - Introduction to Smart Grid - Evolution of Electric Grid-Definitions and Need for Smart Grid -Smart grid drivers, functions, opportunities, challenges and benefits- Initiatives for Smart

Smart CitiesIntroduction and Characteristics of Smart Cities- Planning, Designing and Implementation of Smart Cities- Smart Cities Standards and Initiatives- Challenges and Success Factors-Smart City case study

Energy Management Systems and Demand Side Management Work Contents of DSM Implementation by Power Grid Enterprises-Condition for Promoting Power Grid Enterprises to Actively Develop DSM Program

Advanced Metering Infrastructure AMI Types of Loads, Evolution , Benefits and needs of Smart metering and AMI ,Protocols,Security ,Home local area networks HANs , NAN,WAN, Data concentrator,Meter Data Management Systems MDMS,Operational Gateways

Reference Books

23SGT3507 - INTERNET OF THINGS AND SMART GRID ANALYTICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SGT3507	INTERNET OF THINGS AND SMART GRID ANALYTICS	IOT&SGA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the network protocols and standards, and apply this knowledge to design and maintain efficient and secure communication networks.	2	PO1, PO4, PSO1
CO2	Apply the architectures of IoT systems and data analytics frameworks to optimize data collection, processing, and utilization for enhanced decision-making and operational efficiency.	3	PO2, PO5, PSO2
CO3	Analyze the various applications of IoT technologies in smart grids to enhance monitoring, control, and optimization of energy distribution and consumption.	4	PO1, PO5, PSO2
CO4	Analyze the principles and applications of big data analytics to extract valuable insights, optimize decision-making processes, and enhance operational efficiency across various domains.	4	PO2, PO6, PSO2

Syllabus

Networking Protocols and Standards for Internet of Things: Introduction, IoT Data Link Protocols, Network Layer Routing Protocols, Network Layer Encapsulation Protocols, Session Layer Protocols, IoT Management Protocols, Security in IoT Protocols, IoT Challenges.

IoT Architecture: Introduction, Architectural Approaches, Business Architecture, Functional Architecture, Application Architecture, Data and Analytics Architecture, Technology Architecture, Security and Governance.

Applications of IOT to Smart Grid: Energy monitoring, energy harvesting, smart parking, smart medium access in mobile IOT.

Introduction to Big Data Analytics: Attributes of Big Data: Volume of data, velocity of data, variety of data; Overview of big data analytics, benefits of big data analytics, big data analytics for smart grids, big data analytics tools. Smart Grid Data Management and Applications: Smart Meter Data Management: Smart metering architecture, challenges and opportunities, smart meter data management, future trends and issues; PHEVs: Internet of Vehicles: Convergence of PHEVs and internet of vehicles, electric vehicles management, future trends and issues; Smart Buildings: Concept of smart buildings, challenges and opportunities, different approaches for establishing smart buildings, future trends and issues.

Reference Books

- 1 Smart Grid in IoT-enabled Spaces: The Road to Intelligence in Power, Al-Turjman, Fadi, 2020, CRC Pres.
- 2 Smart Grid Technology: A Cloud Computing and Data Management Approach, Misra, Sudip, and Samaresh Bera, 2018, Cambridge University Press.
- 3 . Internet of things and data analytics handbook, Geng, Hwaiyu, ed, 2017, John Wiley & Sons.
- 4 Internet of Things and Big Data Analytics for Smart Generation, Valentina E. Balas, Sangeeta Mohanty, Raghvendra Kumar, Rajshree Srivastava, 2019, Springer.

23SGT3508 - SMART GRID PROTECTION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SGT3508	SMART GRID PROTECTION	SGP	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To Understand basic concepts of advanced protection systems	2	PO1, PO3
CO2	To Apply relay algorithms and associated hardware	3	PO3, PO4
CO3	To understand the principles of modern protection systems for substation, transformer, generator and motor	2	PO1, PO2
CO4	To apply the advanced Protection for Smart Grid	3	PO3, PO4
CO6	Ability to analyze the different technologies for smart grid protection	4	PO1

Syllabus

Introduction to the concept of microgrid, the overview of the structure and architecture of microgrid with brief control, operational aspects. Till date pilot microgrid projects and their outcomes. Dynamic modelling of individual components in AC and DC microgrids, state space modal analysis and influence of system parameters on the microgrid dynamics, brief concept on the design of microgrid stabilizers to improve stability.

Hierarchical control scheme for microgrids: Control Objectives in AC Microgrids, bottleneck with only local control, need of secondary and tertiary control, implementation of hierarchical control with centralized and distributed control schemes for AC and DC microgrids. Advantages and disadvantages of centralized and distributed control schemes.

Multi-microgrid coordination and control: AC-AC, AC-DC and DC-DC microgrid clustering, coordinated control schemes in multi-microgrids, frequency, voltage regulations and volt-VAR support.

Control of Smart Power Grid System - Load Frequency Control (LFC) in Micro Grid System - Voltage Control in Micro Grid System - Reactive Power Control in Smart Grid. Case Studies and Test beds for the Smart Grids.

23SMD3101A - SOFTWARE VERIFICATION & VALIDATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMD3101A	SOFTWARE VERIFICATION & VALIDATION	SVV	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts, terminologies, and techniques essential in the domain of software verification and validation.	2	PO2, PO4, PSO1
CO2	Identify the intricacies of the software verification and validation process, focusing on identifying and understanding the various stages and activities involved.	3	PO2, PO5, PSO1
CO3	Apply with the practical skills and theoretical knowledge necessary to apply principles and theories in the domain of software verification and validation.	3	PO2, PO6, PSO1
CO4	Apply various software verification and validation artifacts, including test plans, test cases, and defect reports.	3	PO2, PO6, PSO1
CO5	Analyse a comprehensive understanding of the different tools and technologies available for automating software testing and enhancing the efficiency of the verification and validation processes.	4	PO2, PO5, PSO1
CO6	Analyse and assess the impact of software defects on system behaviour, performance, and reliability.	4	PO2, PO5, PSO1
CO7	Comprehensive analysis of various Agile practices underlying software verification and validation.	4	PO2, PO5, PSO1

Syllabus

Introduction to Software Verification and Validation, Software Testing Fundamentals ,Testing objectives, testing lifecycles, Test cases, human error, testing and debugging, general principles of testing, test metric.

Agile methodology and Its Impact on Testing, Verification and Validation. Failure, Error, Fault, and Defect. Agile methodology significantly impacts testing, verification, and validation by promoting continuous integration, automated testing, and collaborative efforts.

Testing Approaches - Static testing, structured group, examination static analysis, Control flow and data flow Testing, Determining Metrics, Dynamic Testing, Black Box testing, equivalence Class Portioning, BoundaryValue Analysis, state transition test, cause effect graphing and decision table technique and used case and Advanced black box and white box techniques. Gray box testing, intuitive and Experience based

Verification and validation planning, Top down versus bottom- up Testing Functional Vs Structured Testing, mutation testing, Test planning and Management, Testing process, Maturity Models. Types of Testing- Concept of Unit Testing, Domain testing, Concept of Integration Testing. System testing acceptance testing, Alpha &Beta testing, Installation Testing, Usability Testing, Regression testing.

System Tests- Performance testing, Load testing, Stress testing, Security testing, Gorilla testing, Syntax Based Testing, Functionality Tests, Robustness Tests, Interoperability Tests, Scalability Tests, Documentation Tests

Test Driven Development: Agile Model Driven Development, Acceptance Tdd, Developer Tdd. TDD, in its various forms AMDD, ATDD, and Developer TDD plays a crucial role in Agile development by promoting high code quality, early bug detection, and continuous feedback.

Various Agile practices underlying software verification and validation. Agile methodologies emphasize iterative development, continuous feedback, and collaboration, which significantly influence how software verification and validation (V&V) are conducted.

23SMD3101R - SOFTWARE VERIFICATION & VALIDATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMD3101R	SOFTWARE VERIFICATION & VALIDATION	SVV	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Illustrate fundamental concepts, terminologies, and techniques used in software verification and validation	2	PO2, PO4, PSO1
CO2	Identify different stages and activities involved in the software verification and validation process	3	PO2, PO5, PSO1
CO3	Apply the principles and theories underlying software verification and validation	3	PO2, PO6, PSO1
CO4	Analyze various software verification and validation artifacts, such as test plans, test cases, and defect reports	3	PO2, PO5, PO6, PSO1
CO5	To Test the software application completely and make it sure that its performing well and as per the specifications.	4	PO2, PO5, PSO1
CO6	Analyzing and assessing the impact of software defects on system behavior, performance, and reliability is crucial for ensuring the quality and stability of software systems.	4	PO2, PO5, PSO1

Syllabus

Testing objectives, Testing lifecycles, Test cases, human error, testing and debugging, general principles of testing, test metrics, Agile methodology and Its Impact on Testing, Verification and Validation. Failure, Error, Fault, and Defect.

Testing Approaches - Static testing, structured group, examination static analysis, Control flow and data flow Testing, Determining Metrics, Dynamic Testing, Black Box testing, equivalence Class Portioning, Boundary Value Analysis, state transition test, cause effect graphing and decision table technique and used case and Advanced black box and white box techniques.

Gray box testing, intuitive and Experience based. verification and validation planning, Top down versus bottom up Testing Functional Vs Structured Testing, mutation testing, Test planning and Management, Testing process, Maturity Models. Types of Testing- Concept of Unit Testing, Domain testing, Concept of Integration Testing. System testing acceptance testing, Alpha & Beta testing, Installation Testing, Usability Testing, Regression testing.

System Tests- Performance testing, Load testing, Stress testing, Security testing, Gorilla testing, Syntax Based Testing , Functionality Tests ,Robustness Tests, Interoperability Tests, Scalability Tests, Documentation Requirement verification, Coding standards, Walk through, Formal Inspection, Design validation and verification, Function test, Design metrics, correctness proof and its requirement, Building Test Cases and Plans: Format of test cases, Du, dc and other data paths, Test data selection, branch coverage, statement coverage, pre-condition and post-condition, Test schedule and check pointing, Case study for creating test cases

Debugging Technique and Tools . Integrated development environment, debugging, tracing, data inspection, exception errors, code and data redundancy, unreachable code. effective use of integrated development environments and debugging tools is crucial for identifying, analyzing, and resolving various types of software issues, ranging from logical errors to performance bottlenecks, ultimately improving the quality and reliability of software systems.

Test Driven Development: Agile Model Driven Development, Acceptance Tdd, Developer Tdd. TDD, in its various forms AMDD, ATDD, and Developer TDD plays a crucial role in Agile development by promoting high code quality, early bug detection, and continuous feedback.

23SMD3202A - DESIGN PATTERNS & CLEAN CODING TECHNIQUES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMD3202A	DESIGN PATTERNS & CLEAN CODING TECHNIQUES	DPCT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate how test driven development and refactoring work in software design and maintenance	2	PO3, PSO1
CO2	Understand Structural and Creational patterns for effective design of a system	3	PO2, PSO2
CO3	Compare the behavioural design patterns and Anti-patterns for system design	3	PO3, PSO1
CO4	Analyze the design patterns in an object oriented language and clear coding principles for a real world application	4	PO2, PO3, PSO1
CO5	Evaluate Programs on concepts of Design patterns in JAVA	4	PO2, PO3, PSO2

Syllabus

Introduction: What is a design pattern? MVC, Describing Design Patterns Organizing the Catalog, How Design Patterns Solve Design Problems, How to Select a Design Pattern, How to Use a Design Pattern

Test-Driven Development and Refactoring Structural Pattern: Adapter, Bridge, Composite, Decorator

Creational Patterns: Abstract Factory, Builder, Factory Method, Prototype, Singleton, Discussion of Creational Patterns. Behavioral Patterns and anti-patterns: Chain of Responsibility

Command, Interpreter, Iterator Designing a Document Editor: Design Problems, Document Structure, Formatting and Embellishing the User Interface

Supporting Multiple Look-and-Feel Standards, Supporting Multiple Window Systems, User Operations Spelling Checking and Hyphenation ,Testing in maintaining clean code ,Utilizing clean coding patterns to enhance code quality and maintainability

Reference Books

- 1 . Design Patterns, Erich Gamma, 3, Pearson Education,2015.
- 2 Clean Code: A Handbook of Agile Software Craftsmanship, Robert C. Martin , 1, PHI,2008.

23SMD3303A - CONTINUOUS DELIVERY & DEVOPS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMD3303A	CONTINUOUS DELIVERY & DEVOPS	CDD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the need for DevOps and version control system to track the latest version of code.	2	PO1, PO3, PSO1
CO2	Apply Continuous Integration and Continuous Deployment using Infrastructure as Code using Pipeline.	3	PO1
CO3	Analyze the need for Containerization in Devops and Examine the Kubernetes Pod Configuration.	4	PO1
CO4	Analyze continuous monitoring and container orchestration process.	4	PO2, PO3
CO5	Analyze the Tools associated with the DevOps Life Cycle.	4	
CO6	Evaluate existing knowledge to develop new hypotheses.	5	
CO7	Create and design an innovative experiment to test a specific hypothesis.	6	, PSO1

Syllabus

Introduction to DevOps, Overview of DevOps, Relationship Between Agile and DevOps, Principles of DevOps, DevOps Tools, Best Practices for DevOps. Version Control Systems: Role of Version Control System in DevOps Environment.

GitHub, Deploy the files to Bitbucket via Git, Need of Cloud in DevOps: Popular Cloud Providers, CI/CD in AWS and Azure, CI/CD Services in AWS. Continuous Integration and Continuous Deployment using Jenkins.

Continuous Integration with Jenkins, Git, and Maven, Build Applications using Pipeline on azure platform, Software and Automation Testing Frameworks: Popular Testing Tools, Test Driven Development Cycle, Behavior driven development.

Automated Testing using Cucumber. Docker as Containerization: Virtualization, Docker on Windows Desktop. Creating an Account in Docker Hub, MySQL in Docker Kubernetes.

Kubernetes: Components, Kubernetes Architecture, Minikube, Pod Configuration on Windows. Configuration management- Chef, puppet Role of Infrastructure as Code in DevOps Environment.

Continuous Monitoring: Role of Monitoring Systems, Types of Monitoring, Popular Monitoring ,Tools: Nagios, Orchestrating application deployment. Creating build jobs for end-to-end automation

Configuring SSH Authentication using a key and Configuring the build pipeline for build job orchestration. Executing the pipeline for application deployment automation.

Reference Books

23SMD3404M - SOFTWARE PROJECT MANAGEMENT (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMD3404M	SOFTWARE PROJECT MANAGEMENT	SPM	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the concept of software project management process	2	PO11, PSO2
CO2	To Understand the various rules and guidelines that involved to improve the time, Cost, Quality, management aspects in software project management.	2	PO11, PSO1
CO3	Analyze the guidelines that are involved to improve the configuration, Human Resource time, Communications management aspects in software project management.	3	PO11, PSO1
CO4	Analyze the techniques that are involved in the Phases of SPM such as Initiating, planning, executing & controlling projects.	3	PO11, PSO2

Syllabus

Introduction to Project Management, Introduction, What is a project?, What is Project Management?, Program and Project Portfolio Management, The Role of the Project Manager, The Project Management Profession, Project Management context, A Systems View of Project Management, Understanding Organizations, Stakeholder Management, Project Phases and the Project Life Cycle, The Context of Information Technology Projects, Recent Trends Affecting Information Technology Project Management

Sequencing Activities, Estimating Activity Resources, Estimating Activity Durations, Developing the Schedule, Controlling the Schedule, Using Software to Assist in Project Time Management, Cost Management, The Importance of Project Cost Management, Basic Principles of Cost Management, Planning Cost Management, Estimating Costs, Determining the Budget, Controlling Costs, Using Project Management Software to Assist in Project Cost Management

Configuration management, Administering Software Configuration Management, Human Resource Management, The Importance of Human Resource Management, What Is Project Human Resource Management?, Keys to Managing People, Developing the Human Resource Plan

Project documentation, Why and When is a project document required?, Is it necessary?, Steps in developing a project document, Initiating, Project Management Processes (Initiation), Project Charter and Project Management Plan Terminology, Two Processes in Project Initiation

Reference Books

- 1 Information Technology Project Management, Schwalbe, K. (2012) , 7th Edition, 2012, Thomson Learning.
- 2 Effective software Project Management, Robert K. Wysocki, 1st Edition, 2006, John Wiley & Sons, Inc. 605 Third Ave. New York, NY United States.
- 4 Agile Project Management with Scrum, Ken Schwaber, 1st Edition, 2022, Microsoft Press US.

23SMD3405M - SOFTWARE ARCHITECTURE & DESIGN (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMD3405M	SOFTWARE ARCHITECTURE & DESIGN	SAD	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concept of software architecture, including its importance and role in software development.	2	PO1, PO5, PSO2
CO2	Examine the diverse quality attributes and their associated scenarios. Evaluate how each attribute impacts software systems in various usage contexts.	3	PO1, PO5, PSO2
CO3	Apply different architectural styles and their practical applications across real-time scenarios. Apply this knowledge to design and implement effective solutions for diverse software systems.	3	PO1, PO5, PSO2
CO4	Analyze methods for documenting architecture and tailor them for web services. Apply documented architectural designs to ensure efficient development and maintenance of web services.	4	PO1, PO5, PSO2

Syllabus

INTRODUCTION AND ARCHITECTURAL DRIVERS: Introduction What is software architecture Standard Definitions Architectural structures Influence of software architecture on organization both business and technical Architecture Business Cycle- Introduction Functional requirements Technical constraints Quality Attributes. QUALITY ATTRIBUTE WORKSHOP Quality Attribute Workshop Documenting Quality Attributes Six part scenarios Case studies.

QUALITY ATTRIBUTE WORKSHOP Quality Attribute Workshop Documenting Quality Attributes Six part scenarios Case studies. QUALITY ATTRIBUTE WORKSHOP: Quality Attribute Workshop Documenting Quality Attributes Six part scenarios Case studies. ARCHITECTURAL VIEWS: Introduction Standard Definitions for views Structures and views Representing views-available notations Standard views 4+1 view of RUP, Siemens 4 views SEI's perspectives and views Case studies.

ARCHITECTURAL STYLES: Introduction Data flow styles Understanding Data Flow Styles: Concepts and principles Call-return styles Shared Information styles -Exploring Call-Return Styles: Principles and design Event styles Case studies for each style. and Identifying and addressing architectural drivers: Functional requirements, Non-Functional requirements (NFRs)

DOCUMENTING THE ARCHITECTURE: Good practices Documenting the Views using UML Merits and Demerits of using visual languages Need for formal languages Architectural Description Languages ACME Case studies. Special topics: SOA and Web services Cloud Computing Adaptive structures.

Reference Books

- 5 Software Architecture: Foundations, Theory, and Practice , R. N. Taylor, N. Medvidovic, E. M. Dashofy-, 1st Edition 2010, Wiley Publication.

23SMD3506 - SOFTWARE RELIABILITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMD3506	SOFTWARE RELIABILITY	SR	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Software Reliability and develop a software project from requirement gathering to implementation.	2	PO2
CO2	Analyze software system failures and develop convincing solutions	2	PO2
CO3	Estimate Software Reliability parameters using Markovian Modelling, Maximum Likelihood and Least Square Method.	2	PO3
CO4	Evaluate performance of Binomial-Type, Poison-Type and Markovian Models and Predict Software Reliability using SQA Intelligent Techniques	2	PO3, PSO1

Syllabus

Software Reliability Introduction to Software Reliability The need for Software Reliability, Some Basic Concepts, Software Reliability and Hardware Reliability, Availability, Modelling and General Model Characteristics.

Software Reliability Modeling Halstead Software Metric, McCabe Cyclomatic Complexity Metric, Error Seeding Models, Failure Rate Models, Curve Fitting Models, Reliability Growth Models, Markov Structure Models, Defining failure for the product, common measure for all associated systems, setting system failure intensity objectives, determining develop software failure intensity objectives, software reliability strategies, failures, faults and errors, availability, system and component reliabilities and failure intensities, predicting basic failure intensity. Time Series Models, Non-homogeneous Poison Process Models.

Parameter Estimation Maximum Likelihood Estimation, Least Squares Estimation, Bayesian Inference. Comparison of Software Reliability Models Comparison Criteria, Comparison of Predictive Validity of Model Groups, Evaluation of other Criteria. Software Reliability Prediction Problems associated with different Software Reliability Models, Software Reliability prediction parameters, Intelligent Techniques for Software Reliability Prediction. Software Quality Management Software Quality Attributes, Quality Measurement & Metrics, Software Quality Assurance functions

Markovian Models General Concepts, General Poison-Type Models, Binomial -Type Models, Poison-Type Models, Comparison of Binomial-Type and Poison-Type Models, Fault Reduction Factor for Poison-Type Models. Descriptions of Specific Models Finite Failure Category Models, Infinite Failure Category Models

23SMD3507 - CROSS-PLATFORM USER INTERFACE DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMD3507	CROSS-PLATFORM USER INTERFACE DESIGN	CPUIF	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand user-centered design principles and best practices to create effective and engaging mobile app interfaces in Flutter.	2	PO2, PSO1
CO2	Understand research and user testing to inform their design decisions and create designs that meet user needs and preferences	2	PO2, PSO1
CO3	Apply the design and implement animations and motion design in Flutter, enhancing the user experience and making the app more engaging and intuitive.	3	PO3, PSO1
CO4	Analyze prototype and wireframe in Flutter to test their designs and gather user feedback.	4	PO3, PSO1
CO5	Understand Collaborate effectively with developers and other stakeholders to bring their UI/UX designs to life in Flutter.	2	PO3, PSO1

Syllabus

Overview of UI/UX design principles and best practices, Introduction to Flutter framework and its capabilities, setting up a development environment for Flutter with UI/UX design tools, User Research, and User-Centered Design, Understanding the importance of user research in UI/UX design, Conducting user research for mobile apps Implementing user-centered design principles in Flutter app design

Designing User Interfaces for Flutter Designing user interfaces and user flows for Flutter apps Implementing visual design principles and best practices in Flutter Using Flutter UI widgets and components to design interfaces Prototyping and User Testing in Flutter Prototyping and wireframing in Flutter for UI/UX design Conducting user testing for Flutter app designs Using feedback from user testing to improve app designs.

Animation and Motion Design in Flutter Introduction to animation and motion design concepts Creating basic animations and transitions with Flutter Creating complex animations and physics-based motion design.

Flutter and Material Design Overview of Material Design principles and guidelines Implementing Material Design components and patterns in Flutter Customizing Material Design components for a unique look and feel

(Only for advanced/peer mentoring courses)

Reference Books

1. 1. Flutter Development with Dart by Simone Alessandria, Paolo Pecorino, and Salvatore Giordano, Paolo Pecorino, second, no strach press.
2. .The Elements of User Experience: User-Centered Design for the Web and Beyond by, Jesse James Garrett, first, manning.
3. "Designing Across Senses: A Multimodal Approach to Product Design" by Christine , jocks, first, press enterprise.
4. Solving Common Interface Challenges with Xamarin.Forms, Samidip Bas, third, crysty park.

23SMF3101A - REVERSE ENGINEERING & RAPID PROTOTYPING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMF3101A	REVERSE ENGINEERING & RAPID PROTOTYPING	MMC	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles and methodology of the reverse engineering process.	2	PO1, PO3, PSO1
CO2	Understand rapid prototyping, including liquid-based techniques, processes, and applications.	2	PO1, PO3, PSO1
CO3	Understand solid and powder-based rapid prototyping techniques and their applications in various industries.	2	PO1, PO3, PSO1
CO4	Understand rapid tooling techniques, their industrial applications, and benefits in manufacturing.	2	PO1, PO3, PSO1
CO5	Apply solid modeling and additive manufacturing in experiments to solve practical engineering challenges.	3	PO1, PO3, PSO1
CO6	Apply solid modeling and additive manufacturing to solve practical engineering challenges	3	PO1, PO3, PSO1
CO7	Analyze Reverse Engineering and Rapid Prototyping to create precise physical objects from digital models.	4	PO1, PO3, PSO1

Syllabus

Reverse Engineering: Introduction, benefits, and applications of reverse engineering. Steps involved in the reverse engineering process, including contact and non-contact techniques. Overview of the 3D scanning process and hardware used in the reverse engineering process.

Rapid Prototyping: Definition and types of prototypes, the role of prototypes in product development, evaluation of rapid prototyping methods. The three phases of development lead to rapid prototyping. Classification of rapid prototyping systems. Fundamentals of rapid prototyping, including the advantages and disadvantages. Outline the fundamental fabrication processes and the process chain of rapid prototyping. Liquid-based RP techniques: Principles of operation, machine details, materials, and process details of SLA, SGC, SCS, SOUP, two-laser beams, as well as their applications

Solid-based rapid prototyping techniques: Principles of operation, machine details, materials, and process details of LOM, FDM, PLT, MJM, MEM, along with their applications. Powder-based RP techniques: Principles of operation, machine details, materials, and process details of SLS, 3DP, LENS, DSPC, MJS, EBM, and their applications

Rapid tooling and RP case studies: Introduction, types of rapid tooling, direct and indirect tooling techniques. Case Studies: Wind Tunnel Testing with Rapid Prototyped Models, RP applied to investment casting, Integration of Reverse Engineering and Rapid Prototyping

Rapid prototyping finds applications in aerospace, automotive, and biomedical industries for rapid development and innovation in product design and manufacturing

23SMF3202A - ADVANCED MATERIALS MANUFACTURING & TESTING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMF3202A	ADVANCED MATERIALS MANUFACTURING & TESTING	AMMT	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand various types of materials involved in manufacturing Composites.	2	PO2, PO5, PSO1
CO2	Understand the principles of Bio, Smart and microelectronic materials to societal needs.	2	PO3, PO6, PSO2
CO3	Understand the Functionally graded materials for industrial needs.	2	PO3, PO5, PSO2
CO4	Apply various fabrication methods of nanomaterial and study of characterisation techniques.	3	PO2, PO5, PSO1
CO5	Develop expertise in analyzing properties and applications of functionally graded materials in engineering.	6	PO2, PO6, PSO1

Syllabus

Introduction to Engineering Materials covers composite materials, their types (polymer, metal, ceramic, carbon), manufacturing (hand layup, pultrusion) and testing methods (spray-up, RTM).

Introduction to Biomaterials includes properties, applications, biocompatibility, and classification. Smart Materials cover shape memory effect, alloys, properties, and applications. Microelectronic Materials include Silicon properties, production, and lithography techniques.

Functionally Graded Materials overview includes types, classification, preparation, properties, and applications. Nano Materials discuss properties, advantages, disadvantages, and applications compared to bulk materials.

Nanoscience and Nanotechnology fundamentals encompass nanomaterial synthesis, nanostructure fabrication, and characterization techniques like SEM, TEM, and AFM principles. Materials Characterization involves X-ray, neutron, and electron diffraction, along with spectroscopic and thermal analysis methods.

Develop expertise in analyzing properties, preparation methods, and applications of functionally graded materials in engineering, focusing on thermal stability, mechanical strength, and material gradients

23SMF3203A - MODERN MANUFACTURING PROCESSES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMF3203A	MODERN MANUFACTURING PROCESSES	MMP	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply process parameters to mechanical energy based machining processes	3	PO1, PO2, PSO2
CO2	Apply process parameters to chemical energy based machining processes	3	PO1, PO2, PSO2
CO3	Apply process parameters to thermo electric energy based machining processes	3	PO1, PO5, PSO2
CO4	Understand the performance of various non-traditional welding processes	2	PO1, PO5, PSO2
CO5	Understand the performance of various non-traditional forming processes	2	PO1, PO5, PSO2

Syllabus

Modern Manufacturing Processes, Introduction, Need for modern manufacturing processes, Classification of modern machining processes based on sources of energy. Mechanical energy based machining processes, Principle, Equipment, Process parameters, Advantages, limitations and applications of Abrasive jet machining, water jet machining, ultrasonic machining

Chemical energy-based machining processes: Principle, Equipment, Process parameters, Advantages, limitations and applications of Chemical machining, Electro-chemical machining, Electro-chemical deburring and Electro chemical honing.

Thermoelectric energy-based machining processes: Principle, Equipment, Process parameters, Advantages, limitations and applications of Electric discharge machining, Wire-electric discharge machining, electric discharge grinding, laser beam machining, plasma arc machining, electron beam machining

Non-traditional welding processes: Principle, Equipment, Process parameters, Advantages, limitations and applications of Laser beam welding, Plasma arc welding, Electron beam welding, Ultrasonic welding, Friction welding, Explosive welding and Under water welding

Non-traditional Forming processes: Methods, advantages, limitations and applications of Explosion Forming Process, Electro Hydraulic Forming, Magnetic Pulse Forming, Petro-Forge Hammer

Reference Books

- 1 Modern Machining Processes: Advanced Manufacturing, J. Paulo Davim, Revised, Springer.
- 2 Nontraditional Manufacturing Processes: Manufacturing Engineering and Materials Processing, Bradley L. Prevost, George W. Woodruff, Revised, CRC Press.

23SMF3304A - SUSTAINABLE DESIGN & SOCIAL INNOVATION IN SMART MANUFACTURING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMF3304A	SUSTAINABLE DESIGN & SOCIAL INNOVATION IN SMART MANUFACTURING	SDSISM	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand all fundamental concepts related to the streams in smart manufacturing Specialization	2	PO2, PO3, PSO1
CO2	Identify the real-world problem and inculcate problem-solving and critical-thinking skills	2	PO2, PO9, PSO2
CO3	Prepare a conceptual prototype	3	PO3, PO5, PSO2
CO4	Analysis and Testing of conceptual prototype	4	PO3, PO5, PSO1
CO5	Gain hands on experience on 3D Modelling software as Fusion 360 and other related 3D modelling S/W tools.	3	PO5, PO9, PSO2
CO6	Skill Certification based on Fusion 360 software and other related 3D modelling S/W tools.	3	PO5, PO9, PSO1
CO7	Patent/Pitching of Idea through Start-up	6	PO3, PO9, PSO2

Syllabus

Fundamental of Sustainable Design, Social Innovation and Smart Manufacturing

Design Thinking Process and Problem Solving

Ideation and Prototyping with Special focus on Smart Manufacturing

Entrepreneurial innovation and the business model for implementing solutions

Innovating and Pitching: Turning Patents into Start-ups.

Reference Books

23SMF3405M - ROBOTICS & INDUSTRIAL AUTOMATION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMF3405M	ROBOTICS & INDUSTRIAL AUTOMATION	RIA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the role of robotics and its classification and anatomy suitable in Industrial Automation	2	PO1, PO3, PSO1
CO2	Apply the concepts of real time sensors used in Industrial automation to check the various physical parameters	3	PO2, PO3, PSO1
CO3	Apply the concepts of various Control strategies used to control the process of automation in various industries.	3	PO2, PO3, PSO1
CO4	Apply the concept of PLC and ladder programming concept to control the Industrial automation.	3	PO2, PO3, PSO1

Syllabus

Robotics: science fiction origins, industrial revolution impact, history, need, definition, terminology, types, and applications. Current status and future trends. Introduction to industrial automation, control, and system architecture.

Measurement Systems Specifications, Temperature measurement - RTD, Thermocouple and Pyrometers, Pressure Measurements: Low Pressure measurement devices and dead weight tester, Force measurements- Load cells and other types, Displacement Measurement: LVDT, Potentiometers, Speed measurement- Tachometers, Flow measurement techniques, Measurement of Level,

Introduction to Process Control, P-I-D Control, Controller Tuning, Implementation of P-I-D Controllers, Special Control Structures: Feedforward and Ratio Control, Predictive Control, Control of Systems with Inverse Response, Cascade Control, Overriding Control, Split Range Control.

Introduction to PLC, Need of PLC in Designing, Architecture of PLC, Ladder Programming, latching, logic gates used in PLC, Types of timers, Counters, data handling operations, Application and Advantage of PLC, Automation Concept and Basic Design, PLC Programming.

23SMF3406M - MECHANICAL MEASUREMENTS AND METROLOGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMF3406M	MECHANICAL MEASUREMENTS AND METROLOGY	MMM	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the standards of measurement, limits & tolerances industrial applications. Identify the uses of gauges and comparators	2	PO1, PSO1
CO2	Apply the concepts of measurement of temperature and pressure with intermediate modifying and terminating devices	3	PO1, PSO1
CO3	Interpret measurement of field variables like force, torque and pressure, direct and indirect methods of level measurements	2	PO2, PSO1
CO4	Analyze stress-strain, force, torque, and power using computer-assisted data acquisition and presentation.	4	PO2, PSO1

Syllabus

INTRODUCTION TO MEASUREMENTS, PRECISION & ACCURACY, ERRORS IN MEASUREMENTS, MEASUREMENT OF DISPLACEMENT, SOURCES OF ERROR, CLASSIFICATION AND ELIMINATION OF ERRORS. PIEZOELECTRIC, INDUCTIVE, CAPACITANCE, RESISTANCE, IONISATION AND PHOTO ELECTRIC TRANSDUCERS

INTRODUCTION, CLASSIFICATION, PRINCIPLES & APPLICATIONS-MEASUREMENT OF TEMPERATURE-THERMISTORS, THERMOCOUPLES, PYROMETER AND TEMPERATURE INDICATORS; MEASUREMENT OF PRESSURE-MANOMETERS, BOURDON PRESSURE GAUGE, BELLOWS, RANGES

INTRODUCTION, CLASSIFICATION, PRINCIPLES & APPLICATIONS-MEASUREMENT OF LEVEL-DIRECT & INDIRECT METHODS-CAPACITIVE, ULTRASONIC, MAGNETIC, CRYOGENIC FUEL & BUBBLE TYPE INDICATOR; MEASUREMENT OF SPEED-MECHANICAL & ELECTRICAL TACHOMETERS, STROBOSCOPE, NONCONTACT TYPE TACHOMETER; ACCELERATION & VIBRATION-PRINCIPLES OF SEISMIC INSTRUMENTS, VIBROMETER & ACCELEROMETER

INTRODUCTION, CLASSIFICATION, PRINCIPLES & APPLICATIONS-MEASUREMENT OF STRESS STRAIN-ELECTRIC STRAIN GAUGE AND GAUGE FACTOR, METHOD OF USAGE OF RESISTANCE STRAIN GAUGE FOR BENDING AND TENSILE STRAIN; FORCE, TORQUE & POWER; STRAIN GAUGE ROSSETTES, LOAD CELLS, TORSION METERS, DYNAMOMETERS; COMPUTER ASSISTED DATA ACQUISITION, DATA MANIPULATION, DATA PRESENTATION

23SMF3507 - MACHINE TO MACHINE COMMUNICATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMF3507	MACHINE TO MACHINE COMMUNICATION	MMC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify the main challenges associated with M2M and sensors	3	PO1, PO2, PSO2
CO2	Understand main standards, protocols, algorithms, and research activities for machine to machine communication with sensors	3	PO1, PO2, PSO2
CO3	Apply protocols to develop machine to machine communication and to understand Hardware interfaces in a sensor network	3	PO1, PO5, PSO2
CO4	Analyze and evaluate different protocols and technologies utilized in machine-to-machine communication systems	4	PO1, PO2, PSO2

Syllabus

Introduction to M2M: Overview, current landscape, early implementations, architecture, protocols, requirements, and high-level architectural principles of M2M communications.

High-Level Architecture Principles for M2M Communications: Service architectures, ETSI TC M2M Service Capabilities Framework, service capabilities, resource-based communication, and procedures.

M2M Terminals and Modules: Hardware interfaces include Power, USB, UART, Antenna, UICC, GPIO, SPI, I2C, ADC, PCM, and PWM.

Analyze and evaluate protocols and technologies in M2M communication systems: architecture, protocols, technologies, standards, implementation, and performance assessment.

Reference Books

- 1 M2M Communications - A System Approach , D. Boswarthick, O. Elloumi, and O. Hersent , 1st, Wiley .
- 2 Machine-to-Machine (M2M) Communications- Architecture, Performance and Applications , C. Anton-Haro, M. Dohler , 3rd, Woodhead Publishing ISBN 978-1-78242-102-3 .
- 3 Building the Internet of Things with IPv6 and MIPv6 The Evolving World of M2M Communications , D. Minoliauth , 2nd, Wiley .
- 4 Machine-to-Machine Communications Architectures, Technology, Standards, and Applications , Vojislav B. Mistic, Jelena Mistic , 2nd, CRC Press .

23SMF3508 - FLEXIBLE MANUFACTURING SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SMF3508	FLEXIBLE MANUFACTURING SYSTEMS	FMS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Schedule machines using hollier methods in various plant layouts	3	PO1, PO2, PSO2
CO2	Apply the concept of group technology to the development of FMS	3	PO1, PO2, PSO2
CO3	Assess performance of Flexible Manufacturing Systems	3	PO1, PO2, PSO2
CO4	Illustrate Manufacturing cells and hardware components of FMS	3	PO2, PO9, PSO2

Syllabus

Production systems: Types of production- Job Shop production, Batch production and Mass production - Functions in manufacturing - Organization and information processing in manufacturing - Plant layouts: Inline Layout, Loop Layout, Rectangular Layout, Ladder Layout and Open Field Layout, - Work in progress inventory - Scheduling using Hollier Method-1 and Hollier method-2, problems

Group technology: Formation of part families - Part classification and Coding system - Opitz system, Multi Class system, Production flow analysis - Machine cell design - Clustering methods, Rank order clustering methods: problems - Modern algorithms - Benefits - System planning - Objective, guide line, system definition and sizing - Human resources - Objective, staffing, supervisor role

Flexible manufacturing systems: Flexible manufacturing systems - Introduction - Types of flexibility - Evolution - Definition - Need - Economic Justification, Application - Machine tool Selection and Layout - Computer control system - Data files - Reports - Planning the Flexible manufacturing systems - Analysis Methods for Flexible manufacturing systems - Benefits and limitations of Flexible manufacturing systems

Flexible manufacturing cells: Introduction , Cell description and classifications , Unattended machining concept, benefits of Unattended machining, Component handling and storage system, Cellular versus Flexible Manufacturing systems, Hardware configuration, Controllers, Communication networks: Local Area Networks, Wide Area Networks, Metropolitan Area Networks, Lean production and agile manufacturing

Reference Books

- 1 Flexible Manufacturing Cells and Systems , William W. Luggen , 2: 1991, Prentice Hall, New Jersey .
- 2 Automation Production Systems & Computer Integrated manufacturing , Mikell P. Groover , 4: 2016, Pearson India.
- 3 Flexible Manufacturing , David J. Parrish , 2:1993, Elsevier Science & Technology Books.
- 4 Flexible Manufacturing Systems: Recent Developments , Raouf.A and Ben-Daya.M , 3: 1995, Elsevier.

23STE3101A - ADVANCED CONCRETE TECHNOLOGY (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3101A	ADVANCED CONCRETE TECHNOLOGY	ACT	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding about Fly Ash, Ground Granulated Blast Furnace Slag, Silica Fume, Metakaolin, Red mud, Bentonite, Concrete Mix Design.	2	PO1, PO2, PSO2
CO2	Understanding about Nano Materials in Concrete, Water Proofing, Chemical Admixture in Concrete (Super Plasticizers, Retarders, & Accelerators), Fibers, Polymers	2	PO1, PO2, PSO2
CO3	Understanding about Mass Concreting, Roller Compacted Concreting, Pumped Concreting, Sprayed Concreting, Self-Compacted Concreting, Re-Cycled Aggregate Concreting	2	PO1, PO2, PSO2
CO4	Understanding about Corrosion of Reinforcing Steel, Chloride Ion Penetration, Carbonation, Service Life of RC Structures, Sulphate Attack, Alkali Silica Reaction, Acid Attack.	2	PO1, PO2, PSO2
CO5	Apply the knowledge of mix design for preparation of high strength concrete	3	PO1, PO2, PSO2
CO6	To apply the knowledge on concrete to live situations	3	PO1, PO2, PSO2
CO7	To investigate the use of innovative materials and methods in concrete technology	3	PO1, PO2, PSO2

Syllabus

Fly Ash, Ground Granulated Blast Furnace Slag, Silica Fume, Metakaolin, Red mud, Bentonite, Concrete Mix Design

Nano Materials in Concrete, Water Proofing, Chemical Admixture in Concrete (Super Plasticizers, Retarders, & Accelerators), Fibers, Polymers

Mass Concreting, Roller Compacted Concreting, Pumped Concreting, Sprayed Concreting, Self-Compacted Concreting, Re-Cycled Aggregate Concreting

Corrosion of Reinforcing Steel, Chloride Ion Penetration, Carbonation, Service Life of RC Structures, Sulphate Attack, Alkali Silica Reaction, Acid Attack.

ACI Method of Mix Design, DOE Method of Mix Design

Reference Books

- 1 Concrete Technology, Santhakumar.A.R, 2, Oxford University press, New Delhi.
- 2 Concrete Technology, Gambhir.M.L, 2, Tata McGraw Hill Book Co. Ltd.,Delhi.
- 3 Concrete Technology, M.S. Shetty, 6, S. Chand & Company Ltd..
- 4 Properties of Concrete, A.M. Neville, 5, Pearson Education.

23STE3101E - ADVANCED CONCRETE TECHNOLOGY (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3101E	ADVANCED CONCRETE TECHNOLOGY	ACT	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding about Fly Ash, Ground Granulated Blast Furnace Slag, Silica Fume, Metakaolin, Red mud, Bentonite, Concrete Mix Design.	2	PO1, PO2, PSO2
CO2	Understanding about Nano Materials in Concrete, Water Proofing, Chemical Admixture in Concrete (Super Plasticizers, Retarders, & Accelerators), Fibers, Polymers	2	PO1, PO2, PSO2
CO3	Understanding about Mass Concreting, Roller Compacted Concreting, Pumped Concreting, Sprayed Concreting, Self-Compacted Concreting, Re-Cycled Aggregate Concreting	2	PO1, PO2, PSO2
CO4	Understanding about Corrosion of Reinforcing Steel, Chloride Ion Penetration, Carbonation, Service Life of RC Structures, Sulphate Attack, Alkali Silica Reaction, Acid Attack.	2	PO1, PO2, PSO2
CO5	Apply the knowledge of mix design for preparation of high strength concrete	3	PO1, PO2, PSO2
CO6	To apply the knowledge on concrete to live situations	3	PO1, PO2, PSO2
CO7	Apply the knowledge on concrete to perform the mix design preparation	3	PO1, PO2, PSO2

Syllabus

Fly Ash, Ground Granulated Blast Furnace Slag, Silica Fume, Metakaolin, Red mud, Bentonite, Concrete Mix Design

Nano Materials in Concrete, Water Proofing, Chemical Admixture in Concrete (Super Plasticizers, Retarders, & Accelerators), Fibers, Polymers

Mass Concreting, Roller Compacted Concreting, Pumped Concreting, Sprayed Concreting, Self-Compacted Concreting, Re-Cycled Aggregate Concreting

Corrosion of Reinforcing Steel, Chloride Ion Penetration, Carbonation, Service Life of RC Structures, Sulphate Attack, Alkali Silica Reaction, Acid Attack.

ACI Method of Mix Design, DOE Method of Mix Design

Reference Books

- 1 Concrete Technology, Santhakumar.A.R, 2, Oxford University press, New Delhi.
- 2 Concrete Technology, Gambhir.M.L, 2, Tata McGraw Hill Book Co. Ltd.,Delhi.
- 3 Concrete Technology, M.S. Shetty, 6, S. Chand & Company Ltd..
- 4 Properties of Concrete, A.M. Neville, 5, Pearson Education.

23STE3101R - ADVANCED CONCRETE TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3101R	ADVANCED CONCRETE TECHNOLOGY	ACT	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding about Fly Ash, Ground Granulated Blast Furnace Slag, Silica Fume, Metakaolin, Red mud, Bentonite, Concrete Mix Design.	2	PO1, PO3, PSO2
CO2	Understanding about Nano Materials in Concrete, Water Proofing, Chemical Admixture in Concrete (Super Plasticizers, Retarders, & Accelerators), Fibers, Polymers	2	PO1, PO3, PSO2
CO3	Understanding about Mass Concreting, Roller Compacted Concreting, Pumped Concreting, Sprayed Concreting, Self-Compacted Concreting, Re-Cycled Aggregate Concreting	2	PO1, PO3, PSO2
CO4	Understanding about Corrosion of Reinforcing Steel, Chloride Ion Penetration, Carbonation, Service Life of RC Structures, Sulphate Attack, Alkali Silica Reaction, Acid Attack.	2	PO1, PO3, PSO2
CO5	To apply the knowledge on concrete to live situations	3	PO1, PO3, PSO2
CO6	Apply the knowledge of mix design for preparation of high strength concrete	3	PO1, PO3, PSO2

Syllabus

Fly Ash, Ground Granulated Blast Furnace Slag, Silica Fume, Metakaolin, Red mud, Bentonite, Concrete Mix Design.

Nano Materials in Concrete, Water Proofing, Chemical Admixture in Concrete (Super Plasticizers, Retarders, & Accelerators), Fibers, Polymers

Mass Concreting, Roller Compacted Concreting, Pumped Concreting, Sprayed Concreting, Self-Compacted Concreting, Re-Cycled Aggregate Concreting

Corrosion of Reinforcing Steel, Chloride Ion Penetration, Carbonation, Service Life of RC Structures, Sulphate Attack, Alkali Silica Reaction, Acid Attack.

ACI Method of Mix Design, DOE Method of Mix Design

Reference Books

23STE3202A - ADVANCED STRUCTURAL ANALYSIS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3202A	ADVANCED STRUCTURAL ANALYSIS	ASA	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Review of Statically Indeterminate Structures Analysis of continuous beams and frames using the force method and displacement method Slope-deflection method and moment distribution method for indeterminate structures Analysis of three-dimensional frames and spatial structures	3	PO1, PO5, PSO1
CO2	Matrix Structural Analysis Formulation of the stiffness matrix for trusses, beams, and frames Assembly of the global stiffness matrix and application of boundary conditions Solution techniques for solving systems of linear equations arising from structural analysis	3	PO1, PO5, PSO1
CO3	Finite Element Analysis (FEA) Introduction to the finite element method for structural analysis Discretization of structures into finite elements and assembly of the global stiffness matrix Application of FEA software for analyzing structural behavior and obtaining numerical solutions	3	PO1, PO5, PSO1
CO4	Advanced Topics in Structural Dynamics Modal analysis and mode shapes of structures Response spectrum analysis for seismic loading Time-history analysis of structures subjected to dynamic loads Introduction to dynamic stability and buckling analysis	3	PO1, PO5, PSO1
CO5	Design and optimize structural systems considering various constraints and performance criteria.	4	PO1, PO5, PSO1
CO6	Use modern computational tools and software for structural analysis and design. Conduct critical reviews of research literature in structural analysis and apply findings to practical problems.	5	PO1, PO5, PSO1
CO7	Develop a comprehensive understanding of the stability and reliability of structures under different loading conditions.	4	PO1, PO5, PSO1

Syllabus

Advanced Analysis of Statically Indeterminate Structures Review of force method and displacement method for indeterminate structures Slope-deflection method and moment distribution method for continuous beams and frames Analysis of three-dimensional frames and spatial structures Introduction to energy methods for structural analysis

Matrix Structural Analysis Formulation of the stiffness matrix for trusses, beams, and frames Assembly of the global stiffness matrix and application of boundary conditions Solution techniques for solving systems of linear equations arising from structural analysis Introduction to computer-based matrix analysis software

Finite Element Analysis (FEA) Introduction to the finite element method for structural analysis Discretization of structures into finite elements and assembly of the global stiffness matrix Application of FEA software for analyzing structural behavior and obtaining numerical solutions Advanced topics in FEA, such as nonlinear analysis and dynamic analysis

Advanced Topics in Structural Dynamics Modal analysis and mode shapes of structures Response spectrum analysis for seismic loading Time-history analysis of structures subjected to dynamic loads Dynamic stability and buckling analysis for structures

Influence Lines and Moving Loads Construction and use of influence lines for determinate and indeterminate structures, Analysis of structures subjected to moving loads using influence lines Applications of influence lines in bridge and transportation engineering

Plastic Analysis of Structures , Plastic behavior of materials and structural elements

Dynamic Analysis of Structures , Fundamentals of structural dynamics Free and forced vibration analysis of single and multi-degree-of-freedom systems

Special Topics in Advanced Structural Analysis , Nonlinear analysis of structures Stability analysis of structures

Reference Books

- 1 Advanced Structural Analysis, Devdas Menon, 3rd Edition, Oxford University Press.
- 2 Matrix Analysis of Structures, Aslam Kassimali, 2nd Edition, Cengage Learning.
- 3 Finite Element Analysis: Theory and Application with ANSYS, Saeed Moaveni, 4th Edition, Pearson.
- 4 Advanced Structural Analysis, S.S. Bhavikatti, 2nd Edition, Vikas Publishing House.

23STE3202E - ADVANCED STRUCTURAL ANALYSIS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3202E	ADVANCED STRUCTURAL ANALYSIS	ASA	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Review of Statically Indeterminate Structures Analysis of continuous beams and frames using the force method and displacement method Slope-deflection method and moment distribution method for indeterminate structures Analysis of three-dimensional frames and spatial structures	1	PO1, PO5, PSO1
CO2	Matrix Structural Analysis Formulation of the stiffness matrix for trusses, beams, and frames Assembly of the global stiffness matrix and application of boundary conditions Solution techniques for solving systems of linear equations arising from structural analysis	1	PO1, PO5, PSO1
CO3	Finite Element Analysis (FEA) Introduction to the finite element method for structural analysis Discretization of structures into finite elements and assembly of the global stiffness matrix Application of FEA software for analyzing structural behavior and obtaining numerical solutions	3	PO1, PO5, PSO1
CO4	Advanced Topics in Structural Dynamics Modal analysis and mode shapes of structures Response spectrum analysis for seismic loading Time-history analysis of structures subjected to dynamic loads Introduction to dynamic stability and buckling analysis	3	PO1, PO5, PSO1
CO5	Design and optimize structural systems considering various constraints and performance criteria.	4	PO1, PO5, PSO1
CO6	Conduct critical reviews of research literature in structural analysis and apply findings to practical problems.	5	PO1, PO5, PSO1
CO7	Develop a comprehensive understanding of the stability and reliability of structures under different loading conditions.	4	PO1, PO5, PSO1

Syllabus

Advanced Analysis of Statically Indeterminate Structures Review of force method and displacement method for indeterminate structures Slope-deflection method and moment distribution method for continuous beams and frames Analysis of three-dimensional frames and spatial structures Introduction to energy methods for structural analysis

Matrix Structural Analysis Formulation of the stiffness matrix for trusses, beams, and frames Assembly of the global stiffness matrix and application of boundary conditions Solution techniques for solving systems of linear equations arising from structural analysis Introduction to computer-based matrix analysis software

Finite Element Analysis (FEA) Introduction to the finite element method for structural analysis Discretization of structures into finite elements and assembly of the global stiffness matrix Application of FEA software for analyzing structural behavior and obtaining numerical solutions Advanced topics in FEA, such as nonlinear analysis and dynamic analysis

Finite Element Methods ,Finite element formulation and discretization Analysis of trusses, beams, and frames using finite element method

Structural Stability, Introduction to structural stability and buckling

Analysis of stability of beams, columns, and frames Design considerations for stability

Dynamics of Structures, Free and forced vibration analysis of single and multi-degree-of-freedom systems

Advanced Topics in Structural Analysis, Nonlinear structural analysis

Reference Books

- 1 Advanced Structural Analysis, Devdas Menon, 3rd Edition, Oxford University Press.
- 2 Matrix Analysis of Structures, Aslam Kassimali, 2nd Edition, Cengage Learning.
- 3 Finite Element Analysis: Theory and Application with ANSY, Saeed Moaveni, 4th Edition, Pearson.
- 4 Advanced Structural Analysis, Ashok K. Jain, 1st, Nem Chand & Bros.

23STE3202R - ADVANCED STRUCTURAL ANALYSIS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3202R	ADVANCED STRUCTURAL ANALYSIS	ASA	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Review of Statically Indeterminate Structures Analysis of continuous beams and frames using the force method and displacement method Slope-deflection method and moment distribution method for indeterminate structures Analysis of three-dimensional frames and spatial structures	3	PO1, PO5, PSO1

23STE3203A - ADVANCED DESIGN OF STEEL STRUCTURE (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3203A	ADVANCED DESIGN OF STEEL STRUCTURE	ADSS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Advanced Structural Analysis Techniques: Explore advanced methods for structural analysis of steel frames, including nonlinear analysis, dynamic analysis, and finite element analysis (FEA).	4	PO1, PO5, PSO1
CO2	Design Optimization: Learn strategies for optimizing the design of steel structures, including the use of advanced software tools and optimization algorithms to achieve optimal performance and efficiency.	4	PO1, PO5, PSO1
CO3	Composite Steel-Concrete Structures: Understand the principles and design considerations for composite steel-concrete structures, including composite beams, columns, and slabs.	4	PO1, PO5, PSO1
CO4	Connections and Joints: Study advanced connection design principles for steel structures, including moment-resisting connections, braced connections, and bolted and welded connections.	4	PO1, PO5, PSO1
CO5	Seismic Design of Steel Structures: Gain insights into seismic design principles for steel structures, including performance-based design, base isolation, and energy dissipation devices.	4	PO1, PO5, PSO1
CO6	Buckling and Stability Analysis: Learn about buckling and stability analysis of steel structures, including global and local buckling phenomena and their implications for design.	4	PO1, PO5, PSO1
CO7	Fatigue and Fracture Mechanics: Explore the effects of fatigue and fracture on the performance and safety of steel structures, and learn strategies for mitigating these effects through design.	4	PO1, PO5, PSO1

Syllabus

Introduction to Advanced Steel Design Overview of advanced topics in steel design Review of fundamental concepts

Advanced Analysis Techniques Nonlinear analysis of steel structures Finite element analysis (FEA) for steel design

Plastic Design of Steel Structures Plastic analysis and design methods Plastic hinge theory

Structural Stability Buckling analysis of steel members Design for structural stability Week 5: Seismic Design of Steel Structures

Seismic Design of Steel Structures Seismic design principles and regulations Performance-based seismic design

Advanced Connection Design Moment-resisting connections Braced connections Bolted and welded connections

Reference Books

- 1 Advanced Design of Steel Structures, Dr. Michael Johnson, Dr. Emily Thompson, 2nd Edition, Wiley.
- 2 Design of Steel Structures, Duggal S K , 4th Edition, McGraw Hill Education.
- 3 Steel Structures: Design and Behavior, Charles G. Salmon, John E. Johnson, Faris A. Malhas , 5th Edition, Pearson.
- 4 Limit States Design of Structural Steelwork, N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 3rd Edition, Publisher: CRC Press.

23STE3203E - ADVANCED DESIGN OF STEEL STRUCTURE (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3203E	ADVANCED DESIGN OF STEEL STRUCTURE	ADSS	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Advanced Structural Analysis Techniques: Explore advanced methods for structural analysis of steel frames, including nonlinear analysis, dynamic analysis, and finite element analysis (FEA).	4	PO1, PO5, PSO1
CO2	Design Optimization: Learn strategies for optimizing the design of steel structures, including the use of advanced software tools and optimization algorithms to achieve optimal performance and efficiency.	4	PO1, PO5, PSO1
CO3	Composite Steel-Concrete Structures: Understand the principles and design considerations for composite steel-concrete structures, including composite beams, columns, and slabs.	4	PO1, PO5, PSO1
CO4	Connections and Joints: Study advanced connection design principles for steel structures, including moment-resisting connections, braced connections, and bolted and welded connections.	4	PO1, PO5, PSO1
CO5	Seismic Design of Steel Structures: Gain insights into seismic design principles for steel structures, including performance-based design, base isolation, and energy dissipation devices.	4	PO1, PO5, PSO1
CO6	Buckling and Stability Analysis: Learn about buckling and stability analysis of steel structures, including global and local buckling phenomena and their implications for design.	4	PO1, PO5, PSO1

Syllabus

Introduction to Advanced Steel Design Overview of advanced topics in steel design Review of fundamental concepts

Advanced Analysis Techniques Nonlinear analysis of steel structures Finite element analysis (FEA) for steel design

Plastic Design of Steel Structures Plastic analysis and design methods Plastic hinge theory

Structural Stability Buckling analysis of steel members Design for structural stability

23STE3304A - BRIDGE ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3304A	BRIDGE ENGINEERING	BE	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the various types of bridges and their structural components.	3	PO1
CO2	Apply the principles of statics and dynamics to the analysis of bridge structures.	4	PO2
CO3	Analyze bridges to withstand the forces of gravity, wind, and traffic.	4	PO3
CO4	Evaluate bridges to withstand the forces of gravity, wind, and traffic.	4	
CO5	Design bridges to withstand the forces of gravity, wind, and traffic.	4	PO3, PSO1
CO6	Develop the model bridges to withstand the forces of gravity, wind, and traffic.	4	
CO7	Understand the construction methods and project management in bridge engineering	2	

Syllabus

Concrete Bridge: Various types of bridges, I.R.C. specifications for road bridges. Culverts: Design of R.C. slab culvert. T Beam Bridge: Pigeaud method for computation of slab moments, courbon method for computation of moments in girders, Design of simply supported T beam bridge.

Sub Structure for Bridges: Pier and abutment caps, Materials for piers and abutments, Design of pier, Design of abutment, Backfill behind abutment, approach slab. Bearings for Bridges: Importance of bearings, bearings for slab bridge, bearings for girder bridges, Expansion bearings, Fixed bearings.

Design of elastomeric pad bearing. Foundations For Bridges: scour at abutments and piers, Grip length, Types of foundations, Design of well foundation.

Cable Supported Bridge: Different types of cable supported bridge, difference between suspension bridge and cable stayed bridge. Different components and factors considered for design of a) suspension bridge, b) cable stayed bridge.

Steel Bridges and Composite Bridges Steel Bridges: Types of Steel Bridges: Plate Girder Bridges Truss Bridges Arch Bridges Box Girder Bridges Design Considerations: Load and Resistance Factor Design (LRFD) and Allowable Stress Design (ASD) Fatigue and Fracture Considerations Corrosion Protection and Maintenance Connection Design (Bolted and Welded Connections) IRC Specifications: IRC codes relevant to the design and construction of steel bridges Standard loading specifications and design requirements Design Examples: Design of a simple plate girder bridge Design of a truss bridge for highway loading

Composite Bridges: Concept and Advantages: Definition of composite bridges Benefits over traditional concrete or steel bridges, including material efficiency and structural performance Types of Composite Bridges: Composite Plate Girder Bridges Composite Box Girder Bridges Design Principles: Shear connectors and their role in composite action Design methodologies for composite sections under bending and shear Differential shrinkage and creep considerations in composite design IRC and International Specifications: Relevant IRC codes for composite bridge design Comparison with AASHTO LRFD specifications and Eurocode standards Design Examples: Design of a composite plate girder bridge for highway application Detailing of shear connectors and composite action evaluation

Design Principles: Shear connectors and their role in composite action Design methodologies for composite sections under bending and shear Differential shrinkage and creep considerations in composite design IRC and International Specifications: Relevant IRC codes for composite bridge design Comparison with AASHTO LRFD specifications and Eurocode standards Design Examples: Design of a composite plate girder bridge for highway application Detailing of shear connectors and composite action evaluation

Construction Methods and Project Management: Bridge Construction Techniques, Equipment and Machinery for Bridge Construction, Equipment and Machinery for Bridge Construction

- 4 Bridge Engineering, Demetrios E. Tonnias and Jim J. Zhao, 3rd, McGraw-Hill Education, 2012.

23STE3304E - BRIDGE ENGINEERING (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3304E	BRIDGE ENGINEERING	BE	E	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the various types of bridges and their structural components.	3	PO1
CO2	Apply the principles of statics and dynamics to the analysis of bridge structures.	4	PO2
CO3	Analyze bridges to withstand the forces of gravity, wind, and traffic.	4	PO3
CO4	Evaluate bridges to withstand the forces of gravity, wind, and traffic.	4	
CO5	Design bridges to withstand the forces of gravity, wind, and traffic.	4	PO3, PSO1
CO6	Develop the model bridges to withstand the forces of gravity, wind, and traffic.	4	
CO7	Understand the construction methods and project management in bridge engineering	2	

Syllabus

Concrete Bridge: Various types of bridges, I.R.C. specifications for road bridges. Culverts: Design of R.C. slab culvert. T Beam Bridge: Pigeaud method for computation of slab moments, courbon method for computation of moments in girders, Design of simply supported T beam bridge.

Sub Structure for Bridges: Pier and abutment caps, Materials for piers and abutments, Design of pier, Design of abutment, Backfill behind abutment, approach slab. Bearings for Bridges: Importance of bearings, bearings for slab bridge, bearings for girder bridges, Expansion bearings, Fixed bearings.

Design of elastomeric pad bearing. Foundations For Bridges: scour at abutments and piers, Grip length, Types of foundations, Design of well foundation.

Cable Supported Bridge: Different types of cable supported bridge, difference between suspension bridge and cable stayed bridge. Different components and factors considered for design of a) suspension bridge, b) cable stayed bridge.

Hybrid Bridges: Introduction to Hybrid Bridges: Definition and examples of hybrid bridges combining different materials and structural systems Advantages and applications of hybrid bridges in modern infrastructure Design Considerations: Structural behavior under combined material usage Load distribution and interaction between different materials Case Studies: Analysis of notable hybrid bridge projects Lessons learned and best practices in hybrid bridge design

Construction Techniques: Erection Methods for Steel and Composite Bridges: Incremental launching Cantilever construction Use of temporary supports and cranes Welding and Bolting Practices: Standards and procedures for welding in steel bridge construction Bolting techniques and quality control measures Inspection and Quality Control: Techniques for the inspection of steel and composite bridges during and after construction Non-destructive testing methods for ensuring structural integrity

Steel Bridges: Types of Steel Bridges: Plate Girder Bridges Truss Bridges Arch Bridges Box Girder Bridges Design Considerations: Load and Resistance Factor Design (LRFD) and Allowable Stress Design (ASD) Fatigue and Fracture Considerations Corrosion Protection and Maintenance Connection Design (Bolted and Welded Connections) IRC Specifications: IRC codes relevant to the design and construction of steel bridges Standard loading specifications and design requirements

Construction Methods and Project Management: Bridge Construction Techniques, Equipment and Machinery for Bridge Construction, Equipment and Machinery for Bridge Construction

23STE3405M - PRESTRESSED CONCRETE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3405M	PRESTRESSED CONCRETE	PC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Fundamentals of Prestressed Concrete: Understand the principles and advantages of prestressed concrete, including its behavior, material properties, and applications.	3	PO1, PO5, PSO1
CO2	Prestressing Techniques: Learn about different methods of prestressing, including pre-tensioning and post-tensioning, and their advantages and limitations.	3	PO1, PO5, PSO1
CO3	Analysis of Prestressed Structures: Explore methods for analyzing the behavior of prestressed concrete structures under various loading conditions, including flexure, shear, and torsion.	3	PO1, PO5, PSO1
CO4	Design of Prestressed Members: Gain proficiency in designing prestressed concrete members such as beams, slabs, and bridges according to relevant design codes and standards.	3	PO1, PO5, PSO1
CO5	Construction Techniques: Understand the construction techniques involved in prestressed concrete, including formwork, tendon installation, grouting, and quality control measures.	3	PO1, PO5, PSO1
CO6	Prestressed Concrete Bridges: Study the design and construction of prestressed concrete bridges, including bridge superstructures, substructures, and deck systems.	3	PO1, PO5, PSO1
CO7	Prestressed Concrete Buildings: Explore the design considerations and construction techniques for prestressed concrete buildings, including floor systems, columns, and connections.	3	PO1, PO5, PSO1

Syllabus

Introduction to Prestressed Concrete Definition and advantages of prestressed concrete Historical development and applications Basic concepts and terminology

Materials for Prestressed Concrete Properties of concrete and steel materials Types of prestressing tendons and anchorages Selection criteria for prestressing materials

: Pre-Tensioning Techniques Pre-tensioning process and equipment Analysis and design considerations Examples of pre-tensioned members

Post-Tensioning Techniques Post-tensioning process and equipment Analysis and design considerations Examples of post-tensioned members

Flexural Behavior of Prestressed Members Behavior of prestressed members under flexure Stress analysis and deflection calculations Design of prestressed beams and slabs

Shear and Torsion in Prestressed Members Shear and torsional behavior of prestressed members Design considerations and reinforcement detailing Examples and applications

Reference Books

- 1 Prestressed Concrete, N. Krishna Raju, 6th Edition, Pearson Education.
- 2 Prestressed Concrete: A Fundamental Approach, Edward G. Nawy, 5th Edition, Pearson.
- 3 Prestressed Concrete Design, M.K. Hurst, Roger J. Plank, 2nd Edition, Taylor & Francis.
- 4 Prestressed Concrete Structures, Krishan K. Kaushik, George C. Lee, 2nd Edition, Wiley.

23STE3406M - PRECAST AND PREFABRICATED STRUCTURES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3406M	PRECAST AND PREFABRICATED STRUCTURES	PPS	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Residential Buildings: Prefabricated panels and modules are increasingly popular for residential construction, offering quick and cost-effective housing solutions.	3	PO1, PO5, PSO1
CO2	Commercial Structures: From office buildings to retail spaces, precast elements enable rapid construction without compromising design flexibility or quality.	3	PO1, PO5, PSO1
CO3	Infrastructure Projects: Bridges, tunnels, and other civil engineering projects benefit from precast concrete components, which enhance durability and reduce construction time.	3	PO1, PO5, PSO1
CO4	Industrial Facilities: Factories, warehouses, and manufacturing plants often utilize prefabricated structures for their speed of construction and adaptability to specific operational needs.	3	PO1, PO5, PSO1
CO5	Modular Construction: Entire buildings can be fabricated off-site as modular units, then transported and assembled on location, providing an efficient solution for temporary or permanent structures.	3	PO1, PO5, PSO1

Syllabus

Introduction to Precast and Prefabricated Construction Design Principles and Engineering Considerations Manufacturing Processes and Quality Control Case Studies in Precast and Prefabricated Structures Sustainability and Environmental Impact Design Software and Modeling Techniques Transportation and Logistics Emerging Trends and Future Directions

Lectures: Presenting theoretical concepts and foundational knowledge. Case Studies: Analyzing real-world examples to illustrate key principles and challenges. Demonstrations: Showcasing manufacturing processes and construction techniques. Hands-on Exercises: Engaging students in design projects and software simulations. Guest Lectures: Inviting industry experts to share insights and experiences. Site Visits (Optional): Organizing field trips to precast facilities or construction sites.

Quizzes and Exams: Assessing understanding of theoretical concepts and practical applications. Design Projects: Evaluating students' ability to apply design principles and engineering calculations. Presentations: Communicating findings from case studies or research projects. Class Participation: Engaging in discussions, asking questions, and contributing to group activities.

Basic knowledge of structural engineering principles. Familiarity with construction materials and methods. Proficiency in computer-aided design (CAD) software is advantageous but not mandatory. Textbooks:

Reference Books

- 2 Design of Prestressed Concrete Structures, T.Y. Lin, Ned H. Burns, 3rd Edition, Wiley.
- 3 Prestressed Concrete: A Fundamental Approach, Edward G. Nawy, 5th Edition, Pearson.
- 4 Prestressed Concrete Design, M.K. Hurst, Roger J. Plank, 2nd Edition, Taylor & Francis.

23STE3507 - PRE ENGINEERING STRUCTURES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3507	PRE ENGINEERING STRUCTURES	PES	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Industrial Buildings: Warehouses, factories, and manufacturing plants often utilize pre-engineered steel structures for their strength, durability, and cost-effectiveness.	3	PO1, PO5, PSO1
CO2	Commercial Buildings: Retail outlets, offices, and recreational facilities benefit from the versatility and flexibility of pre-engineering structures, which can be customized to suit specific design requirements.	3	PO1, PO5, PSO1
CO3	Agricultural Facilities: Barns, storage sheds, and livestock shelters are commonly constructed using pre-engineered metal buildings, providing efficient and durable solutions for agricultural operations.	3	PO1, PO5, PSO1
CO4	Agricultural Facilities: Barns, storage sheds, and livestock shelters are commonly constructed using pre-engineered metal buildings, providing efficient and durable solutions for agricultural operations.	3	PO1, PO5, PSO1
CO5	Infrastructure Projects: Pre-engineered components such as bridges, culverts, and pedestrian walkways contribute to the efficient and timely completion of infrastructure projects, minimizing traffic disruptions and enhancing safety.	3	PO1, PO5, PSO1

Syllabus

Introduction to Pre-Engineering Structures Structural Analysis and Design Principles Materials for Pre-Engineering Structures Types of Pre-Engineered Components Design Considerations and Standards

Case Studies in Pre-Engineering Projects Sustainability and Environmental Impact Safety and Regulatory Compliance Fabrication Techniques and Quality Control Installation and Site Consideration

Lectures: Presenting theoretical concepts and fundamental principles. Workshops: Conducting hands-on exercises and design projects. Case Studies: Analyzing real-world examples to illustrate key concepts and challenges.

Lectures: Presenting theoretical concepts and fundamental principles. Workshops: Conducting hands-on exercises and design projects. Case Studies: Analyzing real-world examples to illustrate key concepts and challenges.

Software Demonstrations: Utilizing structural analysis and design software tools. Guest Lectures: Inviting industry experts to share insights and experiences. Field Visits (Optional): Organizing visits to pre-engineering fabrication facilities or construction sites.

Reference Books

23STE3508 - ADVANCED DESIGN OF REINFORCED CONCRETE STRUCTURES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23STE3508	ADVANCED DESIGN OF REINFORCED CONCRETE STRUCTURES	ADRCS	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Advanced Design of Slender and High-Rise Structures Design considerations for slender columns and walls Analysis and design of high-rise buildings Performance-based design approaches for tall structures	3	PO1, PO5, PSO1
CO2	Design of Long-Span and Special-Purpose Structures Design of long-span floor systems and roof structures Design of bridges, stadiums, and other special-purpose structures Structural optimization techniques for efficient design	3	PO1, PO5, PSO1
CO3	Innovative Materials and Construction Technologies Use of advanced materials such as high-strength concrete and fiber-reinforced polymers (FRP) Innovative construction techniques, including prefabrication and modular construction Design considerations for sustainable and resilient structures	3	PO1, PO5, PSO1
CO4	Seismic Design and Retrofitting of Reinforced Concrete Structures Seismic design principles for reinforced concrete buildings Performance-based seismic design and assessment Retrofitting techniques for enhancing the seismic resilience of existing structure	3	PO1, PO5, PSO1
CO5	Incorporate advanced design considerations, such as sustainability, life-cycle cost analysis, and constructability, into reinforced concrete design projects.	5	PO1, PO5, PSO1
CO6	Utilize advanced structural analysis software and computational tools to perform design calculations and simulations for reinforced concrete structures.	3	PO1, PO5, PSO1
CO7	Critically review and analyze research literature and industry standards related to advanced design practices in reinforced concrete structures.	4	PO1, PO5, PSO1

Syllabus

Design of High-Rise and Slender Structures Analysis and design considerations for tall buildings and slender structures Effects of slenderness ratio on design requirements and performance Application of advanced analysis techniques for tall building design, such as second-order effects and wind-induced vibrations Case studies of iconic high-rise structures and their design challenges

Innovative Materials and Construction Techniques Introduction to advanced materials for reinforced concrete construction, such as high-strength concrete, fiber-reinforced polymers (FRP), and ultra-high-performance concrete (UHPC) Design considerations and applications of advanced materials in structural elements, including beams, columns, and slabs Innovative construction techniques and technologies, including prefabrication, modular construction, and 3D printing Case studies of projects showcasing the use of innovative materials and construction methods

Seismic Design and Retrofitting of Reinforced Concrete Structures Principles of seismic design for reinforced concrete structures, including performance-based design approaches Seismic design provisions and detailing requirements according to relevant building codes and standards Retrofitting techniques for enhancing the seismic performance of existing reinforced concrete buildings Seismic assessment and strengthening of critical infrastructure, such as bridges and lifeline structures

Seismic Design of Reinforced Concrete Structures, Seismic behavior of reinforced concrete buildings Seismic design principles and performance-based design

Advanced Topics in Reinforced Concrete Design, Design of special structural elements (e.g., transfer structures, folded plates)

Sustainable design principles in reinforced concrete construction Innovative materials and construction techniques

Design of Deep Beams and Shear Walls, Analysis and design of deep beams

Case Studies and Project Work, Analysis and design of real-world reinforced concrete structures

Reference Books

- 1 Advanced Reinforced Concrete Design, P.C. Varghese, 2nd Edition, Prentice Hall.
- 2 Design of Prestressed Concrete Structure, T.Y. Lin, Ned H. Burns, 3rd Edition, Wiley.
- 3 High-Rise Concrete Buildings in Seismic Zones: Structural Analysis and Design, Mohamed A. El-Reedy, 1st Edition, Butterworth-Heinemann.
- 4 Design of Reinforced Concrete Structures, M. L. Gambhir, 4th, PHI Learning Pvt. Ltd..

23VLS3101A - ANALOG VLSI DESIGN (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23VLS3101A	ANALOG VLSI DESIGN	AVD	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamentals of MOS transistors for the design of single stage amplifiers.	3	PO1, PSO1
CO2	Realize the active & passive current Mirrors and analyze the differential amplifiers with qualitative and quantitative approaches.	4	PO2, PSO1
CO3	Analyze the CMOS Op Amps, and various types of Op Amps with qualitative and quantitative approaches.	4	PO1, PO3, PO5, PSO1
CO4	Analyze the high frequency response of CS, CG and CD amplifiers and noise analysis of various amplifiers and mixers.	4	PO2, PSO1
CO5	Analysis of real time circuits like switched capacitor circuits, voltage controlled oscillators, and phase locked loops	4	PO2, PO3, PO5, PSO1
CO6	Design and analysis of various MOS analog circuits using Cadence/ LT-Spice/ Qsim environment for real time applications	4	PO2, PSO1
CO7	Design and analysis of various MOS analog circuits using Cadence environment for real time applications	4	PO2, PSO1

Syllabus

Basics of Mosfet operation, drain equation, Mosfet large and small signal models Second order effects CS with different loads CS with Source degeneration and CD CG and Cascode stage

Simple current mirror, multi current mirror, cascode current mirror, Voltage references - Supply independent, PTAT current generation- Constant-Gm Biasing. Basic differential pair - Quantative and qualitative analysis Degenerative differential pair Differential pair with MOS loads Differential amplifier with active current mirror

OP-amp performance parameters, One stage Op-amp Two stage Op-amp cascode Op-amp I/O limitations and Gain boosting, Slew rate, power supply rejection, noise in OP-amps Stability and Frequency Compensation

Miller effect, Association of poles with nodes frequency response of common source stage Statistical characteristics of noise, noise in single stage amplifiers noise in differential amplifiers, Introduction to mixers and Single balanced mixer Double balanced mixer

Switched Capacitor Circuits: Sampling switches; switched capacitor amplifiers; switched capacitor integrator, Phase locked loops: Simple PLL; charge pump PLLs; non ideality effects

Reference Books

- 1 Design of Analog CMOS Integrated Circuits, Behzad Razavi, 2, McGraw Hill.
- 2 Analysis & Design of Analog Integrated Circuits, Gray and Mayer, 5, Wiley.
- 3 CMOS Mixed Signal Circuit Design, Jacob Baker, 2, Wiley.
- 4 Bipolar and MOS Analog Integrated circuit design, Grebene, 2, John Wiley & sons.

23VLS3101E - ANALOG VLSI DESIGN (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23VLS3101E	ANALOG VLSI DESIGN	AVD	E	4	0	4	4	7

Course Outcomes

23VLS3202A - TESTING AND VERIFICATION OF VLSI CIRCUITS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23VLS3202A	TESTING AND VERIFICATION OF VLSI CIRCUITS	TVVC	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Realize the test generation for combinational and sequential circuits	3	PO1, PO3, PO6, PO9, PSO1
CO2	Apply the set of fault modeling approaches to realize the various algorithms for fault simulation	3	PO1, PO3, PO6, PO9, PSO1
CO3	Analyze the concepts of functional coverage	3	PO1, PO3, PO6, PO9, PSO1
CO4	Demonstrate the randomization in System Verilog.	3	PO1, PO3, PO6, PO9, PSO1
CO5	Analyze the Advance BIST Architectures	4	PO1, PO3, PO6, PO9, PSO1

Syllabus

Testing and Test Approaches: Introduction, Test challenges, Fault models - Defects, errors, and faults, Functional Vs structural testing, Stages of fault models, Stuck-at faults, Logic, and fault Simulation: design verification and test evaluation, Modeling circuits for evaluation, Algorithms for fault simulation, Statistical approach for fault simulation

TG Algorithms and illustrations, Redundancy identification, Combinational ATPG algorithms, Test generation systems. Test generation algorithms for sequential circuits, and BIST

Design for Testability -Ad-hoc design - Generic scan-based design - Classical scan-based design- System level DFT approaches. Self-Test and Test AlgorithmsTest generation for Embedded RAMs.

Verification with System Verilog: The concept of Device under test (DUT), Complexity of verification, SV verification environment - Basics of SV testbench, concurrency in SV, encapsulation, and randomization. Inter-thread communications, mailbox, code coverage, functional coverage, and building efficient SV test benches. System Verilog UVM.

Verification of Advanced BIST Architectures

Reference Books

- 1 Essentials of Electronic Testing for Digital, memory & Mixed signal VLSI Circuits, Michael L. Bushnell & Vishwani D. Agrawal, 4, Pearson.

23VLS3202R - TESTING AND VERIFICATION OF VLSI CIRCUITS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23VLS3202R	TESTING AND VERIFICATION OF VLSI CIRCUITS	TVVC	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Realize the test generation for combinational and sequential circuits	3	PO1, PO3, PO6, PO9, PSO1
CO2	Apply the set of fault modeling approaches to realize the various algorithms for fault simulation	3	PO1, PO3, PO6, PO9, PSO1
CO3	Analyze the concepts of functional coverage	3	PO1, PO3, PO6, PO9, PSO1
CO4	Demonstrate the randomization in System Verilog.	3	PO1, PO3, PO6, PO9, PSO1

Syllabus

Testing and Test Approaches: Introduction, Test challenges, Fault models - Defects, errors, and faults, Functional Vs structural testing, Stages of fault models, Stuck-at faults, Logic, and fault Simulation: design verification and test evaluation, Modeling circuits for evaluation, Algorithms for fault simulation, Statistical approach for fault simulation

TG Algorithms and illustrations, Redundancy identification, Combinational ATPG algorithms, Test generation systems. Test generation algorithms for sequential circuits, and BIST

Design for Testability -Ad-hoc design - Generic scan-based design - Classical scan-based design- System level DFT approaches. Self-Test and Test Algorithms Test generation for Embedded RAMs.

Verification with System Verilog: The concept of Device under test (DUT), Complexity of verification, SV verification environment - Basics of SV testbench, concurrency in SV, encapsulation, and randomization. Inter-thread communications, mailbox, code coverage, functional coverage, and building efficient SV test benches. System Verilog UVM.

23VLS3303A - VLSI PHYSICAL DESIGN AUTOMATION (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23VLS3303A	VLSI PHYSICAL DESIGN AUTOMATION	VPDA	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Formulate the graphs for the physical design problems and estimate the complexity of physical design algorithms	3	PO1, PSO1
CO2	Apply the group migration algorithm for the successive circuit partitioning	3	PO1, PSO1
CO3	Modify the floorplans in an abstract manner and apply computer algorithms to make large and optimized floorplans	3	PO2, PSO1
CO4	Apply quadratic and Euclidean distance approaches for the wire length estimation of the full-custom / semi-custom placement problem	3	PO1, PSO1
CO5	Apply the CAD design problems using algorithmic methods	3	PO2, PSO1
CO6	To analyze circuits using both analytical and CAD tools	4	PO3, PSO1
CO7	Design of problems accumulated to FPGA boards	4	PO3, PSO1

Syllabus

Physical Design and Graph Theory: Introduction to the physical design cycle, Types of graph: complete graph, connected graph, subgraph, isomorphism, bipartite graph tree, Shortest path and spanning tree algorithms: Dijkstras Algorithm, Kruskals Algorithm, Prims Algorithm, DFS, and BFS Big O notation Class P class NP NP hard NP complete.

Partitioning: Introduction and Terminology, Objective, and goals Types of partitioning algorithms Group migration algorithms: Kernighan Lin Algorithm, Extensions of Kernighan Lin Algorithm Simulated annealing Multilevel Partitioning

Floorplanning: Introduction and optimization goals Floorplan Representations: Floorplan to a Constraint Graph Pair, Floorplan to a Sequence Pair, Sequence Pair to a Floorplan Floorplanning Algorithms: Floorplan Sizing, Cluster Growth, Integrated Floorplanning Algorithms Pin Assignment.

Placement: Wire length estimation models for placement Quadratic placement Sequence pair technique Routing: Grid routing- Maze routing Line Probe algorithms, Weighted Steiner tree approach Global and Detailed Routing: Rectilinear routing, Left Edge algorithm, Dogleg router Introduction to switch box routing.

Simulation and logic synthesis- gate level and switch level modeling and simulation. Introduction to combinational logic synthesis. ROBDD principles, implementation, construction and manipulation. Two level logic synthesis. High-level synthesis- hardware model for high level synthesis. Internal representation of input algorithms. Allocation, assignment and scheduling. Scheduling algorithms. Aspects of assignment. High level transformations.

High-level synthesis- hardware model for high level synthesis. Internal representation of input algorithms. Allocation, assignment and scheduling. Scheduling algorithms. Aspects of assignment. High level transformations.

FPGA technologies: Physical Design cycle for FPGAs partitioning and routing for segmented and staggered models. MCM technologies, MCM physical design cycle, Partitioning, Placement Chip array based and full custom approaches, Routing Maze routing, Multiple stage routing, Topologic routing, Integrated Pin Distribution and routing, routing and programmable MCMs.

23VLS3404M - SYSTEM-ON-CHIP (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23VLS3404M	SYSTEM-ON-CHIP	SOC	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the transition of System-on-Chip	2	, PSO1
CO2	Apply system-level design and analyze MPSoC concepts.	4	PO1, PSO1
CO3	Analyze the on-chip communication with performance and process execution modeling.	4	PO1, PO2, PSO1
CO4	Realize the functional difference between various bus standards in SoC.	3	PO1, PO2, PSO1

Syllabus

SoC and H/W-S/W Co-Design: Introduction to SoC design, SoC design flow, System level design issues in SoC, Transition of SoC design methodology, Classic Hardware-Software co-design, System level H/W-S/W co-design process, Design flow of co-design process

System-level design: Platform-based SoC design, Types of platforms-based SoC, Concepts of bus-based on-chip communication architecture: Bus topologies, Bus physical structure, Arbitration schemes, Bus data transfer modes, Bus clocking, On-chip standard bus architecture: AMBA 2.0 and AMBA 3.0 bus standards.

Multi-Processor SoC (MPSoC): Introduction to MPSoC, Types of MPSoC, Design methodologies, Design issues of MPSoC, Designing of energy aware MPSoC: Processor design, Memory Design, On-Chip Communication Design, MPSoC performance modeling: Architecture component performance modeling and analysis, Process execution modeling, Modeling of shared resources, Global performance analysis.

Network-on-Chip (NoC): ASIC to System and NOC, Comparison of bus-based and NoC-based system design, NoC for SoC design, Network topologies, Switching strategies, Routing algorithms, Flow control, and clocking schemes, Quality of service (QoS) in NoC.

Reference Books

- 2 Low Power NoC for High-Performance SoC Design, Hoi-Jun Yoo, Kangmin Lee, and Kyong Kim, 2, CRC Press.
- 3 Multiprocessor Systems-on-Chip, Ahmed Amine Jerraya, Wayne Wolf, 1, Morgan Kaufmann, Elsevier.
- 4 A Practical Approach to VLSI System on Chip (SoC) Design, Veena S. Chakravarthi, 1, Springer.

23VLS3505 - MIXED SIGNAL IC DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23VLS3505	MIXED SIGNAL IC DESIGN	MSID	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret the performance analysis of MOSFET circuits.	2	, PSO1
CO2	Apply the small signal model concepts to realize the analog-based IC circuits.	3	PO1, PSO1
CO3	Apply the small signal model concepts to realize the analog-based IC circuits.	4	PO1, PO2, PSO1, PSO2
CO4	Apply the sampling and aliasing to convert an analog signal into a digital representation	3	PO1, PSO1, PSO2

Syllabus

Submicron CMOS: Overview and Models, CMOS process flow, Capacitors, and Resistors. Digital circuit design: The MOSFET Switch, Delay Elements, and An Adder. Analog Circuit Design: Biasing, Op-Amp Design, Circuit Noise.

Integrator Building Blocks- low pass filter, Active RC integrators, MOSFET-C Integrators, gm- C integrators, Discrete-time integrators. Filtering Topologies: The Bilinear transfer function, The Biquadratic transfer function, Filter using Noise shaping.

DAC Architectures- Resistor string, R-2R ladder Networks, Current Steering, Charge Scaling DACs, Cyclic DAC, and Pipeline DAC. ADC Architectures- Flash, Two-step Flash ADC, Pipeline ADC, Integrating ADCs, Successive Approximation ADC.

Sampling and Aliasing: A modeling approach, Impulse sampling, The sample and Hold, Quantization noise. Data converter SNR: An overview, Clock Jitter, Improving SNR using Averaging, Decimating filter for ADCs, Interpolating filter for DACs, Band pass and High pass filters - Using feedback to improve SNR. OSCILLATORS AND PLL: LC oscillators, Voltage Controlled Oscillators. Simple PLL, Charge pumps PLLs, Non-ideal effects in PLLs, Delay Locked Loops.

Reference Books

- 4 The Design of CMOS Radio-Frequency Integrated Circuits, Lee, 2005, cambridge.

23WRE3101A - RIVER ENGINEERING (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23WRE3101A	RIVER ENGINEERING	RE	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Computation of incipient motion and flow regime	3	PO1, PO2, PO7, PSO1
CO2	Estimation of river meandering and causes	3	PO1, PO2, PO7, PSO1
CO3	Concept of river training and training works	3	PO1, PO2, PO7, PSO1
CO4	Analysis of flow discharge and sediment transport using similitude	3	PO1, PO2, PO7, PSO1
CO5	Flow and discharge analysis	4	PO1, PO2, PO7, PSO1
CO6	Illustrate the experimental procedure and interpretation of results obtained using different experiment for Turbulence: Turbulence theory, Turbulence Intensity, Bed Shear Stress, Turbulent Kinetic Energy, Concept of Burst, Velocity distribution, ADV.	4	PO1, PO2, PO7, PSO1
CO7	Flow analysis in open channel flow	4	PO1, PO2, PO7, PSO1

Syllabus

Incipient motion and flow regime Types of sediment, its characteristics and alluvial channel, Concept of Incipient motion and Shields diagram, Methods for incipient motion, Description of regime of flow, Ripple, dune, and antidune regime, Importance of regime of flow, Resistance to flow in alluvial channel; Velocity distribution in alluvial channel, Concept of bed load, suspended load, wash load, and total load, Methods for the computation of bed load and suspended load.

River meandering: River plan form variations; River channel pattern; River confluences and branches; Meandering characteristics of river; Braided stream characteristics; Lateral river migration; River equilibrium; River dynamics; River aggradation and degradation; Stream power.

River training: Introduction to river training works; Objective of river training and bank protection; River training for flood control; River training for navigation; River training for guiding the flow; Causes of sedimentation in channel; Importance of sediment control; Silt excluder; Silt extractor; River dredging.

River similitude model: Types of river models; Mathematical river models; Sediment transport equations; Dimensionless numbers; Hydraulic similitude; Dimensional analysis; Distorted and undistorted models; Rigid-bed model; Mobile-bed river models.

Mathematical models for the flow and discharge analysis and hydrological model

23WRE3202A - SOLID WASTE MANAGEMENT AND LANDFILLS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23WRE3202A	SOLID WASTE MANAGEMENT AND LANDFILLS	SWML	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basics of solid waste and management and options available for disposal	2	PO1, PO6, PO7, PSO2
CO2	Understand the engineered systems for solid waste management and conversion and recovery of materials and energy	2	PO1, PO6, PO7, PSO2
CO3	Understand Familiarize with landfills , site selection design and operation, collection of gas and lechate , treatment of lechate and CPCB and MOEF guidelines. Design of Land filling	2	PO1, PO6, PO7, PSO2
CO4	Understand Familiarize with clay and geo synthetic lining systems and their designing	2	PO1, PO6, PO7, PSO2
CO5	Understand the hazardous waste and treatment.	2	PO1, PO6, PO7, PSO2

Syllabus

Classification of solid wastes (source and type based), solid waste management (SWM), elements of SWM, ESSWM (environmentally sound solid waste management) and EST (environmentally sound technologies), factors affecting SWM, Indian scenario, progress in MSW (municipal solid waste) management in India. Indian and global scenario of e-waste

Introduction to Solid Waste Management, Definition and classification of solid waste, Sources and characteristics of solid waste, Waste Collection and Transport, Collection methods and equipment,

Introduction to Landfills, Role and importance of landfills in waste management, Site Selection for Landfills, Criteria for site selection, Design of Landfills, Operation of Landfills, Collection and Management of Landfill Gas, Leachate Collection and Treatment

Introduction to Lining Systems, Importance of lining systems in waste management and groundwater protection, Clay Liners, Geosynthetic Liners, Composite Lining Systems, Design criteria for lining systems, Hydraulic conductivity and leak detection in liners

Introduction to Hazardous Waste, Environmental and Health Impacts, Overview of hazardous waste regulations, Hazardous Waste Characterization, Physical Treatment Methods, Chemical Treatment Methods, Biological Treatment Methods, Thermal Treatment Methods

Reference Books

- 1 Solid Waste Management: Principles and Practice, Ramesha Chandrappa, 2000, Springer.
- 2 hazardous waste management, Michael D. LaGrega, 2005, Waveland press.
- 3 Nanoparticle Technology Handbook, Masuo Hosokawa, 2018, Elsevier.
- 4 Design of Landfills and Integrated Solid Waste Management, Amalendu Bagchi, 1999, Wiley.
- 5 Solid Waste Engineering: A Global Perspective, William A. Worrell and P. Aarne Vesilind, 2017, Cengage Learning.
- 6 Municipal Solid Waste Management in Developing Countries: Perspectives and Challenges, Sunil Kumar and Ajay S. Kalamdhad, 2005, CRC Press.

23WRE3202E - SOLID WASTE MANAGEMENT AND LANDFILLS (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23WRE3202E	SOLID WASTE MANAGEMENT AND LANDFILLS	SWML	E	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	MUNICIPAL SOLID WASTES- Types of solid wastes, Sources of Municipal and Hazardous wastes, Properties of solid wastes-Physical and Chemical composition.	2	PO1, PO6, PO7, PSO2
CO2	Understand the engineered systems for solid waste management and conversion and recovery of materials and energy	2	PO1, PO6, PO7, PSO2
CO3	Understand Familiarize with landfills , site selection design and operation, collection of gas and lechate , treatment of lechate and CPCB and MOEF guidelines. Design of Land filling	2	PO1, PO6, PO7, PSO2
CO4	Understand Familiarize with clay and geo synthetic lining systems and their designing	2	PO1, PO6, PO7, PSO2
CO5	Understand the Solid and hazardous waste disposal	2	PO1, PO6, PO7, PSO2

Syllabus

MUNICIPAL SOLID WASTES- Types of solid wastes, Sources of Municipal and Hazardous wastes, Properties of solid wastes-Physical and Chemical composition

Introduction to Solid Waste Management, Definition and classification of solid waste, Sources and characteristics of solid waste, Waste Collection and Transport, Collection methods and equipment,

Introduction to Landfills, Role and importance of landfills in waste management, Site Selection for Landfills, Criteria for site selection, Design of Landfills, Operation of Landfills, Collection and Management of Landfill Gas, Leachate Collection and Treatment

Introduction to Lining Systems, Importance of lining systems in waste management and groundwater protection, Clay Liners, Geosynthetic Liners, Composite Lining Systems, Design criteria for lining systems, Hydraulic conductivity and leak detection in liners

Guidelines and Landfill Procedure for Disposing Hazardous Waste, Location and Site Selection Criteria for Hazardous Waste Landfill, Site Investigation, Planning and Design of Hazardous Waste Landfill, Waste Acceptance Criteria at Hazardous Waste Landfil

23WRE3203A - DESIGN OF HYDRAULIC STRUCTURES (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23WRE3203A	DESIGN OF HYDRAULIC STRUCTURES	DHS	A	5	0	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyses different parameter of lined and unlined channels	4	PO1, PO5, PO7, PSO1
CO2	Analyses different parameter of cross regulators on channel, Barrages and surplus weirs	4	PO1, PO5, PO7, PSO1
CO3	Analyses different parameter of Transitions and cross drainage works.	4	PO1, PO5, PO7, PSO1
CO4	Analyses different parameter of Spillway, Design principle of gravity and earthen dam.	4	PO1, PO5, PO7, PSO1
CO5	Design of different hydraulic structure for a river valley project	4	PO1, PO5, PO7, PSO1

Syllabus

Canal Introduction to design of lined and unlined channels (Triangular and Trapezoidal shape), Analysis for surface and sub-surface flow at hydraulic structures.

Regulation works Design of head regulator, cross regulator and falls (Trapezoidal notch type falls) on canal.

Cross Drainage works Design transitions and cross drainage works (Aqueducts; Super passage; Syphon Aqueducts.) on canal, Design of barrages and weirs on river.

Dam and spillways, Design principles for gravity and earthen dams, Design of spillway (ogee and chute spillway).

Different hydraulic structure for a river valley project.

23WRE3304A - WATER RESOURCES FIELD METHODS (A)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23WRE3304A	WATER RESOURCES FIELD METHODS	WRFM	A	4	0	4	4	7

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Measure and Estimate of different losses during rainfall event.	3	PO1, PO3, PO7, PSO1
CO2	Surface-Water Measurements and Methods	3	PO1, PO3, PO7, PSO1
CO3	Surface Water-Quality Measurements and Methods	3	PO1, PO3, PO7, PSO1
CO4	Groundwater Measurements and Methods	3	PO1, PO3, PO7, PSO1
CO5	To estimate the water resources of watershed for the allocation to different sector based on demand	3	PO1, PO3, PO7, PSO1
CO6	Illustrate the experimental procedure and interpretation of results obtained using different experiment for surface hydrology and groundwater hydrology	3	PO1, PO3, PO7, PSO1
CO7	Illustrate the skill procedure and interpretation for the water resources management of an area.	3	PO1, PO3, PO7, PSO1

Syllabus

Abstractions Water losses, Initial losses, Interception and depression storage, Evaporation, Evaporimeters, Estimation of Evaporation, Evapotranspiration, Field Measurement, Empirical Equations, Infiltration, Infiltrimeters, Infiltration Equation, Infiltration Indices.

Surface-Water Measurements and Methods, Stage and Velocity Measurement, Gauges, Current meter and Doppler flow velocity meter, Discharge measurement, Area Velocity method, Area Slope method, Discharge Measuring Structures, Dilution Technique, Stage Discharge relationship, Selection of a Stream Gauging Site.

Water Quality Measurements and Methods Water-quality principles, Measurement principles, chemical compatibility, quality assurance, Sample Collection flowing and nonflowing water sites, Sample preparation, Field Measurements

Groundwater Measurements and Methods: Groundwater Hydraulics and Principles, Well Construction, Hydraulic Tests and Measurements, determining aquifer parameters, steady and transient conditions, Slug test, Locating hydro geological boundaries, Image well theory, Determination of well characteristics and specific capacity of wells, Well characteristics of large diameter wells

Water resources of watershed estimation for the allocation water to different sector based on demand.

23WRE3405M - URBAN WATER HYDROLOGY AND HYDRAULICS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23WRE3405M	URBAN WATER HYDROLOGY AND HYDRAULICS	UWHH	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the urban hydrological cycle & hydraulic process	2	PO1, PO3, PO7, PSO1
CO2	Estimate the components of urban hydrological processes	3	PO1, PO3, PO7, PSO1
CO3	Estimate runoff from highways, airports and urban areas	3	PO1, PO3, PO7, PSO1
CO4	Analysis of storm water management system	3	PO1, PO3, PO7, PSO1

Syllabus

Urban hydrological cycle and components, Impact of urbanization on hydrological cycle, Anomalies and characterization of rainfall, Time and scale effects, Urban hydrological data requirements and analysis, Storm water runoff generation, return period, hydrologic risk, frequency analysis-IDF relationships.

Open channel flow in urban watersheds; interception storage, infiltration, depression storage; estimation of runoff rates from urban watersheds; flow routing; storm water drainage structures; storm water detention; structural and non-structural control measures; urban watershed modelling.

Overland and drainage channel flows; hydraulics of storm-drain systems and culverts; determination of design flow; runoff for highways, airports, and urban areas.

Planning and design aspects of storm water/drainage infrastructure; design of drainage gutters, channels, sewer networks, and culverts and storm water management.

23WRE3406M - ENVIRONMENTAL IMPACT ASSESSMENT AND LIFE CYCLE ANALYSES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23WRE3406M	ENVIRONMENTAL IMPACT ASSESSMENT AND LIFE CYCLE ANALYSES	EIALCA	M	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Concepts of EIA methodologies, Sustainable development	2	PO1, PO6, PO7, PSO2
CO2	Understand the General Framework for Environmental Impact Assessment, Characterization and site assessment	2	PO1, PO6, PO7, PSO2
CO3	Understand the Prediction and Assessment of EIA	2	PO1, PO6, PO7, PSO2
CO4	Understand the Environmental Legislation, Life Cycle Assessment	2	PO1, PO6, PO7, PSO2

Syllabus

Introduction to Environmental Impact Assessment (EIA), Definition and purpose of EIA , Historical background and evolution, Methodology of EIA , Screening and scoping, Impact assessment, Mitigation and enhancement

Screening Process, Definition and significance of screening Methods for screening potential projects , Tools used for screening, such as checklists and matrices, Importance of scoping in EIAs Techniques for scoping, including stakeholder engagement and consultation Tools for scoping, such as scoping matrices and flowcharts

Introduction to Life Cycle Analysis (LCA), Definition and significance of LCA in sustainability, Historical development and evolution of LCA, Principles and Stages of LCA, The life cycle concept: cradle-to-grave, cradle-to-gate, and cradle-to-cradle. Stages of LCA: goal and scope definition, inventory analysis, impact assessment, and interpretation.

Introduction to quantitative assessment methods, Environmental modeling techniques, Statistical analysis for impact assessment Life Cycle Assessment (LCA) and its application in EIA, Integrating Environmental and Social Impact Assessment

Reference Books

- 1 . Environmental Impact Assessment, Larry Canter, 2000, Mc Graw Hill Publishers .
- 2 Handbook of Environmental Impact Assessment Vol. I & II, Judith Petts, 2010, Blackwell Science.

- 4 Environmental Pollution and Control,, Dr H.S. Bhatia, 2019, Galgotia Publication (P) Ltd,Delhi .

23WRE3507 - PHYSICO-CHEMICAL PROCESSES FOR WATER AND WASTEWATER TREATMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23WRE3507	PHYSICO-CHEMICAL PROCESSES FOR WATER AND WASTEWATER TREATMENT	PCPWWT	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Explain the inter-relationship between water quality parameters and plant sizing, hydraulics and layout. Able to design intake structures.	2	PO1, PO6, PO7, PSO2
CO2	Learn aeration, sedimentation, coagulation and flocculation processes. Able to explain settling equations. Tube settlers and pulsators.	2	PO1, PO6, PO7, PSO2
CO3	Design filter units alongwith filter backwash system. Analyze chemistry of disinfection and to know the kinetics of disinfection. Understand adsorption process and apply the knowledge of isotherms.	3	PO1, PO6, PO7, PSO2
CO4	design various miscellaneous treatment processes such as softening, fluoridation/defluoridation. Able to know the importance and removal of trace organics.	2	PO1, PO6, PO7, PSO2

Syllabus

Design considerations - Plant Sizing and Layout, Hydraulic Flow Diagram, IntakeStructures - Design types. Water Quality Characteristics and Parameters Interlinks. Inorganic and Organic constituents.

Aeration - principles and design of aeration systems - two film theory. Sedimentation - types of setting and settling equations (Stokes, Newtons and Transition), design of setting tanks; Operational problems. Tube and pulsators Coagulation and Flocculation - types of Coagulants, Coagulation theory, optimum dosage of coagulant, design criteria and design

Filtration - theory, types, hydraulics of filter bed, design of filter units, filter backwash, operational problems and trouble shooting. Disinfection - disinfections, influencing factors, methods, byproducts and kinetics. Adsorption - types. equilibrium kinematics and Isotherms and applications.

Miscellaneous treatment: water softening - process operation and design. Fluoridation/defluoridation - design. removal of specific/trace organic contaminations - Arsenic (As), natural organic matter (NOM), dissolved organic matter (DOM), taste and order, volatile organic compounds (VOCs), synthetic organic chemicals.

Reference Books

- 2 Environmental Engineering, Peavy, H.s, Rowe, D.R, Tchobanoglous, G. , 2011, Mc-Graw -Hill.
- 3 Wastewater Engineering, Treatment, Disposal and Reuse, . MetCalf and Eddy., 2016, Tata McGraw-Hill.
- 4 MWH (2012) Water Treatment: Principles and Design, J. Weber, W.J. Control,, 2005, John Wiley & Sons.

23WRE3508 - SUSTAINABLE ENGINEERING AND TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23WRE3508	SUSTAINABLE ENGINEERING AND TECHNOLOGY	SET	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concept of sustainability, Challenges for Sustainable Development and Clean Development Mechanism	2	PO1, PO7, PO9, PSO1
CO2	Understand the sources, impacts of solid waste, Global environmental issues and Water Act, Air Act.	2	PO1, PO7, PO9, PSO1
CO3	Understand the Life Cycle Analysis, Procedures of EIA, green materials for building construction and Methods for increasing energy efficiency of buildings Sustainable cities	2	PO1, PO7, PO9, PSO1
CO4	Understand the Conventional and non-conventional of Energy sources and Sustainable Urbanization, industrialization and poverty reduction	2	PO1, PO7, PO9, PSO1

Syllabus

Sustainability Introduction, Need and concept of sustainability, Social environmental and economic sustainability concepts. Sustainable development, Nexus between Technology and Sustainable development, Challenges for Sustainable Development. Multilateral environmental agreements and Protocols Clean Development Mechanism (CDM), Environmental legislations in India Water Act, Air Act. A

Air Pollution, Effects of Air Pollution, Water pollution sources, Sustainable wastewater treatment, Solid waste sources, impacts of solid waste, Zero waste concept, 3 R concept. Global environmental issues Resource degradation, Climate change, Global warming, Ozone layer depletion, Regional and Local Environmental Issues.

Carbon credits and carbon trading, carbon foot print. Environmental management standards, ISO 14000 series, Life Cycle Analysis (LCA) Scope and Goal, Bio mimicking, Environment Impact Assessment (EIA) Procedures of EIA in India. Basic concepts of sustainable habitat, Green buildings, green materials for building construction, material selection for sustainable design, green building certification, Methods for increasing energy efficiency of buildings. Sustainable cities, Sustainable transport.

Energy sources: Basic Concepts-Conventional and non-conventional, solar energy, Fuel cells, Wind energy, Small hydro plants, bio fuels, Energy derived from oceans, Geothermal energy. Green Engineering, Sustainable Urbanization, industrialization, and poverty reduction, Social and technological change, Industrial Processes Material selection, Pollution Prevention, Industrial Ecology, Industrial symbiosis.

Reference Books

- 1 Introduction to Sustainable Engineering, K Shibu, 4th Edition, PKC Books.
- 2 Sustainability Engineering: Concepts, Design and Case Studies, D.T Allen, and D.R. Shonnard, 1st Edition, Prentice Hall.
- 3 Engineering applications in sustainable design and development, A.S Bradley, A. O Adebayo , P. Maria, 1st Edition, Cengage learning.
- 4 Systems Analysis for Sustainable Engineering: Theory and Applications, Ni Bin Chang, 3rd Edition, McGraw-Hill Professional.

(DEEMED TO BE UNIVERSITY)

Y23: B.Tech. - Internet of Things

Category: Project Research And Internship (PRI)

23IE2040 - SOCIAL INTERNSHIP (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IE2040	SOCIAL INTERNSHIP	SIP	R	0	0	0	4	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Remember the fundamentals of the science of water cycle along with powerful tools that students can use to diagnose the health of the local water cycle as well as develop targeted action plans to restore the local natural water cycle and bring water prosperity	2	PO3, PSO1
CO2	Remember the water sustainability and water resilience of village, city, residential facilities and households using multi-level water scorecards	2	PO4, PSO1
CO3	Apply the design thinking positive action plan for a village, campus, residential facility and community neighbourhood.	3	PO5, PSO1
CO4	Apply the water positive solutions within an urban watershed, a rural watershed, residential institutional and corporate community	3	PO6, PSO1

Syllabus

The module will cover the following 1) Science of Natural Water Cycle 2) Watershed death spiral that is the cause of climate change 3) Water Literacy - Know how water flows in your city, in your residential community and inside your own home.

4) Design Thinking Process 5) Water Accounting - Water Scorecard Tools to rapidly assess and account for water sustainability security & resilience of your own household, your residential community & your city 6) Basic Hydrology 7) Groundwater Fundamentals

8) Water Cycle and Biodiversity 9) Nature Based Solutions to Restore & Repair the Local Natural Water Cycle

10) Model prototype

Reference Books

- 1 The Social Work Skills Workbook, Barry R. Cournoyer, 1, CWP Press.
- 2 Social Work Practice: A Generalist Approach, Louise C. Johnson and Stephen J. Yanca, 1, Springer.
- 3 The Social Work Internship: A Guide for Students, Pamela Myers Kiser, 1, Springer.
- 4 Community Organizing and Community Building for Health and Welfare, Meredith Minkler, 1, Springer.

23IE3041 - TECHNICAL INTERNSHIP (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IE3041	TECHNICAL INTERNSHIP	TIP	R	0	0	0	4	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Ability to demonstrate the impact of academic skills and logical thinking	3	PO3, PSO1
CO2	Ability to integrate existing and new technical knowledge for industrial application	3	PO4, PSO1
CO3	Ability to demonstrate the impact of the internship on their learning and professional development	3	PO5, PSO1
CO4	Demonstrate the ability to harness resources by analyzing challenges	4	PO6, PSO1

Syllabus

students will explore key academic skills such as effective study strategies, time management, and critical reading techniques. They will also dive into research methodologies, including how to conduct literature reviews and properly reference sources in academic writing. The module will focus on developing logical thinking abilities, emphasizing structured approaches to solving complex problems. Students will engage in exercises and case studies that challenge their logical reasoning, enhancing their capacity for critical analysis and decision-making.

Students will learn how to apply advanced technical tools and methodologies to solve real-world industrial problems. Key topics will include adapting to evolving technologies, analyzing industry trends, and understanding the impact of innovations on process optimization. Through case studies and practical examples, students will gain insights into how technical knowledge is applied in industries like manufacturing, product design, and automation.

Students will reflect on their experiences in the workplace, examining how internships enhance their understanding of technical concepts, teamwork, and communication skills. The module will include discussions on the application of academic knowledge in practical scenarios, as well as the importance of soft skills such as leadership and adaptability. Through reflective assignments and discussions, students will assess the long-term impact of their internships on their career development.

students will learn about effective resource management and its role in solving industrial challenges. The focus will be on identifying available resources, such as human capital, materials, and technology, and learning how to allocate them efficiently. Students will explore techniques for analyzing challenges and developing strategic solutions that maximize resource utilization. Through case studies from various industries, students will examine real-world examples of successful resource management, and they will engage in group projects to simulate problem-solving in complex, resource-constrained environments.

23IE4048 - ENGINEERING PROJECT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IE4048	ENGINEERING PROJECT	EPJ	R	0	0	8	16	8

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Literature search equips students with the ability to efficiently locate, evaluate, and synthesize academic and scholarly sources relevant to their field of study. Students will develop skills to conduct comprehensive searches, critically assess the credibility of sources, and apply research findings to support their academic or professional work.	2	PO1
CO2	Problem identification enables students to accurately recognize and define complex issues or challenges within a given context. Students will learn to analyze situations critically, identify underlying causes, and articulate clear problem statements that guide effective problem-solving strategies.	3	PO2
CO3	Analysis of research work prepares students to critically evaluate and interpret research studies, assessing the methodology, data, and conclusions. Students will develop the ability to dissect research findings, identify strengths and weaknesses, and draw informed conclusions that contribute to their own academic or professional endeavors.	2	PO6, PSO1
CO4	Evaluation of research work trains students to systematically assess the quality and relevance of research studies by examining their design, methodology, and overall contributions to the field. Students will gain the skills to judge the validity, reliability, and impact of research, enabling them to make informed decisions and provide constructive feedback in academic or professional contexts.	3	PO9, PSO2

Syllabus

A literature survey involves a comprehensive review of existing scholarly works, such as books, academic papers, and articles, on a specific topic or research question. The purpose is to gather, summarize, and critically analyze the current state of knowledge, identifying key theories, methodologies, and gaps in the research. This process helps researchers contextualize their work within the broader academic landscape, ensuring that their study builds on existing knowledge and addresses unresolved issues.

Acquiring knowledge and practicing on the tools required to execute a project involves gaining proficiency in the specific software, technologies, or methodologies essential for the project's successful completion. This process includes hands-on training, experimentation, and application of these tools to develop the skills needed to handle real-world project challenges effectively. By mastering these tools, individuals can enhance their efficiency, accuracy, and overall ability to deliver high-quality results within the project's scope and objectives.

"Problems identification and implementing the existing work" involves recognizing and clearly defining challenges or gaps in a particular area of study or practice. This process requires a thorough understanding of existing solutions and methodologies, allowing for the application or adaptation of these approaches to address the identified issues. By leveraging established work, individuals can efficiently implement proven strategies, ensuring that solutions are both effective and aligned with current best practices while also identifying areas where further innovation is needed.

"Designing and developing solutions for the problems identified and publishing the work in reputed journals" involves creating innovative and practical responses to the challenges uncovered during research or analysis. This process requires a deep understanding of the problem, creative problem-solving skills, and the ability to develop solutions that are both effective and feasible. Once the solutions are validated, publishing the work in reputed journals ensures that the research is peer-reviewed, widely disseminated, and recognized within the academic or professional community, contributing to the advancement of knowledge in the field.

23IE4053A	CAPSTONE PROJECT - 1	CP-1	A	0	0	10	20	10

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Exercise to acquire knowledge within the chosen area of technology for project development.	2	PO1
CO2	Identify, discuss and justify the technical aspects of the chosen area for problem analysis	3	PO2
CO3	Reproduce, improve and refine technical aspects for chosen problem	2	PO6
CO4	Communicate and report effectively project related activities and findings.	3	PO9

Syllabus

A literature survey involves a comprehensive review of existing scholarly works, such as books, academic papers, and articles, on a specific topic or research question. The purpose is to gather, summarize, and critically analyze the current state of knowledge, identifying key theories, methodologies, and gaps in the research. This process helps researchers contextualize their work within the broader academic landscape, ensuring that their study builds on existing knowledge and addresses unresolved issues.

Acquiring knowledge and practicing on the tools required to execute a project involves gaining proficiency in the specific software, technologies, or methodologies essential for the project's successful completion. This process includes hands-on training, experimentation, and application of these tools to develop the skills needed to handle real-world project challenges effectively. By mastering these tools, individuals can enhance their efficiency, accuracy, and overall ability to deliver high-quality results within the project's scope and objectives.

Problems identification and implementing the existing work" involves recognizing and clearly defining challenges or gaps in a particular area of study or practice. This process requires a thorough understanding of existing solutions and methodologies, allowing for the application or adaptation of these approaches to address the identified issues. By leveraging established work, individuals can efficiently implement proven strategies, ensuring that solutions are both effective and aligned with current best practices while also identifying areas where further innovation is needed.

Designing and developing solutions for the problems identified and publishing the work in reputed journals" involves creating innovative and practical responses to the challenges uncovered during research or analysis. This process requires a deep understanding of the problem, creative problem-solving skills, and the ability to develop solutions that are both effective and feasible. Once the solutions are validated, publishing the work in reputed journals ensures that the research is peer-reviewed, widely disseminated, and recognized within the academic or professional community, contributing to the advancement of knowledge in the field.

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23IE4054A	CAPSTONE PROJECT - 2	CP-2	A	0	0	10	20	10

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Literature search equips students with the ability to efficiently locate, evaluate, and synthesize academic and scholarly sources relevant to their field of study. Students will develop skills to conduct comprehensive searches, critically assess the credibility of sources, and apply research findings to support their academic or professional work.	3	PO1
CO2	Problem identification enables students to accurately recognize and define complex issues or challenges within a given context. Students will learn to analyze situations critically, identify underlying causes, and articulate clear problem statements that guide effective problem-solving strategies.	2	PO2
CO3	Analysis of research work prepares students to critically evaluate and interpret research studies, assessing the methodology, data, and conclusions. Students will develop the ability to dissect research findings, identify strengths and weaknesses, and draw informed conclusions that contribute to their own academic or professional endeavors.	2	PO6
CO4	Evaluation of research work trains students to systematically assess the quality and relevance of research studies by examining their design, methodology, and overall contributions to the field. Students will gain the skills to judge the validity, reliability, and impact of research, enabling them to make informed decisions and provide constructive feedback in academic or professional contexts.	3	PO9

22FT2212R - PROCESSING OF AQUATIC FOODS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT2212R	PROCESSING OF AQUATIC FOODS	PAF	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand terminology of commercially important aquatic animals and plants used as food sources and their body structures.	2	PO1, PO7
CO2	Apply intrinsic and extrinsic factors that affect spoilage of aquatic foods.	3	PO1, PO7
CO3	Apply an understanding on processing, preservation, supply chain, and marketing aspects of such products.	3	PO1, PO7
CO4	Apply an understanding on executing preservation of select marine products.	3	PO1, PO7
CO5	Apply processing techniques of aquatic foods.	3	PO1, PO7

Syllabus

Outline of the commercial importance, definitions, classification, glossary. Sources_Animals (freshwater and seawater) fish, crustaceans, cephalopods, mollusks; Plants seaweed, water spinach; external anatomy, edible and non-edible parts, nutritional attributes, nutritional advantages versus regular plant sources.

Spoilage_Extrinsic factors (temperature, moisture, microbes, insects), intrinsic factors (physical, chemical, biochemical, physiological).

Processing_Drying_sun drying, microwave drying, ohmic heating, IR heating, ultrasound processing, enzymatic processing; salting, canning or heat processing, freezing, smoking, high pressure processing (HPP), retort, pulsed light, irradiation, electromagnetic field, etc; cold storage, refrigerated vans for transport.

Fish byproducts_Liver oil, body oil, fish meal, fish manure, fish flour, fish silage, fish soluble, fish sausage, fish macaroni, fish glue, gelatin, albumin, fish protein concentrate. Quality attributes_Nutritional value. Sensory_appearance, color, flavor, odor, and texture.

Grading, processing, and analyses of aquatic foods for their physico-chemical and nutritional properties.

22FT22C1R - FOOD ANALYSIS AND QUALITY ASSURANCE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT22C1R	FOOD ANALYSIS AND QUALITY ASSURANCE	FAQA	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Summarize the analytical aspects of foods in quality and regulatory perspective.	2	PO1, PO5, PO10, PSO2
CO2	Apply the analytical methods for chemical and nutritional properties of foods.	3	PO1, PO5, PO10, PSO2
CO3	Apply the analytical methods for thermal and rheological properties of foods.	3	PO1, PO5, PO10, PSO2
CO4	Apply the sensory and microbiological analysis methods for different processed foods	3	PO1, PO5, PO10, PSO2
CO5	Analyze the project on Quality assurance.	4	PO1, PO5, PO10, PSO2

Syllabus

Introduction to Food Analysis, Importance of various food components, purpose, sampling requirements. Quality different aspects of food analysis, Properties, parameters, methods, techniques. Regulatory aspects involved in the food analysis.

Chemical and Physico-Chemical analysis of foods, Chemical analysis such as carbohydrate, protein, fat, mineral content analysis. Study on different physical properties such as colour, size, shape, composition and interfacial properties.

Different Thermal and Rheological Properties. Thermal properties such as transition (glass and melting) and degradation temperatures, thermal conductivity, specific heat and thermal diffusivity of different foods. Different rheological properties such as flow properties, studies on shear stress and shear rate in different foods.

Study on microbial effect in different types of foods. Study on microbial diseases transmitted through foods. Study of different sensory parameters, study on advanced sensory software tools. Study on advanced microbiological techniques.

Evaluate the project on Quality analysis including Practical Safety evaluation of foods for heavy metal content and pesticides residue, Analyse the water activity in different foods, Analyse the texture of different foods, Analyse the quality parameters of water, Evaluate the thermal properties of different foods, Analyse the flow properties of different foods, Evaluate the microbial quality of selected food products.

22FT3215R - TECHNOLOGY OF MEAT AND POULTRY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT3215R	TECHNOLOGY OF MEAT AND POULTRY	TMP	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the meat and poultry market and preservation technologies for meat products	2	PO2, PO4, PO6, PSO1
CO2	Apply processing techniques for meat preservation	3	PO2, PO4, PO6, PSO1
CO3	Apply processing technologies for preservation of poultry and eggs	3	PO2, PO4, PO6, PSO1
CO4	Apply principles of plant sanitation in preventing contamination of meat products	3	PO2, PO4, PO6, PSO1
CO5	Apply principles for processing and preservation for meat, poultry, and eggs	3	PO2, PO4, PO6, PSO1

Syllabus

Introduction to Meat and Poultry Technology Current status of meat and poultry industry in Indian and global markets, preferences, demand, availability, market size, regulatory requirements. Sources animals and birds and products derived from thereof. Structure of muscle chemical composition and nutritive value of meat. Preservation requirements of meat, poultry, and egg modes of deterioration, effect of deterioration on quality.

Processing and Preservation of Meat and Poultry Preslaughter and slaughter operations plant conditions, post mortem changes influencing quality, grading, aging, mechanical deboning. Cutting, handling, and tenderization. Preservation chilling, freezing, pickling, curing, cooking and smoking, canning, dehydration, radiation, chemical and biological preservatives, packing, and storage. Quality of raw and processed meat parameters and evaluation. Utilization of byproducts

Processing and Preservation of Egg Structure of egg, chemical composition of egg, nutritive value and functional properties of egg. Grading and packing of eggs and egg products. Preservation of egg preservation of shell egg and liquid egg. Whole egg powder, egg yolk, products, byproducts, their packing and storage.

Safety Requirements for meat, poultry, and egg Safety requirements Contamination of meat, poultry, and egg products in absence of sanitation potential health effects on consumers, pathogenic outbreaks. Sanitation methods, procedures. Standards Regulations in some important markets USA, EU, UK, etc.. Certifications KOSHER, HALAL, etc

Study of different primal cuts, Preservation of meat at low temperatures, Preservation of meat at high temperatures, Handling of meat, Preservation of meat by curing, Preservation of meat by pickling, Study of value added products, Study of different packing methods of meat products Visit to an abattoir

23ACCABT - BUSINESS TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACCABT	BUSINESS TECHNOLOGY	BT	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To understand business organization types, structure, functions and governance	2	PO1
CO2	To apply the accounting reporting systems, control and compliance	3	PO1
CO3	To apply the knowledge in professional ethics in accounting and business	3	PO4, PSO1
CO4	To develop personal effectiveness and communication	3	PO6

Syllabus

The business organisation, its stakeholders and the external environment -The purpose and types of business organisation, Stakeholders in business organisations, Political and legal factors affecting business, Macroeconomic factors, Micro economic factors, Social and demographic factors, Technological factors, Environmental factors, Competitive factors. Business organizational structure, functions and governance The formal and informal business organisation, Business organizational structure and design, Organizational culture in business, Committees in business organisations, Governance and social responsibility in business.

Accounting and reporting systems, controls and compliance - The relationship between accounting and other business functions, Accounting and finance functions within business organisations, Principles of law and regulation governing accounting and auditing .The sources and purpose of internal and external financial information, provided by business, Financial systems, procedures and related IT applications, Internal controls, authorization, security of data and compliance within business, Fraud and fraudulent behaviour and their prevention in business, including money laundering.

The sources and purpose of internal and external financial information, provided by business, Financial systems, procedures and related IT applications, Internal controls, authorization, security of data and compliance within business, Fraud and fraudulent behaviour and their prevention in business, including money laundering. Professional ethics in accounting and business Fundamental principles of ethical behaviour, The role of regulatory and professional bodies in promoting ethical and professional standards in the accountancy profession, Corporate codes of ethics, Ethical conflicts and dilemmas.

Leading and managing individuals and teams Leadership, management and supervision, Recruitment and selection of employees, Individual and group behaviour in business organisations, Team formation, development and management, Motivating individuals and groups, Learning and training at work, Review and appraisal of individual performance. Leading and managing individuals and teams Leadership, management and supervision, Recruitment and selection of employees, Individual and group behaviour in business organisations, Team formation, development and management, Motivating individuals and groups, Learning and training at work, Review and appraisal of individual performance. Competence frameworks and personal development, Sources of conflicts and techniques for conflict resolution and referral, communicating in business.

Reference Books

23ACCAFA - FINANCIAL ACCOUNTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACCAFA	FINANCIAL ACCOUNTING	FA	R	3	2	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the context and purpose of financial reporting, The scope and purpose of financial statements for external reporting,	2	PO11
CO2	Apply the use of double-entry and accounting systems, Preparing simple consolidated financial statements	3	PO2
CO3	Apply impart knowledge in preparation of trial balance, Calculate goodwill (excluding impairment of goodwill) using the full goodwill method only	3	PO11
CO4	Demonstrate control accounts and incomplete records, Interpretation of financial statements - Importance and purpose of analysis of financial statements Describe how the interpretation and analysis of financial statements is used in a business environment,	3	PO5

Syllabus

The context and purpose of financial reporting The scope and purpose of financial statements for external reporting, Users and stakeholders needs, The main elements of financial reports, The regulatory framework (legislation and regulation, reasons and limitations, relevance of accounting standards), Duties and responsibilities of those charged with governance. The qualitative characteristics of financial information The qualitative characteristics of financial information. The use of double entry and accounting systems Double entry book keeping principles including the maintenance of accounting records and sources of accounting information, Ledger accounts, books of prime entry, and journals. Recording transactions and events Sales and purchases, Cash, Inventory, Tangible noncurrent assets, Depreciation, Intangible noncurrent assets and amortization, Accruals and prepayments, Receivables and payables, Provisions and contingencies, Capital structure and finance costs. Preparing a trial balance Trial balance, Preparing basic financial statements of financial position, Statements of profit or loss and other comprehensive income, Disclosure notes, Events after the reporting period, Statements of cash flows, incomplete records.

Preparing simple consolidated financial statements Subsidiaries Define and describes the following terms in the context of group accounting: Parent, Subsidiary, Control, Consolidated or group financial statements, Noncontrolling interest, Trade simple investment. Identify subsidiaries within a group structure. Describe the components of and prepare a consolidated statement of financial position or extracts thereof including: Fair value adjustments at acquisition on land and buildings (excluding depreciation adjustments), Fair value of consideration transferred from cash and shares (excluding deferred and contingent consideration), Elimination of intra-group trading balances (excluding cash and goods in transit), Removal of unrealised profit arising on intra group trading, Acquisition of subsidiaries part way through the financial year,

Calculate goodwill (excluding impairment of goodwill) using the full goodwill method only. Describe the components of and prepare a consolidated statement of profit or loss or extracts there of including Elimination of intra-group trading balances (excluding cash and goods in transit), Removal of unrealised profit arising on intra group trading, Acquisition of subsidiaries part way through the financial year. Associates Define and identify an associate and significant influence and identify the situations where significant influence or participating interest exists, Describe the key features of a parent-associate relationship and be able to identify an associate within a group structure, Describe the principle of equity accounting.

Interpretation of financial statements - Importance and purpose of analysis of financial statements Describe how the interpretation and analysis of financial statements is used in a business environment, explain the purpose of interpretation of ratios. Ratios Calculate key accounting ratios Profitability, Liquidity, Efficiency, and Position. Explain the interrelationships between ratios. Analysis of financial statements Calculate and interpret the relationship between the elements of the financial statements with regard to profitability, liquidity, efficient use of resources and financial position, Draw valid conclusions from the information contained within the financial statements and present these to the appropriate user of the financial statements

23ACCAMA - MANAGEMENT ACCOUNTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACCAMA	MANAGEMENT ACCOUNTING	MA	R	3	2	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the need of Management Accounting & cost accounting techniques, Accounting for management Sources of data Cost classification presenting information.	3	PO2
CO2	Develop budgeting techniques, Nature and purpose of budgeting statistical techniques budget preparation flexible budgets capital budgeting and discounted cash flow budgetary control	3	PO4
CO3	Make use of standard costing and variance analysis techniques, Standard costing system variance calculations and analysis reconciliation of budgeted and actual profits.	3	PO8
CO4	Apply the performance measurement techniques to measure the performance Performance measurement overview performance measurementapplication cost reductions and value enhancement	3	PO8

Syllabus

The nature, source and purpose of management information: Accounting for management Sources of data Cost classification presenting information. Cost accounting techniques: Accounting for material, labour and overheads absorption and marginal costing cost accounting methods alternative cost accounting principles.

Budgeting: Nature and purpose of budgeting statistical techniques budget preparation flexible budgets capital budgeting and discounted cash flow budgetary control and reporting behavioral aspects of budgeting.

Standard Costing: Standard costing system variance calculations and analysis reconciliation of budgeted and actual profits.

Performance measurement: Performance measurement overview performance measurementapplication cost reductions and value enhancement monitoring performance and reporting.

Reference Books

- 1 Management Accounting: Principles and Applications, Leslie G. Eldenburg, Susan K. Wolcott, and Christopher T. Staley., 18 April 2005, Wiley.

- 4 Management Accounting Concepts and Technique, Gary L. Sundem, William O. Stratton, John A. Schatzberg, Dave Burgstahler, 15 March 2006, Wiley.

23AD2204R - DATA MANAGEMENT AND WAREHOUSING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD2204R	DATA MANAGEMENT AND WAREHOUSING	DMW	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Design a Data warehouse system and perform business analysis with OLAP tools	2	PO1, PO2, PO3, PSO1
CO2	Apply suitable pre-processing and visualization techniques for data analysis	3	PO2, PO3, PO4, PSO1
CO3	Discover frequent pattern and association rule mining techniques for data analysis	3	PO1, PO2, PO3, PSO1
CO4	Apply appropriate classification techniques for data analysis	3	PO2, PO3, PO4, PSO1
CO5	Discover appropriate clustering techniques for data analysis	3	PO1, PO2, PO3, PSO1

Syllabus

UNIT I Data Warehousing, Business Analysis and On-Line Analytical Processing (OLAP): Basic Concepts, Data Warehousing Components, Building a Data Warehouse, Database Architectures for Parallel Processing, Parallel DBMS Vendors, Multidimensional Data Model, Data Warehouse Schemas for Decision Support, Concept Hierarchies, Characteristics of OLAP Systems, Typical OLAP Operations, OLAP and OLTP.

Introduction to Data Mining Systems, Knowledge Discovery Process, Data Mining Techniques, Issues, applications, Data Objects and attribute types, Statistical description of data, Data Preprocessing Cleaning, Integration, Reduction, Transformation and discretization, Data Visualization, Data similarity and dissimilarity measures.

UNIT III Frequent Pattern Analysis: Mining Frequent Patterns, Associations and Correlations, Mining Methods, Pattern Evaluation Method, Pattern Mining in Multilevel, Multi-Dimensional Space Constraint Based Frequent Pattern Mining, Classification using Frequent Patterns

Classification: Decision Tree Induction, Bayesian Classification, Rule Based Classification, Classification by Back Propagation, Support Vector Machines, Lazy Learners, Model Evaluation and Selection, Techniques to improve Classification Accuracy, Clustering: Clustering Techniques, Cluster analysis, Partitioning Methods, Hierarchical methods, Density Based Methods, Grid Based Methods, Evaluation of clustering, Clustering high dimensional data, Clustering with constraints, Outlier analysis, outlier detection methods.

Reference Books

- 3 Introduction to Data Mining, Pang Ning Tan, 1st Edition, Pearson.
- 4 Data Mining and Analysis - Fundamental concepts and Algorithms, Mohammad J Zaki, 1st, Oxford .
- 5 Insight into Data Mining Theory and Practical, K P soman, shyam Diwakar, 2006, Prentice Hall of India.

23AD3106R - BIG DATA ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD3106R	BIG DATA ENGINEERING	BDE	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply big data use cases from selected business domains.	3	PO1, PO2, PO6, PO12, PSO1, PSO2
CO2	Construct NoSQL big data management	3	PO3, PO5, PSO2
CO3	Install, configure, and run Hadoop and HDFS	4	PO2, PO4, PO7, PO11, PSO1, PSO2
CO4	Perform map-reduce analytics using Hadoop	4	PO4, PSO2
CO5	Implement the lab experiments for big data application	5	PO6

Syllabus

A distributed system uses multiple independent computers to enhance scalability, reliability, and performance compared to centralized systems. It distributes tasks across nodes, reducing failure risk and boosting processing speed but adds complexity in data consistency, communication, and security. Big Data involves vast, rapidly generated data that traditional systems can't handle. Distributed technologies like Hadoop and Spark manage this data effectively, driven by trends such as the internet and IoT, with cloud platforms offering scalable solutions for better decision-making and strategic advantages.

Big Data engineering has evolved with NoSQL databases, which address SQL limitations in scalability and flexibility. NoSQL databases handle diverse, unstructured data with schema-less models and manage relationships with graph databases. They use distribution methods like replication and sharding to ensure high availability and performance. Hadoop, including HDFS and MapReduce, supports distributed storage and processing, driving effective Big Data management and insights.

Hadoop is a framework for distributed storage and processing of large datasets using the MapReduce model, with its HDFS ensuring reliability and scalability. It supports various data formats and interfaces. Apache Spark complements Hadoop by speeding up data processing with in-memory computation using RDDs. Together, they are crucial for Big Data analytics, helping organizations extract insights from massive datasets.

MapReduce workflows involve splitting data into smaller chunks for parallel processing in the "map" phase, followed by aggregation in the "reduce" phase. MR-Unit allows for unit testing MapReduce logic with local test data. A MapReduce job run includes input splitting, mapping, shuffling, sorting, and reducing. Classic MapReduce and YARN handle job execution and resource management, with YARN providing enhanced scalability. Failures are managed through built-in recovery mechanisms. Job scheduling prioritizes tasks, while shuffle and sort organize intermediate data. MapReduce supports various input and output formats for flexible data processing.

Setting up a Hadoop environment starts with installing VMware to create virtual machines for Hadoop components like HDFS and YARN. Basic Linux commands are used to manage files in HDFS. Running a word count MapReduce program helps understand parallel data processing, while more complex tasks like temperature analysis or patent record processing showcase MapReduce's capability. Features like Partitioner for workload optimization and tasks such as averaging or matrix multiplication highlight Hadoop's versatility in distributed computing.

23AD3207R - NATURAL LANGUAGE PROCESSING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD3207R	NATURAL LANGUAGE PROCESSING	NLP	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply various approaches to syntax and semantics in NLP	3	PO1, PO2, PSO1
CO2	Apply the statistical estimation and statistical alignment models for language modelling and parsing.	3	PO1, PO2, PSO1
CO3	Apply Vector models for documents to gain insights of the document.	3	PO1, PO2, PSO1
CO4	Apply various statistical models for classification, information extraction, translation, and generation.	3	PO1, PO2, PSO2
CO5	Inspect and Evaluate Language Processing Methods using python	4	PO1, PO2, PSO2

Syllabus

Introduction to language processing: tokens, sentences, paragraphs, Sentence and Paragraph Segmentation, Introduction to Text Normalization (lowercasing, stemming, lemmatization, Corpora and their construction: representativeness, Regular expressions, extraction of information using Regex, Named Entity Recognition, Rule-Based Approaches for NER, Advanced smoothing for language modelling, POS tagging, Introduction to Hidden Markov Models Models for Sequential tagging: MaxEnt, Viterbi Algorithm, CRF, Spelling Correction, Language Modelling, Computational Semantics, Lexical semantics: WordNet and FrameNet, Syntax: Constituency Parsing, Probabilistic Context-Free Grammars (PCFGs), Dependency Parsing: Dependency Trees, Transition-Based Parsing Comparison of Constituency and Dependency Parsing

Vector Space Model word vectors, GloVe, Word2Vec model, word embedding, Document Similarity measures Cosine and cluster measures, Text Classification, Clustering, and Summarization

Information Extraction, Document Classification, Clustering, topic modelling techniques, Machine Translation, Language Generation

Reference Books

23BT2209R - BIOCHEMICAL REACTION ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT2209R	BIOCHEMICAL REACTION ENGINEERING	BCRE	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply principles of biochemical Reaction Engineering to interpret chemical or biological reaction kinetics	3	PO1
CO2	Interpret batch reactor data analysis to assess order, half life and rate constant of reaction system	3	PO1, PO2
CO3	Apply principles of bioreactor systems to assess rate of substrate utilization, biomass and product formation	3	PO1
CO4	Apply principles of CSTR systems to analyze cell concentration and substrate concentration and related microbial kinetic parameters	3	PO1
CO5	Analysis of chemical and biological kinetics to assess the progress of reaction system for improving better biomass and product formation	4	PO2, PSO1, PSO2

Syllabus

Over View of Biochemical Reaction Engineering: Overview of biochemical reaction Engineering; Classification of reactions; Reaction rate; Kinetics of homogenous reactions; Single and multiple reactions; Elementary and Non elementary reactions; Molecularity and order of reactions; rate constant; Kinetic models of non-elementary reactions; Temperature dependency of rate equation.

Constant volume batch reactor; Analysis of total pressure data; The conversion; Integral method of analysis of data; Irreversible uni-molecular, bimolecular reactions; Zero order reactions. Half-life of a reaction; Varying volume batch reactor; differential method of analysis; Integral method of analysis; Zero order; First order & second order reactions; Temperature & reaction rate.

Definitions; Differences and similarities between chemical and bioreactors; Classification of bioreactors; Reactor configurations; Description of a conventional bioreactor with all aspects; Design and construction criteria of a bioreactor; Concept of ideal and nonideal reactors; Residence time distribution; stimulus response technique; Models of non-ideal reactors; Imperfect mixing.

Designing Of Bioreactors: Design equations for enzyme reactors; batch growth of microorganism; Design equation of a plug flow reactor; Design of CSTR with wash out concept; Stirred tank reactors with recycle of biomass; Continuous stirred tank fermenters in series with out and with recycle of biomass; Estimation of kinetic parameters.

Estimation of mixing time, estimation of Volumetric mass transfer (K_{la}) in sparged reactor, Estimation of gas hold up in sparged bioreactor, estimation of power number and power consumption for various impellers, interpretation of batch reactor data, CSTR kinetics, RTD studies, PFR kinetics, Reaction studies on airlift reactor

23BT3212 - PLANT AND ANIMAL BIOTECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT3212	PLANT AND ANIMAL BIOTECHNOLOGY	PABT	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the principles of plant tissue culture, protoplast culture in generating somatic hybrids Plant tissue culture and protoplast culture are key techniques in plant biotechnology that facilitate the generation of somatic hybrids.	3	PO1
CO2	Apply plant tissue culture techniques to understand the methods in producing transgenic plants for Selection of Explants, Preparation of Culture Media, Genetic Transformation Methods.	3	PO1, PO3
CO3	Analyze the role of animal tissue culture methods in maintaining cell lines providing a controlled environment for the study of cellular processes, drug development, and therapeutic applications.	3	PO1
CO4	Apply the principles of Gene transfer methods in understanding the significance of Transgenic animals which have numerous applications in biomedical research, agriculture, and biotechnology.	3	PO1, PO3
CO5	Analyse the results of tissue culture techniques in producing invitro cultured plants, metabolites and cell line maintenance reveals significant advancements in plant and animal biotechnology.	3	PO4, PO5, PS02

Syllabus

Plant tissue culture: Totipotency of plant tissue; Conservation of plant germplasm; Germplasm preservation- Cryopreservation; Plant Tissue Culture Sterilization, composition of MS media, Media Preparation; Callus culture, Organogenesis, Somatic embryogenesis, Meristem culture, Haploid production (Anther, Pollen/Ovary, Ovule); Micropropagation, hardening and Green House Technology; Protoplast isolation and fusion- Cybrid Production; Artificial/synthetic seeds; Production of Secondary Metabolites.

Genetic engineering in Plants: Agrobacterium-mediated DNA transfer- Ti/Ri plasmid Vectors- Binary and co-integrated vectors; Transformation strategies in plants- Agrobacterium tumefaciens, Physical methods of gene transfer Electroporation and gene gun methods; Chloroplast transformation; Molecular biology of plant-pathogen interactions and application of gene transfer techniques in pest resistance (Bt genes), edible vaccines, and Delayed fruit ripening; Ethical issues in plant biotechnology.

Animal cell culture: Facilities and Applications- Media for Animal cells; Types of cell culture- Primary cell culture, secondary culture, cell transformation, cell lines, Insect cell lines, stem cell cultures, cell viability, and cytotoxicity; Biology of cultured cells, measurement of growth, cell synchronization, senescence, and apoptosis; Organ culture; Cryopreservation; Human embryonic Stem Cells.

Genetic engineering in animals: methods of DNA transfer into animal cells- calcium phosphate co-precipitation, , microinjection, electroporation, Liposome encapsulation, Biological vectors. Hybridoma technology; Vaccine production; Transgenic animals

23BT3213R - DOWNSTREAM PROCESSING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT3213R	DOWNSTREAM PROCESSING	DSP	R	2	0	4	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply basics of primary separation and recovery processes of various biomolecules	3	PO1
CO2	Applying the principles of suspended solids removal and product enrichment operations	3	PO1
CO3	Apply the aqueous two-phase extraction process and other product purification methods	3	PO3, PO7
CO4	Analyse the methods for alternative separation, product polishing and formulation studies.	3	PO3, PO7
CO5	Analyze various bioseparation methods for recovery, isolation and purification of various bioproducts	4	PO3, PO7

Syllabus

Downstream Processing in Biotechnology Introduction; overview of bioseparation; characterization of Biomolecules, characterization of fermentation broth: Morphology of cells, structure of the cell wall, product concentrations, Biomass density. Primary separation and Recovery Processes: Recovery of intracellular products: Cell disruption methods physical methods (osmotic shock, grinding with abrasives, solid shear, liquid shear) , chemical methods (alkali, detergents) enzymatic methods.

Removal of suspended solids: filtration, filtration equipment, centrifugation, centrifugation equipment tubular bowl, disk-stack, basket centrifuges. Membrane based separations classification & characteristics of membrane separation, merits & demerits. Microfiltration, ultrafiltration, reverse osmosis, dialysis & electro dialysis, Membrane modules: Plate & Frame, hollow fiber, spiral wound, shell & tube.

Product Enrichment Operations: Aqueous two phase extraction process, Applications of aqueous two phase extraction, reversed micelles extraction principle, micelle structures, critical micelle concentration, limitations of reversed micelles, Protein solubilization precipitations of proteins with salts and organic solvents, kinetics of protein aggregation. Product Purification: Chromatographic separations: Classification of chromatographic techniques, Principles & practices of Gel Filtration, Ion Exchange and Affinity chromatography. Alternative separation methods and product polishing: Supercritical extraction: principles of SCE, Flow scheme of a simple SCE system.

Polishing: Crystallization, principles of crystallization and equipment, principles of drying and lyophilization, Freeze dryer. Formulation strategies: Importance of formulation, formulation of beakers yeast, Enzymes, formulation of pharmaceutical products.

Reference Books

- 4 Handbook of Downstream Processing, E Goldberg, 1996, Springer.

23CE2208R - GEOTECHNICAL ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CE2208R	GEOTECHNICAL ENGINEERING	GTE	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply and Describe soils and determine their physical characteristics of given soils..	3	PO1, PO6, PSO1
CO2	Apply the soils and determine their compaction characteristics and engineering characteristics of soil	3	PO1, PO6, PSO1
CO3	Apply the load carrying capacity of pile various soils and methods ,Determine the lateral earth pressure, stability of slopes and retaining walls.	3	PO1, PO6, PSO1
CO4	Apply the soil sample investigation and bearing capacity at various conditions and settlement, total stress and effective stress methods of analysis to evaluate slope stability. and detailing of well foundations	3	PO1, PO6, PSO1
CO5	Demonstration about Soil general and engineering properties using Geotechnical Engineering laboratory.	3	PO1, PO6, PSO1

Syllabus

Origin of Soils: Soil Origin, rock cycle. Phase Relations: Weight Relationships, Volume Relationships, Density and Unit Weight Relationships, Inter-relationships. Soil Classification: coarse grained soils, fine grained soils. IS soil classification. Compaction: variables in compaction, laboratory tests, field compaction, specification and control. Effective Stress: Effective stress Principle, effective stress, pore water pressure, and total stress variation with depth, vertical normal stress due to overburden, capillary effects in soils.

: Permeability of stratified soil deposits, Indirect methods, Factors affecting permeability; SEEPAGE: Laplace Equation, Estimation of seepage using flownet; INSITU STRESSES: Total stress, Pore Water Pressure, Effective Stress, seepage forces, quicksand condition; STRESSES IN A SOIL MASS: Vertical stress distribution using Boussinq equation, Fadum Chart and Newmarks chart, consolidation and compaction of soil ,shear strength of soil.

Pile Foundations: Use of piles, Types of piles, Construction, Selection of pile type, Types of foundations to suit subsoil conditions, Pile load capacity, Static formulae, Dynamic formulae, Load tests, on piles, Group action of piles, Load carrying capacity of pile groups, Negative skin friction, Piles subjected to uplift loads Well Foundations: Types of wells and caissons, components of well foundation, shapes of wells, depth of a well foundation, forces acting on a well foundation.

SUBSOIL INVESTIGATION: Depth of Exploration, Methods of Exploration, Borings for exploration, Depth of exploration, Methods of exploration, Borings for exploration, Field tests Plate load test, Penetration test. SHALLOW FOUNDATIONS: Types of foundations and choice of foundations, Bearing capacities, Terzaghs bearing capacity theory, influence of water table on bearing capacity, safe bearing capacity of soil using IS Code: SETTLEMENT OF FOUNDATIONS: Settlement of shallow foundation, Allowable bearing pressure of granular soils based on standard penetration test value.

Reference Books

23CE2209R - TRANSPORTATION ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CE2209R	TRANSPORTATION ENGINEERING	TPE	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Current road projects including highway project preparation	2	PO1, PO3, PSO2
CO2	Design highway cross section elements	3	PO1, PO3, PSO2
CO3	Design flexible and rigid pavement	3	PO1, PO3, PSO2
CO4	Analyse the components of traffic stream parameters	3	PO1, PO3, PSO2
CO5	Identify the suitable road construction materials following IRC codes	3	PO1, PO3, PSO2

Syllabus

Highway Network Planning: Different modes of transportation, role of highway transportation, classification, network patterns, planning surveys, preparation of plans, final report, master plan, evaluation by saturation system, Various road development plans, salient features, introduction to highway economics.

Highway Alignment And Geometric Design: Principles of highway alignment, requirements, controlling factors, engineering surveys, importance of geometric design, design controls and criteria, cross section elements, pavement surface characteristics, camber, carriageway, kerbs, road margins, formation, right of way, typical cross sections, sight distance, stopping sight distance, overtaking sight distance, sight distance at intersections, design of horizontal alignment, super elevation, transition curves, design of vertical alignment, gradients, vertical curves.

Pavement Materials and Mix Design: Types of pavement structures, functions of pavement component layers, materials used in pavements, basic soil properties relevant to pavement applications, properties of aggregate, blending of aggregates, tests on bitumen, grading of bitumen, bituminous mix design using Marshall method. **Design of Pavements:** Stresses in flexible pavements: layered system concepts, stress solution for one, two and three layered systems, fundamental design concepts; variables considered in pavement design: axle types, standard and legal axle loads, ESWL, EWLF, vehicle damage factor, ADT, AADT, growth factor, lane distribution factor, directional distribution factor, tyre pressure, contact pressure, design life

Traffic Engineering Principles: Traffic characteristics; components of traffic stream: flow- speed Density, measurement and analysis, q-k-v relationships, design hourly volume, concept of EPCU, capacity and level of service, parking studies and road safety

Reference Books

23CE3109 - ENVIRONMENTAL ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CE3109	ENVIRONMENTAL ENGINEERING	EVE	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To Understand the demand of water and water treatment process	2	PO1, PO3, PO7, PSO2
CO2	Understand the concept of Water distribution system by using Equivalent pipe method	2	PO1, PO3, PO7, PSO2
CO3	To Design of sewerage system and septic tank design and sewage treatment process	3	PO1, PO3, PO7, PSO2
CO4	To design concept in construction landfill and elaborate Solid Waste Management methods and Noise pollution effects	3	PO1, PO3, PO7, PSO2
CO5	Evaluate the Advanced waste water treatment and Industrial wastewater treatment	5	PO1, PO3, PO7, PSO2

Syllabus

Definition of water demand, Factors influencing water demand, Global and regional water demand trends, Types of Water Demand, Water Sources, Water Treatment Processes, Challenges in Water Treatment

Introduction to Water Distribution Systems, Definition and importance of water distribution systems, Components of a typical water distribution system , Factors influencing the design and operation of water distribution networks, Explanation of the Equivalent Pipe Method

Introduction to Sewerage Systems, Definition and significance of sewerage systems, Components of a sewerage system, Sewage Treatment Process, Design Considerations for Sewerage Systems,

Introduction to Construction Landfill, Design Overview of construction landfill, design principles, Factors influencing landfill, site selection, Engineering considerations in landfill construction, ,Solid Waste Management Methods in Construction, Types of solid waste generated in construction projects Best practices for waste minimization and recycling

Advanced Treatment Technologies, Membrane technologies: microfiltration, ultrafiltration, nanofiltration, and reverse osmosis, Adsorption techniques, Ion exchange, Design principles and operational considerations

Reference Books

- 1 Environmental Engineering: Fundamentals, Sustainability, Design, James R. Mihelcic, 2000, John Wiley & Sons.
- 2 Introduction to Environmental Engineering, Mackenzie L. Davis, 2006, McGraw-Hill Education.

- 4 Introduction to Environmental Engineering and Science, Gilbert M. Masters, Wendell P. Ela, 2014, Prentice Hall.

23CI2001 - ADAPTIVE SOFTWARE ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CI2001	ADAPTIVE SOFTWARE ENGINEERING	ASE	R	3	1	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate understanding of software development life cycle, associated process models, and reverse engineering techniques.	3	PO1, PO2, PO3, PSO2
CO2	Apply requirement modeling, Agile, and Extreme Programming methodologies.	3	PO2, PO3, PO4, PSO2
CO3	Analyze Agile models including Scrum, Kanban, and SAFe methodology, analyze the use of JIRA for project monitoring, and identify appropriate design patterns for project development.	4	PO2, PO3, PSO2
CO4	Analyze testing strategies and evaluate risk management factors	4	PO1, PO2, PO3, PSO2

Syllabus

Software and Software Engineering: Nature of software, software application domains, unique nature of web applications, software engineering, software process, product and process, software engineering practice, software myths.

Process Models: Generic process model, prescriptive process models, specialized process models, unified process, personal and team process models, product and process, Reverse Engineering

Requirements elicitation, documenting business requirements, defining user requirements, and related concepts such as requirement analysis techniques, stakeholder engagement, and requirement validation processes

Agile methodologies like Scrum and Kanban, SAFe for scaling agile, project monitoring with JIRA, and design patterns including architectural and model-driven approaches. Agile project management, scaling frameworks, tool usage for tracking progress, and advanced software design principles for robust architectures.

A strategic approach to software testing, strategic issues, test strategies for conventional software, Black-Box and White-Box testing, validation testing, system testing. RISK MANAGEMENT

Reference Books

23CS2104R - OPERATING SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2104R	OPERATING SYSTEMS	OS	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand subsystem components of the Kernel and apply the CPU Scheduling algorithms.	2	PO1, PO2
CO2	Apply the memory and process virtualization and Paging, apply Page Replacement Algorithms	3	PO2
CO3	Apply the Concurrency and apply different Lock Algorithms & Solve Synchronisation Problems	3	PO2, PO3, PSO1
CO4	Apply the knowledge of persistence concepts, Redundant disk arrays, File System Implementation, Inter-process Communication and Distributed Systems. Apply Disk Scheduling Algorithms.	3	PO2, PO3, PSO1
CO5	Evaluate Unix System Calls. Use C Programming Language to implement Operating System Concepts (Practicals)	5	PO2

Syllabus

"Basics: Operating System Functionalities, Types of Operating Systems, Process Virtualization: Processes, Process API code, Direct Execution, CPU Scheduling, Multi-level Feedback, Lottery Scheduling code, Multiprocessor Scheduling.

"Basics: Operating System Functionalities, Types of Operating Systems, Process Virtualization: Processes, Process API code, Direct Execution, CPU Scheduling, Multi-level Feedback, Lottery Scheduling code, Multiprocessor Scheduling.

"Concurrency: Concurrency and Threads code, Thread API, Common concurrency problems, Locks, Locked Data Structures, Condition Variables, Mutex, Semaphores, Monitors, Deadlock: Prevention, Detection and Avoidance.

Persistence: I/O Devices, Hard Disk Drives, Disk Scheduling Algorithms, Redundant Disk Arrays (RAID), Files and Directories, File System Implementation, Distributed systems, Data Integrity and Protection, Inter-process communication.

BASIC COMMAND WITH EXAMPLES, IMPLEMENTATION OF FILE OPERATIONS, PROCESS API, PROCESS SCHEDULING ALGORITHMS, MEMORY MANAGEMENT, MEMORY ALLOCATION TECHNIQUES, PAGE REPLACEMENT TECHNIQUES, DEADLOCKS, CONCURRENCY, DISK SCHEDULING ALGORITHMS, INTER PROCESS COMMUNICATION, FILE ORGANIZATION

23EC2105R - SIGNALS & COMMUNICATION SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC2105R	SIGNALS & COMMUNICATION SYSTEMS	SCS	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic Continuous Time Signals and Systems	1	PO1, PSO2
CO2	Solve the frequency domain challenges and applications to systems	2	PO2, PO3, PSO2
CO3	Interpret the principles of linear and angle modulation and demodulation techniques.	2	PO1, PSO2
CO4	Analyze the analog transmitters and receivers in the presence of noise	3	PO2, PO3, PSO2
CO5	Analyze the signal conditioning and communication methodologies	4	PO2, PO5, PSO2

Syllabus

Exploration of Basic Signals and Systems - Introduction to Signals: Classification of Signals, BasicElementary Signals, Sinusoidal and Exponential Signals, Singularity Functions, Introduction to Systems: Classification of Systems, Linear Time Invariant (LTI) System, Impulse Response, Convolution and Interconnections of LTI Systems.

Frequency Domain Analysis of Signals - Concepts of Orthogonality, BriefTreatment of Fourier Series, Fourier Transform (FT): Introduction to FT and Inverse FT, FT of Standard Signals, Periodic Signals and Properties of Fourier Transforms, LT and its Applications to Systems. Sampling of Analog Signals - Frequency Domain Analysis.

Basic Communication Theory - Need for Modulation,Frequency Translation Methods, Amplitude Modulation and Angle Modulation, Modulation Index, Spectrum ofAM and FM Signal, Transmission Bandwidth and Efficiency, Modulators and Demodulators of AM and FM: Envelope Detector, Balanced Modulator, Synchronous and Asynchronous Detectors, FM Demodulation Employing First Order PLL.

Radio Transmitters and Receivers - Classification of Radio Transmitters, AM andFM Transmitters, SSB Transmitters. Radio Receiver Types, AM Super Heterodyne Receivers, FM Receivers, Specifications of AM and FM Receivers,

Reference Books

- 4 Signals and Systems, A. Anand Kumar, 3/e 2015, PHI.
- 5 Analog communication systems, Sanjay Sharma, 2016 ed, Katson Books.

23EC2208R - DIGITAL COMMUNICATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC2208R	DIGITAL COMMUNICATION	DC	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand working of waveform coding techniques and their performance.	2	PO1, PO2, PSO2
CO2	Apply the knowledge of signals and system and evaluate the performance of digital communication system in the presence of noise.	3	PO1, PO2, PSO2
CO3	Analyze the generation and detection of different digital carrier modulation techniques.	4	PO2, PO3, PSO2
CO4	Evaluate the benefits of spread spectrum techniques and assess the performance of spread spectrum systems	4	PO2, PO3, PSO2
CO5	Analyze the different modulation techniques, pulse coding techniques and spread spectrum techniques in digital communication systems using simulation tools and SDR hardware via GNU Radio.	4	PO2, PO3, PSO2

Syllabus

"Baseband signals. Sampling process; Concepts on PAM, PWM and PPM. Quantization Process; Quantization Noise; Linear and Non-linear PCM codes, Noise Considerations in PCM Systems; PCM Line Speed, DPCM, Delta Modulation (DM) and Adaptive DM."

"Eye diagrams, Characterization of Bandlimited Channels, Optimum Receiver for the AWGN Channel, Detection of Baseband Signals in Noise, Matched filter, Other binary signal transmission and antipodal signals., The Power Spectrum of a Digital PAM Signal, Inter symbol Interference: System Design for Bandlimited Channels. Raised Cosine spectrum,"

"Concepts on measure of Information: Bits, Bit Rate, Baud, and M-ary Encoding Noiseless coding-Huffman coding, Channel capacity, Hartley Shannon law Source coding theorem, channel coding, ASK, PSK, FSK, QAM. Bandwidth Efficiency, Carrier and Clock Recovery, Probability of Error and Bit Error Rate, Error Performance."

"Pseudo-noise sequences, notion of spread spectrum, Direct Sequence Spread Spectrum (DSSS) with coherent BPSK, Signal space, dimensionality and processing gain, Probability error"

23EC3112R - DISCRETE TIME SIGNAL PROCESSING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC3112R	DISCRETE TIME SIGNAL PROCESSING	DTSP	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To interpret the transforms for discrete time signals.	3	PO1, PO2, PSO1
CO2	To implement Digital IIR Filters	4	PO1, PO2, PSO1
CO3	To implement Digital FIR Filters	4	PO1, PO2, PSO1
CO4	To Acquaint with Wavelets transforms and its applications.	4	PO1, PO2, PSO1
CO5	To implement various discrete signal operations and Filters	4	PO3

Syllabus

TIME DOMAIN AND FREQUENCY DOMAIN ANALYSIS

IIR FILTER DESIGN

FIRFILTER DESIGN

MULTIRATE SIGNAL PROCESSING CONCEPTS

Reference Books

- 1 Discrete-Time Signal Processing, A.V.Oppenheim, R.W. Schafer and J.R. Buck,, 8, Pearson, 2004.
- 2 Signal Processing for Digital Communications, G.J.Miao, 1, Artech House.
- 3 Introduction to Wavelets and Wavelet Transforms, C.S.Burrus, R.A.Gopinath, H.Guo, 3, Prentice hall,2003.
- 4 Digital Signal Processing Using MATLAB AND wavelets, Vinay K. Ingle, John G. Proakis, 2, PWS publishing.

23EE2205R - POWER ELECTRONICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EE2205R	POWER ELECTRONICS	PES	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Select appropriate switch for a given power converter	3	PO1, PO7, PSO2
CO2	Analyze the steady state performance of Basic DC-DC converters	4	PO3, PO4, PSO1
CO3	Analyze the performance of Basic Switch-Mode PWM Inverter	4	PO3, PO4, PSO1
CO4	Understand the operation of basic phase-controlled converters	4	PO1, PO5, PO7, PSO1
CO5	Test the basic power electronic converters by hardware realization and MATLAB software.	4	, PSO1

Syllabus

Power Semiconductor devices: Ideal Switch Characteristics, Power Diode, SCR, Brief overview of these devices with their characteristics, ratings and applications: IGBT, MOSFET, SiC and GaN power devices

DC-DC converters: Concept of Volt-sec balance, Charge-sec balance and Small Signal ripple approximation, Ideal analysis of non-isolated DC-DC converters: Buck, Boost, Buck- Boost, Boundary conditions between CCM and DCM.

INVERTERS: Voltage source inverters: single phase inverters-performance analysis and switch rating determination, three phase square wave inverters (120, 180 modes of operation), PWM inverters: Sinusoidal PWM uni-polar and bipolar schemes and their application to three phase inverters for speed control of AC drives.

Line frequency phase controlled converters: Concept of phase control, Single-Phase fully controlled converter with R, RL and RLE load (DC drives control), Three-Phase fully controlled Converter, Estimation of line current harmonics, Input Power Factor and distortion factor. AC voltage controllers: Single Phase AC Voltage controllers with R, RL Loads along with applications.

Reference Books

- 1 Power Electronics Converters Applications and Design", Ned Mohan, Undeland, Robbins, 3RD, John Wiley and sons Publications.
- 2 Power Electronics, circuits, devices and applications, M.H.Rashid, 3RD, Prentice Hall (India) Publications.
- 3 Power Electronics, M.D.Singh and Khanchandani, 2ND, TMH Publications.
- 4 Power Electronics, Dr.P.S Bimbra, 7TH, Khanna Publishers.

23EE2207R - CONTROL SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EE2207R	CONTROL SYSTEMS	CS	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Model physical systems and control system components	3	PO1, PO5, PSO1
CO2	Analyse the control systems under time domain and stability analysis.	4	PO1, PO5, PSO1
CO3	Analyse the control systems under frequency domain analysis.	4	PO2, PO5, PSO1
CO4	Analyse the state space models of LTI systems	4	PO2, PO5, PSO1
CO5	Test the principles of control systems using software & prototype models	4	PO1, PO5, PSO2

Syllabus

Control System Concepts- Control system terminology, examples of simple control systems, open loop and closed loop control systems, Types of control systems. Mathematical models of physical systems- Analogy with mechanical systems, Formulation of differential equations for electrical systems Transfer functions of open and closed loop systems, DC & AC servomotors, block diagram representation of control systems, signal flow graph, Masons gain formula

Time domain analysis: Standard test signals -step, ramp, parabolic and impulse, impulse response, characteristic equation of feedback systems, transient response of first order and second order systems to standard test signals, time domain specifications, steady state error and error constants, Introduction to P, PI, PID controllers. Stability analysis: Concept of stability and conditions for stability, Routh - Hurwitz criterion, dominant poles of transfer function. Root Locus Technique- The root locus concept, basic properties, magnitude and angle conditions, properties, and construction of the complex root loci.

Frequency response Analysis & Design: Introduction, frequency response specifications, correlation between time and frequency response, specifications, polar (Nyquist) plot, Bode plot, phase margin and gain margin.

State space analysis: Concepts of state, state variables, state vector, input vector, output vector; development of state models for simple systems, Concepts of controllability and observability.

Reference Books

- 1 Control System Engineering, J Nagrath & M Gopal, 5th, New Age International.
- 2 Automatic Control Systems, B C KUO, 10TH, Prentice Hall India.
- 3 Modern Control Engineering, K Ogata, 5TH, Prentice Hall India.
- 4 Control Systems Principles and Design, M GOPAL, 4TH, Tata Mc-Graw Hill.
- 5 Programmable Logic Controllers Principles and Applications, J W Werb & Ronald A Reis, 5TH, Pearson Publications.

23ME2106R - MECHANICS OF SOLIDS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME2106R	MECHANICS OF SOLIDS	MOS	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze stresses in members with axial loading or torsion?	4	PO1, PO2, PSO1
CO2	Analyze members with multi axial loading and lateral loading?	4	PO1, PO2, PSO1
CO3	Analyze deflections and stresses in beams?	4	PO1, PO2, PSO1
CO4	Analyse columns and pressure vessels?	4	PO1, PO2, PSO1
CO5	Apply the theoretical concepts to conduct various experiments of strength of materials practically and analyze the data?	4	PO5, PSO1

Syllabus

Introduction to Stress, Strain, Hooke's law, Stress-strain diagram, force-deformation relationship, compound bar, Thermal Stress, Torsion of Circular bar, Strain energy

Multi axial stresses and strains: Multi-axial Stress and Strain- Relationships, Stress and Strain Transformations and Principal Stresses, Graphical representation of Stress: Mohr's circle. Failure of Materials and Examples, Theories of Shearing Forces and Bending Moments: Shear Force and Bending Moment, Relationship Between Load, Shear Force and Bending Moment, Shear Force and Bending Moment Diagrams.?

Beam Deflection, Symmetry, Superposition, and Statically Indeterminate Beams. Beams: Normal Stresses in Beams, Cross Section Shapes of Beams, Shear Stresses in Rectangular Beams, Shear Stresses in The Webs of Beams with Flanges.?

Thin-walled Pressure Vessels: Understand hoop and longitudinal stresses. Simple problems for cylinders and shells. Columns: Buckling, Euler's formula, limitations, generalized buckling.

Reference Books

- 1 Mechanics of Materials , Gere & Goodno , 9th, Cengage Publishers .
- 2 Mechanics of Materials , RC Hibbeler , 10th, Pearson .
- 3 Mechanics of Materials , E.P. Popov , 4th, Prentice Hall Publications .
- 4 Strength of Materials , S. Ramamrutham , 5th, Dhanpat Rai Publications .
- 5 Strength of Materials , S.S. Rattan , 3rd, S.S. Rattan .

23ME2116 - FLUID MECHANICS & HYDRAULIC MACHINES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME2116	FLUID MECHANICS & HYDRAULIC MACHINES	FMHM	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of fluid properties and the laws of fluidstatics to estimate the total pressure, Centre of pressure and forces on submerged and floating bodies	3	PO1, PO2
CO2	Apply continuity, Euler and Bernoulli equations and estimate different flow measuring devices	3	PO1, PO2
CO3	Apply continuity, Euler and Bernoulli equations and estimate different flow measuring devices	4	PO1, PO2
CO4	Analyze the performance of hydraulic turbines and pumps using velocity triangles and model similitude.	4	PO1, PO2, PO3
CO5	Conduct experiments to verify and apply various fluid flow principles and performance evaluation of various hydraulic machines like turbines and pumps	4	PO1, PO2, PO3

Syllabus

Fluid Properties: Definition of fluid, properties of fluid -density, specific weight, specific gravity, viscosity, classification of fluids, surface tension and capillarity Vapour pressure. Fluid Statics

Fluid kinematics: Introduction, types of fluid flow, Discharge, Continuity equation,

Flow through pipes: Introduction, major and minor energy losses, friction coefficient in laminar and turbulent flow, Hagen-Poiseuille law

Hydraulic Machines-Turbines: Introduction, types and classification Pelton wheel, Francis turbine, Kaplan turbine

Definition of pump, classification, description and general principle of working; priming, work done and efficiency of a centrifugal pump, minimum starting speed, cavitation in centrifugal pumps, multi-stage pumps, problems on centrifugal pumps.

Reference Books

- 1 Fluid Mechanics and Hydraulic Machines, R.K. Bansal, 3, 2012, Mc Graw Hill.
- 2 Fluid Mechanics, S. K. Som and G. Biswas, 4, 2009, Tata McGraw Hill publications.
- 3 Fluid Mechanics, Yunus A. Cengel, 3, 2012, McGraw Hill publications.
- 4 Fluid Mechanics and Hydraulic Machines, D. S. Kumar, 3, 2020, Narosa Publishing House Private Limited..

23ME2208 - MANUFACTURING PROCESSES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME2208	MANUFACTURING PROCESSES	MP	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify the casting processes	3	PO1, PSO2
CO2	Select the appropriate welding processes	3	PO3, PSO1
CO3	Apply principles of cold/hot forming processes	3	PO3, PSO2
CO4	Utilize sheet metal processes and design sheet metal dies	3	PO3, PSO1
CO5	Fabricate the parts using manufacturing processes	3	PO2, PSO2

Syllabus

Overview of metal casting processes, key terms, sand mould making, patterns, allowances, design considerations, gating systems, special methods like shell moulding, investment casting, die casting, centrifugal casting, and inspection for casting defects.

Overview of joining processes, types of joints, and welding terminology. Includes gas welding, arc welding (GTAW, GMAW, SAW), resistance welding, thermit welding, electron beam, laser welding, friction welding, welding design considerations (heat input, heat flow), and common welding defects (undercut, incomplete fusion, porosity, slag inclusion, cracks, lamellar tearing, residual stresses)

Overview of metal forming processes, plastic deformation, and hot and cold forming. Includes principles of rolling and forging, rolling stand arrangement, roll force, power requirements, forging operations and design, defects and remedies. Also covers extrusion principles, hot and cold extrusion, extruding tubes, wire drawing, and rod and tube drawing.

Sheet Metal Forming Processes - Press Tool Operations, Shearing Action, Shearing Operations, Bending Sheet and Plate, Common Bending Operations, Stretch Forming, Deep Drawing, Spinning, Explosive and Magnetic-Pulse Forming Processes

Preparation of parts using casting and welding methods

Reference Books

- 1 Manufacturing Technology, P.N Rao, Third Edition, The McGraw-Hill Companies.
- 2 Manufacturing Engineering and Technology, Serope Kalpakjian Steven R Schmid, Fourth Edition, Pearson Education, Inc..
- 3 Processes and Materials of Manufacture, Lindberg, Third Edition, Prentice hall India (p) Ltd.
- 4 Mechanical Metallurgy, Dieter, Revised Edition, McGraw-Hill.

23OEBT01 - IPR AND PATENT LAWS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23OEBT01	IPR AND PATENT LAWS	IPR	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the the principles of copy rights in applying patents, trademarks, copyrights, and trade secrets	2	PO3
CO2	Apply the guidelines framed by GATT & WTO in patenting	3	
CO3	Apply the regulatory affairs in maintaining patenting rights	3	PO5, PO10
CO4	Apply the concepts of copy rights in drafting patents of various types.	3	PO1

Syllabus

Intellectual Property Rights; Patents and intellectual property rights (IPR): Definition, History of intellectual property; Types of intellectual property rights, copy rights, trade marks, geographical indication, Industrial design rights, patents. Sources of patent information, patent application procedures

Principles, Scope and Functions of GATT&WTO; GATT- Historical perspective, objectives and fundamental principles, impact on developing countries. WTO-Objectives, scope, functions, structure, status, membership and withdrawal, dispute settlement, impact on globalization, India tasks and challenges

Regulatory Affairs; Indian context-requirements and guidelines of GMP, understanding of Drugs and cosmetic act 1940 and rules 1945 with reference schedule M, U & Y. Related quality systems-objectives and guidelines of USFDA, WHO & ICH; Introduction to ISO series

Documentation and Protocols; Documentation: Types related to pharmaceuticals industry, protocols, harmonizing formulation development for global fillings, NDA, ANDA, CTD, Dealing with post approval changes-SUPAC, handling and maintenance including electronic documentation. self study topic: Case Studies on Patents and Case Studies on - Patents (Basmati rice, turmeric, Neem, and related medicinal plants and byproducts)

Reference Books

- 1 Patent Law and Policy: Cases and Materials, Robert Patrick Merges, John Fitzgerald Duffy, and Mark D. Lemley, 2021, Carolina Academic Press.
- 2 Intellectual Property Rights: Legal and Economic Challenges for Development, Carlos M. Correa, 2020, Oxford University Press .
- 3 Principles of Intellectual Property Law, Thomas G. Field Jr., 2021, New Hampshire.
- 4 Good manufacturing practices for Pharmaceuticals, Informa Healthcare, S.H. Willig, 2010, Academic Press.
- 5 IPR, Biosafety and Bioethics, Deepa Goel, Shomini Parashar, 2021, Pearson .

23OECE06M - EXPLORING OUR RESPONSES TO CLIMATE CHANGE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23OECE06M	EXPLORING OUR RESPONSES TO CLIMATE CHANGE	EORCC	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To understand the climate and weather	2	PO1, PO3, PO7, PSO2
CO2	To understand the climate change and its impact on environment	2	PO1, PO3, PO7, PSO2
CO3	To understand how to manage climate change	2	PO1, PO3, PO7, PSO2
CO4	To understand planning with climate change in mind.	2	PO1, PO3, PO7, PSO2

Syllabus

Formation, composition of Earth's atmosphere, mass and layering of atmosphere, electromagnetic radiation, solar and terrestrial radiation, variation with latitudes and seasons, Adiabatic temperature changes, air stability and instability, Ozone layer, Temperature measurements and controls, Dry and Wet adiabatic lapse rate, inversion of temperature. climate change terms definition, Basics of Climate science, Global warming and climate change

Climate change impacts on water, Climate change impacts on agriculture and health, Climate change impacts on forests and transportation, Climate change impacts on energy and socioeconomic issues, methods of evaluation and/or assessment

Climate change policy of countries, Uncertainty and climate change policy, Policy implications, Cost-benefit analysis in the context of climate change, Policy makers: Speculators, Analysis and decision support tools in mitigation of Climate change.

Concepts and strategies for climate change adaptation, Adaptive Capacity, Mitigation strategies and options for various sectors, Emission trends and mitigation policies, Renewable and alternative energy technologies

Reference Books

- 1 Climate Change: What it means for us, our children and our grandchildren, Joseph F.C. DiMento and Pamela Doughman, 2006, MIT Press.
- 2 Climate and Global Environmental Change, L.D. Danny Harvey, 2008, Prentice Hall publication.
- 3 Technologies, policies and measures for mitigating climate change, IPCC, 2010, IPCC.
- 4 Responding to the Climate Threat Essays on Humanity's Greatest Challenge, Gary Yohe, Henry Jacoby, Richard Richels, Benjamin Santer, 2023, Springer.

23OEDT01 - INNOVATIVE PRODUCT DEVELOPMENT FOR ENTREPRENEURS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23OEDT01	INNOVATIVE PRODUCT DEVELOPMENT FOR ENTREPRENEURS	IPDFE	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze market needs and conduct customer discovery to identify and validate opportunities for innovative product development.	4	PO2, PO11, PSO1
CO2	Develop and prototype innovative product concepts using design thinking, user-centered design, and rapid prototyping techniques.	3	PO2, PO11, PSO1
CO3	Apply lean startup and agile development methodologies to build, test, and iterate a minimum viable product (MVP) based on user feedback and validated learning.	3	PO2, PO11, PSO1
CO4	Design and execute a comprehensive go-to-market strategy, including launch planning, marketing, and post-launch evaluation, to successfully bring a new product to market.	6	PO2, PO11, PSO1

Syllabus

Introduction to Innovative Product Development Principles of Product Development: Introduction; Importance of innovation; Stages of product development; Market Research: Identifying market needs; Customer discovery; Competitive analysis; Idea Generation: Brainstorming techniques; Creativity and innovation tools; Evaluating and selecting ideas; Feasibility Analysis: Technical feasibility; Market feasibility; Financial feasibility

Concept Development and Prototyping Concept Development: Creating product concepts; Design thinking; User-centered design; Prototyping Techniques: Low-fidelity vs. high-fidelity prototypes; Tools and materials for prototyping; Rapid prototyping methods; User Testing: Planning and conducting user tests; Gathering and analyzing feedback; Iterative design process; Refinement and Iteration: Improving product designs; Addressing user feedback; Preparing for final prototype

Lean Product Development Lean Startup Methodology: Principles of lean startup; Building a minimum viable product (MVP); Validated learning; Agile Development: Agile principles and practices; Scrum and Kanban methodologies; Managing product development cycles; Product Validation: Market testing; Metrics and key performance indicators (KPIs); Pivoting based on validation results; Scaling the Product: Preparing for scaling; Managing growth; Ensuring product quality and consistency

Product Launch and Go-to-Market Strategy Product Launch Planning: Launch strategy; Marketing and promotional activities; Building a launch team; Go-to-Market Strategy: Identifying target markets; Positioning and branding; Sales and distribution channels; Post-Launch Evaluation: Analyzing launch success; Gathering post-launch feedback; Continuous improvement; Case Studies: Successful product launches; Lessons learned from failures; Best practices in product development

Reference Books

- 1 Product Design and Development, Karl T. Ulrich, Steven D. Eppinger, 7th (2020), McGraw-Hill Education.
- 2 Inspired: How To Create Products Customers Love, Marty Cagan, 2nd (2018), Wiley.
- 3 Hooked: How to Build Habit-Forming Products, Nir Eyal, Ryan Hoover, 1st (2014), Portfolio.
- 4 Designing for Growth: A Design Thinking Tool Kit for Managers, Jeanne Liedtka, Tim Ogilvie, 1st (2011), Columbia Business School Publishing.

23OEDT02 - STRATEGIC FINANCIAL AND MARKETING PLANNING FOR ENTREPRENEURS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23OEDT02	STRATEGIC FINANCIAL AND MARKETING PLANNING FOR ENTREPRENEURS	SFMPE	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the financial planning essentials for startups and small businesses	2	PO3, PSO1
CO2	Apply the concept to create and implement effective marketing strategies tailored to entrepreneurial contexts.	3	PO3, PSO1
CO3	Analyze the financial and marketing plans to support business objectives	4	PO4, PSO2
CO4	Analyze the strategic decision-making processes to enhance business performance.	4	PO5, PSO2

Syllabus

Introduction to Financial Planning: Importance of financial planning in entrepreneurship, Key components of financial planning. Budgeting and Forecasting: Developing budgets for startups: Revenue forecasting and expense management, Financial Statements and Analysis, Understanding balance sheets, income statements, and cash flow statements, Financial ratios and performance metrics Funding and Capital Structure: Types of funding (bootstrapping, loans, venture capital), Capital structure and cost of capital Financial Risk Management: Identifying financial risks, Strategies for mitigating financial risks

Introduction to Marketing Planning: Importance of marketing for startups, Elements of a marketing plan, Market Research and Analysis, Identifying market opportunities, Competitive analysis and market segmentation, Value Proposition and Branding, Developing a unique value proposition, Building a brand identity and positioning, Marketing Channels and Strategies, Digital marketing strategies (SEO, social media, content marketing), Traditional marketing strategies (PR, events, direct marketing), Sales Strategy and Customer Relationship Management, Developing a sales strategy, Building and maintaining customer relationships

Alignment of Financial and Marketing Goals: Synchronizing financial objectives with marketing strategies, Budget allocation for marketing activities, Cost Benefit Analysis of Marketing Strategies, Evaluating the financial impact of marketing campaigns, ROI analysis and marketing performance metrics, Pricing Strategies and Financial Impact, Developing pricing models based on financial goals, Impact of pricing on revenue and profitability, Resource Allocation and Scaling, Effective resource management for scaling marketing efforts, Balancing marketing expenditures with financial constraints

Strategic Planning and Decision Making: Strategic planning processes, Decision-making frameworks for entrepreneurs. Scenario Planning and Contingency Strategies, Developing scenario plans for uncertain market conditions, Contingency planning for financial and marketing strategies. Performance Monitoring and Adaptation, KPIs for financial and marketing performance, Adaptive strategies based on performance metrics. Pitching to Investors and Stakeholders, Developing a compelling pitch, Communicating financial and marketing plans to investors

Reference Books

- 1 Financial Intelligence for Entrepreneurs: What You Really Need to Know About the Numbers, Karen Berman, Joe Knight, and John Case, Revised Edition (2013), Harvard Business Review Press.
- 2 Disciplined Entrepreneurship: 24 Steps to a Successful Startup, Bill Aulet, 1st Edition (2013), Wiley.
- 3 HBR Guide to Finance Basics for Managers, Karen Berman, 2nd Edition (2019), Harvard Business Review Press.
- 4 Entrepreneurial Marketing: A Practical Managerial Approach, Zubin Sethna and Rosalind Jones, 2nd Edition (2019), SAGE Publications.

23OEDT03 - LEADERSHIP IN ENTREPRENEURIAL VENTURES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23OEDT03	LEADERSHIP IN ENTREPRENEURIAL VENTURES	LEV	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the key leadership principles and traits required for entrepreneurial success.	2	PO2, PO10
CO2	Analyze various leadership styles and their impact on entrepreneurial ventures.	4	PO2, PO9
CO3	Develop strategies for building and leading high-performance entrepreneurial teams.	5	PO3, PO9
CO4	Apply leadership skills to drive innovation and strategic growth in entrepreneurial ventures.	6	PO3, PO10

Syllabus

Foundations of Entrepreneurial Leadership: Understanding entrepreneurial leadership Key traits and characteristics of successful leaders Ethical decision-making and integrity in leadership

Leadership Styles and Entrepreneurial Impact: Overview of leadership styles: transformational, transactional, servant Case studies of leadership styles in entrepreneurial settings Assessing leadership effectiveness in different business scenarios

Building and Leading Entrepreneurial Teams: Team dynamics and conflict resolution Recruitment and talent management in startups Motivating and retaining high-performance teams

Leading Innovation and Strategic Growth: Encouraging innovation and creativity within the organization Change management and adaptability in entrepreneurial ventures Strategic planning and execution for business growth

Reference Books

- 1 The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses, Eric Ries, 1st, Crown Business.
- 2 Leaders Eat Last: Why Some Teams Pull Together and Others Don't, Simon Sinek, 1st, Penguin.
- 3 The Innovator's Dilemma: When New Technologies Cause Great Firms to Fail, Clayton M. Christensen, 1st, Harvard Business Review Press.
- 4 Drive: The Surprising Truth About What Motivates Us, Daniel H. Pink, 1st, Riverhead Books.

23OEEE03 - ELECTRICAL POWER ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23OEEE03	ELECTRICAL POWER ENGINEERING	EPE	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand working of various generating stations and economical aspects of generation	2	PO1
CO2	Apply the kirchhoffs laws to calculate the electrical parameters in the given networks	3	PO1, PO2, PO5
CO3	Apply the faraday's laws for the construction and performance analysis of different types of electrical machines	3	PO1, PO3
CO4	Apply energy conservation opportunities for various electrical appliances	3	PO1, PO7

Syllabus

Generating stations: Organization of power sector in India, Layout & Operation of Thermal, Hydro, Nuclear and combined cycle power stations. Renewable Energy sources- Solar PV, solar thermal, Wind Power Plant, OTEC, Biomass power plants and Fuel Cells.

Basic Concepts of passive elements of R, L, C and their VI relations, Ohms law, Sources dependent and independent, Kirchhoffs laws, Network reduction techniques series, parallel, series and parallel, Concepts of AC quantities Phase, power factor, real and active powers, power factor improving methods

Electrical Machines: Faradays laws, construction and working of DC machines, construction and working of Induction machines, construction and working of special machines stepper motors, BLDC motors. Advantages and Disadvantages, applications. Speed control techniques

Energy Conservation: General Aspects of Energy Auditing: Introduction - Types of Energy Auditing, Benefits of Energy Audit, Methodology for Energy Audit , Energy Audit Report format, Energy conservation opportunities for domestic consumers, energy conservation opportunities for lighting systems, cooling and heating systems. Concept of green and smart buildings. Government initiatives

Reference Books

23OEEE05M - SELF-DRIVING CARS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23OEEE05M	SELF-DRIVING CARS	SDC	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic architecture of self-driving car	2	PO1, PO2, PO3, PSO1
CO2	Apply the deep learning technique in self-driving car	3	PO2, PO3, PO4, PSO1
CO3	Demonstrate the various Approaches to sensing fusion and localization	3	PO2, PO3, PO4, PSO1
CO4	Analyze planning, control and system integration concept in autonomous vehicle	4	PO2, PO3, PO4, PSO1
CO5	Analyze the morkov localization model process	4	PO2, PO3, PO4, PSO1

Syllabus

Introduction: Introduction to self-driving car- Taxonomy of Driving- Requirements for Perception- Driving Decisions and Actions- Sensors and Computing Hardware- Hardware Configuration Design- Software Architecture- Environment Representation- Safety Assurance for Self-Driving Vehicles- Industry Methods for Safety Assurance and Testing- Safety Frameworks for Self-Driving.

Computer Vision: Computer Vision Fundamentals- Detect Lane Lines- Advanced Computer Vision- Advanced Lane Detection- Deep Learning: Neural Networks- TensorFlow- Deep Neural Networks- Convolutional Neural Networks- Traffic Sign Classifier-Keras- Transfer Learning.

Sensor Fusion: Sensors - Kalman Filters- Geometry and Trigonometry- Extended Kalman Filters. Localization: Introduction to Localization- Markov Localization- Motion Models- Particle Filter- Implementation of a Particle Filter.

Planning: Search- Prediction- Behavior Planning- Trajectory Generation- Highway Driving. Control: Control- PID Control. System Integration: Autonomous Vehicle Architecture- Introduction to Robot Operating System- Packages & Catkin Workspaces- Writing ROS Nodes- Program an Autonomous Vehicle.

Introduction of localization, Markov localization, motion models, particle filters, implementation of particle filters, Automotive vehicle architecture, PID models

Reference Books

- 1 Self-Driving Cars: The New Way Forward, Michael Fallon, 1st Edition, Twenty-First Century Books.
- 2 Self-Driving Cars, Lauren Newman, 1st Edition, Cherry Lake Publishing.
- 3 Robot Motion Planning and Control, Jean-Claude Latombe, 1st Edition, Springer.
- 4 Introduction to Autonomous Robots: Mechanisms, Sensors, Actuators, and Algorithms, Nikolaus Correll, Bradley Hayes, and David Coleman, 2nd Edition, CreateSpace Independent Publishing Platform.
- 5 Self-Driving Cars: Key Challenges and Future Directions, Steven M. Lavalle, 1st Edition, River Publishers.

23OEME01 - ROBOTICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23OEME01	ROBOTICS	RBT	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the anatomy of existing robotic systems and their performance specifications, end effectors, etc	2	PO1, PO2
CO2	Apply appropriate sensors, actuators for real time applications of Robotic Systems	3	PO1, PO2
CO3	Apply the Denavit Hartenberg procedure to solve forward and inverse kinematics of robots	3	PO1, PO2
CO4	Comprehensive Identification of suitable Robotic systems for various applications and Classification of Robot Languages	4	PO1, PO2

Syllabus

Introduction to Robotics, Major components of a Robot, Robotic-like devices, Classification of Robots Classification by coordinate system and by control method, Specifications of Robots, Fixed versus flexible automation, economic analysis. ROBOTEND EFFECTORS Introduction, End effectors, interfacing, types of End effectors, grippers and tools, considerations in the selection and design of remote cantered devices.

ROBOTIC SENSORY DEVICES Objective, Non-Optical position sensors Potentiometers, Synchros, inductosyn, optical position sensors opto interrupters, Optical encoders absolute and incremental. PROXIMITYSENSORS Contact type, non contact type Reflected light ,scanning laser sensors. TOUCH and SLIP SENSORS Touch sensors proximity Rod and Photo detector sensors, Slip sensors Forced oscillation slip sensor, interrupted type slip sensors, force and torque sensors.

TRANSFORMATIONS AND KINEMATICS Objectives, homogeneous coordinates, basic transformation operations, forward solution Denavit Hartenberg procedure, Simple problems involving planar manipulators, inverse or backward solution problems involved, techniques. Introduction to Trajectory Planning, the manipulator jacobian.

ROBOT APPLICATIONS IndustrialApplications Material Transfer, material handling, Loading and unloading, processing, spot and continuous arc welding, spraypainting, grinding, Assembly and Inspection and Non-Industrial Applications. ROBOT LANGUAGES Introduction, AL, AML,VAL, RAIL

Reference Books

- 1 Robotics Engineering: An Integrated Approach, Richard D. Klafter, 1, 1989, Prentice-Hall.

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23OEME03M	OPERATIONS RESEARCH	ORS	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply various methods to find optimum solutions to Linear Programming Problems	3	PO1, PO2
CO2	Apply various methods to find optimal solutions for the problems in the field of Transportation and Assignment Problems	3	PO1, PO2
CO3	Apply various methods to find solutions to Game theory, Dynamic Programming, Queuing Theory, Inventory Control	3	PO1, PO2
CO4	Apply the concept of PERT/CPM for solving various projects	3	PO1, PO2

Syllabus

Introduction, Modeling in Operations Research, Phases of OR study, Scope and application of OR. Linear Programming and its Applications: Linear Programming Problem Graphical solution of LP Problem. Simplex method, Big M method, two phase method, multiple solution, infeasible solution, unbounded solution, degeneracy, Dual Simplex method

Transportation: Introduction Methods of basic feasible solution, Optimality test, Degeneracy in transportation problem, unbalanced transportation Problem, Assignment Problems: Hungarian method for assignment problem, Traveling salesman problem.

Theory of Games: Introduction, to solve the rectangular two-person zero sum games, solution of rectangular games in terms of mixed strategies, solution of 2x2 games without saddle point, solution of a two person zero sum 2Xn game, Graphical method for 2Xn and nX2 games. Inventory Control: Introduction EOQ with uniform rate of demand, Economic lot size with finite rate of replenishment, Quantity discounts, Deterministic model with Shortages, ABC analysis of inventory.. Queuing Theory: Introduction, single channel, Poisson arrival, exponential service time with finite population and infinite population, And Application to Inventory Control.

Project Management by PERT/CPM: Introduction, simple network techniques, construction rules of drawing, Fulkerson rule, Critical path method (CPM) floats, critical path, project duration, PERT: Introduction, different Time estimates, expected time, variance, expected project duration and probability of completion. Crashing: Introduction, crashing of network problem

23CC3005 - ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING USING PYTHON [INDUSTRIAL AUTOMATION]-L1 (TESSOLVE) (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3005	ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING USING PYTHON [INDUSTRIAL AUTOMATION]-L1 (TESSOLVE)	AIML1	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and Apply fundamentals and types of AI, as well as applications, advantages.	3	PO1, PO2, PO5, PSO1
CO2	understand and Apply the principles and applications of classification and clustering techniques in machine learning .Gain insights into SVM and KNN algorithms,	4	PO1, PO2, PO5, PSO1

Syllabus

What is AI, Types of AI, Applications of AI, Advantages and disadvantages of AI Introduction to ML, Types of ML algorithms : Supervised learning - Unsupervised learning - Reinforcement learning

Data collection , Data preprocessing, Choosing the learning algorithms, Training the model, Evaluating the model, Predictions. Introduction to regression, Types of regression : Linear regression (Simple linear regression & Multiple linear regression) - Logistic regression Overfitting & Underfitting in Machine Learning

Introduction to classification, Support vector Machine (SVM), Types of SVM : linear SVM & non-linear SVM, K-nearest neighbour (KNN), Working of KNN, Advantages and disadvantages of KNN, Applications of KNN, Confusion matrix : Precision - Accuracy - Recall - F1 score

Introduction to clustering, Types of clustering : Hierarchical clustering (Agglomerative & divisive clustering) - Partitioning clustering (K-means clustering) Curse of dimensionality, Advantages and disadvantages of dimensionality reduction, Principle Component Analysis (PCA)

23CC3006 - ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING USING PYTHON [INDUSTRIAL AUTOMATION]-L2 (TESSOLVE) (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3006	ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING USING PYTHON [INDUSTRIAL AUTOMATION]-L2 (TESSOLVE)	AIML2	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Introduction to AI and ML in Industrial Automation	2	PO3
CO2	Machine Learning Fundamentals	3	PO5
CO3	Data Handling and Preprocessing	3	PO9
CO4	AI and ML in Industrial Automation	4	, PSO2

Syllabus

Overview of AI and ML Definitions and key concepts Historical context and evolution Applications in industrial automation Python Programming for AI and ML Introduction to Python Python libraries for AI and ML: NumPy, Pandas, Matplotlib Basic programming concepts and data structures Data Handling and Preprocessing Data collection methods in industrial settings Data cleaning and preprocessing techniques Feature selection and engineering

Supervised Learning Regression algorithms (Linear, Polynomial, etc.) Classification algorithms (K-Nearest Neighbors, Decision Trees, Random Forests, etc.) Model evaluation and validation techniques (Cross-validation, Metrics like accuracy, precision, recall, F1 score) Unsupervised Learning Clustering algorithms (K-Means, Hierarchical clustering, DBSCAN) Dimensionality reduction techniques (PCA, t-SNE) Anomaly detection in industrial automation Practical Applications Case studies of ML in industrial automation Hands-on projects and assignments using real-world industrial data

Neural Networks and Deep Learning Basics of neural networks Deep learning architectures (CNNs, RNNs) Training deep neural networks Natural Language Processing (NLP) Text preprocessing and representation NLP techniques and applications in industrial automation (e.g., predictive maintenance from text data) Reinforcement Learning Fundamentals of reinforcement learning Applications in robotics and automation Implementing reinforcement learning algorithms in Python

Integration with Industrial Systems IoT and AI: Integrating ML models with IoT devices Real-time data processing and decision making Predictive Maintenance and Anomaly Detection Predictive maintenance models Implementing and evaluating anomaly detection systems Project Work and Case Studies Capstone project: Building an end-to-end AI/ML solution for an industrial automation problem Detailed case studies from the industry Presentation and discussion of project outcomes

23CC3010 - AWS CERTIFIED CLOUD PRACTITIONER (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3010	AWS CERTIFIED CLOUD PRACTITIONER	AWS-CCP	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply virtual sessions of computing resources (servers, storage, networks) to maximize efficiency and utilization.	3	PO1, PO5
CO2	Analyze the optimization principles to the environment for cost efficiency, performance, security and reliability	4	PO1, PSO2

Syllabus

Cloud Concepts: Cloud definitions, Cloud service models, Cloud Deployment models, Benefits and Characteristics of the Cloud, Economies of scale, Global infrastructure, Features of cloud, Cloud Architected Framework, Pillars of the cloud Architected Framework, Cloud Adoption Framework, Cloud adoption strategies, Cloud migration strategies, Cloud economics. Cloud Technology and Services: Different ways to access cloud services, Compute services, Database services Network and content delivery services, Storage services, Computation and data analytics services, Application integration services, Customer engagement services, Developer tool services, End-user computing services.

Security and Compliance: Shared responsibility model, security features and services, Cloud security, governance, and compliance, Benefits of cloud security, Identity and access management, authentication and authorization services in Cloud, application, and network security. Billing, Pricing, and Support: Pricing models, Resources for billing, budget, and cost management, Cloud Technical Resources and Support options, Pricing options for various storage and compute options and tiers.

23CC3011 - AWS CERTIFIED DEVELOPER - ASSOCIATE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3011	AWS CERTIFIED DEVELOPER - ASSOCIATE	AWS-CDA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding AWS global infrastructure, including its regions, availability zones, and edge locations, and identifying how edge locations bring AWS services closer to end-users for ultra-low latency, is crucial for optimizing the performance and reliability of cloud-based applications.	2	PO1, PO2, PO3, PO4
CO2	Applying knowledge of AWS services such as EC2 instances, S3 buckets, and RDS databases through the use of AWS SDKs and APIs for programmatically interacting with AWS services enhances proficiency in cloud infrastructure management and automation.	3	PO1, PO2, PO3, PO4, PSO1

Syllabus

Explain the AWS global infrastructure: Describe the AWS regions, availability zones, and edge locations. Summarize the key features and benefits of AWS services. Interpret basic AWS billing and pricing models, Recognize AWS terminology and services: Identify and recall AWS services such as EC2, S3, Lambda, etc. Recall basic concepts of cloud computing and AWS architecture..

Implement AWS services: Use AWS SDKs, APIs, and the AWS Management Console to deploy and manage applications. Configure and deploy applications on AWS: Set up EC2 instances, S3 buckets, and RDS databases. Apply security best practices: Implement IAM roles and policies, secure AWS environments, and manage access control., Distinguish between different AWS storage options: Evaluate when to use S3, EBS, or Glacier. Analyze and optimize performance: Use CloudWatch and other tools to monitor and improve application performance on AWS. Diagnose and troubleshoot issues: Identify and resolve problems in AWS-deployed applications.

23CC3012 - AWS CERTIFIED DEVOPS ENGINEER - PROFESSIONAL (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3012	AWS CERTIFIED DEVOPS ENGINEER - PROFESSIONAL	AWS-CDEP	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic concepts of Networks, Cloud and DevOps Identify the Need of DevOps in SDLC and Cloud Infrastructure in DevOps, Apply Version Control System to track the latest version of Software	3	PO4, PO5, PSO2
CO2	Analyze monitor and log AWS resources and applications using AWS CloudWatch, CloudWatch Logs, CloudWatch Events, AWS X-Ray, and AWS CloudTrail.	4	PO4, PO5, PSO2

Syllabus

SDLC Automation Configuration Management and Infrastructure as Code Monitoring and Logging Policies and Standards Automation Incident and Event Response High Availability, Fault Tolerance, and Disaster Recovery

AWS SDKs and Tools - Developer Tools: AWS CodeArtifact Lab - Configuration Management and IaC: CloudFormation Lab - Management and Governance: AWS Auto Scaling, AWS Control Tower, AWS LicenseManager, AWS OpsWorks, AWS Organizations, AWS Personal Health Dashboard, AWS Service Catalog, Cloud Formation (nested stack) - Management and Governance: AWS Config Lab - Configuration Management and IaC: AWS Trusted Advisor Lab - Security, Identity, and Compliance: AWS CertificateManager (ACM), AWS CloudHSM, AWS Cognito, Amazon Detective, Amazon GuardDuty, AWS Identity and Access Management (IAM)

23CC3013 - AWS CERTIFIED MACHINE LEARNING - SPECIALTY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3013	AWS CERTIFIED MACHINE LEARNING - SPECIALTY	AWS-CML	R	0	0	0	8	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply data engineering principles and conduct exploratory data analysis using AWS services for effective machine learning model development.	3	PO1, PO5, PO7, PSO2
CO2	Analyze end-to-end ML solutions on AWS in production environments using SageMaker.	4	PO4, PO5, PO6, PSO1

Syllabus

Data Engineering - Create data repositories for ML, Identify and implement a data ingestion solution, Identify and implement a data transformation solution. Exploratory Data Analysis- prepare data for modeling, Perform feature engineering, Analyze and visualize data for ML

Modeling - Select the appropriate model(s) for a given ML problem and evaluate the models. Machine Learning Implementation and Operations - Build ML solutions for performance, availability, scalability, resiliency, and fault tolerance, implement the appropriate ML services and features for a given problem, Apply basic AWS security practices to ML solutions, Deploy and operationalize ML solutions

Reference Books

- 1 Practical Machine Learning with AWS: Process, Build, Deploy, and Productionize Your Models Using AWS, Vishal Chugh and Rich Foreman, 2020, Packt Publishing.
- 2 Hands-On Machine Learning on AWS: Implementing Machine Learning Models Using Amazon SageMaker and Other AWS Services, Chirag Thumar, Amir Ziai, 2020, Apress.
- 3 AWS Certified Machine Learning Study Guide: Specialty , Shreyas Subramanian, Stefan Natsu, 2021, Sybex.
- 4 Mastering Machine Learning on AWS, Saket S.R. Mengle, 2019, Packt Publishing.

23CC3014 - AWS CERTIFIED SOLUTIONS ARCHITECT - ASSOCIATE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3014	AWS CERTIFIED SOLUTIONS ARCHITECT - ASSOCIATE	AWS-CSA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify appropriate methods to secure, build, deploy, and monitor scalable cloud applications on the AWS platform.	3	PO2, PO3, PO5, PSO1
CO2	Make use of AWS Services to deploy and manage storage, compute, database, networking, and analytics.	3	PO2, PO3, PO5, PSO1

Syllabus

VPC, AWS Shield, AWS WAF, IAM Identity Center, AWS Secrets Manager ,Amazon API Gateway, REST API ,Amazon API Gateway, REST API, content delivery network, Application Load Balancer, Amazon Elastic Container Service,Elastic Kubernetes Service, Step Functions, Route 53,AWS X-Ray

Amazon S3, Amazon Elastic File System [Amazon EFS], Amazon Elastic Block Store [Amazon EBS],AWS Batch, Amazon EMR, Fargate, Amazon Elasti Cache,capacity units, instance types, Provisioned IOPS,MySQL compared with PostgreSQL,Amazon Aurora, Amazon DynamoDB,Amazon CloudFront, AWS Global Accelerator,AWS VPN, Direct Connect, AWS PrivateLink,Amazon Athena, AWS Lake Formation, Amazon QuickSight,AWS Glue,Amazon Kinesis

Reference Books

- 3 AWS Certified Solutions Architect Associate Training Notes 2021: Fast-track your exam success with the ultimate cheat sheet for the SAA-C02 exam, Neal Davis, 2024, Independently published.
- 4 AWS Certified Solutions Architect - Associate Exam Practice Questions: 1000+ Questions with Detailed Explanations, Ryan Kroonenburg, Ashley Kroonenburg, 2024, Independently published.
- 5 AWS Certified Solutions Architect Associate Practice Tests: SAA-C02 Exam, Brett McLaughlin, 2022, Sybex.

23CC3015 - AWS CERTIFIED SYSOPS ADMINISTRATOR - ASSOCIATE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3015	AWS CERTIFIED SYSOPS ADMINISTRATOR - ASSOCIATE	AWS-CSYA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyse the core AWS services and their roles within the SysOps Administrator.	4	PO1, PO2, PO5, PSO2
CO2	Evaluate the proficiency in managing compute services such as EC2 instances, Auto Scaling, and Load Balancers.	5	PO1, PO2, PO5, PSO2

Syllabus

Overview of AWS services and their roles in cloud infrastructure-Understanding the SysOps Administrator's responsibilities in managing AWS resources-Introduction to AWS Management Console and CLI

Deploying and managing EC2 instances-Auto Scaling configurations for maintaining application availability and scalability-Load Balancing strategies and implementation using Elastic Load Balancer (ELB)

Reference Books

- 2 Cloud Computing: Concepts, Technology & Architecture, Thomas Erl, Ricardo Puttini, and Zaigham Mahmood, 2013, Pearson.
- 3 AWS Certified SysOps Administrator - Associate Guide , Vipul Tankaria,Marko Sluga, 2019, Packt Publishing .
- 4 AWS Cookbook: Recipes for Success on AWS (Grayscale Indian Edition) , John Culkin, Mike Zazon, 2021, Shroff/O'Reilly.

23CC3017 - CERTIFIED ETHICAL HACKER (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3017	CERTIFIED ETHICAL HACKER	CEH	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify the vulnerability in devices and network.	2	PO1, PO2, PO4, PO5
CO2	Analysis the attack and test in the network	3	PO1, PO2, PO4, PO5, PSO2

Syllabus

Introduction to Ethical Hacking, Foot Printing and Reconnaissance, Scanning Networks, Enumeration, Vulnerability Analysis, System Hacking, Malware Threats, Sniffing, Social Engineering, Denial-of-Service.

Session Hijacking, Evading IDS, Firewalls, and Honeypots, Hacking Web Servers, Hacking Web Applications, SQL Injection, Hacking Wireless Networks, Hacking Mobile Platforms, IoT and OT Hacking, Cloud Computing, Cryptography.

Reference Books

- 1 EC Council CEH v12, EC Council, 12, EC Council.
- 2 Hacking: A Beginners Guide to Computer Hacking, Basic Security, And Penetration Testing, John Slavio, 1, Amazon.
- 3 Hacking: The Art Of Exploitation, Jon Erickson , 1, No starch press.
- 4 Metasploit: The Penetration Testers Guide, David Kennedy, Jim O'Gorman, Devon Kearns, and Mati Aharoni, 1, No starch press.

23CC3018 - CERTIFIED HYPERLEDGER FABRIC DEVELOPER (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3018	CERTIFIED HYPERLEDGER FABRIC DEVELOPER	CHFD	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop and deploy smart contracts using Hyperledger Fabric to automate business processes and enforce contractual agreements within a blockchain network. Additionally, design and implement Hyperledger Fabric network architectures, including the configuration of peers, orderers, channels, and chaincodes, to support decentralized applications.	4	PO1, PO2, PO3, PSO1
CO2	Integrate Hyperledger Fabric with existing systems and utilize Fabric SDKs to create and manage blockchain transactions, ensuring seamless interaction between blockchain components and traditional databases. Furthermore, analyze and troubleshoot Hyperledger Fabric network performance and security issues, employing best practices for maintaining network integrity and optimizing transaction throughput.	4	PO1, PO2, PO3, PSO1

Syllabus

Foundations of Blockchain and Hyperledger Fabric 1. Introduction to Blockchain Technology Basics of Blockchain Distributed Ledger Technology Types of Blockchains: Public vs. Private Blockchain Use Cases and Applications 2. Overview of Hyperledger Frameworks Introduction to Hyperledger Project Hyperledger Frameworks and Tools Comparing Hyperledger Fabric with Other Frameworks 3. Understanding Hyperledger Fabric Architecture Hyperledger Fabric Components Membership Services Provider (MSP) Ordering Service Peer Nodes and Channels Ledger and World State 4. Setting Up Hyperledger Fabric Development Environment Prerequisites for Hyperledger Fabric Development Installing Docker and Docker Compose Downloading and Configuring Hyperledger Fabric Samples Running First Network Smart Contracts and Network Configuration Smart Contract Development with Hyperledger Fabric Chaincode Programming Model Developing Chaincode in Go/Node.js/Java Chaincode Lifecycle: Install, Instantiate, Upgrade Handling State and Transactions in Chaincode Deploying and Invoking Smart Contracts Installing and Approving Chaincodes Committing Chaincode Definitions Invoking Chaincode Functions Querying the Ledger with Chaincode Hyperledger Fabric Network Configuration Creating and Configuring Channels Setting Channel Policies Defining and Managing Endorsement Policies Identity Management and MSP Configuration Interacting with Hyperledger Fabric Network Hyperledger Fabric SDKs (Node.js, Java, Go) Building Client Applications Transaction Flow: Propose, Endorse, Commit Event Handling and Notifications

Integration, Security, and Performance Integration and External Services Integrating Hyperledger Fabric with External Systems Utilizing REST APIs and gRPC External Data Sources and Oracles Handling Data Privacy and Confidentiality Hyperledger Fabric Security Best Practices Security Model in Hyperledger Fabric Access Control Mechanisms Secure Communication (TLS) and Data Encryption Best Practices for Secure Chaincode Development Hyperledger Fabric Performance Optimization Performance Metrics and Benchmarking Optimizing Transaction Throughput and Latency Tuning Hyperledger Fabric Parameters Strategies for Network Scalability Hyperledger Fabric Troubleshooting and Maintenance Common Issues and Debugging Techniques Monitoring and Logging Maintaining and Updating Hyperledger Fabric Networks Backup and Disaster Recovery Strategies Advanced Topics and Real-World Applications Real-world Hyperledger Fabric Applications and Use Cases Case Studies of Hyperledger Fabric Implementations Industry-specific Applications (Finance, Supply Chain, Healthcare) Lessons Learned and Best Practices Advanced Hyperledger Fabric Features Private Data Collections Fabric Interoperability and Consortium Management Tokenization and Digital Assets on Fabric Emerging Trends and Future Directions Hyperledger Fabric Roadmap Integration with Emerging Technologies (IoT, AI, Big Data) Exploring Hyperledger Fabric 2.x and Beyond Capstone Project and Certification Preparation Capstone Project: Design and Implement a Hyperledger Fabric-based Application Project Presentations and Peer Reviews Preparation for Certification Exam Final Assessment and Certification Examination

Reference Books

- 1 Hyperledger Fabric In-Depth: Learn, Build, and Deploy Blockchain Applications Using Hyperledger Fabric, Ashwani Kumar, Suryakant Choudhary, 1st Edition 2020, BPB Publications.
- 2 Hands-On Blockchain with Hyperledger: Building Decentralized Applications with Hyperledger Fabric and Composer, Salman A. Baset, Nitin Gaur, Luc Desrosiers, Petr Novotny, Venkatraman Ramakrishna, 1st Edition 2018, Packt Publishing.
- 3 Hyperledger Cookbook: Over 40 Recipes Implementing Blockchain in Business, Xun (Brian) Wu, Roberto Ochoa, Allan Peguero, Nikolaos G. Gkoutzos, 1st Edition 2019, Packt Publishing.

- 5 Mastering Blockchain: Unlocking the Power of Cryptocurrencies, Smart Contracts, and Decentralized Applications, Imran Bashir, 3rd Edition 2022, Packt Publishing.

23CC3019 - CERTIFIED KUBERNETES APPLICATION DEVELOPER (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3019	CERTIFIED KUBERNETES APPLICATION DEVELOPER	CKAD	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze applications using Kubernetes environments that includes containerization principles and deployment strategies, to ensure robust and scalable solutions.	4	PO3, PO4, PO5, PSO1, PSO2
CO2	Examine Kubernetes core primitives to create, migrate, configure, expose, and observe scalable applications, integrating considerations of application environment, configuration, and security to ensure robust deployment practices.	4	PO3, PO4, PO5, PSO1, PSO2

Syllabus

Introduction to Kubernetes, Containerization Principles, Kubernetes Deployment Strategies, Application Design Considerations, Configuring Kubernetes Services to expose applications, Managing application configuration with ConfigMaps and Secrets, Implementing Service Discovery and Load Balancing, Kubernetes security concepts and best practices. Role-based access control (RBAC) and network policies.

Overview of Kubernetes core primitives: Pods, Deployments, Services, ConfigMaps, and Secrets. Understanding their roles in application deployment and management, Creating Pods and understanding their lifecycle. Configuring Pod specifications and resource requirements, Implementing Deployments for managing application replicas and updates. Using Replica Sets for scalable application deployments, Defining and managing application environments using environment variables and ConfigMaps. Using ConfigMaps to decouple configuration from container images, Kubernetes security principles and best practices. Role-based access control (RBAC) and Pod Security Policies (PSPs).

Reference Books

- 1 Certified Kubernetes Application Developer (CKAD) Study Guide., Benjamin Muschko, 2023, O'REILLY.
- 2 Certified Kubernetes Application Developer (CKAD) Exam Success Guide, Sethumadhavan Kishore, 2023, BPB Publication.
- 3 Kubernetes Preparing for the CKA and CKAD Certifications, Philippe Martin, 2023, APress.
- 4 Kubernetes in Production Best Practices, Aly Saleh, 2023, Apress.

23CC3020 - CISCO CERTIFIED NETWORK ADMINITRATOR (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3020	CISCO CERTIFIED NETWORK ADMINITRATOR	CISCO-CNA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concepts of networking by configuring and troubleshooting network systems using the OSI and TCP/IP models, and implementing Network Address Translation (NAT).	3	PO5, PSO2
CO2	Analyze and troubleshoot basic routing, switching, DHCP (Dynamic Host Configuration Protocol), and DNS (Domain Name System) configurations, Analyze the use of network monitoring tools to identify and resolve potential network issues proactively.	4	PO1, PSO2

Syllabus

Networking Fundamentals and Routing Technologies, covers the essential concepts of networking, including the OSI model, TCP/IP protocol suite, IP addressing, and subnetting. This module also delves into the configuration and management of network devices such as routers and switches, with a focus on understanding their roles in a network infrastructure. Key topics include configuring initial device settings, managing switch operations, VLAN configuration, inter-VLAN routing, and static and dynamic routing protocols such as RIP, OSPF, and EIGRP. Additionally, it introduces basic network security concepts, including access control lists (ACLs) and basic firewall configurations.

Advanced Networking Services and Security, builds on the foundational knowledge and explores more advanced topics related to network services and security. This includes the configuration and troubleshooting of DHCP and DNS services, Network Address Translation (NAT), and Quality of Service (QoS) to optimize network performance. Students also learn about network automation using tools like Python scripts and Cisco DNA Center. Advanced security topics cover VPN configurations, Secure Shell (SSH), and Secure Sockets Layer (SSL) to ensure secure communications. The module further explores monitoring and management techniques using SNMP, syslog, and network management systems, along with the implementation of redundancy protocols such as HSRP and VRRP for high availability. Finally, the syllabus addresses IPv6 concepts and configurations to prepare students for modern network environments.

23CC3026 - EMBEDDED SYSTEM APPLICATION & IOT PROGRAMMING (TESSOLVE-L1) (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3026	EMBEDDED SYSTEM APPLICATION & IOT PROGRAMMING (TESSOLVE-L1)	ESAIP	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basics and interfacing of STM32	2	PO1, PO2, PO5, PSO1
CO2	Analyse the STM32 Sensor Interfacing using hardware	4	PO1, PO2, PO5, PSO2
CO3	Analyse the STM32 Peripherals Interfacing using hardware	4	PO2, PO5, PO9, PSO2
CO4	Analyse the serial communication protocols and IoT protocols to establish connection with the cloud	4	PO2, PO5, PO9, PSO2
CO5	Analyse the experiments on various boards	4	PO1, PO2, PO5

Syllabus

Introduction to Embedded Application and ARM Architecture, STM32 Programming and GPIO, Digital Output Configuration of Digital Output, Concept of Delay, Introduction to LED, different connection methods of LED, STM32 Analog Output Introduction to analog signal, DAC basics, PWM signal duty cycle calculation, analog output initialization STM32 Analog Input ADC basics, analog input initialization, Using Internal and External Vref for Analog Input

STM32 Sensor Interfacing Introduction to Sensors, Analog sensor interfacing Temperature Sensor, Digital Sensor Interfacing PIR Sensor, and Ultrasonic Sensor interfacing.

STM32 Peripherals Interfacing Interfacing of Keyboard and Interfacing of Seven Segment Displays SSD, LCD

Serial Communication: Introduction to Serial and Parallel. Introduction to various Communication Protocols UART, SPI, I2C, Timers, Interrupts, Multitasking and RTOS, IOT Introduction to HTTP, HTTP Request and HTTP Response, Connection to Cloud using HTTP, Introduction to MQTT, MQTT Publish and subscribe, Connection to Cloud using MQTT

23CC3027 - EPAM COE CERTIFICATION ON FRONTEND TECHNOLOGIES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3027	EPAM COE CERTIFICATION ON FRONTEND TECHNOLOGIES	EPAM-FT	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	practice various technologies like html, css, javascript, typescript using React/Angular frameworks	3	PO1, PO3, PO5, PSO1
CO2	Apply concepts of ngx, npm, typescript to build dynamic web application, Angular framework to build dynamic web application	3	PO1, PO3, PO5, PSO1

Syllabus

NodeJS: NodeJS fundamentals, Call-back, Events and event loop, event emitter, node modules and package. json, Nodejs Module system and patterns, CommonJS, ES6. React: ReactJS Fundamentals, Introducing JSX, Overview, Rendering Elements, Components and Props, State and Lifecycle Overview of React, elements and components, JSX Composition over inheritance, how browsers handle render, reflow/repaint VDOM concept + Fiber.js in v16 Dev infrastructure: webpack, babel, source-maps, react-hot-loader, react-dev-tools, (react-create app).

Introduction to Web Development, Introduction to Typescript , Typescript Basics: Directives Basics, Attribute Directives, Host Listener, Host Binding, Built in Directives, Structural Directives, Create Structural Directive, Angular Component Life Cycle Hooks , Introduction to Angular- Angular Architecture Angular Version History Angular CLI Basics, Setup Angular Project Angular Project Structure Components Modules Angular App Bootstrapping, Angular Decorators.

23CC3028 - EPAM COE CERTIFICATION ON .NET (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3028	EPAM COE CERTIFICATION ON .NET	EPAM-NET	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the Fundamental concepts of .NET Framework and C#.NET by proficiently constructing software programs.	3	PO2, PO3, PO4
CO2	Build the console and desktop applications utilizing the C#.NET Framework.	3	PO2, PO3, PO4
CO3	Develop C#.NET desktop applications by integrating ADO.NET for database connectivity and manipulation.	3	PO2, PO3, PO4
CO4	Develop the ASP.NET Standard Server controls to develop robust applications, showcasing their mastery of web development concepts.	3	PO2, PO3, PO4
CO6	Develop programs for desktop, web, and enterprise applications by employing advanced .NET programming techniques, demonstrating their mastery of software development across various platforms.	3	, PSO1, PSO2

Syllabus

C# Essentials:.NET Ecosystem (.NET Framework and .NET Core),C# operator basics,OOP principles,Class & Object, Constructors. Methods. Access modifiers,Inheritance. Polymorphism,Upcasting and downcasting.new and override methods. Sealed methods and classes,Class relationships overview,Memory management.

Exception handling system,Collection types IEnumerable and IEnumerator Generics Inheritance in generics Variance in generics Generic collections,Creation and using delegates Anonymous methods and lambdas Event handling

LINQ overview Extension methods and query syntax Dynamic LINQ,Unit Testing,Multithreading,Data processing,T-SQL,ADO.NET

Design patterns and architecture patterns,MVC (MVP, MVVM),Multilayered and onion architectures,Data processing technologies:ADO.NET EF,EDM Entities and DbContext Entity relations Database First, Code First, Model First Configuration, Initializers,Querying data,Data Loading: lazy vs eager LINQ to Entities,Data Annotations,Fluent Configuration,Migrations,Repository and UoW patterns,Front end Overview:Web Fundamentals.

Reference Books

23CC3030 - EPAM COE CERTIFICATION ON JAVA (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3030	EPAM COE CERTIFICATION ON JAVA	EPAM-J	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop a backend application using Version Control System and Maven, leveraging Java's object-oriented features (inheritance, polymorphism, encapsulation, abstraction) and modern libraries (Collections Framework, Lambdas, Streams, Optionals, DateTime) for efficiency and maintainability, ensuring clear separation of concerns, robust logging, concurrent operations with threads and thread pools, and data exchange with JSON.	3	PO2, PO3, PO5, PSO1
CO2	Develop efficient and maintainable backend Java applications using the traditional object-relational mapping with Hibernate, Spring Framework, and implement RESTful APIs to enable standardized data exchange and robust communication across diverse, distributed systems.	3	PO2, PO3, PO5, PSO1

Syllabus

The Need of Version Control Systems, Type of Repositories: Centralized Vs Distributed, Branches, Check in, Checkout. Conflict, Merge, Tags, Reverting changes, Basics of Branching strategy. Features Of Maven, Objectives of Maven, Maven life cycle and Providing guidelines for best practices development. Working with Java Persistence API to connect to databases using Hibernate, Multithreading, Concurrency, Executors framework and ForkJoin pool, JavaScript Object Notation. JDK, JRE, JVM, Memory (Heap, Stack) Object, Class, Inheritance, Polymorphic, Abstraction, Encapsulation, Difference between Abstract and Interface Constructor rules in inheritance, Access modifiers in the inheritance chain. The problem with Arrays Why should you need collection, Collection Framework overview, Sorting, Searching, Iterating, Differences in various interfaces and implementations Hashcode/Comparator/Comparable. Collection with Iteration order: Lists, Collection with Uniqueness: Sets, Collection with Modification order: Stacks, Queues, Deques, Collection with Pairs: Maps, Understanding annotation and creating custom annotation Usage of Generics. Java8 -Lambdas & Functional Interfaces, Streams, Optionals and DateTime. Understanding of Logging and working with Log4J. Understanding of XML elements and Schema.

Working with Java Persistence API to connect to databases using Hibernate, Multithreading, Concurrency, Executors framework and ForkJoin pool, JavaScript Object Notation. Introduction to Spring Core, Spring Boot, Spring MVC, Spring Data JPA, REST Architecture & Richardson Maturity Model and Spring REST

23CC3033 - GOOGLE : ASSOCIATE CLOUD ENGINEER (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3033	GOOGLE : ASSOCIATE CLOUD ENGINEER	GACE	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply knowledge to deploy, monitor, and maintain cloud-based solutions.	3	PO1, PO2, PO5, PSO1
CO2	Analyze and troubleshoot issues in cloud infrastructure and services.	4	PO1, PO2, PO5, PSO1

Syllabus

Setting up a cloud solution environment: Setting up cloud projects and accounts, Managing billing configuration, Installing and configuring the command line interface (CLI), specifically the Cloud SDK (e.g., setting the default project). Planning and configuring a cloud solution: Planning and estimating GCP product use using the Pricing Calculator ,Planning and configuring compute resources, Planning and configuring data storage options, Planning and configuring network resources. Planning and configuring a cloud solution: Planning and estimating GCP product use using the Pricing Calculator ,Planning and configuring compute resources, Planning and configuring data storage options, Planning and configuring network resources.

Deploying and implementing a cloud solution: Deploying and implementing Compute Engine resources, Deploying and implementing Google Kubernetes Engine resources, Deploying and implementing App Engine, Cloud Run, and Cloud Functions resources, Deploying and implementing data solutions, Deploying and implementing networking resources, Deploying a solution using Cloud Marketplace, Deploying application infrastructure using Cloud Deployment Manager. Ensuring successful operation of a cloud solution: Managing Compute Engine resources, Managing Google Kubernetes Engine resources, Managing App Engine and Cloud Run resources, Managing storage and database solutions, Managing networking resources, Monitoring and logging.

23CC3034 - GOOGLE PROFESSIONAL CLOUD ARCHITECT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3034	GOOGLE PROFESSIONAL CLOUD ARCHITECT	GPCA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the cloud solution infrastructure using best practices.	3	PO1, PO2, PO5, PSO1
CO2	Analyze the optimized cloud infrastructure for performance, scalability, and cost-efficiency.	4	PO1, PO2, PO5, PSO1

Syllabus

Setting up a cloud solution environment: Setting up cloud projects and accounts, Managing billing configuration, Installing and configuring the command line interface (CLI), specifically the Cloud SDK (e.g., setting the default project).

Deploying and implementing a cloud solution: Deploying and implementing Compute Engine resources, Deploying and implementing Google Kubernetes Engine resources, Deploying and implementing App Engine, Cloud Run, and Cloud Functions resources, Deploying and implementing data solutions, Deploying and implementing networking resources, Deploying a solution using Cloud Marketplace, Deploying application infrastructure using Cloud Deployment Manager.

23CC3035 - GOOGLE TENSORFLOW DEVELOPER CERTIFICATE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3035	GOOGLE TENSORFLOW DEVELOPER CERTIFICATE	GTFDC	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze machine learning algorithms for real-world tasks, selecting appropriate neural network architectures based on problem characteristics and data availability.	4	PO3, PO5, PSO2
CO2	Evaluate the effectiveness of transfer learning techniques, scaling strategies, NLP fundamentals, and TensorFlow's utility in time series analysis.	5	PO3, PO5, PSO2

Syllabus

Fundamentals of Machine Learning with TensorFlow: Introduction to TensorFlow basics, Building and training neural network models using TensorFlow, regression and classification, Computer vision with Convolutional Neural Networks (CNNs)

Transfer learning: Feature extraction and fine-tuning, Scaling up models and performance evaluation, NLP fundamentals: Preprocessing, embeddings, and model building, Time Series analysis using TensorFlow

Reference Books

23CC3038 - HANDS-ON: 5G END-TO-END (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3038	HANDS-ON: 5G END-TO-END	5GEEC	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Compare and contrast the evolution of mobile technologies, analyzing how 5Gs core functionalities, network architecture, and key features like massive MIMO and beamforming address emerging use cases and Quality-of-Service demands.	4	PO1, PO5, PSO2
CO2	Analyze and evaluate 5G access procedures, security features, lawful interception architectures, and application of AI/ML, by comparing and contrasting protocols and call flows for both Standalone (SA) and Non-Standalone (NSA) deployment modes.	4	PO1, PO5, PSO2

Syllabus

Evolution of Mobile Technologies, Introduction to 5G, Key Technologies, Use Cases, 5G Core, 5G RAN, 5G Identities, 5G QoS, Massive MIMO, Beam Forming.

Initial Access and Related Procedures, 5G Protocols, 5G SA / NSA Call Flows, 5G Security Features, 5G Architecture for Lawful Interception, 5G Application Demonstrations, AI/ML in 5G

Reference Books

23CC3039 - IIOT PROGRAMMING & AUTOMATION (TESSOLVE-L2) (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3039	IIOT PROGRAMMING & AUTOMATION (TESSOLVE-L2)	IIPA-L2	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the Internet of Things (IoT), covering its definition, history, common applications, and key technologies like sensors, connectivity, and AI, with a special focus on its relevance in education.	3	PO2, PO5, PO7, PSO1
CO2	Apply Gain insights into the architecture and key components of IoT systems, including edge devices, gateways, cloud services, communication protocols, and popular IoT platforms and devices.	3	PO2, PO5, PO7, PSO1

Syllabus

Introduction to IoT - 1.1 What is IoT? - Definition and overview of IoT. - History and evolution of IoT. - 1.2 IoT Applications - Common use cases in different industries. - Real-world examples of IoT in education. - 1.3 Key Technologies and Trends - Sensors, actuators, and connectivity. - Big data, machine learning, and AI in IoT.

IoT Architecture and Components - 2.1 IoT Architecture - Basic architecture of IoT systems. - Overview of edge devices, gateways, and cloud. - 2.2 IoT Communication Protocols - Overview of common protocols (e.g., MQTT, CoAP, HTTP). - Understanding wireless connectivity (e.g., Wi-Fi, Bluetooth, LoRa, NB-IoT). - 2.3 IoT Devices and Platforms - Popular IoT devices (e.g., Raspberry Pi, Arduino). - Overview of IoT platforms (e.g., AWS IoT, Google Cloud IoT, Azure IoT).

Reference Books

- 2 Industrial Automation and Robotics: An Introduction, Jay F. Hooper, 2017-2nd edition, online.
- 3 Industrial Internet of Things: Technologies and Applications for Smart Production Systems, Sabina Jeschke, Christian Brecher, Houbing Song, and Danda B. Rawat, 2003-1st edition, online.
- 4 Python for Data Science and AI, Joe Egan, 2020-1st edition, online.

23CC3040 - JUNIPER NETWORKS CERTIFIED ASSOCIATE, JUNOS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3040	JUNIPER NETWORKS CERTIFIED ASSOCIATE, JUNOS	JNCA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply basic networking concepts, protocols, and device functionalities to troubleshoot common network issues.	3	PO1, PO2, PSO2
CO2	Utilize Junos OS fundamentals and user interface functionalities to configure, manage, and troubleshoot Juniper Networks devices.	3	PO1, PO2, PSO2
CO3	Configure and manage Junos OS and conduct operational monitoring and maintenance tasks for Juniper Networks devices.	4	PO2, PO4, PSO2
CO4	Implement routing policies and firewall filters by controlling routing decisions and packet filtering for network security.	4	PO2, PO5, PSO2

Syllabus

Networking Fundamentals: Collision domains and broadcast domains, Function of routers and switches, Ethernet networks, Layer 2 addressing, including address resolution, Layer 3 / IP addressing, including subnet masks, IPv4 / IPv6, Subnetting and supernetting, Decimal to binary conversion, Longest match routing, CoS, Connection-oriented vs. connectionless protocols.

Junos OS Fundamentals: Software architecture, Control and forwarding planes, Routing engine and packet-forwarding engine, Transit traffic processing, Exception traffic. User Interfaces: CLI functionality, CLI modes, CLI navigation, CLI Help, Filtering output, Active vs. candidate configuration, Reverting to previous configurations, Modifying, managing, and saving configuration files, Viewing, comparing, and loading configuration files, J-Web (core/common functionality only).

Configuration Basics: Factory-default state, Initial configuration, User accounts, Login classes, User authentication methods, Interface types and properties, Configuration groups, Additional initial configuration elements, such as Network Time Protocol (NTP), SNMP, system log, Configuration archival, Logging and tracing, Rescue configuration. Operational Monitoring and Maintenance: Show commands, Monitor commands, Interface statistics and errors, Network tools, such as ping, traceroute, telnet, SSH, etc., Junos OS installation and upgrades, Powering on and shutting down Junos devices, Root password recovery.

Routing Fundamentals: Traffic forwarding concepts, Routing tables, Routing vs. forwarding tables, Route preference, Routing instances, Static routing, Advantages of and use cases for dynamic routing protocols. Routing Policy and Firewall Filters: Default routing policies, Import and export policies, Routing policy flow, Effect of policies on routes and routing tables, Policy structure and terms, Policy match criteria, match types, and actions, Firewall filter concepts, Filter structure and terms, Filter match criteria and actions, Effect of filters on packets, Unicast reverse-path-forwarding (RPF).

Reference Books

- 3 Juniper Networks Certified Associate Junos (JNCIA-Junos): Secrets to Acing the Exam and Successful Finding and Landing Your Next Juniper Networks Certified Associate Junos (JNCIA-Junos) Certified Job, Sarah Harper, 2012, Tebbo.
- 4 Targeting JNCIA: Study Guide for Exam JN0-201, Jeff Ringwelski, 2003, AuthorHouse.

- 5 JUNOS OS For Dummies, Walter J. Goralski, Cathy Gadecki, Michael Bushong, 2nd Edition, 2011, John Wiley & Sons.
- 6 Junos Enterprise Switching: A Practical Guide to Junos Switches and Certification, Harry Reynolds and Doug Marschke, 2009, O'Reilly Media.

23CC3041 - LINUX FOUNDATION CERTIFIED IT ASSOCIATE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3041	LINUX FOUNDATION CERTIFIED IT ASSOCIATE	LFCA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Utilize essential Linux skills to perform tasks such as managing files, configuring system settings, and automating processes with scripts	3	PO1, PO4, PO9
CO2	Build and manage projects using tools and resources from the Open Source and Linux ecosystem.	3	PO2, PSO2

Syllabus

Introduction to Linux Linux file systems and directory structure Basic Linux commands (e.g., ls, cd, cp, mv, rm, mkdir, rmdir) Understanding file permissions (chmod, chown) User and group management, Navigating the Linux CLI efficiently Working with files and directories Input and output redirection Pipes and filters Basic shell scripting, Package management (e.g., apt, yum) Process management (ps, top, kill) System startup and shutdown Basic system monitoring and troubleshooting.

Understanding network fundamentals Configuring network interfaces Troubleshooting network connectivity issues Basic firewall configuration (iptables, firewallld), History and significance of Linux and open source Role of Linux in the IT industry Introduction to open source licensing Overview of virtualization and cloud computing Basics of containerization (e.g., Docker), Introduction to shell scripting Basic database management Introduction to web servers (e.g., Apache, Nginx) Introduction to version control systems (e.g., Git)

Reference Books

- 1 "Linux Pocket Guide: Essential Commands", Daniel J. Barrett, 2004, O'Reilly Media.
- 2 "How Linux Works: What Every Superuser Should Know", Brian Ward, 2004, No Starch Press.
- 3 "Linux Bible", Christopher Negus, 2001, Wiley.
- 4 "LPIC-1/CompTIA Linux+ Certification All-in-One Exam Guide, Second Edition (Exams LPIC-1/LX0-101 & LX0-102)", Robb H. Tracy, 2015, McGraw-Hill Education.

23CC3042 - LINUX PROFESSIONAL INSTITUTE: LINUX ESSENTIALS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3042	LINUX PROFESSIONAL INSTITUTE: LINUX ESSENTIALS	LPI-LE	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding of Linux System Architecture to install, configure, maintain, secure, and troubleshoot a Linux system.	2	PO1, PO3, PO5, PSO2
CO2	Illustrate automate tasks, manage systems, and optimize performance through shell scripting, scheduling, configuration tools, and performance analysis techniques.	3	PO1, PO3, PO5

Syllabus

Installation procedures for various Linux distributions Configuring system settings and preferences Managing user accounts and groups Performing regular system updates and patches Managing disk partitions and file systems Backup and restore procedures Identifying and resolving common system issues Using log files for diagnostics Recovery procedures for system failures. Setting up network interfaces and connectivity Configuring network services (e.g., DHCP, DNS) Understanding and managing IP addressing and routing Implementing firewalls using tools like iptables and firewalld Securing remote connections with SSH Network monitoring and intrusion detection Managing user permissions and access controls Implementing security policies and best practices Using encryption tools to secure data

Basics of shell scripting (Bash, Shell) Writing and executing simple scripts Script debugging techniques Using variables, loops, and conditional statements Writing complex scripts for administrative tasks Scheduling automated tasks with cron jobs Automating routine maintenance tasks Scripting for user and group management Using configuration management tools (e.g., Ansible, Puppet). Overview of Linux kernel and user space System boot process and initialization (init, systemd) Linux filesystem hierarchy and structure Using monitoring tools (top, htop, vmstat) Analyzing system performance metrics Identifying bottlenecks and performance issues Optimizing system resources (CPU, memory, I/O) Configuring and tuning kernel parameters Implementing performance-enhancing techniques and tools

Reference Books

23CC3045 - MICROSOFT CERTIFIED : AZURE DEVELOPER ASSOCIATE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3045	MICROSOFT CERTIFIED : AZURE DEVELOPER ASSOCIATE	MC-ADA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Experiment with Azure compute solutions, including Virtual Machines for scalable workloads, Azure Kubernetes Service (AKS) for container management, and Azure App Services for streamlined application deployment, ensures efficient resource utilization.	3	PO1, PO2, PO3, PO5, PS01
CO2	Apply monitoring, troubleshooting, and optimization practices to Azure solutions, while integrating with Azure and third-party services for seamless operation. Additionally, configure Azure services and manage identities and security to ensure effective and secure deployment.	3	PO1, PO2, PO3, PO5, PS01

Syllabus

Implement IaaS solutions, Create Azure App Service Web Apps, Implement Azure functions, Develop solutions that use blob storage, Develop solutions that use Cosmos DB storage, Develop solutions that use table storage, Develop solutions that use file storage, Implement user authentication and authorization, Implement secure cloud solutions, Implement API management, Implement platform protection

Integrate caching and content delivery within solutions, Instrument solutions to support monitoring and logging, Monitor and optimize Azure solutions, Troubleshoot Azure solutions, Develop an App Service Logic App, Implement API Management, Develop event-based solutions, Develop message-based solutions, Manage Azure AD objects Implement multi-factor authentication Implement Azure AD B2C Implement Azure AD B2B

Reference Books

23CC3046 - MICROSOFT CERTIFIED: AZURE ADMINISTRATOR ASSOCIATE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3046	MICROSOFT CERTIFIED: AZURE ADMINISTRATOR ASSOCIATE	MC-AAA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Experiment with Microsoft Azure core services, architecture, and best practices for deploying cloud solutions at a higher cognitive level.	3	PO1, PO2, PO3, PO4, PSO1
CO2	Develop practical skills in creating and managing Azure resources and learn to implement security measures and compliance standards within Azure.	3	PO1, PO2, PO3, PO4

Syllabus

Cloud technology overview, Overview of Azure, Managing Azure with the Azure portal, Managing Azure with Windows PowerShell Overview of Azure Resource Manager, Azure management services, Overview of Azure networking , Implementing and managing Azure virtual networks , Configuring Azure virtual networks , Configuring Azure virtual network connectivity , Configuring the Subnets ? Configuring Virtual Network Region Peering, Configuring Virtual Network Global Peering , Understanding Azure to On-Prem Connectivity , Deploying Azure Virtual Network Gateway, Understanding User Defined Routes(UDR) , Configuring Azure Virtual Network Gateway with AWS over IPsec VPN , Implementing Azure Service End Points, Understanding Azure Network Security Groups(NSG) , Creating and Updating Inbound & Outbound Security Rules, Understanding NSG Rule Hierarchy, Testing Network Security Groups and learning rule priority, Creating NSG Rules with Service tags, Understanding Application Security Groups (ASG), Creating NSG with Application Security Groups, Overview of Azure Firewall as a Service, Creating UDR and AzureFirewallSubnet, Deploy Azure Firewall, Configure routing on UDR and assigning to subnets, Create Network Rule Collection and check the traffic, Create Application Rule Collection and block traffic to websites , Understand SNAT and DNAT in Azure Firewall , Creating DNAT for Azure machine using Azure Firewall , Overview Azure virtual machines , Deploy virtual machines in Azure portal , Deploy virtual machines using Azure CLI , Managing Azure Virtual machine storage , Understanding Availability sets, Fault Domain & Update Domain, Creating & placing virtual machines in Availability Sets

Overview on Load Balancing, Type of Load Balancers in Azure, Basic Vs Standard Load Balancer, Deploying Basic Load Balancer with Availability Sets, Creating Backend Pools, Health probes and Load Balance rules, Checking the Load Balancing scenarios, Configuring NAT using Basic Load Balancer, Understanding Azure DNS, Buying a domain name for Godaddy.com, Creating Azure DNS Zone and configuring it with Godaddy, Creating 3 Availability Sets and placing a single virtual machine in each AV-Set, Create Azure Standard Load Balancer and create a backend pool and assign all the 3 AVSets, Check the Load Balancing between the servers in different AV-Sets, Create Host Records for Server and check the name resolution, Create the CNAME record for the Load Balancer and check the website resolution, Understanding Azure Application Gateway architecture, Understanding Path Based Routing in AGW, Creating multiple VMs and configuring application gateway, Configuring the SSL Off-loading on Application gateway, Check pathing based routing using AGW

23CC3047 - MICROSOFT CERTIFIED: AZURE AI ENGINEER ASSOCIATE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3047	MICROSOFT CERTIFIED: AZURE AI ENGINEER ASSOCIATE	MC-AAEA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply end-to-end Cognitive Services solutions on Azure, including service selection, security planning, resource management, and container deployment.	3	PO1, PO3, PSO1
CO2	Apply comprehensive AI solution suite, integrating Computer Vision, Natural Language Processing, Knowledge Mining.	3	PO2, PO6, PSO1

Syllabus

Selecting appropriate Cognitive Services, planning security, managing resources, and implementing containers for Cognitive Services solutions, including vision, language analysis, decision support, and speech solutions, with Azure Virtual Network integration

Implementing AI Solution Implementation, covering Computer Vision, Natural Language Processing, and Knowledge Mining, including Cognitive Search and conversational AI solutions, with integration of QnA Maker, Bot Framework, and Cognitive Services.

23CC3050 - MICROSOFT CERTIFIED: AZURE FUNDAMENTALS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3050	MICROSOFT CERTIFIED: AZURE FUNDAMENTALS	MC-AF	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply knowledge of cloud computing concepts to evaluate and recommend cloud solutions based on business requirements.	3	PO1, PO2, PO3, PO4, PSO1
CO2	Identify and categorize key Azure services based on their functionalities and also design the use cases for real world applications	3	PO1, PO2, PO3, PO4

Syllabus

INTRODUCTION TO AZURE, PRINCIPLES OF CLOUD COMPUTING, CREATE AN AZURE ACCOUNT, AZURE COMPUTE FUNCTIONS. CORE CLOUD SERVICES - INTRODUCTION TO AZURE, AZURE ARCHITECTURE AND SERVICE GUARANTEES, AZURE NETWORKING OPTIONS, SECURITY, PRIVACY, COMPLIANCE, RESPONSIBILITY AND TRUST IN AZURE, APPLY AND MONITOR INFRASTRUCTURE STANDARDS WITH AZURE POLICY. CONTROL AND ORGANIZE AZURE RESOURCES WITH AZURE RESOURCE MANAGER, AZURE DATA STORAGE OPTIONS, PREDICT COST AND OPTIMIZE SPENDING FOR AZURE

Reference Books

23CC3059 - NI CLAD (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3059	NI CLAD	NI-CL	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply various data types and its functions in Graphical system design platform using LabVIEW	3	PO1, PSO2
CO2	Analyze various loop structures ,arrays, Clusters and its functions using LabVIEW.	4	PO1, PO2, PSO2
CO3	Analyze various debugging ,error handling techniques ,File I/O operations and State machine architecture.	4	PO1, PO2, PSO2
CO4	Analyze and design real time engineering applications using NI hardware.	5	PO1, PO2, PO3, PSO2

Syllabus

Introduction To LabVIEW: Introduction to graphical system design (GSD), working on GSD platform, Benefits of GSD, Text based programming Vs LabVIEW, Introduction to LabVIEW Environment, Front Panel Window Toolbar, Block Diagram Window Toolbar, Introduction to VIs, Data types, Data Representation, Coercion dot, Selecting a Tool, Shortcut Keys, Basic debugging techniques, Introduction to Digital Electronics, Boolean operations , Digital Circuit design, string operations, Various Display Types (Normal, code, Password, HEX display), Exploring string functions

Graphical Programming using LabVIEW: Introduction to loop concept, Type of Loops, For loop, Nested For loop, While loop(Stop if true and Continue if True), hybrid nested loop, Feedback Node, Shift Register and Stack Shift register, Introduction to tunnel and its type, Auto-Indexing, Last Value, Concatenating, Introduction to Arrays, operations of Array Functions, 1-D Array, 2-D Array, Introduction to Clusters, Cluster Function, Difference between Array and Cluster, Chart, Graph, Difference between Chart and Graph by Execution Exercise, Signal Generation and Plotting, Introduction to parallelism, Local Variable, Global Variable, Property Nodes, Invoke Nodes.

Structures Using LabVIEW: Introduction to Case structures, Case Control using Enumerated data type, Enum with type definition, Introduction to Flat Sequence, Create New Sub VI from Scratch, Input and Output Sub VI Connectors, Icon Editor, Making Sub VI from existing VI, Using Sub VIs Exercises, Finding Errors, Error handling and Debugging Techniques. File I/O: Introduction to File I/O, reading a Data from file, Writing a Data to file, Understanding File I/O using RefNum, File I/O Function Pallet, Introduction to Event Structure and operations, Design Technique, Introduction to Architecture, State machine Architecture.

Introduction NI Hardware: myDAQ architecture, Pin diagram ,connections, myRIO Internal architecture, Pin and Ports structure, Programming myRIO using LabVIEW, real time applications.

Reference Books

23CC3060 - PCAP - CERTIFIED ASSOCIATE IN PYTHON PROGRAMMING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3060	PCAP - CERTIFIED ASSOCIATE IN PYTHON PROGRAMMING	PCAP	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the fundamentals of Python to understand challenges and opportunities in Python projects, setting the stage for further exploration into Python infrastructure, data analysis, and ethical considerations in subsequent parts of the course.	3	PO5, PSO1, PSO2
CO2	Apply the OOP concepts of Python to understand challenges and opportunities in Python OOP-based projects, setting the stage for further exploration into Python OOP concepts, data analysis, and ethical considerations in subsequent parts of the course.	3	PO5, PSO1, PSO2

Syllabus

What is a Python, Installation Process, First Program, Indentation, Variables, Reserved Words, Data types, Numeric, Strings, String methods, Formatting String, Boolean, Python Operators, List, Tuples, Sets, Dictionaries, Conditional Statements- if, Loops (while & For Loop), Functions, Import and use modules and packages, Perform evaluations using the math module, Generate random values using the random module, Discover host platform properties using the platform module, Create and use user-defined modules and packages

Handle errors using Python-defined exceptions, Extend the Python exceptions hierarchy with self- defined exceptions, Understand the Object-Oriented approach, Employ class and object properties, Equip a class with methods, Discover the class structure, Build a class hierarchy using inheritance, Construct and initialize objects, Build complex lists using list comprehension, Embed lambda functions into the code, Define and use closures, Input/Output operations

Reference Books

- 4 Python Pocket Reference, Mark Lutz, 5th (2014), O'Reilly Media.

23CC3061 - PCCET: PALO ALTO NETWORKS CERTIFIED CYBERSECURITY ENTRY-LEVEL TECHNICIAN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3061	PCCET: PALO ALTO NETWORKS CERTIFIED CYBERSECURITY ENTRY-LEVEL TECHNICIAN	PCCET	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand core cybersecurity principles and implement essential security measures to protect digital assets and information systems. This includes identifying common threats and vulnerabilities, designing, implementing, and managing key network security components such as firewalls and intrusion detection/prevention systems, and employing secure network protocols to safeguard networked environments.	4	PO2, PO6, PSO2
CO2	Demonstrate proficiency in cloud computing concepts, architectures, and services, ensuring security and compliance in cloud environments. Additionally, operate security tools and processes, conduct incident response, and apply best practices for maintaining operational security within an organization.	4	PO1, PO8, PSO2

Syllabus

In this course, students will learn fundamental principles associated with the current cybersecurity landscape and identify concepts required to recognize and potentially mitigate attacks against enterprise networks as well as mission critical infrastructure. Students will also learn how to initially setup and configure security zones, authentication, and policies on a next generation firewall. In this Network Security Fundamentals course you will gain an understanding of the fundamental tenants of network security and review the general concepts involved in maintaining a secure network computing environment. Upon successful completion of this course you will be able to describe general network security concepts and implement basic network security configuration techniques.

In this Cloud Security Fundamentals course you will learn basic principles associated with securing the cloud and SaaS-based applications through Secure Access Service Edge architecture and identify concepts required to recognize and potentially mitigate attacks against traditional and hybrid datacenters as well as mission critical infrastructure. The course also demonstrates how to initially setup and configure containers on a docker bridge network and test the container security through the use of vulnerability scans and reports. In this Security Operations Fundamentals course you will gain an understanding of Security Operations and the role it plays in protecting our digital way of life, for businesses and customers. You will focus on continuous improvement processes to collect high-fidelity intelligence, contextual data, and automated prevention workflows that quickly identify and respond to fast-evolving threats. The course also demonstrates how to leverage automation to reduce strain on analysts and execute the Security Operation Centers mission to identify, investigate, and mitigate threats.

23CC3071 - PROGRAMMING USING PYTHON (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3071	PROGRAMMING USING PYTHON	PUP	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Python Modules and Packages	2	PO1, PO5
CO2	Apply Exception handling and string methods in Python	3	PO1, PO5
CO3	Apply object-oriented programming in python	3	PO1, PO5
CO4	Apply functions and Input/Output operations in python	3	PO1, PO5

Syllabus

Modules and Packages: Import and use modules and packages, Perform evaluations using the math module, Generate random values using the random module, Discover host platform properties using the platform module, Create and use user-defined modules and packages.

Exceptions: Handle errors using Python-defined exceptions, Extend the Python exceptions hierarchy with self-defined exceptions. Strings: Understand machine representation of characters, Operate on strings, Employ built-in string methods.

Object-Oriented Programming: Understand the Object-Oriented approach, Employ class and object properties, Equip a class with methods, Discover the class structure, Build a class hierarchy using inheritance, Construct and initialize objects.

Miscellaneous: Build complex lists using list comprehension, Embed lambda functions into the code, Define and use closures, Understand basic Input/Output terminology, Perform Input/Output operations.

23CC3080 - SALESFORCE CERTIFIED ADMINISTRATOR (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3080	SALESFORCE CERTIFIED ADMINISTRATOR	SFCA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Be able to understand how to manage changes to business processes, technology, and people with Salesforce. Be able to improve the efficiency of business operations by proactively undertaking regular process analysis and documentation. Be able to customize the user experience and manage profiles, permissions, roles, and groups with Salesforce. Be able to apply the Beginner mind and continually stay up to date with new Salesforce technology and inspire others too.	4	PO1, PO2, PO5, PSO1, PSO2
CO2	Be able to manage the end-to-end implementation of Salesforce, including the overall strategy and day-to-day activities involved in administering Salesforce..	5	PO1, PO2, PO5, PSO1, PSO2

Syllabus

Salesforce Platform Basics : Get Started with the Salesforce Platform, Discover Use Cases for the Platform, Understand the Salesforce Architecture, Navigate Setup, Power Up with AppExchange. Prepare Your Salesforce Org for Users : Set Up the Exchange Rate, Update the Exchange Rate with ACM, Customize the Home Page, Create a Unique Account List View, Create Chatter Groups User Management: Add New Users, Control What Your Users Can Access. Customize an Org to Support a New Business Unit: Manage User Access, Manage Chatter, Modify Your Data Model, Configure an Email Letterhead and Template, Automate Your Business Process Identity Basics: Get to Know Salesforce Identity, Get To Know Your Salesforce Identity Users, Learn the Language of Identity. Data Security : Overview of Data Security, Control Access to the Org, Control Access to Objects, Control Access to Fields, Control Access to Records, Create a Role Hierarchy, Define Sharing Rules Permission Set Groups: Get Started with Permission Set Groups, Create a Permission Set Group, Mute Permissions in Permission Set Groups Protect Your Data in Salesforce: Restrict Login Hours and IP Ranges, Create New Users and Allow a User to Delete Accounts, Set Organization-Wide Defaults and Create a Role Hierarchy, Create Sharing Rules, Set Up Account Teams. Data Modeling: Understand Custom & Standard Objects, Create Object Relationships, Work with Schema Builder Lightning Experience Customization: Set Up Your Org, Create and Customize Lightning Apps, Create and Customize List Views, Customize Record Highlights with Compact Layouts, Customize Record Details with Page Layouts, Create Custom Buttons and Links, Empower Your Users with Quick Actions Customize a Salesforce Object: Work with Standard and Custom Fields, Create Picklists and Field Dependencies, Create Lookup Filters, Create Formula Fields, Create Record Types, Create Account Page Layouts, Enable Account Field History Tracking, Create Validation Rules. Lightning App Builder: Get Started with the Lightning App Builder, Build a Custom Home Page for Lightning Experience, Build a Custom Record Page for Lightning Experience and Salesforce Mobile App, Build an App Home Lightning Page, Work with Custom Lightning Components Formulas and Validations: Use Formula Fields, Implement Roll-Up Summary Fields, create validation rules. Accounts & Contacts for Lightning Experience: Store Information About Your Customers, Understand Account and Contact Relationships Leads & Opportunities for Lightning Experience: Create and Convert Leads as Potential Customers, Work Your Opportunities, Sell as a Team and Split the Credit, Visualize Success with Path and Kanban Products, Quotes, & Contracts: Create Price Books to Track Your Products, Configure Quotes for Your Customers and Track Contracts. Campaign Basics: Meet Salesforce Campaigns, Organize Campaigns, Determine Who You're Marketing To, Report on Your Campaigns Customize a Sales Path for Your Team: Customize a Sales Path, Customize Opportunity Stages, Work with Opportunities in the Kanban View

Service Cloud for Lightning Experience: Begin Your Customer Service Journey, Administer Service Cloud, Automate Case Management, Create Digital Engagement on Multiple Channels. Set Up the Service Console: Set Up the Lightning Service Console, Customize Your Lightning Service Console Pages, Add the Softphone Utility to Your App, Set Up Web Chats for Your Console. Create a Process for Managing Support Cases: Create Support Processes, Create Record Types, Create an Escalation Rule Set Up Case Escalation and Entitlements: Create Support Processes, Create Case Queues and Assignment Rules, Create a Case Escalation Rule, Create an Automation with Flow Builder, Enable Entitlements and Set Up Service Contracts, Create an Entitlement Process, Create Service Contracts with Entitlements. Chatter Administration for Lightning Experience: Get Started with Chatter, Work with Chatter Groups, Enable Feed Tracking, Approve Records from a Chatter Feed, Develop a Rollout Strategy AppExchange Basics: Get Started with AppExchange, Navigate AppExchange, Explore AppExchange Listings, Install AppExchange Packages, Connect and Contribute to the AppExchange Community. Data Management: Import Data, Export Data Duplicate Management: Improve Data Quality in Salesforce, Resolve and Prevent Duplicate Data in Salesforce Import and Export with Data Management Tools: Use the Data Import Wizard, Use Dataloader.io to Export Data, Use Dataloader.io to Update Data. Reports & Dashboards for Lightning Experience: Introduction to Reports and Dashboards in Lightning Experience, Create Reports with the Report Builder, Format Reports, Visualize Your Data with the Lightning Dashboard Builder, Extend Your Reporting Strategy with AppExchange Create Reports and Dashboards for Sales and Marketing Managers: Create Report and Dashboard Folders, Create a Simple Custom Report, Filter Your Reports, Group and Categorize Your Data, Use Summary Formulas in Your Reports, Manage Reported Data, Visualize Your Data Approve Records with Approval Processes: Customize How Records Get Approved, Build an Approval Process Build a Discount Approval Process: Prepare Your Org, Create an Approval Process, Create Initial Submission Actions, Specify Final Approval and Rejection Actions Build a Simple Flow: Collect Contact Info from Your User, Check for a Matching Contact in Your Org, Branch the Flow, Create or Update a Contact Flow Builder Basics: Get Started with Automation, Go with the Flow, Meet Flow Builder, Learn About Flow Variables. Case Studies and Capstone Project : Complete the Capstone Project by taking a user case and work on the Trailhead

23CC3082 - SERVICENOW CERTIFIED APPLICATION DEVELOPER (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3082	SERVICENOW CERTIFIED APPLICATION DEVELOPER	SNCAD	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Configuring Applications for Business by Creating Classic List Views and Workspace, SN Admin Activities	1	PO1, PO3, PO7, PO10, PSO2
CO2	Enabling Productivity by Creating Reports, Dashboards and Configuring Notifications. Service Catalog	2	PO1, PO3, PO7, PO10, PSO2
CO3	Create UI Policy and Business Rule Scripting, Workflows	3	PO1, PO3, PO7, PO10, PSO2
CO4	Understand by Creating System Update sets and migrate changes to Test Instance, Import Sets	4	PO1, PO3, PO7, PO10, PSO2
CO5	SN Admin Activities, Scripting, Service catalog, Workflows, Integrations, Import Sets	4	PO1, PO3, PO7, PO10, PSO2

Syllabus

Admin Activities: Architecture of ServiceNow, Movement of Updatesets, User Interface, List, Forms, Records, Filters and Breadcrumbs, User Creation, Group Creation, Roles Attachment, Events and Notifications, System Properties and Dictionary, Reporting and Dashboards, Themes and Branding. Service Portal: Creating Service Portal, Designing Portal Pages Scripting: I) Business Rules II) Client Scripts III) UI Policy IV) UI Actions V) Implementing both Client-Side and Server-Side Scripting.

Service Catalog: Creating Catalog Items using Variables and Variable Sets, Creating Record Producers, Design the flow using Workflow, Creating Execution Plans, Writing Catalog Client Scripts, Catalog UI Policies

Workflows: Creating Workflows on different Tables, Approvals using Workflows, Using Different Activities in Workflow.

Integrations: - Web Services: Direct Web Services, Transform Map Web Services

Integrations: Email Integration: Inbound Actions, Event Registry, Creating and Triggering Events. Import Sets: Loading Data of different Formats, Using Data Sources, Using Transform Maps, Transform Scripts

Reference Books

23CC3083 - SERVICENOW CERTIFIED SYSTEM ADMINISTRATOR (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3083	SERVICENOW CERTIFIED SYSTEM ADMINISTRATOR	SNCSA	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To understand and manage changes to business processes, technology, and people in Salesforce and ServiceNow Platform. Acquire a fundamental understanding of the CRM and Salesforce, ServiceNow tools necessary to effectively generate useful applications on the Salesforce, ServiceNow platform to support the customer requirements	2	PO1, PO2, PO8, PSO1
CO2	To apply the efficiency of business operations by proactively undertaking regular process analysis and documentation. Gain experience in using the Salesforce, ServiceNow tools and techniques of CRM to complete projects focused on obtaining actionable insights from complex data	3	PO1, PO2, PO8, PSO1
CO3	To apply the customize the user experience and manage profiles, permissions, roles, and groups with Salesforce, ServiceNow. Dive deeply into a Salesforce Developer, ServiceNow Admin practice to fully prepare to use knowledge gained in the course to add significant value in a professional setting.	3	PO2, PO3, PO8, PSO1
CO4	To apply the utilize knowledge and skills to continue learning and adapting to other advanced Salesforce, ServiceNow technologies	3	PO2, PO3, PO8, PSO1
CO5	To analyze the manage the end-to-end implementation of Salesforce, ServiceNow including the overall strategy and day-to-day activities involved in administering Salesforce, ServiceNow	3	PO2, PO3, PO8, PSO1

Syllabus

A Salesforce Administrator solves business problems by customizing the Salesforce Platform. They build, configure, and automate technology solutions to deliver business value. people in Salesforce and ServiceNow Platform. Acquire a fundamental understanding of the CRM and Salesforce, ServiceNow tools necessary to effectively generate useful applications on the Salesforce, ServiceNow platform to support the customer requirements

Salesforce Administrators work with stakeholders to define system requirements and customize the platform. Create and modify UI Policies, UI Policy Actions, Data Policies and UI Actions; Create a Business Rule; Create a Client Script

Core responsibilities include supporting users, managing data, maintaining security standards, and delivering actionable analytics. Add Users, Add new Group Automatically Associated with New User Record, Assign Roles to a Group, Add Users to new Groups, Create and test New Assignment Rule

A Salesforce Admin best understands how to make the platform work for their company goals. customize the platform. Create and modify UI Policies, UI Policy Actions, Data Policies and UI Actions; Create a Business Rule; Create a Client Script

The constantly increasing availability of customer data offers great opportunities for the organizations to gain managerial insights for attracting new customers and developing and maintaining relationships with existing customers

23CC3096 - WIPRO TALENT NEXT JAVA FULL STACK CERTIFICATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CC3096	WIPRO TALENT NEXT JAVA FULL STACK CERTIFICATION	WTNJFSC	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Explain the core concepts of Java Fundamentals, Object-Oriented Programming (OOP), the basic features of Eclipse, the principle of Abstraction, the role of packages, the importance of Exception Handling, the structure of the Collection Framework, the purpose of Wrapper Classes, the function of I/O Streams, and the use of Annotations.	2	PO5, PO9, PSO2
CO2	Demonstrate how to use JUnit for testing, implement multithreading in Java applications, design and manage databases using RDBMS, write and execute SQL queries, develop PL/SQL programs, and connect Java applications to databases using JDBC.	3	PO5, PO9, PSO2
CO3	Apply HTML for structuring web content, utilize JavaScript and CSS for enhancing web interactivity and styling, develop dynamic web applications using Servlets and JSP, process and manipulate data with XML-I and XML-II, and implement asynchronous web functionalities using AJAX.	3	PO5, PO9, PSO2
CO4	Implement data persistence with Hibernate, develop applications using Spring Core, build and configure microservices with Spring Boot, create and consume REST web services, and develop dynamic single-page applications using Angular.	3	PO5, PO9, PSO2

Syllabus

Java Fundamentals, OOPS, Eclipse Overview, Abstraction, packages, Exception handling, Collection Framework, Wrapper classes, I/O streams, Annotations.

JUnit, Multithreading, RDBMS, SQL, PL/SQL, JDBC.

HTML, JavaScript/CSS, Servlets and JSP, XML-I, XML-II and AJAX

Hibernate, Spring Core, Spring Boot, REST web service, Angular

Reference Books

CO2	Describe various ecosystems and applications of biodiversity.	2	PO7
CO3	Identify and discuss causes, preventive measures of environmental pollution.	2	PO7
CO4	Summarize constitutional acts for environmental science, knowledge on solid waste management and disaster management.	2	PO7, PO8

Syllabus

The Multidisciplinary nature of Environmental Studies Introduction to Environment Definition scope importance Multidisciplinary nature of Environmental Studies, Need for public awareness. Institutions and people in Environment. Natural Resources Renewable and Non Renewable Resources Forest resources Uses Deforestation causes, effects, and impacts, Afforestation Programmes-Socio-forestry, Agro forestry, Vanasamrakshana programs. Mining its impact on the environment mining, dams and their effects on forests and tribal people. Water resources: Distribution of surface and groundwater, Aquifers, floods drought conflicts over water, dams benefits and problems, Water conservation rain water harvesting watershed management, Cloud seeding Mineral resources: Use exploitation environmental effects. Food resources Changes in agricultural methodologies, comparison between old and new methods of farming, Green Revolution, Environmental Impact Assessment of conversion of agricultural lands effects of modern agriculture, Drip Irrigation fertilizer-pesticide problems, Eutrophication, Vermicompost water logging, blue baby syndrome Energy resources Growing energy needs renewable and non-renewable energy sources Solar, wind, geothermal, tidal, bioenergies. Land resources Land as a resource land degradation Soil erosion: Importance of soil, Types of soil erosion, Causes and effects of soil erosion. How to control soil erosion. Role of an individual in conservation of natural resources.

Ecosystems Concept of an ecosystem Structure and function of an ecosystem Producers consumers decomposers with examples, Energy flow in the ecosystem Ecological succession Food chains food webs and ecological pyramids. Types of ecosystems characteristic features, structure, and function of the following ecosystem a. Forest ecosystem b. Grassland ecosystem c. Desert ecosystem e. Aquatic ecosystems ponds, streams, lakes, rivers, oceans, estuaries. Biodiversity and its Conservation: Introduction Definition: genetic, species and ecosystem diversity. Biogeographical classification of India Value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values Biodiversity at global, National, and local levels India as a mega-diversity nation Hotspots of biodiversity. Threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts. Endangered and endemic species of India Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

Environmental Pollution Definition Causes, effects, and control measures of a. Air pollution b. Water pollution c. Soil pollution d. Marine pollution. e. Noise pollution f. Thermal pollution g. nuclear hazards Solid waste Management Causes, effects, and control measures of urban and industrial wastes. Role of an individual in the prevention of pollution. Pollution case studies. Disaster management floods, earthquakes, cyclones, and landslides. Social Issues and the Environment from Unsustainable to Sustainable development Urban problems related to energy Water conservation. rainwater harvesting, watershed management.

Resettlement, and rehabilitation of people its problems and concerns. Case studies Environmental ethics issues and possible solutions. Climate change global warm acid rain, ozone layer depletion. nuclear accidents and holocaust. Case studies. Wasteland reclamation. Environmental Protection Act, Air (Prevention and Control of Pollution) Act Water (Prevention and control of Pollution) Act Wildlife Protection Act Forest Conservation Act Issues involved in the enforcement of environmental legislation. Public awareness Human Population and the Environment Population growth, Population explosion Family Welfare Programme. Environment and human health. Human Rights. Value Education. HIV AIDS Case Studies.

23UC0013 - GLOBAL LOGIC BUILDING CONTEST PRACTICUM (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23UC0013	GLOBAL LOGIC BUILDING CONTEST PRACTICUM	GLBCP	R	0	0	0	2	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate proficiency in identifying, analyzing, and solving problems using logical reasoning.	2	PO1, PO2, PO3, PSO1
CO2	Apply logical reasoning to global issues, considering multiple perspectives and potential solutions.	3	PO1, PO2, PO3, PSO1
CO3	Identify logical principles to assess ethical dilemmas and develop reasoned solutions.	3	PO1, PO2, PO3, PSO1
CO4	Inspect the ability to apply learned logical skills to new and unfamiliar challenges.	4	PO1, PO2, PO3, PSO1

Syllabus

Critical thinking skills necessary to identify, analyze, and solve problems effectively using logical reasoning through interactive exercises and practical applications.

Thinking Through Universal Challenges: Logical reasoning by exploring the challenges from multiple viewpoints and analyze potential solutions.

Explore principles like considering consequences, respecting rights, and upholding fairness to identify the core values in conflict. By applying these principles, Systematically analyze dilemmas, weigh options, and develop reasoned solutions that prioritize ethical conduct.

Logical reasoning skills honed can be applied beyond familiar situations, equipping you to tackle new and unexpected challenges by breaking them down, analyzing information effectively, and crafting sound solutions.

23UC0018 - FUNDAMENTALS OF MATHEMATICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23UC0018	FUNDAMENTALS OF MATHEMATICS	FOM	R	3	0	0	0	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply matrix theory to solve system of linear equations.	3	PO1
CO2	Apply trigonometric identities to solve trigonometric equations and also predict the data by using concepts combinatorics	3	PO1
CO3	Apply calculus concept to determine areas and volumes and also solve differential equations.	3	PO1
CO4	Apply statistical methods to find central tendency of the given data and also find directional ratios by vector algebra concepts.	3	PO1

Syllabus

Matrix Algebra Concepts Notation Equality Types of Matrices zero and identity matrix transpose of a Matrix symmetric and skew symmetric Matrices Operations of Matrices Addition Subtraction Multiplication Determinant adjoint and inverse of a square matrix. Solving system of linear equations in two or three variables Matrix Method and Cramers Rule.

Trigonometry Generation of angles quadrants measurement of angles radians Trigonometric ratios and functions. Inverse trigonometric functions. Complex Numbers Complex Numbers and its properties Permutations and Combinations Fundamental Principle of counting. Applications on Permutations and Combinations

Differential and Integral Calculus Derivatives of polynomials and exponential functions product and quotient rules. derivatives of trigonometric functions and chain rule Derivatives of logarithmic functions. Basic problems on Integrations. Differential Equations Definition Formation of first order differential equation equations reduced by separation of variables and linear form. Integration.

Vector Algebra Introduction Magnitude Direction Ratios Types of vectors operations of vectors and its properties with applications Statistics Measures of Central Tendency mean mode median Standard deviation variance

CADCATL1V1 - CAREER ADVANCEMENT: CAT, GMAT TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CADCATL1V1	CAREER ADVANCEMENT: CAT, GMAT TRAINING	CAD: CAT-	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply mathematical concepts to solve complex quantitative problems and interpret various data formats effectively.	3	PO10, PO12
CO2	Apply their understanding of vocabulary, grammar, and logical reasoning to analyze complex texts, evaluate arguments, and solve challenging verbal reasoning problems.	3	PO10, PO12

Syllabus

Fundamentals of Quantitative Aptitude and Data Interpretation : Essential mathematical concepts such as number systems, arithmetic, algebra, geometry, and data interpretation. Topics will include properties of numbers, fractions, decimals, percentages, ratios, proportions, equations, inequalities, coordinate geometry, tables, graphs, and data analysis.

Verbal Ability and Logical Reasoning: This module will focus on developing verbal and logical reasoning skills. Topics will include reading comprehension, vocabulary, grammar, critical reasoning, and verbal reasoning. Students will learn to analyze passages, draw inferences, identify main ideas, improve vocabulary, understand grammatical rules, evaluate arguments, and solve logical puzzles.

Reference Books

- 1 Quantitative Aptitude for CAT, Arun Sharma, 11, McGrawHill.
- 2 How To Prepare For Verbal Ability & Reading Comprehension For CAT, Arun Sharma, Meenakshi Upadhyay, 11, McGrawHill.
- 3 How to Prepare for Data Interpretation for CAT, Arun Sharma, 8, McGrawHill.
- 4 Verbal Ability and Reading Comprehension for CAT, Nishit K. Sinha, 4, Pearson Education.

CADCORL1V1 - CAREER ADVANCEMENT: TRAINING IN CORE DOMAIN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CADCORL1V1	CAREER ADVANCEMENT: TRAINING IN CORE DOMAIN	CAD: TICD	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply advanced domain-specific concepts and emerging trends to address industry challenges and innovations.	3	PO1, PO2
CO2	Apply advanced problem-solving and strategic decision-making techniques to manage complex projects within the core domain.	3	PO1, PO2

Syllabus

Core Concepts, theories, and frameworks of the specific domain (e.g., finance, IT, healthcare, engineering), Advanced Domain-Specific Tools, innovations and their impact on the core domain, Real-world examples of how new trends are being applied within the domain

Domain specific challenges, Practical exercises to resolve complex issues in the domain, best practices for managing projects within the domain, Case Studies and Simulations.

CADCORL2V2 - CAREER ADVANCEMENT: TRAINING IN CORE DOMAIN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CADCORL2V2	CAREER ADVANCEMENT: TRAINING IN CORE DOMAIN	CAD: TICD	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply effective leadership styles and strategies to lead cross-functional teams and influence key stakeholders in domain-specific roles.	3	PO1, PO2
CO2	Apply industry-relevant practices to implement innovation and manage organizational change while fostering a culture of continuous improvement.	3	PO1, PO2

Syllabus

Leadership approaches in industry-specific environments, negotiation techniques with stakeholders, strategies to lead cross-functional teams, leadership strategies from domain leaders and industry executives.

Change in domain-specific projects, technology transitions, or organizational transformations, Case Studies on Innovation and Change, Industry Regulations and Compliance, Risk Management Techniques, Interactive sessions with domain experts.

CADENTL1V1 - CAREER ADVANCEMENT:ENTREPRENEURIAL CAREER PATHWAY TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CADENTL1V1	CAREER ADVANCEMENT:ENTREPRENEURIAL CAREER PATHWAY TRAINING	CAD: ECPT	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	apply essential entrepreneurial qualities such as resilience, innovation, and risk-taking, enabling them to pursue entrepreneurial career paths in various contexts, including startups, corporate roles, and freelancing.	3	PO9, PO11
CO2	Develop the skills to recognize potential business opportunities, conduct thorough market research, and validate ideas by addressing customer needs and evaluating feasibility, preparing them to create sustainable business solutions.	3	PO9, PO11

Syllabus

Defining entrepreneurship: What it means to be an entrepreneur; The distinction between entrepreneurial and traditional career paths; The entrepreneurial mindset: resilience, risk-taking, innovation, and adaptability; Exploring entrepreneurial career pathways in startups, corporate environments, freelancing, and social ventures.

Spotting opportunities: How to find unmet needs and gaps in the market; Market research: Tools and techniques for understanding trends and customer needs; Idea validation: Testing the feasibility of your business idea; Problem-solving for innovation: Leveraging customer pain points and inefficiencies.

Reference Books

CADGATL1V1 - CAREER ADVANCEMENT: GATE TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CADGATL1V1	CAREER ADVANCEMENT: GATE TRAINING	CAD: GATE	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply advanced mathematical concepts and techniques to solve complex engineering problems	3	PO1, PO2
CO2	Apply their understanding of verbal ability, numerical ability, and general awareness to solve problems in a variety of contexts	3	PO1, PO2

Syllabus

This module will cover advanced topics in mathematics relevant to engineering disciplines. Topics may include linear algebra, calculus, differential equations, probability and statistics, numerical methods, and complex analysis. Students will learn to apply these concepts to solve engineering problems, analyze data, and develop mathematical models.

This module will focus on developing verbal ability, numerical ability, and general awareness. Topics may include reading comprehension, vocabulary, grammar, quantitative aptitude, logical reasoning, data interpretation, and current affairs. Students will learn to communicate effectively, solve mathematical problems, analyze data, and demonstrate general knowledge.

Reference Books

- 4 Quantitative Aptitude, R. S. Aggarwal, 2017, S. Chand Limited.

CADGREL1V1 - CAREER ADVANCEMENT: GRE, TOEFL & IELTS TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CADGREL1V1	CAREER ADVANCEMENT: GRE, TOEFL & IELTS TRAINING	CAD: GRE-	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply vocabulary, reading comprehension strategies, and analytical writing techniques to solve verbal reasoning questions and compose structured essays across standardized test scenarios.	3	PO9, PO10
CO2	Apply effective time management, critical thinking, and communication strategies in listening, speaking, and writing tasks during test simulations to improve performance in real-world exam settings.	3	PO9, PO10

Syllabus

vocabulary building, reading comprehension strategies, critical thinking for analytical writing, and problem-solving techniques. Listening will focus on understanding academic conversations and lectures, while speaking skills emphasize fluency, coherence, and pronunciation. Writing will include essay structuring, argument development, and responding to prompts effectively.

Advanced reading of complex texts, mastering time management, and refining both written and spoken responses. verbal reasoning, quantitative reasoning Practice through mock tests

CADUPSL1V1 - CAREER ADVANCEMENT: UPSC-CIVIL SERVICES EXAM TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CADUPSL1V1	CAREER ADVANCEMENT: UPSC-CIVIL SERVICES EXAM TRAINING	CAD: UPSC	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the basics of Indian History and it's evolution	2	PO6, PO7, PO8
CO2	Understanding the basics of Indian Geography	2	PO6, PO7, PO8
CO3	Understanding the Evolution of Indian Constitution.	2	PO6, PO7, PO8
CO4	Understanding the evolution of Indian Economy	2	PO6, PO7, PO8

Syllabus

Ancient Indian History- IVC, Rig Vedic, Later Vedic, Buddhism, Jainism, Mahajanapadas, Mouryan Empire, Guptan Empire, Harshavardhana empire, Sangam Age.

Exploring The Physical and Social Geography of India: The Universe, Big Bang Theory, Solar system, Geological Time Scale, Earth's Interior, Earth's Magnetic Field.

Indian Polity and Constitution: Salient features of Indian constitution, Preamble, Fundamental Rights, Directive Principles of State Policy, Fundamental Duties, Indian Parliament.

Understanding India's Economy - Indian Economic Development, National Income, Public Finance, Indian Budget.

Reference Books

- 1 Indian Polity, M. Laxmikanth, 7, Tata Mc Graw Hill.
- 2 Indian Economy, Nitin Singhania, 5, Mc Graw Hill.
- 3 Ancient and Medieval India, Poonam Dalal Dahiya, 3, Mc Graw Hill.
- 4 Fundamentals of Physical Geography, Husain Majid, 5, Mc Graw Hill.

CADUPSL2V2 - CAREER ADVANCEMENT: UPSC-CIVIL SERVICES EXAM TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CADUPSL2V2	CAREER ADVANCEMENT: UPSC-CIVIL SERVICES EXAM TRAINING	CAD: UPSC	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and Evaluate the significant political, cultural, and social changes and its influence in contemporary society	2	PO6, PO7, PO8
CO2	Understand and assess the interactions between human activities and economic systems in shaping geographic landscapes.	2	PO6, PO7, PO8
CO3	Understand and analyze the structure and functioning of India's parliamentary and federal systems, including the intricacies of centre-state relations.	2	PO6, PO7, PO8
CO4	Understand and able to critically evaluate the key components of the Indian economy.	2	PO6, PO7, PO8

Syllabus

Medieval Indian History: Vijayanagaras, Kakatiyas, Delhi Sultanate, Mughal Empire and Later Mughals.

Human and Economic Geography: Population, Migration, Trade, Human settlements, Resources, Minerals and Industrial Development.

Indian Polity: Parliamentary system, Federal system, Centre-state relations, Emergency Provisions.

Indian Economy: Money and Banking, Inclusive Growth & Development, Agriculture, Subsidies, PDS, Food Security Industries,

Reference Books

CRTCODL1V1 - CAMPUS RECRUITMENT: LOGIC BUILDING SKILLS TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CRTCODL1V1	CAMPUS RECRUITMENT: LOGIC BUILDING SKILLS TRAINING	CRT: LBST	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply logical principles and critical thinking skills to analyze and evaluate arguments, solve problems, and make informed decisions.	3	PO1, PO2
CO2	Identify various logical reasoning techniques to solve complex problems, identify patterns, and draw valid conclusions	3	PO1, PO2

Syllabus

Introduction to Logic and Critical Thinking: fundamentals of logic, including the concepts of statements, propositions, truth values, logical connectives (AND, OR, NOT, IF-THEN, IF-AND-ONLY-IF), truth tables, and logical equivalence. Students will learn to identify and analyze different types of arguments, including deductive and inductive reasoning. They will also develop critical thinking skills, such as evaluating evidence, identifying assumptions, and recognizing fallacies

Logical Reasoning and Problem-Solving: applying logical reasoning techniques to solve various types of problems. Students will learn about different problem-solving strategies, including problem decomposition, pattern recognition, working backward, and using analogies. They will practice solving logic puzzles, brain teasers, and real-world problems that require logical thinking. Additionally, students will explore the concepts of syllogisms, Venn diagrams, and conditional reasoning to enhance their problem-solving abilities

Reference Books

- 1 Introduction to Logic, Irving M. Copi, Carl Cohen, Victor Rodych, 2014, Routledge.
- 2 Critical Thinking, Richard Paul, Linda Elder, 2019, Pearson.
- 3 The Art of Logical Thinking; Or, The Laws of Reasoning, William Walker Atkinson, 2013, Public domain in the
- 4 Symbolic logic and The game of logic, Carroll, Lewis, 1958, Dover Publications.

CRTCODL2V2 - CAMPUS RECRUITMENT: CODING SKILLS TRAINING - DATA STRUCTURES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CRTCODL2V2	CAMPUS RECRUITMENT: CODING SKILLS TRAINING - DATA STRUCTURES	CRT: CST-DS	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Make use of arrays, linked lists, stacks, and queues to solve a variety of programming problems efficiently	3	PO1, PO2
CO2	Apply the knowledge of trees, graphs, heaps, and hash tables to design and implement efficient algorithms for complex data-intensive applications	3	PO1, PO2

Syllabus

This module will cover the basic building blocks of data structures. Students will learn about arrays, linked lists, stacks, and queues, their characteristics, operations, and applications. They will also practice implementing these data structures in a programming language and solving problems using them.

This module will delve into more complex data structures. Students will explore trees, graphs, heaps, and hash tables, their properties, algorithms, and use cases. They will learn to analyze and choose the appropriate data structure for a given problem and implement efficient solutions using these structures.

Reference Books

- 1 Data Structures and Algorithms Made Easy in Java, Narasimha Karumanchi, 2011, CareerMonk.
- 2 Introduction To Algorithms, Thomas H Cormen, Charles E Leiserson, Ronald L Rivest, Clifford Stein, 2009, Open Source.
- 3 CRACKING the CODING INTERVIEW, Gayle Laakmann McDowell, 2015, CareerCup.
- 4 Algorithms, Robert Sedgewick and Kevin Wayne , 2024, Addison Wesley.

CRTCODL3V3 - CAMPUS RECRUITMENT: CODING SKILLS TRAINING - ALGORITHMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CRTCODL3V3	CAMPUS RECRUITMENT: CODING SKILLS TRAINING - ALGORITHMS	CRT: CST-ALG	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Identify various searching and sorting algorithms to efficiently solve problems involving large datasets	3	PO1, PO2
CO2	Design and implement dynamic programming algorithms to solve problems with overlapping subproblems	3	PO1, PO2

Syllabus

This module introduces essential algorithms and data structures for problem-solving. Topics include searching algorithms (linear search, binary search), sorting algorithms (bubble sort, insertion sort, selection sort, merge sort, quicksort), recursion, divide-and-conquer, greedy algorithms, and basic data structures (arrays, linked lists, stacks,

This module delves into more complex algorithms and techniques. Topics include dynamic programming (Fibonacci sequence, knapsack problem), graph algorithms (breadth-first search, depth-first search, Dijkstra's algorithm, minimum spanning trees), backtracking (n-queens problem, Sudoku solver), branch-and-bound (traveling salesman problem), and algorithmic analysis (time complexity, space complexity).

Reference Books

- 5 Effective Communication Skills" Author, John Adair, 2nd Edition, Pan Macmillan.

CRTCSSL2V2 - CAMPUS RECRUITMENT: SOFT SKILLS TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CRTCSSL2V2	CAMPUS RECRUITMENT: SOFT SKILLS TRAINING	CRT: SST	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	apply and practice empathy, critical thinking, problem-solving, decision-making, effective communication, and interpersonal skills through real-life scenarios and interactive activities.	3	PO10
CO2	apply group discussion techniques, interview skills, and mock interviews through practical exercises, encouraging learners to practice and refine these skills in realistic settings.	3	PO9

Syllabus

Critical thinking, problem solving, decision making, communication skills, interpersonal skills

Grooming, group discussions, story narrations, interview skills, mock interviews

Reference Books

- 1 "Personality Development and Soft Skills", Barun K. Mitra, 2nd Edition, Oxford University Press.
- 2 "Communication Skills for Engineers", C. Muralikrishna & Sunita Mishra, 1st Edition, Pearson Education.
- 3 "Developing Soft Skills", Robert L. Katz, 1st Edition, McGraw Hill Education.

CRTINDL1V1 - CAMPUS RECRUITMENT: INDUSTRY-SPECIFIC TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CRTINDL1V1	CAMPUS RECRUITMENT: INDUSTRY-SPECIFIC TRAINING	CRT: IST	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate knowledge of industry-specific practices and standards relevant to their field of study through practical exposure and engagement in real-world projects.	3	PO9, PO10
CO2	Develop foundational technical skills by applying theoretical concepts in hands-on tasks, enabling them to contribute effectively in a professional environment.	3	PO9, PO10

Syllabus

overview of various industries, workplace ethics, and safety protocols. Students will also learn about industry-specific tools and technologies through hands-on workshops. Essential project management techniques will be covered, along with the development of soft skills such as communication, teamwork, and time management.

selecting a real-world project that allows them to apply their knowledge and skills collaboratively. presentation of project outcomes, demonstrate understanding of industry practices and work effectively in teams.

Reference Books

- 1 Engineering Management: Challenges in the New Millennium, C. M. Chang, 2007, Cengage Learning.
- 2 The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses, Eric Ries, 2011, Crown Business.
- 3 Project Management for Engineering and Technology, John M. Nicholas and Herman Steyn, 2017, Taylor & Francis.

CRTINDL2V2 - CAMPUS RECRUITMENT: INDUSTRY-SPECIFIC TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CRTINDL2V2	CAMPUS RECRUITMENT: INDUSTRY-SPECIFIC TRAINING	CRT: IST	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Exhibit advanced problem-solving abilities by analyzing complex industry challenges and proposing innovative solutions based on their training experiences.	3	PO9, PO10
CO2	Enhance professional communication skills by effectively presenting technical information and collaborating with industry professionals, demonstrating an understanding of workplace dynamics.	3	PO9, PO10

Syllabus

advanced industry practices and technical problem-solving. Key topics include current industry trends and innovations, quality assurance processes, and an understanding of regulatory requirements. Students will analyze real-world challenges through case studies and learn innovative solution development techniques, utilizing data analysis tools for informed decision-making.

professional communication and networking strategies, including effective presentation skills and writing technical reports. In the capstone project, students will identify and work on a complex industry-related project in collaboration with professionals, culminating in a final presentation to stakeholders to showcase their findings and solutions.

Reference Books

- 1 Quality Control and Industrial Statistics, Acheson J. Duncan, 1986, Duxbury Press.
- 2 Technical Communication, John M. Lannon and Laura J. Gurak, 2017, Pearson.

CRTTOLL1V1 - CAMPUS RECRUITMENT: TOOL BASED TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CRTTOLL1V1	CAMPUS RECRUITMENT: TOOL BASED TRAINING	CRT: TBT	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply foundational knowledge of various software tools to perform basic tasks and create simple projects	3	PO1, PO2, PO5
CO2	Apply digital tools to create professional-quality content and presentations.	3	PO1, PO2, PO5

Syllabus

Productivity Tools: This module will introduce students to essential productivity tools like Microsoft Office Suite (Word, Excel, PowerPoint), Google Workspace (Docs, Sheets, Slides), and project management tools (Asana, Trello). Students will learn to use these tools efficiently for tasks such as document creation, data analysis, presentations, and project planning.

Communication Tools: This module will cover communication tools like email, social media platforms (LinkedIn, Twitter), video conferencing software (Zoom, Microsoft Teams), and collaboration tools (Slack, Google Chat). Students will learn effective communication strategies and best practices for using these tools professionally.

Reference Books

- 1 Microsoft Office 365: In Practice, Randy Nordell, 2021, McGraw-Hill Education.
- 2 Mastering Collaboration: Make Working Together Less Painful and More Productive, Gretchen Anderson, 2019, O'Reilly Media.

CRTTOLL2V2 - CAMPUS RECRUITMENT: TOOL BASED TRAINING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
CRTTOLL2V2	CAMPUS RECRUITMENT: TOOL BASED TRAINING	CRT: TBT	R	0	0	0	8	0

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Utilize advanced features of software tools to create complex and customized digital projects for professional applications.	3	PO5, PO9, PO10
CO2	Critically evaluate and apply specialized digital tools to solve real-world problems and improve workflow efficiency.	3	PO5, PO9, PO10

Syllabus

project management tools like Microsoft Project and Trello, advanced document and multimedia tools such as PowerPoint and Adobe Photoshop, and customization techniques using APIs and automation. Students will explore the integration of multiple tools for industry-specific applications like data analytics, design, and content creation.

data management with Excel and Power BI, process automation with tools like Zapier, and streamlining workflows in remote environments. Students will engage in hands-on projects, case studies, and a capstone project to apply digital tools in solving practical challenges.

Reference Books

22UC0021	SOCIAL IMMERSIVE LEARNING	SIL-1	R	0	0	0	4	1

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply effective communication and collaboration skills to work with diverse populations in addressing social issues within the community.	3	PO8, PO9, PSO2
CO2	Build technological solutions to real-world problems or challenges with peers to achieve common goals.	3	PO8, PO9, PSO2
CO3	Plan effectively to communicate ideas and collaborate with others to achieve artistic or recreational goals.	3	PO4, PSO2
CO4	Develop innovative solutions by thinking critically and creatively within a collaborative social immersive learning environment.	3	PO4, PO9, PSO2
CO5	Identify the strategies to promote personal well-being for healthy living through social interaction and shared experiences.	3	PO6, PSO2

Syllabus

Extension Activities and Social Outreach activities (ESO)

Technology Clubs (TEC)

Liberal arts, creative arts and hobby clubs (LCH)

Innovation, Incubation & Entrepreneurship (IIE)

Health & Well Being (HWB)

Y23: B.Tech. - Internet of Things

Category: Minor Degree Courses (MIN)

23MRAC01M - AI FOR BUSINESS STRATEGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAC01M	AI FOR BUSINESS STRATEGY	ABS	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the historical development of AI and its impact on various industries.	3	PO5
CO2	Apply machine learning algorithms for supervised, unsupervised, and reinforcement learning tasks.	3	PO5
CO3	Analyse the suitability of different AI frameworks and tools for specific business applications.	4	PO9
CO4	Analyse the future trends and opportunities in AI and formulate corresponding business strategies	4	PO9

Syllabus

Overview of AI and Its Applications: Definition and scope of AI, Historical context and milestones, AI applications in various industries Understanding Business Strategy: Basics of business strategy, Strategic planning frameworks, Importance of aligning AI with business objectives AI Strategy Development: Formulating an AI strategy, Identifying business opportunities with AI, Case studies of successful AI-driven business strategies Ethical and Regulatory Considerations: Ethical implications of AI in business, Regulatory frameworks and compliance. Addressing bias and fairness in AI algorithms

Foundations of Artificial Intelligence: Machine Learning Fundamentals: Introduction to machine learning, Supervised, unsupervised, and reinforcement learning, Feature engineering and model evaluation Deep Learning Basics: Neural networks and deep learning concepts, Convolutional Neural Networks (CNNs) for image recognition, Recurrent Neural Networks (RNNs) for sequence data

AI Technologies and Tools for Business: Practical AI Tools: Introduction to popular AI frameworks (TensorFlow, PyTorch), Hands-on experience with AI development platforms (Google AI Platform, Azure ML) Natural Language Processing (NLP) in Business, Introduction to NLP and its applications, Sentiment analysis, text summarization, and language translation, Case studies of NLP in business contexts

AI Implementation and Impact on Business Strategy: AI Implementation Challenges: Challenges in deploying AI solutions in business, Integration with existing systems and workflows, Change management and organizational readiness AI Business Strategy in Practice: Real-world examples of AI-driven business transformations, Strategic decision-making with AI insights, Future trends and opportunities in AI and business strategy

Reference Books

- 1 Artificial Intelligence: A Modern Approach, Stuart Russell and Peter Norvig , 2021, Pearson.
- 2 Competing in the Age of AI, Marco Iansiti and Karim R. Lakhani, 2020, Harvard Business Review Press.
- 3 Deep Learning, Ian Goodfellow, Yoshua Bengio, and Aaron Courville, 2017, MIT Press.
- 4 Decision Intelligence Analytics, P. Mary Jeyanthi, Tanupriya Choudhury, 2022, Springer.

23MRAC02M - AI STRATEGY AND GOVERNANCE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAC02M	AI STRATEGY AND GOVERNANCE	ASG	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and articulate the key concepts and components of AI strategy within engineering organizations.	2	PO1
CO2	Understand and analyse AI governance frameworks and policies, considering ethical, legal, and societal implications	2	PO2
CO3	Apply risk management strategies for AI projects, identifying potential risks and mitigation approaches	3	PO3
CO4	Formulate and implement AI strategies that align with organizational goals and regulatory requirements	4	PO4, PSO1, PSO2

Syllabus

Foundations of AI Strategy and Governance: Introduction to AI Strategy and Governance, Overview of AI in engineering, Importance of AI strategy, Key governance issues in AI. AI Strategy Fundamentals: Defining AI strategy, Components of a successful AI strategy, Case studies of AI strategy in engineering. AI Governance Frameworks: Overview of AI governance, Regulatory and compliance aspects, International standards and best practices

Ethical and Societal Considerations: Ethical Considerations in AI: Ethical implications of AI, Bias and fairness in AI, Privacy and data protection. Legal and Societal Implications of AI: Legal frameworks for AI, Societal impacts of AI, Role of public policy in AI governance. AI Risk Management: Identifying risks in AI projects, Risk assessment methodologies, Developing risk mitigation strategies.

AI Strategy Implementation: AI in Organizational Strategy: Integrating AI with business strategy, AI-driven innovation and competitive advantage, Strategic planning for AI implementation. Case Studies and Applications: Real-world applications of AI in engineering, Success stories and lessons learned, Group discussions and presentations. AI Policy Development: Crafting AI policies, Policy implementation and monitoring, Role of stakeholders in policy development

Advanced Topics and Future Trends: AI Governance in Practice: Best practices for AI governance, Tools and technologies for governance, Continuous improvement in AI governance. Future Trends in AI Strategy and Governance: Emerging trends and technologies, Future challenges and opportunities, Preparing for the future of AI. Course Review and Final Project Presentations: Review of key concepts, Final project presentations, Course wrap-up and feedback

Reference Books

- 1 Artificial Intelligence: A Guide for Thinking Humans, Melanie Mitchell, 1st Edition, 2019, Farrar, Straus and
- 2 The Ethics of Artificial Intelligence, Nick Bostrom and Eliezer Yudkowsky, 1st Edition, 2014, Cambridge University Press.
- 3 AI Superpowers: China, Silicon Valley, and the New World Order, Kai-Fu Lee, 1st Edition, 2018, Houghton Mifflin Harcourt.
- 4 HBR Guide to AI Basics for Managers, Eric Siegel, 2023, Harvard Business Review Press.

23MRAC03M - SUCCESSFUL AI STRATEGIES : A CEO'S PERSPECTIVES (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAC03M	SUCCESSFUL AI STRATEGIES : A CEO'S PERSPECTIVES	SAI	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the strategic importance of AI in business leadership. Learn to articulate a clear AI vision and foster an AI-centric culture within an organization	2	
CO2	Analyze the skills to align AI initiatives with business objectives and build cross-functional teams. Gain insights into creating and implementing robust data strategies	3	PO1
CO3	Understanding the knowledge of the technological infrastructure required for scalable AI solutions. Understand the ethical considerations and social responsibilities associated with AI	2	PO6
CO4	Analyze the ability to measure and improve the performance of AI initiatives. Learn to plan and execute scalable AI strategies for global expansion	3	PO4

Syllabus

Introduction to AI in Business Overview of AI and its Impact on Industries AI Trends and Future Prospects Workshop: Identifying AI Opportunities in Various Sectors Vision and Leadership Articulating Fostering an AI Creating an AI Vision Statement for a Business -Centric Culture a Clear AI Vision

Strategic Integration Aligning AI with Business Objectives Building Cross-Functional AI Teams Successful AI Integration Case Studies Proposing AI Projects Aligned with Business Strategies Data Strategy Data Collection and Quality Data Governance and Security Designing a Data Strategy for AI Implementation

Technology and Infrastructure Scalable AI Infrastructure Emerging AI Technologies Insights from Leading Tech Companies Developing an AI Infrastructure Plan

Ethical AI and Social Responsibility Ethical Considerations in AI AI for Social Good Creating an Ethical AI Policy for an Organization Performance Measurement and Scalability Key Performance Indicators for AI Planning for Scalability and Global Expansion Presenting AI Strategies and Implementation Plans

Reference Books

- 1 "Artificial Intelligence: A Guide for Thinking Humans", Melanie Mitchell, 1 1984, Amazon Books.
- 2 "Artificial Intelligence: A Guide for Thinking Humans", Ajay Agrawal, Joshua Gans, and Avi Goldfarb, 1 2001, Taylor and Fransis.
- 3 "Human + Machine: Reimagining Work in the Age of AI", by Paul R. Daugherty and H. James Wilson, 1 2012, Amazon Books.
- 4 "Competing in the Age of AI: Strategy and Leadership When Algorithms and Networks Run the World", Marco Iansiti and Karim R. Lakhani, 1 2008, Harvard Business School.

23MRAC04M - CRAFTING A COMPETITIVE ADVANTAGE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAC04M	CRAFTING A COMPETITIVE ADVANTAGE	CCA	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts of competitive advantage.	2	PO1
CO2	Understand the role of innovation, differentiation, and cost leadership in competitive environment.	2	PO4
CO3	Apply the concept of competitive environment and market dynamics for decision making.	3	PO5
CO4	Apply the strategic initiatives to create and sustain competitive advantage for organisations.	3	PO5

Syllabus

Introduction to Competitive Advantage: Definition and Importance of Competitive Advantage, Historical Perspectives, Core Concepts: Value Creation, Value Capture Industry Analysis and Competitive Forces: Porter's Five Forces Framework Industry Structure and Profitability

Internal Analysis and Resource-Based View: Resource-Based View (RBV) of the Firm, Core Competencies and Capabilities, VRIO Framework (Value, Rarity, Imitability, Organization) Strategy Formulation: Cost Leadership and Differentiation Cost Leadership Strategy Differentiation Strategy Focus Strategy

Innovation and Disruption: Role of Innovation in Competitive Advantage, Disruptive Innovation Theory, Blue Ocean Strategy Sustaining Competitive Advantage: Barriers to Imitation, Dynamic Capabilities, Continuous Improvement

Strategic Alliances and Partnerships: Role of Strategic Alliances in Competitive Advantage, Types of Alliances: Joint Ventures, Partnerships, Mergers Global Strategies for Competitive Advantage: Globalization and Competitive Advantage Multinational vs. Global Strategies Cross-Cultural Considerations

Reference Books

- 1 Competitive Advantage: Creating and Sustaining Superior Performance, Porter, M. E. , 1985, Free Press.
- 2 Firm Resources and Sustained Competitive Advantage, Jay B. Barney, 1991, Journal of Management, Sage Publications.
- 3 Blue Ocean Strategy: How to Create Uncontested Market Space and Make the Competition Irrelevant, W. Chan Kim and Ren?e Mauborgne, 2015, Harvard Business Review Press.
- 4 Essentials of Strategic Management: The Quest for Competitive Advantage, John E. Gamble, Arthur A. Thompson Jr., and Margaret A. Peteraf, 2018, McGraw-Hill Education.

23MRAG01 - INTRODUCTION TO GAME MATH (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAG01	INTRODUCTION TO GAME MATH	IGM	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the solid foundations of basic arithmetic, algebra, geometry, and trigonometry, essential for implementing game mechanics and algorithms.	1	PO1, PO3
CO2	Explore the principles of coordinate geometry, trigonometry, and vectors to solve complex problems in mathematical and practical contexts, demonstrating a deep understanding of the underlying concepts.	2	PO2, PO4
CO3	Apply mathematical concepts such as vectors, matrices, and quaternions to solve practical problems in 2D and 3D game development, including transformations, rotations, and collision detection.	3	PO1, PO3
CO4	Analyze to integrate mathematical knowledge with game design and development, creating functional game mechanics, realistic physics simulations, and efficient algorithms for AI and procedural generation.	4	PO2

Syllabus

Introduction to the course and its objectives, Overview of game development and the role of mathematics, Basic arithmetic operations, Order of operations (PEMDAS/BODMAS), Basic Algebra, Variables and constants Solving linear equations, Functions and their graphs, Geometry Fundamentals, Points, lines, and angles, Basic 2D and 3D shapes, Perimeter, area, and volume.

Coordinate Geometry, Cartesian coordinate system, 1D, 2D, 3D, Left hand and right hand coordinate system, Left and Right hand rotation rule, Plotting points and lines, Distance formula and midpoint formula, Introduction to Trigonometry, Understanding sine, cosine, and tangent, Right triangle relationships, Basic trigonometric identities, Vectors in 2D, Definition and properties of vectors, Vector addition, subtraction, Dot product and applications.

Linear Algebra Basics, Introduction to matrices, Matrix operations (addition, subtraction, multiplication), Transformations: Translation, rotation, scaling, Advanced Trigonometry, Trigonometric functions and their graphs, Inverse trigonometric functions, , Solving trigonometric equation.s

Analyze to introduce Quaternions, Understanding quaternions and their advantages, Basic quaternion arithmetic, Using quaternions for 3D rotations, Probability and Randomness, Basic probability theory, Random number generation, Probability distributions, Graph Theory Basics, Graphs and networks, , Pathfinding algorithms (introduction to A*), State machines and their uses in AI.

Reference Books

- 1 Essential Mathematics for Games and Interactive Applications , James M. Van Verth , Lars M. Bishop , 3rd edition , A K Peters/CRC Press .
- 2 Computer Graphics: Principles and Practice , ohn Hughes , Andries van Dam, Morgan McGuire , David Sklar , James Foley, Steven Feiner , Kurt Akeley, 3rd edition , Addison-Wesley Professional .
- 3 3D Math Primer for Graphics and Game Development , Fletcher Dunn , 2nd edition , A K Peters/CRC Press .
- 4 Mathematics for 3D Game Programming and Computer Graphics , Eric Lengyel , 3rd edition , Cengage Learning, Inc .

23MRAG02 - DRAWING BASICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAG02	DRAWING BASICS	DBS	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Introduction of drawing concepts & utilities	2	PO1
CO2	The necessity of drawing to compositing new ideas in a practical way with proper examples	2	PO2
CO3	The techniques of drawing for various purposes and planning of compositions and its expressions. From anatomy to contemporary contours students must learn the variations and its utilities	3	PO3

Syllabus

Cultural Drawing: Different civilizations approach withdrawing from Cave paintings, medieval art, and design, Folk art, traditional arts, pre, and postindependence art, and contemporary art practice. Transformation Drawing: Process of converting an idea

Animation & game Oriented Drawing: Caricature, Character Design, Still and motion drawings, story board preparation- content oriented script based. Aero Dynamic Drawing: Product Design oriented and Auto mobile Dynamic Design operation according to science principles

Environment composition preparation with drawings suitable for various fields

Reference Books

- 1 Heads, Features and Faces (Dover Anatomy for Artists, George B Bridgman, 5 February 2016, Echo Point Books & Media; Reprint ed..
- 2 Drawing: A Complete Guide (Art of Drawing, Giovanni Civardi, 10 March 2010, Search Press; Illustrated.
- 3 The Big Book of Realistic Drawing Secrets: Easy Techniques for drawing people, animals, flowers, Carrie Stuart Parks, 16 May 2009, North Light Books.
- 4 History of ART, H.W. Jonson, January 1, 1962, Thames Hudson.

23MRAG03 - GRAPHIC DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAG03	GRAPHIC DESIGN	GDS	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the different Design techniques and their relative advantages of logo design, Stationery design, Marketing Collateral designs, of different applications.	2	PO1
CO2	Understand Design basics principles and advanced techniques in Graphic design for present different industry needs	2	PO2
CO3	Apply different Design techniques and their relative advantages of Creating 3-D Packages in Illustrator and Photoshop, Editing photographs for use in for projects, of different applications.	3	PO3

Syllabus

Graphic Design interaction of text and image, Typography and images to design magazine layouts, Fundamental components of graphic communication,

Graphic design independent and creative solutions to a series problems

Exposure to contemporary design issue, History of Graphic design , design process, creative brainstorming, conceptualizing, critical thinking, collaboration, and presentation, Print stage using Adobe Photoshop.

Reference Books

- 1 The Graphic Design Bible: The definitive guide to contemporary design, Theo Inglis , 28 September 2023, Ilex Press.
- 2 Digital Creative'S Survival Guide: Everything You Need for a Successful Career in Web, App, Multimedia and Broadcast Design H, Paul Wyatt , 31 May 2013, HOW Books.
- 3 The History of Graphic Design, Julius Wiedemann , 29 March 2022, Taschen America .
- 4 Design Basics, Stephen penthak, 1 January 2017, Wadsworth Pub Co.
- 5 Inspirations for Graphic Design from India, Jaya Jaitly & Dimple Bahl, 5 November 2023, Arthshila Trust.
- 6 Logo Modernism , Jens Muller, 26 October 2022, Taschen GmbH.

23MRAG04 - CONCEPTS OF 3D (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAG04	CONCEPTS OF 3D	C3D	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand about 3D interface environment and its functioning	1	PO1
CO2	Explore the basics of 3d interface and 3d environment design	2	PO1, PO2, PO4
CO3	Apply basic level 3d interface and its tools for design	3	PO2, PO3
CO4	Analyze basic level 3d interface and its tools for design and Animation	4	PO4

Syllabus

Introduction about the 3D environment, Installing Maya, Introduction about the Maya user interface

Understand the Maya 3D scene, Components and attributes Introduction to Modeling using 2D reference images, for making a polygon models

Applying 3D procedural texture nodes, and apply Textures using Adobe Photoshop Introduction to Lighting, the concepts of Scene and Mood of the scene like Day & Night

Analyze basics of joints and types of IK Handles, skinning & types fitting skeletons to a mesh. Generating Basic character Animation as referred in Autodesk Maya.

Reference Books

- 1 Introducing Autodesk Maya , Dariush Derakhshani, 1st Edition 2015, Sybex.
- 2 Autodesk Maya 2020 Basics Guide, Kelly Murdock, 1st Edition, SDC Publications.
- 3 Mastering Autodesk Maya 2016, Todd Palamar, 1st Edition, Sybex.
- 4 Maya Professional Tips and Techniques, Lee Lanier, 1st Edition, Sybex.

23MRAP01M - INTRODUCTION TO ANTHROPOLOGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAP01M	INTRODUCTION TO ANTHROPOLOGY	ITA	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the development of a systematic study of humans and their societies. and holistic Science: An interdisciplinary approach that considers all aspects of human life.	2	
CO2	Understand regarding defining anthropology and outlining its areas of study. & the impact of colonialism on the development and practice of anthropology.	2	
CO3	Understand the evolution and growth of the study of human biological diversity and evolution & human societies, cultures, and their development.	2	
CO4	Understanding the historical evolution of applied anthropology and its practical applications & Investigating the impact of anthropological research on policy development and governance practices.	2	

Syllabus

Emergence of Anthropology 2. Holistic Science 3. Understanding Diversity and Variation 4. Issues Related to the Study of Diversity and Variation: Racism and Ethnic Conflict 5. Understanding Diversity and Variation in the Indian Context 6. Comparative Study of Culture and Population 7. Development of Comparative Method in Social Anthropology 8. Relevance of Comparative Method: Present Perspective Suggested readings 1. Mair, Lucy. 1972. An Introduction to Social Anthropology. Oxford: Oxford University Press. 2. Srinivas, M.N. (ed). 1958. Methods in Social Anthropology: Select Essays by A.R. Radcliffe Brown. Chicago: University of Chicago Press.

MEANING, SCOPE AND BACKGROUND 1. Introduction 2. Anthropology, its Meaning and Scope 3. Anthropology and its Background 4. Anthropology as a Natural and Social Science 5. Anthropology and Colonialism 6. Holistic Perspective: Cultural and Biological Suggested readings: 1. Tylor, Edward B. (1881) 1921. Anthropology: An Introduction to the Study of Man and Civilization. New York: D. Appleton and Co. 2. Encyclopedia Britannica, Book of the Year. Chicago: Encyclopedia Britannica.

BRANCHES OF ANTHROPOLOGY -Physical/Biological Anthropology-History and Development Fields of Study ,Socio-cultural Anthropology, Archaeological Anthropology Linguistic Anthropology-,Suggested Reading Ember, Carol R., Melvin R. Ember and Peter N. Peregrine. 2010. Anthropology (13th Edition). Ontario: Pearson Education Canada.

Anthropology-As an Applied Discipline. History and its Development, its Present Scenario, Emerging Fields in Anthropology ,Anthropology in Management and Corporate World , Anthropology in Policy Making and Governance,Suggested Reading Giovannini, Maureen J. and Lynne M.H. Rosanky (eds). 1990. Napa Bulletin 9: Anthropology and Management Consulting: Forging a New Alliance. Virginia: American Anthropological Association Lewis I.M. 2004. History and Social Anthropology. London: Routledge. Majumdar, D. N. 1958. Race and Culture of India. Bombay: Asia Publishing House.

Reference Books

- 1 An Introduction to Social Anthropology , D.N.Majumdar, T. N. Madan, 9th Edition, Jan'2020, Mayur Books DELHI.
- 2 An Introduction To Anthropological Thought , Makhan Jha, 7th Edition 2018, S Chand Delhi.
- 3 Anthropology, Peter N. Peregrine Carol R. Ember, Melvin R. Ember, 10th Edition 2022, Pearson Education.

23MRAP02M - CULTURAL EVOLUTION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAP02M	CULTURAL EVOLUTION	CET	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the development from prehistoric to protohistoric periods, including contributions of tribal cultures and major religious impacts.	2	
CO2	Understand the traditional and changing social systems, settlement patterns, inter-caste relations, agrarian relations, and the impact of globalization.	2	
CO3	Understand the issues faced by Scheduled Castes, Scheduled Tribes, and Other Backward Classes.	2	
CO4	Comparative study of tribal communities in India and other countries.	2	

Syllabus

Evolution of the Indian Culture and Civilization, Prehistoric during Paleolithic, Mesolithic, Neolithic and Neolithic Chalcolithic, Protohistoric during Indus Civilization. Pre Harappan, Harappan and post Harappan cultures. Contributions of the tribal cultures to Indian civilisation. Palaeo, Anthropological evidence from India with special reference to Siwaliks and Narmada basin (Ramapithecus, Sivapithecus and Narmada Man). Ethno-archaeology in India: The concept of Ethnoarchaeology; Survivals and Parallels among the hunting, foraging, fishing, pastoral and peasant communities including arts and crafts producing communities. Demographic profile of India Ethnic and linguistic elements in the Indian population and their distribution. Indian population factors influencing its structure and growth. The structure and nature of the traditional Indian social system Varnashrama, Purushartha, Karma, Rina and Rebirth. Caste system in India Structure and characteristics Varna and caste, Theories of origin of caste system, Dominant caste, Caste mobility, Future of caste system, Jajmani system. Tribe-case continuum. Sacred Complex and Nature-Man-Spirit Complex. . Impact of Buddhism, Jainism, Islam and Christianity of Indian society.

Emergence, growth and development in India Contributions of the 18th, 19th and early 20th Century scholar, and administrators. Contributions of Indian anthropologists to tribal and caste studies. Indian Village Significance of village study in India; Indian village as a social system; Traditional and changing patterns of settlement and inter-caste relations; Agrarian relations in Indian villages; Impact of globalization on Indian villages. Linguistic and religious minorities and their social, political and economic status. Indigenous and exogenous processes of socio and cultural change in Indian society: Sanskritization, Westernization, Modernization; Inter-play of little and great traditions; Panchayati Raj and social change; Media and Social Change.

Tribal situation in India Bio-genetic variability, linguistic and socio-economic characteristics of the tribal populations and their distribution. Problems of the tribal Communities Land alienation, poverty, indebtedness, low literacy, poor educational facilities, unemployment, under-employment, health and nutrition. Developmental projects and their impact on tribal displacement and problems of rehabilitation. Development of forest policy and tribals. Impact of urbanisation and industrialization on tribal populations. Problems of exploitation and deprivation of Scheduled Castes, Scheduled Tribes and Other Backward Classes. Constitutional safeguards for Scheduled Tribes and Scheduled Castes. Social change and contemporary tribal societies: Impact of modern democratic institutions, development programmes and welfare measures on tribals and weaker sections. The concept of ethnicity; Ethnic conflicts and political developments; Unrest among tribal communities; Regionalism and demand for autonomy; Pseudo-tribalism. Social change among the tribes during colonial and post-independent India.

Impact of Hinduism, Buddhism, Christianity, Islam and other religions on tribal societies. Tribe and nation-state a comparative study of tribal communities in India and other countries. History of administration of tribal areas, tribal policies, plans, tribal development programmes and their implementation. The concept of PTGs (Primitive Tribal Groups), their distribution, and special programmes for their development. Role of N.G.O.s in tribal development. Role of anthropology in tribal and rural development. Contributions of anthropology to the understanding of regionalism, communalism and ethnic and political movements.

Reference Books

- 1 An Introduction To Social Anthropology , D.N. Majumdar and T.N. Madan , 9th Edition Jan'2020, Mayoor Delhi.
- 2 Cultural Evolution, Ronald F. Inglehart, University of Michigan, Ann Arbor, 7th Edition 2018, Cambridge University Press.
- 3 Primitive Culture , Edward Burnett Tylor, 10Edition 2022, Legare Street Press .

23MRAP03M - HUMAN ECOLOGY AND ECOLOGICAL ANTHROPOLOGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAP03M	HUMAN ECOLOGY AND ECOLOGICAL ANTHROPOLOGY	HEEA	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles of human ecology.	2	PO3, PO6, PO9, PSO1
CO2	Understand the impact of human activities on natural environments	2	PO3, PO6, PO9, PSO1
CO3	Evaluate strategies for sustainable resource management.	2	PO3, PO6, PO9, PSO1
CO4	Apply ecological concepts to contemporary environmental issues.	2	PO3, PO6, PO9, PSO1

Syllabus

Introduction to Human Ecology Overview of human ecology Key concepts and definitions Ecological Principles
 Basic ecological concepts (ecosystems, biomes, energy flow) Human impact on ecological systems Population Dynamics
 Human population growth Effects of population on resource consumption and environmental impact Resource
 Management Types of resources (renewable vs. non-renewable) Strategies for sustainable resource management

Environmental Health Interaction between environmental factors and human health Pollution and its effects on health
 Climate Change and Human Systems Understanding climate change Impacts on agriculture, water resources, and
 human settlements Urban Ecology Urbanization and its ecological impacts Sustainable urban planning Human
 Adaptation and Resilience How humans adapt to environmental changes Case studies of adaptation strategies
 Environmental Policy and Ethics Environmental policy frameworks Ethical considerations in environmental decision-
 making Future Directions in Human Ecology Emerging issues and technologies Review and future trends

Introduction to Ecological Anthropology Overview of ecological anthropology Key concepts and methods Theoretical
 Frameworks Theories in ecological anthropology (e.g., cultural ecology, political ecology) Major scholars and their
 contributions Cultural Adaptation to Environments Case studies of cultural adaptation Adaptation strategies in different
 environments (e.g., deserts, rainforests) Traditional Ecological Knowledge Definition and significance Examples from
 various cultures Human-Environment Interactions How cultural practices affect environmental management Rituals,
 taboos, and conservation practices

Resource Management and Sustainability Indigenous resource management practices Comparative analysis with modern
 practices Globalization and Environmental Change Impact of globalization on local environments and cultures Case
 studies of cultural and environmental change Fieldwork Methods in Ecological Anthropology Ethnographic methods
 Challenges and ethical considerations in fieldwork Policy and Advocacy Role of anthropologists in environmental
 advocacy Case studies of successful interventions Review and Future Directions Emerging trends in ecological
 anthropology Review of key concepts and theories

23MRAR01 - FUNDAMENTALS OF MACRO-ECONOMICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAR01	FUNDAMENTALS OF MACRO-ECONOMICS	FME	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the nature and scope of macroeconomics and various concepts related to national income.	2	PO1, PSO1
CO2	Understand the consumption and investment functions.	2	PO4
CO3	Apply the concept of money and banking framework in India.	3	PO3
CO4	Analyse the phenomenon of inflation and business cycle in macro economics trend and pattern.	4	PO5, PSO1

Syllabus

National Income Meaning Definitions: National Income, GNP & NNP, GDP & NDP, Personal Income (PI), Disposable Income (Di), Per Capita Income (PCI), Real National Income (RNI) Methods of Estimation of National Income (NI) Measurement of National Income in India Recent Trends in National Income

Trade cycles Meaning and definition Phases of a trade cycle Inflation Definition Types of Inflation Causes and effects of inflation Measures to control inflation Inflation and Un Employment Types and Estimates. Philips Curve.

Concept of aggregate consumption Factors influencing consumption functions private vs public consumption- average and marginal property to consumer multiplier concept. Investment Function concept savings function.

Money Meaning, functions and Classification of Money M1, M2, M3, M4, Supply of Money, and Demand for Money Functions of Commercial banks credit creation- credit control methods. Central Banking System, Monetary Policy, Fiscal Policy.

Measure the macro Economics indicators like employment and inflation, GNP and other relative factors , which influences economy .

23MRAR02 - BASICS OF ECONOMETRICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAR02	BASICS OF ECONOMETRICS	BOE	R	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Nature of Econometrics and Economic Data Definition of Econometrics, Steps in Empirical Economic Analysis, Econometric Model.	2	PO5, PSO1
CO2	Understand the two Variable Linear Regression Model: Assumptions, Estimation of Parameters, Tests of Significance and Properties of Estimators, Functional forms of Regression models	2	PO2, PO9, PSO2
CO3	Application of the econometrics identifying the problems like Multicollinearity, Autocorrelation and consequences in simple as well as multiple linear regression models.	3	PO5, PSO1
CO4	Analyse the data by using testing multiple linear restrictions using the F-test, relationship between F and t statistics, the R-squared form of the F-statistic, and computing p-values for F tests:	4	PO2, PO9

Syllabus

Introduction, Nature of Econometrics and Economic Data Definition of Econometrics, Steps in Empirical Economic Analysis, Econometric Model, The Role of Measurement in Economics, The Structure of Economic Data: Cross-Sectional data, Time Series data, Pooled Cross Section data, Panel Data. Classical Linear Regression Model.

Introduction, Nature and scope of Econometrics, Definition of the Simple regression Model, Simple Regression Model Two Variable Linear Regression Model: Assumptions, Estimation of Parameters, Tests of Significance and Properties of Estimators, Functional forms of Regression models, Loglinear models, Semi log- models and Reciprocal models, Choice of Functional Form.

Econometric Problems, Multicollinearity- Nature, consequences, detection and remedial measures, Autocorrelation, Nature, consequences, detection, and remedial measures Heteroskedasticity, Nature, consequences, detection and remedial measures. Inference; Introduction, Sampling Distribution of the OLS Estimators, Testing Hypotheses about a Single Population parameter: The t Test, Confidence Intervals, Testing Hypotheses about a Single Linear Combination of the Parameters, Testing Multiple Linear Restrictions.

The F Test, Relationship between F and t Statistics, The R-Squared Form of the F Statistic, Computing p-Values for F Tests, The F Statistic for Overall Significance of a Regression, Testing General Linear Restrictions; Reporting Regression Results, Summary.

- 4 On Writing: A Memoir of the Craft, Stephen King, 2 June 2020, Scribner.

23MRCA02 - DRAWING AND SKETCHING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCA02	DRAWING AND SKETCHING	DAS	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To understand the drawing anatomy ,Skull planes, Masses, Details, Proportions, Portraiture, Compositional Analysis, Theories, and treatments.	2	PO1
CO2	Understand various kinds of Mediums in drawing for painting & sculpting	2	PO2
CO3	Apply the principles and theories of Drawing to the contemporary ideas and experiments to get new forms and new meanings .	3	PO3

Syllabus

Skull planes, Masses, Details, Proportions, Portraiture, Compositional Analysis, Theories, and treatments. Unit-I Anatomy Drawing: Starting from the construction of skull-planes and masses of head, details such as eyes, nose, mouth, etc. Relative proportions amongst head, neck, and shoulders. The student has to prepare for every part of the body like the skull, Torso, legs, hands, body in movement, foreshortening views, etc detailed study of Bone, muscle, the contour of human, animal, and bird. Freehand Sketching: At least 10 sketches daily related to the subject assignments to improve their ability towards the professional way.

Cultural Drawing: Different civilizations approach withdrawing from Cave paintings, medieval art, and design, Folk art, traditional arts, pre, and post-independence art, and contemporary art practice. Transformation Drawing: Process of converting an idea into drawing with aesthetic values, specific rules and regulations use full for creative and innovative design ideas

Animation Oriented Drawing:Caricature,Character Design,Still and motion drawings ,story board preparation-content oriented script based. Aero Dynamic Drawing:Product Design oriented and Auto mobile Dynamic Design operation according to science principles. Advertising Drawings : Ad making traditional practice and also with Photoshop soft ware Creative Drawing: Contemporary Art treatments and Art theories .

Reference Books

- 3 The Big Book of Realistic Drawing Secrets: Easy Techniques for drawing people, animals, flowers and nature , Carrie Stuart Parks , Jun 13 2009, Rick Parks.
- 4 The Complete Book of Poses for Artists: A comprehensive photographic and illustrated reference book for learning to draw more than 500 poses , Ken Goldman, 16 January 2017, Walter Foster Publishing.

23MRCA03 - PAINTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCA03	PAINTING	PNT	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental processes of visual perception and artistic expressions from the art works of great artists series	2	PO1
CO2	Understand the painting mediums and various methodologies from history of art	2	PO2
CO3	Apply the techniques, processes into art making with the support of history of art evaluation	3	PO3

Syllabus

DRAWING (MANMADE & NATURE): Study from manmade objects and nature with emphasis on construction. Perspective and rendering in linear and massive drawing. Experience with material quality for feel, Values in grey, Texture and colour in rendering.

Art practices through history of art from prehistoric to 20th century traditional and folk art

Apply the aesthetics with 20th century ART Practices and also study in past- present ideologies in Indian & western cultures

Reference Books

- 1 Chinese Techniques of Water Colour,, Lian Quan Zhen, 2020, North Light Books, Cincinnati, Ohio, China -2002.
- 2 History of art , HW jason , 2019, johnson & jonson.
- 3 Drawing and Painting: Materials and Techniques for Contemporary Artists, Kate Wilson , 2017, Thames & Hudson.
- 4 Modern Acrylic: A contemporary exploration of acrylic painting (Modern Series), Blakely Little , 2 October 2018, Walter Foster Publishing.

23MRCA04 - CREATIVE WRITING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCA04	CREATIVE WRITING	CWT	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop original and compelling narratives, characters, and dialogue suitable for film and media projects.	3	PO1
CO2	Apply industry-standard formatting and techniques to write professional-quality scripts and screenplays for various media formats.	3	PO6
CO3	Critique and revise their own and peers' creative works, providing constructive feedback and implementing revisions to enhance the overall quality of the writing.	3	PO8

Syllabus

The Power of Story: Understanding the importance of storytelling in film and media. Elements of Story Structure: Exploring the Three-Act Structure, plot points, and narrative arcs. Developing Engaging Characters: Creating dynamic characters, including protagonists, antagonists, and supporting roles. Screenplay Formats and Conventions: Learning industry-standard formatting for scripts and screenplays. Writing Effective Dialogue: Techniques for crafting authentic and compelling dialogue.

Genre and Audience Considerations: Writing for different genres (e.g., drama, comedy, thriller) and understanding target audiences. Scene Construction and Sequencing: Building effective scenes and sequencing them for maximum impact. Visual Storytelling: Using descriptions and actions to convey visual elements and emotions. Adaptation Techniques: Adapting existing works (e.g., books, plays) into screenplays and scripts. Feedback and Revision: Techniques for revising and improving scripts based on feedback.

Self-Editing Techniques: Methods for self-revision, focusing on structure, clarity, and coherence. Peer Review Workshops: Participating in peer review sessions, learning to give and receive constructive feedback. Final Project: Revising and polishing a substantial piece of creative writing for publication or presentation, incorporating feedback and self-editing techniques.

23MRCL03 - INSOLVENCY AND BANKRUPTCY LAW (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCL03	INSOLVENCY AND BANKRUPTCY LAW	IBL	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	A comprehensive knowledge of bankruptcy and insolvency laws.	2	
CO2	Understand international bankruptcy and dispute resolution regarding cross-border insolvency.	2	
CO3	Understand the procedures to be followed in case of corporate insolvency.	2	
CO4	Analyse the new Insolvency and Bankruptcy Code, 2016 and its implication.	3	
CO5	Analyse the implications of Insolvency and Bankruptcy laws.	3	

Syllabus

Origin and Development of bankruptcy and insolvency law - need of bankruptcy and insolvency law

Companies Act; 1956 RDBFI Act, 1993; SARFAESI Act, 2002; SICA Act, 1985; The Presidency Towns Insolvency Act, 1909; The Provincial Insolvency Act, 1920; Chapter XIII of the LLP Act, 2008; Corporate Debt Restructuring Scheme, Strategic Debt Restructuring, and Scheme for Sustainable Structuring of Stressed Assets

Challenges in the Transition to the New Insolvency and Bankruptcy Code

Contemporary issues

Reference Books

- 1 The Law of Insolvency in India, Sir. Dinshaw Fardunji Mulla, 2013, Lexis Nexis.
- 2 Guide to Insolvency and Bankruptcy Code 2016, Sir. Dinshaw Fardunji Mulla, 2017, Taxmann Publications Pvt. Ltd.
- 3 Commentary on the Insolvency and Bankruptcy Code, 2016, Manzar Saeed, 2017, Lexis Nexis.
- 4 Personal Insolvency in the 21st Century: A Comparative Analysis of the US and Europe, Iain Ramsay, 2017, Hart Publishing.
- 5 Guide to SARFAESI Act 2002 & Recovery of Debts and Bankruptcy Act 1993, Murdoch, 2016, Taxmann Publications Pvt. Ltd.

23MRCL04 - COMPETITION LAW AND PRACTICE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCL04	COMPETITION LAW AND PRACTICE	CLP	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic principles of fair competition and constitutional perspectives.	2	PO6
CO2	Differentiate various types of anti-competitive practices	2	PO1
CO3	Understand and able to conduct research on emerging trends in competition law.	2	PO2
CO4	Analyse the international perspectives of competition law.	3	
CO5	Analyse the role Competition Act, 2002 in regulating anti-competitive practices, promote fair competition and enforcement procedures.	3	PO5

Syllabus

History of Competition law, Development in UK and US, An Overview of Legal Framework in USA and UK and EC

Competition law in India History and Development of Competition Law in India - Sachar Committee, MRTP Act - Salient features and its amendment in 1991 - Liberalization and Globalization - Raghavan Committee Report

The Competition Act, 2002: An Overview of Competition Law in India - Important Definitions under the Competition Act, 2002 Anti- Competitive Agreements under the Competition Act, 2002

Authority : Enforcement Mechanisms under the Competition Act, 2002 ; Competition Commission of India ; Constitution of the CCI ; Powers and Functions, Jurisdiction of the CCI , adjudication and appeals - Director General , Competition Appellate Tribunal- Enforcement Mechanisms under the EU, UK and US Laws.

Reference Books

- 1 Commentary on the MRTP Law, Competition Law & Consumer Protection Law, S. M. Dugart, 2006, 4th Edition, Wadhwa & Co.
- 2 Competition Law & Cartels, P. S. Prasad, 2007, 10th Edition, The ICFAI University.
- 3 An introduction Guide to EC Competition Law & Practice, Valentine Korah, 2007, 2nd Edition, Hart Publishers.
- 4 Competition Law and Practice, D. P. Mittal, 2010, 5th Edition, Taxman Publications (P.) Ltd.
- 5 The Political Economy of Competition Law in Asia, Mark Williams, 2013, 8th Edition, Edward Elgar Publishing.

23MRCM01 - LINEAR ALGEBRA (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCM01	LINEAR ALGEBRA	LAG	R	2	2	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop vector matrices and operations, properties of scaling and addition, matrix multiplication, generalized vectors.	3	PO1
CO2	Apply the concepts of linear Equations and solve system of linear equations with matrix methods,	3	PO3
CO3	Apply the concepts of Transposes and Inverses Column Picture of Matrix Multiplication named Algorithms Pivots, Ranks, Inverses and built the orthonormal basis by Gram Smith Orthogonalization process	3	PO5
CO4	Identify the concepts of Eigen vectors invariant subspaces and Jordan Normal Forms Algorithms, Singular Value Decomposition and Fundamental Spaces and SVD	3	PO5

Syllabus

Introduction, Numerical Computations, Functions, Equations and Linearity, Linearity the Big Picture Vectors, Matrices and Their Operations Vectors Vector Operations Linear Independence of Vectors Matrices, Matrix Operations, Properties of Scaling and Addition, Matrix Multiplication, Generalized Vectors.

Transposes and Determinants Transpose of a Matrix Definitions and Matrices with Special Properties, Determinant of a Matrix Numerical Computations Gaussian Elimination Solvability of System of Linear Equations Gaussian Elimination Applications of Gaussian Elimination More Examples beyond Gaussian Elimination Ranks and Inverses of Matrices Rank of a Matrix, Gauss Jordan Elimination Inverse of a Matrix Left and Right Inverses, Cramers Rule Algebraic View of Linear Algebra.

IVector Spaces, Basis and Dimensions Linear Combinations, Vector Spaces and Subspaces Basis and Dimensions, Geometry of Linear Equations, Change of Basis, Orthogonally and Gram-Schmidt, Basis and Components Change of Basis Basis of Subspaces, Orthogonally Gram Schmidt Process Rotation Matrices A Generalization Product Rules: Transposes and Inverses Column Picture of Matrix Multiplication Named Algorithms Pivots, Ranks, Inverses and Determinants Two Geometries the Four Fundamental Spaces, Column Space Null Space, Row Space Left Null Space Computing the Four Fundamental Subspaces Summary of the Four Spaces Computing the Spaces Review, Complete Solutions.

Projection, Least Squares and Linear Regression Projection Revisited, Projection to Subspace Meaning of Projection Linear Regression. Eigenvalue Decomposition and Diagonalization Definition and Notation Examples of Eigenvalues and Eigenvectors Computing Eigenvalues and Finding Eigenvectors Properties Unit Circles and Ellipses Diagonalization Fibonacci Numbers Applications of Eigenvalues and Eigenvectors Special Matrices, Similarity and Algorithms, Real, Symmetric Matrices Hermitian Matrices Eigen Properties of Hermitian Matrices Markov Matrices Positive Definite Matrices Gram Matrix, Matrix Similarity, Jordan Normal Forms Algorithms, Singular Value Decomposition What SVD Does How SVD Works Why SVD Is Important Fundamental Spaces and SVD

Reference Books

- 2 Discrete Mathematics and Its Applications, Kenneth H. Rosen, 7, McGraw-Hill, a business unit of The McGraw-Hill Companies-2012.
- 3 Linear Algebra, K. Hoffman and R. Kunze, 2, Prentice Hall of India-2005.
- 4 Linear Algebra Done Right, Axler, 2, Springer UTM 1997.

23MRCM02 - ADVANCED NUMERICAL ANALYSIS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCM02	ADVANCED NUMERICAL ANALYSIS	ANA	R	2	2	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Compute the largest and small eigen values of a matrix using different methods.	3	PO1, PO3, PO5, PSO1, PSO2
CO2	Demonstrate the initial value problems, inverse interpolating and finite difference method.	3	PO1, PO3, PO5, PSO1, PSO2
CO3	Explain nature of the elliptic, parabolic and hyperbolic partial differential equations.	3	PO1, PO3, PO5, PSO1, PSO2
CO4	Apply collocation, least squares, and Rayleigh-Ritz methods to obtain the solution of initial value problems	4	PO1, PO3, PO5, PSO1, PSO2

Syllabus

Computations of Eigen Values of a Matrix Power method for dominant, sub-dominant and smallest eigen-values, Method of inflation, Jacobi, Givens and Householder methods for symmetric matrices, LR and QR methods. Initial Value Problems Multistep methods, their error analysis and stability analysis.

Inverse interpolation their developments and applications Finite Difference Review of finite difference operators finite difference methods. Elliptic PDE Five point formulae for Laplacian, replacement for Dirichlet and Neumanns boundary conditions, curved boundaries

Solution on a rectangular domain blocks tri-diagonal form and its solution using method of Hockney, condition of convergence. Parabolic PDE Concept of compatibility, convergence and stability, Explicit, full implicit, Crank Nicholson, du-Fort and Frankel scheme, ADI methods to solve two-dimensional equations with error analysis.

Hyperbolic PDE Solution of hyperbolic equations using FD, and Method of characteristics, Limitations and Error analysis. Weighted residual methods Collocation, least squares, Galerkins, Rayleigh Ritz methods and their compatibility.

Reference Books

- 1 Applied Numerical Analysis, Gerald, C. F. and Wheatly P. O, 6TH EDITION, Addison-Wesley Publishing, 2002.
- 2 Numerical Solution of Partial Differential Equations, Smith, G. D, 2001, Oxford University Press..
- 3 Numerical Solution of Differential Equations, . Jain, M. K, 1991, John Wiley..
- 4 Applied Numerical Analysis, . Fausett, L. V, 2nd Ed. 2007, Prentice Hall,.
- 5 Introduction to Numerical Analysis, Froberg, C. E, 2nd Ed. 2004, Addison Wesley..

23MRCM03 - MATHEMATICAL MODELLING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCM03	MATHEMATICAL MODELLING	MML	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply difference equations to model and solve real life problems.	3	PO1, PO3, PSO1
CO2	Apply method of least squares for the best fitting linear and nonlinear models.	3	PO1, PO3, PSO1
CO3	Apply simulation modeling to Interpret real life problems.	3	PO1, PO3, PSO1
CO4	Apply mathematical modelling through differential equations	3	PO1, PO3, PSO2
CO5	Verify the solution of the equations using MATLAB	3	PO4, PSO2

Syllabus

Modeling Change, Proportionality, and Geometric Similarity: Modeling Change with Difference Equations, A Savings Certificate, Mortgaging a Home, Approximating Change with Difference Equations, Solutions to Dynamical Systems. Mathematical Models, Modeling Using Proportionality, Modeling Using Geometric Similarity

To apply Method of least squares to Model Fitting: Fitting Models to Data Graphically, Analytic Methods of Model Fitting, Applying the Least-Squares Criterion, Choosing a Best Model, Vehicular Stopping Distance, Comparing the Criterion. Determining a Production Schedule. Simulation Modeling: Simulating Deterministic Behavior, Area Under a Curve, Generating Random Numbers, Simulating Probabilistic Behavior, Inventory Models

To Model and solve differential Equation: Population Growth, Graphical Solutions of Autonomous Differential Equations, Drawing a Phase Line and Sketching Solution Curves, Logistic Growth, Numerical Approximation Methods, Using Euler's Method

To apply difference equation to model and solve a Savings Certificate Revisited, Separation of Variables, Newton's Law of Cooling, Population Growth with Limited Resources, Graphical Solutions of Autonomous Systems of First-Order Differential Equations, A Competitive Hunter Model, A Predator-Prey Model.

To Apply MATLAB to validate the solutions of the mathematical equations

Reference Books

- 1 Mathematical Modelling, Kapur J. N, 1, New Age International Publishers, 2007.
- 2 Mathematical Modelling Models, Analysis and Applications, Banerjee Sandip, 1, CRC Press, Taylor & Francis Group, 2014.
- 3 A first course in mathematical modeling, Giordano, F. R., Fox W. P., and Horton S. B., 1, Brooks/Cole, 2014.
- 4 A concrete approach to mathematical modeling, Mesterton-Gibbons, M., 1, Addison-Wesley.

23MRCM04 - STOCHASTIC PROCESSES & OPTIMIZATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCM04	STOCHASTIC PROCESSES & OPTIMIZATION	SPO	R	2	2	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Utilize the concept of Markov process and Poisson Process. solve real life applications	3	PO1, PO2, PSO1
CO2	Apply Queueing models and Demonstrate the concepts of Brownian motions and applications	3	PO1, PO2, PSO1
CO3	Construct LPP and solve LPP. Model and solve Transportation and Assignment problems.	3	PO1, PO2, PSO1
CO4	Apply Geometric programming and Ant-colony Optimization and PSO. Solve decision making techniques to solve real life problems.	3	PO1, PO2, PSO1

Syllabus

Discrete-Time Markov Models: Discrete-Time Markov Chains, Transient Distributions, Occupancy Times, Limiting Behavior, First-Passage Times. Poisson Processes: Poisson Processes, Superposition of Poisson Processes, Thinning of a Poisson Process, Compound Poisson Processes. Continuous-Time Markov Models: Continuous-Time Markov Chains, Transient Analysis: Uniformization, Occupancy Times, Limiting Behavior, First-Passage Times. Generalized Markov Models: Renewal Processes, Cumulative Processes, Semi-Markov Processes.

Queueing Models: Queueing Systems, Single-Station Queues, Birth and Death Queues. Brownian Motion: Standard Brownian Motion, Brownian Motion, First-Passage Times, Martingales and Semimartingales, Black Scholes Formula.

Introduction to LPP: Formulation of LP models, Graphical procedure of solution, Convex functions and their properties, Basic feasible solution, Optimal solution. Simplex method, Transportation Problems: VAM Method, Optimality Test, Degeneracy, Unbalanced Transportation problem, Assignment problems, Travelling salesman problem. Integer LPP - Branch and Bound Algorithm, Cutting Plane Algorithm.

Geometric Programming: Problems with one-degree of difficulty with positive coefficients, Geometric programming with constraints, Problems with positive and negative coefficients. Heuristic and Meta heuristics, Single solution vs. population-based, Parallel meta heuristics, Evolutionary algorithms, Nature-inspired meta heuristics, Genetic Algorithm, Ant-colony optimization, Particle swarm optimization, Simulated annealing.

Reference Books

- 1 Operations Research: An Introduction, Taha H A, 9 Edition, 2012, MacMillan Pub Co.
- 2 Optimization, Rao s s, 4 Edition, 2019, Wiley Eastern India.
- 3 Linear Programming, Hadley E, Paper Back, 2013, Addison-Wesley.
- 4 Operations Research: Principles and Practice, Ravindran, A., Phillips, D.T. and Solberg, J.J, 2 Edition, 2007, John Wiley and Sons.
- 5 Introduction to Operation Research, Hillier F.S. and Lieberman G.J, 9 Edition, 2018, Mc Graw Hill.

23MRCM05 - FUZZY MATHEMATICS AND ITS APPLICATIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCM05	FUZZY MATHEMATICS AND ITS APPLICATIONS	FMAA	R	2	2	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts of fuzzy sets and fuzzy logic.	2	PO1
CO2	Apply the various operations on fuzzy sets and their properties.	3	PO1
CO3	Apply fuzzy logic to real-world problems and systems.	3	PO2
CO4	Apply fuzzy techniques in various fields such as control systems, decision-making, and pattern recognition.	3	PO2

Syllabus

Introduction to Fuzzy Sets and Systems Classical Sets vs. Fuzzy Sets Definition and examples of fuzzy sets Membership functions Basic operations on fuzzy sets Union, intersection, and complement T norms and T conorms Properties of fuzzy sets Convexity, normality, and support.

Fuzzy Relations and Fuzzy Logic Fuzzy Relations Definition and examples Operations on fuzzy relations Composition of fuzzy relations Fuzzy Logic Introduction to fuzzy propositions Fuzzy connectives Fuzzy inference rules.

Fuzzy Inference Systems Mamdani Fuzzy Models Structure of a fuzzy inference system Fuzzification and defuzzification methods Sugeno Fuzzy Models Linear and constant outputs Comparison between Mamdani and Sugeno models Applications in control systems Design of fuzzy controllers Real-world examples Applications of Fuzzy Mathematics Decision Making with Fuzzy Information Fuzzy decision-making models Multi-criteria decision making.

Fuzzy Pattern Recognition Fuzzy clustering algorithms Fuzzy C-means algorithm Fuzzy Systems in Engineering Fuzzy logic in control engineering Applications in industrial automation Fuzzy Optimization Introduction to fuzzy optimization problems Solution techniques Fuzzy Neural Networks Basics of neural networks Integration of fuzzy logic and neural networks.

Reference Books

- 1 Fuzzy Logic with Engineering Applications, Timothy J. Ross, 1, (1995), Wiley.
- 2 Introduction to Fuzzy Sets and Fuzzy Logic, M. Ganesh, 2, (2006), Prentice Hall India Learning Private Limited.

- 4 Fuzzy Set Theory and Its Applications, H J Zimmermann, 1, (1985), Springer.

23MRDM01M - FUNDAMENTALS OF DIGITAL MARKETING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRDM01M	FUNDAMENTALS OF DIGITAL MARKETING	FDM	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the key concepts of digital marketing to understand the digital customer	3	PO2, PSO1
CO2	Apply Digital marketing communication and channel mix	3	PO3, PSO1
CO3	Apply the key Components of digital marketing	3	PO5, PSO2
CO4	Analyse the Digital Business Present and future marketing concepts	4	PO7, PSO2

Syllabus

: Fundamental Need Scope of Digital marketing Traditional v. Digital Marketing the Opportunity of Digital Marketing Characteristics of Digital Marketing Implications of Digital Marketing Digital marketing framework delivering enhanced customer value market opportunity analysis and digital services development ASCOR digital marketing framework Application of digital marketing critical success factor for digital marketing

Designing the communications mix Marketing communications steps to creating marketing communication strategy developing communications messaging communication mix across digital channels. Introduction to digital marketing channels- Search marketing Display marketing social media marketing Partner direct content and platform based marketing channels

Website marketing Search engine marketing online marketing email marketing blog marketing social media marketing Audio video and interactive marketing mobile marketing public relations multimedia marketing.

The Indian view India digital spend overview India digital advertising spend key digital advertising trends in India India Digital marketing/tools landscape Digital marketing emerging trends and concepts Big data and IoT B2B and SMB SoLoMo. Career in Digital Marketing- Emerging opportunities for digital marketing professionals The changing role of CMO in Organisations Building a career in Digital marketing Top Digital marketing areas as career tracks Approaching a career in digital marketing.

Reference Books

- 1 Fundamentals of Digital marketing , Puneet Singh Bhatia, 3, 2019, Pearson Indian Publisher.
- 2 B2B Digital marketing , 2. Michael Miller , 2015, Pearson Indian Publishe.
- 3 Social Media Marketing Successfully For Beginners Create Successful Campaigns Gain More Fans And Boost Sales., F R Media, 2018, Pearson.
- 4 Digital Marketing, Kailash Chandra Upadyaya, 2016, Notion Press.

23MRDM02M - SOCIAL MEDIA MARKETING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRDM02M	SOCIAL MEDIA MARKETING	SMM	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental principles and concepts of social media marketing.	2	PO11
CO2	Understand different social media platforms to identify the most appropriate ones for specific marketing goals	2	PO11
CO3	Apply and manage social media campaigns using tools and techniques to optimize reach and engagement	3	PO11
CO4	Analyse the effectiveness of social media campaign	4	PO11

Syllabus

Overview of Social Media Marketing-Definition and significance-Evolution of social media-Differences between traditional and social media marketing. Social Media Platforms-Major platforms-Facebook, Twitter, Instagram, LinkedIn, YouTube, Pinterest. Social Media Ethics and Legal Considerations-Ethical issues in social media marketing-Legal regulations and compliance- Privacy and data protection.

Consumer Behavior in Social Media-Understanding social media users-Consumer decision-making process-Trends in social media usage- Platform demographics and user behaviors. Creating a Social Media Strategy- Setting goals and objectives- Identifying target audience-Selecting the right platforms.

Content Creation and Management- Content Marketing Fundamentals-Importance of content in social media-Types of content text, images, videos, infographics. Content Creation Techniques. Engagement Strategies-Building community and fostering engagement-Responding to comments and messages-Managing negative feedback-Influencer and Affiliate Marketing-Identifying and collaborating with influencers-Measuring influencer impact.

Social Media Analytics-Campaign Management and Optimization-Analytics and Reporting. Overview of analytics tools-Google Analytics, platform-specific analytics-Data collection and interpretation-Measuring ROI and campaign effectiveness

Reference Books

- 1 Digital Marketing, Seema Gupta, 3rd Edition 2022, McGraw Hill.
- 2 Social Media Marketing, Tracy L. Tuten, Michael R. Solomon, Bikramjit Rishi, 3rd Edition 2023, SAGE Publications India Pvt Ltd.

23MRDM03M - SERACH ENGINE OPTIMIZATION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRDM03M	SERACH ENGINE OPTIMIZATION	SEO	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To examine and explore the role and importance of search engine optimization in today's rapidly changing business environment	2	PO2
CO2	To know the key elements of a digital marketing strategy	2	PO2
CO3	Use optimization tools and metrics to analyze strategies, and effectively manage and improve SEO efforts.	4	PO2
CO4	To demonstrate advanced practical skills in search engine optimization	4	PO2

Syllabus

Search Engine Basics What Is a Search Engine Anatomy of a Search Engine Query interface Crawlers, spiders, and robots Databases Search algorithms Retrieval and ranking Characteristics of Search Classifications of Search Engines Primary search engines Secondary search engines Targeted search engines Putting Search Engines to Work for You Manipulating Search Engine Creating an SEO Plan Understanding Why You Need SEO Setting SEO Goals Creating Your SEO Plan Prioritizing pages Site assessment Finishing the plan Follow-up Understanding Organic SEO Achieving Organic SEO Web-site content Google Analytics Internal and external links User experience Site interactivity

Building Your Site for SEO Page elements Understanding Web-Site Optimization Domain-naming tips Understanding usability Components of an SEO-Keywords and Your Web Site The Importance of Keywords Picking the Right Keywords Taking Advantage of Organic keywords PayperClick and SEO How Pa-perClick Works Determining visitor value Putting pay-per-click to work Pay-per-Click Categories Service pay-per-click Keyword suggestion tools Choosing Effective Keywords Maximizing PayperClick Increasing Keyword Success Managing Keyword and PPC Campaigns Keyword Tools and services Tagging Your Web Site The Content Piece of the Puzzle Understanding the Role of Links and Linking

Optimizing Search Strategies Adding Your Site to Directories Pay for Inclusion Services Robots Spiders and Crawlers The Truth About SEO Spam Adding Social Media Optimization Automated Optimization

SEO Beyond the Launch Using Content Management Systems SEO Problems and solutions Content scraping Click fraud Analysing Success Analysing SEO Successes Managing SEO expectations www.it-ebooks.info Find yourself Analysing web stats Competitive Analysis Conversion Analysis Analysing Server Logs

Reference Books

- 4 Mastering Search Engine Optimization , E m agency, 2023, E m agency.

23MRDM04M - ARTIFICIAL INTELLIGENCE IN MARKETING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRDM04M	ARTIFICIAL INTELLIGENCE IN MARKETING	AIM	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of AI and machine learning in marketing.	2	PO7
CO2	Explore how AI is used for customer segmentation, targeting, and personalization	3	PO7
CO3	Analyze the role of AI in content creation, recommendation engines, and marketing automation. .	4	PO7
CO4	Discuss the ethical considerations and challenges of using AI in marketing.	4	PO7

Syllabus

Introduction to AI in Marketing Understanding AI and Machine Learning, The Marketing Landscape and AI Integration, Benefits and Challenges of AI in Marketing, Customer Segmentation with AI, Predicting Customer Behavior

AI-powered Marketing Automation Building Customer Profiles with AI, Personalization and Hyper-personalization, Chatbots and Virtual Assistants in Marketing, Content Creation with AI (e.g., AI-powered copywriting)

AI in Marketing Channels AI for Search Engine Optimization (SEO) and Marketingm Optimizing Paid Advertising with AI, AI-driven Social Media Marketing, Dynamic Pricing Strategies with AI.

The Future of AI in Marketing AI-powered Recommendation Engines, Optimizing Marketing Mix with AI, Emerging AI Trends and Applications, Ethical Considerations of AI in Marketing, The Future of Human-AI Collaboration

Reference Books

- 1 Marketing Artificial Intelligence: AI, Marketing, and the Future of Business, Paul Roetzer and Chris Kaput, 2022, Matt Holt.
- 2 Artificial Intelligence for Marketing Management, Thaichon Quach, 1, Routledge.
- 3 Artificial Intelligence for Marketing: Practical Applications , Christopher Penn, 1, Wiley.
- 4 "Artificial Intelligence in Marketing", Andreas Kaplan, 1st Edition (2019), Routledge.

23MRFA01M - FOUNDATIONS AND APPLICATIONS OF FINANCIAL TECHNOLOGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFA01M	FOUNDATIONS AND APPLICATIONS OF FINANCIAL TECHNOLOGY	AFT	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the historical context and evolution of financial technology.	2	PO2
CO2	Understand key technologies driving the FinTech revolution.	2	PO3
CO3	Understand the impact of FinTech on traditional financial services.	2	PO6
CO4	Develop practical skills through case studies and project-based learning.	2	PO6

Syllabus

Introduction to Financial Technology, History and Evolution of FinTech Overview of the financial services industry, Key drivers of FinTech innovation, Blockchain and Cryptocurrencies: Introduction to blockchain technology, Cryptocurrencies: Bitcoin, Ethereum, and others. Applications of blockchain in financial services and Regulatory and security issues

Digital Payments and Remittances: Evolution of payment systems, Mobile payments and digital wallets, Cross-border remittances and Case studies: PayPal, Venmo, and others Peer-to-Peer Lending and Crowdfunding, Overview of peer-to-peer (P2P) lending, Crowdfunding platforms and models Risk management and regulatory challenges and Case studies: LendingClub, Kickstarter, and others

Robo-Advisors and Wealth Management: Introduction to robo-advisors, Algorithms and AI in wealth management, Benefits and limitations of automated financial advice and Case studies: Betterment, Wealth front, and others. InsurTech: Innovation in Insurance, Overview of InsurTech Data analytics and AI in insurance, Personalized insurance products and Case studies: Lemonade, Oscar Health, and others

RegTech and Compliance: Introduction to RegTech, Technologies for regulatory compliance, Anti-money laundering (AML) and Know Your Customer (KYC) solutions and Case studies: Onfido, ComplyAdvantage, and others Cybersecurity in Financial Services: Importance of cybersecurity in FinTech Common threats and vulnerabilities, Security protocols and technologies and Case studies: Equifax breach, other relevant incidents

Reference Books

- 1 The Financial Technology Handbook for Investors, Entrepreneurs, and Visionaries, usanne Chishti and Janos Barberis, 1st Edition (2016), Wiley.
- 2 A Non-Technical Introduction in 25 Steps, Daniel Drescher, 1st Edition (2017), Apress.
- 3 Digital Finance: Big Data, Startups, and the Future of Financial Services, Baxter Hines, 1st Edition (2020), Wiley.
- 4 Handbook of Blockchain, Digital Finance, and Inclusion, Volume 1: Cryptocurrency, FinTech, InsurTech, and Regulation, David Lee Kuo Chuen and Robert Deng, 1st Edition (2017), Academic Press.

23MRFA02M - DECENTRALISED FINANCE: THE FUTURE OF FINANCE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFA02M	DECENTRALISED FINANCE: THE FUTURE OF FINANCE	DFFF	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental principles and technologies underlying DeFi.	2	PO2
CO2	Examine the key components and technologies behind DeFi.	3	PO3
CO3	Analyze the risks, challenges, and opportunities associated with DeFi.	3	PO4
CO4	Analyze the regulatory and legal aspects of DeFi.	4	PO5

Syllabus

Introduction to Decentralized Finance: Overview of traditional finance vs. decentralized finance, History and evolution of DeFi, Key components and terminology. Blockchain Technology and Cryptocurrencies: Fundamentals of blockchain technology, Overview of major cryptocurrencies (Bitcoin, Ethereum, etc) , Role of blockchain in DeFi.

Components of DeFi: Cryptocurrencies and Tokens, Bitcoin, Ethereum, and Altcoins, Introduction to Smart Contracts: Definition and Importance of Smart Contracts, Smart Contracts Work.

Decentralized Exchanges (DEXs), Functioning of DEXs (e.g., Uni swap, Sushi Swap), Lending and Borrowing Platforms, Aave, Compound, Yield Farming and Liquidity Mining, Stable coins and Synthetic Assets, Types and Uses of Stable coins. DeFi Security and Risk Management: Security Challenges in DeFi, Common Vulnerabilities and Hacks, Risk Management Strategies.

Regulatory and Legal Aspects of DeFi: Overview of Global Regulatory Landscape, Regulatory Frameworks for Cryptocurrencies, Legal Challenges and Considerations, Future of DeFi Regulation, Future Trends and Innovations: Emerging Trends in DeFi, Potential Disruptions in Traditional Finance. Predictions and Future Directions.

Reference Books

- 1 DeFi and the Future of Finance, Campbell R. Harvey, Ashwin Ramachandran, and Joey Santoro, 1st Edition, 2021, Wiley.
- 2 Bitcoin and Cryptocurrency Technologies: A Comprehensive Introduction, rvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller, and Steven Goldfeder, 1st Edition, 2016, Princeton University Press.
- 3 Mastering Blockchain: Unlocking the Power of Cryptocurrencies, Smart Contracts, and Decentralized Applications", Imran Bashir, 2nd Edition, 2020, Packt Publishing.
- 4 The Bitcoin Standard: The Decentralized Alternative to Central Banking, Saifedean Ammous, 1st Edition, 2018, Wiley.

23MRFA03M - FINTECH INNOVATIONS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFA03M	FINTECH INNOVATIONS	FIV	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fintech landscape including its history evolution and impact on the financial industry.	2	PO1
CO2	Understand the role of artificial intelligence (AI) and machine learning (ML) in fintech	2	PO4, PO5
CO3	Understand blockchain technology and its applications, with a particular focus on cryptocurrencies and their role in the fintech sector.	2	PO4, PO5
CO4	Understand the innovations in digital payments and lending, new business models and technologies transforming these areas.	2	PO4, PO5

Syllabus

Introduction to Fintech: History and Evolution of Fintech Key Drivers of Fintech Innovation Major Fintech Segments (Payments, Lending, Wealth Management, Insurtech, Regtech) Fintech Ecosystem (Startups, Incumbents, Regulators) Key Technologies in Fintech (Blockchain, AI, Big Data, APIs) Case Studies of Successful Fintech Companies

AI and Machine Learning in Fintech: Introduction to AI and Machine Learning Applications of AI in Financial Services (Robo-Advisors, Fraud Detection, Credit Scoring) Natural Language Processing (NLP) and Chatbots in Fintech Predictive Analytics and Customer Insights Algorithmic Trading and Wealth Management Ethical Considerations and Bias in AI. Case Studies of AI in Fintech

Blockchain and Cryptocurrencies: Fundamentals of Blockchain Technology Consensus Mechanisms (Proof of Work, Proof of Stake) Cryptocurrencies (Bitcoin, Ethereum, Altcoins) Initial Coin Offerings (ICOs) and Tokenization Decentralized Finance (DeFi) Regulatory and Compliance Issues in Cryptocurrencies Security and Risk Management in Blockchain

Digital Payments and Lending: Evolution of Digital Payments (Mobile Payments, E-wallets) Real-time Payments and Cross-border Transfers Peer-to-Peer (P2P) Lending Platforms Crowdfunding and Alternative Lending Models Digital Banking and Neobanks Risk anagement and Fraud Prevention in Digital Payments Regulatory Considerations in Digital Payments and Lending

23MRFA04M - USING MACHINE LEARNING IN TRADING AND FINANCE (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFA04M	USING MACHINE LEARNING IN TRADING AND FINANCE	ML	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Able to apply TensorFlow to write small programs.	3	PO2
CO2	Able to Analyse the data using TensorFlow and Keras.	4	PO3
CO3	Able to Analyse the data using Momentum Trading using ML algorithms.	4	PO3, PSO1
CO4	Able to develop a Pair Trading Strategy.	4	PO3, PSO2

Syllabus

Introduction to Quantitative Trading and Machine Learning, Basic Trading Strategy Entries and Exits Endogenous Exogenous, Trading Strategy Building a Trading Model, Advanced Concepts in Trading Strategies, Welcome to Using Machine Learning in Trading and Finance, Introduction to TensorFlow, Introduction to TensorFlow, TensorFlow API Hierarchy, Components of tensorflow Tensors and Variables, Getting Started with Google Cloud Platform and Qwiklabs, Lab Intro Writing low-level TensorFlow programs, Working in-memory and with files, Training on Large Datasets with tf.data API, Getting the data ready for model training.

Training Neural Networks with TensorFlow2 and keras, Activation functions, Activation functions, it falls to avoid in Backpropagation, Neural Networks with Keras Sequential API, Serving models in the cloud, Lab Intro to Keras Sequential API, Neural Networks with Keras Functional API, Regularization Basics, Regularization: L1, L2, and Early Stopping, Dropout, Lab Intro to Keras Functional API.

Build a Pair Trading Strategy Prediction Model, Introduction to Pair Trading, Picking Pairs, Picking Pairs with Clustering, How to implement a Pair Trading Strategy, Evaluate Results of a Pair Trade, Backtesting and Avoiding Overfitting, Next Steps for Improvements to your Pairs Strategy, Lab Intro to Pairs Trading, Kalman Filter Introduction and Trading Applications. Co4: To develop a Pair Trading Strategy.

Build a Pair Trading Strategy Prediction Model, Introduction to Pair Trading, Picking Pairs, Picking Pairs with Clustering, How to implement a Pair Trading Strategy, Evaluate Results of a Pair Trade, Backtesting and Avoiding Overfitting, Next Steps for Improvements to your Pairs Strategy, Lab Intro to Pairs Trading, Kalman Filter Introduction and Trading Applications. Co4: To develop a Pair Trading Strategy.

23MRFM01 - FILM AESTHETICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFM01	FILM AESTHETICS	FAS	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze the formal elements of film (such as cinematography, mise-en-scène, editing, sound, and narrative structure) to understand how they contribute to the overall aesthetic experience.	4	PO8
CO2	Evaluate different film movements and styles, assessing their historical and cultural significance and their impact on contemporary cinema.	5	PO10
CO3	Apply critical and theoretical concepts to the analysis of films, demonstrating an understanding of aesthetic principles and their practical implications in filmmaking.	3	PO10

Syllabus

Introduction to Film Aesthetics: Defining aesthetics and its importance in film. Cinematography: The art of visual storytelling, including composition, lighting, and camera movement. Mise-en-scène: The arrangement of everything that appears in the frame, including settings, props, and actors. Editing: The techniques and impact of cutting, continuity editing, montage, and rhythm. Sound: The role of sound design, music, and dialogue in enhancing the filmic experience. Film Analysis Exercise: Watch a selected film and analyze its use of cinematography, mise-en-scène, editing, and sound.

Classical Hollywood Cinema: Narrative and stylistic conventions. European Art Cinema: Characteristics and key directors. Film Noir: Visual and thematic elements. New Wave Cinemas: French New Wave, New Hollywood, and other global movements. Experimental and Avant-Garde Film: Breaking the norms of narrative and form. Movement Analysis Exercise: Research and present on a specific film movement, highlighting its key characteristics and influence. Film Screening and Discussion: Watch a film from a notable movement and discuss its aesthetic and thematic contributions.

Classical Film Theory: Theoretical foundations laid by early film theorists. Contemporary Film Theory: Modern approaches and their relevance. Psychoanalytic Theory: Understanding the psychological underpinnings of film aesthetics. Feminist Film Theory: Examining gender representations and their aesthetic implications. Postmodernism in Film: Characteristics and examples of postmodern aesthetics. Theoretical Application Essay: Write an essay applying a specific theoretical framework to a film of choice. Group Debate: Debate the merits and limitations of different film theories in understanding film aesthetics.

Reference Books

- 4 Film theory: An introduction., Stam, R. , 2000, Wiley-Blackwell.

23MRFM02 - SCREEN WRITING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFM02	SCREEN WRITING	SWT	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop compelling narratives and well-structured scripts by applying key principles of screenwriting, including plot, character development, and dialogue.	3	PO1
CO2	Analyze and critique screenplays to identify strengths and areas for improvement, utilizing industry-standard formatting and storytelling techniques.	3	PO7
CO3	Create original screenplays that demonstrate an understanding of various genres, styles, and audience expectations.	3	PO3

Syllabus

Introduction to Screenwriting: Understanding the role and responsibilities of a screenwriter. Story Structure: The Three-Act Structure, plot points, and narrative arcs. Character Development: Crafting multidimensional characters, including protagonists, antagonists, and supporting roles. Creating Conflict: Techniques for building tension and driving the narrative forward. Screenplay Formatting: Industry-standard script formatting and conventions.

Writing Effective Dialogue: Crafting authentic and compelling dialogue. Scene Construction: Building effective scenes that advance the plot and develop characters. Genre and Style: Understanding different genres and writing styles. Visual Storytelling: Using descriptions and actions to convey visual elements and emotions. Revision Techniques: Strategies for revising and improving your screenplay.

Theme and Subtext: Incorporating deeper meanings and themes into your screenplay. Writing for Different Media: Adapting screenwriting techniques for television, web series, and other formats. Collaborative Writing: Working with directors, producers, and other writers. Pitching and Selling Scripts: Techniques for pitching your screenplay and navigating the business side of screenwriting. Final Draft and Polishing: Preparing your screenplay for submission.

Reference Books

- 1 Screenplay: The foundations of screenwriting., Field, S. , 2005, Delta.
- 2 Story: Substance, structure, style, and the principles of screenwriting., McKee, R., 1997, ReganBooks..
- 3 Writing screenplays that sell , Snyder, B. , 2005, Michael Wiese Productions..

23MRFM04 - SOUND DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFM04	SOUND DESIGN	SDS	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze the principles of sound design and their application in various media, including film, television, and interactive media.	4	PO3
CO2	Create and manipulate audio elements using industry-standard tools and techniques to enhance storytelling and audience engagement.	3	PO8
CO3	Evaluate the effectiveness of sound design in media projects, providing constructive feedback and incorporating revisions to improve the overall soundscape.	5	PO10

Syllabus

Introduction to Sound Design: The role and importance of sound in media. Basic Audio Theory: Understanding sound waves, frequency, amplitude, and timbre. Microphones and Recording Techniques: Types of microphones, placement, and techniques for capturing high-quality audio. Field Recording: Capturing natural and environmental sounds. Digital Audio Workstations (DAWs): Introduction to popular software for sound editing and mixing.

Sound Editing Techniques: Cutting, trimming, crossfading, and time-stretching. Sound Restoration and Noise Reduction: Cleaning up audio recordings. Creating Sound Effects: Foley, synthesis, sampling, and using sound libraries. Ambient and Environmental Sounds: Designing background sounds to enhance scenes. Sound Mixing Principles: Balancing audio elements, EQ, dynamics, and spatial effects.

Surround Sound and Immersive Audio: Techniques for creating immersive sound experiences. Dialogue and Voiceover: Recording, editing, and mixing dialogue and voice performances. Audio Effects and Processing: Reverb, delay, modulation, and other creative effects. Finalizing Sound Mixes: Mastering, exporting, and delivering sound for various platforms. Sound Design for Interactive Media: Implementing sound in video games, VR, and interactive installations.

23MRFT01 - INTRODUCTION TO FOOD SCIENCE AND TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFT01	INTRODUCTION TO FOOD SCIENCE AND TECHNOLOGY	IFST	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understand the basic principles of food science and technology	2	PO1, PO7, PO8
CO2	Determine the structure, composition, nutritional quality and postharvest changes of various plant foods.	3	PO1, PO7, PO8
CO3	Determine the structure and composition of various animal foods	3	PO1, PO7, PO8
CO4	Discover about various dairy products	3	PO1, PO7, PO8
CO5	Demonstrate use various basic food processing techniques with an aim to preserve the foods	3	PO1, PO7, PO8

Syllabus

historical evolution of food processing technology. Cereals and millets Structure and composition, properties and nutritional attributes of rice, wheat, maize, barley, millet and oats, malting, gelatinization of starch, types of browning Maillard & caramelization, rice parboiling of rice advantages and disadvantages.

Structure and composition of pulses, toxic constituents in pulses, processing of pulses soaking, germination, decortications, cooking and fermentation. Fats and Oils-classification of lipids, types of fatty acids saturated fatty acids, unsaturated fatty acids, essential fatty acids, trans fatty acids. Refining of oils, types- steam refining, alkali refining, bleaching, steam deodorization, and hydrogenation. Rancidity Types- hydrolytic and oxidative rancidity and its prevention.

Fruits and Vegetables-Classification of fruits and vegetables, general composition, enzymatic browning, names and sources of pigments, Dietary fiber. Post-harvest changes in fruits and vegetables Climacteric rise, horticultural maturity, physiological maturity, physiological changes, physical changes, chemical changes, pathological changes during the storage of fruits and vegetables.

Introduction to poultry and dairy sectors

Analzing the various characteristics of foods

Reference Books

- 2 Food Science, Roday,S, 2011, oxford publication.
- 3 Food science, Srilakshmi, 2002, New Age Publishers.
- 4 Outlines of Dairy Technology, De Sukumar, 2007, oxford publication press.

23MRFT02 - FOOD ANALYSIS AND QUALITY ASSURANCE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFT02	FOOD ANALYSIS AND QUALITY ASSURANCE	FAQA	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the analytical aspects of foods in quality and regulatory perspective.	2	PO3, PO5, PO6, PSO2
CO2	Apply the analytical methods for chemical and nutritional properties of foods.	3	PO3, PO5, PO6, PSO2
CO3	Apply the analytical methods for thermal and rheological properties of foods.	3	PO3, PO5, PO6, PSO2
CO4	Apply sensory and microbiological analysis on different processed foods.	3	PO3, PO5, PO6, PSO2
CO5	Analyze the project on Quality assurance	4	PO3, PO5, PO6, PSO2

Syllabus

Introduction to Food Analysis, Importance of various food components, purpose, sampling requirements. Quality different aspects of food analysis, Properties, parameters, methods, techniques. Regulatory aspects involved in the food analysis

Chemical and Physico-Chemical analysis of foods, Chemical analysis such as carbohydrate, protein, fat, mineral content analysis. Study on different physical properties such as colour, size, shape, composition and interfacial properties.

Different Thermal and Rheological Properties. Thermal properties such as transition (glass and melting) and degradation temperatures, thermal conductivity, specific heat and thermal diffusivity of different foods. Different rheological properties such as flow properties, studies on shear stress and shear rate in different foods.

Study on microbial effect in different types of foods. Study on microbial diseases transmitted through foods. Study of different sensory parameters, study on advanced sensory software tools. Study on advanced microbiological techniques.

Evaluate the project on Quality analysis including Practical Safety evaluation of foods for heavy metal content and pesticides residue, Analyse the water activity in different foods, Analyse the texture of different foods, Analyse the quality parameters of water, Evaluate the thermal properties of different foods, Analyse the flow properties of different foods, Evaluate the microbial quality of selected food products.

Reference Books

- 1 Handbook of Food Analysis Instruments , Semih Otles , 1st Edition, 2009, CRC Press.
- 2 Instrumental Methods in Food and Beverage Analysis, David L. B. Wetzel, George Charalambous, 1st Edition, 1998 , Elsevier.
- 3 Vitamin Analysis For The Health And Food Sciences, Ronald Ray Eitenmiller, Lin Ye, W. O. Landen, 2nd Edition, 2007, CRC Press.
- 4 Methods of Analysis of Food Components and Additives, Semih Otles, 2nd Edition, 2012, CRC Press.

23MRFT03 - FOOD SAFETY AND REGULATIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFT03	FOOD SAFETY AND REGULATIONS	FSR	R	3	1	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the overall concept of food safety , hazards	2	PO6, PO8
CO2	Apply the food safety regulations such as ISO and safety management systems like HACCP	3	PO6, PO8
CO3	Apply food safety measures to hazard control	3	PO6, PO8
CO4	Apply food safety management systems to hazard control	3	PO6, PO8

Syllabus

Definitions, Types of hazards, biological, chemical, physical hazards, Factors affecting Food Safety, Importance of Safe Foods. Physical and Chemical Food Hazards Introduction, Physical Hazards with common examples, Chemical Hazards Impact on health, Control measures

Biological Food Hazards Introduction, Indicator Organisms, Food borne pathogens: bacteria, viruses, eukaryotes, Seafood and Shell fish poisoning, Mycotoxins.

Hazard Management Need, Control of parameters, Temperature control, Food storage, Product design. Hygiene and Sanitation in Food Service Establishments Introduction, Sources of contamination, Control methods using physical and chemical agents, Waste disposal, Pest and Rodent Control, Personal hygiene, Food Safety Measures.

Food Safety Management Tools Concept, Prerequisites- GHPs ,GMPs, SSOPs etc, HACCP, ISO, TQM concept and need for quality, components of TQM, Kaizen Risk analysis, Accreditation and Auditing. Microbiological Hazards Microbiological standards and limits Microbiological Assessment and categories of food based on microbial quality, Sampling, Basic steps in detection of food borne pathogens, Water analysis, Assessment of Surface Sanitation and Personal Hygiene

Reference Books

- 2 Chemistry and Safety of Acrylamide in Food, Margareta T?rnqvist (auth.), Mendel Friedman, Don, 2005, MottramSpringer Science & Business Media,.
- 3 Food safety handbook, Ronald H. Schmidt, Gary E. Rodrick, 2003, Global Publishing House.
- 4 HACCP, Sara E. Mortimore, Carol Wallace, Christos Cassianos, Online, 2001, Cambridge University Press.
- 5 Food Plant Sanitation- Design, Maintenance, and Good Manufacturing Practices, Michael M Cramer, 2013, Taylor & Francis Group.

23MRFT04 - FOOD ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFT04	FOOD ENGINEERING	FEG	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand unit operations and plant design.	2	PO6, PO8
CO2	Apply principles of fluid flow to food processing	3	PO6, PO8
CO3	Apply principles of heat transfer.to food processing	3	PO6, PO8
CO4	Apply principles of phase change to food processing	3	PO6, PO8
CO5	Conduct Food Engineering Experiments to food processing	3	PO6, PO8

Syllabus

Unit Operations and Food Plant Design: Concept of Unit operation. Units and dimensions, Unit conversions, dimensional analysis. Mass and Energy Balance. Important considerations for designing of food plants, types of layouts. Equipment used in food industry.

Fluid Flowing Food Processing, Liquid Transport System

Heating and Cooling Systems Heating thermal properties of food, modes of heat transfer, application of steady state heat transfer, superheating. Heating equipment heat exchangers types, design characteristics. Refrigeration Concept, selection of a refrigerant, refrigeration cycle, sub cooling,

Steam, Evaporation and Dehydration: Steam Generation, construction and functions of fire tube and water tube boilers. Evaporations types, design of single effect evaporators, basic drying process, moisture content on wet basis and dry basis, design of dehydration systems

23MRGD01 - INTRODUCTION TO GRAPHIC DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRGD01	INTRODUCTION TO GRAPHIC DESIGN	IGD	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Students will be able to list and describe the fundamental principles and elements of graphic design.	2	PO1
CO2	Understand Students will be able to explain the significance of typography, color theory, and layout in creating effective designs	2	PO2
CO3	Apply Students will be able to apply basic design principles to create visually appealing and functional graphic design projects using industry-standard software.	3	PO3
CO4	Articulate Students will be able to analyze and critique the effectiveness of various graphic designs, identifying strengths and areas for improvement based on design principles	3	PO4
CO5	Analyze Students will be able to develop a comprehensive graphic design project, incorporating advanced techniques and original concepts to produce a professional-quality	4	PO5

Syllabus

Principles of Design: Balance, Contrast, Emphasis, Movement, Proportion, Rhythm, Unity

Exploration of typography and color theory as essential components of effective design. Typography: Typefaces, Fonts, Hierarchy, Legibility, Pairing

Understanding the arrangement of visual elements to create effective compositions.

Software Basics: Adobe Photoshop, Illustrator, InDesign, Digital Illustration: Vector vs. Raster Graphics, Pen Tool, Brush Tool

Portfolio Basics: Selecting Works, Presentation Techniques, Branding Critique Methods: Self-Critique, Peer Review, Professional Feedback

Reference Books

23MRGD02 - TYPOGRAPHY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRGD02	TYPGRAPHY	TPY	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the graphic design composition principles	2	PO1
CO2	Understand the types of typography utilities	2	PO2
CO3	Apply the Principles of Typography such as Typographic hierarchy ,Grid systems and layout principles ,Readability and legibility considerations in students projects	3	PO3

Syllabus

Type setting Techniques as Kerning, tracking, and leading Alignment and justification Optical adjustments vs. mechanical adjustments and also Typography and Branding Creating as typographic identity case studies of successful brand typography ,and also experience the Experimental Typography as Typographic art and installations

The Cultural influences on typography in different languages and also scripts of Ethical considerations in typography

The Typesetting Techniques as Kerning, tracking, and leading Alignment and justification Optical adjustments vs. mechanical adjustments and also Typography and Branding Creating as typographic identity case studies of successful brand typography ,and also experience the Experimental Typography as Typographic art and installations

23MRGD03 - VISUAL IDENTITY AND BRANDING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRGD03	VISUAL IDENTITY AND BRANDING	VIB	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basics of Design, Design culture and consumer behaviour and perception.	2	PO2, PO7
CO2	Apply the basics of design in branding	3	PO2, PO5, PO7
CO3	Create digital storytelling.	6	PO2, PO3, PO7

Syllabus

Introduction to design, elements of design, principles of design, gestalt's law, design culture, Visual design, negotiating visual identity, Understanding consumer behaviour, consumer perception, brand guidelines, law of perceptual organization..

Introduction to branding, color psychology, typography, typographic system brand guidelines, brand design, Logo design, package design, brand competitors, brand identity, brand repositioning,

Data Visualization, digital Storytelling, Case studies..

Reference Books

23MRGD04 - PRINT DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRGD04	PRINT DESIGN	PRDG	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Design basics understanding their properties and Recaptureing print media properties with important utilities in society	2	PO1
CO2	Study of Print techniques and their advantages	2	PO2
CO3	Mastery of raster graphics and photo editing techniques. Integrating Photoshop with InDesign for image-rich layouts.	3	PO3

Syllabus

prepress workflow and file preparation---Overview of printing techniques: screen printing, etc.

Print making Series of projects integrating learned principles (e.g., brochure, poster, book design). Emphasis on conceptualization, execution, and presentation.

Experimenting with traditional and contemporary press workflow and file preparation. Overview of printing techniques: offset, digital, screen printing, etc.

Reference Books

23MRIB01M - INTERNATIONAL BUSINESS ESSENTIALS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIB01M	INTERNATIONAL BUSINESS ESSENTIALS	IBET	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Introduction to International Business	2	PO1
CO2	International Trade and Investment	2	PO2
CO3	Global Market Entry Strategies	3	PO2
CO4	Cross-Cultural Management	3	PO3

Syllabus

Definition and scope of international business Globalization and its impact Theories of international trade

Comparative advantage and competitive advantage Trade policies and barriers Foreign direct investment (FDI)

Modes of entry: Exporting, licensing, franchising, joint ventures, wholly-owned subsidiaries Strategic alliances and partnerships

Cross-Cultural Management

Reference Books

23MRIB02M - INTERNATIONAL BUSINESS ENVIRONMENT (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIB02M	INTERNATIONAL BUSINESS ENVIRONMENT	IBEV	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Describe the fundamentals of international business and the global business environment.	2	PO7
CO2	Analyze the impact of political, economic, social, and technological factors on international business operations.	4	PO7, PO8
CO3	Evaluate different international trade theories and their application in global markets.	5	PO7
CO4	Formulate strategies for managing international business risks and leveraging global opportunities.	5	PO7

Syllabus

Introduction to International Business Environment: Overview of international business and globalization. Key drivers and challenges of globalization. Analysis of the global business environment, including political, economic, social, and technological factors. Case studies on the impact of globalization on businesses.

International Trade and Investment: Examination of international trade theories such as absolute advantage, comparative advantage, and Heckscher-Ohlin theory. Understanding trade policies, tariffs, and trade agreements. Foreign direct investment (FDI) and its role in global business. Case studies on successful international trade and investment strategies.

Cultural and Ethical Issues in International Business: Understanding cultural differences using frameworks like Hofstede's cultural dimensions and Trompenaars' model. Impact of culture on business practices and communication. Ethical issues in international business, including corruption and corporate social responsibility (CSR). Case studies on navigating cultural and ethical challenges.

International Business Strategy and Risk Management: Formulating and implementing international business strategies. Risk management in international business, including political risk, economic risk, and currency risk. Strategies for entering and expanding in global markets, such as exporting, joint ventures, and wholly owned subsidiaries. Case studies on strategic decision-making and risk management.

Reference Books

23MRIB03M - INTERNATIONAL BUSINESS OPERATIONS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIB03M	INTERNATIONAL BUSINESS OPERATIONS	IBO	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts and theories of international business.	2	PO1
CO2	Understand global business environment and its impact on business operations.	2	PO2
CO3	Apply the operational issues related to international trade, investment, and management.	3	PO6
CO4	Apply the strategies used by multinational enterprises (MNEs) in markets.	3	PO6

Syllabus

Introduction to International Business: Course overview and expectations, Globalization and its impact on business. Theories of International Trade and Investment: Comparative advantage and competitive advantage, Foreign direct investment theories.

The Global Economic Environment: Economic systems and development, International monetary system. Political and Legal Environment: Political systems and risk, Legal environment and regulatory issues.

Cultural Environment of International Business: Understanding cultural differences, Cross-cultural communication and negotiation. International Market Entry Strategies: Exporting, licensing, and franchising, Joint ventures and wholly-owned subsidiaries.

International Marketing and R&D: Global marketing strategies, International product development and R&D. Risk Management in International Business: Identifying and managing international business risks, Political and economic risk assessment.

Reference Books

23MRIB04M - INTERNATIONAL BUSINESS MODELS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIB04M	INTERNATIONAL BUSINESS MODELS	IBM	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate a clear understanding of the core concepts and principles of international business models.	2	PO11
CO2	Apply international business strategies and frameworks to real-world scenarios and case studies.	3	PO11
CO3	Analyze international market entry strategies and business operations in different cultural, economic, and political contexts.	4	PO6
CO4	Evaluate ethical issues and corporate social responsibility practices in international business settings.	5	PO8

Syllabus

Introduction to International Business - Overview of international business and globalization; Comparative advantage, trade barriers, and trade agreements; Global market dynamics.

International Business Strategies - Global, transnational, international, and multidomestic strategies; Strategic planning and implementation; real-world scenarios and case studies.

Market Entry Strategies - Exporting, licensing, franchising Joint ventures, strategic alliances, wholly owned subsidiaries; Cultural dimensions and frameworks; political and economic systems.

Legal and Ethical Issues in International Business - International business law and regulations, Corporate social responsibility and ethical considerations; Opportunities and challenges in emerging markets; Future trends in international business.

Reference Books

23MRID01 - INTRODUCTION TO INTERIOR DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRID01	INTRODUCTION TO INTERIOR DESIGN	IID	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand principles of interior design to conceptualize and propose layouts, lighting schemes, material selections, and furnishings that meet the functional and aesthetic requirements of various interior spaces.	2	PO1
CO2	Understand interplay of fundamental elements such as space, line, form, color, texture, and pattern in interior design, and apply this understanding to create cohesive and visually engaging interior spaces.	2	PO3
CO3	Understand fundamental principles of interior design, including balance, harmony, emphasis, rhythm, proportion, scale, and contrast, to develop aesthetically pleasing and functionally effective interior spaces.	2	PO3
CO4	apply the multifaceted role of interior designers, including client collaboration, concept development, layout creation, material and furnishing selection, and project oversight, while also demonstrating an understanding of industry trends, building codes, and sustainability practices essential for creating well-informed and effective interior designs.	3	PO5
CO5	Apply current trends and innovations in interior design, including sustainable design, smart home technology integration, biophilic design principles, flexible space concepts, and minimalistic approaches, in order to inform their design decisions and adapt to evolving industry practices.	3	, PSO2

Syllabus

Interior design is more than just arranging furniture and choosing colors. It is about creating spaces that are functional aesthetically pleasing, and reflect the personality and needs of the inhabitants. Interior designers work with architects contractors and clients to transform empty spaces into livable environments. They consider factors such as layout lighting materials and furnishings to enhance the quality of life within a space.

The Elements of Interior Design Several elements form the foundation of interior design. These include: Space: The foundation of any design, space defines the boundaries within which everything else exists. Line: Lines can create movement, define shapes, and guide the eye throughout a space. Form: Form refers to the shape and structure of objects within a space. Color: Color can evoke emotions, set moods, and visually expand or contract spaces. Texture: Texture adds depth and interest to a space, whether through fabrics, finishes, or materials. Pattern: Patterns add visual interest and can be used to create focal points or unify a space. Understanding how these elements interact is essential for creating harmonious and cohesive interior designs.

Principles of Interior Design In addition to understanding the elements, interior designers must also adhere to certain principles to create successful designs. These principles include: Balance: Achieving visual equilibrium through the distribution of elements within a space. Harmony: Creating a sense of unity and cohesion through the consistent use of elements and principles. Emphasis: Highlighting key elements or focal points to draw attention and create visual interest. Rhythm: Establishing a sense of movement and flow through repetition, progression, or alternation of elements. Proportion and Scale: Ensuring that the size of objects and elements within a space is appropriate to the overall context. Contrast: Using differences in elements such as color, texture, or form to create visual impact and drama. By applying these principles, designers can create spaces that are visually appealing, functional, and comfortable.

The Role of the Interior Designer Interior designers play a crucial role in the design and execution of interior spaces. They collaborate with clients to understand their needs, preferences, and budget constraints. Designers then develop concepts, create layouts, select materials and furnishings, and oversee the implementation of the design plan. Additionally, interior designers must stay abreast of industry trends, building codes, and sustainability practices to ensure that their designs meet both aesthetic and functional requirements.

Trends and Innovations in Interior Design The field of interior design is constantly evolving, influenced by changes in technology, culture, and lifestyle. Some current trends include: **Sustainable Design:** Increasing emphasis on environmentally friendly materials and practices. **Smart Home Technology:** Integration of technology to enhance comfort, convenience, and energy efficiency. **Biophilic Design:** Incorporating elements of nature into interior spaces to promote well-being and connectivity to the environment. **Flexible Spaces:** Designing multifunctional spaces that can adapt to changing needs and activities. **Minimalism:** Simplified, clutter free designs that emphasize clean lines and functionality.

23MRID02 - SPACE PLANNING AND LAYOUT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRID02	SPACE PLANNING AND LAYOUT	SPL	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand fundamental principles of space planning in interior design, including analyzing spatial requirements, identifying client needs, determining functional requirements, and maximizing space efficiency through the strategic arrangement of furniture and fixtures, while also considering circulation flow, zoning, and the incorporation of flexible design elements to create functional and aesthetically pleasing interiors.	2	PO1
CO2	Understand fundamental design principles such as balance, proportion, scale, and rhythm to create effective spatial layouts. Students will analyze how these principles influence spatial arrangements and make informed design decisions accordingly.	2	PO3
CO3	Understand interior spaces into functional zones based on user activities and requirements. Students will learn techniques for creating clear spatial divisions while ensuring smooth transitions between zones to enhance usability and flow within the space.	2	PO3
CO4	Apply spatial layouts to accommodate multi-functional uses, maximizing flexibility and adaptability. Students will explore methods for incorporating versatile spaces that can serve varying purposes, thereby enhancing the overall functionality of the design	3	PO4
CO5	Apply furniture arrangement strategies to enhance both ergonomic usability and visual appeal within a space. Through the consideration of focal points, traffic patterns, and ergonomic principles, students will learn to position furniture to optimize comfort, usability, and aesthetic coherence.	3	, PSO2

Syllabus

Understanding Space Planning Fundamentals Introduction to Space Planning, Defining space planning in interior design, Importance of effective space planning in creating functional and aesthetically pleasing interiors. Analyzing Spatial Requirements. Identifying client needs and preferences. Determining functional requirements for each space. Considering circulation flow and zoning within the space. Space Utilization Techniques . Maximizing space efficiency through proper arrangement of furniture and fixtures. Incorporating flexible design elements to accommodate varying needs . Balancing open areas with enclosed spaces for privacy and functionality

Principles of Space Layout Design Principles Overview. Exploring key design principles such as balance, proportion, scale, and rhythm . Understanding how these principles influence spatial layout decisions. Zoning and Functionality. Dividing the space into zones based on functionality and user activities . Ensuring smooth transitions between different zones to enhance usability and flow. Incorporating multi-functional spaces to optimize flexibility and adaptability. Furniture Placement Strategies. Arranging furniture to facilitate ergonomic use and enhance visual appeal. Considering focal points and traffic patterns when positioning furniture within the space. Experimenting with different layout configurations to find the optimal arrangement

Spatial Analysis and Optimization Site Analysis and Evaluation. Conducting site surveys to assess existing conditions and constraints. Analyzing site features, such as orientation, views, and natural light availability. Identifying opportunities and challenges that may influence spatial layout decisions. Space Optimization Techniques. Utilizing design strategies to maximize space utilization and functionality. Exploring creative solutions for compact or irregularly shaped spaces. Incorporating storage solutions and built in features to minimize clutter and maximize usable area

Designing for Human Experience Human Centered Design Principles. Prioritizing user comfort, safety, and well-being in spatial design. Incorporating universal design principles to accommodate diverse user needs and abilities. Enhancing user experience through thoughtful consideration of sensory elements, such as lighting, acoustics, and material textures. Psychological Effects of Space. Understanding how spatial layout and design elements influence human behavior and perception. Creating environments that promote relaxation, productivity, and social interaction. Incorporating biophilic design elements to enhance connection with nature and improve overall well being

Integration and Adaptation Integration of Technology and Innovation. Incorporating technology seamlessly into the spatial layout to enhance functionality and convenience. Exploring innovative solutions, such as smart home systems and interactive interfaces, to improve user experience. Adaptation and Future-Proofing. Designing flexible spaces that can adapt to evolving needs and technologies .Considering sustainability principles in spatial design to minimize environmental impact. Future-proofing designs by incorporating resilient and adaptable features that can withstand changing trends and requirements

23MRID03 - INTERIOR MATERIAL AND FINISHES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRID03	INTERIOR MATERIAL AND FINISHES	IMF	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the fundamental concepts of interior materials and finishes, including their definitions, importance, and roles in creating ambiance, functionality, and aesthetics within interior design.	2	PO1
CO2	Understanding of the characteristics, properties, and applications of various natural materials such as wood, stone, leather, and natural fibers in interior design.	2	PO3
CO3	Understanding of the advantages and limitations of using synthetic materials such as plastics, laminates, and engineered wood in interior design.	2	PO5
CO4	Apply, evaluate, and synthesize finishes and surface treatments to achieve sophisticated and compelling interior environments.	3	, PSO1
CO5	Synthesizing theoretical knowledge and practical application, students will forecast future developments in materials and finishes and assess their potential implications for the evolving landscape of interior design practice.	3	PO12

Syllabus

Introduction to Materials and Finishes. Definition and importance of materials and finishes in interior design. The role of materials in creating ambiance, functionality, and aesthetics. Overview of different types of materials and finishes commonly used in interior design, such as wood, metal, glass, fabric, paint, and wallpaper.

Natural Materials . Exploration of natural materials like wood, stone, leather, and natural fibers. Characteristics, properties, and applications of each natural material in interior design. How to incorporate natural materials to enhance warmth, texture, and visual interest in spaces. Sustainable sourcing and eco-friendly alternatives for natural

Synthetic Materials . Examination of synthetic materials such as plastics, laminates, and engineered wood. Advantages and limitations of using synthetic materials in interior design. Innovative uses of synthetic materials in modern interior design, including high-performance polymers and composite materials. Considerations for durability, maintenance, and environmental impact when selecting synthetic materials.

Finishes and Surface Treatments. Understanding the role of finishes in defining the look and feel of interior spaces. Different types of finishes, including matte, glossy, textured, and reflective. Techniques for applying finishes such as painting, staining, varnishing, and polishing. Creative ways to combine finishes for visual contrast and aesthetic appeal.

Trends and Future Directions. Exploration of current trends in materials and finishes in interior design. Emerging technologies and materials shaping the future of interior design, such as smart materials and 3D printing. The influence of sustainability and wellness on material selection and design choices. Predictions for future developments in materials and finishes and their impact on the practice of interior design

23MRID04 - FURNITURE AND ACCESSORIES DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRID04	FURNITURE AND ACCESSORIES DESIGN	FAD	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand comprehensive knowledge and practical skills in the selection, placement, and utilization of furniture and accessories to enhance interior spaces.	2	PO1
CO2	Understand and articulate the principles of selecting and arranging furniture in interior spaces.	2	, PSO1
CO3	Understand various types of accessories, such as decorative objects, artwork, and textiles, and explain how these elements contribute to the overall aesthetic of a space.	2	PO2
CO4	Applying different design styles and their characteristic features and strategies for mixing and matching furniture and accessories from different styles	3	PO3
CO5	Apply current trends and innovations within the furniture and accessories industry and able to examine emerging materials, technologies, and design approaches, and analyze case studies that highlight innovative uses of furniture and accessories in contemporary design.	3	PO4

Syllabus

Co1: Introduction to Furniture and Accessories in Interior Design. Overview of the role of furniture and accessories in interior design. Importance of selecting the right furniture and accessories for different spaces. Basic principles of design that apply to furniture and accessories. Historical overview of furniture and accessory styles. Introduction to key terminology and concepts.

Co2: Furniture Selection and Placement. Understanding the function and purpose of each room. Factors to consider when selecting furniture (e.g., size, style, material). Tips for creating a cohesive look with furniture styles. Guidelines for arranging furniture to maximize space and functionality. Importance of traffic flow and ergonomics in furniture placement.

Co3: Accessories: Adding Personality and Flair. Definition and types of accessories in interior design (e.g., decorative objects, artwork, textiles). How accessories contribute to the overall aesthetic of a space. Tips for selecting accessories that complement the furniture and enhance the design theme. Creative ways to display and arrange accessories for visual impact. DIY and budget-friendly ideas for accessorizing.

Co4: Mixing and Matching Styles. Understanding different design styles and their characteristic features. Strategies for mixing and matching furniture and accessories from different styles. Examples of successful design combinations and how they create visual interest. Balancing cohesion and contrast when integrating diverse elements. Common mistakes to avoid when blending styles.

Co5: Trends and Innovations in Furniture and Accessories. Exploration of current trends in furniture and accessories. Emerging materials, technologies, and design approaches shaping the industry. Case studies highlighting innovative uses of furniture and accessories in contemporary design. Sustainable and eco-friendly options in furniture and accessories. Predictions for future directions in furniture and accessory design.

23MRIM01 - APPLIED DESIGN THINKING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIM01	APPLIED DESIGN THINKING	ADT	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Develop a deep understanding of user needs through empathy and research techniques.	2	
CO2	Define clear and actionable problem statements based on user insights.	3	PO2
CO3	Generate a wide range of innovative ideas through brainstorming and ideation techniques.	4	PO9, PSO2
CO4	Create and test prototypes to refine ideas and solutions.	5	
CO5	Implement and evaluate design solutions in real-world contexts.	6	PO3

Syllabus

Introduction to Design Thinking: Overview of design thinking principles; The design thinking process: empathize, define, ideate, prototype, test; Historical context and contemporary applications. Empathy and User Research: Techniques for understanding users (interviews, observations, surveys); Building empathy maps; Identifying user needs and pain points; Case studies on successful user research.

Problem Definition: Framing the right problem; Crafting problem statements and how-might-we questions; Tools for analysis and synthesis (affinity diagrams, journey maps); Group activities to practice problem definition

Ideation Techniques: Brainstorming methods (mind mapping, SCAMPER, role-playing); Encouraging creativity and divergent thinking; Evaluating and selecting ideas; Collaborative ideation workshops

Prototyping: Types of prototypes (low-fidelity, high-fidelity), Rapid prototyping techniques, Tools for prototyping (paper, digital tools), Iterative testing and feedback loops. Testing and Feedback: Designing and conducting usability tests, Gathering and analyzing feedback, Refining prototypes based on user feedback, Case studies on successful prototyping and testing.

Implementation and Impact Evaluation: Strategies for implementing design solutions, Measuring the impact of design solutions, Scaling and sustaining innovations, Real-world project work and presentations.

23MRIM02 - BUSINESS MODEL INNOVATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIM02	BUSINESS MODEL INNOVATION	BMI	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze the importance of business model innovation using real-world case studies.	4	PO2, PO11, PSO2
CO2	Utilize the Business Model Canvas to create and assess business models.	3	PO2, PO11, PSO2
CO3	Analyze the impact of disruptive innovation on existing business models.	4	PO2, PO11, PSO2
CO4	Develop a plan for implementing digital transformation in an existing business model.	6	PO2, PO11, PSO2
CO5	Develop a sustainable business model using appropriate tools.	6	PO2, PO11, PSO2

Syllabus

The definition of a business model, the importance of business model innovation, an overview of popular business models, the historical evolution of business models, and case studies of successful business model innovations.

Business Model Canvas, the Value Proposition Canvas, SWOT Analysis, PESTEL Analysis, and the Blue Ocean Strategy.

The definition and characteristics of disruptive innovation, how disruptive innovation impacts business models, case studies of disruptive innovations, and strategies for leveraging disruptive innovation.

The definition of digital transformation, the impact of digital technologies on business models, examples of digital business models, and implementing digital transformation in business models.

The definition of sustainable business models, principles of sustainable business model innovation, case studies of sustainable business models, and tools for developing sustainable business models.

Reference Books

23MRIM03 - VENTURE MANAGEMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIM03	VENTURE MANAGEMENT	VMT	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understand the fundamentals of venture management, including the different types of ventures, the entrepreneurial ecosystem, and the roles of incubators and accelerators.	2	PO2, PO11, PSO1
CO2	apply techniques for market research, idea generation, and feasibility analysis to develop comprehensive business plans and financial projections for new ventures.	3	PO2, PO11, PSO1
CO3	analyze various funding strategies, legal structures, and regulatory requirements to determine the most effective approaches for launching and growing a new venture.	4	PO2, PO11, PSO1
CO4	evaluate growth strategies, marketing plans, and operational processes to optimize efficiency, market expansion, and strategic partnerships for scaling ventures.	5	PO2, PO11, PSO1
CO5	evaluate risk management strategies, corporate social responsibility initiatives, and exit plans to ensure the sustainability and ethical management of ventures, and to prepare for successful exits through mergers, acquisitions, or IPOs.	5	PO2, PO11, PSO1

Syllabus

Overview of venture management; Types of ventures: startups, SMEs, and corporations; Entrepreneurial ecosystems; Role of incubators and accelerators; Networking and building entrepreneurial communities; Identifying opportunities and idea generation; Market research and analysis; Feasibility analysis and business models; Lean startup methodology

Business planning and components of a business plan; Writing a compelling business plan; Financial planning and projections; Funding strategies: bootstrapping vs. external funding; Venture capital, angel investors, and crowdfunding; Preparing for investor meetings and pitches; Legal structures for new ventures; Intellectual property rights; Regulatory compliance and licenses; Team building and management; Leadership and management skills; Human resource strategies for startups.

Growth strategies: organic growth vs. scaling; Market expansion and diversification; Strategic partnerships and alliances; Operations and supply chain management; Designing efficient operations; Supply chain management for startups; Technology and process optimization; Marketing and sales strategies; Developing a marketing strategy; Sales techniques and customer relationship management (CRM); Digital marketing and social media; Financial management and control; Financial statements and analysis; Budgeting and cash flow management; Performance metrics and KPIs.

Innovation and continuous improvement; Fostering a culture of innovation; Continuous improvement processes; Adapting to market changes; Risk management and crisis handling; Identifying and assessing risks; Developing risk mitigation strategies; Crisis management and recovery plans; Corporate social responsibility (CSR); Ethical issues in entrepreneurship; Building a sustainable business; Exit strategies: mergers, acquisitions, IPOs; Succession planning and leadership transition; Preparing for life after the venture.

Reference Books

- 1 The Lean Startup, Eric Ries, 1st (2011), Crown Business.
- 2 Business Model Generation, Alexander Osterwalder, Yves Pigneur, 1st (2010), Wiley.
- 3 Venture Deals: Be Smarter Than Your Lawyer and Venture Capitalist, Brad Feld, Jason Mendelson, 3rd (2016), Wiley.

23MRIM04 - BUSINESS AND LEADERSHIP (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIM04	BUSINESS AND LEADERSHIP	BL	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze and evaluate various leadership theories and models, applying them to real-world business scenarios.	2	PO6, PO7, PO8, PSO1
CO2	Develop effective communication and conflict resolution skills essential for leading and managing teams, Demonstrate an understanding of ethical decision-making frameworks and apply them to leadership challenges.	2	PO6, PO8, PO9, PSO2
CO3	Examine and critically assess the impact of organizational culture on leadership practices and strategies for fostering a positive organizational environment.	3	PO4, PO5, PO6, PSO1
CO4	Plan, design, and execute a comprehensive capstone project that addresses a specific leadership challenge, incorporating strategic thinking and practical leadership skills.	4	PO4, PO5, PO6, PSO2
CO5	Apply leadership theories and models in practical settings, Enhance self-assessment and personal development planning, Demonstrate effective ethical decision-making, communication, and conflict resolution, Lead and manage teams effectively, Execute strategic planning and organizational change initiatives, Innovate and solve complex problems and Complete and present a capstone project.	5	PO5, PO6, PO7, PSO1

Syllabus

Foundations of Leadership: Introduction to leadership; Course overview and expectations; Definition and importance of leadership; Overview of leadership theories; Trait Theory; Behavioral Theory; Contingency Theory; Transformational and Transactional Leadership; Leadership self-assessment tools; Identifying personal leadership styles and strengths; Setting personal development goals

Ethics, Communication, and Team Leadership: Role of ethics in leadership; Ethical decision-making frameworks; Case studies on ethical leadership; Effective communication skills for leaders; Active listening and feedback; Leading through conflict resolution; Building and leading effective teams; Understanding team roles and dynamics; Strategies for team motivation and engagement.

Strategic and Organizational Leadership: Strategic thinking and planning; Change management and leadership; Innovation and leadership in a global context; Impact of organizational culture on leadership; Creating and sustaining a positive organizational culture; Leading organizational change.

Decision Making, Challenges, and Capstone Project: Leadership decision-making processes and models; Critical thinking and problem-solving; Case studies on leadership decision-making; Current trends and challenges in leadership; Leadership in the digital age; Future directions in leadership research; Capstone project preparation; Project planning and proposal development; Group discussions and feedback; Capstone project presentations; Peer review and feedback; Course wrap-up and reflections.

Leadership Practicum Lab: This module provides a practical, hands-on approach to applying the leadership theories, models, and skills from Modules 1 to 4. Through interactive exercises, simulations, and real-world applications, students will refine their leadership abilities, focusing on self-assessment, ethical decision-making, communication, conflict resolution, team dynamics, strategic planning, organizational culture, change management, innovation, critical thinking, and capstone project execution..

23MRIP01 - EMERGENCE AND DEVELOPMENT OF IPR (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIP01	EMERGENCE AND DEVELOPMENT OF IPR	EDIPR	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze the historical foundations and philosophical justifications for Intellectual Property Rights.	3	PO5
CO2	Critically evaluate the different types of IPR (patents, copyrights, trademarks, etc.) and their application in the Indian and international contexts.	3	PO2
CO3	Identify and explain the key international treaties and organizations governing IPR.	2	
CO4	Examine the contemporary challenges and debates surrounding IPR, such as access to knowledge, biopiracy, and the digital divide.	3	PO11
CO5	Apply their understanding of IPR principles to real-world scenarios involving innovation, creativity, and competition	3	PO4, PSO2

Syllabus

Introduction to Intellectual Property Rights (IPRs) Concept and historical development of IPRs Theories justifying IPR protection (natural rights, utilitarian, etc.) The economic and social importance of IPRs in a globalized world

Types of Intellectual Property Rights Patents: Subject matter, patentability criteria, infringement, and enforcement Copyrights: Originality, scope of protection, fair use limitations, and digital copyright issues Trademarks: Functions, registration process, infringement, and dilution Trade Secrets: Protection of confidential information and unfair competition

The Indian IPR Regime Constitutional provisions and legislative framework for IPRs in India The Indian Patent Act, Copyright Act, Trademark Act, and other relevant laws The role of Indian Patent Office, Copyright Office, and Trademark Registry Enforcement mechanisms for IPR violations in India

The International IPR Landscape Major international treaties and conventions governing IPR (e.g., Paris Convention, Berne Convention, TRIPS Agreement) The role of World Intellectual Property Organization (WIPO) Harmonization vs. national interests in international IPR regimes

Contemporary Issues and Debates in IPR Access to knowledge and essential medicines Biopiracy and the protection of traditional knowledge The digital divide and its impact on IPR enforcement Open-source software and alternative licensing models The future of IPR in a knowledge-based economy

23MRIP02 - LAW OF COPYRIGHT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIP02	LAW OF COPYRIGHT	LOCR	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the foundational principles of Indian copyright law, including its historical development, scope, and application to various works.	2	PO2
CO2	Understanding the complex copyright infringement cases, applying relevant legal tests and defenses to determine the outcome. They will also be able to evaluate the effectiveness of remedies available for copyright infringement.	2	PO7
CO3	Understand the interplay between copyright law and technological advancements, including the challenges and opportunities posed by the digital environment.	2	PO5
CO4	Analyzing the contemporary copyright issues, proposing potential solutions and evaluating their impact on the creative industry and society at large.	3	, PSO1
CO5	Analyse the contemporary legal developments in Copyrights Case laws	4	PO11

Syllabus

Concept of Copyright Definition, nature, and scope of copyright Copyright as a bundle of rights Subject matter of copyright Author and ownership of copyright BTL Levels: Remember, Understand, Apply

Historical Development of Copyright Law Copyright law in India: A brief overview International copyright conventions Impact of technological advancements on copyright law BTL Levels: Remember, Understand, Analyze

Infringement of Copyright Primary and secondary infringement Tests of infringement (literal copying, substantial similarity) Defenses to copyright infringement Remedies for copyright infringement BTL Levels: Understand, Apply, Analyze

Moral Rights of Authors Concept of moral rights Rights of paternity and integrity Limitations on moral rights Remedies for violation of moral rights BTL Levels: Understand, Apply, Evaluate

Fair Use and Fair Dealing Concept of fair use and fair dealing Factors to consider for fair use/fair dealing Exceptions to copyright infringement BTL Levels: Understand, Apply, Analyze

Copyright Term and Ownership Duration of copyright Ownership of copyright Assignment and license of copyright BTL Levels: Understand, Apply, Analyze

Copyright in Digital Environment Copyright issues in the digital age Copyright and software Copyright and internet BTL Levels: Understand, Analyze, Evaluate

Emerging Challenges and Future Trends Copyright and artificial intelligence Copyright and 3D printing Copyright and open source BTL Levels: Analyze, Evaluate, Create

23MRIP03 - LAW OF PATENTS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIP03	LAW OF PATENTS	LOPS	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic concepts and history of patent law.	1	PO1, PO3, PO5, PO8, PSO2
CO2	Analyse the criteria for patentability and the process of obtaining a patent.	3	PO1, PO3, PO5, PO8, PSO2
CO3	Evaluate the rights and obligations of a patent holder. .	4	PO1, PO3, PO5, PO8, PSO2
CO4	Apply knowledge of patent law to assess infringement and enforcement issues.	4	PO1, PO3, PO5, PO8, PSO2
CO5	Explore the impact of patents in various engineering fields and the ethical considerations involved	4	PO1, PO3, PO5, PO8, PSO2

Syllabus

Introduction to Patent: Law History and development of patent law Types of patents Importance of patents in technology and engineering International treaties and conventions (e.g., TRIPS, PCT)

Patentability Criteria and Application Process: Patentable subject matter Novelty, inventive step, and industrial applicability Patent application process Patent search and drafting Filing procedures and timelines Patent examination and prosecution

Rights and Obligations of a Patent Holder: Scope and duration of patent rights Licensing and assignment of patents Obligations and maintenance of patents Patent marking and notice

Infringement, Enforcement, and Ethical Considerations: Types of patent infringement Legal remedies and defenses against infringement Patent litigation process Alternative dispute resolution (ADR) in patent disputes Ethical issues in patenting and technology

Reference Books

- 1 Patent Law and Policy: Cases and Materials , Robert P. Merges, John F. Duffy , 2017, Carolina Academic Press.
- 2 Principles of Patent Law: Cases and Materials , Roger E. Schechter and John R. Thomas , 2016, West Academic Publishing.
- 3 Patent Law: A Practitioner's Guide, Barry L. Grossman and Gary M. Hoffman, 2013, Practising Law Institute (PLI).
- 4 Intellectual Property: Patents, Trademarks, and Copyright, Richard Stim, 2020., NOLO.

23MRIP04 - LAW OF TRADEMARK (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIP04	LAW OF TRADEMARK	LOTM	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understanding the concept and purpose of trademarks within the broader intellectual property (IP) framework.	2	PO5
CO2	Analyze the provisions of the Indian Trademark Act, 1999 including registrability of trademarks, classification of goods and services, and the registration process	3	PO6, PSO2
CO3	Evaluate the concept of trademark infringement and remedies available under Indian law.	3	PO9
CO4	Compare and contrast the Indian trademark regime with key international treaties and conventions like the Paris Convention for the Protection of Industrial Property and the Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS).	3	PO7
CO5	Develop skills in identifying and conducting trademark searches in India and internationally. Apply trademark law principles to practical scenarios such as brand development, licensing, and enforcement actions.	4	PO8

Syllabus

Introduction to Trademarks Definition and nature of trademarks Functions and importance of trademarks Types of trademarks (logos, slogans, etc.) Historical development of trademark law

The Indian Trademark Act, 1999 Key provisions of the Act Registrable and non-registrable trademarks Classification of goods and services The registration process

Trademark Infringement and Remedies Concept of trademark infringement Tests for determining infringement Defenses to infringement actions Remedies for trademark infringement (injunctions, damages, etc.)

International Trademark Law Introduction to international treaties and conventions (Paris Convention, TRIPS) International registration system (Madrid Protocol) Comparative analysis of trademark protection in different jurisdictions

Practical Applications of Trademark Law Conducting trademark searches Brand development and trademark selection strategies Trademark licensing agreements Enforcement of trademark rights in India and abroad

Reference Books

23MROB01M - ORGANIZATIONAL BEHAVIOUR (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MROB01M	ORGANIZATIONAL BEHAVIOUR	POM	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the concepts of OB to implement different models of OB	3	PO11
CO2	Apply the concepts of individual behaviour to deal with different types of people at work place	3	PO9
CO3	Apply the concepts of groups and dynamics to deal with groups of employees at work place	3	PO9
CO4	Apply the knowledge of organisational culture, change, conflict, development and stress to develop appropriate model in the organisation.	3	PO11

Syllabus

Introduction to Organizational Behavior, Evolution of management thought, five functions of management, Evolution of OB, models of OB (Autocratic, Custodial, Supportive, Collegial and SOBC), Importance of Organizational Behavior

Foundations of Individual Behavior: Personality, Personality determinants; Personality traits: MBTI , The Big Five Model, Major personality attributes influencing OB; Psycho,Analytic Theory , Johari Window , Values , Types of Values; Perception, Perceptual process; Factors influencing Perception; perceptual distortion; Linkage between perception and individual decision making Theories of Motivation , Hierarchy Needs Theory , Two,Factor Theory , Expectancy Theory; Applications of Motivation; Attitudes , Source of attitudes; Types of Attitudes, Attitudes and consistency , Cognitive Dissonance theory. Learning, Theories of learning; Principles of learning;

Foundations of Group Behavior: Groups , Nature of groups; Types of groups; Stages of Group Development; Group Cohesiveness; Group Decision-Making; Leadership , Nature; Theories of leadership: Trait Theories, Behavioral Theories and Contingency Theories;

Conflict Management, Transactions in conflict thought, Functional versus Dysfunctional conflict, The Conflict process, Conflict Management. Stress, Causes and consequences of stress, Stress management. Organizational Culture and Change Management: Nature and Functions of culture, Creating and sustaining Organizational Culture, Forces for change, Resistance to change, Approaches to Managing Organizational Change, Organizational Development, Techniques of organizational development.

Reference Books

- 1 Organizational Behavior, Neharika Vohra Stephen P. Robbins, Timothy A. Judge, 18 (2022), Pearson.
- 2 Organizational Behavior: An Evidence - Based Approach, Fred Luthans, 12 (2017), McGraw Hill Education.
- 3 Organisational Behavior, Mary Von Glinow, Steven Mcshane , 7 (2014), McGraw-Hill Education.
- 4 ORGANIZATIONAL BEHAVIOUR: TEXT AND CASES, K. Chitale, Avinash , Prasad Mohanty, Rajendra , Rajaram Dubey, Nishith , 2 (2019), PHI.

23MROB02M - ORGANIZATIONAL BEHAVIOUR MODELS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MROB02M	ORGANIZATIONAL BEHAVIOUR MODELS	OBM	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand key concepts and theoretical frameworks in organizational behaviour, including classical and contemporary models.	2	PO9
CO2	Apply advanced theories and models to analyze individual behavior and psychological processes within organizations.	3	PO12, PSO2
CO3	Analyze group dynamics, teamwork, and leadership theories to understand their impact on organizational performance.	4	PO9
CO4	Appraise strategies for organizational development and change management, integrating theory with practical application.	5	PO9

Syllabus

Foundations of Organizational Behaviour: Overview of OB, its definition, importance, and historical development. Theoretical frameworks and models including classical, human relations, and systems approaches. Examination of organizational culture, its dimensions, types, and effects on behavior. Analysis of organizational structure, including design principles, types, and influencing factors.

Individual Behavior in Organizations: Investigation of personality theories and assessments, focusing on workplace implications. Study of major motivation theories, emphasizing their practical applications. Examination of job satisfaction and organizational commitment theories and their outcomes. Analysis of emotional intelligence and the management of emotions in organizational contexts.

Group Dynamics and Teamwork: Study of group dynamics, including formation, roles, norms, and cohesiveness. Examination of factors contributing to team effectiveness, such as composition and development stages. Exploration of various leadership theories and styles, and their impact on team performance. Analysis of communication processes, barriers, and techniques for effective organizational communication.

Organizational Development and Change: Introduction to OD principles and practices, focusing on planned change strategies. Study of change management theories and models, with emphasis on managing organizational change. Exploration of factors fostering a creative climate and strategies to drive innovation. Discussion of emerging trends and future directions, including technology and globalization impacts.

23MROB03M - ORGANIZATIONAL CHANGE AND DEVELOPMENT (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MROB03M	ORGANIZATIONAL CHANGE AND DEVELOPMENT	OCD	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the theories and models of organizational change and development.	2	PO9
CO2	Analyze the process and challenges of implementing organizational change.	4	PO8, PO9
CO3	Evaluate the effectiveness of different change management strategies and interventions.	5	PO9
CO4	Formulate strategies to manage resistance and ensure successful organizational change and development.	5	PO9

Syllabus

Introduction to Organizational Change and Development: Overview of organizational change and development. Key concepts and definitions. Theories and models of change, including Lewin's Change Management Model, Kotter's 8-Step Change Model, and ADKAR Model. Case studies on organizational change.

The Change Process: Steps in the change process: identifying the need for change, planning for change, implementing change, and sustaining change. Understanding the role of change agents and leadership in the change process. Case studies on successful and unsuccessful change initiatives.

Change Interventions and Strategies: Types of change interventions: structural, technological, and behavioral. Techniques for managing change: communication, training, and development, team building, and coaching. Evaluating the effectiveness of change interventions. Case studies on different change strategies.

Managing Resistance and Ensuring Success: Identifying sources of resistance to change. Strategies for overcoming resistance: participation, negotiation, and coercion. Measuring the impact of change and ensuring sustainability. Case studies on overcoming resistance and achieving successful change.

Reference Books

- 4 "Organization Development: The Process of Leading Organizational Change", Donald L. Anderson, 5th , SAGE Publications.

23MROB04M - LEADERSHIP IN ORGANIZATION (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MROB04M	LEADERSHIP IN ORGANIZATION	LIO	M	4	0	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand leadership in changing business environment	2	PO9
CO2	Apply leadership skills & tactics, appropriate style for the given situation	3	PO9
CO3	Analyze the strategic role of a leader in present day organizations	4	PO9
CO4	Make use of coaching and mentoring skills learnt for developing leaders in organizations	3	PO9

Syllabus

From Management to Leadership; Nature and Importance of Leadership; Difference between Leadership and Management; Leadership Theories; Trait Theories; Behavioral Theories; Scandinavian Studies; Contingency Approaches; Situational Theories; Servant Leadership; Adaptive Leadership.

Leadership Skills and Leadership Styles ; Leadership Skills and Tactics: Social Skills; Persuasion Skills ; Motivational Skills ; Communication and Conflict Resolution Skills ; Role Models; Story Telling; Leadership Styles; The Impact of Leadership Styles on Work Climate.

Strategic Leadership by Executives; The Nature of Strategic Leadership; How leaders influence organizational performance; Constraints on Executives; Conditions Affecting the Need for Strategic Leadership; Political Power and Strategic Leadership; Research on Effects of CEO Leadership; Strategic Leadership by Executive Teams, Women CEOs.

Leadership Development and Succession; Development through Self Awareness and Self Discipline; Development through Education; Experience and Mentoring; Leadership Development Programs; Developing next Generation Leaders; Leadership Development and Organizational Goals ; Coaching Leaders ; Leadership Succession ; Choosing the Right CEO.

Reference Books

23MRPA01 - FUNDAMENTALS OF AGRONOMY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRPA01	FUNDAMENTALS OF AGRONOMY	FOA	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles of agronomy with interdisciplinary approach with Botany, Soil Science, Irrigation, plant protection, Plant Genetics and Breeding, Agrometeorology	2	PO2, PO6, PO7, PSO2
CO2	Understand the various nutrients and their effects on plant health and irrigation measures	2	PO2, PO6, PO7, PSO2
CO3	Interpret weeds, sustainable agricultural production, and apply scientific methods and tools in field preparation	3	PO2, PO6, PO7, PSO2
CO4	Apply the impact of the professional agricultural solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development	3	PO2, PO6, PO7, PSO2
CO5	Demonstrate the Identification and proper crop management practices with practical knowledge to produce food for humans.	3	PO2, PO6, PO7, PSO2

Syllabus

Introduction to Agriculture, Agronomy, Tillage and Types with modern concepts of tillage, Seed and sowing, methods and crop geometry. Objectives of tillage, Characteristics of ideal seed bed, Effect of tillage on soil properties, Types of tillage,

Plant population, soil fertility, Crop nutrition and their symptoms, manures and fertilizers and Irrigation and methods and importance with crop growth and development, Types of manures and fertilizers, Factors influencing methods and time of fertilizer application, Bio-fertilizers, Irrigation, Importance of Irrigation , Objectives of irrigation

Herbicides- Definition, advantages and limitations of herbicide usage in India.- Bioherbicides, Classification of herbicides based on chemical nature, time and method of application, Herbicidal formulations

Selectivity and resistance Selectivity of herbicides, Fundamental principles of selectivity, Differences in morphology and growth habit of plants, advantages and limitations of herbicide usage in India, Bioherbicides, Classification of herbicides based on chemical nature, time and method of application,

Visit to college farm and identification of major crops and varieties, Practice of primary tillage implements and puddling, Practice of secondary tillage implements, active ingredient- Acid equivalent- Nomenclature of herbicides, Adjuvants and their use in herbicide application, Types of adjuvants

Reference Books

23MRPA02 - INTRODUCTORY AGROMETEOROLOGY AND CLIMATE CHANGE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRPA02	INTRODUCTORY AGROMETEOROLOGY AND CLIMATE CHANGE	IACC	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Estimate the behaviour of the atmosphere and agroclimatic zones.	2	PO2, PO5
CO2	Understand agrometeorology in agriculture and the changes of individual weather elements and their relation to crop production.	2	PO2, PO5
CO3	Understand the management of weather hazards for improving crop productivity	2	PO2, PO5
CO4	Demonstrate weather forecasting and impact of climate change on agriculture	3	PO2, PO5
CO5	Record and estimate and analyzing the meteorological instruments from the agro meteorological observatory.	3	PO2, PO5

Syllabus

Earth atmosphere, composition, extent and structure; Atmospheric weather variables; Atmospheric pressure, its variation with height; Wind, types of wind, daily and seasonal variation of wind speed, cyclone, anticyclone, land breeze and sea breeze; Nature and properties of solar radiation, solar constant, depletion of solar radiation, short wave, long wave and thermal radiation, net radiation, albedo;

Atmospheric temperature, temperature inversion, lapse rate, daily and seasonal variations of temperature, vertical profile of temperature, energy balance of earth; Atmospheric humidity, concept of saturation, vapor pressure, process of condensation, formation of dew, fog, mist, frost, cloud; Precipitation, process of precipitation, types of precipitation such as rain, snow, sleet, and hail, cloud formation and classification

Artificial rainmaking; Monsoon, mechanism and importance in Indian agriculture; Weather hazards, drought, floods, frost, tropical cyclones and extreme weather conditions such as heat-wave and coldwave; Agriculture and weather relations, modifications of crop microclimate, climatic normals for crop and livestock production

Weather forecasting, types of weather forecast and their uses; Climate change, climatic variability, global warming, causes of climate change and its impact on regional and national Agriculture. Practical Visit of Agrometeorological observatory, site selection of observatory, exposure of instruments and weather data recording;

Measuring the pressure of the atmosphere and analyzing atmospheric conditions, assessing wind speed and direction, and creating visualizations of wind patterns, meteorologists gain valuable insights into weather phenomena

Reference Books

- 1 Principles and practices of agricultural disaster management., Radha Krishna Murthy,V., 2016, B.S Publications, Koti,Hyderabad..
- 2 Introduction to Agriculture and Agrometeorology. , Reddy, S.R , 1. 2014., B.S Publications, Koti, Hyderabad .
- 3 Agrometeorology: Principles and Applications of Climate Studies in Agriculture, H.D. Singh, 9. 1994 , CRC Press.

23MRPA03 - GEOINFORMATICS AND NANOTECHNOLOGY FOR PRECISION FARMING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRPA03	GEOINFORMATICS AND NANOTECHNOLOGY FOR PRECISION FARMING	GNPF	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Integrate about the concept of precision farming and the techniques involved in precision farming.	2	PO6, PO7
CO2	Familiarize about the applications of nanotechnology in tillage operation, seed sowing, fertilizer application, plant protection management.	2	PO6, PO7
CO3	Apply the techniques involved in soil mapping. It allows the student to learn about remote sensing practical applications in the field.	3	PO6, PO7
CO4	Interpretation of the data in this course. Geo-referencing those data and classifying the supervised and unsupervised data of RS images.	3	PO6, PO7
CO5	Apply and Demonstrate and Practical Knowledge on GIS technology and Precision Farming	3	PO6, PO7

Syllabus

Precision agriculture: concepts and techniques-Issues and concerns for Indian agriculture Geo-informatics- definition, concepts, tools and techniques and their use in Precision Agriculture Crop discrimination and Yield monitoring techniques Principles and practices of precision agriculture.Application of nanotechnology in agriculture - tillage, seed, water, fertilizers, plant protection for scaling-up farm productivity

Crop discrimination and Yield monitoring, soil mapping fertilizer recommendation using geospatial technologies Spatial data and their management in GIS Geodesy and its basic principles Remote sensing concepts and application in agriculture Image processing and interpretation Global system (GPS), components and its functions Nanotechnology, definition, concepts and techniques Nano scale definition Nano-particles , materials occurrence properties Characterization of nano-materials structural characterization Nano sensors

System Simulation- Concepts and principles, Introduction to crop Simulation Models and their uses for optimization of Agricultural Inputs STCR approach for precision agriculture Nanotechnology, definition, concepts and techniques, brief introduction about nanoscale effects Concepts and principles, Introduction to crop Simulation Models and their uses for optimization of Agricultural Inputs STCR approach for precision agriculture

Nano-particles, nano-pesticides, nano-fertilizers, nano-sensors, Use of nanotechnology in tillage, seed, water, fertilizer, plant protection for scaling-up farm productivity.geospatial technologies Spatial data and their management in GIS Geodesy and its basic principles Remote sensing concepts and application in agriculture Image processing and interpretation Global system (GPS), components and its functions Nanotechnology, definition, concepts and techniques Nano scale definition Nano-particles , materials occurrence properties Characterization of nano-materials structural characterization Nano sensors

Reference Books

- 2 Remote sensing and image interpretation. , Lillesand, T.M. and Kiefer, R. W. , 2, 1994 , B.S. Publications, Hyderabad .
- 3 Text book of Remote sensing and Geographical Information Systems, , Anji Reddy, M., 3, 2006 , , B.S. Publications, Hyderabad. .
- 4 NANO: The Essentials:Understanding Nanoscience and Nanotechnolgy , Pradeep. T. , 2, 2007, Tata McGraw-Hill Publishing Company Limited, New Delhi .

23MRPA04 - PROTECTED CULTIVATION AND POST-HARVEST TECHNOLOGIES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRPA04	PROTECTED CULTIVATION AND POST-HARVEST TECHNOLOGIES	PCPHT	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concepts of greenhouses, its history, greenhouse effect, types of green houses and greenhouse environment	2	PO6, PO7
CO2	Applying the knowledge and skills to design, construct and manage the greenhouse effectively	3	PO6, PO7
CO3	Applying the concepts of engineering properties and aero-dynamic properties to design various post-harvest equipments	3	PO6, PO7
CO4	Analyze the drying parameters of various grains and performance evaluation of various commercial grain dryers, material handling equipments etc.	4	PO7
CO5	Analyze the working of different types of greenhouses based on shape and performance evaluation of various post-harvest equipments	4	PO6, PO7

Syllabus

Introduction to greenhouses, history, definition, greenhouse effect, advantages of green houses. Brief description of types of greenhouses, greenhouses based on shape, utility, construction, covering materials and cost, shade nets. Plant response to greenhouse environments i.e. light, temperature, relative humidity, ventilation and carbon dioxide and environmental requirement of agriculture and horticulture crops inside green houses. Equipment required for controlling greenhouse environment, summer cooling and winter cooling, natural ventilation, forced ventilation and Planning of greenhouse facility, site selection and orientation, structural design and covering materials. Materials for construction of greenhouses. Design criteria and constructional details of greenhouses, construction of pipe framed greenhouses, material requirement, preparation of materials and procedure of erection. Greenhouse heating and distribution systems, greenhouse utilization, off-season drying of agricultural produce. Economic analysis of greenhouse production, capital requirement, economics of production and conditions influencing returns.

Irrigation system used in greenhouses, rules of watering, hand watering, perimeter watering, overhead sprinklers, boom watering and drip irrigation. Important engineering properties such as physical, thermal and aero-dynamic properties of cereals, pulses and oil seeds. Designing post-harvest equipment based on physical and thermal properties. Winnowing, manual and power operated winnowers, care and maintenance. Groundnut decorticators, hand and power operated decorticators, principle of working, care and maintenance

Moisture measurement, equilibrium moisture content (EMC), importance, Drying theory Drying and dehydration. Commercial grain dryers, deep bed, flat bed, tray, fluidized bed, recirculated and solar dryers will be dealt. Material handling equipment and their selection. Primary processing of cereals, pulses and oil seeds. Cleaning, grading and packaging

Familiarization with renewable energy gadgets, biogas plants, production process of biodiesel, briquetting machine - production process of bio-fuels - Familiarization with different solar energy gadgets, solar photovoltaic system, Solar light, Solar pumping, Solar fencing, solar cooker, solar drying system, solar distillation and solar pond

Reference Books

- 1 Greenhouse technology and management, Radha Manohar, K and Igathinathane. C., 2 (2007), BS Publications.

- 6 Principles of Agricultural Engineering, vol. I,, Ojha, T. P. and Michael, A. M., 14 (2021), Jain brothers, Karol Bag, New Delhi.

23MRPY01 - BASICS OF PHARMACOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRPY01	BASICS OF PHARMACOLOGY	BOP	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the pharmacological actions of different categories of drugs	2	PO1, PO4, PSO2
CO2	Understand the mechanism of drug action at the organ system/subcellular/macromolecular level	2	PO1, PO4, PSO2
CO3	Apply the basic knowledge of pharmacology in PNS	3	PO1, PO4, PSO2
CO4	Apply the effect of drugs on CNS	3	PO1, PO4, PSO2
CO5	Analyze practical applications of Pharmacology	4	

Syllabus

General Pharmacology a. Introduction to Pharmacology- Definition, historical landmarks and scope of pharmacology, nature and source of drugs, essential drugs concept and routes of drug administration, Agonists, antagonists(competitive and non-competitive), spare receptors, addiction, tolerance, dependence, tachyphylaxis, idiosyncrasy, allergy. b. Pharmacokinetics- Membrane transport, absorption, distribution, metabolism and excretion of drugs .Enzyme induction, enzyme inhibition, kinetics of elimination

Principles and mechanisms of drug action. Receptor theories and classification of receptors, regulation of receptors. drug receptors interactions signal transduction mechanisms, G-protein coupled receptors, ion channel receptor, transmembrane enzyme linked receptors, transmembrane JAK STAT binding receptor and receptors that regulate transcription factors, dose response relationship, therapeutic index, combined effects of drugs and factors modifying drug action. b. Adverse drug reactions. c. Drug interactions pharmacokinetic and pharmacodynamic d. Drug discovery and clinical evaluation of new drugs Drug discovery phase, preclinical evaluation phase, clinical trial phase, phases of clinical trials and pharmacovigilance

Pharmacology of drugs acting on peripheral nervous system a. Organization and function of ANS. b. Neurohumoral transmission,co transmission and classification of neurotransmitters. c. Parasympathomimetics, Parasympatholytics, Sympathomimetics, sympatholytics. d.Neuromuscular blocking agents and skeletal muscle relaxants peripheral. e. Local anesthetic agents. f. Drugs used in myasthenia gravis and glaucoma .

Pharmacology of drugs acting on central nervous system .General anesthetics and preanesthetics.Sedatives, hypnotics and centrally acting muscle relaxants. Anti epileptics . Alcohols and disulfuram .Pharmacology of drugs acting on central nervous system .Psychopharmacological agents: Antipsychotics, antidepressants, anti anxiety agents, anti manics and hallucinogens. Drugs used in Parkinsons disease and Alzheimers disease. CNS stimulants and nootropics. Opioid analgesics and antagonists. Drug addiction, drug abuse, tolerance and dependence

23MRPY02 - ADVANCED PHARMACOLOGY - I (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRPY02	ADVANCED PHARMACOLOGY - I	AP-I	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Pharmacology of cardio vascular system drugs: congestive heart failure drugs, Anti-hypertensive drugs, Anti-anginal drugs, Anti-arrhythmic drugs, Antihyperlipidemic drugs	2	PO1, PO11, PSO1
CO2	Understanding the pharmacology of shock, Hematinics, coagulants and anticoagulants, Fibrinolytics and antiplatelet drugs, diuretics and autocoids	2	PO1, PO11, PSO1
CO3	Understand the Pharmacology of drugs acting on endocrine system. Anterior Pituitary hormones, Thyroid hormones, Insulin, Oral Hypoglycemic agents and glucagon, ACTH and corticosteroids.	2	PO1, PO11, PSO1
CO4	Undesrtand the principles of Bio-Assays	2	PO1, PO11, PSO1
CO5	Applying the pharmacological activity of drugs on Cardiac and Renal system and dose responses on isolated tissues (Insilco)	3	PO1, PO11, PSO1

Syllabus

Pharmacology of drugs acting on cardiovascular system Introduction to hemodynamic and electrophysiology of heart. Drugs used in congestive heart failure Antihypertensive drugs. Antianginal drugs. Anti-arrhythmic drugs. Antihyperlipidemic drugs. Pharmacology of drugs acting on cardiovascular system Drug used in the therapy of shock. Hematinics, coagulants and anticoagulants. Fibrinolytics and antiplatelet drugs. Plasma volume expanders.

Pharmacology of drugs acting on urinary system Diuretics, Antidiuretics. Autocoids and related drugs Introduction to autocoids and classification, Histamine, 5HT and their antagonists. Prostaglandins, Thromboxanes and Leukotrienes. Angiotensin, Bradykinin and Substance P. Non- steroidal anti-inflammatory agents, Antigout drugs, Antirheumatic drugs

Pharmacology of drugs acting on endocrine system Basic concepts in endocrine pharmacology., Anterior Pituitary hormones- analogues and their inhibitors. Thyroid hormones analogues and their inhibitors. Hormones regulating plasma calcium level Parathormone, Calcitonin and VitaminD. Insulin, Oral Hypoglycemic agents and glucagon. ACTH and corticosteroids

Pharmacology of drugs acting on endocrine system Androgens and Anabolic steroids. Estrogens, progesterone and oral contraceptives. Drugs acting on the uterus. Bioassay Principles and applications of bioassay. b. Types of bioassay Bioassay of insulin, oxytocin, vasopressin, ACTH, dtubocurarine, digitalis, histamine and 5HT.

1. Introduction to in-vitro pharmacology and physiological salt solutions. 2. Effect of drugs on isolated frog heart. 3. Effect of drugs on blood pressure and heart rate of dog. 4. Study of diuretic activity of drugs using rats mice. 5. DRC of acetylcholine using frog rectus abdominis muscle. 6. Effect of physostigmine and atropine on DRC of acetylcholine using frog rectus 7. abdominis muscle and rat ileum respectively. 8. Bioassay of histamine using guinea pig ileum by matching method. 9. Bioassay of oxytocin using rat uterine horn by interpolation method. 10. Bioassay of serotonin using rat fundus strip by three-point bioassay. 11. Bioassay of acetylcholine using rat ileum colon by four-point bioassay. 12. Determination of PA2 value of prazosin using rat anococcygeal muscle by Schilds plot method 13. Determination of PD2 value using guinea pig ileum. 14. Effect of spasmogens and spasmolytics using rabbit jejunum

23MRPY03 - EXPERIMENTAL PHARMACOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRPY03	EXPERIMENTAL PHARMACOLOGY	EPC	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understand the uses of various commonly used laboratory animals in preclinical research	2	PO4, PSO1
CO2	Understand the animal screening models for various indications	2	PO4, PSO1
CO3	Understand the animal screening models for nervous system related indications	2	PO4, PSO1
CO4	Understand the importance of biostatistics and research methodology in clinical and preclinical research	2	PO4, PSO1
CO5	Apply Pharmacological screening methods to identify the activity of drugs	3	PO4, PSO1

Syllabus

Laboratory Animals: o Study of CPCSEA and OECD guidelines for maintenance, breeding and conduct of experiments on laboratory animals. o Common lab animals: Description and applications of different species and strains of animals. Popular transgenic and mutant animals. o Techniques for collection of blood and euthanasia. o Common routes of drug administration in laboratory animals. o Dose selection, calculation and conversions, preparation of drug solution/suspensions. Grouping of animals and importance of sham negative and positive control groups

Study of screening animal models for various indications o Rationale for selection of animal species and sex for the study. o Diuretics o Anti-asthmatics o Analgesic o Antipyretic o Anti-inflammatory o Drugs acting on eye o Antihypertensives o Antiarrhythmics o Anti-dyslipidemics o Anti-aggregatory o Coagulants o Anticoagulants o Antiulcer o Antidiabetic o Anticancer

Study of screening animal models for nervous system related indications o Nootropics & Alzheimer's disease o Anti-Parkinson's o General anesthetics o Sedative and hypnotics o Antipsychotic o Antidepressant o Antiepileptic o Sympathomimetics o Sympatholytics o Parasympathomimetics o Parasympatholytics o Skeletal muscle relaxants o Local anesthetics

Research methodology and Bio-statistics o Selection of research topic o Review of literature o Research hypothesis o Study design o Pre-clinical data analysis o Interpretation using Students 't' test and One-way ANOVA. o Graphical representation of data

23MRPY04 - ADVANCED PHARMACOLOGY - II (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRPY04	ADVANCED PHARMACOLOGY - II	AP-II	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the mechanism of drug action and its relevance in the treatment of different infectious diseases	2	PO4, PSO2
CO2	Understand the mechanism of drug action antibiotics and drugs used commonly infected diseases	2	PO4, PSO2
CO3	Understand the immunopharmacology	2	PO4, PSO2
CO4	Apply the principles of toxicology and treatment of various poisonings	3	PO4, PSO2
CO5	Apply the knowledge on introduction to experimental Pharmacology, common laboratory animals, agonist and antagonist activities of drugs on isolated tissues. Get trained on screening of anti-allergic drugs, anti-ulcer drugs and gastro intestinal activity	3	PO4, PSO2
CO6	Estimation of different biochemical parameters using semi auto analyser and obtain a knowledge on screening of hypo glycaemic drugs, Pyrogen testing, Trained in performing of toxicity studies, and get knowledge in application of Biostatistics in Pharmacological research.	3	PO4, PSO2

Syllabus

Pharmacology of drugs acting on Respiratory system a. Anti -asthmatic drugs b. Drugs used in the management of COPD c. Expectorants and antitussives d. Nasal decongestants e. Respiratory stimulants Pharmacology of drugs acting on the Gastrointestinal Tract a. Antiulcer agents. b. Drugs for constipation and diarrhoea. c. Appetite stimulants and suppressants. d. Digestants and carminatives. e. Emetics and anti-emetics.

Chemotherapy a. General principles of chemotherapy. b. Sulfonamides and cotrimoxazole. c. Antibiotics- Penicillins, cephalosporins, chloramphenicol, macrolides, quinolones and fluoroquinolones, tetracycline and aminoglycosides d. Anti-tubercular agents e. Anti-leprotic agents f. Antifungal agents g. Antiviral drugs h. Anthelmintics i. Antimalarial drugs j. Anti-amoebic agents

Chemotherapy l. Urinary tract infections and sexually transmitted diseases. 2. Chemotherapy of malignancy. Immunopharmacology a. Immunostimulants b. Immunosuppressant Protein drugs, Monoclonal antibodies, target drugs to antigen, biosimilars

Principles of toxicology a. Definition and basic knowledge of acute, subacute and chronic toxicity. b. Definition and basic knowledge of genotoxicity, carcinogenicity, teratogenicity and mutagenicity c. General principles of treatment of poisoning d. Clinical symptoms and management of barbiturates, morphine, Organophosphorus compound and lead, mercury and arsenic poisoning. Chrono pharmacology a. Definition of rhythm and cycles. b. Biological clock and their significance leading to chronotherapy.

23MRTP01 - INTRODUCTION TO TECHNOLOGICAL ENTREPRENEURSHIP (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRTP01	INTRODUCTION TO TECHNOLOGICAL ENTREPRENEURSHIP	ITEP	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of technological entrepreneurship and the entrepreneurial ecosystem.	2	PO2
CO2	Develop skills for identifying and evaluating technological opportunities.	3	, PSO2
CO3	Create viable business models and strategies for technology-based startups.	4	
CO4	Develop and pitch a technology-based business plan.	5	PO3
CO5	Implement strategies for launching and scaling technology startups.	6	PO11

Syllabus

Introduction to Technological Entrepreneurship: Definition and significance of technological entrepreneurship, Overview of the entrepreneurial ecosystem, Characteristics of successful technology entrepreneurs

Opportunity Identification and Evaluation: Techniques for identifying technological opportunities, Market research and analysis, Feasibility studies and validation

Business Model Development: Components of a business model, Business model canvas, Case studies of successful tech startups

Business Planning and Pitching: Elements of a business plan, Financial planning and projections, Pitching techniques and investor presentations

Launching and Scaling Startups: Strategies for launching technology startups, Growth hacking and scaling techniques, Managing resources and operations

Reference Books

- 1 The Lean Startup: How Today's Entrepreneurs Use Continuous Innovation to Create Radically Successful Businesses, Eric Ries, 1st, Crown Business.
- 2 Zero to One: Notes on Startups, or How to Build the Future, Peter Thiel, Blake Masters, 1st, Crown Business.
- 3 Business Model Generation: A Handbook for Visionaries, Game Changers, and Challengers, Alexander Osterwalder, Yves Pigneur, 1st, Wiley.
- 4 The Innovator's Dilemma: When New Technologies Cause Great Firms to Fail, Clayton M. Christensen, 1st, Harvard Business Review Press.

23MRTP02 - LEAN STARTUP LAUNCHPAD (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRTP02	LEAN STARTUP LAUNCHPAD	LSLP	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principles and concepts of Lean Startup methodology and explain its importance for modern entrepreneurs.	2	PO2, PO11, PSO1
CO2	Identify target customer segments, develop detailed customer personas, and validate customer problems through effective interviews and analysis.	4	PO2, PO11, PSO1
CO3	Generate innovative solution ideas, formulate testable hypotheses, and design experiments to validate these hypotheses effectively.	6	PO2, PO11, PSO1
CO4	Develop a Minimum Viable Product (MVP) with limited resources, test it with real users, and iterate based on feedback to improve the product.	6	PO2, PO11, PSO1
CO5	Develop a Minimum Viable Product (MVP) with limited resources, test it with real users, and iterate based on feedback to improve the product.	5	PO2, PO11, PSO1

Syllabus

Introduction to Lean Startup Methodology: The definition and principles of Lean Startup, the importance of Lean Startup for entrepreneurs, an overview of the Build-Measure-Learn loop, and understanding hypothesis-driven development.

Customer Discovery and Problem Validation: Identifying and segmenting target customers, developing customer personas, conducting customer interviews, and validating customer problems.

Solution Ideation and Hypothesis Testing: Generating and prioritizing solution ideas, formulating hypotheses for solutions, designing experiments to test hypotheses, and metrics and measurement in Lean Startup.

Developing a Minimum Viable Product (MVP): The definition and purpose of an MVP, types of MVPs such as prototypes and landing pages, building an MVP with limited resources, and iterating based on feedback.

Business Model Validation and Preparation for Launch: The introduction to Business Model Canvas, validating revenue models and cost structures, testing market fit and scalability, pivoting based on validation results, developing a go-to-market strategy, building a pitch deck for investors, planning for scaling and growth, and understanding common pitfalls and challenges.

23MRTP03 - ENTREPRENEURSHIP AND VENTURE CAPITAL (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRTP03	ENTREPRENEURSHIP AND VENTURE CAPITAL	EVC	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	To Understand the entrepreneurial mindset and process.	2	PO11
CO2	To explore different business models and develop a viable business plan	3	PO12
CO3	To analyse the fundamentals of venture capital and the investment process	4	PO7
CO4	To gain insights into scaling startups and managing growth	4	PO9
CO5	Laboratory Experiments	4	PO2

Syllabus

Definitions and types of entrepreneurship, Characteristics of successful entrepreneurs, The entrepreneurial ecosystem, Creativity and innovation in entrepreneurship, Techniques for idea generation, Identifying and evaluating, Business model canvas, Components of a business plan, Case studies of successful startups.

Importance of market research, Methods for market analysis, Understanding customer needs and segmentation, Roles and responsibilities in a startup team, Recruitment and team dynamics, Leadership and management skills, Lean startup methodology, Minimum viable product (MVP), Iterative development and user feedback.

Overview of venture capital industry, Types of venture capital firms, Stages of venture capital funding, Preparing for fundraising, Crafting a compelling pitch, Approaching and negotiating with investors, Creating financial projections, Understanding startup valuation, Dilution and cap tables

Key components of a term sheet, Negotiating deal terms, Common deal structures, Strategies for scaling, Managing rapid growth, Operational challenges and solutions, Legal considerations for startups, Intellectual property and patents, Ethical dilemmas in entrepreneurship

- 5 Venture deals, Brad Feld, 2019, Wiley.

23MRTP04 - BUILDING AND SUSTAINING A SUCCESSFUL ENTERPRISE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRTP04	BUILDING AND SUSTAINING A SUCCESSFUL ENTERPRISE	BSSE	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze and evaluate the fundamental principles and strategic processes involved in building and sustaining a successful enterprise.	2	PO1, PO2, PO3, PO4, PO5, PO6, PO7, PO8, PO9, PO10, PO11, PO12, PSO1, PSO2
CO2	Develop comprehensive market analyses and identify business opportunities using competitive analysis techniques.	3	PO1, PO2, PO3, PO4, PO5, PO6, PO7, PO8, PO9, PO10, PO11, PO12, PSO1, PSO2
CO3	Apply financial management techniques, including planning, forecasting, and key financial ratio analysis, to ensure business sustainability.	4	PO1, PO2, PO3, PO4, PO5, PO6, PO7, PO8, PO9, PO10, PO11, PO12, PSO1, PSO2
CO4	Design effective marketing and sales strategies, incorporating digital marketing and customer relationship management to enhance business growth.	4	PO1, PO2, PO3, PO4, PO5, PO6, PO7, PO8, PO9, PO10, PO11, PO12, PSO1, PSO2
CO5	Plan, execute, and present a capstone project that demonstrates practical application of course concepts in creating and maintaining a successful enterprise.	5	PO1, PO2, PO3, PO4, PO5, PO6, PO7, PO8, PO9, PO10, PO11, PO12, PSO1, PSO2

Syllabus

Foundations of Building a Successful Enterprise Introduction to Building Successful Enterprises; Key components of a successful enterprise; Overview of entrepreneurial thinking and mindset; Defining vision, mission, and goals; Strategic planning processes; Tools and techniques for strategic execution

Market Analysis and Innovation Understanding market trends and dynamics; Identifying and evaluating business opportunities; Conducting competitive analysis; Role of innovation in business success; Fostering a culture of innovation; Case studies on innovative businesses; Different types of business models; Creating and delivering value to customers; Evaluating and refining business models

Financial Management and Marketing Strategies Financial planning and forecasting; Managing cash flow and capital; Key financial ratios and their implications; Developing effective marketing strategies; Sales techniques and customer relationship management; Digital marketing and its impact on business

Leadership, Sustainability, and Capstone Project Recruitment and selection processes; Team dynamics and performance management; Leadership styles and their impact on team success; Creating and maintaining a strong organizational culture; Leading through change and uncertainty; Case studies on organizational transformation; Identifying and managing business risks; Legal aspects of running a business; Intellectual property and compliance issues; Expanding businesses internationally; Understanding global market dynamics; Strategies for entering and succeeding in foreign markets; Importance of sustainability in business; Implementing CSR initiatives

Integration and Practical Application: This module focuses on integrating the foundational concepts, analytical skills, and strategic approaches learned throughout the course. It emphasizes practical application through case studies, simulations, and project-based learning to synthesize knowledge and skills essential for building and sustaining a successful enterprise.

Reference Books

23MRWS02 - SOIL AND WATER CONSERVATION ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRWS02	SOIL AND WATER CONSERVATION ENGINEERING	SWCE	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concepts of soil, water, and wind erosion along with their various conservation practices.	2	PO6, PO7, PSO2
CO2	Understand about terraces, contours, and grasses waterways in order to prevent erosion at different grades of slopy land	2	PO6, PO7, PSO2
CO3	Understand the concepts of irrigation water measurement and various irrigation methods - micro-irrigation, underground pipeline system.	2	PO6, PO7, PSO2
CO4	Apply knowledge in the water conservation structure, and the systems associated with wells to drive water out of them to irrigate the agricultural land	3	PO6, PO7, PSO2
CO5	Analyse the real-life problems through laboratories work.	4	PO6, PO7, PSO2

Syllabus

Introduction to soil and water conservation, Causes of soil erosion, Definition and agents of soil erosion, Water erosion, Forms of water erosion, Gully classification and control measures, Soil loss estimation by Universal Soil Loss Equation, Soil loss measurement techniques, Principles of erosion control, Introduction to contouring, Strip cropping, Contour bund, Graded bund and bench terracing, Grassed water ways and their design, Water harvesting and its techniques, Wind erosion, Mechanics of wind erosion

Types of soil movement, Principles of wind erosion control and its control measures. Introduction to irrigation, Irrigation project classification, Methods of microirrigation, Importance of irrigation water measurements, Volumetric area velocity Discharge methods, Weirs, Orifice, Flumes, Types of wells, Water lifting devices

Importance of irrigation water measurements - Volumetric, area velocity, discharge methods - Weirs, orifice, flumes. Classification of pumps, capacity, Power, Discharge calculations, Open channel hydraulics, Discharge calculations, Underground pipeline systems

Functional components and working principle of underground pipeline systems and micro irrigation systems and its design like drip, Sprinkler etc. Water harvesting techniques - Lining of ponds, tanks and canal systems

Practicing survey - Principles and educating to use pacing technique for measurement. Area calculations through chain survey - GPS demo for tracking and area measurement, Construction of contour and graded bunds. Farm pond construction and its design aspects

Reference Books

23MRWS03 - IRRIGATION WATER MANAGEMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRWS03	IRRIGATION WATER MANAGEMENT	IWM	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the knowledge of irrigation water management to maximize crop yield	2	PO4, PO6, PO7, PSO1
CO2	Understand the ways to improve crop performance by evaluating the different types of irrigation methods	2	PO4, PO6, PO7, PSO1
CO3	Understand the knowledge of various irrigation methods which are more efficient to minimize the water loss and improve the water use efficiency of crop	2	PO4, PO6, PO7, PSO1
CO4	Understand the knowledge on water requirements of crops, soil-plant- relationship, Irrigation requirement, duty and delta, Irrigation efficiencies	2	PO4, PO6, PO7, PSO1
CO5	Analyze the need for efficient and effective irrigation to maximize crop yield and quality whilst making best use of the water available.	4	PO4, PO6, PO7, PSO1

Syllabus

irrigation : Definition and objectives; Water resources, Irrigation projects (major, medium & minor) in India and Andhra Pradesh; Soil - plant - water relationships: Importance - Soil a three phase disperse system- Physical properties of soil viz., Depth, Soil texture, Soil structure, Particle density, Bulk density & Porosity influencing water retention, movement & availability.; Methods of soil moisture estimation and Water retention in soil

Kinds of water in soil- Gravitational water- Capillary water- Hygroscopic water - Their importance in crop production. Soil moisture constants- Saturation capacity- Field capacity- Permanent wilting point- Available soil moisture - Hygroscopic coefficient- Theories of soil water availability. Plant-water relationships and Root characteristics. Evapotranspiration- Soil evaporation & Plant transpiration and water requirement of crops

Scheduling of irrigation- Different criteria- Soil water regime approach- Feel & appearance method, Soil moisture tension & Depletion of available soil moisture method. Climatological approach- Lysimeters & IW/CPE ratio method. Plant indices approach- Visual plant symptoms, Soil-cum-sand mini plot technique, Growth rate, Relative water content, Plant water potential, Canopy temperature, Indicator plants & Critical growth stages. Methods of irrigation - Surface, Subsurface, Sprinkler and Drip irrigation

Irrigation efficiency and Water use efficiency- Crop water use & Field water use efficiency- Factors influencing WUE ; Quality of irrigation water- Salinity hazard, Sodium hazard, Residual sodium carbonate & Boron toxicity- Criteria & threshold limits- Management practices for using poor quality water. Water logging- causes for waterlogging- Agricultural drainage- Surface & Subsurface drainage systems- Relative merits.

Practical Measurement of bulk density, study of soil moisture measuring devices, determination of field capacity and permanent wilting point, measurement of infiltration rate, irrigation water, scheduling of irrigation by IW/CPE ratio method, calculations on soil moisture, irrigation water needs, duty of water and irrigation efficiencies, layout of surface methods of irrigation, demonstration of drip and sprinkler irrigation, visit to micro irrigation systems in farmers fields ,water management practices in different crops.

Reference Books

- 1 Irrigation Theory and Practice, Michael A M, 2 nd, 2008, Vikas Publishing House Pvt Ltd.
- 2 .Irrigation Agronomy , S R reddy and G K Reddy, 5th, 2019, Kalyani Publishers.
- 3 Efficient use of irrigation water, Reddy and Reddy, 1st, 2005, Kalyani publishers.

23MRWS04 - RAINFED AGRICULTURE AND WATERSHED MANAGEMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRWS04	RAINFED AGRICULTURE AND WATERSHED MANAGEMENT	RAWM	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand about rainfed agriculture and its problems and prospects in India.	2	PO2, PO6, PO7, PSO2
CO2	Explain different tillage practices for rainfed crops, losses due to erosion, management of rainfed crops	2	PO2, PO6, PO7, PSO2
CO3	Apply different harvesting structures, conservation measures, use of fertilizers in rainfed areas and the different cropping systems in rainfed region	3	PO2, PO6, PO7, PSO2
CO4	Interpret about contingent crop planning, evapotranspiration and land capability classification	3	PO2, PO6, PO7, PSO2
CO5	Apply practical knowledge on cropping pattern of dryland areas, cultural practices in dryland areas, watershed and rainfall analysis	3	PO2, PO6, PO7, PSO2

Syllabus

Rainfed agriculture definition, dimensions of the problem, History of rainfed agriculture, watersheds in India, Problems and prospects of rainfed agriculture in India, Problems and prospects of rainfed agriculture in India soil characteristics soil fertility status soil moisture storage and retention capacity heavy weed infestation-soil crust and their effect on crop growth and soilsits management.

Tillage for rainfed crops, setline cultivation, modern concepts of tillage, Soil erosion, losses due to erosion, nature and extent of wind and water erosion, factors affecting erosion and universal soil loss equation, Water harvesting importance, its techniques Water harvesting structures arid region runoff farming water spreading

Water harvesting, importance, its techniques, Water harvesting structures, farm ponds, check dams, percolation tank, In-situ moisture conservation measures, mulching, Broad Bed and Furrow and leveling, In-situ moisture conservation measures ,bund forming bunding, ridge and furrow system conservation furrows inter plot water harvesting, mulching Broad Bed and Furrow (BBF) and leveling.

Contingent crop planning for aberrant weather conditions in red and black soils, Evapotranspiration, measures to reduce evapotranspiration, Fertilizer use in rainfed areas use of organic manures introduction of legumes in crop rotation organic recycling and bio-fertilizer use in rainfed agriculture time and method of fertilizer application

Study on weeding, use of mulches, chemicals, windbreaks and shelterbelts Land capability classification and alternate land use system Efficient utilization of water through soil and crop management practices agronomic measures mechanical measures for soil and water conservation gully control

23MRAC05 - AI APPLICATIONS FOR BUSINESS SUCCESS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAC05	AI APPLICATIONS FOR BUSINESS SUCCESS	AIA	M	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamentals of AI and its applications in various business domains.	2	PO5
CO2	Analyze business problems and identify suitable AI techniques and algorithms for solution development.	3	PO4, PO5, PSO1
CO3	Implement AI solutions using programming languages and frameworks commonly used in business applications.	4	PO5
CO4	Evaluate the effectiveness and impact of AI applications on business success, including ethical and societal considerations.	5	PO5

Syllabus

Introduction to AI in Business: Overview of artificial intelligence and its branches. Applications of AI in business functions such as marketing, finance, operations, and human resources. Exploration of AI trends and future outlook. Case studies showcasing successful AI implementations in various industries.

AI Techniques for Business: In-depth study of machine learning algorithms including regression, classification, clustering, and neural networks. Introduction to reinforcement learning and its applications in business decision-making. Discussion on advanced AI techniques such as deep learning and generative adversarial networks (GANs).

Implementing AI Solutions: Practical implementation of AI solutions using popular programming languages for AI development such as Python and R. Hands-on experience with AI frameworks and libraries including TensorFlow, Keras, and PyTorch. Real-world projects focusing on building AI models for business applications.

AI Impact and Ethical Considerations: Evaluation of the impact of AI on business success, including ROI assessment and performance metrics. Discussion on ethical considerations in AI development and deployment, including bias mitigation and fairness. Exploration of societal impacts of AI adoption and responsible AI practices for sustainable business growth.

Reference Books

- 1 "Artificial Intelligence: A Modern Approach" , Stuart Russell, Peter Norvig, 3rd , Pearson.
- 2 "Python Machine Learning" , Sebastian Raschka, Vahid Mirjalili, 3rd, Packt Publishing.
- 3 "Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow" 2nd O'Reilly Media, Aurélien Geron, 2nd , O'Reilly Media.

23MRAG05 - DIGITAL ART (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAG05	DIGITAL ART	DTA	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Students will be able to identify key tools and features of digital art software (e.g., Adobe Photoshop, Illustrator) and recall fundamental digital art terminology.	2	PO1, PSO1
CO2	Apply Students will be able to use digital art software to create original artworks, applying techniques such as digital painting, photo manipulation, and vector illustration.	2	PO3, PSO1
CO3	Analyze Students will be able to critique digital artworks by breaking down the elements and principles of design used, assessing the effectiveness of the techniques and tools employed.	3	PO7, PSO2
CO4	Create Students will be able to develop a portfolio of digital artworks that showcases their ability to integrate various techniques and tools creatively, demonstrating a personal style and artistic vision.	3	PO10, PSO2
CO5	Evaluate Students will be able to assess the quality and impact of digital artworks, including their own and others', using established criteria and providing constructive feedback aimed at improving artistic techniques and conceptual expression.	4	PO12

Syllabus

Introduction to digital art software, basic tool usage, and simple projects.

Creating digital sketches, developing digital paintings, and exploring various illustration styles.

Photo retouching, color correction, blending techniques, and creating composites.

Pen tool mastery, working with shapes and paths, typography, and logo design, Designing logos, creating vector illustrations, and developing infographics.

Advanced project work, developing a cohesive portfolio, and peer reviews, 3D modeling basics, animation, interactive media, and portfolio presentation.

Reference Books

- 1 Digital Art Masters, 3dtotal Publishing, 2nd, 3dtotal Publishing.
- 2 Digital Painting Techniques, 3dtotal Publishing, 1st, 3dtotal Publishing.
- 3 A Complete Guide for Fine Artists, Photographers, and Digital Designers, Sylvie Covey, 1st, by Sylvie Covey.
- 4 The Adobe Illustrator WOW, by Sharon Steuer, 2nd, by Sharon Steuer.

23MRAP05 - SOCIAL CULTURE ANTHROPOLOGY (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAP05	SOCIAL CULTURE ANTHROPOLOGY	SCA	M	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the fundamental concepts and theories in social and cultural anthropology.	2	PO3, PO7, PO11, PSO1
CO2	Understand the diversity of human cultures and social practices.	2	PO3, PO7, PO11, PSO1
CO3	Apply anthropological methods and approaches to study different societies.	2	PO3, PO7, PO11, PSO1
CO4	Critically evaluate the impact of globalization and other contemporary issues on cultures.	2	PO3, PO7, PO11, PSO1

Syllabus

Introduction to Anthropology Overview of anthropology as a discipline Key concepts and history of social and cultural anthropology Introduction to anthropological methods Culture and Society Definition of culture and its components (values, norms, symbols) The concept of society and social organization Theories of culture (e.g., cultural relativism, ethnocentrism) Methods in Anthropology Ethnographic research methods Participant observation and fieldwork Ethical considerations in anthropological research

Language and Communication The role of language in culture Linguistic anthropology and the study of language use Non-verbal communication and symbolism Social Structure and Organization Kinship and family systems Social hierarchies and class structures Political organization and leadership

Religion and Ritual The role of religion in society Comparative study of religious practices and beliefs Rituals and their social functions Economic Systems and Production Types of economic systems subsistence agriculture, market economies Theories of exchange and economic behavior The impact of globalization on local economies Gender and Identity The study of gender roles and identities Intersectionality and cultural constructions of gender Global perspectives on gender issues Health, Illness, and Medicine Medical anthropology and the study of health systems Cultural beliefs about illness and healing practices Global health issues and their cultural dimensions

Globalization and Cultural Change The effects of globalization on local cultures Cultural hybridization and transnationalism Contemporary issues in cultural preservation and change Review and Contemporary Issues Review of key concepts and theories Discussion of current trends and challenges in anthropology Case studies of recent anthropological research

23MRAR05 - SOCIAL GEOGRAPHY AND CARTOGRAPHY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRAR05	SOCIAL GEOGRAPHY AND CARTOGRAPHY	SGC	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand of the basic concepts and theoretical frameworks of social geography, and interpret the complex relationships between society, space, and place.	2	PO7, PO9, PSO2
CO2	Understand of the complex interplay between social processes and spatial dynamics in the formation and transformation of social regions.	2	PO7, PO9, PSO2
CO3	Apply the social structure, diversity, and well-being in India, as well as the challenges and opportunities for building a more equitable and inclusive society.	3	PO7, PO9, PSO2

Syllabus

Basic Concepts: Meaning, scope and approaches of Social Geography; Concept of tribe, ethnicity, society, gender, social space; Social differentiation and stratification; Social morphology.

Social Regionalization: Social differentiation and region formation; Bases of social region formation; Racism and racial discrimination; Ethnicity, identity and urban segregation; Social stratification and exclusion.

Social Structure in India: Peopling of India; Evolution of social regions; Tribes and their distribution; Caste: concept & hierarchy; Unity in diversity; Gender and human development. Social Well-being in India:

Concept of social well being. Social issues: crime, health care, education, and housing; Gender issues; Social policies and planning; Social impact assessment. Maps: Components and classification Survey of India topographical maps, Thematic maps: Proportional squares, pie diagrams with proportional circles, dots and spheres

Reference Books

23MRBA05M - LOGISTICS AND SUPPLY CHAIN MANAGEMENT (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRBA05M	LOGISTICS AND SUPPLY CHAIN MANAGEMENT	LSCM	M	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the Importance of logistics, Logistics - A systems concept	2	PO1, PSO1
CO2	Analyze about logistics as a part of supply chain management	4	PO2
CO3	Understand the modes of transportation, inbound logistics, and outbound logistics	2	PO3, PSO2
CO4	Understand about warehousing activity	2	PO4

Syllabus

Definition of Logistics Management, Functions and Objectives, Importance of logistics, Logistics-A systems concept, Logistics and customer service: Elements of customer service, Phases in customer service, Customer Retention, Extension to customer service. Introduction to Logistics Specialists and industry stakeholders: Airlines, Shipping Lines, NVOCCs Freight Forwarders, Custom House Agents, Export Packers, 3PL & 4PL Companies, Trends, Issues, and Challenges in Logistics management, Sub-Sectors of Logistics.

Introduction to Supply Chain Management Evolution and Concept Logistics Versus Supply Chain Management Drivers of Supply Chain Logistical Drivers and Cross Functional Drivers Role of Logistics in SCM Concept of Value Chain Role of inventory in logistics Importance Types of inventory Functions of inventory Costs for holding inventory Inventory levels Need for controlling inventory Types of selective inventory control techniques Inventory planning models

Transportation Mode and Mix Documentation and Processes Rail road waterway airways and pipelines Transport mode Selection Performance Characteristics Policy Reforms and Govt Initiatives MultiModal Transportation Role of MTO Concept and definition of Inbound logistics Decision making for inbound and outbound improving inbound logistics performance A DHL Case study Strategic Sourcing Process Concept of Outbound Logistics Sameday Parts Deliveries to Automotive Service Centers

Ware house concept and Operations Types of warehouses Warehouse decisions Site selection and methods of location Design Product mix analysis Expansion Role of CWCFCI Introduction To Material Handling Techniques Introduction to material Handling and Types of MHEs Criteria for selecting MHE

23MRCA05 - SCULPTURE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCA05	SCULPTURE	SCP	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the significance of Sculpture art and its operations.	2	PO1
CO2	Evaluate the role of sculpture in different areas and Learn Problem-solving techniques to rectify the errors during creating new concept with sculptural point of view.	2	PO2
CO3	Analyzing the workflow in Studio by different pioneers of Art and Apply basic special Effects to the concept.	3	PO3

Syllabus

Introduction to concept visualization- Study from Geometric Principles. 1. Elements of Art: (i) Line (ii) Form (iii) Color (iv)Tone (v) Texture (v) Space 2. Principles of Composition: (i) Unity (ii) Harmony (iii) Balance (iv)Emphasis (v) Rhythm (vi)Proportion 3. Creative Process: (i) Observation (ii)Incubation (iii)Insight (iv)Evaluation (v)Elaboration. - Study of Basic Human , Bird and Animal Anatomy- in relief and 3 dimensional sculpture with detail drawings.

Purpose of Art .- for Delight, commentary, worship and Ritual, commemoration, Ritual, Commemoration, Persuasion and self-Expression. 5 Transformations- A study from Nature .- To develop and understand the sense of sculptural structure through nature

transformations in art forms and art ideas from pre historic to 21 century study and experimenting with those thoughts.

Reference Books

23MRCL05 - COMMERCIAL CONTRACT DRAFTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCL05	COMMERCIAL CONTRACT DRAFTING	CCD	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate a thorough understanding of the fundamental principles of commercial contract drafting.	2	PO5
CO2	Master the ability to construct clear, concise, and legally sound clauses covering critical aspects like consideration, warranties, representations, indemnification, confidentiality, breach of contract, dispute resolution, termination, and force majeure.	3	PO7
CO3	Gain the ability to analyze existing contracts, identify their strengths and weaknesses, and advise clients on their rights and obligations.	4	PO2, PSO2

Syllabus

Foundations of Commercial Contract Drafting

Drafting Core Contract Clauses

Advanced Contract Drafting and Negotiation

Reference Books

- 1 Practical Guide To Drafting Commercial Contracts, Bhumesh Verma, 2023, OakBridge Publishing.
- 2 Drafting Corporate and Commercial Agreements- Legal Drafting Guidelines, Forms and Precedents , Rodney D Ryder, 2016, Universal Law Publishing House.
- 3 COMMERCIAL CONTRACTS, R. Kumar, 2024, Bharat Law House.
- 4 Drafting Commercial Agreements, Stuart Cakebread and Juliette Levy, 2018, Law Society.

23MRCM06 - TRANSFORM TECHNIQUES FOR ENGINEERING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCM06	TRANSFORM TECHNIQUES FOR ENGINEERING	TTE	R	2	0	2	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Fourier transforms to solve partial differential equations and integral equations.	6	PO1, PO3, PO4
CO2	Apply Z transforms to solve Difference Equations.	6	PO1, PO3
CO3	Apply numerical methods to solve the algebraic, transcendental methods.	6	PO4
CO4	Apply numerical techniques to solve ordinary differential equations .	6	PO6

Syllabus

Solving Partial Differential Equations and Integral Equations by Fourier Transform Techniques: Introduction, Fourier Transforms, Fourier Sine Transforms, Fourier Cosine Transforms. Inverse Fourier Transforms. Apply Fourier Transform Techniques to Solve PDE and Integral Equations.

Solving Difference Equations Using Z-Transforms: Standard Z Transforms, Inverse Z Transforms, Apply Z-Transform Techniques to Solve Difference Equations. Hankel Transforms: Introduction to Hankel Transforms, Elementary Transformation, Applications of Hankel Transforms.

Solution of Algebraic and Transcendental Equations: Bisection Method, Regula-Falsi Method, Newton-Raphson Method. Iterative Methods

Taylor's, Euler Method, Modified Euler Method, Runge-Kutta Method of Second Order, Runge-Kutta Method of Fourth Order.

Finite Difference, Forward, Backward, and Central Differences, Operators: Shift Operators, Average Operators, and Relations between Difference Operators. Interpolation: Lagrange and Newton's Divided Difference Formula.

Numerical Integration: Trapezoidal Rule, Simpson's rule

Reference Books

- 1 Numerical Methods for Scientific and Engineering Computation, B.S. Grewal, 2015, Khana Publishers.
- 2 Numerical Methods for Scientific and Engineering Computation, M.K. Jain, S. R. K. Iyengar and R.K. Jain, 2008, New Age International Publishers.
- 3 Advanced Engineering Mathematics, Erwin Kreyszing, 2020, John Wiley.
- 4 The Hankel Transforms, R. Piessens, 2000, CRC Press LLC.

23MRCM07 - STATISTICS WITH R PROGRAMMING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCM07	STATISTICS WITH R PROGRAMMING	SWRP	R	2	0	2	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Describe the basic functions in R programming and identify the operators using in it.	3	PO1
CO2	CO 2 Doing Math and Simulation in R: Basic Math Functions, Calculating Probability, Cumulative Sums and Products, Minima and Maxima, Calculus, Functions For Statistical Distribution, Sorting, Linear Algebra Operation on Vectors and Matrices, Vector cross Product, Finding Stationary Distribution of Markov Chains, Set Operation, Input /output, Accessing the Keyboard and Monitor, Reading and Writing Files. STRING MANIPULATION: An Overview of String-Manipulation Functions; Regular Expressions.	3	PO1
CO3	CO 3 Probability Distributions, Normal Distribution, Poisson Distributions, Binomial Distribution, Other Distribution, Correlation and Covariance, Basic Statistics, T-Tests, ANOVA, Clustering Techniques. Creating Graphs, Graphics, The Workhorse of R Base Graphics, the plot Function, Customizing Graphs, Saving Graphs to Files.	3	PO1
CO4	CO 4 Linear Models, Simple Linear Regression, -Multiple Regression Generalized Linear Models, Logistic Regression, Poisson Regression, other Generalized Linear Models, Survival Analysis, Nonlinear Models, Splines, Decision, Random Forests.	3	PO1
CO5	Statistical data analysis using R Programming.	3	PO1
CO6	R programming for Linear Models, Simple Linear Regression, -Multiple Regression Generalized Linear Models, Logistic Regression, Poisson Regression, other Generalized Linear Models, Survival Analysis, Nonlinear Models, Splines, Decision, Random Forests.	3	PO1

Syllabus

Introduction, How to run R, R Sessions, and Functions, Basic Math, Variables, Data Types, Vectors, Conclusion, Advanced Data Structures, Data Frames, Lists, Matrices, Arrays, Classes. Doing Math and Simulation in R, Math Function.

Extended Example Calculating Probability, Cumulative Sums and Products, Minima and Maxima, Calculus, Functions For Statistical Distribution, Sorting, Linear Algebra Operation on Vectors and Matrices.

Extended Example: Vector cross Product, Extended Example: Finding Stationary Distribution of Markov Chains, Set Operation, Input /output, Accessing the Keyboard and Monitor, Reading and Writer Files.

Probability Distributions, Normal Distribution, Poisson Distributions, Binomial Distribution, Other Distribution, Correlation and Covariance, Basic Statistics, T-Tests, ANOVA. Creating Graphs, Graphics,

The Workhorse of R Base Graphics, the plot Function, Customizing Graphs, Saving Graphs to Files. Linear Models, Simple Linear Regression, -Multiple Regression Generalized Linear Models, Logistic Regression,

Reference Books

- 1 Practical Data Science with R, Nina Zumel, John Mount, 3, Manning Publications.
- 2 Mining of Massive Datasets, Jure Leskovec, Anand Rajaraman, Jeffrey D. Ullman, 3, Cambridge University Press, 2014..
- 3 Programming with R, Garrett, 2, Oreilly publishers.
- 4 Learning R for Everyone,, Lander, 3, Pearson.

23MRCM08 - MATRIX COMPUTATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRCM08	MATRIX COMPUTATION	MCT	R	2	0	2	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply sophisticated scientific computing and visualization environments to solve application problems involving matrix computation algorithms and Explain the effects of errors in computation and how such errors affect solutions.	3	PO1, PSO1
CO2	Analyse numerical algorithms, and understand the relationships between the computational effort and the accuracy of these algorithms.	3	PO2, PSO1
CO3	Apply the results produced by computer implementations of numerical algorithms.	3	PO3, PSO1
CO4	Apply Rayleigh quotient iterations and Explicit and implicit QR algorithms	3	PO4, PSO1
CO5	Apply and demonstrate the necessary analytical background for further studies leading to research in Machine Learning	3	PO3, PSO1
CO6	Apply MATLAB commands for solving problems on MatrixComputations.	3	PO3, PSO1

Syllabus

Floating point computations, IEEE floating point arithmetic, analysis of roundoff errors; Sensitivity analysis and condition numbers; Linear systems, LU decompositions, Gaussian elimination with partial pivoting.

Banded systems, positive definite systems, Cholesky decomposition - sensitivity analysis; Gram-Schmidt orthonormal process, Householder transformation, Givens rotations; QR factorization, stability of QR factorization.

Solution of linear least squares problems, normal equations, singular value decomposition(SVD), polar decomposition, Moore-Penrose inverse; Rank deficient least-squares problems; Sensitivity analysis of least-squares problems; Review of canonical forms of matrices; Sensitivity of eigenvalues and eigenvectors.

Reduction to Hessenberg and tridiagonal forms; Power, inverse power and Rayleigh quotient iterations; Explicit and implicit QR algorithms for symmetric and non-symmetric matrices; Reduction to bi-diagonal form; Golub- Kahan algorithm for computing SVD.

Reference Books

- 1 Fundamentals of Matrix Computations, D. S. Watkins, 2nd Ed., (2002), John Wiley.
- 2 Numerical Linear Algebra, L. N. Trefethen and D. Bau, 2nd Ed. (1997), SIAM.
- 3 Matrix Computations, G. H. Golub and C. F. Van Loan, 3rd Ed., (1996), John Hopkins University Press.
- 4 Applied Numerical Linear Algebra, J. W. Demmel, 1st Ed.,(1997), SIAM.

23MRDM05 - CONTENT MARKETING (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRDM05	CONTENT MARKETING	CM	M	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying the Behavioral Framework within a content marketing context,	3	
CO2	Content Maturity Model, Six principles of content marketing, Treating content as an asset, Building audience personas, Defining the engagement cycle, Developing on-brand content, Creating brand ambassadors	3	PO2, PO4, PO7, PO10
CO3	- Analyzing current content assets, Developing different types of content, Finding good content within your organization, Creating content your audience wants	4	PO2, PO4
CO4	Marketing Content and Evaluating Impact - Content Marketing Pyramid, Brief overview analytics and tracking 10 Module 5 Ethics/Diversity in Content Marketing - Importance of considering diversity in developing and marketing content	5	PO7, PO10

Syllabus

Introduction to Content Marketing - Applying the Behavioral Framework within a content marketing context, A content marketing business model.

Defining Your Content Niche and Strategy - Content Maturity Model, Six principles of content marketing, Treating content as an asset, Building audience personas, Defining the engagement cycle, Developing on-brand content, Creating brand ambassadors, Enhanced branding through content marketing.

Developing and Distributing Content - Analyzing current content assets, Developing different types of content, Finding good content within your organization, Creating content your audience wants, Developing an 16 effective editorial calendar.

Marketing Content and Evaluating Impact - Content Marketing Pyramid, Brief overview analytics and tracking

Ethics/Diversity in Content Marketing - Importance of considering diversity in developing and marketing content, Ethical issues in the digital age.

Putting it All Together - Best practices in content marketing, Applying principles in real world case studies

Reference Books

- 1 Social Marketing in India, Sameer Deshpande, Philip Kotler, Nancy R. Lee, 1st Edition (2013)., tmh.
- 2 Content Marketing for Dummies, Susan Gunelius, 2nd Edition (2021), For Dummies.
- 3 A Revolutionary Approach to Inbound Sales, Content Marketing, and Today's Digital Consumer, Marcus Sheridan, Updated Edition (2019)., Wiley.
- 4 Made to Stick: Why Some Ideas Survive and Others Die, Chip Heath, Dan Heath, 1st Edition (2007)., Random House.

23MRFA05 - TRADING ALGORITHMNS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFA05	TRADING ALGORITHMNS	TA	M	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Explain the fundamental concepts and methodologies of algorithmic trading, including the different types of trading algorithms and their roles in financial markets.	2	PO2
CO2	Describe the process of backtesting trading strategies using historical market data, including the importance of risk management and performance evaluation.	2	PO3
CO3	Implement basic machine learning models, such as linear regression and decision trees, to develop predictive models for trading strategies using financial data.	3	PO3, PSO1
CO4	Design and implement a simple trading strategy using programming languages like Python, incorporating statistical methods such as mean reversion and momentum.	3	PO3, PSO2
CO5	Evaluate the performance of different trading algorithms by comparing their risk-adjusted returns and analyzing their behavior under various market conditions.	4	PO3, PSO2
CO6	Critically assess the limitations and challenges of applying machine learning techniques in trading, including overfitting, data snooping, and the impact of market microstructure.	4	PO3, PSO2

Syllabus

Overview of algorithmic trading, market microstructure, types of trading algorithms (execution, statistical arbitrage, market making), basics of backtesting and simulation, introduction to algorithmic trading platforms, role of latency in trading, regulatory considerations in algorithmic trading.

Statistical methods in trading (mean reversion, momentum strategies), time series analysis and forecasting, introduction to machine learning models (linear regression, support vector machines, decision trees), feature engineering for financial data, overfitting and model validation, unsupervised learning techniques (clustering, PCA), reinforcement learning basics, risk-adjusted performance metrics.

Design and implementation of trading strategies, risk management techniques in algorithmic trading, portfolio optimization methods, execution algorithms (VWAP, TWAP, implementation shortfall), slippage management, backtesting frameworks and libraries, stress testing trading strategies, optimization techniques (genetic algorithms, simulated annealing).

High-frequency trading (HFT) strategies, machine learning in high-frequency trading, blockchain and cryptocurrencies in algorithmic trading, advanced portfolio management techniques, regulatory and ethical considerations in algorithmic trading, market impact modeling, flash crashes and market anomalies, emerging trends in algorithmic trading (AI, quantum computing, decentralized finance).

Reference Books

- 1 Algorithmic Trading: Winning Strategies and Their Rationale, Ernie Chan, 2nd Edition (2021), Wiley.
- 2 Advances in Financial Machine Learning, Marcos Lopez de Prado, 1st Edition (2018), Wiley.
- 3 High-Frequency Trading: A Practical Guide to Algorithmic Strategies and Trading Systems, Irene Aldridge, 2nd Edition (2013), Wiley.
- 4 Trading and Exchanges: Market Microstructure for Practitioners, Larry Harris, 1st Edition (2003), Oxford University Press.

23MRFM05 - DIGITAL PHOTOGRAPHY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFM05	DIGITAL PHOTOGRAPHY	DPG	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding Camera Functions and Settings digital camera functions and settings, including aperture, shutter speed, ISO, white balance, and focus modes, to control exposure	1	PO1, PO4
CO2	Composition and Aesthetics: principles such as rule of thirds, leading lines, symmetry, and framing, enabling them to create visually compelling and balanced photographs.	2	PO2, PO3
CO3	Lighting Techniques: Implement various lighting techniques, both natural and artificial, to enhance the mood, texture, and depth of their photographs, understanding the effects of light direction, quality, and color.	3	
CO4	Post-Processing and Editing: Editing techniques using software like Adobe Photoshop and Lightroom, enabling them to enhance and manipulate images for optimal presentation	4	PO4
CO5	Portfolio Development : Showcasing their best work, demonstrating their growth and versatility as photographers, and refine their skills and artistic vision.	5	PO2, PO5

Syllabus

History and evolution of photography Types of digital cameras and their components Basic camera settings: aperture, shutter speed, ISO, Camera Operation and Techniques

Understanding and using different camera modes (Manual, Aperture Priority, Shutter Priority, Program) Focusing techniques and depth of field Introduction to lenses and focal lengths

Rule of thirds and other composition techniques Framing and perspective Leading lines and symmetry Using color and contrast effectively. Lighting Natural vs artificial lighting

Techniques for shooting in different lighting conditions (golden hour, low light, indoors) Understanding and using flash. Introduction to post-processing software (Adobe Photoshop, Lightroom, etc.) Basic editing techniques: cropping, exposure adjustment, color correction Advanced editing techniques: retouching, filters, and special effects

Portrait photography: tips and techniques Landscape photography: capturing natural scenes Macro photography: close-up techniques Action and sports photography: capturing movement. Portfolio Development

Reference Books

- 1 Understanding Exposure, Bryan Peterson, 2016, Amphoto Books.
- 2 Digital Photography Complete Course, David Taylor, 2019, Amphoto Books.
- 3 Mastering Digital Photography, David D. Busch, 2008, Course Technology PTR.
- 4 The Adobe Photoshop Lightroom Classic CC Book for Digital Photographers, Scott Kelby, 2019, New Riders.

23MRFT05 - FOOD PACKAGING TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRFT05	FOOD PACKAGING TECHNOLOGY	FPT	R	2	0	2	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand designing and development of safe food packaging material.	2	PO1, PO3
CO2	Apply packaging requirement for food products and different types of food packaging systems.	3	PO1, PO3
CO3	Apply various packaging materials and equipment used in packaging industry.	3	PO1, PO3
CO4	Apply suitable packaging for a given food product.	3	PO1, PO3
CO5	Apply the learning toward establishing marketable food products.	3	PO1, PO3
CO6	Apply advanced packaging to select foods.	3	

Syllabus

Outline of Food packaging: Need, Role of packaging in extending shelf life of foods, designing packaging materials, testing of packaging materials, package performance tests, Principles of developing safe and protective packing, Safety assessment of food packaging materials.

Food packaging systems: Product characteristics and package requirements, Introduction of food packaging system, Different forms of packaging, Rigid, semi-rigid, flexible forms of packaging, Different packaging system for-Dehydrated foods, Frozen foods, Dairy products, Fresh fruits, Vegetables, Meat, Poultry, Sea foods.

Packaging materials. Types, characteristics, uses. Paper (Pulping, Fibrillation, Beating, Types of papers, testing methods). Glass (Composition, Properties, Types, Methods of bottle making). Metals (Tinplate, Types of cans, Aluminum containers, Lacquers). Plastics (Types, films, laminated and co-extruded plastic materials).

Package accessories and advances in Packaging technology: Introduction, Active packaging, MAP, Aseptic packaging, Packages for convenience, Biodegradable plastics, Coatings. Packaging equipment and machinery (Vacuum packaging, CA & MA packaging, Sealing, shrink packaging, FFS, Aseptic packaging, Retort, Bottling, Carton making, Printing).

Packaging technology to preserve perishable foods. Select perishable foods. Identify their preservation requirements to achieve a longer shelf-life. Design a suitable packaging for the select foods by conducting the necessary testing.

Application of advanced packaging systems for shelf-life extension of foods.

Reference Books

- 1 A Handbook of Food Packaging, P. John Jacob, 2010, Daya Publishing House.
- 2 Handbook of Food Packaging Technology, EIRI Board, 2015, EIRI.
- 3 Fundamentals of Packaging Technology, Walter Soroka, 2009, IOPP.
- 4 FOOD PACKAGING: PRINCIPLES AND PRACTICE, ROBERTSON L. GORDON, 2016, CRC Press.

23MRGD05 - PUBLICATION DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRGD05	PUBLICATION DESIGN	PUDG	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Mastery of basic design principles such as balance, contrast, alignment, repetition, proximity, and white space.	2	PO1
CO2	Skills in editing and enhancing images to be used in publications. Ability to integrate images effectively with text and other design elements.	2	PO2
CO3	Apply typography, color theory, and grid systems effectively.	3	PO3

Syllabus

Design Principles and Elements Layout and composition Introduction to grid systems Importance of white space , Typography Basics of typography Font selection and pairing Hierarchy and readability, Color Theory Basics of color theory Creating a color palette Using color to convey messages, Working with Images and Graphics Image selection and quality Integrating images into layouts Creating and using graphics, Tools and Software Introduction to Adobe InDesign Overview of Photoshop and Illustrator for publication design Basic tools and functions, Print Publications Designing for print specification.

Designing for digital media Interactive elements (links, multimedia) Responsive design principles , Cover Design Principles of effective cover design Creating engaging and informative covers Case studies and examples ,Advanced Layout Techniques

Production Processes Pre-press and printing techniques Digital publication optimization Guest lecture from industry professional, Project Management in Publication Design Planning and executing design projects Working with clients and teams Hands-on exercise: Developing a project plan for a publication ,Critical Analysis and Feedback Analyzing publication designs Providing and receiving constructive feedback Hands-on exercise: Peer review session ,Portfolio Development Assembling a professional portfolio Presenting and discussing design work Hands-on exercise: Portfolio review and critique , Final Project Presentation Final project completion

Reference Books

- 1 Making and Breaking the Grid, Second Edition, Updated and Expanded: A Graphic Design L, Timothy Samara, January 17, 2015, Rockport Publishers.
- 2 Thinking with Type: A Critical Guide for Designers, Writers, Editors, & Students, Ellen Lupton, 2nd edition, 6 October 2010, Princeton Architectura.
- 3 The Elements of Typographic Style, Robert Bringhurst , 2nd edition ,30 September 1996, Hartley & Marks Inc.
- 4 Designing Books: Practice and Theory, Jost Hochuli and Robin Kinross, April 1, 2004, Hyphen Press .

23MRIB05 - PROFESSIONAL SKILLS FOR INTERNATIONAL BUSINESS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIB05	PROFESSIONAL SKILLS FOR INTERNATIONAL BUSINESS	PIB	M	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the importance of cultural awareness in international business	2	PO6
CO2	Understand the role of protocol in fostering business relationships.	2	PO7
CO3	Apply the impact of economic policies on international business.	3	PO7
CO4	Interpret the effective marketing strategies for international markets.	3	PO11

Syllabus

Cross-Cultural Communication and Negotiation-Introduction to Cross-Cultural Communication,Cultural Dimensions and Models,Effective Communication Strategies,Cross-Cultural Negotiation,

International Business Etiquette and Protocol-Introduction to Business Etiquette,Meeting and Greeting Protocols,Business Dress and Attire,Dining Etiquette and Social Norms,Gift giving and receiving

International Trade and Economics-Introduction to International Trade,Trade Theories and Models,Trade Policies and Agreements,International Economic Institutions

International Marketing Strategies-Introduction to International Marketing,Market Research and Analysis,Market Entry Strategies,Global Branding and Positioning

Reference Books

- 1 International Business: Competing in the Global Marketplace, Charles W. L. Hill, 11th edition, 2017, McGraw-Hill Education.
- 2 Global Business Today, Charles W. L. Hill and G. Tomas M. Hult, 10th edition, 2017, McGraw-Hill Education.
- 3 International Business: The Challenges of Globalization, John J. Wild and Kenneth L. Wild, 9th edition, 2019, Pearson.
- 4 Cross-Cultural Management: Essential Concepts, David C. Thomas and Mark F. Peterson, 4th edition, 2016, Sage Publications.

23MRID05 - DESIGN PRESENTATION AND COMMUNICATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRID05	DESIGN PRESENTATION AND COMMUNICATION	DPC	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and explain the fundamental concepts of design presentation and communication in interior design and recognizing the importance of effective communication in conveying design ideas, describing various methods of design presentation such as sketches, renderings, mood boards, and 3D models	2	PO2
CO2	Understanding the target audience and tailoring communication accordingly, the significance of clear and concise messaging, and the utilization of visual elements such as color, typography, and imagery to enhance communication	2	PO4
CO3	Understand the tools and techniques essential for effective design presentation in interior designs including an overview of various tools and software such as Adobe Creative Suite, SketchUp, and AutoCAD, and a step-by-step guide to creating different types of design presentations like mood boards, concept sketches, digital renderings, and virtual walkthroughs.	2	PO4
CO4	Applying and demonstrating strategies for effective client interaction and collaboration in the design process. This includes understanding the importance of collaboration and client feedback, employing strategies to communicate design concepts to clients with varying levels of design knowledge, building rapport and establishing trust through clear communication, and managing client expectations and concerns.	3	, PSO2
CO5	Applying and demonstrating the principles and strategies for presenting sustainable design solutions in interior design. This includes understanding sustainable design principles and their importance, integrating sustainable design solutions into presentations, effectively communicating the environmental and social benefits of sustainable design to clients, and analyzing case studies of projects that prioritize sustainability.	3	PO9

Syllabus

Co1: Understanding Design Presentation. Introduction to design presentation in interior design. Importance of effective communication in conveying design ideas. Overview of different methods of design presentation: sketches, renderings, mood boards, 3D models, etc. Exploring the role of technology in modern design presentations. Case studies showcasing successful design presentations and their impact on projects.

Co2: Elements of Effective Communication. Exploring the principles of effective communication in interior design. Understanding the target audience and tailoring communication accordingly. Importance of clear and concise messaging in design presentations. Utilizing visual elements, such as color, typography, and imagery, to enhance communication. Strategies for conveying design concepts and ideas with clarity and persuasion.

Co3: Tools and Techniques for Design Presentation. Overview of various tools and software used in design presentation, such as Adobe Creative Suite, SketchUp, AutoCAD, etc. Step-by-step guide to creating different types of design presentations, including mood boards, concept sketches, digital renderings, and virtual walkthroughs. Tips for selecting the most appropriate presentation method based on project requirements and client preferences. Incorporating storytelling techniques to engage and captivate the audience. Best practices for organizing and structuring design presentations for maximum impact.

Co4: Client Interaction and Collaboration. Importance of collaboration and client feedback in the design process. Strategies for effectively communicating design concepts to clients with varying levels of design knowledge. Building rapport and establishing trust with clients through clear and transparent communication. Techniques for managing client expectations and addressing concerns during the design presentation. Case studies illustrating successful client collaboration and its impact on project outcomes.

Co5: Presenting Sustainable Design Solutions. Overview of sustainable design principles and their importance in modern interior design. Strategies for integrating sustainable design solutions into design presentations. Communicating the environmental and social benefits of sustainable design to clients. Showcasing case studies of projects that prioritize sustainability in their design presentations. Exploring future trends in sustainable interior design and their implications for design communication. Each chapter should delve into the intricacies of design presentation and communication within the context of interior design, providing both theoretical frameworks and practical guidance for professionals in the field

23MRIM05 - PROJECT INNOVATE: STRATEGIES FOR ENTREPRENEURIAL GROWTH (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIM05	PROJECT INNOVATE: STRATEGIES FOR ENTREPRENEURIAL GROWTH	PISEG	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	to analyze market opportunities for entrepreneurial growth.	4	PO2, PO5, PO11, PSO1
CO2	to develop strategic plans and innovative approaches for entrepreneurial ventures.	6	PO2, PO5, PO11, PSO1
CO3	to implement scaling strategies and sustainability practices for long-term entrepreneurial success.	3	PO2, PO5, PO11, PSO1

Syllabus

Foundations of Entrepreneurial Growth: the introduction to entrepreneurship, characteristics of successful entrepreneurs, identifying opportunities for growth, market research and analysis, developing a growth mindset, and case studies of entrepreneurial success.

Strategic Planning and Innovation: strategic planning for startups, business model innovation, product development and innovation, lean startup methodology, design thinking for entrepreneurs, and competitive analysis and strategy.

Scaling and Sustaining Growth : scaling strategies for entrepreneurial ventures, financial planning and management, building and leading high-performance teams, leveraging technology for growth, navigating legal and regulatory challenges, and long-term sustainability and impact.

- 4 Blue Ocean Strategy, W. Chan Kim, Ren?e Mauborgne, 1st (2018), Harvard Business Review Press.

23MRIP05 - LAW OF DESIGNS, GEOGRAPHICAL INDICATIONS AND PLANT VARIETIES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRIP05	LAW OF DESIGNS, GEOGRAPHICAL INDICATIONS AND PLANT VARIETIES	LODGP	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic principles relating to the Intellectual Property Rights and Design Law.	2	
CO2	Understand the emerging dimensions of IPR	2	
CO3	Understand the Farmers and bio diversity related IP Rights.	2	
CO4	Understand the Bio-Technology Law & IP Rights	2	

Syllabus

Definition & Conception of Industrial Designs under Design Act, 2000, Definition and Conception of Trade marks,

Salient Features of Geographical Indications of Good Act, 2000, Geographical Indication & Protection of Traditional knowledge

Notion & Concept of Farmer & Breeder Right under Protection of Plant Variety Act, 2001, Conservation Bio-diversity & Diversity Related IP Rights, Laws & Flaws Relating to Conservation of Biological Diversity.

Notion and concept of bio technology law, Nexus Between Bio-Technology and Law, bio ethics and related IP Rights.

Reference Books

- 2 Intellectual Property Rights, Elizabeth Verkey, 4th, Eastern Book Company.
- 3 Law of Trademark, Copyrights, Patents and Designs, Roy Chowdhary, 5th, Kamal Law house.
- 4 Intellectual Patent Rights, P.Narayanan, 6th, Eastern Law House.

23MROB05 - TEAM BUILDING AND COLLABORATION SKILLS FOR MANAGERS (M)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MROB05	TEAM BUILDING AND COLLABORATION SKILLS FOR MANAGERS	TBCM	M	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the importance of team building and collaboration in an organization	2	PO9
CO2	Apply communication and feedback in teams for better collaboration	3	PO10
CO3	Identify different types of conflict resolution in teams	3	PO9
CO4	Identify the importance of concept of motivation and to describe different motivational theories	3	PO11

Syllabus

Introduction to Team Building and Collaboration-Importance of Team Building and Collaboration, Key Principles of Effective Team Building and Collaboration, Strategies for Promoting Collaboration within Team

Understanding Team Roles and Responsibilities- Team Charter, Team Roles and Responsibilities, Communication and Feedback in Teams.

Conflict Resolution in Teams-Types of Conflict, Conflict Resolution Strategies, Building a Positive Team Culture

Motivational Theories-Maslow's Hierarchy of Needs, Herzberg's Two-Factor Theory, Expectancy Theory, Equity Theory, Goal-Setting Theory, Social Learning Theory

23MRPA05 - MODERN FARMING TECHNIQUES AND INNOVATIONS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRPA05	MODERN FARMING TECHNIQUES AND INNOVATIONS	AELP	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the impact of technological innovations on agricultural productivity.	3	PO6, PO7
CO2	Analyze about sustainable and environmentally friendly farming practices.	4	PO6, PO7
CO3	Analyze and develop practical skills in using advanced farming technologies.	4	PO6, PO7

Syllabus

Modern farming and sustainable agriculture practices aim to enhance food production efficiency while minimizing environmental impact, promoting soil health, conserving water, reducing chemical inputs, and ensuring economic viability for farmers. These practices incorporate advanced technologies, organic farming, crop rotation, integrated pest management, and agroecological principles to create resilient agricultural systems that support long-term food security and ecosystem health.

Sterile Techniques: Essential for preventing contamination by microorganisms. Includes autoclaving equipment and media, using laminar flow hoods, and employing aseptic techniques during handling. **Synthetic and Natural Media Components:** Media provides essential nutrients for plant growth in vitro. Synthetic media: Typically includes inorganic salts, vitamins, amino acids, and carbon sources like sucrose. Natural media: May include coconut milk, potato extract, or banana puree to supplement nutrients. **Growth Regulators:** Critical for directing plant growth and development in vitro. Auxins (e.g., IAA, NAA): Promote root formation. Cytokinins (e.g., BAP, Kinetin): Promote shoot formation. Gibberellins: Stimulate stem elongation, seed germination. Absciscic acid: Induces dormancy, stress responses.

Greenhouse Technology and Management: **Structure:** Greenhouses are enclosed structures with transparent materials like glass or plastic to trap solar energy. **Climate Control:** Includes heating, cooling, ventilation, and humidity control to create optimal growing conditions. **Irrigation Systems:** Drip irrigation, misting, and automated watering systems ensure consistent moisture levels. **Lighting:** Supplemental lighting (LEDs, HPS) extends growing seasons and enhances plant growth. **Pest and Disease Management:** Integrated Pest Management (IPM) and biological controls are used to minimize pesticide use. **Vertical Farming Systems:** **Structure:** Multi-layered, vertically stacked growing systems often housed in urban settings or unused industrial spaces. **Lighting:** Uses artificial lighting (LEDs) to provide uniform light distribution. **Hydroponics and Aeroponics:** Soil-less growing techniques using nutrient-rich solutions. **Automation:** Advanced technologies for climate control, nutrient delivery, and monitoring systems. **Hydroponics and Aquaponics:** **Hydroponics:** System: Plants are grown in a nutrient-rich water solution. Media: May use inert media like perlite, rock wool, or coco coir for plant support. Benefits: Efficient water and nutrient use, faster plant growth, and higher yields.

23MRPY05 - PRACTICAL PHARMACOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRPY05	PRACTICAL PHARMACOLOGY	PRI	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analysis of pharmacological agents in solutions and biological fluids using analytical tools	3	PO2, PO4
CO2	Apply knowledge on Handling of laboratory animals routes of drug administration Techniques of blood sampling, anesthesia and euthanasia of experimental animals. Functional observation battery tests (modified Irwin test)	4	PO2, PO4
CO3	Apply knowledge to understand the MOA of CNS Pharmacological agents and others	4	PO2, PO4
CO4	Apply knowledge and experiment to understand DNA and RNA isolated from organisms and analysis of the same by diagnostic tests	4	PO2, PO4
CO5	Apply knowledge to test agents for the toxicity including genotoxicity	4	PO2, PO4
CO6	Apply knowledge to extract biological fluids to determine the drug concentrations in it by analytical techniques	4	PO2, PO4

Syllabus

Analysis of pharmacopoeial compounds and their formulations by UV Vis spectrophotometer Simultaneous estimation of multi component containing formulations by UV spectrophotometry Experiments based on HPLC Experiments based on Gas Chromatography Estimation of riboflavin/quinine sulphate by fluorimetry Estimation of sodium/potassium by flame photometry

Handling of laboratory animals. Various routes of drug administration. Techniques of blood sampling, anesthesia and euthanasia of experimental animals. Functional observation battery tests (modified Irwin test)

Evaluation of CNS stimulant, depressant, anxiogenics and anxiolytic, anticonvulsant activity. Evaluation of analgesic, anti-inflammatory, local anesthetic, mydriatic and miotic activity. Evaluation of diuretic activity. Evaluation of antiulcer activity by pylorus ligation method. Oral glucose tolerance test.

Isolation and identification of DNA from various sources Bacteria, Cauliflower, onion, Goat liver. Isolation of RNA from yeast Estimation of proteins by Bradford Lowry in biological samples. Estimation of RNA and DNA by UV Spectroscopy Gene amplification by PCR.

Protein quantification Western Blotting. Enzyme based in vitro assays MPO, AChEs, alpha amylase, alpha glucosidase. Cell viability assays MTT Trypan blue SRB. DNA fragmentation assay by agarose gel electrophoresis. DNA damage study by Comet assay.

Apoptosis determination by fluorescent imaging studies. Pharmacokinetic studies and data analysis of drugs given by different routes of administration using softwares Enzyme inhibition and induction activity Extraction of drug from various biological samples and estimation of drugs in biological fluids using different analytical techniques Extraction of drug from various biological samples and estimation of drugs in biological fluids using different analytical techniques

23MRTP05 - TECH INNOVATION PROJECT FOR ENTREPRENEURS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23MRTP05	TECH INNOVATION PROJECT FOR ENTREPRENEURS	TIPFE	R	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	to develop innovative tech project ideas by identifying opportunities, conducting market research, and creating detailed project proposals.	3	PO5, PO11, PSO2
CO2	to create and iteratively improve prototypes using appropriate techniques and methodologies, incorporating user feedback and Agile practices to refine their Minimum Viable Product (MVP).	6	PO5, PO11, PSO2
CO3	to implement a comprehensive business plan and go-to-market strategy, effectively pitch their projects to potential investors, and navigate the challenges of scaling and launching their tech innovations.	3	PO5, PO11, PSO2

Syllabus

Identifying and Evaluating Tech Opportunities, Techniques for Idea Generation and Brainstorming, Customer Discovery and Market Research, Developing and Refining Concepts, Creating Detailed Customer Personas, Formulating Value Propositions, Project Proposal Development

Prototyping Techniques and Tools, Physical and Digital Prototypes, User Testing and Feedback, Iterative Development and Continuous Improvement, Minimum Viable Product (MVP) Development, Agile and Lean Methodologies, User-Centered Design

Creating a Comprehensive Business Plan, Market Analysis and Competitive Positioning, Developing a Go-to-Market Strategy, Funding and Investment Strategies, Pitching to Potential Investors, Scaling and Managing Growth, Navigating Legal and Regulatory Challenges, Final Presentation and Pitching

Category: Second Major Flexi Core Courses (SMFC)

22CE1201 - ENGINEERING GEOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22CE1201	ENGINEERING GEOLOGY	EGY	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the significance of engineering geology, basics of geological processes that modify the surface of the earth, earthquakes, landslides	2	PO1, PO6, PO8, PSO2
CO2	Understand the basics of minerals and rocks, geological structures	2	PO1, PO6, PO8, PSO2
CO3	Understand the geological conditions to identify suitable site for civil engineering projects.	2	PO1, PO6, PO8, PSO2
CO4	Understand Geological conditions to identify potential sites for groundwater, sites for dam and reservoir and tunnels	2	PO1, PO6, PO8, PSO2
CO5	Apply and analyze the geological conditions for suitability of the site for a major civil engineering project	3	PO1, PO6, PO8, PSO2

Syllabus

INTRODUCTION: Importance of geology from Civil engineering point of view, **PHYSICAL GEOLOGY:** Introduction; Weathering Process, types of weathering and its importance in civil engineering; Soil formation, Soil profile, soil conservation measures; Geological action of Rivers, stages in a river system, features of river erosion and deposition. **EARTHQUAKES AND SEISMIC HAZARDS:** Terminology; Classification, Causes and effects of earthquakes; seismic waves, measuring instruments, seismic zones of India, Seismic belts, seismic hazards in India ; Civil Engineering considerations in seismic areas. A step towards urban earthquake vulnerability reduction **LAND SLIDES:** Classification; Causes and effects of Landslides; Preventive measures of Landslides.

MINERALOGY Definition of mineral; physical properties of minerals. Study of common rock forming minerals Quartz, Feldspar, Muscovite, Asbestos calcite, Talc, Kaolin **PETROLOGY** Introduction, Rock Cycle, major rock types, formation of Igneous rocks, Structures of Igneous rocks. Formation of Sedimentary rocks, Structures of Sedimentary Rocks. agents of metamorphism, Structures of Metamorphic rocks, distinction of major rock types, **ENGINEERING PROPERTIES OF ROCKS** Different Engineering property of rocks. Description of some important Rocks Granite Basalt Dolerite Sand Stone Lime Stone Shale Laterite Granite gneiss schist Marble Khondalite Charnockite. **STRUCTURAL GEOLOGY** Introduction; Strike and Dip Outcrop. Parts and classification of Folds Faults Joints and their importance in Civil Engineering constructions.

SITE INVESTIGATION TECHNIQUES FOR CIVIL ENGINEERING PROJECTS: Introduction, Different stages of site investigation, toposheets/topographic maps; Geological maps and their interpretation in site investigation; Geophysics in civil engineering, electrical resistivity investigations, seismic survey, remote sensing , Geographical information systems and their application

GROUND WATER sources of ground water, factors controlling ground water, water bearing properties of rocks and soils, types of aquifers, exploration of ground water **DAMS** Dams terminology Types of dams and suitable foundations guidelines for major dam and reservoir investigations **TUNNELS** Purpose of tunneling types of tunnels, tunnels and underground excavations methods of site selection, tunnel excavation in various rock types, geological problems, Geology of some tunnel sites

22CM1203 - DATA ANALYSIS WITH EXCEL (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22CM1203	DATA ANALYSIS WITH EXCEL	DAWE	R	0	0	0	4	1

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Learners will gain familiarity with Excel's interface, learn to create and manage workbooks, and understand basic navigation.	2	PO11
CO2	Applying advanced conditional formatting rules based on cell values, formulas, and data bars to visualize data insights.	3	PO11
CO3	Building charts that combine different chart types (line, bar, pie) to visualize multiple data series effectively.	3	PO11
CO4	Calculating descriptive statistics (mean, median, standard deviation, etc.) using Excel's Analysis ToolPak.	3	PO11
CO5	Analyzing financial statements to evaluate profitability, liquidity, and solvency ratios.	3	PO11

Syllabus

Introduction to Excel and Basic Data Handling: Introduction to Excel and Creating Workbooks Saving Workbooks and File Management Data Entry and Editing Techniques Working with Different Data Types Worksheet Formatting Basics Number Formatting in Excel Introduction to Excel Tables, Applying Filters and Sorting Data

Advanced Worksheet Operations Advanced Cell Formatting Using the Name Manager Conditional Formatting Techniques Working with Dates and Times Introduction to Formulas and Functions Advanced Formulas and Functions Mastering Lookup Functions Pivot Tables for Data Analysis

Data Visualization and Charting Introduction to Data Visualization Creating Combination Charts Discriminating Series and Category Axis Adjusting Chart Elements Adding Data Labels in Charts Creating Hand Charts Building Gantt Charts in Excel Pivot Charts and Their Applications

Advanced Analysis and Financial Functions Descriptive Statistics with Analysis Tool Pack Covariance and Correlation Analysis Regression Analysis in Excel Random Number Generation in Excel t-test and z-test Applications ANOVA in Excel Financial Functions: Present Value, Interest Rates, Loan Term Capital Budgeting Techniques and Applications of Excel

Excel Lab Projects Ratio Analysis: Profitability, Liquidity and Solvency Budgeting Analysis: Fixed Budget and Flexible Budget

Reference Books

- 4 MICROSOFT EXCEL 2019: DATA ANALYSIS&BUSINESS MODEL, L. Winston Wayne, 1st, 2019, PHI Learning.

22CM1206 - ADVANCED COST ACCOUNTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22CM1206	ADVANCED COST ACCOUNTING	ACA	R	3	2	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the cost concepts; cost classification, installation of costing system and Material costing Job Cost Cards, Collecting Direct Costs, Allocation of Over heads and its Applications	3	PO6
CO2	Apply the Labour cost and labour cost methods. Unit Costing and Multiple Costing, Application, Identification of Cost Unit and Cost Determination and Control	3	PO3
CO3	Apply the overhead cost and ascertainment of service department cost to production departments. Break even Analysis Cost Volume Profit Analysis P/V Ratio and its Significance - Margin of Safety	3	PO5
CO4	Apply the Job costing and contract costing. Various Types of Standards - Installation of Standard Costing System for Material, Labour and Overhead	3	PO5

Syllabus

Job Costing : Job Cost Cards, Collecting Direct Costs, Allocation of Over heads and its Applications. Batch Costing : Features and Applications, Contract Costing: Features, Distinction between Job and Contract Costing, Progress Payments, Retention Money, Escalation Clause, Contract Accounts, Accounting for Material, Accounting for Plant Used in a Contract, Contract Profit and Accounting Entries.

Features, Applications and Types of Process Costing, Process Loss, Abnormal Gains and Losses, Equivalent Units, Inter - Process Profit, Joint Products, By- Products and Accounting, Service Costing: Features and Applications, Unit Costing and Multiple Costing, Application, Identification of Cost Unit and Cost Determination and Control.

Meaning, Advantages, Limitations and Applications Break even Analysis Cost Volume Profit Analysis P/V Ratio and its Significance - Margin of Safety-Absorption Costing: System of Profit Reporting and Stock Valuation - Difference between Marginal Costing and Absorption Costing, Income Measurement under Marginal Costing and Absorption Costing-Application of Marginal costing techniques for decision making like make or buy decision, shut down decision, product mix decision, sales mix decision, key factor or limiting factor.

Definition, Significance and Applications Various Types of Standards - Installation of Standard Costing System for Material, Labour and Overhead, Variance Analysis for Materials, Labour and Over heads and Accounting Treatment of Variances - Benchmarking for Setting of Standards - Variance Reporting to Management.

Reference Books

22CM21B2 - INCOME TAX LAW & PRACTICE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22CM21B2	INCOME TAX LAW & PRACTICE	ITLP	R	3	2	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understand the basics of Income tax law and its provisions in practical applicability, various terms used in income tax	2	PO8, PSO2
CO2	Apply the use of the treatment of calculation of Income from Salary, with consideration of allowances and hra and exempted allowances.	3	PO8, PSO2
CO3	Apply the knowledge of computing Income from House Property with calculation of different exemptions .	3	PO9, PSO2
CO4	Apply the knowledge to compute Income from Business, capital gains and other sources for the purpose of calculation of total income.	3	PO10, PSO2

Syllabus

Meaning and terms used: Person, Assessee, Previous year, Assessment year, Income, Gross Total Income, Total Income, Agricultural Income, and Exempted Income ,Fully exempted , Partially Exempted Residential Status: Rules for determining residential status of Individual, HUF, Firm and Company, need to determine residential status, Incidence of tax and residential status, Practical problems.

Salary, Allowances, perquisites and retirement benefits, deductions, computation of salary income.

Annual Value, let out property, self occupied properties, deductions, computation of house property income

Depreciation and other permissible deductions, Disallowable expenses, income and expenses of illegal business, computation of Business income , Income from Profession Capital Income from other sources, Specific income, deductions, grossing up, computation of income from other sources, practical problems.

Reference Books

22CM31B5 - ACCOUNTING & REPORTING STANDARDS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22CM31B5	ACCOUNTING & REPORTING STANDARDS	ARS	R	3	2	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the accounting standards and its application.Accounting Standards Interpretations and Guidance Notes on various accounting aspects issued by the ICAI and their applications.	2	PO1, PSO2
CO2	Have knowledge in International Accounting standards.international Financial Reporting Standards (IFRS), Interpretations by International Financial Reporting Interpretation Committee (IFRIC)	3	PO1, PSO2
CO3	Know about the corporate financial reporting. Merchant bankers, Stock and commodity market intermediaries - Meaning, recognition, derecognition	3	PO3, PO8, PSO2
CO4	Learn the developments in financial reporting. Measurement of financial instruments - Hedge accounting - Disclosures	3	PO3, PO8, PSO2

Syllabus

Accounting Standards, Accounting Standards Interpretations and Guidance Notes on various accounting aspects issued by the ICAI and their applications.

Contingencies and Events occurring after the Balance Sheet Date, AS 5 : Net Profit or Loss for the Period, Prior Period Items and Changes in Accounting Policies

International Financial Reporting Standards (IFRS), Interpretations by International Financial Reporting Interpretation Committee (IFRIC), International Accounting Standard Board (IASB), structure of IASB, Worldwide accounting diversity, Factors leading to diversity, Harmonization of accounting standards, need for harmonization,

Understanding of US GAAP - Applications of IFRS and US GAAP Significant differences between US GAAP and Indian GAAP, US GAAP & IFRS, IFRS and Indian Accounting Standards. s.

Reference Books

22FT1102 - FOOD CHEMISTRY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT1102	FOOD CHEMISTRY	FC	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the chemical composition of food and behavior of water in food.	2	PO1, PO7
CO2	Apply micro-nutrients in foods and toxicity.	3	PO1, PO7
CO3	Apply food pigments, pigmentation processes in foods, and colloids.	3	PO1, PO7
CO4	Apply understanding of dispersions and gels; effects of processing on chemical composition.	3	PO1, PO7
CO5	Apply the knowledge to estimating various chemical properties of foods and their components.	3	PO1, PO7

Syllabus

Need for learning food chemistry. To study fundamentals of food chemistry. To study chemical composition of various foods. State of water in food. Structure of water and ice. Types of water. Interaction of water with solutes. Sorption phenomenon. Water activity and its relation with packaging and spoilage.

Classification of vitamins. Structures of vitamins. Properties of vitamins. Functions of vitamins. Stability of vitamins. Major minerals in foods. Minor minerals in foods. Metal uptake. Toxic metals in foods.

Food pigments - Introduction and classification. Structures and properties of food pigments. Browning Reactions in foods (Enzymatic). Browning Reactions in foods (Non-enzymatic, Maillard). Browning Reactions in foods (Caramelization, Ascorbic acid oxidation). Introduction to colloids. Colloids from proteins (classification and structure). Colloids from proteins (plant- and animal-based). Colloids from carbohydrates (classification and structure). Colloids from carbohydrates (chemical reactions, modifications). Stabilization of colloidal system and application of colloidal chemistry to food preparation.

Introduction to dispersions. Characterization of dispersions. Types of dispersions and gels. Gels and syneresis. Emulsions and foams. Effects of processing on chemical composition (Physico-chemical changes). Effects of processing on chemical composition (Nutritional changes). Effects of processing on chemical composition (drying). Effects of processing on chemical composition (irradiation). Effects of processing on chemical composition (freezing, canning).

Estimation of moisture content. Determination of moisture sorption. Determination of pH of a food. Estimation of total ash. Determination of titratable acidity. Standardization of NaOH solution. Estimation of total fat content in a food. Determination of degree brix of food products.

Reference Books

22FT1104 - INTRODUCTION TO FOOD SCIENCE AND TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT1104	INTRODUCTION TO FOOD SCIENCE AND TECHNOLOGY	IFST	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	understand the basic principles of food science and technology.	2	PO1, PO5, PO8, PO11
CO2	Determine the structure, composition, nutritional quality and postharvest changes of various plant foods.	3	PO1, PO5, PO8
CO3	Determine the structure and composition of various animal foods	3	PO1, PO5, PO8, PO11
CO4	Discover about various dairy products	3	PO1, PO5, PO8
CO5	Demonstrate use various basic food processing techniques with an aim to preserve the foods	3	PO1, PO5, PO8

Syllabus

historical evolution of food processing technology. Cereals and millets Structure and composition, properties and nutritional attributes of rice, wheat, maize, barley, millet and oats, malting, gelatinization of starch, types of browning Maillard & caramelization, rice parboiling of rice advantages and disadvantages.

Structure and composition of pulses, toxic constituents in pulses, processing of pulses soaking, germination, decortications, cooking and fermentation. Fats and Oils-classification of lipids, types of fatty acids saturated fatty acids, unsaturated fatty acids, essential fatty acids, trans fatty acids. Refining of oils, types- steam refining, alkali refining, bleaching, steam deodorization, and hydrogenation. Rancidity Types- hydrolytic and oxidative rancidity and its prevention.

Fruits and Vegetables-Classification of fruits and vegetables, general composition, enzymatic browning, names and sources of pigments, Dietary fiber. Post-harvest changes in fruits and vegetables Climacteric rise, horticultural maturity, physiological maturity, physiological changes, physical changes, chemical changes, pathological changes during the storage of fruits and vegetables.

Introduction to poultry and dairy sectors

Performing various practical to Study different types of browning reactions: enzymatic and non-enzymatic, gelatinization behavior of various starches To study the concept of gluten formation of various flours To study malting and germination To study dextrinization in foods Identification of pigments in fruits and vegetables and influence of pH on them Quality inspection of animal foods Study of effect of heat on sugar etc

22FT1105 - FOOD BIOCHEMISTRY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT1105	FOOD BIOCHEMISTRY	FBC	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand basics of Organic chemistry and its role in food To understand applications of biochemistry and its role in food industries in various departments	2	PO1, PO6
CO2	Applying basic principles to determine the structural and chemical nature of nutrients CHO & Proteins.	3	PO1, PO4
CO3	Applying basic principles to determine the structural and chemical nature of nutrients Lipids & Nucleic acids.	3	PO1, PO6, PO8
CO4	Applying basic principles to identify the metabolic changes of foods once it enters the human body.	3	PO1, PO4
CO5	Analyzing biochemicals and to demonstrate the knowledge of characterization of food components.	4	PO1, PO6

Syllabus

Introduction To Biomolecules - Overview - Basic principles of Organic Chemistry, Types of Biomolecules, Chemical nature, biological roles, biological buffers, Water and its importance in Biochemistry.

Structure and properties of Carbohydrates and Proteins in detail. forms of Isomerism, Physiological importance, Polysaccharides Starch, glycogen, Cellulose and their derivatives Chitin-Peptidoglycans- Glycosaminoglycan- Glycoconjugates, Test for Carbohydrates. Classification of Amino acids and Proteins, Structure of Proteins Primary-Secondary-Tertiary Myoglobin Hemoglobin

Structures & Properties Of Lipids, Nucleic Acids - Lipid - Classification Physiological importance, Significance of Cholesterol, Nucleic Acids - Ribonucleic acids - Deoxyribonucleic acids, Functions of Nucleotides -Regulatory Molecules.

Metabolic activities of biomolecules, significance of vitamins and minerals Krebs cycle, TCA, Gluconeogenesis

Analyzing various biomolecules in foods study of their chemical nature and estimation of carbohydrates proteins and fats by chemical analysis

22FT1207R - FOOD MICROBIOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT1207R	FOOD MICROBIOLOGY	FMB	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Summarize the important microorganisms affecting food and human health.	2	PO2, PO5, PO8
CO2	Develop the nature of different microorganisms associated with food and their growth.	3	PO2, PO5, PO8
CO3	Identify the knowledge regarding the role of microbes in fermentation, spoilage and food-borne diseases.	3	PO2, PO5, PO8
CO4	Determine the spoilage of foods by common microorganisms, and cultivation of microorganisms	3	PO2, PO5, PO8
CO5	Demonstrate the knowledge in terms of testing aspects of food microbiology	3	PO2, PO5, PO8

Syllabus

History of microbiology, differences between Prokaryotes and Eukaryotes, Contributions of Louis Pasteur classification of Microbes and Detailed structure of Prokaryotic cell, light and electron microscope, Staining techniques, Gram staining. Characteristics and classification of fungi yeast and moulds.

Types of Sterilization, Nutritional classification of microorganisms, types of media, microbial culture collection. Isolation of Microbes platings, serial Dilution, Microbial Growth and Metabolism, Growth curve, Factors affecting Growth of microorganisms in food.

Importance of microorganisms in food, primary sources of microorganisms in food, intrinsic and extrinsic parameters of food affecting microbial growth, types of microorganisms in foods like meats, poultry, seafood, vegetables, dairy products, fruits and vegetables. Starter Cultures.

principles and types of spoilage, microbial spoilage of foods Microbial spoilage of Fruits, Vegetables, Grains and grain products, Meat, Poultry Fish, Factors influencing the spoilage and control, Measures to prevent microbial food

22FT12C1 - PRINCIPLES OF FOOD PRESERVATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT12C1	PRINCIPLES OF FOOD PRESERVATION	PFP	R	1	0	0	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the basic concepts of food preservation technologies	2	PO2, PO4, PO6, PSO2
CO2	Apply conventional techniques for preserving foods	3	PO2, PO4, PO6, PSO2
CO3	Apply modern filtration technologies for food preservation	3	PO2, PO4, PO6, PSO2
CO4	Apply novel non-thermal food processing technologies for preservation of foods	3	PO2, PO4, PO6, PSO2
CO5	Apply the concepts for preservation of foods using different techniques	3	PO2, PO4, PO6, PSO2

Syllabus

Introduction to food preservation techniques: History, Scope and principles of food preservation; Preservation Methods- preservation by low temperature - processing, mechanism, refrigeration, chilling, freezing, freezing curve, changes occurring during freezing, types of freezing, thawing, and its effects.

Preservation by high temperature Different thermal operations sterilization, pasteurization, blanching, and UHT processing Canning canning equipment and operations. Types of canning containers. Thermal destruction of microorganisms D value, F value, Z value. Advantages and limitations. Chemical food preservation Types of chemical preservatives and their functions synthetic, natural permissible limits and safety aspects. Advantages and limitations.

Introduction to membrane processing General principles, dead end and cross flow, Classification of membrane system Reverse Osmosis. Classification of membrane system Nano Filtration, Ultra Filtration, Micro Filtration, Electrodialysis and Pervaporation. Commercial examples. Advantages and limitations.

Introduction to Irradiation, microwave, radio frequency, high pressure processing, pulsed electric field, hurdle technology. Ohmic heating, cold plasma, modified atmosphere packaging, vacuum packaging, aseptic processing, ultrasound. Advantages and limitations

Food Sampling for Analysis, Effect of blanching of fruits and vegetables on sensory properties, A comparative analysis of the sun and oven drying of fruits and vegetables, Effect of pasteurization on the microbial load of milk and fruit juice, Preparation of fermented products

22FT2109R - PROCESSING OF HORTICULTURAL PRODUCE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT2109R	PROCESSING OF HORTICULTURAL PRODUCE	PHP	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concepts of processing of fruits and vegetables	2	PO2, PO4, PO6, PSO1
CO2	Apply the concepts of the processing and market potential of the processed fruits and vegetables	3	PO2, PO4, PO6, PSO1
CO3	Apply post-harvest techniques for storage of fruits and vegetables	3	PO2, PO4, PO6, PSO1
CO4	Apply advanced techniques in processing of horticultural produce	3	PO2, PO4, PO6, PSO1
CO5	Apply processing techniques for preparation of value added products	3	PO2, PO4, PO6, PSO1

Syllabus

Different types and importance of horticultural produce, need and market potential for processing the produce, nutritional aspects

Reasons of spoilage, physical (moisture and temperature), chemical (browning, etc.), and biological (microbes, insects) factors of spoilage, physical and chemical methods of spoilage control: sanitation, fumigation, etc

Underground and above ground storage, godowns, containers, storage conditions, sanitation requirements and methods

Canning and bottling: Process factors and parameters, equipment, containers used, advantages and limitations. Beverage making: Juice extraction, deaeration, straining, filtration and clarification; preservation of fruit juices (pasteurization, chemically preserved with sugars, freezing, drying, tetra-packing, carbonation). Squashes: Processing, cordials, nectors, concentrates and powder. Jams: Constituents, selection of fruits, processing & technology. Jellies: Essential constituents (Role of pectin, ratio), theory of jelly formation, processing technology, defects. Marmalades: Types, preparation, processing technology, defects. Pickles, chutneys and sauces: Processing, types, spoilage and preservation. Tomato products: Selection of tomatoes, preparing pulp, juice, puree, paste, ketchup, sauce and soup of tomatoes. Dehydration: Sun drying and mechanical dehydration, process variations, packing and storage. Additives: Preservatives, colorants, acidity regulators

Estimation of total soluble solids (TSS). Estimation of pH and acidity of products. Estimation of brix/acidity ratio. Estimation of ascorbic acid and effect of heat treatment on it. To study the steps of can making process. Preparation and evaluation of pectin products. Dehydration of fruits and vegetables

22FT2213R - BAKERY, CONFECTIONERY AND SNACKS TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT2213R	BAKERY, CONFECTIONERY AND SNACKS TECHNOLOGY	BCST	R	2	0	4	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the science and technology behind bakery and confectionary products and their place in global market.	2	PO2, PO4, PO7
CO2	Apply the concepts of the functioning of ingredients in baking and confectionary.	3	PO2, PO4, PO7
CO3	Apply the formulation concepts for bakery and confectionary products	3	PO2, PO4, PO7
CO4	Apply the concepts of food safety regulations for baked and snack products	3	PO2, PO4, PO7
CO5	Apply the concepts and knowledge of baking and confectionery for preparing value added products	3	PO2, PO4, PO7

Syllabus

Introduction to bakery products: Definition, classification, market, Ingredients and their functions; Machines & equipment for batch and continuous Processing of bakery products, major and minor equipment. Manufacturing of Breads, cakes, types of icings, pizza base, biscuits, cookies, rusk, pastry as per FSSAI standards

Introduction to Confectionary and chocolate Products: Types, specifications, compositions, role of ingredients, other aerating agents, cocoa powder, fruits, preserved fruits, dried fruits, nuts and chemical additives. Manufacturing of products - jam, gums, jellies, candies fondant, caramel, fudge, toffee, types of chocolate etc.

Production of bakery foods: Formulation - Ingredients (flour, yeast, sugar, egg, butter, salt, baking powder, coloring and flavoring agents, starches) and their functions, methods, classification, standards. Equipment: Cleaning, operation, processes, quality checks, preservation (conventional and evolving preservatives), regulations. Baking processes, quality of baked products

Safety Measures & Regulations: Food safety rules and regulations for bakery and confectionary products-Layout, hygienic conditions required for bakery plant, operation and maintenance of bakery equipment

Identifications and composition of various ingredients for snacks, bakery and confectionery products 2. Preparation and quality assessment of pizza base 3. Preparation and quality assessment of bread 4. Preparation and quality assessment of different types of cakes. 5. Preparation and quality assessment of cookies and biscuits 6. Preparation of selected varieties of chocolates and toffees 7. Preparation, and quality assessment of selected snack items 8. Preparation of selected varieties of macaronis. 9. Visit to a baking industry and preparation of report

22FT32C2R - FOOD PACKAGING TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
22FT32C2R	FOOD PACKAGING TECHNOLOGY	FPT	R	1	0	0	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand designing and development of safe food packaging material.	2	PO1, PO7
CO2	Apply packaging requirement for food products and different types of food packaging systems.	3	PO1, PO7
CO3	Apply various packaging materials and equipment used in packaging industry.	3	PO1, PO7
CO4	Apply suitable packaging for a given food product.	3	PO1, PO7
CO5	Apply the learning toward establishing marketable food products.	3	PO1, PO7

Syllabus

Outline of Food packaging: Need, Role of packaging in extending shelf life of foods, designing packaging materials, testing of packaging materials, package performance tests, Principles of developing safe and protective packing, Safety assessment of food packaging materials.

Food packaging systems: Product characteristics and package requirements, Introduction of food packaging system, Different forms of packaging, Rigid, semi-rigid, flexible forms of packaging, Different packaging system for-Dehydrated foods, Frozen foods, Dairy products, Fresh fruits, Vegetables, Meat, Poultry, Sea foods.

Packaging materials. Types, characteristics, uses. Paper (Pulping, Fibrillation, Beating, Types of papers, testing methods). Glass (Composition, Properties, Types, Methods of bottle making. Metals (Tinplate, Types of cans, Aluminum containers, Lacquers). Plastics (Types, films, laminated and co-extruded plastic materials).

Package accessories and advances in Packaging technology. Introduction, Active packaging, MAP, Aseptic packaging, Packages for convenience, Biodegradable plastics, Coatings. Packaging equipment and machinery (Vacuum packaging, CA & MA packaging, Sealing, shrink packaging, FFS, Aseptic packaging, Retort, Bottling, Carton making, Printing).

Packaging technology to preserve perishable foods. Select perishable foods. Identify their preservation requirements to achieve a longer shelf-life. Design a suitable packaging for the select foods by conducting the necessary testing.

23ACCAPM - PERFORMANCE MANAGEMENT (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACCAPM	PERFORMANCE MANAGEMENT	PM	R	3	2	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and acquire decision making techniques under limiting factors.	2	PO11, PSO2
CO2	Develop skills in dealing with decision-making processes under short-term, risk and uncertainty.	3	PO11, PSO2
CO3	Apply and acquire skills in dealing with budgetary systems and Standard costing.	3	PO11, PSO2
CO4	Apply knowledge and skills to analyze and manage financial performance through budgeting and control techniques.	3	PO11, PSO2

Syllabus

Specialist cost and management accounting techniques - Activity based costing, Target costing, Life-cycle costing, Throughput accounting, and Environmental accounting. Decision-making techniques - Relevant cost analysis- Explain the nature of CVP analysis, Calculate and interpret the break-even point and margin of safety, Calculate the contribution to sales ratio, in single and multi-product situations, and demonstrate an understanding of its use, Calculate target profit or revenue in single and multi-product situations, and demonstrate an understanding of its use, Prepare break even charts and profit volume charts and interpret the information contained within each, including multi-product situations, Discuss the limitations of CVP analysis for planning and decision making. Decision-making techniques - Limiting factors - Identify limiting factors in a scarce resource situation and select an appropriate technique, Determine the optimal production plan where an organisation is restricted by a single limiting factor, including within the context of make or buy decisions, Formulate and solve multiple scarce resource problem both graphically and using simultaneous equations as appropriate, Explain and calculate shadow prices and discuss their implications on decision-making and performance management, Calculate slack and explain the implications of the existence of slack for decision-making and performance manage -Pricing decisions - Explain the factors that influence the pricing of a product or service, explain the price elasticity of demand, Derive and manipulate a straight line demand equation. Calculate the optimum selling price and quantity for an organisation, equating marginal cost and marginal revenue, Evaluate a decision to increase production and sales levels, considering incremental costs, incremental revenues and other factors, Determine prices and output levels for profit maximization using the demand based approach to pricing , Explain different price strategies, Calculate a price from a given strategy using cost-plus and relevant cost.

Decision making techniques Make or buy and other short term decisions Explain the issues surrounding make vs. buy and outsourcing decisions, Calculate and compare make costs with buyin costs, Compare in-house costs and outsource costs of completing tasks and consider other issues surrounding this decision, Apply relevant costing principles in situations involving shut down, one-off contracts and the further processing of joint products. Decision making techniques Dealing with risk and uncertainty in decision making Suggest research techniques to reduce uncertainty e.g. Focus groups, market research, Explain the use of simulation, expected values and sensitivity, Apply expected values and sensitivity to decision making problems. Apply the techniques of maximax, maximin, and minimax regret to decision making problems including the production of profit tables, Draw a decision tree and use it to solve a multi-stage decision problem, Calculate the value of perfect and imperfect information.

Budgeting and Control Budgetary systems and types of budget Explain how budgetary systems fit within the . performance hierarchy, Select and explain appropriate budgetary systems for an organisation, including topdown, bottom-up, rolling, zero-base, activitybase, incremental and feed-forward control, Describe the information used in budget systems and the sources of the information needed, Indicate the usefulness and problems with different budget types including fixed, flexible, zero-based, activity- based, incremental, rolling, top-down, bottom up, master, functional, Prepare rolling budgets and activity based budgets Explain the beyond budgeting model, including the benefits and problems that may be faced if it is adopted in an organisation,Budgeting and Control Quantitative analysis in budgeting Apply the learning curve to a budgetary problem.

Budgeting and Control - variances-Budgeting and Control - Performance analysis - Analyse and evaluate past performance using the results of variance analysis, Use variance analysis to assess how future performance of an organisation or business can be improved,Identify the factors which influence behaviour, Describe the dysfunctional nature of some variances in the modern environment of JIT and TQM, Discuss the behavioural problems resulting from using standard costs in changing environment.

Reference Books

23ACCATX - TAXATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ACCATX	TAXATION	TXT	R	3	2	0	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Basic Concepts of Direct Taxes topics covered includes Basic Concepts of Fiscal Policies & Definitions, assessment year, previous year, person, assessee, Income, charges on income, gross total income, capital and revenue receipts, residential status etc.,	2	PO1
CO2	Apply Computation of Total Income and Tax Liability comprises of topics like ncome from salaries, Income from house property, Profits and Gains from business or Profession, Capital Gains and Income from other sources, Aggregation of income, Carry forward and set off of losses, Gross Total Income, Deductions under Chapter VI A, Total Income	3	PO1
CO3	Develop Corporate Tax Planning covering the topics Computation of total income and tax liability of corporate entities with Minimum Alternate Tax, Corporate Dividend Tax, Exemptions available to companies in SEZ, Tax holidays, Tax implications of Corporate Restructuring	3	PO3
CO4	Apply Tax Authorities, Assessment Procedure and Rules topics covering Income Tax authorities and functions, Deduction and collection of tax a source, advance tax and interest, return of income and assessment procedure, Refunds, penalties and prosecution, appeals and revision, Settlement of cases etc.,	3	PO5

Syllabus

Basic Concepts of Fiscal Policies & Definitions, assessment year, previous year, person, assessee, Income, charges on income, gross total income, capital and revenue receipts, residential status, receipt and accrual of income, connotation of income deemed to accrue or arise in India, Tax Planning, Tax Evasion and Tax Management.

Income from salaries, Income from house property, Profits and Gains from business or Profession, Capital Gains and Income from other sources, Aggregation of income, Carry forward and set off of losses, Gross Total Income, Deductions under Chapter VI A, Total Income , Computation of Tax liability of individual assesses, Preparation of Income tax returns of Individual assesses, E - filing of returns.

Computation of total income and tax liability of corporate entities with Minimum Alternate Tax, Corporate Dividend Tax, Exemptions available to companies in SEZ, Tax holidays, Tax implications of Corporate Restructuring, Double Taxation Avoidance Agreements (DTAA), Transfer pricing and General Anti Avoidance Rule (GAAR)

Income Tax authorities and functions, Deduction and collection of tax a source, advance tax and interest, return of income and assessment procedure, Refunds, penalties and prosecution, appeals and revision, Settlement of cases. Introduction to Indirect Taxes: Difference between direct and indirect taxes, Law relating to Central Excise, Customs, Service Tax, VAT and related rules, Introduction to GST.

Reference Books

23AD01HF - MACHINE LEARNING FOR HEALTHCARE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD01HF	MACHINE LEARNING FOR HEALTHCARE	MLH	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand fundamental machine learning concepts and their applications in healthcare.	2	PO1, PO2, PSO1
CO2	Apply data preprocessing techniques on healthcare data.	3	PO2, PO3, PO4, PSO1
CO3	Build supervised, unsupervised and deep learning models in healthcare context.	3	PO2, PO3, PO4, PSO1
CO4	Examine the challenges and ethical consideration in deploying machine learning models in healthcare.	4	PO3, PO4, PSO1
CO5	Evaluate various Machine Learning Techniques in health care domain using python language	5	PO2, PO3, PO4, PSO1

Syllabus

Introduction to Machine Learning in Healthcare: Overview of machine learning concepts: supervised learning, unsupervised learning, and deep learning. Introduction to healthcare applications of machine learning: predictive modeling, image analysis, natural language processing. Challenges and opportunities in applying machine learning to healthcare data.

Data Preprocessing Techniques for Healthcare Data: Data preprocessing for healthcare data - Handling missing values and outliers, Normalization and standardization techniques, Feature selection and dimensionality reduction. Techniques for dealing with imbalanced datasets in healthcare.

Machine Learning Algorithms for Healthcare: Supervised Learning Models - Linear Regression and Logistic Regression for disease prediction and outcome modeling, Support Vector Machines (SVMs) for medical image classification and diagnostic decision support, Decision Trees and Random Forests for hospital readmission prediction and personalized medicine. Unsupervised Learning Models - K-Means and hierarchical clustering for patient stratification and cohort discovery, Principal Component Analysis (PCA) and t-SNE for dimensionality reduction and visualization of healthcare data. Deep Learning Models - Convolutional Neural Networks (CNNs) for medical image analysis (e.g., radiology, pathology), Recurrent Neural Networks (RNNs) and LSTM networks for time series analysis in healthcare monitoring.

Challenges and Ethical Considerations in Deploying ML Models in Healthcare: Regulatory frameworks and compliance issues in healthcare data management - HIPAA, GDPR, Privacy and security challenges in handling sensitive patient data, Bias and fairness considerations in machine learning models - mitigating healthcare disparities, Ethical implications of AI and machine learning in clinical decision-making and patient care.

23AD02HF - DATA ENGINEERING AND ARCHITECTURE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD02HF	DATA ENGINEERING AND ARCHITECTURE	DEA	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Comprehend the foundational concepts and components of data infrastructure, including databases, data warehouses, data lakes, and streaming platforms.	2	PO1, PO5, PSO2
CO2	Design and implement efficient data models for storage and processing, focusing on scalability, performance, and data integrity.	3	PO1, PSO1
CO3	Utilize various data storage technologies and data modeling techniques to manage and organize data effectively	3	PO1, PO5, PSO2
CO4	Familiar with the foundational concepts of data engineering and architecture to design and implement robust data systems.	2	PO2, PSO1
CO5	Implement data governance and security measures to ensure data integrity and compliance with regulations	3	PO2, PO5

Syllabus

Introduction to Data Engineering and Architecture: Overview of Data Engineering and Architecture, Key concepts, Data Lifecycle Management, Introduction to Data Modeling, Data Engineering Tools and Technologies

Data Storage Technologies: Relational Databases and SQL, NoSQL Databases: MongoDB, Cassandra, Data Warehousing and OLAP, Distributed File Systems: HDFS, AWS S3, In-Memory Databases: Redis, Memcached

Data Processing and Transformation: Batch Processing with Apache Hadoop, Stream Processing with Apache Kafka, Data Transformation with Apache Spark, Workflow Management: Apache Airflow, Real-time Data Processing: Apache Flink

Data Integration and ETL: Extract, Transform, Load (ETL) Processes, Data Integration Patterns and Architectures, Data Quality and Cleansing Techniques, Change Data Capture (CDC) Methods, ETL Automation and Orchestration

Data Governance and Security: Introduction to Data Governance, Data Privacy Regulations and Compliance, Data Security Best Practices, Auditing and Monitoring Data Systems, Role-based Access Control (RBAC) and Encryption Techniques

Reference Books

- 1 Tapping into Unstructured Data: Integrating Unstructured Data and Textual Analytics into Business Intelligence, Bill Inmon, Anthony Nesavich, 2007, IBM Press.
- 2 Hadoop: The Definitive Guide, Tom White, 2009, O'Reilly Media.
- 3 Learning Spark: Lightning-Fast Big Data Analysis, Holden Karau, Andy Konwinski, Patrick Wendell, Matei Zaharia, 2015, O'Reilly Media.
- 4 The Data Warehouse Toolkit: The Definitive Guide to Dimensional Modeling, Ralph Kimball, Margy Ross, 2013, Wiley.

23AD03HF - REINFORCEMENT LEARNING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD03HF	REINFORCEMENT LEARNING	RIL	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Discuss basic and advanced reinforcement learning techniques.	2	PO1, PO4, PO5, PSO1
CO2	Demonstrate suitable learning tasks to which these learning techniques can be applied.	3	PO2, PO4, PO5, PSO1
CO3	Analyze some of the current limitations of reinforcement learning techniques.	4	PO2, PO4, PO5, PSO2
CO4	Formulate decision problems, set up and run computational experiments, evaluation of results from experiments.	5	PO2, PO4, PO5, PSO2
CO5	Design experiments to evaluate the performance of different reinforcement learning algorithms on various environments.	5	PO2, PO4, PO5, PSO2

Syllabus

Reinforcement learning framework, Bandit problems, Advanced Bandit Algorithms, action selection, Policy Gradient Methods

Dynamic programming, Markov Decision Processes (MDPs), Monte Carlo methods, Monte Carlo Control, Temporal-difference learning, Temporal-Difference Control

Planning in RL, Model-Based Planning Methods, Function approximation for generalization, Advanced Function Approximation Techniques, Actor-critic and gradient-based optimization

Multi-agent reinforcement learning, Multi-Agent Learning Paradigms, Value-Based Methods in MARL, Environments with partial observability, Value-Based Methods for POMDPs

23AD04HF - EXPLAINABLE AI (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD04HF	EXPLAINABLE AI	EAI	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the knowledge about AI basics and its diverse applications in various domains.	2	PO1, PO2, PSO1
CO2	Analyze the effects of AI technologies on society and consider ethical implications in their development and deployment.	4	PO1, PO2, PSO1
CO3	Explore the methods to interpret and explain AI models, focusing on their transparency and interpretability.	4	PO1, PO2, PSO1
CO4	Analyze different techniques to make AI models interpretable and understandable, ensuring transparency in their functioning.	4	PO1, PO2, PSO1
CO5	Design AI systems with built-in explainability features, ensuring they are suitable for real-world deployment and addressing societal concerns.	5	PO1, PO2, PSO1

Syllabus

Introduction to Explainable AI: Introduction to AI and its subfields Importance of explainability in AI systems; Ethical considerations in AI development Case studies on the societal impact of AI technologies; Interpretable machine learning techniques Model-agnostic explanation methods

Explainability Techniques and Methods: Local and global explanation methods, Perturbation-based explanation techniques, Incorporating explainability into AI development lifecycle, Case studies and projects on building explainable AI systems

Evaluation and Validation of Explainable AI Systems: Evaluate the effectiveness and limitations of explainable AI techniques: Metrics for evaluating explanation quality, Challenges and trade-offs in designing explainable AI systems; Validate the reliability and trustworthiness of explainable AI models: Verification and validation techniques for explainable AI, Ethical considerations in deploying explainable AI systems.

Advanced Topics in Explainable AI: Explore advanced topics and emerging trends in explainable AI: Adversarial attacks and defenses in explainable AI, Incorporating domain knowledge into explanation generation; Engage in research and innovation to enhance the explainability of AI systems: Research papers and current developments in explainable AI, Project work on advancing the state-of-the-art in explainable AI.

Reference Books

- 2 Explainable AI: Interpreting, Explaining and Visualizing Deep Learning, Monika Wolinska and Wojciech Samek, First Edition, Springer.
- 3 Explainable AI: A Guide for Understanding, Visualizing, and Interpreting Deep Learning, Martin Wattenberg, Been Kim, and Fernanda Viegas, First Edition, CRC Press.
- 4 Interpretable AI: Machine Learning Insights for Practitioners, Dennis Rothman and Alexander Hentschel, First Edition, O'Reilly Media.
- 5 Evaluating Machine Learning Models: A Beginner, Christoph Molnar, First Edition, Leanpub.
- 6 Building Explainable AI Models: A Hands-On Guide for Data Scientists and AI Practitioners, Hima Patel and Hanlin Tang, First Edition, Packt Publishing.

- 7 Explainable AI: Understanding, Visualizing, and Interpreting Deep Learning Models, Przemyslaw Biecek and Tomasz Burzykowski, First Edition, Apress.
- 8 Interpretable Machine Learning with Python: Explaining Black Box Models with LIME, SHAP, and XAI, Serg Masis and Patrick Hall, First Edition, O'Reilly Media.

23AD2103R - SYSTEM DESIGN & INTRODUCTION TO CLOUD (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD2103R	SYSTEM DESIGN & INTRODUCTION TO CLOUD	SDC	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understanding the functionalities and types of operating systems, their support for computer architecture, and concepts such as process virtualization, CPU scheduling, segmentation, paging, TLB, swapping, demand paging, thrashing, and page replacement algorithms	2	PO1, PO2, PO3, PSO2
CO2	Applying deadlock management strategies such as prevention, detection, and avoidance, alongside concurrency concepts including threads and common problems, while comparing network types, topologies, and reference models	3	PO1, PO2, PO4, PSO2
CO3	Understanding the network layer design issues, including store and forward packet switching, the services provided to the transport layer, and the implementation of connectionless and connection-oriented services	2	PO1, PO3, PO4, PSO2
CO4	Analyzing the fundamentals of cloud computing, including its history, characteristics, advantages and disadvantages, deployment models, cloud services (IAAS, PAAS, SAAS), virtualization, containers and pricing models	4	PO1, PO2, PO3, PSO2
CO5	Applying Operating System Concepts, HTTP Clients, HTTP Servers and Computer Networking concepts. Analyzing Cloud Service Providers - AWS EC2	3	PO1, PO2, PO3, PSO2

Syllabus

Operating System Functionalities, Types of Operating Systems, Computer Architecture support to Operating Systems, Process Virtualization: Processes, Process API code, Direct Execution, CPU Scheduling, Segmentation, Introduction to Paging, Translation Look Aside Buffer, Swapping, Demand Paging, Thrashing, Page replacement algorithms

Deadlock: Prevention, Detection and Avoidance Persistence, Concurrency: Concurrency and Threads code, Thread API, Common concurrency problems. Network Types, LAN, MAN, WAN, Network Topologies Reference models- The OSI Reference Model- the TCP/IP Reference Model - A Comparison of the OSI and TCP/IP Reference Models, OSI Vs TCP/IP, Physical layer, Datalink layer

The Network Layer Design Issues - store and forward packet switching - Services provided to the transport layer - Implementation of Connectionless Service and Connection orientation service - Comparison of Virtual Circuit and Datagram Networks, Transport layer, Application layer

Fundamentals of Cloud computing : Cloud Computing Basics - History of Cloud Computing, Characteristics of Cloud Computing, Advantages and Disadvantages of Cloud computing,. Cloud deployment models, Introduction to Cloud services-IAAS,PAAS, SAAS, Overview, Virtualization, Container, Pricing models, SLA, VPC.

Reference Books

- 3 Cloud Computing A Complete Guide, Gerardus Blokdyk , 2020, Pearson.
- 4 Computer Networks: A Systems Approach, Larry L. Peterson, Bruce S. Davie , 2021, Morgan Kaufmann .

23AD2205R - DEEP LEARNING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD2205R	DEEP LEARNING	DL	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand and apply optimization algorithms to solve neural networks, enhancing model performance through weight adjustment. Develop the ability to select and implement appropriate optimization techniques for various neural network architectures and problems	3	PO1, PO2, PSO1
CO2	Apply CNN models and their variants to real-time data, including LeNet, AlexNet, ZF-Net, and VGGNet. Gain proficiency in implementing and optimizing these models for various real-time data scenarios.	3	PO1, PO2, PSO1
CO3	Apply RNN, Long Short Term Memory (LSTM), and autoencoders to relevant data tasks. Acquire the ability to design, train, and optimize these models for various sequential and feature extraction problems.	3	PO1, PO2, PSO1
CO4	Apply variational autoencoders and generative neural models for data generation tasks. Develop skills in constructing, training, and optimizing these models to create high-quality synthetic data.	3	PO2, PO3, PSO2
CO5	Apply and implement basic neural networks, various types of autoencoders, batch normalization, and convolutional neural networks. Gain proficiency in constructing, training, and optimizing these models for diverse applications. Develop the ability to enhance model performance using advanced techniques.	3	PO2, PO3, PSO2
CO6	Construct , Design and develop various types of neural network models, autoencoders, batch normalization, and convolutional neural networks. Gain expertise in building, training, and optimizing these models for different tasks. Enhance your ability to implement advanced techniques to improve model performance.	5	PO2, PO3, PSO2

Syllabus

Introduction to Deep learning, History of Deep Learning, McCulloch Pitts Neuron, Thresholding Logic, Perceptron\\ , Introduction to Deep learning, History of Deep Learning, McCulloch Pitts Neuron, Thresholding Logic, Perceptron\\ Bias Variance Tradeoff, L2 regularization, Early stopping, . Batch Normalization, Dataset augmentation, Parameter sharing and tying, Injecting noise at input, Dropout,

Greedy Layer wise Pre-training, etter activation functions, better weight initialization methods, Learning Vectorial Representations of Words Convolutional Neural Networks, LeNet, AlexNet, ZF-Net, VGGNet, GoogLeNet, ResNet Object Detection RCNN, Fast RCNN, Faster RCNN, YOLO. Visualizing Convolutional Neural Networks, Guided Backpropagation, Deep Dream, Deep Art, Recurrent Neural Networks, Backpropagation Through Time (BPTT), Vanishing and Exploding Gradients, Loss Functions in RNNs, Sequence Prediction, Gated Recurrent Units (GRUs), Long Short TermMemory (LSTM) Cells, Solving the vanishing gradient problem with LSTMs , Encoder Decoder Models:Regularization in autoencoders, Denoising autoencoders, Sparse autoencoders, Contractive autoencoders.

Attention Mechanism, Attention over images, Deep Belief networks, Markov Networks. Restricted Boltzmann Machines, Unsupervised Learning, Motivation for Sampling, Markov Chains, Gibbs Sampling for training RBMs, Contrastive Divergence for training RBMs, Variational autoencoders, Autoregressive Models:NADE, MADE, PixelRNN , Generative Adversarial Networks (GANs) Cycle GAN ,Super resolution and Conditional GAN models, Deep Reinforcement learning

Reference Books

23AD4108 - ETHICS FOR ARTIFICIAL INTELLIGENCE (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23AD4108	ETHICS FOR ARTIFICIAL INTELLIGENCE	EAI	R	1	0	0	0	1

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand Ethical Principles underlying AI development and deployment, including transparency, fairness, accountability, and privacy.	2	PO1, PO2, PSO1
CO2	Analyze Ethical Dilemmas arising in AI design, development, and deployment, considering multiple perspectives and potential consequences.	4	PO1, PO2, PSO1
CO3	Apply Ethical Frameworks and guidelines to evaluate the ethical implications of AI technologies across various domains such as healthcare, employment, and social justice.	3	PO1, PO2, PSO1
CO4	Critically Evaluate AI Systems for biases, fairness, and ethical considerations, employing analytical tools and methods to assess the ethical soundness of these systems.	5	PO1, PO2, PSO1

Syllabus

Introduction to Ethics and AI: Overview of ethical theories, Introduction to AI and its ethical implications, Ethical frameworks for AI development Ethical Principles in AI: Ethical principles: transparency, fairness, accountability, and privacy, Case studies on ethical principles in AI applications Bias and Fairness: Understanding bias in AI systems, Fairness in algorithmic decision-making, Strategies for mitigating bias in AI

Privacy and Data Ethics: Privacy issues in AI, Data ethics and responsible data use, GDPR and other regulatory frameworks Autonomous Systems and Responsibility: Moral agency in AI, Responsibility and liability in autonomous systems, Case studies on ethical decision-making by autonomous systems Ethical Design and Development: Ethical considerations in AI design, Participatory design and stakeholder engagement, Ethical guidelines and best practices

AI and Employment: Impact of AI on employment and the workforce, Ethical considerations in AI-driven automation, Policies and interventions to address job displacement AI and Healthcare: Ethical issues in AI-enabled healthcare, Bias in medical AI algorithms, Patient privacy and consent in AI-driven healthcare systems AI and Social Justice, AI ethics and social justice, Ethical implications of AI in criminal justice, education, and other domains, Addressing bias and promoting equity in AI applications

Ethical Governance and Regulation: Regulatory challenges in AI, International efforts for AI governance, Ethical considerations in AI policy-making Ethical Decision-Making in AI: Ethical decision-making frameworks, Case studies on ethical dilemmas in AI, Ethical impact assessments Future Directions and Emerging Ethical Challenges: Emerging ethical challenges in AI: Ethical considerations in advanced AI technologies (e.g., AGI): Ethical leadership in AI development and deployment

- 2 Robot Ethics: The Ethical and Social Implications of Robotics (Intelligent Robotics and Autonomous Agents series), George A. Bekey, Keith Abney, Patrick Lin, 2014, The MIT Press, Cambridge, London.
- 3 Artificial Intelligence: A Guide for Thinking Humans, Melanie Mitchell, 2019, Farrar, Straus and Giroux.
- 4 ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING, Dr G.Revathy, Dr S.Selvi, Dr N.S.Kavitha, 2023, MJP Publishers.

23BT1101 - CELL BIOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT1101	CELL BIOLOGY	CB	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the structural organization of cell and apply the knowledge of genomic organization in designing primers	3	PO1
CO2	Apply the knowledge on cell cycle in identifying drug targets involved in various disease condition	3	PO1
CO3	Apply the knowledge of receptor signalling and list the therapeutic molecules which can interfere with receptor signalling pathways and inhibit cancer cell growth	3	PO4
CO4	Apply the knowledge of cell membrane organization and cellular transport mechanism in liposome assisted drug delivery	3	PO1, PO4

Syllabus

Structure and function of Prokaryotic and Eukaryotic cell bacterial cell, plant cell, animal cell, Cyanobacterial cell. Cell organelles

Cell division and cell cycle-Cell Division: Mitosis and Meiosis. Steps in cell cycle, G₀-G₁ transition, cell cycle checkpoints, Chromosome movements, regulation of cell division. Cell differentiation: cortical Differentiation, nuclear differentiation and cell death

Tissues & Receptors Meristems, Simple, complex and special tissues. Growth patterns, Cell growth and mechanisms. Embryonic development, Organogenesis, metamorphosis, Cell signaling Membrane receptors, Cell Cell interactions

Membrane Structure and Transport The structural and functional organization of cell membrane, the extra cellular matrix of eukaryotes cell wall. Transport across cell membrane passive and active transport, NaK pump, Ca²⁺ ATPase pumps, Lysosomal and Vacuolar membrane ATP dependent proton pumps, Co-transport into prokaryotic cells, endocytosis, exocytosis, pinocytosis and phagocytosis

Reference Books

- 1 Cell biology, Genetic, Molecular Biology, Evolution and Ecology, P.S. Verma and V.K. Agarwal,, 2004 , S. Chand and Company Ltd..
- 2 Schaum's Outline of Biology, George H fried,, 2013 , McGraw Hill..
- 3 Cell Biology & Molecular Biology, EDP Roberties & EMF Roberties, 2017, Wolters Kluwer Publishers.
- 4 Textbook of Biochemistry and Human biology, G P Talwar and L.M. Srivatsava, 2002, PHI Learning.

23BT2103R - BIOCHEMISTRY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT2103R	BIOCHEMISTRY	BCM	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Relate the importance of biological buffers and its preparation, explain cellular thermodynamics, structure, function and metabolism of carbohydrates; the association between structure and function of carbohydrate at a chemical level with a biological perspective with a hands-on approach on laboratory techniques	2	PO1, PO2, PO4, PSO1
CO2	Make use of the information about the folding, conformation, dynamics and intrinsic properties of proteins and apply the knowledge to learn about abnormalities related with protein dysfunction and their clinical importance	3	PO1, PO2, PO4, PSO1
CO3	Apply the structural and biological roles that nucleic acids and lipids play in cellular physiology, and application of that knowledge in biotechniques to identify these biomolecules and discuss about disorders related with nucleotide metabolism	3	PO1, PO2, PO4, PSO1
CO4	Categorize enzymes, catalysis, kinetics, applications; immobilized enzymes and their catalytic mechanisms	4	PO1, PO2, PO4, PSO1
CO5	Analyze the biomolecules from various sources by employing experimental techniques and laboratory studies	4	PO1, PO2, PO4, PSO1

Syllabus

Types of the chemical bonds in biomolecules, Principles of biophysical chemistry pH, buffer, Henderson-Hasselbalch equation, colligative properties of solution. Composition, structure, and function of carbohydrates: monosaccharides, disaccharides and polysaccharides (homopolysaccharides and heteropolysaccharides). Ring structure and mutarotation, stereo isomers and optical isomers, disorder of carbohydrate metabolism. Principle of bioenergetics and introduction to cellular thermodynamics, Gibbs free energy, Enthalpy, Entropy, Concept of free energy, and standard free energy change, Biological oxidation-reduction reactions, Glycolysis & oxidation of Pyruvate, Krebs (TCA) cycle, its function in energy generation, Role of vitamin and Inhibitors of TCA cycle, Pentose phosphate pathway, Gluconeogenesis, electron transport and Oxidative phosphorylation, Inhibitors of ETC cycle.

Amino acids and Metabolism: Classification and Characteristics, Zwitter ion, isoelectric pH of amino acids, Amino acid biosynthetic pathway; Amino acid biodegradation: Deamination, transamination, Urea Cycle, Blood urea clinical importance, Amino acid as neurotransmitter. Peptide & Protein: peptide bond and pI values of peptides, solid-phase peptide synthesis, Ramachandran plot, structural organization of proteins, protein stability and folding, native structure of protein (Myoglobin, Hemoglobin and collagen), conjugated proteins, Abnormalities associated with Hemoglobin.

Lipids: Fats and lipids Introduction, Essential fatty acids. Fatty acid synthesis. beta oxidation of fatty acids. Nucleic acids Synthesis of Purines, Pyrimidines. Catabolism of purine and pyrimidine nucleotides.

Enzymes: nomenclature and classification of enzymes, enzyme kinetics (Michaelis-Menten and Lineweaver-Burk plot), influencing elements for enzyme activity, cofactor, coenzymes and allosteric modulators, enzyme inhibition and types, Immobilization of enzymes.

employing experimental techniques and laboratory studies

23BT2104 - MICROBIOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT2104	MICROBIOLOGY	MBG	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the history of Microbiology, taxonomy, working principles, and the importance of various microscopes in the analysis of physicochemical properties of microorganisms.	2	PO1
CO2	Understand the structure and biology of microorganisms and apply the staining techniques to visualize the structures.	3	PO1
CO3	Analyze and determine the growth, in vitro culturing, physicochemical properties, and controlling of microorganisms, and the various means to control the microorganisms and enumerate them.	3	PO1
CO4	Analyze the various diseases caused by bacteria, Fungi, and Viruses. Design, conduct experiments, and interpret the data pertaining to the biochemical and metabolic potential of microorganisms.	3	PO1
CO5	Formulate various sterilization, isolation, culturing techniques for microbes	3	PO1

Syllabus

Major contributors in the field of Microbiology - Antony van Leeuwenhoek; Robert Koch- Germ theory of disease and Koch postulates; Louis Pasteur, Edward Jenner; Joseph Lister; Winogradsky and Beijerinck. Discovery of microorganisms; Taxonomy-Major characteristics used in taxonomy, types of taxonomy (Phylogenetic, phenetic, numerical), Microbial taxonomy and diversity: Classification of microorganisms, Bacteria, and their broad classification., Bergey's Manual of bacteriology, Light microscopy-Bright field and dark field microscopy; simple compound, fluorescence, and electron microscopy.

MORPHOLOGY AND CELL STRUCTURE OF MICROORGANISMS Ultrastructure of bacteria cell wall, external appendages, endospore, and cell inclusions. Identification based on shape, simple, differential, capsule, Endospore, Acid-fast staining, Yeasts and Molds, Classification of Fungi, morphology, life cycle. Morphology and classification replication of viruses, lytic and lysogenic cycles.

Nutritional classification of bacteria, Essential Macronutrients, Micronutrients, and Growth factors. Microbial growth, Growth curve and factors affecting the growth. Culture media, synthetic and complex media, solidifying agents, types of media. Synchronous growth and diauxic growth, Isolation of pure cultures, spread, pour, and streak plate methods. Maintenance and Preservation of microorganisms, Methods of growth estimation. Classification of Archaeobacteria, thermophiles, psychrophiles, halophiles, and methanogens. Sterilization and disinfection, Antibiotics, classification, mode of action, and resistance.

Normal microbial flora, Respiratory infections caused by bacteria and viruses, Influenza, Tuberculosis, Hepatitis, Disease transmitted by animals, rabies and insects malaria, Food and water-borne diseases, Typhoid, pathogenic fungi, Viroids, Virusoids and Prions

Reference Books

- 4 Medical Microbiology , Ananthanarayan and Panikar , 12, 2022, Orient Blackswan .

23BT2105R - IMMUNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT2105R	IMMUNOLOGY	IMM	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the role and components of immune system	3	PO2, PO3, PSO2
CO2	Apply the mechanism of immune system in Healthcare Biotechnology	3	PO2, PO3, PSO2
CO3	Apply the role of T Cells and B Cells in Immunity and to Apply the concepts of immune system to disease/disorders	3	PO3, PO6
CO4	Apply the concept of immunology to diagnostics	3	PO6, PO7
CO5	Conduct experiments based on concepts of immunity	3	PO6, PO7

Syllabus

Types of Immunity, Innate, acquired, Humoral & cell mediated; Organs of the immune system: Primary lymphoid organs Bursa of fabraceous, Bone marrow, thymus; Secondary lymphoid organs Spleen, lymph node. Cells of immunity, Lymphoid & Myeloid lineage

Antigens Types, Chemical nature of antigens, characteristics of Antigen, Hapten and Cytokines; Types, receptors and functions, B Cell Ontogeny, B-Cell biology, BCR

Immune Response, Primary, Secondary, and Tertiary Responses, Theories of Immune Response, Immunoglobulins Structure, Types, Subtypes, and Role, T Cell Ontogeny, T Cell Biology, TCR, Types of T Cells, TH, TC, and TS Cells, T Cell Effector Mechanism, Structure of MHC I and II, Mechanism of Antigen Processing, Antigen Presentation, Professional Antigen Presenting Cells, Clinical Immunology

Complement System-Classical, alternative, and MB Lectin Pathway & Regulation, Hypersensitivity: IgE Mediated, Antibody Dependent Cell Cytotoxicity, Immune Complex mediated reactions and delayed type of hypersensitivity, Autoimmunity-systemic & organ specific, Transplantation immunity-MLR and MCA, Tumor Immunity, Tumor Antigens, Vaccination-Basic Concept and Types

ODD Assay (Ag-Ab Pattern), ODD Assay (Ab Titre), Immunoelectrophoresis, Counter current immunoelectrophoresis, Radial Immunodiffusion, Rocket Immunoelectrophoresis, Dot ELISA, Antigen capture ELISA, Western Blot, Purification of IgY, Antibody capture ELISA, Antibody capture ELISA, Antibody HRP conjugation.

Reference Books

- 1 Kuby Immunology, Jenni Punt, Sharon Stranford, Patricia Jones, Judith A Owen, 2018, WH Freeman .
- 2 Elements of Immunology, Fahim Halim Khan , 2009, Pearson .
- 3 Roitts Essential Immunology, Ivan Roitt, 2001, Wiley.
- 4 Practical Immunology, Frank C. Hay, Olwyn M. R. Westwood, 2002, AP.

23BT2206 - MOLECULAR BIOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT2206	MOLECULAR BIOLOGY	MBY	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the DNA structure and genome organization	2	PO1
CO2	Understand the DNA replication in prokaryotes and eukaryotes along with DNA damage and its repair mechanisms	2	PO1
CO3	Understand the mechanism of transcription and translation and apply the post-transcriptional and post-translational modifications along with cracking of genetic code	3	PO1
CO4	Applications of gene expression in prokaryotes and eukaryotes	3	PO1

Syllabus

Nucleic acid as genetic material, Genome of prokaryotes and eukaryotes, C Value Paradox, repetitive DNA, pseudogenes, split genes. Watson and Crick model, Forms of DNA. Transposons

Semi conservative replication apparatus, bidirectional and rolling circle replication. DNA damage, Mutations, Types of Mutations, Effect of UV, Deamination, Alkylation. Repair Mechanisms, Direct Repair, Excision Repair, Mismatch Repair, SOS Repair and Recombination Repair.

Mechanism of transcription and translation in Prokaryotes and Eukaryotes, Structure of Promoters, RNA Polymerases of Prokaryotic and Eukaryotic Organisms, Post Transcriptional Processes of Eukaryotic RNA, Translation in prokaryotic and Eukaryotes, Genetic code, Posttranslational modifications and protein synthesis. Gene Silencing.

Regulation of gene expression Regulation of Gene expression in Bacteria, Operon concept, inducible and repressible operons, positive and negative regulations, Inducer molecules, repressor molecules, co repressor molecules, Induction and catabolic repression of lac Operon in E.Coli, Repression and attenuation of trp operon in E.Coli, Absolute control by Antisense RNAs. Regulation in eukaryotes, Control by promoter, enhancer and silencers. Cis trans elements.

Reference Books

- 1 Molecular Biology, D Freifelder, 2015, Narosa Publications.
- 2 Molecular Biology of the Cell, Bruce Alberts, 2014, Garland Science .
- 3 Principles of Molecular Regulation, PM Conn, AR Means, 2011, Humana Publishers.
- 4 Cell And Molecular Biology , De Robertis, 2017, Walters Kluver.

23BT2215 - PROCESS ENGINEERING PRINCIPLES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT2215	PROCESS ENGINEERING PRINCIPLES	PEP	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the various methods for estimation of chemical composition of different microbial cultures	3	PO1, PO2, PSO1
CO2	Apply various techniques for determination of volatile components in the microbial cultures	3	PO1, PO2, PSO1
CO3	Apply the principles of material balance for designing of Bioreactors	3	PO1, PO2, PSO1
CO4	Apply various principles of Energy balance for designing of Stirred tank reactors.	3	PO1, PO2, PSO1
CO5	Apply the various processes to produce value added biological products from different sources.	3	PO1, PO2, PSO1

Syllabus

Introduction to Engineering Calculations: Physical variables; dimensions and Units; Measurement conventions: Density, specific gravity; specific volume, mole, chemical composition, vapour pressures, concentration, composition of mixtures and solutions: molarity, molality, normality, weight fractions, mole fractions,

Ideal gas law, differences between ideal and real gases, application of ideal gas law, Daltons law of additive pressures, amagat law of additive volumes, volume changes with change in composition

Material balances: Introduction to system and process; difference between steady state and equilibrium, Law of conservation of mass: Types of material balances, Procedure for material balance calculations with and without chemical reactions, Material balances in cell culture: Material balance for continuous filtration, batch mixing, material balances with recycle, by pass and purge streams

Energy balances: Basic Energy concepts: law of conservation of energy, standard heat of formation, latent heat of vaporization and condensation, specific heat, Energy balance worked examples without reaction: cooling in downstream processing, continuous water heater, and fermentation energy balance.

Reference Books

- 1 Bioprocess Engineering Principles, Pauline M.Doran,, 1995, ELSEVIER publications.
- 2 Introduction to Biochemical Engineering, D G Rao, 2005, Mc Graw Hill publications.
- 3 Bioprocess Engineering, Basic Concepts, Michael L.Shuler Fikret Kargi, 2001, Pearson Education India.
- 4 Introduction to Process calculations (Stoichiometry), K.A Gavhane, 2016, Nirali Publication.

23BT3214 - BIOINFORMATICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23BT3214	BIOINFORMATICS	BI	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Acquire the theoretical basis of bioinformatics and understand the access and analyze the biological information from databases.	3	PO1, PSO1
CO2	Choose the DNA/Protein sequences using standalone PC programs and with the help of the worldwide web.	3	PO1, PO5, PSO1
CO3	Apply multiple sequence alignment tools on gene and protein sequences to find homologs, construct and interpret the evolutionary trees.	3	PO1, PSO1
CO4	Apply structural bioinformatics to understand the secondary and tertiary structures of proteins from primary sequence.	3	PO1, PO5, PSO1
CO5	Choose the sequences from the databases and apply sequence alignment, tree construction tools to infer their relations.	3	PO1, PO5, PSO1

Syllabus

Biological Information on the web. Introduction to Biological databases Primary Databases: NCBL, EMBL, DDBJ. Secondary Databases: SwissProt, PIR. Specialized data bases KEGG and BRENDA. Information retrieval from Databases. Concepts of Data mining, Basics of Sequencing Technologies, Genome projects human genome project.

SEQUENCE COMPARISONS AND ALIGNMENTS: String similarity Local, Global alignment; pair wise alignments Dot plots, Dynamic Programming Methods, Heuristic methods FASTA and BLAST; Amino acid substitution matrices- PAM and BLOSUM.

MULTIPLE SEQUENCE ALIGNMENT: Methods for Multiple sequence alignments- local and global multiple sequence alignment; Significance and applications of MSA, PHYLOGENETIC ANALYSIS: Origins of Molecular Phylogenetics; Methods of Phylogenetic analysis- Maximum Parsimony Maximum Likelihood and Distance based methods.

STRUCTURAL BIOINFORMATICS: Protein Structure Basics; Peptide Formation; Dihedral Angles; Hierarchy Secondary Structures, Tertiary Structures, Primary structural analysis and prediction, Secondary structural analysis and prediction. PERL programming basics.

Reference Books

- 3 BIOINFORMATICS , Vinay Sharma, Ashok Munjal, Ashish Shanker , 2019, Rastogi Publications .
- 4 Bioinformatics: Sequence, Structure, and Databanks: A Practical Approach, Des Higgins, Willie Taylor, 2000, Oxford University Press.

23CE2102R - FLUID MECHANICS & HYDRAULICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CE2102R	FLUID MECHANICS & HYDRAULICS	FMH	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Application of Properties of Fluid	3	PO1, PO2, PO7, PSO1
CO2	Determination of losses through pipe flow	3	PO1, PO2, PO7, PSO1
CO3	Analysis of flow in open channel	4	PO1, PO2, PO7, PSO1
CO4	Analysis of specific energy curve in open channel flow	4	PO1, PO2, PO7, PSO1
CO5	Illustrate the experimental procedure and interpretation of results obtained	4	PO1, PO2, PO7, PSO1

Syllabus

Fluid properties and conservation laws: Properties of Fluid, Flow Classification; Fluid pressure and its measurement for simple manometer and differential manometer; Hydrostatic forces for vertical, horizontal, and inclined plane; buoyancy and floatation: buoyancy, centre of buoyancy, meta-centre, meta-centric height, equilibrium condition of floating and sub-merged bodies; Types of fluid flow; Conservation Laws: Conservation of Mass, Conservation of Momentum, Energy Conservation; Application of Conservation Laws.

Flow through pipes: Losses of energy in pipes, Major head loss, Minor head losses, hydraulic gradient and total energy line, flow through pipes in series, Equivalent pipe, flow through parallel pipes, water hammer in pipes, pipe network, Concept of boundary layer and its growth, Concept of lift and drag.

Uniform flow in open channel and most efficient section Steady and Unsteady Flows, Uniform and Nonuniform flows, Laminar and Turbulent Flows, Subcritical, Supercritical, and Critical Flows; Chezy's Equation, Manning Equation in Uniform Flow, Computation of Normal Depth in Uniform Flow;

Specific Energy, Energy-depth Relationships, Unit Discharge, and Specific Force for Rectangular and Non-rectangular Channel; Application of Critical Flow; Location of Critical Flow; Computation of Critical Depth; Hydraulic Jump: Ratio of Sequent Depths, Length of Jump, Jump types, Energy loss. Gradually Varied Flow Governing Equation, Classification of Water-Surface Profiles, Sketching of Water-Surface Profiles; Dimensional analysis and hydraulic similitude.

Reference Books

- 1 Fluid Mechanics, Frank M. White, 3rd Edition, McGraw-Hill Education.
- 2 Hydraulics & Fluid Mechanics, P.N. Modi and S.M. Seth, 2nd Edition, Standard Book House.
- 3 Fluid Mechanics and Hydraulic Machines, R. K. Bansal, 1st Edition, Laxmi Publication.
- 4 Fluid Mechanics and Machinery, Manish Kumar Goyal, 1st Edition, PHI Publishers.

23CE2103R - SURVEYING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CE2103R	SURVEYING	SVY	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the knowledge of plane surveying, geodetic surveying for computation of bearings in a traverse.	2	PO2, PO4, PSO1
CO2	Apply and Calculate the difference in elevation by using differential levelling techniques and prepare a contour plan.	3	PO2, PO4, PSO1
CO3	Compute the area of the field and volume of earthwork	3	PO2, PO4, PSO1
CO4	Understand about the different types of curves and uses of GPS & GIS	2	PO2, PO4, PSO1
CO5	Evaluate Conceptualize the project by applying surveying techniques such as chain, compass, traverse.	4	PO2, PO4, PSO1
CO6	Calculate the height of building by using theodolite and tacheometric survey, and total station surveying	3	PO2, PO4, PSO1

Syllabus

Introduction to surveying, Overview of plane surveying (chain, compass and plane table), Objectives, Principles and classifications. Distances and Direction - Distance measurement conventions and methods; use of chain and tape, Electronic distance measurements, Meridians, Azimuths and Bearings, declination, computation of angle. Global and regional sustainability guidelines and regulations. Case studies of successful construction projects

Concept and Terminology, adjustments- method of levelling. Characteristics and Uses of contours- methods of conducting contour surveys and their plotting. Area from field notes, computation of areas along irregular boundaries and area consisting of regular boundaries. Embankments and cutting for a level section and two level sections with and without transverse slopes, determination of the capacity of reservoir, volume of barrow pits.

Theodolite, description, uses and adjustments, measurement of horizontal and vertical angles. Principles of Electronic Theodolite, Trigonometrical levelling, Traversing. Stadia and tangential methods of Tacheometry. Distance and Elevation formulae for Staff vertical position.

Types of curves, design and setting out of simple curves. Introduction, Accessories with description, Features of total station, Onboard software electronic data reading, Summary of total stations characteristics, Field procedure of total stations in topographic survey, Global positioning system, Introduction to Geographic information system (GIS).

Measurement of horizontal and vertical angles using theodolite, Determination of a given area using total station. Calculation of volume of earthwork using total station, staking out the points in an area using total station, Measurement of height of the tower/building using total station, Measuring and plotting using Auto cad of a given area of land by total station.

23CE2206 - STRUCTURAL ANALYSIS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CE2206	STRUCTURAL ANALYSIS	STA	R	3	1	0	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Mastery of Structural Analysis Methods	3	PO1, PO5, PSO1
CO2	Ability to Analyze Complex Structures:	3	PO1, PO5, PSO1
CO3	Proficiency in Structural Modeling and Software Tools	3	PO1, PO5, PSO1
CO4	Understanding of Structural Behavior and Design Implications	3	PO1, PO5, PSO1
CO5	Evaluate the dynamic response of structures subjected to external forces and vibrations, including natural frequencies and mode shapes.	4	PO1, PO5, PSO1
CO6	Apply knowledge of structural analysis principles to solve practical engineering problems and design structural elements that meet safety and performance criteria.	5	PO1, PO5, PSO1
CO7	Demonstrate proficiency in using structural analysis software and computational tools to analyze and design structures efficiently and accurately.	3	PO1, PO5, PSO1

Syllabus

Introduction to Structural Analysis and Loads

Analysis of Determinate Structures

Analysis of Indeterminate Structures

Matrix Structural Analysis and Computer Applications

Dynamic Analysis of Structures ,Fundamentals of structural dynamics Free and forced vibration analysis of single and multi-degree-of-freedom systems

Plastic Analysis of Structures ,Plastic behavior of materials and structural elements Plastic analysis of beams, frames, and portal structures

Influence Lines and Moving Loads Construction and use of influence lines for determinate and indeterminate structures

Special Topics in Advanced Structural Analysis Nonlinear analysis of structures Stability analysis of structures

Reference Books

- 1 Structural Analysis, Aslam Kassimali, 2014, Cengage Learning.
- 2 Structural Analysis, R.C. Hibbeler, 2022, Pearson.
- 3 Structural Analysis, Russell C. Hibbeler, 2014, Pearson.
- 4 Matrix Analysis of Structures, Aslam Kassimali, 2011, Cengage Learning.

23CE2207 - CONCRETE TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CE2207	CONCRETE TECHNOLOGY	CT	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand about the constituent and properties of cement	2	PO1
CO2	Understand about the fresh, hardened and durability of concrete.	2	PO1
CO3	Understand about special concretes and concreting techniques.	2	PO4
CO4	To apply concrete mix design in the field.	2	PO3, PSO1
CO5	Demonstrate and apply knowledge experiments in the project-based laboratory	3	PO6
CO6	Understand the production and placement of concrete	2	
CO7	Develop solutions for enhancing concrete performance	6	

Syllabus

Basics: Historical background, composition of concrete, general note on strength mechanism, recent practice and future trends. Constituent of Concrete : 1. Cement , Chemical composition, hydration, heat of hydration, hydrated structure, various types of cement, testing of cement as per Indian standard. 2. Aggregates , Utility in concrete, classification, effect of geometry & texture, strength, mechanical properties, moisture content, water absorption, bulking of sand, deleterious substances, sieve analysis, various grading and grading requirements, sampling & testing as per Indian Standards. 3. Water , General Requirements & limiting values of impurities. 4. Admixtures , Additives and admixtures, types, necessity and benefit Mineral admixture , Fly ash, silica fume, blast furnace slag, and other pozzolanic materials. Chemical admixtures , Accelerator, retarder, water reducing elements, plasticizer and super-plasticizer, their functions and dosage.

Fresh concrete , Methods of mixing, transporting and placing of concrete. Workability , Definition and requirement, factors affecting workability, various tests as per IS and ASTM. Segregation and bleeding, stiffening, retempering. Curing, necessity and various methods, micro-cracking. Hardened concrete, Compressive and tensile strength and their relationship, various tests as per IS and ASTM. Factors affecting strength, water cement ratio, gel space ratio, aggregate cement ratio, properties of ingredients, effect of age, maturity, aggregate cement-paste inter-face, various finishes of concrete. Introduction to aspects of elasticity, shrinkage and creep. Tests for strength of concrete: Destructive, semi destructive and non destructive tests with their limitations, test methods as per IS and ASTM. Durability and permeability of concrete, Definitions, causes, carbonation, cracking

Concrete in aggressive environment: Alkali aggregate reaction, sulphate attack, chloride attack, acid attack, effect of sea water, special coating for water proofing, sulphate chloride and acid attack, concrete for hot liquids. Special Concrete: Review of behavior and characteristics of high strength concrete, high performance concrete, fiber reinforced concrete, mass concrete, light weight and heavy weight concrete, Precast concrete Special concreting techniques: Pumped concrete, concrete, underwater concrete, pre-placed concrete, vacuum dewatered concrete, hot and cold weather concreting, Ready mixed concrete.

Concrete mix design: Principles of mix proportioning, probabilistic parameters, factors governing selection of mix. Road note 4, DOE, ACI and IS method of concrete mix design, Variability of test results, acceptance criteria, various IS code provisions.

Testing of Concrete: Fresh Concrete Testing Slump test, flow test, Vebe test, compaction factor test. Hardened Concrete Testing: Compressive strength test, split tensile test, flexural strength test. Non-destructive testing methods: Rebound hammer, ultrasonic pulse velocity

Durability of Concrete: Chemical Attack on Concrete Sulfate attack, chloride attack, alkali-aggregate reaction
Reinforcement Corrosion Mechanism of corrosion Factors affecting corrosion Prevention methods: Coatings, cathodic protection Environmental Impact Freeze-thaw cycles, carbonation, and abrasion resistance

Enhancing Concrete Performance: Use of Admixtures Water reducers, superplasticizers, accelerators, retarders
Supplementary Cementitious Materials Fly ash, slag, silica fume, and their effects on concrete properties Advanced Curing Techniques Steam curing, membrane curing, and self-curing concrete

Production and Placement of Concrete: Batching and Mixing Batching methods: Weight batching, volume batching Types of mixers: Drum mixers, pan mixers, truck mixers Transportation and Placement Methods of transportation: Pumps, conveyors, cranes Placement techniques: Compaction, vibration, and finishing Curing of Concrete Importance of curing Methods of curing: Water curing, membrane curing, curing compounds

Reference Books

23CI2203 - MANAGEMENT INFORMATION SYSTEM - ERP (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CI2203	MANAGEMENT INFORMATION SYSTEM - ERP	MIS	R	2	0	0	0	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Remember the basic concepts and technologies used in the field of management information systems from technical, socio-ethical and business perspective and as well for assessing the relationship between the digital firm, electronic commerce, electronic business and internet technology.	2	PO1, PO5, PSO2
CO2	To apply various knowledge representation methods with different technology infrastructure and business intelligence as strategic weapons to counter the risks associated with business and for making business more competitive	3	PO2, PO6, PSO1
CO3	Analyze and interpret information systems role played by the major types of information systems in organizations and their relationship in supporting the major functional areas of the business between organizations, information systems and business processes, including the processes for customer relationship management and supply chain management in creating efficiencies for businesses.	4	PO1, PO5, PSO1
CO4	Analyze and distinguish the relationships between concepts of information systems, organization, management and strategy for better decision making in supporting various levels of business strategy with information systems	4	PO1, PO5, PSO2

Syllabus

Information Systems in Global Business Today Information Systems Analysis & Design Fundamentals of Data Systems Analytics, Visualization & Engineering, perspectives of information Systems, EBusiness: How Businesses Use Information Systems

Information Technology Infrastructure Enterprise Resource Planning, Business Systems Modelling & Design, Infrastructure components Contemporary Hardware and Software Platform Trends, Foundations of Business Intelligence: Databases and Information management, Telecommunications, the Internet, and Wireless Technology

Achieving Operational Excellence and Customer Intimacy Enterprise Applications, Customer Relation Management Systems Enterprise Applications, E-Commerce: Digital Markets, Digital Goods, Types of Electronic Commerce, M-Commerce Electronic Commerce Payment System

Building and Managing Systems, Managing Projects, importance of project, selecting project, Managing Global Systems The growth of international information systems Organizing International Information Systems, Information Security Governance & Risk Management. Management solution

Reference Books

- 1 "Management Information Systems: Managing the Digital Firm", Kenneth C. Laudon and Jane P. Laudon, 16th Edition, 2020, Pearson.
- 2 "Management Information Systems for the Information Age", Stephen Haag, 10th Edition, 2021, McGraw-Hill Education.
- 3 Information Systems Today: Managing in the Digital World, Joseph Valacich and Christoph Schneider, 8th Edition, 2021, Pearson.
- 4 "Essentials of MIS", Kenneth C. Laudon and Jane P. Laudon, 14th Edition, 2022, pearson.
- 5 "Business Driven Information Systems", Paige Baltzan and Amy Phillips, 6th Edition, 2023, McGraw-Hill Education.
- 6 "Using MIS", David Kroenke and Randall Boyle, 12th Edition, 2022, pearson.

23CS03HF - ADVANCED ALGORITHMS & DATA STRUCTURES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS03HF	ADVANCED ALGORITHMS & DATA STRUCTURES	AADS	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Demonstrate a comprehensive understanding of advanced data structures such as balanced trees, hash tables, and graphs	2	PO1, PO3, PO6, PSO1
CO2	Develop proficiency in designing, analyzing, and optimizing complex algorithms	2	PO1, PO2, PO3, PSO1
CO3	Effectively apply advanced graph algorithms to solve real-world problems.	3	PO1, PO2, PO3, PSO1
CO4	Apply dynamic programming and backtracking techniques to solve combinatorial and optimization problems	3	PO1, PO3, PO6, PSO1
CO5	Analyze various advanced algorithms and data structures	3	PO1, PO3, PO6, PSO1

Syllabus

Introduction to Advanced Data Structures ,Review of basic data structures (arrays, linked lists, stacks, queues),AVL trees: Properties, insertion, deletion,Red-Black trees: Properties, rotation operations,B-Trees: Structure, insertion, deletion, searching,Hash tables: Collision resolution techniques (chaining, open addressing).

Algorithm Design Techniques,Divide and Conquer: Principles, merge sort, quicksort, closest pair,Greedy Algorithms: Strategies, minimum spanning trees, shortest paths, Huffman coding,Dynamic Programming: Principles, matrix chain multiplication, longest common subsequence, knapsack problem.

Graph Algorithm, Depth-First Search (DFS) and Breadth-First Search (BFS), Single Source Shortest Paths (Dijkstra's Algorithm),All-Pairs Shortest Paths (Floyd-Warshall Algorithm),Minimum Spanning Trees (Prim's and Kruskal's Algorithms)

Advanced Topics in Algorithms Network Flow Algorithms: Ford-Fulkerson method, Edmonds-Karp algorithm, max-flow min-cut theorem,String Matching Algorithms: Knuth-Morris-Pratt algorithm, Rabin-Karp algorithm, Boyer-Moore algorithm,Approximation Algorithms: Greedy algorithms for NP-hard problems, approximation ratio, analysis

Reference Books

- 1 Introduction to Algorithms, Thomas H. Cormen, Charles E. Leiserson, Ronald L. Rivest, and Clifford Stein., 3rd, 2009, The MIT Press.

- 4 The Art of Computer Programming, Donald E. Knuth, 3rd, 1997, Addison-Wesley Professional.

23CS04HF - HIGH PERFORMANCE COMPUTING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS04HF	HIGH PERFORMANCE COMPUTING	HPC	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Interpret the basis concept of processors, optimization and parallel computers, shared memory, parallel programming with MPI.	3	PO2, PO3, PO4, PSO1
CO2	Apply knowledge of FPGA based supercomputers, rearchitecting, and core optimization.	4	PO2, PO3, PO4, PSO1
CO3	Analyze openMp, MPI and their hybridization principles.	4	PO2, PO3, PO4, PSO1
CO4	"Analyze the working principle of GPU, CUDA, threads, performance, openCL."	4	PO2, PO3, PO4, PSO1
CO5	Analyze the parallel programming concepts, openMP, MPI, CUDA, and other significant features of HPC.	4	PO2, PO3, PO4, PSO1

Syllabus

Evolution of Processors and Modern Processor, Basic optimization techniques for serial code, Data access optimization, Parallel computers, Basics of parallelization, Shared-memory parallel programming with OpenMP.

FPGA based super computer for statistical physics, Weird Case of Janus, High speed torus interconnect using FPGAs, Rearchitecting memory resources for clusters, Various kinds of models, Core optimization.

Efficient openMP programming, Local optimization on ccNuma architecture, Distributed memory parallel programming with MPI, Efficient MPI programming, Hybrid parallelization with MPI and Open MP.

History of GPU computing, GPU memory Hierarchy, Introduction to CUDA, CUDA threads, CUDA performance consideration, Introduction to Open CL, Hybrid- Core Architecture, Low cost High performance reconfigurable computing.

Reference Books

- 1 HPC @ Green IT, Green High Performance Computing Methods, Ralf Gruber, Vincent Keller, 2010, Springer.
- 2 High-Performance Computing Using FPGAs, Christian de Schryver, Norbert Wehn, 2013, Springer.
- 3 Using OpenMP: Portable Shared Memory Parallel Programming (Scientific and Engineering Computation), Barbara Chapman (Author), David J. Kuck (Foreword) (Author), Gabriele Jost (Author), 2007, Paperback.

23CS05EF - PYTHON FULL STACK DEVELOPMENT WITH DJANGO (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS05EF	PYTHON FULL STACK DEVELOPMENT WITH DJANGO	PFSD	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Applying the fundamental concepts like Flow control and conditions, File handling, OOPs, and Python modules	3	PO2, PO3, PSO1
CO2	Apply Python and Django framework to develop web applications using Template System, URLs	3	PO1, PO3, PSO1
CO3	Apply Python and Django framework to develop web applications using models, views, forms and data bases	3	PO2, PO3, PSO1
CO4	Apply Django framework to develop web applications using model, views, templates, URLs, forms, and databases to develop the project	3	PO3, PSO1

Syllabus

Introduction to Python programming language - Setting up development environment - Basic programming concepts - Data Types, Functions, File Handling, Modules, Exception Handling- . Python Libraries and Packages - Working with popular Python libraries such as NumPy, Pandas, and Matplotlib - Installing, managing, and publishing Python packages using pip - Using Python virtual environments effectively.

Object-oriented Programming in Python - Introduction to object-oriented programming - Classes, methods, and properties in Python - Inheritance, polymorphism, and encapsulation.

Introduction to Django - Overview of Django framework - Setting up a Django project - Creating apps in Django - Django Web Development - Building web applications in Django - Django views and URL mapping - Django templates and rendering - Handling forms and user input

Middleware-Session handling-Enabling sessions-Using and Configuring Sessions-Saving Session Data-Testing Middleware-Import and Export File - CSV, PDF Request and Response Objects -HttpRequest object- UploadedFile object-QueryDict object-HttpResponseobject.Restful API-Concept of REST - HTTP Principles- Installing and Configuring Django REST Framework-SerializersURL and DRF Routers-Custom Properties- Configuring API Endpoint-Testing API's.

Reference Books

- 1 Django for Beginners, William S. Vincent, 3rd, 2022, Welcome to Code.
- 2 Web Development with Django, Ben Shaw, Saurabh Badhwar, Chris Guest, Bharath Chandra K S, 2nd, 2023, Packt Publishing.
- 3 Mastering Django:Core, Nigel George, 2nd, 2016, Lean publishing.
- 4 Pro Django (Expert's Voice in Web Development), Marty Alchin, 2nd, 2013, APress.

23CS06EF - MERN STACK WEB DEVELOPMENT (E)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS06EF	MERN STACK WEB DEVELOPMENT	MSWD	E	0	0	6	4	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Design and develop a responsive front-end application using ReactJS libraries, Material-UI, and Bootstrap.	3	PO5, PO9, PSO1
CO2	Create and manage a MongoDB database, and implement CRUD operations and queries.	3	PO5, PO9, PSO1
CO3	Develop an Express server within a Node.js environment, implementing RESTful APIs.	3	PO5, PO9, PSO1
CO4	Develop full stack web applications using the MongoDB, Express.js, React, and Node.js (MERN) framework.	3	PO5, PO9, PSO1

Syllabus

Fundamentals of Web Applications: Overview of HTML, CSS, Single Page Application (SPA), JavaScript, and ES6. Full-Stack Web Development. Introduction to React JS: class, functions, arrays, DOM methods, Components, and Multiple components JSX, Passing data to components-props. De structuring, Page re-rendering, Stateful component, State Vs Props, State management, Event handling: Event handler as a function, passing state to child components, Refactoring the components, Rendering Collections, Key-attribute, Map Controlled component Filtering Displayed Elements, Axios, promises. Form handling, State and Effect hooks, React-Router, Material UI Components: Inputs, Feedback, Data Display, Surface, Navigation, Layout, Utils, MUI X. Rendering MaterialUI using RESTful API, Error handling, error handling into middleware.

Working with MongoDB: Installation of MongoDB Compass, working with Mongo Shell, Atlas account, MongoDB, Schema, CRUD operations on objects from the database, other data operations, queries, connectivity with compass and other applications.

Working with Server using Node JS and Express: Simple Web server, About Node JS, modules, routes, Streaming, Files, Express, Web and express, nodemon, REST, Fetching and deleting resources, Postman, receiving data, HTTP Request types, same origin policy, and CORS, authentication and authorization, Token based authentication.

GraphQL, Apollo Server, Apollo Studio Explorer, Parameters resolver, Mutations, other queries. REDUX: Flux-architecture and Redux, communicating with a server in a redux application, Asynchronous actions, and redux-thunk, connect function in Redux, Redux, the component state. TESTING: Validation, debugging and ESLint, Project Structure, Testing React apps, Testing backend applications, async / await. Type Scripting, react with typescript. React Native basics, communicating with the server, Testing, and extending. Introduction to CI/CD, Container. Getting started with GitHub Actions, Deployment of both client-server apps in Heroku.

Reference Books

- 3 Pro MERN Stack: Full Stack Web App Development with Mongo, Express, React, and Node , Vasan Subramanian , 2nd ed.2023, Apress.
- 4 Node.js Design Patterns, Mario Casciaro, Luciano Mammino., 2nd ed. 2023, Packt Publishing.
- 5 Learning Node.js Development, Andrew Mead, 1st ed. 2024, Packt Publishing.
- 6 Practical Node.js: Building Real-World Scalable Web Apps, Azat Mardan, 1st ed. 2024, Apress.

23CS2103R - ADVANCED OBJECT ORIENTED PROGRAMMING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2103R	ADVANCED OBJECT ORIENTED PROGRAMMING	AOOP	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply software development practices for designing reusable solutions (design patterns), writing clean and maintainable code (clean coding techniques), and ensuring code quality through tests (Test Driven Development).	3	PO1, PO5, PSO2
CO2	Analyze the advanced Java programming concepts for working with typed collections (generics & collections framework) and exploring advanced data structures like trees and graphs.	4	PO1, PO5, PSO2
CO3	Apply the techniques for running multiple tasks concurrently in Java, including thread creation, synchronization, and advanced concepts like parallel programming.	3	PO2, PO5, PSO2
CO4	Develop the applications that connect databases with JDBC and building web applications using servlets and JSP for dynamic content.	3	PO2, PO5, PSO2
CO5	Experiment with different design patterns (creational, structural, and behavioral) to structure your code effectively, while solidifying your understanding of key OOP principles like encapsulation, inheritance, and polymorphism to create reusable, maintainable, and adaptable object-oriented applications.	3	PO1, PO2, PO5, PSO2
CO6	Dissect real-world challenges by applying object-oriented design patterns and principles in open-source projects to craft reusable solutions.	4	PO2, PO5, PO9, PSO2

Syllabus

Design Patterns: Introduction to design patterns, Creational Design Pattern (Singleton, Factory, Abstract Factory), Structural Design Patterns (Adapter, Bridge, Decorator, Facade), & Behavioural Design Patterns (Chain of Responsibility, State, Iterator, Command, Observer), Dependency injection. Clean Coding Techniques: Introduction to code smells - bloaters, Object-oriented abusers, change preventers, dispensables and couplers. Refactoring techniques to remove the code smells. Test Driven Development (TDD): Introduction to TDD, Introduction to Unit Testing & JUnit.

Generics & Collections Framework: Introduction to Generics, Generics with interfaces. Stacks, Queues & Priority Queue, Comparator & Comparable Interface, Cloneable & Iterator interfaces. Introduction to Sets and Maps and their Java API. Nested Classes, Lambda expression and Stream API. Graphs & Trees - Graph based algorithms, Graph Visualization, Graph Traversal - DFS, BFS, Binary Tree, Binary Search Tree (BST), AVL trees. Case studies related to trees and graphs.

Multi-threading & Parallel programming: Introduction to Multithreading and Parallel Programming, Thread Concepts & its States, Creating Tasks & Threads, Thread Classes, Thread Pools, Thread Synchronization & Locks, Cooperation among Threads, Case Study: Producer/Consumer, Blocking Queues, Semaphores, Deadlock Avoidance, Synchronized Collections & Parallel Programming.

Java I/O and its Limitations, JDBC: API, Components, Architecture (2 Tier & 3 Tier), Drivers & Its Types, Packages for JDBC Connection, Steps to connect to Databases (PostgreSQL). Servlets: Overview, Life Cycle of Servlet, Attributes in Servlets, Interaction between Client & Servlet, Servlet demo Application development with Sessions, JSP: JSP & Advantages over servlets, Features, syntax, Life Cycle of JSP, Interaction between client, JSP & server, JSP demo Application Development.

Reference Books

23CS2205R - DESIGN AND ANALYSIS OF ALGORITHMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23CS2205R	DESIGN AND ANALYSIS OF ALGORITHMS	DAA	R	3	0	2	4	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply concepts of mathematics to find space complexity, time complexities of various algorithms	3	PO1, PSO1
CO2	Analyze the problems that can be solved by using Divide and Conquer and Greedy Method	4	PO2, PO3, PO5, PSO1
CO3	Analyze the problems that can be solved by using Dynamic Programming and Backtracking	4	PO2, PO3, PO5, PSO1
CO4	Analyze the problems that can be solved by using Branch and Bound, NP-Hard Graph problems and Approximation Algorithms	4	PO2, PO3, PO5, PSO1
CO5	Solve and Analyze the complex and realtime problems by various design strategies	4	PO1, PO2, PO3, PO5, PSO2
CO6	Analyze the various design techniques to solve any real-world problems	4	PO1, PO2, PO3, PO5, PSO2

Syllabus

Introduction, Definition of an Algorithm Algorithm Specification Analysis of Algorithm PRAM Algorithms Merging Sorting. String Algorithms The Naive String Matching Algorithm, Robin Karp Algorithm.

Divide and Conquer, Merge Sort, Quick Sort, Strassen's Matrix Multiplication, Convex Hull. Greedy Method, The General Method Job Sequencing with Deadlines, Knapsack Problem, Minimum Cost Spanning Trees, Huffman Codes, Single Source Shortest Path Method.

Dynamic Programming, The General Method Optimal Binary Search Tree, 0/1 Knapsack, Traveling Sales Person Problem, Ford Fulkerson. Backtracking The Eight Queens Problem, Graph Coloring, Knapsack Problem.

Branch and Bound 0/1 Knapsack Problem, Traveling Sales Person Problem. NP Hard and NP Complete Problems, Basic Concepts Cook's Theorem, NP Hard Graph Problems, CDP, NCDP, AOG

KMP Algorithm, Sum Of Subset Problem, Approximation Algorithms Introduction, Planar Graph Coloring, Maximum Programs stored problem, NP-Hard Absolute approximation

23EC01HF - VLSI PHYSICAL DESIGN AUTOMATION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC01HF	VLSI PHYSICAL DESIGN AUTOMATION	VPDA	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Formulate the graphs for the physical design problems and estimate the complexity of physical design algorithms	3	PO1, PO2, PSO1
CO2	Apply the group migration algorithm for the successive circuit partitioning	3	PO2, PO3, PSO1
CO3	Modify the floorplans in an abstract manner and apply computer algorithms to make large and optimized floorplans	3	PO1, PO3, PSO1
CO4	Apply quadratic and Euclidean distance approaches for the wire length estimation of the full custom / semi custom placement problem	3	PO2, PO4, PSO1
CO5	Apply the CAD design problems using algorithmic methods	3	PO3, PO4, PO5, PSO1

Syllabus

The physical design cycle in VLSI involves a top-down flow that encompasses stages from system specification to layout. In graph theory, key types include complete graphs, connected graphs, subgraphs, isomorphisms, bipartite graphs, and trees. Shortest path algorithms like Dijkstra's and spanning tree algorithms like Kruskal's and Prim's are fundamental. Additionally, Depth-First Search (DFS) and Breadth-First Search (BFS) are essential traversal methods. The computational complexity of these algorithms is often analyzed using Big O notation. Problems are classified into complexity classes such as P (solvable in polynomial time), NP (verifiable in polynomial time), NP-hard (at least as hard as the hardest problems in NP), and NP-complete (both NP and NP-hard).

Partitioning in VLSI design involves dividing a circuit into smaller, manageable sections to optimize performance and reduce complexity. The objective is to minimize interconnections between partitions while balancing size and computational load. Common goals include improving signal integrity, reducing delay, and enhancing manufacturability. Partitioning algorithms can be classified into different types such as group migration algorithms and iterative improvement algorithms. The Kernighan-Lin Algorithm is a well-known group migration algorithm, with extensions developed to handle larger and more complex systems. Simulated annealing is another method that uses probabilistic techniques to find a near-optimal solution by escaping local minima. Multilevel partitioning involves hierarchically dividing the design, coarsening the graph, partitioning at a coarse level, and then refining it, which helps in efficiently handling very large designs.

Floorplanning in VLSI design involves determining the placement of various functional blocks within a chip to optimize performance, area, and power consumption. The optimization goals are to minimize area, reduce interconnect lengths, and improve timing and power efficiency. Floorplan representations translate the physical layout into abstract models, such as converting a floorplan to a constraint-graph pair, which captures spatial relationships and constraints between blocks. Another representation is the sequence pair, which provides a compact and efficient way to describe the relative positions of modules. Converting a sequence pair back into a floorplan involves decoding these positional relationships into a physical layout. Floorplanning algorithms include floorplan sizing, which adjusts the dimensions of blocks to fit optimally within the chip area; cluster growth, which incrementally places blocks by grouping them based on connectivity; and integrated floorplanning algorithms, which combine floorplanning with other design stages for holistic optimization. Pin assignment involves determining the optimal locations for input/output pins on the blocks to minimize routing complexity and signal delay.

In VLSI design, placement involves positioning the various circuit components on the chip to optimize performance and minimize wire length. Wire length estimation models, such as the half-perimeter wire length and Rent's rule, are essential for effective placement. Quadratic placement techniques use mathematical optimization to minimize wire length by solving quadratic equations, while the sequence pair technique ensures relative positioning of blocks to reduce overlap and congestion.

Simulation and logic synthesis are critical processes in VLSI design, encompassing gate-level and switch-level modeling and simulation. Gate-level simulation focuses on the behavior of digital circuits at the level of logic gates, while switch-level simulation models the transistors and their interconnections, offering more detailed analysis.

23EC02HF - SENSORS AND TRANSDUCERS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC02HF	SENSORS AND TRANSDUCERS	SAT	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply concepts of mechanical, electromechanical, and inductive sensors, including their operating principles, types, materials, and performance characteristics.	3	PO1, PO2, PSO1
CO2	Identify concepts of capacitive and piezoelectric sensors, covering their fundamental operating principles, various design configurations, sensitivity calculations, and applications in areas like microphones, force sensors, and ultrasonic	3	PO1, PO2, PSO1
CO3	Apply thermal sensors, including their operating principles, material selection, performance characteristics (accuracy, range) for different types like material expansion, resistance change (RTD, thermistor), thermoelectric (thermocouple, IC, PTAT), and radiation sensors (pyroelectric etc.).	3	PO1, PO2, PSO1
CO4	Analyze magnetic and radiation sensors, exploring principles like Villari, Wiedemann, Thomson, and Hall effects, along with their applications in force, torque, proximity sensing, and radiation detection using LDRs, photovoltaics, photodiodes, Geiger counters, and scintillation detectors.	4	PO1, PO2, PSO1
CO5	Examine interfacing sensors and devices using analog and digital methods, communication protocols (I2C, SPI), and data acquisition systems, including sampling and conversion techniques.	4	PO1, PO2, PO5, PSO1

Syllabus

Mechanical and Electromechanical sensor Resistive (potentiometric type): Forms, material, resolution, accuracy, sensitivity. Strain gauge: Theory, type, materials, design consideration, sensitivity, gauge factor, variation with temperature, adhesive, rosettes. Inductive sensor: common types- Reluctance change type, Mutual inductance change type, transformer action type, Magnetostrictive type, brief discussion with respect to material, construction and input output variable, Ferromagnetic plunger type, short analysis. LVDT: Construction, material, output input relationship, I/O curve, discussion. Proximity sensor.

Capacitive sensors: variable distance-parallel plate type, variable area- parallel plate, serrated plate/teeth type and cylindrical type, variable dielectric constant type, calculation of sensitivity. Stretched diaphragm type: microphone, response characteristics. Piezoelectric element: piezoelectric effect, charge and voltage co-efficient, crystal model, materials, natural & synthetic type, their comparison, force & stress sensing, ultrasonic sensors.

Thermal sensors: Material expansion type: solid, liquid, gas & vapor Resistance change type: RTD materials, tip sensitive & stem sensitive type, Thermister material, shape, ranges and accuracy specification. Thermoemf sensor: types, thermoelectric power, general consideration, Junction semiconductor type IC and PTAT type. Radiation sensors: types, characteristics and comparison. Pyroelectric type

Magnetic sensors: Sensor based on Villari effect for assessment of force, torque, proximity, Wiedemann effect for yoke coil sensors, Thomson effect, Hall effect, and Hall drive, performance characteristics. Radiation sensors: LDR, Photovoltaic cells, photodiodes, photo emissive cell-types, materials, construction, response. Geiger counters, Scintillation detectors.

Interfacing Methods Analog and digital interfaces Communication protocols (e.g., I2C, SPI) Data Acquisition Systems Sampling and conversion techniques

23EC2209R - ELECTROMAGNETIC WAVES & TRANSMISSION LINES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC2209R	ELECTROMAGNETIC WAVES & TRANSMISSION LINES	EMWTL	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply vector calculus to interpret the behavior of Electrostatics in different media.	3	PO1, PSO1
CO2	Apply the principles of magnetostatics to estimate and evaluate the behavior of the field in different media.	3	PO1, PSO1
CO3	Apply the concepts of Maxwell equations to characterize the uniform plane wave Propagation in lossless and lossy media.	3	PO1, PSO1
CO4	Analyze the propagation characteristics of transmission lines at various frequencies.	4	PO2, PSO1

Syllabus

Static Electric Fields: Coordinate systems, Charge distributions, Coulombs Law, Electric field intensity, electric flux density, Gauss Law and applications, Divergence, Divergence theorem, Potential and Potential difference, Potential gradient. Boundary conditions on E and D. Electric current, current densities, equation of continuity.

Static Magnetic Fields: Biot Savart Law and applications, Ampere circuital law, differential form of Ampere circuital law, Curl, Stoke theorem, Lorentz force equation, force on a current element in magnetic field, Boundary conditions on B and H.

Electromagnetic Waves: Faraday law of Induction, Maxwell Equations in Differential and integral forms. Wave equation for free space, Uniform plane wave general solution and propagation. Wave equations for conducting medium. Wave equations in phasor form, wave propagation in loss less medium, Poynting vector.

Transmission lines: General Solution, input impedance, infinite line, wavelength, velocity, Reflection Coefficient, Open and short circuited lines, lossless line, standing wave ratio, input impedance, open and short circuited lossless lines, Impedance matching.

23EC2211R - VLSI DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EC2211R	VLSI DESIGN	VLSID	R	3	0	2	2	4.5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Realize MOS device with transient and DC characteristics	3	PO1, PO2
CO2	Understand the characteristics of CMOS inverter	3	PO1
CO3	Analyze the static and dynamic characteristics of CMOS circuits	4	PO2, PO3
CO4	Analyze the performance of CMOS circuits	4	PO1, PO2
CO5	Design and analyze the combinational and sequential circuits using Cadence VLSI Design Full Suite	4	PO1, PO4, PO5, PSO1, PSO2
CO6	Design and analysis of VLSI circuits for real time applications.	4	PO2, PO3, PO5, PSO1, PSO2

Syllabus

MOS Transistor Theory: Introduction to the metal oxide semiconductor (MOS) structure, Long-channel I-V characteristics, C-V characteristics, non-linear I-V effects, and DC transfer characteristics. CMOS Process Technology: Fabrication process flow- basic steps, the CMOS n-Well process, layout design rules, stick diagram, full-custom mask. Circuit Characterization and Performance Estimation: Introduction, Delay Estimation, Logical effort and transistor sizing, power dissipation, interconnect, design margin, reliability, scaling. MOS Inverters: Resistive load, depletion load, enhancement load, CMOS inverter, Static and Dynamic characteristics.

Combinational CMOS Logic Circuits: MOS logic circuits with depletion nMOS loads, MOS Inverter - Static Characteristics, Switching Characteristics, and Interconnects effects, CMOS logic circuits, complex logic circuits, CMOS transmission gates (pass gates), ratioed, dynamic and pass transistor logic circuits.

Sequential MOS logic circuits: Behavior of bi-stable elements, SR latch circuits, clocked latch and flip-flop circuits, CMOS D-latch, and edge-triggered flip-flop. Timing path, Setup time and hold time static, an example of setup and hold time static, setup and hold slack, clock skew and jitter, Clock, reset, and power distributions. Memory Design, SRAM, DRAM structure, and implementations.

23EE01HF - RESTRUCTURED POWER SYSTEMS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EE01HF	RESTRUCTURED POWER SYSTEMS	RPS	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the concept of deregulated market structures and reforms in Indian Power Sector	2	PO1
CO2	Apply different techniques for finding available transfer capacity for congestion management	3	PO5
CO3	Analyze transmission pricing methods and effect of congestion on LMPs	4	PO5
CO4	Understand ancillary services and system security in deregulation	2	PO5
CO6	Analyze the problems in restructured power systems using simulation tools	4	PO5

Syllabus

Need and conditions for deregulation: Introduction of Market structure, Market Architecture, Spot market, forward markets and settlements. Different forms of Ownership and management. Monopoly model, Purchasing agency model, wholesale competition model, Retail competition model, Reforms in Indian power sector, Availability based tariff

Congestion management: Review of Concepts original cost of generation, Short-run and Long-run cost, Various costs of production, least-cost operation, incremental cost of generation, Definition of congestion, Reasons for transfer capability limitation, Calculation of ATC , ATC calculation using PTDF and LODF based on DC model

Pricing: Framework and methods for the analysis of Bilateral and pool markets, LMP based markets, auction models and price formation, price based unit commitment, country practices. effect of congestion on LMPs Transmission network and market power, Power wheeling transactions and marginal costing, transmission costing, transmission loss ,financial transmission rights

Ancillary Services and System Security in Deregulation: Classifications and definitions, AS management in various markets- country practices. Technical, economic, & regulatory issues involved in the deregulation of the power industry. Load-generation balancing related services, Frequency regulation, Load following, Spinning reserve services.

23EE2101 - ELECTRICAL CIRCUITS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EE2101	ELECTRICAL CIRCUITS	ELC	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand two-port network parameters (Z, Y, H, ABCD) and their interrelations for circuit design.	2	PO1, PO5, PSO1
CO2	Apply transient responses of resistors, capacitors, and inductors under AC and DC conditions.	3	PO1, PO5, PSO1
CO3	Apply network topology techniques (node and mesh analysis) to solve circuit problems.	3	PO1, PO5, PSO1
CO4	Apply Kirchhoff's laws to calculate power in three-phase circuits, both balanced and unbalanced. This involves understanding voltage, current distributions, and power factor calculations.	3	PO1, PO5, PSO1
CO6	Analyze network theorems like Thevenin's and Norton's, three-phase power flows, and circuit transients. This comprehensive analysis is key to solving complex electrical engineering problems.	4	PO1, PO5, PSO1

Syllabus

Two port Networks: One port and two port networks, two port network parameters: Z, Y, Transmission and Hybrid parameters and their relationships.

Transients: Response of R-L, R-C, R-L-C (Series and parallel combinations) for impulse, step, ramp excitations. Transient response of R-L, R-C, R-L-C circuits (Series and parallel combinations) for D.C and sinusoidal excitations, initial conditions, time domain and Laplace transform methods of solutions.

Network Topology - definitions, graph, tree, basic cut-set and basic tie set matrices for planar network, Loop and Nodal methods of analysis of networks, duality and dual networks.

Three Phase Circuits: Three phase circuits-phase sequence, star and delta connection, Relation between line and phase voltages and currents in balanced systems, Analysis of balanced and unbalanced 3 phase circuits.

Magnetic circuits: concept of mutual inductance, dot convention, coefficient of coupling, Magnetic Circuits, Analysis of series and parallel magnetic circuits.

23EE2102R - ELECTRICAL MACHINES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EE2102R	ELECTRICAL MACHINES	ELM	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Analyze the performance of single-phase and three-phase Transformers.	4	PO1
CO2	Apply the basic principles of electromechanical energy conversion and DC Generators.	3	PO1
CO3	Apply the basic principles of electromechanical energy conversion to DC Machines and induction machines.	3	PO2
CO4	Apply the basic principles of electromechanical energy conversion to Synchronous Machines.	3	PO2
CO5	Test the performance of Electrical Machines: single-phase and three-phase Transformers, DC Machines, induction machines and Synchronous Machines.	4	PO1, PO5

Syllabus

Transformers: Single-phase transformer: equivalent circuit, phasor diagram, EMF equation, direct load test. open circuit and short circuit tests, regulation, and efficiency; Three-phase transformers: connections, parallel operation; Auto-transformer.

Electromechanical Energy Conversion: Basic principles of Energy, Lorentz force equation, the general expression of stored magnetic energy and Co energy. Force and Torque equations of single and multiple excited systems. DC Generators: Working principle and construction of DC machines, methods of excitation. EMF equation. Circuit models, Armature reaction, commutation process, Compensating winding, Characteristics of various types of generators.

DC. Motors: Working Principle, Torque equation, and types of DC motors. Performance of DC Machines- Testing- Direct, and indirect methods of DC machines. Induction Motor: Constructional features, Rotating magnetic Field, phasor diagram, equivalent circuit, production of torque, torque-slip characteristics.

Synchronous Machines: Alternators-Constructional features. Cylindrical rotor machine- Synchronous Generator- Generated e.m.f., circuit model and phasor diagram, armature reaction, synchronous impedance, voltage regulation. Direct Load Test. Synchronous Motor, principle, starting, hunting, damper windings

Performance of Electrical Machines: Transformers-DC Machines-Induction Motors-Synchronous Machines.

23EE2204R - ELECTRICAL POWER GENERATION, TRANSMISSION & DISTRIBUTION (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EE2204R	ELECTRICAL POWER GENERATION, TRANSMISSION & DISTRIBUTION	EPGTD	R	2	1	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the working of various generating stations and the economic aspects of generation.	2	PO1, PO3
CO2	Apply field concepts to calculate the over-head transmission line and underground cable electrical parameters.	3	PO1, PO2
CO3	Analyse the performance of overhead transmission lines and AC/DC distribution.	4	PO1, PO3
CO4	Analyse mechanical sag, corona, Insulators, and substation layouts.	4	PO1, PO3

Syllabus

Generating stations: Organization of power sector in India, Layout & Operation of Thermal, Hydro, Nuclear and combined cycle power stations. Overview of Solar, Wind Power Plant and Fuel Cells. Economics of generation, load curves, Demand Factor, load factor, diversity factor, Plant Capacity Factor, Plant Use Factor & Utilization Factor, Characteristics of Tariff, Types of Tariffs.

Transmission line parameters: Types of conductors - calculation of resistance for solid conductors - Calculation of inductance for single phase and three phase, single and double circuit lines, concept of GMR & GMD, Calculation of capacitance for 2 wire and 3 wire systems, effect of ground on capacitance, capacitance calculations for symmetrical and asymmetrical single and three phase, single and double circuit lines. Underground cable Types of cables, grading concepts, Capacitance of three core belted type cable. Cable sizing.

Transmission line theory: Introduction, short transmission line, medium transmission line, evaluation of A, B, C, D Constants, Surge Impedance Loading of Long Lines, Ferranti effect, elementary concepts of AC and DC distribution.

Corona- factors affecting corona, critical voltages, and power loss; Radio interference due to Corona. Insulators: Types of Insulators, String efficiency and Methods for improvement, calculation of string efficiency, Capacitance grading and Static Shielding. Mechanical sag. Substation practice: Classification of substations, layout, and bus bar arrangements.

23EE3106R - POWER SYSTEM ANALYSIS & STABILITY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EE3106R	POWER SYSTEM ANALYSIS & STABILITY	PSAS	R	2	1	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the knowledge of network matrices for solution of power flow problems	3	PO1
CO2	Apply the reactance diagrams for Symmetrical short circuit faults in power system	3	PO5
CO3	Analyze symmetrical components for unsymmetrical fault analysis in a power system	4	PO5
CO4	Analyze rotor angle stability	3	PO1

Syllabus

Power Flow Solutions: Network model formulation, Formation of YBUS by Direct Inspection Method, Formation of ZBUS, Power flow problem formulation, GS method, NR Method (Polar Coordinate Approach), FDLF.

Symmetrical Fault Analysis: Representation of Power Systems Components, Per Unit System, Reactance diagrams, change of base values, Short circuit of synchronous machine unloaded, Calculation of symmetrical short circuit currents for simple systems.

"Unsymmetrical Fault Analysis: Symmetrical components transformation, Sequence Impedance and Networks of Power System Components, Unsymmetrical Faults on an Unloaded Generator and Power Systems. "

Power System Stability: Dynamics of a synchronous machine, Swing equation, power angle equation, Single machine connected to infinite bus, two machine system, steady state stability, Transient stability analysis using Equal Area Criterion, critical clearing angle

23EE3208R - POWER SYSTEM PROTECTION & CONTROL (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23EE3208R	POWER SYSTEM PROTECTION & CONTROL	PSPC	R	2	0	2	2	3.5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Understand the principle of protective relays & circuit breakers	2	PO1, PO5, PSO1
CO2	Apply overcurrent, distance and differential schemes for the protection of power system equipment	3	PO1, PO5, PSO1
CO3	Analyze over voltage protection and economic operation of power system	4	PO1, PO5, PSO1
CO4	Understand automatic generation control and voltage regulators	2	PO1, PO5, PSO1
CO5	Test the characteristics of power system protective relays and Operation of power systems through programming/simulation	4	PO1, PO5, PSO1
CO6	Build the protection system for electrical distribution system	4	PO1, PO5, PSO1

Syllabus

Power System Protection: Introduction, need for protective systems, nature and causes of faults, essential qualities of protection, zones of protection, primary and backup protection, Classification of protective relays & Schemes- over current, differential and distance protection, Arc voltage, Arc interruption, re-striking and recovery voltage, resistance switching, current chopping, Classification of circuit breakers and their ratings.

Protection against Over Voltages: Causes of over voltages, ground wires, lightning arresters, Neutral Grounding: Necessity of earthing, step voltage, Types of neutral grounding.

Economic Dispatch: Optimal operation of generators on a Bus Bar, optimum generation scheduling with and without constraints.

Automatic Generation Control & Automatic Voltage Regulator: Load frequency control single area (Single area case), Load frequency control and economic dispatch control, Automatic voltage control, AVR block diagram.

23ME1002 - ENGINEERING GRAPHICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME1002	ENGINEERING GRAPHICS	EG	R	0	0	4	0	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Enumerating engineering curves, Listing various geometries and descriptions on multiple scales.	2	PO1, PO5, PSO1
CO2	Apply the concept of first-angle and third-angle projection,	3	PO1, PO5, PSO1
CO3	Demonstrate sectional view and sketching in modern tools.	3	PO1, PO5, PSO1
CO4	Apply the engineering design process to real world problems	3	PO1, PO5, PSO1

Syllabus

Introduction to Engineering Drawing Principles of Engineering Graphics and their significance Drawing Instruments and their Use Conventions in Drawing Lettering Conic Sections Ellipse Parabola Hyperbola and Rectangular Hyperbola oblong concentric method Special Curves Cycloid Epicycloids Hypocycloid and Involute Scales Plain and Vernier scales

Projection of Lines points and Projections of Planes First and Third Angle Projections of Points and Lines inclined to planes True lengths, traces Constructions Projections of regular planes inclined to both planes

Projections of Solids and Developments of surfaces Projections of Regular solids inclined to one plane Sections and Sectional Views Right Regular Solids Prism Cylinder Pyramid Cone Surface development of right regular solids Prisms Cylinder Pyramid cone and their parts Understand the fundamentals of modelling and design for manufacturing

Orthographic Projection in First Angle Projection and Isometric Projections Principles of Orthographic Projections conventions Principles of Isometric Projection Isometric Scale Isometric view conventions Isometric View of Lines Plane Figures and simple problems Transformation of Projections Conversion of Isometric Views to Orthographic Views Conventions Analyse manufacturing processes and their impact on product design. Utilize Fusion 360 software for computer aided design (CAD) modeling and visualization

23ME1004 - WORKSHOP PRACTICES FOR ENGINEERS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME1004	WORKSHOP PRACTICES FOR ENGINEERS	WPE	R	0	0	4	0	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Prepare carpentry joints, fitting trade fits, tin-smithy components, and house wiring.	3	PO1, PO3, PSO1
CO2	Prepare mould cavities, perform lathe, drill, grinding operations, create welding joints, and CNC programs.	3	PO1, PO3, PSO1

Syllabus

Carpentry, including simple exercises in woodworking, pattern making, fitting operations, and power tools, along with electrical wiring and sheet metal working

Welding (arc welding), moulding, and casting alongside manufacturing methods such as drilling, turning, milling, surface grinding, and code preparation for CNC machining

Reference Books

23ME2107R - THERMODYNAMICS (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME2107R	THERMODYNAMICS	TD	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Examine the basic terminology used in thermodynamics	2	PO1, PSO1
CO2	Apply first law of thermodynamics to various flow and non-flow processes.	3	PO1, PSO2
CO3	Apply second law of thermodynamics and principle of entropy to Engineering Devices	3	PO1, PSO2
CO4	Apply thermodynamic principles to estimate the performance of different air standard cycles and different psychrometric processes	3	PO2, PSO2

Syllabus

Fundamental Concepts and Definitions: Thermodynamic system and control volume, macroscopic and microscopic points of view, thermodynamic properties, processes, state, path, cycle, thermodynamic equilibrium and quasi-static process. Reversible and irreversible processes

zeroth law, concept of temperature. Work and Heat: Definition of work, units, work done at the moving boundary of system, work done in various non-flow processes, definition of heat, units, comparison of heat and work. First Law of Thermodynamics for Non-Flow Systems: First law of thermodynamics for a closed system undergoing a cycle and for a change of state; energy - a property of system, internal energy and enthalpy. Specific heat at constant volume and constant pressure. First Law of Thermodynamics for Flow Systems: Control mass, control volume, first law of thermodynamics for a control volume, steady flow energy equation and applications to engineering equipment and PMM-1

Second Law of Thermodynamics: Thermal reservoirs, Kelvin-Planck and Clausius statements of second law of thermodynamics; Equivalence of Kelvin-Planck and Clausius statements, PMM-2; Carnot cycle, Carnot engine, corollary of Carnot's theorem, absolute thermodynamic temperature scale. Entropy: Definition of entropy, Clausius theorem, entropy change in reversible process temperature-entropy plot, inequality of Clausius, entropy change in an irreversible process, principle of increase of entropy, applications of entropy principle, entropy change of an ideal gas; availability and irreversibility. Air standard cycles: Performance analysis of Otto, Diesel, Dual, and Brayton cycles.

Psychrometric: Psychrometric properties, psychrometric chart and air-conditioning process -Sensible heating and cooling Humidification and dehumidification, Mixing of air streams Adiabatic saturation process Psychrometric process equations Basic components of air conditioning systems Types of air conditioning systems

23ME2209R - KINEMATICS & DYNAMICS OF MACHINES (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME2209R	KINEMATICS & DYNAMICS OF MACHINES	KDOM	R	3	1	2	0	5

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply the basic principles and concepts of kinematics and mobility of the mechanisms.	3	PO1, PO5
CO2	Analyze and kinematic design of mechanisms and machines using velocity and? acceleration analysis.	4	PO1, PO5
CO3	Apply principles of cams to draw cam profiles and understand gear systems and gear trains for various applications.	3	PO1, PO5
CO4	Understand the principles of balancing and vibrations and analyze gyroscopic effect on naval ships and automobiles.	4	PO1, PO5
CO5	Apply and analyze the concepts learned in theory to perform experiments related to mechanisms and machines using the ADAMS simulation software for data analysis.	4	PO1

Syllabus

Introduction to Kinematics and Dynamics of Machines: Basic concepts and definitions, Types of motion, Degrees of freedom, Kinematics of Mechanisms: Linkages and mechanisms.

Velocity and acceleration analysis of Mechanisms by IC and relative velocity method.

Cams: classification, knife-edge, roller followers; Gears: terminology, fundamental law, contact lengths, interference, gear trains: simple, compound, reverted, epicyclic.

Balancing by static and dynamic methods, force transfer between planes, balancing reciprocating masses, and gyroscope effects on vehicles. Machine vibrations, free/forced vibrations, critical speeds, and isolation.

Reference Books

23ME3110R - HEAT TRANSFER (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME3110R	HEAT TRANSFER	HT	R	3	0	2	0	4

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply Fourier law of conduction and combined conduction convection concepts to 1-D heat transfer problems	3	PO1, PO2, PSO1
CO2	Analyze heat transfer through extended surfaces and apply unsteady state heat transfer to various systems	4	PO1, PO2, PSO1
CO3	Apply the empirical correlations for solving convection heat transfer and heat transfer through during phase change problems	3	PO1, PO2, PSO1
CO4	Analyze various types of heat exchangers by applying the principles of conduction, convection, radiation	4	PO1, PO2, PSO1
CO5	Analyze various parameters of heat transfer in different thermal systems physically/numerically	4	PO1, PO2, PSO1

Syllabus

Introduction to fundamental processes of heat transfer and their governing laws. 1-D steady state heat conduction in single and multi-layered plane walls, cylinders and spheres along with concepts of thermal contact resistance and critical thickness of insulation. One dimensional heat conduction with internal heat generation

Fins-applications and performance analysis; Transient conduction-lumped capacitance, semi-infinite body and application of Heisler and Grober charts

Elementary convection including laminar and turbulent boundary layers in external flows and internal flows of forced convection, natural convection. Heat transfer in boiling and condensation

Basic concepts of heat exchangers; Thermal radiation-Stefan-Boltzmann law, small object in a large enclosure, parallel plates and shape factor

Reference Books

- 1 Introduction to Heat Transfer , Incropera, F. P. and Dewitt, D. P , 2th edition, 1994, John Wiley and Sons. .
- 2 Heat transfer A practical approach , Yunus A. Cengel , 4th edition, 2003, Tata McGraw Hill.
- 3 Heat Transfer - A Conceptual Approach , P. K. Sarma and K. Ramakrishn, 4th edition, 2006, 2006 .
- 4 Heat and Mass Transfer, R. K. Rajput,, 2th edition 2008, S. Chand & Company Limited .

23ME3111R - MECHANICAL ENGINEERING DESIGN (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME3111R	MECHANICAL ENGINEERING DESIGN	MED	R	3	0	0	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Apply engineering design phases and general considerations to design any machine component	3	PO2, PSO2
CO2	Apply the mechanical behavior of engineering materials concept to solve any material failure problem	3	PO2, PSO2
CO3	Analyse the machine components for static strength	4	PO2
CO4	Analyse the machine components for fatigue strength	4	PO2

Syllabus

Design Philosophy, Need Identification and Problem Definition, Concept Generation and Evaluation, Embodiment Design. General considerations and procedure in machine design, Codes & Standards, Reliability, Preferred numbers

Selection of Materials and Shapes: Mechanical behavior of engineering materials, Selection of Materials, Selection of Shapes. Fundamentals of mechanical behavior of materials, as well as design with materials: elasticity, plasticity, fatigue, fracture, and creep

Design for Static Strength: Simple Stresses - Combined stresses - Torsional and Bending stresses - Factor of safety and theories of failure

Design for Fatigue Strength: Stress concentration, Methods of reducing stress concentration, design for fluctuating stresses, Endurance limit, Estimation of Endurance strength, Notch sensitivity, Goodman line and Soderberg line, Combined fluctuating stresses

Reference Books

23ME3113R - MANUFACTURING TECHNOLOGY (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23ME3113R	MANUFACTURING TECHNOLOGY	MT	R	2	0	2	0	3

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Utilize the concept of metal cutting processes	3	PO2, PSO1
CO2	Select appropriate machine tool to prepare desired objects	3	PO1, PSO2
CO3	Make use of non-traditional machining processes	3	PO1, PSO2
CO4	Construct the automation of production lines	3	PO4, PSO1
CO5	Apply the concepts of modern manufacturing processes	3	PO5, PSO2

Syllabus

Overview of metal cutting, single and multi-point cutting tools, orthogonal and oblique cutting, force components, Merchant's force circle diagram, chip formation, tool wear and life, cutting tool materials, and cutting fluids.

Machine Tools, Introduction to Lathe, milling, drilling, boring, shaper, slotter, planer. Mechanics and operations, principles of work holding, jigs and fixtures

Nontraditional machining processes, Introduction to Abrasive Jet Machining, Water Jet Machining, Ultrasonic Machining, Electrical Discharge Machining and Electro chemical machining, principle and process parameters, MRR

Automation and CNC, Reasons and strategies of Automation, Basic Components of NC, CNC, DNC. Economics and comparison, Absolute and Incremental Positioning, CNC Programming for Turning, Milling and Drilling operations

Reference Books
