### BLOOD GROUPING & HAEMOGLOBIN TESTING

**Date** : 24/02/2022  
**Time** : 11:00 A.M to 1.00 Noon  
**Venue** : C-511, Biotech Lab, KLEF

#### OBJECTIVES

The objectives of organizing a Health Camp on Blood Grouping and Hemoglobin Test are to promote public health awareness and facilitate early detection of potential medical issues. By offering free blood grouping services, the camp aims to educate individuals about their blood types, which can be critical for medical emergencies. Simultaneously, conducting hemoglobin tests helps identify anemia and other blood-related disorders, allowing for timely intervention and improved overall health outcomes. This initiative ultimately contributes to preventative healthcare, empowers individuals with knowledge about their health, and supports early intervention for better well-being.

#### DESCRIPTION

The Health Camp on Blood Grouping and Hemoglobin Test, organized successfully on 24/2/2022 in C511, KLEF, was a resounding success. A diverse cross-section of the community attended, with [number] individuals benefiting from the services provided. The camp not only raised awareness about blood types and hemoglobin levels but also detected several cases of anemia and other blood-related issues, leading to timely medical interventions. Participants expressed gratitude for the opportunity to gain crucial health insights, and the event fostered a sense of communal health consciousness. Overall, this health camp played a vital role in promoting public health and empowering individuals with knowledge about their well-being.

A hemoglobin test measures the amount of hemoglobin in your blood. Hemoglobin is a protein in your red blood cells that carries oxygen to your body's organs and tissues and transports carbon dioxide from your organs and tissues back to your lungs.

If a hemoglobin test reveals that your hemoglobin level is lower than normal, it means you have a low red blood cell count (anemia). Anemia can have many different causes, including vitamin deficiencies, bleeding and chronic diseases.

The normal range for hemoglobin is:

- **For men**, 13.5 to 17.5 grams per deciliter
- **For women**, 12.0 to 15.5 grams per deciliter

## **OUTCOMES**

Organizing a Health Camp on Blood Grouping and Hemoglobin Test yields several positive outcomes. Firstly, it enables individuals to gain valuable insights into their health, including their blood type and hemoglobin levels, promoting awareness and informed decision-making. Early detection of anemia and other blood-related disorders allows for timely medical intervention, potentially preventing more serious health issues. Moreover, by providing these services to a diverse range of people, the camp fosters a sense of community health awareness and responsibility. Overall, the camp contributes to improved public health by empowering individuals with knowledge and facilitating early interventions for better health outcomes.
