23SDME05R - 3D MODELLING AND DIGITAL PROTOTYPING (R)

CourseCode	Course Title	Acronym	Mode	L	T	P	S	CR
23SDME05R	3D MODELLING AND DIGITAL PROTOTYPING	3DMDP	R	0	0	2	4	2

Course Outcomes

CO#	CO Description	BTL	PO/PSO
CO1	Perform 3D modelling of engineering components	4	PO2, PO5, PSO1
CO2	Perform analysis and simulation of a finite element model	4	PO2, PO5, PSO1
CO3	Design and execute a fully functional prototype	5	PO2, PO5, PSO1

Syllabus

3D modeling of engineering components involves creating a digital representation of physical objects using three-dimensional geometry. This process is essential for designing, analyzing, and manufacturing components across various industries, including automotive, aerospace, civil engineering, and consumer products. 3D models provide a detailed and accurate depiction of components, facilitating simulations, prototyping, and production.

Converting a geometric model to a finite element model (FEM) involves several steps to prepare the model for numerical analysis. The finite element method (FEM) is used to analyze complex structures by dividing them into smaller, simpler elements.

Preparing a model from concept, analyzing it to improve the design, and developing a functional prototype involves a systematic approach that includes conceptual design, geometry preparation, finite element modeling, simulation, and prototype development. By iterating through design and analysis, engineers can refine their models, address issues, and optimize performance. Developing a functional prototype provides a tangible representation of the design, allowing for real-world testing and validation before full-scale production.
