The Academic Staff College of Koneru Lakshmaiah Education Foundation (KLEF) organized 4-day Faculty Development Program on the topic "**Next-Gen AI for Developers: From Deep Learning to Generative Intelligence**" for selected teaching faculty members of KLEF, Vaddeswaram campus.

Inaugural Session

The session commenced with a brief welcome note by Dr.A. Srinath, Dean (Student Progression & Skill Development). He emphasized the growing importance of AI and encouraged participants to explore the latest trends in deep learning and generative intelligence. The session set a positive tone for the program ahead.

The Faculty Development Program (FDP) on Generative Artificial Intelligence (AI) brought together experts and participants to explore cutting-edge AI tools and techniques. This six-day program, held from 8th to 11th November 2024, featured an engaging mix of lectures, research discussions, hands-on training, and an industrial visit, designed to provide both theoretical knowledge and practical exposure.

Welcome address by Dr. A. Srinath, Dean (Student Progression & Skill Development).

Inaugural Session

The Faculty Development Program (FDP) on “Next-Gen AI for Developers: From Deep Learning to Generative Intelligence” began with an enthusiastic and insightful inaugural session, bringing together faculty, researchers, and professionals keen to explore the evolving landscape of Artificial Intelligence.

The session commenced with a warm welcome address by Dr. A. Srinath, Dean (Student Progression & Skill Development). In his speech, He emphasized the transformative role of Artificial Intelligence in today’s digital era, particularly highlighting how Deep Learning and Generative AI are shaping innovation across industries. He encouraged all participants to take full advantage of the FDP to enhance their knowledge and skills, urging them to be active learners and contributors throughout the program.

“AI is not just a technological revolution—it is a tool for innovation, creativity, and problem-solving. As educators and developers, it's our responsibility to stay ahead of the curve,” he noted.

Following the welcome note, the Chief Guest addressed the gathering and shared perspectives on how Generative AI, including models like GPT, DALL·E, and BERT, are revolutionizing everything from education to healthcare, art to software development. The keynote speech highlighted the urgent need for academic institutions to embed AI into their curriculum and empower faculty to become enablers of next-gen learning.

The Program Coordinator (you can mention the name here) then provided an overview of the FDP, outlining its objectives, the day-wise schedule, and the thematic areas to be covered—ranging from deep learning architectures to ethical AI practices, and hands-on training on tools like TensorFlow, PyTorch, and Hugging Face.

A sense of collaborative learning and innovation was established as participants introduced themselves and shared their expectations from the FDP. The organizers reiterated their commitment to fostering an engaging and intellectually stimulating environment throughout the week.

The inaugural session concluded with a vote of thanks, expressing gratitude to the management, resource persons, organizing committee, and all the participants for their enthusiasm and support.

Key Highlights of the Inaugural Session:

Program Overview:

This Faculty Development Program (FDP) aims to bridge the gap between traditional AI techniques and cutting-edge developments in generative intelligence. It provides educators, researchers, and developers with a comprehensive understanding of the AI landscape, starting from deep learning fundamentals to state-of-the-art generative AI models like GPT, DALL·E, and diffusion models. Participants will gain both theoretical knowledge and practical exposure to tools and frameworks widely used in the AI industry today.

Participants listening to the lecture.

Learning Objectives:

By the end of this FDP, participants will be able to:

- Understand the fundamentals of deep learning.
- Explore architectures like CNNs, RNNs, and Transformers.
- Dive deep into generative models: GANs, VAEs, and diffusion models.
- Learn prompt engineering and fine-tuning in Generative AI (e.g., LLMs).
- Develop hands-on projects using tools like Tensor Flow, PyTorch, and Hugging Face.
- Understand ethical implications and responsible use of AI.

Participants listening to the lecture.

1. Understand the fundamentals of deep learning

- **Explanation:**

  Deep learning is a subset of machine learning that uses **neural networks with multiple layers** to model complex patterns in data.

  You will learn:
- What is a neuron and how neural networks work.
- How data flows through layers in a deep network.
- Activation functions, loss functions, and optimizers.
- Basic training process using **backpropagation and gradient descent**.
- **Example Concepts:**
- Feedforward networks
- Overfitting vs. under fitting
- Epochs, batches, learning rate

2. Explore architectures like CNNs, RNNs, and Transformers

- **Explanation:**

  Different types of neural networks are suited to different tasks:
- **CNNs (Convolutional Neural Networks)** – Best for image data (e.g., object recognition).
- **RNNs (Recurrent Neural Networks)** – Good for sequential data like time series and text.
- **Transformers** – The foundation for modern AI models like BERT and GPT, highly effective for understanding language and long-term dependencies.

- **You'll Learn:**
- How CNNs detect patterns in images

  Participants listening to the lecture.

- How RNNs retain memory of previous inputs
- Why Transformers have replaced RNNs in many applications

3. Dive deep into generative models: GANs, VAEs, and diffusion models

- **Explanation:**
  Generative models create **new data** similar to the training data. These are foundational to Generative AI.
- **GANs (Generative Adversarial Networks):** Use a Generator and Discriminator to generate realistic data (e.g., fake images that look real).
- **VAEs (Vibrational Auto encoders):** Encode input into a compressed form and decode it back, useful for data generation and compression.
- **Diffusion Models:** Used in image generation (like DALL·E 3), gradually convert random noise into realistic images through a process of denoising.
- **Use Cases:** AI art, face generation, data augmentation, etc.

4. Learn prompt engineering and fine-tuning in Generative AI (e.g., LLMs)

- **Explanation:**
- **Prompt Engineering** is the technique of designing effective inputs (prompts) to get the desired output from **LLMs (Large Language Models)** like ChatGPT, Gemini, and Claude.
- **Fine-tuning** means adapting a pre-trained model (like GPT) to a specific domain or task by training it on your own dataset.
- **You'll Learn:**
- How to write clear and powerful prompts
- How to use system instructions and context effectively
- Basics of training or customizing a model using platforms like Hugging Face

5. Develop hands-on projects using tools like TensorFlow, PyTorch, and Hugging Face

- **Explanation:**
  Theory is important, but you'll also get **practical experience** through coding projects.
- **TensorFlow and PyTorch:** Two of the most popular deep learning frameworks for building and training models.
- **Hugging Face:** A platform providing easy access to state-of-the-art models like BERT, GPT, T5, and more.
- **Example Projects:**
- Image classifier using CNN

- Text generator using GPT
- Chatbot using Transformers
- Image-to-text or text-to-image generation using multimodal models

6. Understand ethical implications and responsible use of AI

- **Explanation:**

  As AI becomes powerful, it also raises **ethical and societal concerns**.
- Topics include:
- **Bias in AI:** How biased training data can lead to unfair or harmful outcomes.
- **Misinformation & Deepfakes:** Misuse of generative models to create fake images or content.
- **AI Transparency and Explainability:** Ensuring AI decisions can be understood and trusted.
- **Responsible AI Deployment:** Ensuring safety, privacy, and alignment with human values.
- You'll also learn about frameworks like **Fairness, Accountability, and Transparency (FAT)** in AI.

Outcomes:

Participants will:

- Design, train, and evaluate deep learning and generative AI models.
- Integrate generative models into apps/services using APIs.
- Develop mini-projects using LLMs and image generators.
- Understand AI ethics and best practices in academia and industry.

Conclusion

This comprehensive FDP provided a unique opportunity to delve into generative AI's potential, fostering learning and collaboration among academia and industry. Participants left equipped with new skills and insights to contribute meaningfully to the evolving field of artificial intelligence.
