The **National Workshop on “Neuropharmacology & Drug Discovery: Bridging Mechanisms to Therapeutics”** was successfully conducted on **22nd November 2025** at **KL College of Pharmacy, KLEF**, in association with the **Academic Staff College**. The event was held in **hybrid mode** and featured expert lectures, demonstrations, and interactive sessions.

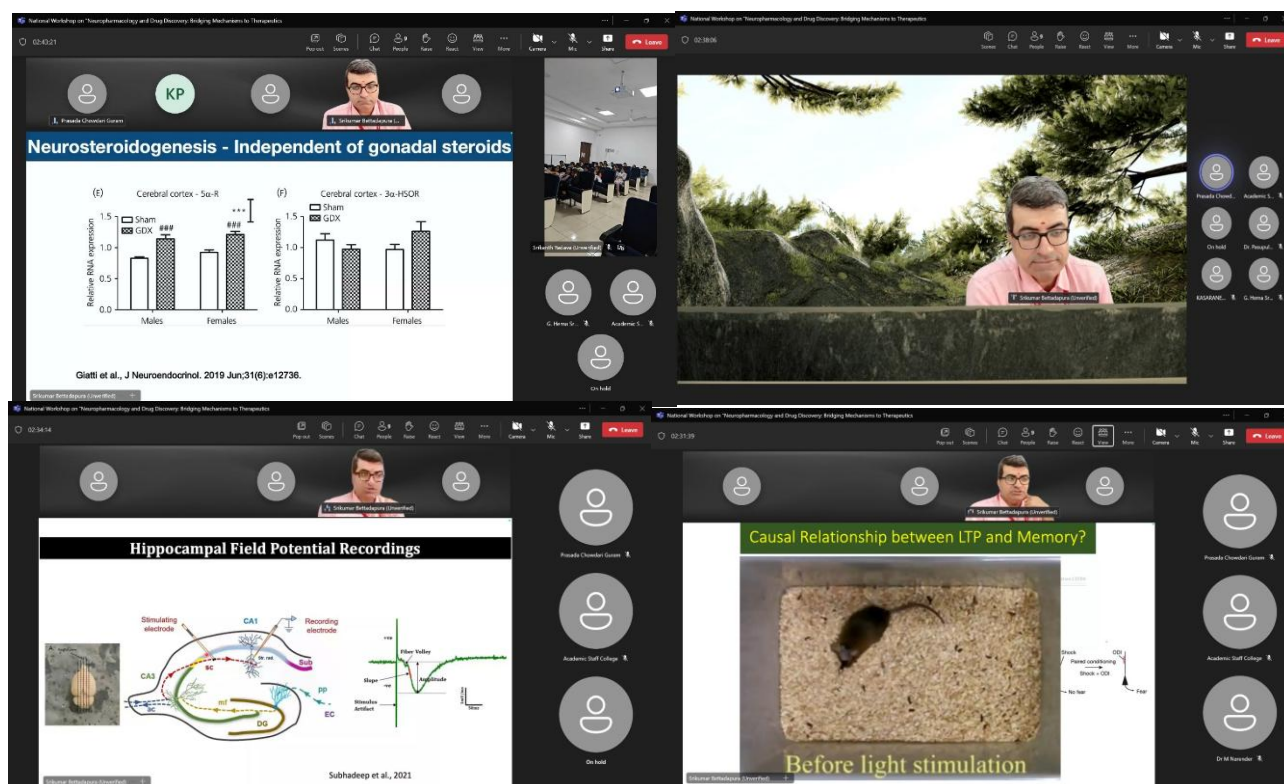

The workshop featured two distinguished resource persons. **Prof. B. N. Srikumar**, Additional Professor at **NIMHANS, Bengaluru**, delivered a session on *“Steroids and Mental Health”*, highlighting the neurobiological effects of steroid use and their implications in mood, cognition, and neuropsychiatric disorders. **Dr. Suman Manandhar**, Medical Reviewer at **Cactus Life Sciences, Mumbai**, presented *“Basics of Drug Discovery Technologies: Uncovering Wnt-Targeted Approaches for Alzheimer’s Disease”*, where he discussed core drug discovery workflows, Wnt-based therapeutic strategies, and essential preclinical skills, including animal handling, routes of administration, blood collection, and neurobehavioral models.

The workshop provided participants with an integrated understanding of neuropharmacology, drug discovery mechanisms, preclinical methodologies, and translational approaches. Faculty,

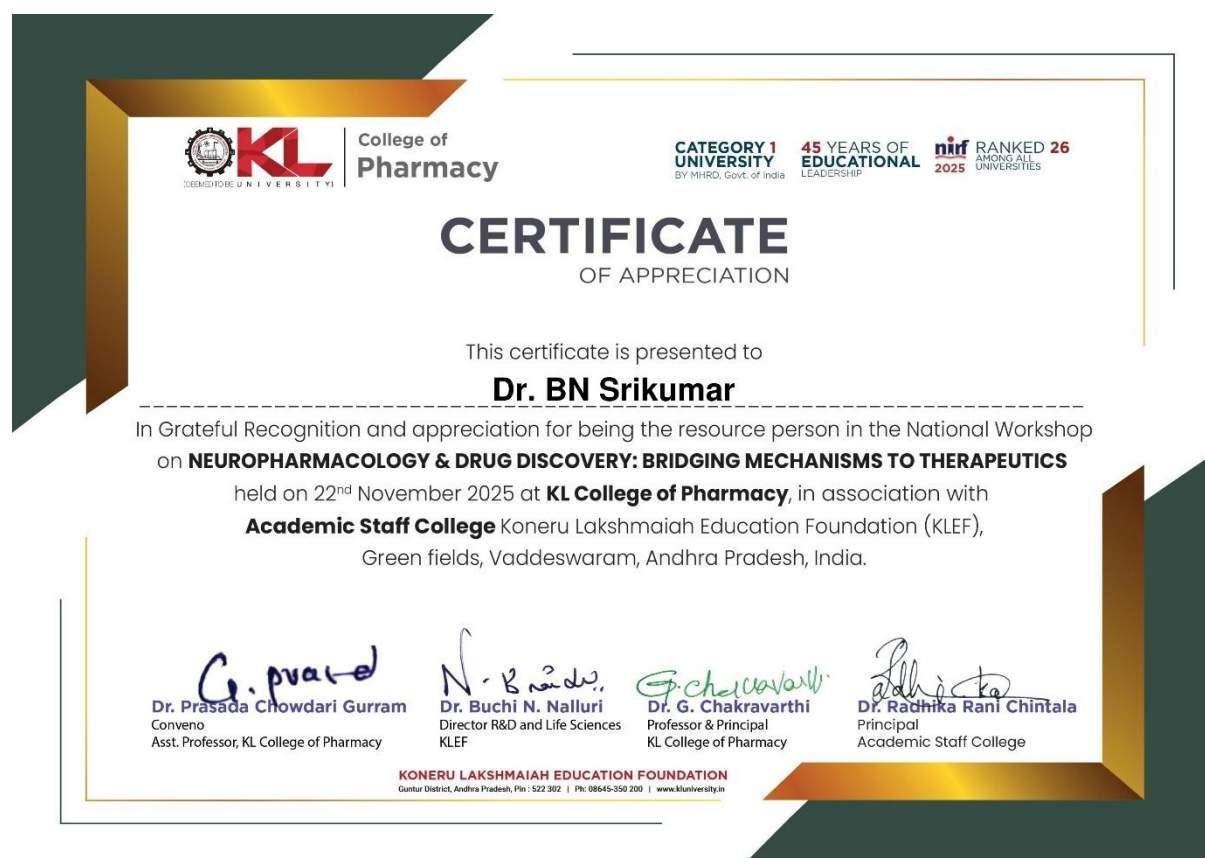

scholars, and students actively participated, making the program highly engaging and academically enriching.

(22nd NOVEMBER 2025 (Saturday))

(Morning Session: Discovery of Novel Molecules to Treat Neurological Disorders & Workshop On Lab Techniques in Preclinical Neuropharmacological Research)

Dr. B. N. Srikumar delivered an engaging talk on the effects of steroids on mental health and their implications in the drug discovery process for neuropsychiatric disorders. He provided detailed insights into various neurobehavioral models used in depression research, including the forced swim test, sucrose preference test, and social interaction test, highlighting their relevance in evaluating antidepressant activity. Additionally, he discussed advanced molecular and neurophysiological techniques such as electrophysiological recordings, dendritic arborization analysis, and assessments of synaptic plasticity, emphasizing their importance in understanding brain function and identifying potential therapeutic targets. His session offered a comprehensive overview of both behavioral and molecular approaches in neuropharmacology research.
